CERTIFICATION

I, Wes Lindemuth am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Manhattan West Northeast Tower, (NYC VCP Site No. 15EHAN319M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 371 9th Ave in the Midtown West section in Manhattan, New York and is identified as Block 729 and Lot 60 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 26,500-square feet and is bounded by West 33rd St to the north, the newly constructed platform covering rail road tracks to the south, office building 450 West 33rd St to the west, and 9th Avenue to the east. A map of the site boundary is shown in Figure 1. Currently, the Site is used for staging of construction equipment and contains asphalt that was formerly associated with the on-site parking lot.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of full build-out of the Site to construct a new 69-story commercial tower totaling approximately 2,000,000 gross square feet. The primary use is commercial office space with first floor commercial retail space. The building will have two (2) basement levels occupied by stormwater tanks, irrigation pumps, maintenance and storage rooms, elevator banks and a service corridor. Layout of the proposed site development is presented in Figure 1 and Appendix A. The current zoning designation is C6-4 “Commercial District” in a Specialty District identified as Hudson Yards Rezoning. The proposed use is consistent with existing zoning for the property.

The proposed building will occupy an approximately 26,500 square foot footprint. The foundation excavation is anticipated to extend approximately 22 feet below street grade into bedrock to accommodate cellar space for the new buildings mechanical equipment. Based on available geotechnical and environmental data the water table is expected to be located within bedrock from approximately 27 to 60 feet below street grade. The water table is expected at approximately 27 to 60 feet below grade surface (bgs). Layout of the proposed site development is presented in Figure 1 and Appendix A.

Summary of Past Uses of Site and Areas of Concern

According to available historic Sanborn Fire Insurance Maps the historic use of the Site includes development since at least 1911 with residential structures, operation as a gasoline filling station in 1950, and conversion to a parking lot in 1976. The Site is currently owned by 9th and 33rd Associates who purchased the property in 1986. The following areas of concern were identified with the property.

1. The prior use of the Site as a filling station, train yard, auto repair shop, mechanical shop and building with buried underground storage tanks.
2. The presence of Historic Fill at the Site from 0 to 10 feet below street level.
3. The detection of one SVOC [benzo(a)pyrene], three metals (arsenic, barium and lead) at concentrations above the Commercial Use Soil Cleanup Objectives (SCOs).
4. The detection of Toxicity Characteristic Leachate Procedure (TCLP) lead in one samples [SB-03(5-10')] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.

Summary of the Work Performed under the Remedial Investigation

The Remedial Investigation activities were performed from January 29 to 30th and consisted of the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performance of a geophysical survey to clear proposed boring locations of the presence of underground utilities and subsurface structures and identify geophysical anomalies indicative of USTs;
3. Installed seven (7) soil borings across the entire project Site. No soil samples were collected for chemical analysis;
4. Groundwater was not encountered in any of the soil borings installed at the Site;
5. Installed seven (7) soil vapor probes across the entire project Site and collected seven (7) soil vapor samples for chemical analysis.

Summary of Environmental Findings

WCD performed a Phase II ESI at the Site consisting of a Site inspection, geophysical survey, installation of soil borings and temporary soil vapor sampling points and the collection and laboratory analysis of soil vapor samples. The results of the Phase II ESI indicate the following:

1. Elevation of the property is approximately 28 feet above mean sea level.
2. Depth to groundwater is believed to be 27 to 60 feet below street level. Groundwater was not encountered during the Phase II ESI.
3. Groundwater flow is believed to be generally from east to west beneath the Site towards the East River.
4. Depth to bedrock varies from approximately 4 to 13 feet bgs at the Site.
5. The stratigraphy of the site, from the surface down, consists of up to 6 feet of fill material consisting of red/brown sand, silts with fine gravel, brick, asphalt, concrete, and ash; underlain by a layer of native material consisting of sand and silts followed by bedrock. The maximum sample depth during the remedial investigation was 13 feet bgs. Bedrock was encountered in soil borings ranging from 4 to 13 feet bgs.
6. No soil samples were collected for chemical analysis during this RI. The prior Phase II ESI performed by ATC Associates Inc. in 2008 consisted of the installation of six (6) soil borings and collection of 13 soil samples for laboratory analysis. The results of the Phase II ESI identified one SVOC [benzo(a)pyrene] and three metals (arsenic, barium and lead) were detected at concentration above the Commercial Use Soil Cleanup Objectives (SCOs). No VOCs, PCBs or Pesticides were detected at concentrations above the Commercial Use SCOs. In addition, TCLP Lead was detected in one samples [SB-03(5-10')] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.
7. No groundwater samples were collected during remedial investigations. Groundwater was not been encountered at any boring location before refusal at bedrock.
8. A review of the soil vapor sample analytical results indicate that two solvent-related VOCs analyzed utilizing USEPA Method TO-15 were detected in the soil vapor samples.

PCE was detected above the corresponding AGV of 30 µg/m^3 in two of seven samples at concentrations of 147 µg/m^3 and 35.7 µg/m^3. Methylene chloride was not detected above the corresponding AGV of 60 µg/m^3. TCE was detected above the corresponding AGV of 5 µg/m^3 in four (4) of seven (7) soil vapor samples at concentrations of 19.8 µg/m^3, 40.2 µg/m^3, 95.7 µg/m^3 and 109 µg/m^3. Soil vapor sampling results for carbon tetrachloride, TCE and vinyl chloride were compared to Matrix 1 of the NYSDOH Vapor Intrusion Guidance Document. Carbon tetrachloride and vinyl chloride were not detected at concentrations above 5 µg/m3 in the soil vapor samples. TCE was detected in four (4) of seven (7) soil vapor samples at concentrations of 19.8 µg/m^3, 40.2 µg/m^3, 95.7 µg/m^3 and 109 µg/m^3 . Based on Matrix 1, the recommended action for carbon tetrachloride, TCE and vinyl chloride at concentrations from less than 5 to 250 µg/m3 is no further action or to take reasonable and practical actions to identify source(s) and reduce exposures, monitoring or mitigations, depending upon corresponding indoor air sample results (note, indoor air samples were not collected during the remedial investigation). Soil vapor sampling results for 1,1-dichloroethene, cis-1,2-dichloroethene, PCE, and 1,1,1-trichloroethane (1,1,1-TCA) were compared to Matrix 2 of the NYSDOH Vapor Intrusion Guidance Document. 1,1-dichloroethene, cis-1,2-dichloroethene and 1,1,1-TCA were not detected at concentrations above 100 µg/m3 in the soil vapor samples. PCE was detected in two of seven samples at concentrations of 147 µg/m^3 and 35.7 µg/m^3. Based on Matrix 2, the recommended action for PCE concentrations greater than 100 and less than 1,000 µg/m3 is monitoring or mitigation, depending upon corresponding indoor air sample results (note, indoor air samples were not collected during the remedial investigation).

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Brookfield Office Properties has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.61-acre site located at 371 9th Ave, in Midtown West section of Manhattan, New York. Commercial office space is the primary proposed for the property. The RI work was performed between January and February, 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 371 9th Ave in the Midtown West section in Manhattan, New York and is identified as Block 729 and Lot 60 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 26,500-square feet and is bounded by West 33rd St to the north, the newly constructed platform covering rail road tracks to the south, office building 450 West 33rd St to the west, and 9th Avenue to the east. A map of the site boundary is shown in Figure 1. Currently, the Site is used for staging of construction equipment and contains a partial asphalt covered parking lot.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of full build-out of the Site to construct a new 69-story commercial tower totaling approximately 2,000,000 gross square feet. The primary use is commercial office space with first floor commercial retail space. The building will have two (2) basement levels occupied by stormwater tanks, irrigation pumps, maintenance and storage rooms, elevator banks and a service corridor. Layout of the proposed site development is presented in Figure 1 and Appendix A. The current zoning designation is C6-4 “Commercial District” in a Specialty District identified as Hudson Yards Rezoning. The proposed use is consistent with existing zoning for the property.

The proposed building will occupy an approximately 26,500 square foot footprint. The foundation excavation is anticipated to extend approximately 22 feet below street grade into bedrock to accommodate cellar space for the new buildings mechanical equipment. Based on

available geotechnical and environmental data the water table is expected to be located within bedrock from approximately 27 to 60 feet below street grade. Layout of the proposed site development is presented in Figure 1 and Appendix A.

1.3 Description of Surrounding Property

The Site is bounded to the north by 33rd Street followed by a mid-rise commercial office buildings and the Saint Michaels Church and School; to the east by Ninth Avenue followed by the United States Post Office; to the west by mid-rise commercial office buildings and to the south by the newly constructed platform spanning the railroad lines followed by 32nd Street.

Figure 1 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to available historic Sanborn Fire Insurance Maps the historic use of the Site includes development since at least 1911 with residential structures, operation as a gasoline filling station in 1950, and conversion to a parking lot in 1976. The Site is currently owned by 9th and 33rd Associates who purchased the property in 1986.

2.2 Previous Investigations

2.2.1 Phase I ESA Summary

In 2007, ATC Associates Inc. conducted a Phase I Environmental Site Assessment of the Site. The ATC "Phase I Environmental Site Assessment," dated September 10, 2007, reports the following recognized environmental conditions in connection with the Site:

- The classification of the Site with an E-designation for Hazardous Materials, Noise and Air;
- Prior use of the Site a filling station, auto repair shop, mechanical shops and buildings with buried petroleum tanks; and
- Potential presence of petroleum related contamination, metals and polychlorinated biphenyls (PCBs) contamination at the Site based on a review of a Site Investigation Report prepared by Hazardous Waste Engineering Consultants (HWE) dated April 9, 1991.

There are no other recognized environmental conditions identified in the report. The Phase I ESA is included in Appendix B.

In 2015, Cardno ATC conducted a Phase I Environmental Site Assessment of the Site. The ATC "Phase I Environmental Site Assessment," dated January 12, 2015, reports the following recognized environmental conditions in connection with the Site:

- The classification of the Site with an E-designation for Hazardous Materials, Noise and Air;
- Use of portions of Lot 60 (not included in the footprint of the Northeast Tower) as a train yard since at least 1911.

No other recognized environmental conditions were identified in the report. The Phase I ESA Report is included in Appendix B.

2.2.2 Prior Phase II ESI Summary

In 2008, ATC Associates Inc. conducted a Phase II Environmental Site Investigation of the Site. The Phase II ESI consisted of the performance of a geophysical survey, installation of six (6) soil borings, and collection of 13 soil samples for laboratory analysis. The results of the Phase II ESI indicate the following:

- Bedrock was encountered from 7 to 24 feet below street level.
- Historic fill was encountered at the Site from 0 to 10 feet below street level.
- The one SVOC [benzo(a)pyrene], three metals (arsenic, barium and lead) were detected at concentration above the Commercial Use Soil Cleanup Objectives (SCOs).
- No VOCs, PCBs or Pesticides were detected at concentrations above the Commercial Use SCOs.
- TCLP Lead was detected in one samples [SB-03(5-10')] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.

The laboratory analytical data from the Phase II ESI is summarized in the attached Tables 1 to 6. The Phase II ESI is included as Appendix B.

2.3 Site Inspection

The Site inspection was performed on January 30th by WCD representatives TJ Motley and Wes Lindemuth. No additional areas of concern were identified during the site inspection.

2.4 Areas of Concern

Based on a review of the prior reports available for the Site and the performance of the Site inspection the following areas of concern were identified associated with the Site.

1. The prior use of the Site as a filling station, train yard, auto repair shop, mechanical shop and building with buried underground storage tanks.

2. The presence of Historic Fill at the Site from 0 to 10 feet below street level.

3. The detection of one SVOC [benzo(a)pyrene], three metals (arsenic, barium and lead) at concentrations above the Commercial Use Soil Cleanup Objectives (SCOs).

4. The detection of Toxicity Characteristic Leachate Procedure (TCLP) lead in one samples [SB-03(5-10’)] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Wes Lindemuth.

The Site developer is Brookfield Office Properties.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. Soil cuttings generated during the installation of the soil borings was used to backfill the locations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The Remedial Investigation activities were performed from January 29 to 30th and consisted of the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performance of a geophysical survey to clear proposed boring locations of the presence of underground utilities and subsurface structures and identify geophysical anomalies indicative of USTs;
3. Installed seven (7) soil borings across the entire project Site. No soil samples were collected for chemical analysis;
4. Groundwater was not encountered in any of the soil borings installed at the Site;
5. Installed seven (7) soil vapor probes across the entire project Site and collected seven (7) soil vapor samples for chemical analysis.

4.1 Geophysical Investigation

A Geophysical Survey was performed across the project site by Nova Geophysical Inc. on January 29th, 2015 under subcontract and supervision of WCD. NOVA performed a survey consisting of Ground Penetrating Radar (GPR) and Electromagnetic (EM) surveys for the purpose of identifying anomalies, utilities, and other substructures, and to clear and mark proposed environmental boring areas. The equipment selected for this investigation was a Noggin's 250 MHz GPR shielded antenna and Ditch-witch Electro-magnetometer with multi-frequency/utility locator. The Geophysical Survey Report can be found in Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Subsurface soil vapor sampling was conduction on January 30, 2015. Aquifer Drilling and Testing (ADT) was retained as a subcontractor by WCD for drilling services. A Track Mounted Geoprobe 6620DT was used to install soil borings using 5-foot long 2-inch diameter macro-core samplers. Soil borings were installed to refusal at bedrock.

Borings were screened with a MiniRAE 3000 hand-held VOC meter and inspected for indications of contamination (e.g., staining, odors, etc). Geologic descriptions of the soil and field screening results were recorded in field logs. Based on field logs and PID readings, no apparent impacted soils were identified. The soil boring logs are presented in Appendix D.

Soil vapor samples were collected from the 2 foot interval directly above refusal at bedrock at all seven (7) sampling locations. The samples were collected over a 2-hour duration with 2.7 Liter SUMMA canisters provided by Alpha Analytical Laboratory. The canisters were properly labeled and delivered to Alpha Analytical, under strict chain of custody procedures. Alpha Analytical is an ELAP-certified laboratory approved by NYSDOH. Each sample was analyzed for VOCs by using USEPA Method TO-15. Upon completion each soil boring was backfilled with soil cuttings and (if necessary) an upper bentonite plug.

Boring logs were prepared by WCD Group and are attached in Appendix D. A map showing the location of soil borings and soil vapor samples is shown in Figure 2.

Groundwater Monitoring Well Construction

Installation of groundwater wells was attempted, but groundwater was not encountered in any of the soil borings installed and no monitoring wells were installed during this investigation.

Survey

Soil vapor sampling locations were safely marked out by Nova Geophysical Survey during the geophysical investigation. The soil boring/soil vapor locations were recorded by WCD using distances from fixed site benchmarks, such as curb lines and truck entrance gates that will remain in place for the duration of the project.

Water Level Measurement

Groundwater was not encountered in any of the seven (7) boring locations prior to refusal at bedrock. Based on available information groundwater is expected to be encountered at a depth between 27 to 60 feet below street level.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements,

odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

No soil samples were collected for chemical analysis during this RI. The prior Phase II ESI performed by ATC Associates Inc. in 2008 consisted of the installation of six (6) soil borings and collection of 13 soil samples for laboratory analysis. The results of the Phase II ESI indicate the following.

- Bedrock was encountered from 7 to 24 feet below street level.
- Historic fill was encountered at the Site from 0 to 10 feet below street level.
- The one SVOC [benzo(a)pyrene], three metals (arsenic, barium and lead) were detected at concentration above the Commercial Use Soil Cleanup Objectives (SCOs).
- No VOCs, PCBs or Pesticides were detected at concentrations above the Commercial Use SCOs.
- TCLP Lead was detected in one samples [SB-03(5-10')] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.

Groundwater Sampling

Groundwater was not encountered during the performance of the RI. No groundwater samples were collected.

Soil Vapor Sampling

A total of seven (7) temporary soil vapor probes were installed and seven (7) soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 2. Soil vapor sample collection data is reported in Table 1. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.*

The soil vapor samples were collected using a direct-drive system (i.e., Geoprobe). Soil vapor samples WCD-SV-1, WCD-SV-5, WCD-SV-6, and WCD-SV-7 were collected at approximately 11 feet bgs. Sample WCD-SV-2 was collected at approximately 3 feet bgs. Sample WCD-SV-3 was collected at approximately 6 feet, bgs, and WCD-SV-4 was collected at approximately 7 feet bgs. Each soil vapor sample was collected by installing a stainless steel vapor probe connected to teflon tubing and sealing the annular space with hydrated bentonite.

The adequacy of each seal was tested in accordance with the NYSDOH-approved method for vapor sampling. The adequacy of each seal was tested by using a 5-gallon bucket placed over the borehole. Helium tracer gas was then pumped into the bucket. The above grade end of the tubing, which is the sample collection point, was then attached to a helium gas detector. The adequacy of the seal was verified by direct helium readings of less than 10 percent. The temporary soil vapor probe was then purged using a PID to evacuate three well volumes of soil vapor. A maximum PID reading of 0.5 ppm was measured in the soil vapor sample WCD-SV-5. The soil vapor samples were collected in laboratory-supplied individually certified-clean 2.7-liter SUMMA canisters for an approximately 2-hour sampling period. Upon completion, the temporary soil vapor sampling point was removed and the sample location was backfilled to near grade surface with the drill cuttings and then the ground surface was restored to its original condition.

The soil vapor samples were analyzed for VOCs by USEPA Method TO-15. The canisters were properly labeled and transported via courier to Alpha Analytical Laboratories, Inc. (Alpha) of Mansfield, MA utilizing standard chain-of-custody procedures. Alpha is a NYSDOH ELAP-certified analytical laboratory. A summary of the soil vapor analytical results is provided in Table 1 and a copy of the analytical laboratory results is attached in Appendix E.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Wes Lindemuth.
Chemical Analytical	Chemical analytical laboratory(s) used in the RI is NYS ELAP

Laboratory	certified and were Alpha Analytical Laboratories, Inc.
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Groundwater analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil vapor are summarized in Table 1, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

A description of the geologic and hydrogeological conditions at the Site are presented below.

Stratigraphy

During the remedial investigation fill material consisting of red/brown sand, silts with fine gravel, brick, asphalt, concrete, and ash was encountered at the Site to a maximum depth of 6 feet bgs. The fill material is underlain by native material consisting of sand and silts followed by bedrock. The maximum sample depth during the remedial investigation was 13 feet bgs. Bedrock was encountered in soil borings ranging from 4 to 13 feet bgs.

Hydrogeology

Based on available geotechnical and environmental data the water table is expected to be located within bedrock from approximately 27 to 60 feet below street grade. Installation of groundwater wells was attempted, but groundwater was not encountered during the performance of the RI. No groundwater samples were collected.

5.2 Soil Chemistry

No soil samples were collected for chemical analysis during this RI. The prior Phase II ESI performed by ATC Associates Inc. in 2008 consisted of the installation of six (6) soil borings and collection of 13 soil samples for laboratory analysis. The results of the Phase II ESI indicate the following.

- Bedrock was encountered from 7 to 24 feet below street level.
- Historic fill was encountered at the Site from 0 to 10 feet below street level.
- The one SVOC [benzo(a)pyrene], three metals (arsenic, barium and lead) were detected at concentration above the Commercial Use Soil Cleanup Objectives (SCOs).
- No VOCs, PCBs or Pesticides were detected at concentrations above the Commercial Use SCOs.
- TCLP Lead was detected in one samples [SB-03(5-10')] at a concentration of 6.33 mg/L above the USEPA Maximum Concentration of Contaminants for Toxicity Characteristic of 5.0 mg/L.

Data collected during the prior Phase II ESI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 1 to 6.

5.3 Groundwater Chemistry

Based on available geotechnical and environmental data the water table is expected to be located within bedrock from approximately 27 to 60 feet below street grade. Groundwater was not encountered during the performance of the RI. No groundwater samples were collected.

If groundwater is encountered during further excavation activities at the Site a sample will be collected and submitted for laboratory analysis.

5.4 Soil Vapor Chemistry

A review of the soil vapor sample analytical results indicate that several petroleum- and solvent-related VOCs analyzed utilizing USEPA Method TO-15 were detected in the soil vapor samples. A summary of the analytical results for VOCs in soil vapor is summarized in Table 7. The complete analytical data report is presented in Attachment D. A summary of the detected compounds at a concentration greater than the AGV is provided below:

The NYSDOH has established AGVs for three (3) of the VOCs analyzed (methylene chloride, tetrachloroethene [PCE], and trichloroethene [TCE]). PCE was detected in two of seven samples at concentrations of 147 µg/m^3 and 35.7 µg/m^3 which is above the corresponding AGV of 30 µg/m3. Methylene chloride was not detected above the corresponding AGV of 60 µg/m3. TCE was detected in four (4) of seven (7) soil vapor samples at concentrations of 19.8 µg/m^3, 40.2 µg/m^3, 95.7 µg/m^3 and 109 µg/m^3 above the corresponding AGV of 5 µg/m3.

Soil vapor sampling results for carbon tetrachloride, TCE and vinyl chloride were compared to Matrix 1 of the NYSDOH Vapor Intrusion Guidance Document. Carbon tetrachloride and vinyl chloride were not detected at concentrations above 5 µg/m3 in the soil vapor samples. TCE was detected in four (4) of seven (7) soil vapor samples at concentrations of 19.8 µg/m^3, 40.2 µg/m^3, 95.7 µg/m^3 and 109 µg/m^3 . Based on Matrix 1, the recommended action for carbon tetrachloride, TCE and vinyl chloride at concentrations from less than 5 to 250 µg/m3 is no further action or to take reasonable and practical actions to identify source(s) and reduce

exposures, monitoring or mitigations, depending upon corresponding indoor air sample results (note, indoor air samples were not collected during the remedial investigation).

Soil vapor sampling results for 1,1-dichloroethene, cis-1,2-dichloroethene, PCE, and 1,1,1-trichloroethane (1,1,1-TCA) were compared to Matrix 2 of the NYSDOH Vapor Intrusion Guidance Document. 1,1-dichloroethene, cis-1,2-dichloroethene and 1,1,1-TCA were not detected at concentrations above 100 µg/m3 in the soil vapor samples. PCE was detected in two of seven samples at concentrations of 147 $\mu g/m^3$ and 35.7 $\mu g/m^3$. Based on Matrix 2, the recommended action for PCE concentrations greater than 100 and less than 1,000 µg/m3 is monitoring or mitigation, depending upon corresponding indoor air sample results (note, indoor air samples were not collected during the remedial investigation).

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 7.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Site-Specific Standards, Criteria and Guidance

- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes
- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- STARS #1 - Petroleum-Contaminated Soil Guidance Policy
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (October 1994)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- NYSDOH Indoor Air Sampling & Analysis Guidance (August 8, 2001 or subsequent update)
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)
- DER Interim Strategy for Groundwater Remediation at Contaminated Sites in New York State
- 6 NYCRR Part 612 - Registration of Petroleum Storage Facilities (February 1992)
- 6 NYCRR Part 613 - Handling and Storage of Petroleum (February 1992)
- 6 NYCRR Part 614 - Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992)
- 40 CFR Part 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks

Re: 9th Avenue Phase 1 Report

Dear Mr. White and Mr. Caso:

Attached please find an original copy of the Phase I Environmental Site Assessment (ESA) commissioned by WCD Consultants at the direction of Brookfield Properties. The ESA is specific to the street-level portions of Block 729, lots 50 and 60 in the Borough of Manhattan, New York, NY. The ESA was prepared by ATC Associates, Inc. (ATC) in full conformance with ASTM Standard Practice E 1527-05. The ESA is the initial regulatory requirement for any development on properties subject to an "E" designation pursuant to ZR 11-15, Chapter 24 of Title 15 – Rules of the City of New York.

The purpose of the ESA is to review the historic uses of the subject site and identify any historic conditions which may represent recognized environmental conditions requiring mitigation or remediation prior to site development.

As noted in the ESA's conclusions, the review of available documents, reports, and regulatory data bases confirms that the subject properties and properties in the immediate vicinity did contain historic uses which are generally considered to represent recognized environmental conditions. Further, it is evident from the record that these historic uses are the underlying basis for the "E" designations.

A Phase II Environmental Site Investigation to document the nature and extent of the recognized environmental conditions and any related site contamination is recommended. A proposal for the Phase II Environmental Site Investigation will be submitted to Brookfield Properties under separate cover.

Should you have any questions, please do not hesitate to contact me directly.

Sincerely,
WCD Consultants

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Senior Project Manager/ Environmental Professional

1.2 Findings and Conclusions Summary

ATC Associates Inc. (ATC) has performed this Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05. ATC conducted this Phase I ESA for WCD Consultants. The Site consists of two parcels that are located along 9th Avenue, between west 31st Street and West 33rd Street, on the west side of Manhattan, New York (Block 729, lots 50 and 60). Currently, the Site consists of train yards of the Long Island Railroad (LIRR) and three parking lots used by parking management companies. Two of the parking lots are located along West 33rd Street and one along West 31st Street. The train yards are located 60 feet below street level. The objective of the Phase I ESA was to identify the presence of recognized environmental conditions (RECs) as defined by ASTM and/or to identify areas of environmental concern that may represent RECs. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has not revealed evidence of *recognized environmental conditions (REC) with the exception of the following* in connection with the Site:

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		**No Further Action**	**De Minimis Condition**	**Recognized Environmental Condition (REC)**	**Historical REC**	**ASTM Non-Scope Condition**	**Description**
4.0	**User Provided Information**	X					
5.1.1	**Federal Database Findings**	X					
5.1.2	**State and Tribal Database Findings**			X			The Site is classified as an "E" designated Site. Refer to note (1) below.
5.1.3	**Local Environmental Record Sources**			X			The Site is classified as an "E" designated Site. Refer to note (1) below.
5.3	**Historical Records Sources**			X			Prior use of the Site as filling station, auto repair shop, mechanical shops and buildings with buried petroleum tanks See note (2) below. Review of a prior soil investigation report identified petroleum related contamination and PCBs at the Site's train yards. See note (3) below.
6.2	**Hazardous Substance Use,**	X					

	Storage and Disposal						
6.3	**Underground Storage Tanks**			X			Potential presence of abandoned USTs beneath the Site.
6.4	**Aboveground Storage Tanks**	X					
6.5	**Other Petroleum Products**	X					
6.6	**Polychlorinated Biphenyls (PCBs)**			X			PCBs were identified at the Site during a phase II Site investigation report prepared by HWE. Refer to note (3) below.
6.7	**Unidentified Substance Containers**	X					
6.8	**Non-hazardous Solid Waste**	X					
6.9	**Wastewater**	X					
6.10	**Waste Pits, Ponds and Lagoons**	X					
6.11	**Sumps**	X					
6.12	**Septic Systems**	X					
6.13	**Stormwater Management System**	X					
6.14	**Wells**	X					
7.0	**Interviews**	X					
8.1	**Asbestos-Containing Material (ACM)**	X					
8.2	**Radon**	X					
8.3	**Lead in Drinking Water**	X					
8.4	**Lead-Based Paint (LBP)**	X					
8.5	**Mold Screening**						
8.6	**Additional User Requested Conditions**	X					

(1) The review of New York City Department of City Planning and New York City Department of Building records, as well as the review of the regulatory agencies database identified both lots of the Site as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "Hazmat, Noise and Air". An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The classification of the Site with an "E" designation is considered to represent a *recognized environmental condition* for the Site.

(2) The review of the historical uses of the Site identified the Site to be used as a train yard, a car repair shop, filling stations, auto repair and mechanical shop. Identified on the adjoining properties were a filling station, the train yards, printing facilities, motor shops, metalwork companies and dying facilities. These identified historical activities typically use petroleum products, solvents, and other hazardous chemicals in their routine operations. Therefore, the historical uses of the Site and surrounding area are considered to represent a *recognized environmental condition* for the Site. Additionally, the historical on-

Site USTs identified in the historical sanborn maps and certificates of occupancy were not identified on the NYSDEC database; however since the structures were demolished more than 40 years ago, no records are expected to be found. Any buried tanks that were not removed during demolition operations could potentially remain on-Site, either located in collapsed basement or buried.

(3) ATC's review of the Site investigation report prepared by Hazardous Waste Engineering Consultants (HWE) dated April 9, 1991, identified the presence of petroleum related contamination, metals and polychlorinated biphenyls (PCBs) contamination at the Site. No remedial action or additional investigation reports were provided for review. Since the contamination may still be present at the Site, ATC considers the reported contamination to represent a *recognized environmental condition* for the Site.

1.3 Significant Data Gap Summary

The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gaps* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gaps* identified.
5.1	**Standard Environmental Records**	No *significant data gaps* identified.
5.2	**Physical Setting Sources**	No *significant data gaps* identified.
5.3	**Historical Records Sources**	No *significant data gaps* identified.
6.1	**Methodology and Limiting Conditions**	No *significant data gaps* identified.
7.0	**Interviews**	No *significant data gaps* identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC recommends the performance of a phase II Environmental Site Investigation (ESI) at the Site. The phase II ESI shall include the collection of soil and groundwater samples to assess whether the subsurface of the Site has been impacted by the environmental conditions identified during this phase I ESA. As part of the phase II ESI, a geophysical survey shall be performed to attempt to determine if USTs are burried beneath the Site.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify *recognized environmental conditions* and certain potential environmental conditions outside the scope of ASTM Standard Practice E 1527-05 in connection with the Site at the time of the site reconnaissance. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E 1527-05, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the Site through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the Site, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current Site usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, non-hazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties on the Site.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the Site.

The scope of the assessment also included consideration of the following environmental issues or conditions that are beyond the scope of ASTM Standard Practice E 1527-05:

- Mold Screening to report the findings of a baseline survey of readily observable mold and conditions conducive to mold on the Site identified by limited interview, document review and physical observation and to provide an opinion on whether an identified condition warrants further action. The scope of work for the Mold Screening was intended to be consistent with ASTM Standard Practice E 2418-06: S*tandard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process*. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to one knowledgeable person from Site management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein,

ATC observed the HVAC equipment room(s) and readily accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed readily accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the Site.

- Visual observation of suspect ACM, consisting of providing an opinion on the condition of suspect ACM on the Site based upon visual observation during the site reconnaissance.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the Site.

- Lead in drinking water data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the Site meets or exceeds drinking water standards for lead.

- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for LBP based on the construction date of buildings on the Site and visual observation of the condition of suspect LBP.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the Site is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the Site is identified as being located within a flood plain.

2.3 Significant Assumption

Any assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the Site.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products at the Site. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E 1527-05 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any Site.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the Site and environmental conditions on such Site.

- *Past Uses of the Site* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of Site at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E 1527-05 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other Site construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the Site are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the Site during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial

Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the Site in this report, represent a comprehensive definition or precise delineation of Site ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The *Environmental Professional* Statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E 1527-05 and the scope of work for this assessment.

Per ASTM Standard Practice E 1527-05, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the Site. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E 1527-05, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice 1527-05 and therefore, the entire report must be updated to reflect current conditions and Site-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by WCD Consultants (WCD), and third parties authorized in writing by WCD, and ATC, including the lender(s) in connection with a secured financing of the Site, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual Site conditions may change with time, and that hidden conditions may exist at the Site that were not discovered within the authorized scope of the assessment.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of $100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The Site is located at 371 9th Avenue and 401 9th Avenue in New York County, New York 10001. According to information obtained from the New York City Department of Finance, the Site is identified as Block 729, Lots 50 and 60. According to the New York City Department of City Planning zoning map, the Site is currently zoned as M1-6 "Manufacturing District." The current owner of lot 50 is identified as "Brookfield Properties" and the current owner of lot 60 is identified as "9th & 33rd Associates." A Site Vicinity Map is provided in Appendix A and a Site Plan is provided in Appendix B.

3.2 Surrounding Area General Characteristics

Land use in the vicinity of the Site consists mainly of commercial and residential buildings. The specific usage of adjoining and contiguous properties is summarized in Section 3.5.

3.3 Current Use of the Site

The Site is currently developed with the train yards of the Long Island Railroad (LIRR) and three parking lots used by parking management companies; two along West 33rd Street and one along West 31st Street. The train yards are located 60 feet below street level. The three parking lots are paved with asphalt and have no buildings. The depressed train yards were not accessible for inspection at grade, but were viewed from street level at west 31st Street and West 33rd Street. The total area of the Site is approximately 5 acres. There are currently no buildings on the Site.

3.4 Description of Site Improvements

The following table provides general descriptions of the Site improvements.

SITE IMPROVEMENTS	
Size of Site (approximate)	5-acres
General Topography of Site	Flat with a slight downward slope towards the southwest. The train yards at the Site are located 60 feet below street level and unleveled with the rest of the Site.
Adjoining and/or Access/Egress Roads	Access to the Site available along 9th Avenue, West 33rd Street, and West 31st Street.
Paved or Concrete Areas (including parking)	Parking lot and access roads paved with asphalt and concrete sidewalks along the exterior of the Site.
Unimproved Areas	The Site is fully improved and is occupied by the train yards and parking lots.
Landscaped Areas	No landscaping areas were observed at the Site.
Surface Water	No surface water was observed on or near the Site.
Potable Water Source	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer Utility	None
Storm Sewer Utility	NYCDEP
Electrical Utility	Consolidated Edison (Con Ed)
Natural Gas Utility	Con Ed
Current Occupancy Status	100% occupied with three parking lots and the LIRR train yards

SITE IMPROVEMENTS	
Unoccupied Buildings/Spaces/Structures	No buildings on Site.
Number of Occupied Buildings	None
General Building Description	No buildings on Site.
Number of Floors	0
Total Square Feet of Space (approximate)	Not applicable (N/A)
Construction Completion Date (year)	The train yard on the Site was constructed by approximately 1911 and the parking lots were on Site by approximately 1944.
Construction Type	N/A
Interior Finishes Description	N/A
Exterior Finishes Description	N/A
Cooling System Type	None
Heating System Type	None
Emergency Power	None

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Site	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North	424-434 West 33rd Street	Multi-tenant office building	Commercial	One tenant of this adjoining facility, identified as Knickerbocker Graphic Services, is listed in the regulatory agency database as a RCRA SQG. The facility is also listed NYSDEC UST database with one active tank. Refer to sections 5.1.1 and 5.1.2
	411 9th Avenue, New York	Restaurant	Commercial	None
	408 West 34th Street, New York	Parking lot	Commercial	None
	414 West 34th Street, New York (aka 425 West 33rd Street)	St. Michaels church and school	Commercial	The St. Michaels School is listed in the NYSDEC UST database and LTANKS database. Refer to section 5.1.2
	431 West 33rd Street, New York	Commercial (parking lot)	Commercial	None
East	372 9th Avenue, New York	United States Postal Service	Commercial	None
West	450 West 33rd Street, New York	Multi tenant office building with deli on ground floor	Commercial	Two tenants of this facility identified as Daily News and Art Carved Inc. are listed in the RCRA- SQG database Refer to section 5.1.1. This facility is also listed NYSDEC UST and AST databases with

Direction from Site	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
				one active tank UST and one active AST. Refer to sections 5.1.1 and 5.1.2
South	400 West 31st Street, New York	Commercial (office building)	Commercial	None
	406 West 31st Street, New York	Fashion Institute of Technology (FIT) Residence Hall	Residential	Two tenants of this facility identified as James Byron Photo Engraving and Expansion Group are listed in the RCRA- SQG database. This facility is also listed in the NYSDEC AST database and NY Spills database. Refer to sections 5.1.1 and 5.1.2
	432 West 31st Street, New York	Residential building with deli on ground floor	Commercial and residential	None
Southwest	450 West 31st Street, New York	Residential and commercial (art studios and apartments)	Residential and commercial	One tenant of this facility identified as Evergreene Painting Studio is listed in the RCRA- SQG database Refer to section 5.1.1
Southeast	362 9th Avenue, New York (aka 360 West 31st Street)	Multi-tenant office building	Commercial	Two tenants of this facility identified as GHG Realty and Eastman Kodak are listed in the RCRA- SQG database. Refer to section 5.1.1
Northwest	448 West 34th Street, New York	Parking lot	Commercial	None
Northeast	420 9th Avenue, New York	B&H photo/video/audio store	Commercial	B&H is listed in the RCRA-SQG database. Refer to section 5.1.1

Several listings for the surrounding properties were identified on the Federal and State regulatory databases (See Section 5.1 for details).

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by WCD Consultants (the User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

ATC was not provided with title record information from the User.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

User provided no information regarding environmental liens or activity of use limitations; however, the User contracted ATC to obtain the information. An environmental lien search was requested for the Site from EDR.

According to the Environmental Lien Search Reports, included in Appendix L, no records of environmental liens against the Site Site's lots 50 and 60 were found. The Environmental Lien Search Reports further state that no records of AULs in place at the Site were found.

4.3 Specialized Knowledge

User provided no specialized knowledge regarding *recognized environmental conditions* associated with the Site.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the Site.

4.5 Owner, Site Manager and Occupant Information

The User informed ATC that the Site is developed with two parking lots and the train yards.

4.6 Reason for Performing Phase I ESA

According to the User, the reason for conducting this ESA is in connection with a potential redevelopment of the Site.

4.7 Other User Provided Documents

Per the ASTM Standard Practice E 1527-05 ATC obtained the documents listed below from User. Further discussion may be found in relevant sections of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
ASTM-05 Questionnaire completed by WCD	August 13, 2007	Mr. Rick Gimello
Environmental Investigation Report	April 9, 1991	Hazardous Waste Engineering Consultants (HWE)
Environmental Site Assessment Report (block 729, lot 60)	February 1995	EEA, Inc

Copies of the abovementioned questionnaire and reports are provided in Appendices D and H.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the Site. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the Site based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as a being within the approximate minimum search distance from the Site based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. It is noted that the search radius for the LTANKS database has been reduced from one-half mile to one-quarter mile based on the densely developed urban nature of the Site area. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Site Listed?**	**# Sites Listed**
Federal National Priority (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	1
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Site & Adjoining	No	8
Federal Institutional Control/Engineering Control Registry	Site	No	0
Federal Emergency Response Notification System (ERNS)	Site	No	0
Federal Facility Index System (FINDS)	Site	No	0
State and Tribal NPL	1 mile	No	0
State and Tribal CERCLIS	½ mile	No	0
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	2
State and Tribal Leaking Storage Tank Incident Reports (LTANKS)	¼ mile	No	31
State and Tribal Registered Petroleum Bulk Storage Tank (UST/AST)	Site & Adjoining	No	7
State and Tribal Institutional Control/Engineering Control Registry	Site	No	N/A
State and Tribal Voluntary Cleanup Site (NY VCP)	½ mile	No	1
State and Tribal Brownfield Sites	½ mile	No	0
State Spills (NY Spills)	Site & Adjoining	No	4
NY MANIFEST	Site & Adjoining	No	7

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Site Listed?**	**# Sites Listed**
EDR Manufactured Gas Plants	1 mile	No	6
NY E Designation	Site	**Yes**	N/A

As the above table indicates, the Site was identified on the NY E Designation database. The following subsections provide a discussion of the listings for the Site and surrounding properties, which have been identified within the corresponding search radii.

5.1.1 Federal Agency Database Findings

The following listings with a potential for release and impact on the Site were identified in the Federal agency databases searched:

James Banyon Photo Engraving / Expansion Group (basement)
406 West 31st Street
New York, NY
Databases: Resource Conservation and Recovery Act (RCRA)-Small Quantity Generator (SQG), NY Manifest
Approximate Distance from the Site: Adjacent to the South
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, the tenant James Banyon Photo Engraving of this adjoining property is identified as a small quantity waste generator with one reported violation. The reported violation is associated with annual reporting requirements and compliance was achieved on 09/24/97. According to the NY Manifest, this facility has disposed of 885 gallons of Silver waste in 1996 and 60 gallons in 1997. Another tenant of the same adjoining property, Expansion Group, is identified in the RCRA-SGQ database with no reported violations.
Discussion: This adjoining property is depicted with a multi tenant commercial building which occupies the full footprint of the lot. The building is connected to the municipal sanitary/sewer services. Based on the fact that no significant violations were reported for the adjoining property coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider these listings to represent a *recognized environmental condition* for the Site.

GHG Realty Co Inc / Eastman Kodak
360 West 31st Street
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the Southeast
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, the tenant GHG Realty of this adjoining property is identified as a small quantity generator with no reported violations. According to the NY Manifest, this facility disposed of 185 gallons of Non-listed corrosive waste in 2006 and 220 gallons of Halogenated Solvents and Still Bottoms waste in 1995. Another tenant of the same adjoining property, Eastman Kodak, is also identified in the RCRA-SGQ database with no reported violations. Reportedly, this tenant disposed of several small amounts of D-001 Non-ignitable wastes in 2002.

Discussion: This adjoining property is depicted with a multi tenant commercial building which occupies the full footprint of the lot. The building is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported for the adjoining property coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider these listings to represent a *recognized environmental condition* for the Site.

Knickerbocker Graphic Services
424 West 33rd Street, 8th floor
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the north
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, one tenant of the 8th floor of this adjoining property, identified as "Knickbocker Graphic Services", is listed in the RCRA- conditionally exempt SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed of several amounts of halogenated solvents and still bottoms.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Daily News LP NY Headquarters / Art Carved Inc.
450 West 33rd Street
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the West
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, one tenant of the 3rd floor of this adjoining property, identified as "Daily News", is listed in the RCRA- SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed of 50 gallons of Silver of in 1995. Another tenant of the same adjoining property is also listed in the RCRA-SQG with no reported violations. No manifests were available for review on this facility.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

B&H Inc
420 9th Avenue
New York, NY
Databases: RCRA- SQG
Approximate Distance from the Site: Adjacent to the East
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, this adjoining property is listed in the RCRA- SQG database with no reported violations. No waste manifests were available for review.

Discussion: This adjoining property is used as photographic equipment /electronics store. The area is connected to the municipal sanitary/sewer services and the building occupies the full footprint of the lot. Based on the fact that no violations were reported, coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Evergreene Painting Studios
450 West 31st Street – 7th Floor
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the Southwest
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, this tenant of the 7th floor of this adjoining property is listed in the RCRA- SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed several amounts of Halogenated solvents and still bottoms between 1988 and 2006. Additionally, this facility disposed of unknown waste between 2000 and 2006.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Manhattan General Mail Facility
West 29th & 9th Avenue
New York, NY
Databases: Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) - Federal CERCLIS No Further Remedial Action Planned (NFRAP)
Approximate Distance from the Site: 721 feet to the south
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: This CERCL-NFRAP facility identified as "Manhattan General Mail Facility" was not listed on the NPL and became an archive facility on September 15, 1993.
Discussion: Based on the distance, regulatory status, lack of reported releases, and assumed crossgradient position, ATC concludes that this listing does not represent a *recognized* environmental condition for the Site.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release on the Site.

5.1.2 State and Tribal Database Findings

The following listings with a potential for release and impact on the Site were identified in the state and tribal databases searched:

Lot 50, Tax block 729
371 9th Avenue
Manhattan, NY
Databases: NY E DESIGNATION
Approximate Distance from the Site: on-Site
Assumed Groundwater Gradient: N/A

Regulatory Data Summary: The Site's block 729 lot 50 is listed in the NY E Designation database. The E designation is associated with air, noise and hazardous chemicals (petroleum storage tanks).
Discussion: According to the review of the New York City Department of City Planning zoning maps and New York City Department of Building records, The Site's block 729, lot 60 is also identified as having an "E" designation. An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The classification of the Site with an "E" designation is considered to represent a *recognized environmental condition* for the Site.

424 West 33rd Street Associates
424 West 33rd Street
New York, NY
Databases: UST
Approximate Distance from the Site: adjacent to the north
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: This adjoining property is listed in the underground storage tanks (UST) database with an active 7,500-gallon #6 fuel oil UST. No spills or releases were reported associated with this facility.
Discussion: Based on the lack of reported releases, the on-Site UST is not considered to represent a *recognized environmental condition* for the Site.

St. Michaels School
425 West 33rd Street
New York, NY
Databases: LTANKS, AST
Approximate Distance from the Site: adjacent to the north
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The Site was identified on the AST database (PBS number 2-056022) with one active 7,500-gallon #2 fuel oil aboveground storage tanks (AST). This adjoining facility is also listed in the LTANKS database with two closed spills. Spill number 9608649 was attributed to the Site on 10/11/96 due to a tank overfill that caused the release of approximately 25-gallons of oil into the ground. The spill was cleaned up and the spill case was closed on 10/11/1996. Spill number 0606006 was attributed to this facility on 08/24/06 due to a tank leak that caused the release of approximately 200 gallons of fuel oil. The fuel oil was contained in the secondary containment and no drains or sewer were reportedly affected. The oil was pumped out and the tank was reportedly replaced. The spill case was closed on 09/11/2006.
Discussion: Based on regulatory status, ATC concludes that this adjoining facility is not considered to represent a *recognized environmental condition* for the Site, since all of the listed spill cases have regulatory closure.

450 West 33rd Street
450 West 33rd Street
New York, NY
Databases: UST, AST
Approximate Distance from the Site: adjacent to the west

Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This adjoining property is listed in the underground storage tanks (UST) database with an active 3,000-gallon #2 fuel oil UST. This property is also listed in the AST database with two active 3,000-gallon diesel ASTs. No spills or releases were reported associated with this facility.
Discussion: Based on the lack of reported releases, the adjoining property UST and ASTs are not considered to represent a *recognized environmental condition* for the Site.

406 West 31st Street
406 West 31st Street
New York, NY
Databases: AST, NY Spills
Approximate Distance from the Site: adjacent to the south
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This adjoining property is listed in the AST database with one closed and removed 550-gallon AST, a closed and removed 14,500-gallon #2 fuel oil AST, a closed 15,000-gallon #6 fuel oil AST, an active 2,000-gallon #2 fuel oil AST and a 16,000-gallon #2 fuel oil AST. The two active ASTs were installed on 05/17/2006. This facility is also listed in the NY Spills database with two closed cases.

- Spill number 0310638 was attributed to this property on 12/15/2003 due soil contamination identified in the fill ports. Reportedly, during a phase I/phase II investigation preformed at the Site soil borings installed next to two fill ports evidenced soil contamination down to approximately 4-5 feet below ground. The sidewalks were removed and the soils were excavated until soil samples results were below the New York City criteria. The spill case was closed by the NYSDEC on 03/21/2007.
- Spill number 9914517 was attributed to this property on 03/23/00 due to a transformer oil spill identified on vaulted ConEd transformer. Reportedly, 5 gallons of dialectic transformer fluid were identified in a vault. Reportedly there were no entryways to sewer or waterways. The oil spill was cleaned up on 03/29/2000 and the equipment was removed and replaced. The spill case was closed by the NYSDEC on 10/03/03
- Spill number 9606711 was attributed to this facility on 06/01/96. Reportedly, "Kingsklawn Press", a former tenant of the 13th floor of the building was dumping printing chemicals down the toilets. The building is reported to be connected to the municipal sewer. The spill case was closed by the NYSDEC on 08/26/1996.

Discussion: Based on the remedial activities preformed at this facility, closed status of the spills and aboveground of the tanks, the adjoining property listings are not considered to represent a *recognized environmental condition* for the Site.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release on the Site.

5.1.3 Local Environmental Records Sources

New York City Department of Health and Mental Hygiene (NYCDOHMH)

The NYCDOHMH maintains files of health-related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen complaints regarding asbestos issues, lead-based paint violations, or reports of chemical odors or fumes. NYCDOHMH information

concerning the Site was requested in a Freedom of Information letter (FOIL). As of the writing of this report, ATC had not yet received a response from the NYCDOHMH. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Department of Environmental Protection (NYCDEP)

NYCDEP information concerning the Site was requested in a FOIL request. As of the writing of this report, ATC had not yet received a response from the NYCDEP. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Fire Department (FDNY)

The FDNY, Bureau of Fire Prevention maintains information pertaining to gasoline and petroleum bulk storage tanks. FDNY information concerning the Site was requested in a Record Search Request Application. As of the writing of this report, ATC had not yet received a response from the FDNY. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Department of City Planning (NYCDCP)

ATC reviewed the NYCDCP Zoning Map from the NYCDCP website (http://www.nyc.gov/html/dcp/home.html), which indicated that the Site is located in an area that is currently zoned as M1-6– "Manufacturing District. Both lots of the Site have been identified as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "hazmat, noise and air." An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. Additionally, according to the review of the "*No. 7 Subway Extension - Hudson Yards Rezoning and Development Program Final Generic Environmental Impact Statement, dated 2004*" available at the NYCDCP website http://www.nyc.gov/html/dcp/html/hyards/eis.shtml, both lots of the Site were proposed to be mapped with an "E" designation for hazardous materials (related to petroleum and non-petroleum contamination), noise attenuation, and air.

New York City Department of Buildings (NYCDOB)

ATC reviewed available building department information, provided by the NYCDOB via the on-line Building Information System website (http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp). The Site is designated as Block 729, Lots 50 and 60. There are no open Environmental Control Board (ECB) or Department of Buildings (DOB) violations on lot 60 of the Site. Lot 50 of the Site has no open ECB violations; however, this lot has five active Department of Buildings (DOB) violations relating to boiler issues. These reported violations are not related to environmental issues and therefore are not considered to represent a recognized environmental condition for the Site.

New York City Department of Finance

ATC reviewed available tax files at the New York City Department of Finance website (http://www.nyc.gov/html/dof/html/home/home.shtml) for information on the Site. The current owner of Lot 50 is identified as "Brookfield Properties" and the current owner of lot 60 is identified as "9th and 33rd Associates." The review of tax files did not identify conditions indicating *recognized environmental conditions* at the Site or surrounding area.

Water Utility

Within the City of New York, potable water is supplied to Manhattan primarily from upstate New York reservoirs. ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website (http://www.nyc.gov/html/dep/home.html) for the year 2004. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the United States Environmental Protection Agency Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the Site.

Sewer Utility

The NYCDEP is responsible for the municipal combined sanitary and stormwater sewer system. This system is operational in all five boroughs of New York City, with the exception of certain remote areas of the City, namely Queens and Staten Island, which have separate operating systems for sewage and stormwater. The New York City sewer infrastructure consists of a 6,000-mile grid of sewers beneath the streets, from which a daily 1.3-billion gallon wastewater effluent travels to 14 separate water pollution control plants (WPCPs) throughout the City to be processed. This system enables the City's sewage and stormwater, pursuant to various municipal, state and federal regulations, to be treated to near drinking water-quality standards.

Electrical and Natural Gas Utility Companies

The local utility, Consolidated Edison, provides electric service and natural gas to the Site.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle, *Central Park, N-Y* dated 1995; the elevation of the Site is approximately 28 feet above mean sea level. The area surrounding the Site indicates topography that slopes to the southwest.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

According to the New York Department of Environmental Conservation, Water Power and Control Commission report titled *Ground Water in Bronx, New York, and Richmond Counties, with Summary Data on Kings and Queens Counties, New York City, New York*, the Site Area is located in a southern extension of an upland area that covers a large part of New England. Manhattan has been extensively eroded by pre-glacial stream action, modified by later glacial erosion and deposition. A thick layer of unconsolidated glacial and glaciofluvial deposits are present beneath the section of Manhattan in which the Site is located. The sediments were deposited into a deep north-south oriented depression in bedrock in the area. The process that formed the depression is unknown, but may be attributable to the differential

weathering rates of various rock types through pre-glacial alluvial erosion. In addition, a major east-west oriented fault is present in bedrock in the area. The thickness of the unconsolidated sediment beneath the Site is 40 to 100 feet.

5.2.3 Soils

According to EDR, soils beneath the Site are classified as Urban Land, with variable soil textures. Urban Land refers to soils that have been altered by urban development such as buildings and streets, where at least 85 percent of the surface is covered with asphalt, concrete or other impervious building material. Typically, these soils have been mixed with other materials, such as brick and concrete, and characteristics can only be determined by on-site investigation.

5.2.4 Hydrology

Based on the surface topography at the Site, groundwater flow is assumed to be to the southwest. Estimated groundwater levels and/or flow direction may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations. ATC observed no evidence of active or inactive water supply wells at the Site. There are no surface water bodies or streams located at the Site. The nearest water body, the Hudson River, is located at approximately 1,300 feet to the west of the Site. Based on the Site's elevation and close proximity to the Hudson River, groundwater beneath the Site is estimated to be encountered at approximately 20 feet below ground.

Stormwater runoff originating from the Site is discharged to the combined municipal sanitary/stormwater system located in the streets surrounding the Site.

5.2.5 Other Physical Setting Sources

Flood Plain Map

ATC reviewed a Flood Insurance Rate Map (FIRM) depicted in the EDR Radius Map regulatory agency database report. According to FIRM map – Community Panel # 3604970039B, the Site is not located within a 100- and 500-year floodplain zone. A copy of the flood plain map is available for review in the EDR Radius Map report included in Appendix E.

Wetlands Map

ATC reviewed a National Wetlands Inventory Map depicted in the EDR Radius Map regulatory agency database report. According to wetlands map – *Central Park, NY* quadrangle, the Site is not located within a designated wetlands area.

A copy of the National Wetlands Inventory map is available for review in the EDR Radius Map report included in Appendix E.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical Site and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Site	**Surrounding Area**		
Prior to 1940	Train yard and a furniture warehouse since at least 1911. A garage with underground storage tank in 1930.	Commercial and light industrial	Sanborn maps (1890, 1899, 1911 and 1930), City Directories (1920, 1923, 1927, 1931, 1934 and 1938), Topographic maps (1897)	First map reviewed dated 1890. Data gaps between 1899 and 1911, and between 1912 and 1920.
1940-1960	Train yard, furniture warehouse, auto repair shop, filling station, contractor's yard, and parking lots.	Commercial and residential	Sanborn maps (1950), City Directories (1942, 1947, 1950, 1956 and 1958), Topographic maps (1947, 1955 and 1956)	No significant data gaps.
1961-1980	Train yard, parking lots, and a vacant lot.	Commercial and residential	Sanborn maps (1976 and 1979), City Directories (1963,1968,1973 and 1978), Topographic maps (1967 and 1979)	No significant data gaps.
1981 to present	Train yard and parking lots.	Commercial and residential	Sanborn maps (1982, 1985, 1987, 1988, 1991, 1992 and 1993), City Directories (1983, 1988, 1993, 1998, 2000), Topographic maps (1981 and 1995)	No significant data gaps.

In accordance with ASTM standards, ATC attempted to review the historical uses of the site back to obvious first development, or back to 1940, whichever is earlier. Despite the data gaps noted in the Historical Use Summary table, the Site usage appeared unchanged over the period in which the gaps were identified. Historical information sources researched in this assessment allowed uses of the Site to be traced from the present back to 1895. This does not predate the Site's obvious first developed use, per ASTM Standard Practice E 1527-05 § 8.3.2., and therefore constitutes historical data failure. Based on the documented use of the Site, this historical data failure does not significantly impact the findings of this report. As such, the requirements of ASTM Standard Practice E 1527-05 §8.3.2.1 §8.3.2.2 have been satisfied and, as stated in ASTM Standard Practice E 1527-05 §8.3.2.3, the historical research is considered complete.

5.3.1 Aerial Photographs

ATC did not review aerial photographs as part of this assessment. Based on ATC's experience, little useful information was expected from a review of aerial photographs due to the urban density and long-term development of the Site and surrounding area.

5.3.2 Fire Insurance Maps

ATC reviewed available historical Sanborn fire insurance maps of the Site and surrounding areas in order to identify historical land use that may have involved hazardous substances and petroleum products. Historical fire insurance maps from the years 1890 through 1996 were reviewed to determine historical uses of the Site. The following are descriptions and interpretations from the fire insurance map reviews:

FIRE INSURANCE MAP SUMMARY	
Year	**Comments**
1890	**Site:** The Site is not shown on this Sanborn map. **Surrounding Area:** Surrounding properties to the north, east, and west are not depicted on these Sanborn maps. Surrounding properties to the south are depicted with a paper hangings manufacturer and a church.
1899	**Site:** The Site is not shown on this Sanborn map. **Surrounding Area:** Surrounding properties to the north, east, and west are not depicted in these Sanborn maps. Surrounding property to the south that was formerly occupied by the paper hangings manufacturer is now vacant.
1911	**Site:** The Site appears to be depicted with a train yard on the central portion of the Site, a chair manufacturer on the southwest portion of the Site (429-435 West 31st Street), a fire house on the northern portion of the Site (440 West 33rd Street), and residential dwellings. **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a wood working shop, church/school, news company, and hospital. Surrounding properties to the west are depicted with a chocolate factory and residential dwellings. Surrounding properties to the south and east are not shown on this map.
1930	**Site:** The Site is depicted with a train yard on the central portion, a furniture warehouse on the southwest portion of the Site (429-435 West 31st Street), an iron works facility on the northern portion of the Site (412 West 33rd Street), a garage with an 2,000-gallon buried gasoline tank on the northeast portion of the Site (401-405 9th Avenue), and residential dwellings. **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a wood working shop, church/school, a wood supply storage building, and a printing company. Surrounding properties to the west are depicted with a theatrical storage building, filling station with underground tanks, and a film studio. Surrounding properties to the south and east are not shown on this map.
1950	**Site:** The Site is depicted with a furniture warehouse on the southwest portion of the Site (429-435 West 31st Street), auto repair shop on the southern portion of the Site (427 West 31st Street), train yard on the central portion of the Site, filling station on the northeast portion of the Site (401 9th Avenue), parking lots, and a contractor's yard on the northwest portion of the Site (440-442 West 33rd Street). **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a parking lot, church/school, a printing company, residential dwellings, and a vacant lot. Surrounding properties to the west remain largely unchanged from the 1930 Sanborn map, aside from the apparent addition of a machine shop and another filling station. Surrounding properties to the south and east are not shown on this map.
1976,1979, 1980,1982, 1985,1987,	**Site:** The Site is depicted with a train yard on the central portion of the Site, two parking lots, and a vacant lot on the southern portion of the Site. **Surrounding Area:** Surrounding properties to the north and northeast appear relatively

1988,1991, 1992	unchanged from the 1950 Sanborn map. Surrounding properties to the west are depicted with one large building labeled as the Westyard Distribution Center. Surrounding properties to the south and east are not shown on this map.
1993,1994, 1995,1996	**Site:** The Site appears to be depicted with the current improvements. It is shown to have a train yard on the central portion of the Site and three parking lots. **Surrounding Area:** Surrounding properties appear relatively unchanged from the 1992 Sanborn map.

According to the review of the historical sanborn maps, the train yards that currently occupy the central portion of the two lots (lot 50 and lot 60) of the Site were built in approximately 1911. Prior to their construction, this portion of the Site was occupied with the West 32nd Street, dwellings with stores on ground floor and a church.

The northern parking lots, on lot 60, along West 33rd Street have been present at the Site since approximately 1950. The 1950 Sanborn map identifies the presence of a filling station on the northeastern portion of the parking lot, on the corner of 33rd Street and 9th Avenue. Prior to be used as parking lots, the northern portion of the Site was used as dwellings and stores and a garage on which a buried tank is identified.

The parking lot on lot 50 of the Site, along West 31st Street has been present at the Site since approximately 1993. Prior to being used as a parking lot, this portion of the Site was depicted with dwellings and a hanging factory in 1899; dwellings and a furniture factory from 1911 to 1930; a dwelling, an auto repair shop, a mechanical shop, an auto parking on which a gas tank is identified, and a warehouse in 1950. From 1976 to 1993 this portion of the Site was depicted as vacant

Surroundings properties were historically used as dwellings, commercial buildings, the train yards, a printing facility and a filling station.

The review of the historical uses of the Site identified the Site to be used as a train yard, a car repair shop, filling stations, auto repair and mechanical shop. A filling station, the train yards and a printing facility were identified in the surrounding properties. These identified historical activities typically use petroleum products, solvents, and other hazardous chemicals in their routine operations. Therefore, the historical uses of the Site and surrounding area are considered to represent a *recognized environmental condition* for the Site. Copies of the fire insurance maps are provided in Appendix G.

5.3.3 Site Tax Files

ATC reviewed available tax information from the New York City Department of Finance website for historical ownership information on the Site. ATC reviewed the available final assessment rolls available for the years 2003, 2004, 2005, 2006, and 2007. The owner of lot 50 of the Site is identified as Brookfield Properties, Ltd for the years 2006 and 2007 and West 31st Street Inc for the years 2003 through 2005. The owner of lot 60 of the Site is identified as 9th and 33rd Associates for all years reviewed. Documentation is included in Appendix G. The review of tax files did not identify past uses indicating *recognized environmental conditions* at the Site.

5.3.4 Recorded Land Title Records

The acquisition of a chain-of-title report was not a part of the scope of services for this ESA.

5.3.5 Historical USGS Topographic Quadrangles

ATC reviewed five historical USGS topographic quadrangles of the Site and surrounding area dated 1947, 1966, 1979, and 1995. All of the maps depict the Site with the train yards. The surrounding areas are depicted with scattered structures, which include the United States Postal Service on 9th Avenue and Madison Square Garden. The review of historical topographic maps did not identify past uses indicating any *recognized environmental conditions* at the Site or surrounding areas; however, the long term use of the Site as a train yard is considered to represent an environmental concern for the site.

5.3.6 City Directories

ATC reviewed historical city directories for the Site for 1920, 1923, 1927, 1931, 1934, 1938, 1942, 1947, 1950, 1956, 1958, 1963, 1968, 1973, 1978, 1983, 1988, 1993, 1998 and 2000 as provided by EDR. The following table summarizes the city directory review:

YEAR	DESCRIPTION
1920	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with a printing facility, embroidery works, a book binding company, a linotyping company, and a trucking company.
1923	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including printing, publishing, typesetting, engraving and lithography facilites, a book bindery, a glue company, a stone company, motor transportation companies, and a gold company.
1927	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including printing, publishing and lithography facilities, a book bindery, a glue company, a stone company, motor transportation companies, and a gold company.
1934	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/ light industrial listings including an electro chemical company, a shoe shiner, and printing and publishing facilities.
1938, 1942	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, and a textile company.
1947	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, a check duplication company, a plastic manufacturer, and a textile company.
1950, 1956, 1958, 1963	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, a check duplication company, and a textile company.
1968, 1973	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a parking lot, printing/publishing/lithography facilities, a jewelry manufacturer, a fur dressing facility, a truck company, and a check duplication facility.
1978	**Site:** Site address is not listed in research source.

YEAR	DESCRIPTION
	Surrounding Properties: Surrounding properties are listed with multiple commercial/light industrial listings including a parking lot, a mounting/finishing facility, printing/publishing/lithography facilities, a jewelry manufacturer, a fur dressing facility, a truck company, and a check duplication facility.
1983	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, and printing/publishing/lithography facilities.
1988, 1993	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, a belt manufacturer, and a machine manufacturer, and printing/publishing/lithography facilities.
1998, 2000	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, a belt manufacturer, and a machine manufacturer, a thermography facility, a towing company, and printing/publishing/lithography facilities.

ATC's review of historical city directories identified no listings for the Site. Surrounding properties listings included several printing, publishing, and lithography facilities, motor companies, an electro chemical company, fur dressing and dying facilities, and a metal company. The identified historical uses of the surrounding properties are considered to represent a *recognized environmental condition* for the Site. Copies of the EDR City Directory Abstract are provided in Appendix G.

5.3.7 Building Department Records

ATC reviewed available building department information provided by the NYCDOB via the on-line Building Information System website (http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp). The Site is designated as Block 729 Lots 50 and 60. Certificates of Occupancy and building permits were available for review. The following are descriptions and interpretations from the department of building records: review:

LEGAL DESCRIPTION	CERTIFICATES OF OCCUPANCY REVIEW	ENVIRONMENTAL CONCERNS
Block 729, Lot 50: 371 9th Avenue	Five certificates of occupancy were available for years 1937, 1939, and 1970. Two each for the years 1939 and 1970. In 1937, 425 West 31st Street on the Site is identified as a storage area in the cellar and a garage for two cars on the first story. The 1939 certificates identify 415-417 West 31st Street on the Site as a gasoline service station and parking and storage for more than five motor vehicles. It identifies one 550-gallon gasoline tank on the Site. The 1970 certificates identify 425 West 31st Street on the Site as a public parking lot for 149 cars and two temporary attendants' shelters.	Historic gasoline tank
Block 729, Lot 60: 9th Avenue	Four certificates of occupancy were available for the years 1921, 1944, 1947 and 1972. The 1921 certificate identifies 401-405 9th Avenue on the Site as a garage on the first floor with a boiler room in the cellar. The 1944 certificate identifies 401-409 on the Site as parking and storage for more than five motor vehicles and a gasoline service station. It identifies gasoline tanks on the Site. The 1947 certificate identifies 405 9th Avenue on the Site as a gasoline service station, parking lot and office. It identifies gasoline tanks on the Site. The 1972 certificate identifies 401-409 9th Avenue and 400-410 West 33rd Street on the Site as parking for 115 motor vehicles.	Historic gasoline tanks

ATC's review of historical department of building records identified several historical petroleum tanks at the Site. None of the identified tanks appear to be registered in the NYSDEC Petroleum bulk storage database provided in the EDR report. The historical use of the Site as filling stations is considered to represent a *recognized environmental condition* for the Site. Copies of the department of building records are provided in Appendix D.

5.3.8 Zoning/Land Use Records

ATC reviewed the NYCDCP Zoning Map from the NYCDCP website, which indicated that the Site is located in an area that is currently zoned as M1-6 – "Manufacturing." Historical zoning information would require a manual search of past zoning maps at the NYCDCP. Since historical information regarding the Site dating back to the late 1800s was obtained from other sources used for this assessment and no significant data gaps were identified, ATC did not request a search of past zoning maps.

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Environmental Site Investigation of 9th Avenue and 31st Street	April 9, 1991	Hazardous Waste Engineering Consultants, Inc. (HWE)
Phase I Environmental Site Assessment at Block 729 lot 60	February 1995	EEA, Inc

Environmental Site Investigation of 9th Avenue and 31st Street, dated April 1991 prepared by HWE

HWE conducted an Environmental Site Assessment (ESA) for Olympia and York Construction Co. in April 1991. The purpose of the investigation was to identify areas of contaminated soil and railroad bedding which may require remedial action prior to the development of the Site. A total of 12 grab samples of the soil were collected from 12 point locations on the railroad tracks. The soil samples were collected from 0 to 0.5 feet (surficial) and 1 to 1.5 feet (deep) intervals below ground. The 12 samples (12 shallow samples and 12 deep samples) were composited in 6 samples (6 surficial samples and 6 deep samples). The 6 surficial samples were analyzed for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals) and Priority Pollutant Base/Neutral/Acid Extractable Compounds + 25 (PBNA+25). The 6 deeper samples were submitted for analysis for Priority Pollutant Volatile Organic Compounds+15 (PPVO+15), Priority Pollutant Pesticides/PCBs and Herbicides. Based on the results obtained HWE concluded that elevated levels of TPHC, cadmium copper, lead, mercury, zinc, PPBNA+25 and PCBs were identified, when compared to industrial standards action levels (no New York State standards were available in 1991). HWE recommended additional investigation at the Site.

ATC's review of the HWE Site investigation report identified the presence of petroleum related contamination, metals and PCBs contamination at the Site. No remedial action or additional investigation reports were provided for review. Since the contamination may still be present at the Site, ATC considers the identified contamination to represent a *recognized environmental condition* for the Site.

Phase I Environmental Site Assessment at Block 729 lot 60 prepared by EEA Inc., dated February 1995

EEA conducted a Phase I Environmental Site Assessment (ESA) for Rosenman & Colin in February 1995. The purpose of the investigation was the identification of environmental conditions indicating the potential for significant contamination of the subject property by toxic and hazardous materials and chemical products.

EEA identified the subject property to be depicted with the train railroads and two parking lots. The review of historical information identified former uses of the subject property as residential; two industrial buildings used as printing facilities; an iron works facility, a garage with a 1,000-gallon buried gasoline tank and a filling station. The fire department records requested to the FDNY did not reveal that the former tanks at the Site were closed or removed; therefore EEA concluded that there is the potential for the presence of buried tanks at the Site.

ATCs review of the former phase I ESA preformed at the northern portion of the Site (block 729, lot 60) by EEA revealed the same concerns related to historical uses of the Site as ATC identified by the review of historical information (refer to sections 5.3.1 to 5.3.8).

5.3.10 Other Historical Sources

No other historical sources were reviewed during this assessment.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the Site on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of: the Site and improvements; adjoining properties as viewed from the Site; and, the surrounding area based on visual observations made during the trip to and from the Site. Unimproved portions of the Site were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. The site visit and area reconnaissance were conducted by Ms. Isabel Ribeiro, ATC Project Manager, on August 16, 2007. Weather conditions during the site visit consisted of clear skies with no visibility limitations. ATC was not provided access to the train yards.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC did not observe the use, storage or disposal of hazardous substances, including hazardous wastes, on the Site.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs at the Site and no active USTs were identified in the UST database (Section 5.1.2); however ATC identified the presence of historical USTs at the Site (Section 5.3.2). None of the former tanks were identified in the NYSDEC database; however since the former on-Site structures were demolished more than 40 years ago, no records are expected to be found. Any buried tanks that were not removed during demolition operations could potentially remain on-Site.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs at the Site and no active ASTs were identified in the AST database (Section 5.1.2).

6.5 Other Petroleum Products

ATC did not observe the use, storage or disposal of petroleum products on the Site.

6.6 Polychlorinated Biphenyls (PCBs)

ATC did not observe evidence of the use, storage or disposal of potential PCB-containing transformers, lifts, or other equipment at the Site; however, transformers are typically present on railroads and train yards. Since no access was provided to the train yards located at the Site, the presence of transformers could not be confirmed.

The review of a prior report prepared by HWE in 1991 identified the presence of PCB contamination within the train yard at the Site. Refer to section 5.3.9 for details.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the Site.

6.8 Non-hazardous Solid Waste

No municipal waste is currently generated at the Site.

6.9 Wastewater

No industrial or domestic wastewater is generated at the Site.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons at the Site.

6.11 Sumps

ATC did not observe evidence of sumps at the Site.

6.12 Septic Systems

ATC did not observe evidence of a septic system at the Site.

6.13 Stormwater Management System

Stormwater runoff at the Site drains to catch basins located along West 33rd Street and Wes 31st Street that discharge to the municipal combined sanitary and stormwater sewer system.

6.14 Wells

ATC did not observe evidence of wells on the Site.

7.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the Site:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Site**	**Interview Type**
Developer	Mr. Rick Gimello	Vice President – Senior Consultant of WCD	unknown	Telephone and email
Local Govt. Official	New York City Fire Department	New York City Fire Department	N/A	FOI letter
Local Govt. Official	New York City Department of Environmental Protection	New York City Department of Environmental Protection	N/A	FOI letter
Local Govt. Official	New York City Department of Health and Mental Hygiene	New York City Department of Health and Mental Hygiene	N/A	FOI letter

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Asbestos-Containing Material (ACM)

Based on the absence of buildings at the Site, no asbestos survey was conducted.

8.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

According to the USEPA, New York, is located within Zone 3, indicating that the average predicted indoor screening level for radon will generally be less than 2.0 picoCuries per liter (pCi/L). Based on this Zone designation, ATC does not consider radon to represent an environmental concern for the Site.

8.3 Lead in Drinking Water

Within the City of New York, potable water is supplied to Manhattan primarily from upstate New York reservoirs. ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website (http://www.ci.nyc.ny.us/html/dep/home.html) for the year 2005. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the United States Environmental Protection Agency Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the Site.

8.4 Lead-Based Paint (LBP)

Based on the absence of buildings at the Site, no LBP survey was conducted.

8.5 Mold Screening

Based on the absence of building structures at the Site, no mold screening was conducted.

APPENDIX D

USER PROVIDED DOCUMENTATION

ATTACHMENT D
CLIENT QUESTIONNAIRE

Per ASTM Standard Practice E 1527-05, Section 6, User Responsibilities, the User of an ESA has specific obligations for performing tasks during the ESA that will help identify the possibility of *recognized environmental conditions* in connection with the Site. Failure by the User to fully comply with the requirements may result in a *data gap* being identified in the report and may impact their ability to use the report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). If this questionnaire is not returned to ATC prior to issuance of the draft report, then ATC assumes that the User does not have any information or actual knowledge pursuant to ASTM Standard Practice E 1527-05, Section 6, User Responsibilities. ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

Please complete the following and return immediately via email or fax to the attention of:
Doug Glorie at doug.glorie@atcassociates.com or (212) 979-8447
If other parties are intending to be the Users of the ESA report, then please forward a copy of this questionnaire for them to complete and return to ATC.

Site Name: 9th Avenue Train Yards

Site Address: 9th Avenue and 33rd St.

ATC Project Number:

Please provide the following information (if available) per the requirements of ASTM E 1527-05.

1. Environmental cleanup liens that are filed or recorded against the Site (40 CFR 312.25)

Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law? Yes ☐ or No ☑

If yes, please provide a description of the lien(s).

2. Activity and land use limitations (ALUs) that are in place on the Site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law? Yes ☐ or No ☑ If yes, please provide.

3. Specialized knowledge or experience of the person seeking to qualify for the Landowner Liability Protections (40 CFR 312.28)

As the user of this ESA do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ☐ or No ☑ If yes, please explain.

4. Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)

a. Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? Yes ☐ or No ☐

N/A

b. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

Yes ☐ or No ☐ If yes, please explain.

N/A

5. Commonly known or reasonably ascertainable information about the Site (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user.

a. Do you know the past uses of the site? Yes ☑ or No ☐ If yes, please state.

1995 Phase I

b. Do you know of specific chemicals that are present or once were present at the Site?
Yes ☐ or No ☑ If yes, please state.

c. Do you know of spills or other chemical releases that have taken place at the Site?
Yes ☐ or No ☑ If yes, please state.

6. Do you know of any environmental cleanups that have taken place at the Site?
Yes ☐ or No ☑ If yes, please state.

7. The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?
Yes ☑ or No ☐ If yes, please explain.

Portions of the site currently operating Rail Yard

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 03/21/2007 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
MANHATTAN GENERAL MAIL FACILIT	WEST 29TH & 9TH AVE	1/8 - 1/4 S	51	198

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

STATE AND LOCAL RECORDS

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 05/01/2007 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page

RED BALL INTERIOR DEMOLITION	625 WEST 29 STREET	1/4 - 1/2 W	195	701

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 04/02/2007 has revealed that there are 104 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 89 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 04/02/2007 has revealed that there are 21 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

NY HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY Hist Spills sites within approximately 0.125 miles of the target property.

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 12/31/1992 has revealed that there is 1 NY RES DECL site within approximately 0.18 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 6 Manufactured Gas Plants sites within approximately 1 mile of the target property.

DEC Memo: Start DECRemark - 0310638 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SAWYER" 12/15/2003 Sangesland spoke with Matthew Stanley (212-273-5097) of NY State Dormatory Authority. His group is looking at buying this building touse as a college dorm. As part of a phase 1/2 the consultant saw a sealed fill port and an active fill port. Both had evidence of oil staining around them. 2 borings were done adjacent to these fill ports and heavy contamination was found downto approx 4-5 ft deep. At 6-8' deep there did NOT appear to be any problems. Sent Contaminated Soil Letter to: 406 Realty LLC c/o The Expansion Group Inc. 250 West 57th Street NY, NY 10107 Attn: Johny Melohn 12/21/05 Sharif// I spoke with Matthew Stanley of NYS Dormatory Authority . He said the property is currently owned by Fashion Institute of Technology(FIT)and they are building a residential unit for students. NYS Dorm. Authority is providing the financial assistance to FIT for building the Dorm.Mr. Paul Goncalves,(212)273-5043 is the Construction Project Manager on behalf of NYS Dorm. Authority.I left a message for Paul to follow up about the current status of the clean up. 02/23/06 Sharif Rahman- Another CSL wassent to Fashion Institute of Technology Seventh Avenue at 27th Street New York, NY 10001 Attn: Harbey W Spector, Vice President 03/31/06 Sharif Rahman- As per Paul's request, CSL was sent via fax #212-273-5121. Address of NYS Dormatory Authority in NYC One Penn Plaza, 52nd Floor New York, New York

OFFICE BUILDING (Continued) **S106127057**

10119-0098 212-273-5000 Fax: 212-273-5121 05/08/06 Sharif Rahman- Repeated failure to get any response from the RP required to send csl again, via certified mail(7099 3220 0010 3990 0800) to NYS Dormatory Authority One Penn Plaza,52nd Floor New York, NY 10119 Attn: Paul Goncalves 03/15/07 Rahman- Contact @ Persons & Brimkerhoff is Mike Johnston,(212)631-3705, if not call John Faeth,(212)465-5411 03/21/07 Rahman- RAP andfinal closure report on edocs.Side walk was removed to facilitate the excavation of contaminated soil.A totalof 65.34 tons of contaminated soil was removed for disposal from the area of concern.Four post excavation samples did not identify any voc/svocs above TAGM.Area was backfilled.Waste manifest was provided to DEC.NFA required. END DECRemark - 0310638

Remarks: Start CallerRemark - 0310638 outside on sidewalk from overfiling the tank. soil borings showed some kind of petroluem in ground. unknown how long or how much. will be doing more soil borings, to see how deep . END CallerRemark - 0310638

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0606006 DEC Piper spoke w/ Charles Rose. Assistant to the principal. As per conversation, they were getting ready for winter and noticed a leak. When the janitor inspected found approx 200 gal in vaulted area. Spill is contained and in vault. PTC to respond today and pump out remaining oil and oil on floor. No drains, sewers effected. PTC to contact DEC upon completion of emergency cleanup. School is not in session and no children are present. Odors present in basement onlyand not in school. 9/11/06- DEC Piper spoke w/ Sister Katheleen, PTC had cleaned up emergency spill. Piper spoke w/ PTC, tank was above ground on concrete. Concrete was in good shape. School is going to replace tank. 6 drums of oil soaked speedydry removed. CLosed. END DECRemark - 0606006
Remarks:	Start CallerRemark - 0606006 TANK IS LEAKING IN THE TANK ROOM OF SCHOOL: CREW ENROUTE TO PUMP OUT TANK AND CLEAN UP SPILL: NO DRAINS EFFECTED: END CallerRemark - 0606006

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MANHOLE #1110 (Continued) **S106127135**

Operable Unit: 01
Material ID: 499612
Material Code: 0020A
Material Name: TRANSFORMER OIL
Case No.: Not reported
Material FA: Petroleum
Quantity: 5.00
Units: Gallons
Recovered: 0.00
Resource Affected: Soil
Oxygenate: False
DEC Memo: Start DECRemark - 0310766 William J Curtin #50,Mechanic A, I & A South found apprx. 5 gallons of transformer oil in top of approx. 3 gallons of water. He also sates that this is a bottom leak, and after inspection will be coming out OOE/2 on feeder M77. Update: At 15:13 Called and informed E/V desk that clean up will be pending transformer removal, and for now oil absorbent has been put down and has made a dike around transformer with oil absorbent. Update 12/18/03 called CIG spoketo K.Mcardle # 16516 @15:21hrs and told him of the the "Opn Status" is now -PTRAN (Pending tranformer Removal) Update 12-18-03 @ 19:59 Lab Sequence Number: 03-10076-001 Analysis indicates the presence of a substance similar to a dielectric fluid. Update 12-18-03 @ 22:20 ab Sequence Number: 03-10075-001\\ TOTAL PCB 9 ppm. Lab Sequence Number: 03-10075-002 TOTAL PCB 6 ppm Update: 3/12/04 @ 14:15 hrs. Jerry Gnall #19045, I&A Operating Supervisor reported that the transformer intthis vault is scheduled to be drained and disconnected on the 3 to 11 pm shift on 3/12/04. An Under 50 tanker and crew has been scheduled. The transformer is scheduled to be removed and replaced on the midnight shift (3/13/04). Update: 03/12/04 M.Grazia # 16040 Mech A, reports that drain and disconnet complete and that tanker removed 150 gallons from transformer, and 650 gallons of oil and water mixed from vault. (water from flush truck) 3/13/04 08:32 E. Hulser # 39723 Cable/cleanupsupervisor reports that the cleanup was completed at 08:00. The structure was double washed with Bio-Gen. The flush truck removed all debris & liquid. The spill tag # 38893 was removed. The transformer was removed & a new one installed. END DECRemark - 0310766
Remarks: Start CallerRemark - 0310766 BOTTOM LEAK, CONTAINED, NO SEWER, WATERWAYS ,SMOKE OR FIRE. CLEAN UP IS PENDING REMOVAL OF TRANSFORMER; END CallerRemark - 0310766

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0209637 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHAO/DO" 12/19/02 - AUSTIN, DDO - TTF LETTER SENT 1/11/06- DEC Piper spoke w/ Eugene Degan, (PRev. Owner Rep 845.294.7509) regarding tank test. He couldnot be sure though he thinks the tanks are still empty. He will look into this. Piper then contacted new owner Dov Hertz, Extell Group. 212.712.0633. He knows nothing and will have previous owner get info. Galden Frankel performed Phase I and II onproperty. Left message at GF requesting call back. 1/18/06- DEC Piper spoke w/ property manager, Rob Scharf 212.712.6111. Stewart Dean Co. -212.695.3180. He will fax info. DEC Piper to review and inform Rob of additional work if warranted. 2/6/06-DEC Piper spoke w/ Rob S. I explained to him that he was still in violation of PBS code. I have received analytical suggesting that there was no release at the site. The tank test results indicated a dry ullage leak. The tank is empty and still needs to be removed or closed iin place. As per Rob, he will be sending in the new appplication this week. I instructed him to include a line item that that due to the razing of the building, that they will remove the tank when the activities have beencompleted. Afterwards, he will need to update the PBS records to insicate that the tank has been removed. Upon review of a limited phase II investigation of the site performed by Galden Frankel, of the six soil samples taken from various locationsthroughout the site, no elevated constituents were detected. However, three GW samples were collected. The results indicate 1,040 ppb of MtBE and slightly elevated levels of PERC and its byproducts. 5/15/06- DEC Piper. Referred to Remediation. 5/31/06 - reviewed file: MTBE was detected without other VOCs usually present in a petroleum release. The MTBE is likely the leading edge of an off-site impact. Low level of CVOCs are also detected. These CVOCs are only detected in GW with no soil contamination or other sources on site. Spill is closed, no NFA issued since no remediation was ever conducted at site. - KST END DECRemark - 0209637
Remarks:	Start CallerRemark - 0209637 they are going to abandoned the tank END CallerRemark - 0209637

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource

AMOCO#11248/36644 (Continued) **1000556251**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks:	8/27/99 - Saccacio - on 7/31/99 I called the caller and he said that speedy-dry had been applied and that a cleanup crew was enroute. Called the spiller Tmore) and he said that he contracted tyree to do the cleanup. I asked him to send me a letter certifing the spill had been cleaned up. I called him and left him a messsage on 8/27/99 reminding him I need that letter to close out the spill
Spill Cause:	tank was overfilled at location - speedy dry applied - cleanup crew enroute - some material may have flowed into storm drain and street update 0400 hrs - spill only 5-7 gal all cleaned up - none entered waterway

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0305833 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" Sent TTF letter to consultant: Maria Ramirez,

BASEMENT OF (Continued) **S105999768**

GZA, 65 Willowbrook Blvd, Wayne, NJ 07470 11/5/2003 Sangesland spoke with Maria Ramirez at GZA. She says the building is converting to natural gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated. 12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the water for VOC and SVOC. GZA said they would also test for Floride and Clorine to determine if this water is city tap water or groundwater. If the water samples come back clean, then GZA will prepare an arguement that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number. 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the descriptionof the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride& Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure. 11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed. END DECRemark - 0305833

Remarks: Start CallerRemark - 0305833 failed a tighteness test but could not isolate a specific pipe - test was performed as part of a closure. END CallerRemark - 0305833

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

EVAN AUTO (Continued) **1004762362**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0307633 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT "10/20/03. Contaminated soil letter sent to Walter Seelig (High Ridge Enterpr.). Also see spill # 9008960. YK. 11/21/03 Rommel Met Brian McCabe, senior geologist, on site. Soil samples collected from 8 to 16 feet below grade were contaminated. Groundwater (15 to

HIGH RIDGE ENTERPRISES (Continued) **S106124184**

18 feet) was also sampled during the investigation and were impacted by BTEX and MTBE. They will excavatewhat soil they can and install a minimum of three monitoring wells (one outside by remote fills). Spill 9008960 reported TTF of 4000 gallon gas UST 11/14/1990 STIPULATION SIGNED RD 2/18/04. 3/18/04-Vought-Spoke with Rob Ferguson (631-586-4900). Subsurface Investigation report sent to DEC on 2/3/2004. Ferguson will send small CAP upon receiving subsurface investigation report review. Ferguson requires review of subsurface investigation as per STIP. Vought requested that another copy of the Subsurface investigation be sent to DEC. 4/1/04-Vought-Spoke with Tom Melia (F&N) and he requested that he be point of contact. Spill transferred from Rommel to Vought. 4/6/04-Vought-File review by Vought: Contaminated soil letter sent form DEC Krimgold to High Ridge Enterprises. Site meeting minutes (Fenley & Nicol Brian McCabe)-11/25/03. Site meetin on 11/24/03. In attendance were DEC Rommel, F&N McCabe, F&N Melia and F&N Hole. "The results of the sampling indicated that the contamination is located in the northern portion of the building. The effected area extended from the north end od the 4000 gallon tank excavation to the front of the building, approximately thirty five feet and from the center for the550-gallon tank excavation west to the side of the building, approximately twenty feet." DEC recommended additional soil excavation without comprimising structural intergrity and required 1)installation of one well inside the building after backfilling completed 2)installation of two wells on sidewalk at the location of the former remote fills and twenty feet west of the bay door. Letter from Fenley & Nicol(Thomas Melia) to DEC(Rommel)-12/18/03. "The new owner of the building indicated that his intended use for the building is as an art gallery". During building remodeling excavation was performed and tanks were discovered under floor. Two gasoline USTs (one 4000-gallon and one 550-gallon) were removed and were in separate lcoations fifteen to twenty feet apart. "Upon removal of the bottom slab the soil encountered was saturated with liquid phase hydrocarbon". Depth to water expected to be 18' below grade. F&N proposes delineation of soil and groundwater contamination, installation of wells and additional soil excavation. See also Spill #9008960 reported in 1990 for tank test failure and administratively closed on 3/4/03. Letter from DEC Rommel-12/4/03. Letter approving installation of wells on the sidewalk on the south side of West 29th Street between 10th and 11th Avenues and requesting expediting of sidewalk permits. Letter from F&N(Melia) to DEC Rommel-12/18/03. "At this time we are continuing our efforts to delineate the extent of the contamination...". Three monitoring wells installed (one inside and two outside building). "At this time the owener of ther property feels that it would be too far costly to excavate the contaminated soil without jeopardizing the structural integrityof the building, and would prefer that we install an air sparge/soil vapor extraction (As/SVE) system to remediate the hydrocarbon impact". Please indicate your approval below. No approval indicated by DEC Rommel. Stipulation Agreement-1/15/04.Stip with deadline of 2/13/04 sent to: Walter Seeling High Ridge Enterprises, Inc. P.O. Box 2542 York, Pa. 17405. Subsurface Investigation Report (F&N-Melia 631-586-4900x190) -3/19/04. Investigation consisted of six soil borings, six temporary groundwater monitoring points and three monitoring wells. "The central and eastern units are currently vacant and undergoing renovations for use as an art gallery". Depth to groundwater is 8-9' and flows northwest. Soil analyticals show 35ppb benzene(SP-1 at 12'), 882ppb benzene(SP-2 at 12'), 14ppb (SP-3 at 12'), 4900ppb benzene(SP-4 at 12'), 817ppb benzene(SP-5 at 12'). Groundwater analyticals show 2.5 ppb benzene(TW-1), 1459ppb benzene(TW-2), 45ppb benzene(YW-3), 2109ppb benzene(TW-4), 254ppb benzene(TW-5), 11ppb benzene(TW-6), 1200ppb benzene(FN-1), 206ppb benzene(FN-2), 4.2ppb benzene(FN-3). Report recommends Air Spage/Soil Vapor extraction system. NYSDEC requires: 1)signing of Stipulation before any further correspondence l

HIGH RIDGE ENTERPRISES (Continued) **S106124184**

2)presence or absence of free product and interim remedial recovery if present 3)surrounding area site plan including property usage 4)additional wells east of FN-2 and well north of FN-2 to calculate required radius of influence for system design. 4/6/04-Vought called F&N(Milea) to repeat Stipulation requirement and left message to return call to DEC. 4/7/04-Vought-Received faxed copy of STIP already implemented by DEC Kunkel on 2/18/04 (Copy of original not in file). 4/8/04-Vought-Sent letter to High Ridge requiring well installation north of FN2 and east of FN2, submission of monitoring well data and surrounding property sketch. 4/16/04-Vought-Wells will be installed next week (tentatively). Wells for pilot test will also installed. Mailing address is: High Ridge Enterprises P.O. Box 2542 York, Pa. 17405 4/18/04-Vought-Received message from David Oloke (F&N-631-586-4900x144) that he is new project manager for site. Vought called David and two additional well installed (one north of FN2 and one east of FN2). All onsite wells were sampled. No free product in new wells. Four vapor wells installed and air sparge well will be installed. DEC will receive pilot test report by 7/15/04. 6/23/04-Vought-Spoke with David and initial results faxed on 6/9/04. .5" of free product in well in 1" vapor well sent for fingerprinting. EFR not effective. DEC requires recovery of free product and submission of pilot test. 9/2/04-Vought-File review by Vought: Groundwater results (F&N)-6/23/04. Groundwater analyticals show 1.2ppb benzene(FN5), 1.8ppb benzene(FN4), 14ppb benzene(FN3), 26ppb xylene(FN3), 474ppb benzene(FN2), 621ppb MTBE(FN2), 8ppb toluene(FN2), 2065ppb benzene(FN1), 47170ppb MTBE(FN1), 4106ppb toluene(FN1) and 2761ppb xylene(FN1). Addendum to the direction beneath the site was found to be toward the north." Property uSubsurface Investigation Report (F&N)-7/14/04. On 5/7/04 two additional monitoring wells were installed. "On June 4, 2004 the AS/SVE pilot tests were conducted". One inch of floating product was detected in P2. "The results of the AS pilot test indicated that the introduction of air pressure into the formation below the contaminant zoneis a viable remediation technique". Report recommends commencement of an interim remedial measure to recover product from P-2 via weekly EFR. Report also recommends installation of another well to replace P2. Vought called David from F&N to approve of workplan. Well installation will be included with final remedial action plan. Vought sent letter approving of proposed workplan (installation of well at P2 and IRM) and included requirement of determination of groundwater flow direction andsurrounding property sketch. 9/3/04-Vought-Received fax from Oloke (F&N). "The groundwater flow sage of downgradient sites to the north are a parking garage and an art studio. Vought called Oloke and approved workplan as per 9/2/04 letter. Vought called Oloke and he will begin drafting RAP for submission to DEC. 9/29/04-Vought-Spoke to David F&N and he will be sending RAP in overnight. 10/1/04-Vought-Reviewed RAP received by DEC on 10/30/04. "Site is currently occupied by a masonary block structure which is subdivided into three sections. An art gallery occupies the western unit. The central and eastern units are currently vacant and are undergoing renovations for use as an art gallery. RAP proposes weekly recovery of free product from FN2 via a peristaltic pump until well is converted to a 2" product recovery well designated at FN6. Two additional wells will be installed in the interior of the building. Monthly groundwater monitoring and quarterly sampling. Fiveair sparge and four SVE wells will be installed in the interior of the building. Remedial system will be installed on the roof of the building. Daily monitoring for the first week, weekly monitoring for the first month, monthly maintenance visitsand effluent sampling, quarterly effluent sampling and groundwater sampling. Vought sent letter approving of RAP. 10/28/04-Vought-Spoke to David(F&N) and FN1 must be reinstalled due to it was a bent well. Wells will be installed during the nextfew days. 9/27/05 - SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO 11/9/05 - Obligado - Review System STartup Report. AS/SVE system consists of 5 HP

HIGH RIDGE ENTERPRISES (Continued) **S106124184**

compressor and 3.5 hp blower and 5 air sparge wells and four soil vapor extraction wells. Effluent air stack results show 31.4 ug/m3 for benzene. Operation and maintenance schedule proposes monthly SVE effluentmonitoring and Quarterly Status Reports. System started in May 2005. Due to noise generation, the system only runs from 9pm to 6am. Quarterly Status Report - Groundwater analyticals show 4.7 ppb benzene (FN3), 50.1 ppb MTBE (FN2), 78.3 ppb MTBE SVE5, 1.7 ppb MTBE SVE3. Benzene effluent show 46.74 ug/m3. 5/15/06 - Obligado - Called David Oloke. Asked that he send recent Quarterly Status Reports. 5/22/06 - Obligado - 2Q06 Quarterly Status Report, submitted by Fenley Nicol, Inc. Ground water analyticals show 9 ppb benzene 35 ppb MTBE in FN3 and and 3.7 ppb benzene in FN4. Benzene effluent below STIP limits. Thereis duplicated data on Table 2 Air Sampling Results, probably a cut and paste error, call Dave Oloke, he said he will look into it at send a new table with the electronic copy. Report recommends continuing system operation. 6/23/06 - Obligado - Called David Oloke. Asked for the corrected Table. He said he will email it to me. 10/23/06 - Obligado - Called David Oloke. Left message requesting most recent quarterly status report. David Oloke call me back and said he would send the report shortly and he would correct the typo on Table 2. 1/30/07 - Obligado - Review 3Q06 monitoring report. Typo in 2Q06 table has been fixed in cumulative table. AS/SVE system online and working at 100 maximum capacity. Air samples collected monthly. Benzene in gw exceeds standard at 4 ppb. in 2 wells. All effluent below STIP guidance. Benzene detected in VES/AS effluent at 4.86 ug/m3 in 6/06. Recommends continued operation of the system. Review 4Q06 monitoring report - AS/SVE system operating at 100 capacity 9 hours per day. All effluent samples below STIP guidance. BTEX effluent at 361.71 ug/m3 during 10/27/06 Report recommends continued operation of system. GW results show minor exceedences of Benzene - max concentration at 8 ppb in FN3. However gw monitoring does not include FN1 where highest contamination was found. END DECRemark - 0307633

Remarks: Start CallerRemark - 0307633 caller was hired to remove a few tanks from the site - x-ref spill # 9008960 - they encountered contaminated soil - they are stockpiling soil now END CallerRemark - 0307633

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Test Method: Horner EZ Check I or II
DEC Memo: Start DECRemark - 9805607 According to the NYSDEC records, on August 5, 1998, the on-site 2,000 gallon UST failed a tank tightness test and was issued Spill #98-05607. After review of information received from the client, it has been determined that after the UST failed tank tightness testing, the UST was cleaned, sandblasted, and relined with an epoxy lining, and the associated piping was replaced in September 1998. On July 10, 2003, the 2,000 gallon UST failed a tank tightness testwasissued Spill #03-03799. It appears that soil borings were performed to determine the extent of the UST leak/spill. Upon reviewing data received from the NYSDEC Spills Database, the NYSDEC notes section determined the soils were "slightly above" TAGM guidelines due to levels consistent with "old coal ash fill materials" and was granted "closure" status on September 2, 2003. The UST was emptied and taken out of service, and an 1,080 gallon steel registered AST was installed in a small cellar area near the north bay door area. On September 28, 2005, EnviroTrac contacted the NYSDEC regarding Spill #98-05607 to determine what isneeded to "close" the Spill. It was determined that since Spill #98-05607 was prior to Spill #03-03799 which is "closed", and was the same tank and area, it should be "closed" as well. END DECRemark - 9805607
Remarks: Start CallerRemark - 9805607 TANK TO BE EVACUATED, CLEANED, AND LINES TO BE TESTED. END CallerRemark - 9805607

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

NEW YORKER HOTEL (Continued) **1004761098**

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 8909614 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 01/05/90: (6) MONITORING WELLS INSTALLED,OIL TANKS BEING TESTED BY CONTRACTORS(TRINITY & FENLEY & NICOL), ALL TANKS PUMPED & CLEANED, REPAIRING WATER MAIN. 10/10/2003-Vought-Spoke with LaJuana Smith (works for Clinton Housing-212-967-1644) and she is looking to resolve spill). In Nov 1996 DEC required further work from DEC. Ms Smith will call back on Wed for current site status and willpossibly submit FOIL request upon her discussion with bank. 10/17/2003-Vought-File review by Vought: Community Board 4 Meeting Notice-2/21/90-Meeting held with DEC, NYFD, NYPD, DCA and NYCDEP to discuss current status and plans of site. Faxto DEC from Gaseteria-2/22/90-Pedneault Associates (516-467-8477)-Groundwater analyticals from six monitoring wells and two soil disposal piles (no site plan in file). Groundwater analyticals show 275ppb benzene(W1), 341ppb benzene(W2), 327ppb benzene(W3), 448ppb benzene(W4), 158ppb benzene(W5) and 128ppb benzene(w6). Disposal samples show 1433ppb benzene(east pile) and 188ppb benzene(west pile). Groundwater analyticals-5/21/90-Pedneault Associates-Groundwater analyticals from six monitoring wells (no site plan in file). Groundwater analyticals show 2308ppb benzene(W1), 1091ppb benzene(W2), 680ppb benzene(W3), 385ppb benzene(W4), 736ppb benzene(W5) and 810ppb benzene(w6). Subsurface Investigation-7/90-Environmental Management Services. "In Jan 1990 a subsurface water line broke beneath 10th avenue near the northwest side of the site. Water entered the basement of the adjoining building along with some gasoline." DEC required installation of six monitoring wells on Gaseteria property. Gasoline vapors detected in sewers in building across 10th Avenue. This subsurface investigation consisted of eight soil borings and installation of two additional monitoring wells. Three pump islands serviced by 12 (550-gallon) gasoline USTs and one (2000-gallon) diesel UST. Local topography slopes to the north. Groundwater at depth of 7-9' below grade. Bedrock is 7-11' below grade and slopes downward toward the northwest and southwest corners of site. Groundwater "suspectedto flow northward". All wells onsite were set "firmly on bedrock" and "there is not sufficient information available to determine specific groundwater flow". No free product detected in wells. Groundwater appears to flow from 10th Ave towards theUSTs. Report recommends groundwater monitoring with possible additional delineation. No soil samples submitted for analysis nor were screened via PID. Letter from DEC to Gaseteria-7/12/90. Letter from DEC (Sigona) to Gaseteria (Oscar Porcelli)requesting subsurface investigation work plan to be apporoved by the DEC to investigate the presence of gasoline vapors. Plan must be received by the DEC by 7/17/90. Odor complaints in January 1990 and again in July 1990. Sigona performed site visit on 7/13/90. Fax to DEC-7/17/90. Letter from Environmental Management Services to DEC (Sigona) proposing: 1)investigation of subsurface utilities as potential pathways 2)determination of groundwater flow direction 3)groundwater monitoring 4)installation of six soil borings along western margin of station and installation of two additional monitoring wells. Letter from DEC to Gaseteria-1/5/95. Letter from DEC (Sigona) to Gaseteria (Angel Chang) requiring "cleanup and removal of discharge". Letter also

GASETERIA (Continued) **1001482964**

required immediate steps to abate seepage into basement of 403 W 40th Street. Response from Gaseteria required to DEC by 1/15/95. Letter from Gaseteria to DEC-1/20/95. Letter from Gaseteria (Chang) to DEC (Sigona) stating that Gaseteria will: 1)"divert the flow of surface water away from the south wall of the building" 2)install a SVE system in the basement alonside of the south wall between the concrete floor and the building foundation. Gaseteria does not believe "thereis a need to install new groundwater monitoring wells or to further develop existing wells.....since the problem appears to be surface related". Sample analyticals from basement of 480 10th Ave-8/96. Soil analyticals show 20664ppb ethylbenzene(sample 48334), 59164ppb xylene(sample 48334), 11000ppb napthalene(sample 48334). Letter from DEC to Gaseteria-9/10/96. Letter from DEC(Rommel) to Gaseteria(George Esayan). "DEC in possession of analyticals from Clinton Housing(403 W. 40th Street)". Gasteria required to sample two of the onsite monitoring wells for 8021/8270/lead. Letter from Clinton Housing Development Company-9/11/96. Letter from Clinton(Joseph Tuana) to DEC(Rommel) with copies of analyticals discussed above. Letter from Carl Sulfaro (attorney for Gaseteria) to DEC (Rommel)-9/20/96. Letter stating that Sulfaro "authorized EMS Environmental Services to take two samples of the onsite monitoring wells". Samples will be taken 9/27/96. Groundwater analyticals-10/10/96. Analyticals from MW5 by EMS showing 42.56ppb methylene chloride, 5549ppb benzene, 107.33ppb toluene, 1024.75ppb ethylbenzene, 393.15ppb xylene and 0ppb MTBE. Letter from Clinton(Kathy Prioleau) to DEC(Rommel)-11/11/96. On 10/27/96"strong fumes entered basement of 480 10th Ave". NYFD onsite. Letter requests that DEC relay information on "testing done at Gaseteria and UST inspection of Gaseteria". Letter from DEC(Rommel) to Gaseteria(Sulfaro)-11/25/96. Letter stating that requirements of fax dated 9/10/96 were not met because only one well was sampled and 8270/Lead analyses were not performed. Letter requires:1)submittal of an investigation plan to delienate soil and groundwater contamination 2)source determination 3)installation of three additional monitoring wells 4)installation of an air sampling port on the exhaust line of the venting system and monthly sampling for benzene and THC. Letter states that "action must be taken within 45 days". Letter from DEC(Rommel) to Prioleau(Clinton)-11/26/96. Letter stated that "DEC was never notified" of odor complaints as 11/11/96 letter stated. Also attached to letter was copy of 11/25/96 letter from DEC to Gaseteria. Letter from Gaseteria(Sulfaro) toDEC(Rommel)-1/15/97. Letter stating that Gaseteria "would prefer to perform site investigation, soil removal and/or remediation as needed concurrent with excavation anticipated as part of Federal EPA UST upgrade mandate" and the work is expected totake place in "Spring 1997". Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-7/29/98. Letter "serving as final notification of obligations regarding petroleum contamination and vapor incidents". On 6/28/03 petroleum contaminated groundwater infiltrated basement of 480 10th Ave due to heavy rains. This is the "seventh vapor complaint associated with Gaseteria since Jan 1990". Letter states that the "Department is alotting 30 days for Gaseteria to statisfy all requirements in DEC letter dated 11/25/96". Deadline of 8/31/98 given by DEC. Letter from Gaseteria(Seth Friedland) to DEC(Rommel)-8/13/98. Letter stating that "the June 1998 episode was caused by heavy rains and appears to be an isolated event" and that Gaseteria does not agree with Departments conclusions". Letter stated that the station will be taken out of service on 9/15/98,permanently close the USTs and reinstall upgraded USTs on the northern boundary of the site. Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-8/28/98. Letter serving as a "reminder of 8/31/98 deadline". Letter from Gaseteria(Oscar Porcelli) to DEC(Rommel)-8/28/98. Letter stating that new USTs were ordered and that work will start the second week of September. Gaseteria intends to install four monitoring wells to replace those destroyed by station upgrade and will retain

GASETERIA (Continued) **1001482964**

Environmental Management services to develop remedial plan. Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-8/31/98. Letter confirming phone conversation where an agreement was reached that Gaseteria will comply with following requirements and complete the tank upgrade prior to 9/30/98. Letter also required that a workplan be submitted prior to 9/4/03 which included 1)completedelineation 2)soil and groundwater sampling plan for use during excavation activities 3)sampling of SVE emmissions 4)installation of three monitoring wells into bedrock and 5)cleaning and proper disposal of oil in the building floor drains and all associated discharge points. Letter from Camin Cargo Control(Gaseteria's Enviro consultant) to Gaseteria-10/5/98. Letter from Camin(Patricia Badding) stating that a site investigation and report shall be prepared. Investigation with Geoprobe andsubsquent insallation of monitoring wells scheduled for 10/16/98. Soil samples will also be collected during excavation for new USTs. Venting system emissions will also be sampled. "Cleaning and proper disposal of any oil in the building floor drains and all associated discharge points is the responsibility of Gaseteria". Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-10/8/03. Letter acknowledging receipt of Camin 10/5/98 proposal and requiring the following by 10/13/98: 1)Site plan with proposed boring locations 2)discussion of locations 3)discussion of endpoint sampling locations from UST excavation 4)discussion of delineation procedure 5)include MTBE with analyticals 6)collect groundwater samples from Geoprobe locations. Letter from Camin(Badding) to DEC(Rommel)-10/13/03. Submission of 1)site plan with ten boring locations 2)Collection of six endpoint soil samples from UST excavation 3)excavation and disposal of contaminated soil encountered during tank installation 4)Inclusion of MTBE analyticals 5)collection of groundwater samples(if encountered).
Investigation Results from Camin(Badding) to DEC(Rommel)-11/6/98. Results of eight soil borings peformed. Soil analyticals show 2149ppb MTBE(SB1), 526ppb benzene(SB2), 188ppb benzene(SB4), 212ppb benzene(SB5), 4576ppb MTBE(SB6), 1458ppb benzene(SB7), 29114ppb napthalene(SB7), 187ppb benzene(SB8). Groundwater analyticals show 1239ppb benzene(SB4), 1975ppb benzene(SB5), 5360ppb benzene(SB6). Subsurface Investigation Report Camin Badding 908-523-0616 10/16/98). Investigation report including results above of eight soil borings performed. "There is approximately 2-4 inches of contaminated soil at the soil/bedrock interface in soil boring locations SB2, SB4, SB5, SB7 and SB8. Bedrock at depths of 6-11.5' below grade". "A sheen was detected on all samples"(groundwater). Venting system was samples on 12/11/98 via a vacuum canister attachment to vent. Removed dispenser island is the proposed location of new USTs. See analyticals above. Venting analyticals show 264ppm TPH and no other volatiles. Baseline Acquisition Assessment Report-10/10/02 Delta Environmental (Brad Fisher). Purpose was to establish baseline conditions priorto proposed lease and raze and rebuild of site by BP. One soil borings peformed in 4/02 to depth of 11.5'. Two borings drilled to 24.5" via air rotary and converted to temporary monitoring wells (MW1 and MW2). Delta recommends 1)gaseteria installpermanent monitoring wells to delineate contamination. "It is Delta's understanding that Gaseteria will retain the environmental liability of the subject site until spill closure has been obtained". At time of assessment three USTs on site (two 6000-gallon gasoline USTs and one 6000-gallon diesel UST) and four pump islands with six dispensers. Surrounding area is multiple story apartment buildings. "Groundwater is located within bedrock fractures at depths between approximately 12.5 and 13.5 ft bgs". Former USTS onsite which were CLOSED IN PLACE include two (6000-gallon) gasoline USTs in 1998 , one 6000-gallon diesel in 1999, ten 550-gallon gasoline USTs in 1998, one 550-gallon waste oil in 1998 and one 550-gallon fuel oil in 1996.Soil analyticals show 4570ppb xylenes(SB1) and 3970ppb isopropylbenzene(SB1) from depths of 10-11.5'. Groundwater analyticals show 148ppb benzene(MW1), 24800ppb MTBE(MW1) and 30.7ppb benzene(MW2).

GASETERIA (Continued) **1001482964**

10/21/2003-Vought-Reviewed site with DEC(Rommel).Sent Stipulation Agreeement with the following requirements: 1)Groundwater delineation via installation of bedrock monitoring wells at former boring locations SB1, SB4, SB5, SB6, SB7 2)Monitoring of vapors and groundwater intrusion 480 10th Ave 3)current status of SVE system and submittal of historic and current SVE effluent samples for benzene analysis or collection of indoor air samples from 480 10th Ave. 10/24/2003-Vought-Called LuJuana Smith (212-967-1644) and left message and explained requirements of 10/21/03 letter. 10/27/2003-Vought-Received message from Steve Muller will be taking indoor air samples from 480 10th Avenue. Vought returned call to Muller (516-395-5957).
10/28/2003-Vought-returned call to Steve Mullerto discuss indoor air samples. Left message to return call to DEC. Left message for LuJuana Smith to call DEC. Vought spoke with Muller and okayed PID and stated that SUMA sample as per NYSDOH guidance was not necessary until 1)closure of SVE system or 2)PID indications of petroleum vapors followed by subsequent remediation. Vought also instructed Muller to check sumps. Vought spoke to LuJuana Smith who will be sending in FOIL Request for continuous updates on site. Vought also called Muller and gave him LuJuana's phone (212-967-1644) for access arrangements. 11/6/2003-Vought-Spoke with Steve Muller who was onsite. No PID readings and no olfactory evidence of petroleum and no groundwater infiltration into basement and no productin sump. Muller will produce summary letter and send to DEC. 11/7/2003-Vought-Received Summary Letter from Applied Geosolutions(Muller). Site visit performed on 11/6/03 and inspection of basement at 480 10th Ave. "AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline". PID readings of 4.8ppm were attributed to moisture in basement. Small amount of standing water present near leaking hose. No signs of product in sump. Vapor abatement system unoperational during site visit. Photos of basement submitted with report show no free product or petroleum impact. 11/24/2003-Vought-Received signed STIP from Adam Good(Gaseteria) with revised Corrective Action Plan. 11/26/2003-Vought-Spill transferred from Rommel to Vought. Vought received call from LuJuana Smith and she requested update. Vought faxed her copy of 11/7/03 report and letter sent to Gaseteria on 10/21/03. Vought submitted STIP for implementation to DEC Kunkel. 12/2/03-Vought-STIP implemented by Kunkel. Copy sent and faxed to Good and Muller. 12/17/2003-Vought-See closed spill 0301220 at same location. 9/14/04-Vought-New file review by Vought: Letter from Applied Geosolutions (Steven Muller 516-395-5957). "On November 6, 2003 Applied Geosolutions inspected the basement of 480 10th Avenue to perform vapor monitoring and to identify the presence of groundwater". "During the inspection AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline. The air space was monitored with a portable PID indicating a measurement of 4.8 ppm... This detection is likely the result of low atmosheric pressure followed from periods of rain causing the basement to be damp." The basement floor did not indicate the presence of groundwater...". Line and Dispenser Upgrade Report (Delta Environmental Brad Fisher 914-765-8180). "This Line and Dispenser Report summarizes the results of pump island and productpiping upgrade assessment activities conducted by Delta Environmental and Gasoline Installations on behalf of BP Products North America". Work performed included the removing and installing new spill containment boxes beneath each dispenser, removal and replacement of propduct piping and installation of electronic line leak detection systems. Soil analyticals onlly show minor TAGM 4046 SVOC exceedences attributable to fill. Subusurface Investigation Workplan (Applied Geosolutions)-July 2004. Bedrock at depth of 10' below grade and groundwater at depth of 12.5-13.5' below grade. Report proposes installation of four wells via air rotary followed by groundwater sampling. Groundwater flow direction not determined as of yet. 9/14/04-Vought-Sent letter to Gaseteria approving of Subsurface Investigation

GASETERIA (Continued) **1001482964**

Workplan. Vought received message from Lujuanna Smith (212-967-1644) and returned call. Vought spoke to Smith and no indication of vapors was noted. Ms. Smith requested info onthe applicability of the BCP program for 480 10th Avenue and Vought replied that was only available if HPD was willing to take responsiblity of the spill and that she should call Albany for futher information. Vought also suggested that she returnthe call to DEC on 11/14/04 which is when the workplan results are due to DEC. 9/17/04-Vought-Received fax from Applied Geosolutions (Muller). "466 10th Avenue-AGS is currently getting drilling quotes and will complete the Workplan within the 60day time frame". 1/6/05-Vought-Reviewed Subsurface Investigation Summary Report (Applied Geosolutions) dated December 2004 and received on 1/3/05. Location north of USTs not possible due to concrete with rebar. Installation of three monitoringwells. Groundwater from 7-11' bgs and flow to the west. Groundwater analyticals show 48ppb xylene(MW1), 13ppb 1,2,4-trimethylbenzene(MW1), 17ppb 1,3,5-trimethylbenzene(MW1), 26ppb napthalene(MW1), 1400ppb MTBE(MW1), 23ppb MTBE(MW2), and 20ppb MTBE(MW3). "The existing groundwater monitoring wells should be monitored on a monthly schedule and sampled on a quarterly schedule to document changes in groundwater elevation and contaminate concentration trends in order to develop and appropriate remedial strategy". DEC requires: 1)installation of monitoring wells on West 37th Street north northeast of site and downgradient from abandoned tankfield along 10th Avenue. 1/19/05-Vought-Meeting at DEC with ASR Tomasello. Will examine possibilityof borings across 10th Avenue (may not be possible due to utilities) and also onsite adjacent to 480 10th Avenue. If onsite boring adjacent to 480 10th Avenue is not possible then boring will be installed on 37th Street. 2/17/05-Vought-Spoke to Muller and site visit scheduled for 2/24 at 10am to discuss possible well installation locations. 2/24/05-Vought-Site meeting with ASR Tomasello and no borings possible across 10th Avenue. Well will be installed onsite under canopy downgradient of abandoned tankfield. Well will also be installe on West 37th Street north northeast of site. Obligado- SITE TRANSFERRED FROM VOUGHT TO OBLIGADO 10/12/05 - Spoke with Tomasello ASR, requests to talk about closure for sp0206783. 10/17/05- Obligado - File Review: Final Subsurface Investigation Report, dated June 2005. 4 monitoring wells installed at the site. Wells were installed into Bedrock down to 25 ft bgs. 3 wells installed in December 2004, one additional well installed in March 2005. Groundwater encountered at approximately 7 to 11 feet. No product encountered. Initial gw samples in Dec. 2004 show ND for Benzene in all wells, 1400 ppb MTBE (MW-1), 23 ppb MTBE (MW@), 20 ppb MTBE (MW-3), 48 ppb Xylene (MW-1). March 2005gw results show 140 ppb benzene (MW1), 2100 ppb MTBE (MW-1), 26 ppb benzene (MW-3), 16 ppb MTBE (MW-3). June 2005 results show 45 ppb benzene (MW-1), 11 ppb Ethylbenene (MW-1), 750 ppb MTBE (MW-1), 52 ppb benzene (MW4), 10 ppb toluene (MW-4), 170 ppb Napthalene (MW4), 55 ppb MTBE (MW4), 193 ppb xylenes (MW-4). 4Q05 Monitoring Report, dated 10/15/05. Ground water analyticals at show 20 ppb benzene (MW-1), 580 ppb MTBE (MW1), 23 ppb MTBE (MW-2), 21 ppb benzene (MW-3), 15 ppb MTBE (MW-3), 16ppb benzene (MW-4), 52 ppb ethylbenzene (MW-4), 140 ppb MTBE (MW-4). 11/14/05 - Obligado - Site visit with ASR Tomasello. Request to see at least 2 more quarters of monitoring at a minimum. 12/8/05 - Obligado - Will do a sensitive receptor survey. Continue monitoring. Only 2 quarters of data at MW4. 3/1/06 - Obligado - PHone call with Chris/STeve, ask that site be monitored quarterly not monthly. 4/12/06 - Obligado - review 1Q06 monitoring report. BTEX ND to 33 ppb, MTBE ND to800 ppb. 11/21/06 - Obligado - Reviewed Closure Petition/Sensitive Receptor Survey. Sent email to ASR denying NFA stating the following: "Due to historical vapor issues in the adjacent apartment, and the presence of benzene above guidance levels in ground water, the Department requires laboratory analyzed vapor samples from either the slub slab system (if operational) or indoor air samples to confirm no vapor

GASETERIA (Continued) **1001482964**

intrusion. The Department also requires an additional round of ground water monitoring to confirm benzene and MTBE levels are still decreasing. NYSDOH Vapor Intrusion Guidance should be followed when collecting air samples available at http://www.health.state.ny.us/environmental/investigations/soil gas/svi guidance/index.html. Please submit the results of the additional investigation by January 21, 2007." 12/1/06 - Obligado - Steve Muller will be onsite today to collect addtional data.

DEC Memo: Start DECRemark - 0103274 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 8/2001-Tank closure report prepared by Franklin Company Contractors. 6/29/2001-Franklin implemented bioremediation by mixing 240lbs of ORC with surrounding soils and filling in excavation. 500 gallons of Waste stream technologies W-4 bio-blend mixture also injected.. Site was bakcfilled with 3 to 6 feet of clean fill, 6 inches of crushed stone and an 8-mil polyethylene vapor barrier. Areawas then covered with 6 inch reinforced concrete slab. Soil VOC pass TAGM, soil SVOC exceed TAGM but are due to fill composition. Site visit by Jacob Krimgold showed no visual evidence of contamination. Groundwater VOC and SVOC also pass TAGM. 12/13/2001 Spill

DEC Memo:	Start DECRemark - 0503270 need to contact either jeff bohlen at envirotrack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site. No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC. 10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac. 3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasolne UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additonally, 8- 550 gal USTs are located in the basement of the property. These

555 WEST 34TH ST/NYTEL (Continued) **S104275609**

tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 wereclosed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June- August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's , SVOC's, and metals above TAGM 4046. Note: the groundwater wasdetermined to be slightly to moderately saline. From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046. Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that VOC's were not present above TAGM 4046, however SVOC's were. In additon to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil. As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. 45 feet bgs. In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang 3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is 200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST END DECRemark - 0503270

Actual: 28 ft.

VCP:

Program Type:	BCP
Site Code:	359020
Assessment:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.
Env Problems:	There are eight 550 gallon USTs abandoned in-place on site. Two 4000 USTs have been removed. Groundwater is at approximately 20 to 26 feet deep. Bedrock is at approximately 17 t 24 feet deep. Supsected contaminants at this site are primarily frompetroleum. These contaminants are impacting the soil and shallow groundwater. The bedrock aquafer does not appear to be contaminated. Of the 5 reported spills associated with this site, all are closed. The shallow groundwater contamination is basically from petroleum compounds, including

WEST 34TH STREET DEVELOPMENT PROJECT (Continued) **S107787047**

MTBE. Metals contamination is not a problem at this site. Off-site contamination is not known. An investigation is needed to determine the necessary site remedial action.

Site Desc: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City, New York County. The property is identified as Block 706, Lot 1 in New York City's tax records and consists of a 37,800 square-foot (1.02 acre) rectangular-shaped two-story building. The surrounding urban area consists primarily of retail and commercial business. Current use of this site is for commercial and industrial uses. Future use of this site will be for unrestricted use. The BCP Agreement was signed by the DEC on February 21, 2007. The Citizen's Participation Plan has been drafted and a remedial investigation work plan is to be developed.

DEC Memo:	Start DECRemark - 0613440 Sangesland spoke with Carol Owings of Key Environmental. She said the site is an industrial building that had several buried tanks removed. There is contaminated soil on the site that can not be removed, so the area willbe treated in place. Key Enviornmental will work on a plan to submit to the DEC for review. Sangesland wrote a CSL letter and listed Ryan Piper as the contact for the site. CSL sent to one of the owners: William Cirillo, 33 Tiers St, Apt F,Bronx, NY 10464 END DECRemark - 0613440

HERTZ/PENSKE - MAN (Continued) **S104513532**

DEC Memo: Start DECRemark - 8906443 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 03/29/04 Transferred from James to Rommel 10/29/04 Reassigned from Rommel to Sun. 11/1/04 Sun sent a letter to Richard Saut, Environmental Manager of Penske, requiring by January 14, 2004 the following:1)Delineation of soil and groundwater contamination. A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination to soil and groundwater both on-site and off-site must be performed. 2)A Ssurrounding property sketch including layout and usage must be submitted to the Department, 3)The locations of former remote fills and dispenser island must be submitted to the Department, and 4)A PBS registration must be submitted immediately reflecting the former tanks and their subsequent decommissioning. 1/5/06: Called Richard Saut and left a message (610-775-6298) to ask for an update on what was required in 11/1/04 letter. 1/10/06: Spoke with Richard Saut and he said he would speak to his consultants and get back to me. 1/30/06: Left a message with Richard Saut to follow up. 3/15/06: Spoke with Matt of Groundwater Environmental Services (631-582-4187 x15, mschieferstein@gesonline.com). I sent him a copy of the additional delineation letter that was sent to Hertz.
5/19/06: Left voice message with Matt Schieferstein about overdue workplan.
6/21/06: Spoke to Matt Schieferstein of GES. Penske is doing research on this site and has not authorized GES to do any work. Spoke to Richard Saut of Penske. Richard Saut said that Hertz is responsible for this spill and forwarded DEC's letter to Virginia Carlson of Hertz. He forwarded me the correspondence between him and Virginia Carlson. 7/19/06: Sent Virginia Carlson an email to followup. 8/10/06: Owner according to propertyshark.com: 500 West 38 L.L.C. 290 Park Ave S New York NY 10010-5313 Sent delineation required letter to above address. Assessment required by 11/10/06. 8/16/06: Received phone call from Mindy Horowitz (212-675-3225) of Fleming Lee Shew, consultant for property owner. She will submit a workplan for remediation after a FOIL requestis reviewed. 8/17/06: Received email from Mindy Horowitz: We will begin our remedial investigation upon reviewing the previous investigations conducted at this site. We are simultaneously performing an investigation for the New York City Department of Environmental Protection, as this site has an "e" designation. Mindy Chassin Horowitz Project Manager Fleming-Lee Shue, Inc. 6 E32nd Street, 4th Floor New York, NY 10016 (212) 675-3225 (telephone) (212) 675-3224 (fax) mindy@flemingleeshue.com
11/6/06: Received and approved invesigation workplan. Four soil borings will be performed surrounding the former UST location. A soil sample from directly below the floor and from the interval with the highest PID reading willbe collected from each boring. The report noted the possible presence of a transformer and hydraulic lifts on the property. 11/14/06: Received call from Fleming Lee Shue. Soil borings installation is not possible because clearance in basement is too low. Borings will be installed following building demolition in early 2007. 12/4/06: Received letter indicating that delineation is not possible, will occur in early 2007 after building demolition. Assessment report submission due 3/30/07. END DECRemark - 8906443

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0409846 ttf ltr sent 1/14/2005 2/14/2005 Received a letter from Morton Usdan (212-564-2006) saying that he hired a company to work on the tank. If it can be fixed, it will be. If not, it will be abandoned. 5/2/2005 Sangesland spoke to Mr. Usdan. He said PTC found a dry leak in the vent line and replaced the line. Tank was retested and passed, no contamination was visible. Sangesland asked Mr. Usdan to submit all of this in writing to DEC. 5/5/2005 Sangesland received a letter from Mark Salamack at Petroleum Tank Cleaners. Tank was originally tested and failed by another company. PTC emptied the 1500 gal tank, isolated the lines and the stickline and vent line were found to leak. The gasket was replacedand then the tank was tested alone and passed. All necessary piping was replaced and no contamination was found. Spill Closed END DECRemark - 0409846

DEC Memo:	Start DECRemark - 0010648 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. On December 22, 2000, DEC (Sigona) observed the excavation and removal of 4 x 550 gallon USTs. The contents of 3 x 550 gallon USTs was found to contain a mixture of gasoline and water. 1 x 550 gallon UST contained water only. The excavation was being performed by Fenely & Nicol for Public Parking, Inc. The project was also supervised by DEC contractor EAR under PIN project for New York Auto Service which was impacting the Jacob Javits Center. Does not appear to be related to New York Auto Service spill or have an impact on the Javits Center. 2/24/05-Vought-Spoke with Phillip Rizzuto (973-470-25510) who is agent for property owners. Rizutto asked for status of Tank Closure Report review and Vought required that a copy be sent to DEC for review. Spill transferred from Rommel to Vought. 3/16/05-Vought-Reviewed Tank Closure Report(Fenley & Nicol - Angel Ramirez) dated 1/18/01 and received on 3/2/05. Project was prepared for: Mr. Phil Rizzuto Classic Sanitation Corporation 99 Route 3 Clifton, NJ 07014 Removal and closure of one (275-gallon) fuel oil AST and four (550-gallon)

(Continued) **S106702998**

gasoline USTs. Subject site is used as a public parking garage. Three (550-gallon) gasoline USTs were removed from the north-east front of the interior of the building(Tank Area 1) and one (550-gallon)gasoline UST was removed from southwest of Tank Area 1. Depth to groundwater at site estimated to be 20 feet below grade and flow to the west. "Inspector Anthony Sigona of the NYSDEC was present at the time of the excavcation to inspect the tanksand excavated area". "The bottom and sidewalls of the excavation consisted of Manhattan Schist and bedrock". "...it was discovered that soil above the tanks exhibited evidence of gasoline contamination". All product lines were removed and disposed. Soil were analyzed for 8260/8270 TCLP as per Sigona. Soil analyticals only showed on minor exceedence of napthalene at 11ug/L (Guidance value is 10ug/L). No PID readings were detected. Report recommends No Further Action. Spill closed by Vought due to one minor TAGM 4046 Soil Cleanup Objective exceedence. END DECRemark - 0010648

Remarks: Start CallerRemark - 0010648 DURING TANK REMOVAL SOIL CONTAMINATION HAS BEEN DISCOVERED. CONTAMINATION IS ON TOP OF TANKS. AREA TO BE EXCAVATED AND FURTHER SAMPLING/TESTING TO BE DONE. NO CALL BACK REQUESTED. CALLER HAS BEEN IN CONTACT WITH REGION 2 OFFICE. END CallerRemark - 0010648

DEC Memo: Start DECRemark - 9801954 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" Formerly assigned to Tomasello 4/10/2002 - Someone from Penske Truck Leasing called looking for a closure letter on this site. Sangesland spoke to him. DeMeo was on duty for the day, therefore it was assigned to DeMeo. Sangesland suggested the rep from Penske should send a copy of the original closure report to DeMeo along with a request for closure. 8/29/03 TJD Work plan approved. 12/9/03 TJD Transferred Demeo >>> Rommel. 1/7/04 Reviewed 12/31/03 report from GES proposing 5 additional delineation wells. Spoke to Tony Dellaria, GES, verbally approved additional well locations with the addition of one well downgradient of MW4. Letter to Penske, Route 10, Green Hills, PO Box 7635 Redding PA 19603-7635 Rommel 3/8/04 Spoke to Debra Kaplan,GES. Wells are scheduled for 3/22/04. Rommel. >>> <DKaplan@gesonline.com> 05/13/04 10:46AM >>> Ms. Rommel, Attached please find the Subsurface Investigation Report for the above-referenced site. The hard copy of the report was sent to you today. If you have any questions, please feel free to call Anthony Dellaria at (631) 420-5095. Thank you. >>> Jennifer Rommel 05/13/04 03:43PM >>> DEC approves the work proposed in the Subsurface Investigation Report dated 5/13/04. At the end of the three months of HIT events, please submit an evaluation of the needfor a permanent recovery system. 5/17/04 Received summary, 4 mw installed. Total 8 wells. Product in MW1 and MW4 - quarterly bailing recommended. Rommel 10/14/04 Reassigned from Rommel to Sun. 10/31/04 File Update by Sun: - On 11/22/04, Sun sent a letter to Richard Saut of Penske requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 12/10/04 for signing the Stipulation Agreement. The Stipulation Agreement was signed by Penske on 12/10/04 and implemented by the Department on 12/27/04. -On 12/21/04, Sun sent a letter to Richard Saut of Penske informinghim that the Department has approved the Remedial Action Plan (RAP)/HypeAir Work Plan prepared by his Consultant, Groundwater & Environmental Service (GES) for the subject site; specifically two in-situ chemical oxidation events at the site via "HypeAir" air and Hydrogen peroxide injection system. The Department requires that due to the proximity of existing utility corridors, temperature, pH, pressure, oxidation-redox potential (ORP), conductivity and dissolved oxygen (DO) shall be monitoredon all the monitoring wells. Any potential accumulation of vapors during the injection activities shall be avoided. (Sun) 02/21/06: Sun received 4th Quarter 2005 Site Status Update Report. Review of this report is pending. (Sun) 02/27/06: TheDepartment approves the GES s request for two (2) additional injection events to be completed in April and May 2006; specifically two in-situ chemical oxidation (Chem-Ox) events at the above referenced site utilizing a hydrogen peroxide, ozone, andpersulfate injection system (HypeAir). (Sun) END DECRemark - 9801954
Remarks: Start CallerRemark - 9801954 CALLER RESPONDED TO ABOVE LOCATION TO REMOVE FUEL TANKS. UPON REMOVAL SOME SOIL CONTAMINATION DISCOVERED. TANKS REMOVED AND SOIL EXCAVATION IN PROGRESS. NO CALL BACK REQUESTED. END CallerRemark - 9801954

DEC Memo:	Start DECRemark - 9602633 Prior to Sept, 2004 data translation this spill Lead DEC Field was "M TIBBE" 6/8/05 - Project transferred to TLGibbons in Central Office, Albany 8/16/05 - Spoke with Brenden Keany, Mutual Redevelopment Houses, Inc., (212) 675-3200. Spill reported 5/23/96 by CDM during removal of twelve (12) 20,000 gal. #2 and #6 fuel oil USTs. The large fuel usage was for a cogen plant which generates electricity for 3,000 people. After removing tanks and cleaning, went to dualfuel system, reinstalling only six 20,000 gal. #2 fuel oil USTs. Spoke with David Marabello (732-225-7000), CDM project manager during spill. He said that they excavated to the lateral and vertical limits possible, using shoring, without compromising structure of building. Southern

POWER HOUSE (Continued) **S102233331**

portion of excavation encountered bedrock. Sixteen post-excavation samples were collected and evaluated for VOCs and SVOCs. All samples greater than 10 feet bgs. Elevated levels of VOCs and SVOCs were encountered inseveral samples, however, according to 10/2/98 CDM tank closure report, levels not indicative of gross tank failure, rather indicative of chronic spills over time. While some sporadic elevated levels of petroleum remain, everything that was reasonable to be done, was done. Close spill. END DECRemark - 9602633

Remarks: Start CallerRemark - 9602633 OLD TANK APPEARED TO HAVE FAILED. TANK IS BEING REMOVED, CONTAMINATED SOIL WAS FOUND DURING REMOVAL PROCESS. INVESTIGATION IS UNDERWAY AT THIS TIME. END CallerRemark - 9602633

DEC Memo:	Start DECRemark - 0409059 Tipple responded, oil impacted sidewalk, roadway along curb and Con-Ed transformer vault. Con-Ed advised of impact, surfaces cleaned, awaiting documentation. PBS# 2-152277 07/31/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called to Mr. Angelo Solimine (718)499-2900 and talk to Ms. Mili (Secretary) she will find information regarding spill and she will call me back. -QA 08/15/06: Called Angelo solomine (T&S Trucking Co.)and talked to Mr. John Bari he said he will find out the report and he will fax me. -QA 08/18/06: Recieved a closing confirmation letter from Mr. Eston Clare, Sr. Manager (T & S) Trucking Company in which he mentioned that approximate 10 to 15 gals of #6 oil due to defective gauge caused oil to spill while Delivery was being made. T & S Trucking Company sent their Spill Crew at that private residence same day. The Crew cleaned everything that had been stained. Based on the information DEC staff closed the spill. -QA END DECRemark - 0409059
Remarks:	Start CallerRemark - 0409059 faulty gauge oil came out of vent: oil went into coned vault and coned was notified: michele tipple was advised from dec: END CallerRemark - 0409059

DEC Memo: Start DECRemark - 0412228 Sangesland spoke with Roux Assoc. Tank excavation with some spillage around tanks. (Tanks had been previously abandoned in place). Now tanks are being pulled. Sangesland asked for several end point soil samples taken from tank grave after removal. Test for VOC & SVOC. 3/16/2005 Sangesland reviewed a report from Roux Assoc. dated 3/9/05 On 2/18/05 Roux collected 6 post-ex samples. One per each side & 2 bottom VOC's - All samples contained low levels of VOC's, but they were ALL BELOW RSCO Stds. SVOC's - Some minor "Hits" on PAHs consistant with historical fill levels. Results show some contaminants exceed regulatory standards. Samples taken on removed (waste) soils showed much higher VOC & SVOClevels. Roux conclusion says that the contamination "source" has been removed and the site

VACANT LOT (Continued) **S106868700**

should be closed out. Based on the soil sampling work performed on the site and the report prepared by Roux Assoc., the NYSDEC agrees with the conclusion and the spill case is closed with: "No Further Action - Does Not Meet Standards" END DECRemark - 0412228
Remarks: Start CallerRemark - 0412228 REMOVING TANK, JUST AN ODOR IN THE SOIL: NOT SURE HOW TO MOVE FORWARD WITH PROJECT: END CallerRemark - 0412228

DEC Memo:	Start DECRemark - 0005393 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SAWYER" 4/22/03 SAMUEL- RCVD TANK CLOSURE & SITE ASSESSMENT REPORT. CONTACT PERSON:- HUGH J FREUND 212 705 7000- ATTORNEY FOR THE MARY BOONE GALLERY (R.P) 2/9/06- DEC Piper spoke w/ LEE WESTCHOTT at Whitman CO. As per conversation there was free floating product discovered at the property. There is a monitoring well network. It has been recently sampled and Lee will forward a summary status report to the dept. including analytical summaries within the next month. Case referred to Koon Tang. 06/08/06: This spill transferred to S.Kraszewski. - SK 08/14/06: Received a voicemail from Ira Whitman, concerning the status of the site. He gaveno callback number. SK reviewed the Tank Closure Report from Fall 2001. It is evident that high levels of VOCs were detected around the fuel oil UST. Lower exceedances were also found around the gasoline USTs and the Oil/Water separator. No mentionif GW was encountered; the site lies next tothe Hudson River so GW is probably shallow. No MWs were installed during the investigation. Must know the GW condition above all else at this point. - SK 08/15/06: Called Ira Whitman (732-553-4333) after he left a voicemail. He is no longer the consultant involved with this site, in fact he believes that no firm is involved at all. He was involved on a site project adjacent from this one: Dynamic Delivery was the contractor involved with the clean-up. He said this site already received an NFA. I said, based on the report, the GW condition must be established. He said it might be worth-while to review the reports from the neighboring site, which is also downgradient from this one (closer to the Hudson.) He said to contact a John Houshmand, of Clark Construction, who discovered the tanks during renovation work on the property. - SK 08/18/06: Left a message for John Houshmand (917-553-4333). - SK 08/22/06: John Houshmand called back. He gave me the contact info for Mary Boone, owner of the gallery. Gallery: 212-753-2929, Cell: 917-861-2929. She is not the property owner of the site, she only rents the space. According to John, contractor for the building and several others nearby, after the abatement of the gasoline tanks, fuel oil tank and sump pit the entire area was covered in concrete and established as the Mary Boone Gallery. He also mentioned the adjacent site which supposedly has GW wells and may be useful in characterizing the GW condition for this site. I told John I would look into this other site and get back to him, since he regularly deals with the owner. - SK 08/29/06: I discussed the site situation with JK. The site needs a GW investigation, unfortunately their is no access to the interior so the MWs need to be placed on the sidewalk next to the former gasoline USTs and oil/water separator pit. Also, a soil boring next to the gasoline fill port will be needed. I called John Houshmand (917-553-4333)

(Continued) **S104782023**

Remarks:	and explained what work would need to be done. I also asked him for the property owner's contact info since it is not on file. He will find out, plus he asked about other consultants to do the work since The Whitman company had a falling outwith Mary Boone. I said to convince her that he seems like a reputable company based on the report. Letter was sent out asking for two MWs, a soil boring and sub-slab soilgas sampling. Property owner is a Samuel Weinberg. - SK 11/09/06: Reassigned from Stephen Kraszewski to Chanda. (Chanda) 01/02/07:Prepared and sent out a letter to Property Owner (Mr.Samuel Weinberg) requring additional investigation of GW and additional monitoring wells.A work plan is mandated by 03/02/07.(Chanda) 01/10/07: DEC received an e-mail from John Houshmand, Clark Construction Corp.He will be retained Long Island Analytical Laboratories(LIAL), Inc. to perform this work. 2/27/07: DEC received a limited subsurfsce investigstion work plan prepared by LIAL dated on 2/26/07.(Chanda) 2/28/07:DEC reviewed the limited subsurface investigation work plan. The Department conditionaly approves this work plan. Prepared and sent out letter to the RP (Samuel Weingberg)and his consultant (John Hushmand), Michael Veraldi (LIAL). An investigation summary report be submitted by April 16, 2007.(Chanda) END DECRemark - 0005393 Start CallerRemark - 0005393 while removing tanks contaminated soil found - END CallerRemark - 0005393

DEC Remarks: On March 12, 2001, DEC Sigona called David Nickerson and requested a copy of the report left Message on voice mail). On June 5, 2001, DEC Sigona received the results of soil investigation for tank installation, dated June 1, 2001. DEC s comments regarding the results of a site investigation performed by Parsons Engineering Science, Inc. PES) at the above referenced site. The results of the investigation report, dated June 1, 2001 reveal the presence of petroleum contamination whichexceed recommended cleanup levels in the DEC s Technical Administrative Guidance Memorandum TAGM) Determination of Soil Cleanup Objectives and Cleanup Level s, dated January 24, 1994. The results of laboratory analysis for soil collected from test borings Nos. SB-1, SB-2, SB-4, SB-5 and SB-6 all exceed the level recommended for the cleanup of semi-volatile petroleum contamination. The level of volatile petroleum compounds evident in the soil sample collected from soil boring No. SB-3exceed the cleanup level of all tentatively identified compounds, which cannot exceed10 ppm. The level of p-Isopropyl toluene found in the soil sample was detected at 11 ppm. However, the laboratory reported a detection limit for ben ene and MTBEat 0.94 ppm and 19.0 ppm respectively, which exceed the required detection limit acceptable to this Department. The levels of petroleum vapors recorded by field soil testing ranged from non-detectable to as high as 1140 ppm in soil boring No. SB-3.The PES investigation did not include the installation of groundwater monitoring wells or collection of any groundwater samples. The depth of the soil borings ranged from 3 feet to 10 feet below grade and indicated the presence of materials, including, wet fill material, concrete, gravel, sand and refusal. A Geoprobe TM drill was used to collect the samples and was unable to penetrate some of the refusal at the site.
The DEC recogni ed that the PBS facility was being upgraded to replace two aboveground 2,000 gallon diesel storage tank and piping systems with two new 6,000 gallon aboveground tanks. Moreover, the existing tanks passed inspections and tests for tightness following the closure and removal activities, and did not appear to be a direct source of the contamination.
Rather, the consultant suggests that the contamination was likely the result of background contamination from historic fill material placed on the site. While this may provide a plausible explanationfor the elevated levels of semi-volatile petroleum hydrocarbons or Polynuclear Aromatic Hydrocarbons PAHs), it does not explain why there were elevated levels of volatile organic compounds VOCs). The DEC is concerned that the presence of these VOCs may be the result of gasoline or diesel fuel spills on the parking lot area.
Based upon these results the baseline site assessment performed, DEC requires additional investigatory and remedial actions pursuant to the requirements of 6 NYCRRPart 611 and Article 12 of the NYS Navigation Law. All areas with elevated VOC contaminated soils must be remediated. In this regard, GL has at least two options, A and B, as follows: A) If GL chooses to further assess the extent of petroleumcontamination prior to remediation, then you must sample soils and/or groundwater around and below the boring sample location SB-3. The assessment must conform to DEC s Spill Prevention Operations Technology Series SPOTS 14) Site Assessments at Bulk Storage Facilities, dated August 1, 1994.
B) If GL chooses to remediate the petroleum contamination prior to assessment,

GREYHOUND FACILITY (Continued) **S103941004**

then you must excavate site soils around boring sample location SB-3. GL must then collect and analy e endpoint soil andsamples below and/or groundwater around the excavation every 15- 20 linear feet, in accordance sampling guidelines referenced in DEC s SPOTS 14. In either event, GL should evaluate the quality of soils that are immediately surrounding the formerboring location SB-3 for compliance with TAGM) Determination of Soil Cleanup Objectives and Cleanup Levels, dated January 24, 1994. GL should be advised to further document the nature of the fill material throughout the upper ten feet layer of theproperty, referenced by PES. All of the petroleum contaminated soils must be excavated and disposed off-site in accordance with 6 NYCRR Part 364. Polynuclear Aromatic Hydrocarbons PAHs) - The report notes the presence of PAHs. We concur that these chemicals appear to be from fill material previously brought to the site. The concentration of PAHs in the various samples taken at the site have not been demonstrated to be a ha ardous waste. It is suggested that you maintain a two-foot thick cover of clean soil or an equivalent protective layer of concrete or asphalt be placed on all areas where soils exceeded TAGM levels for PAHs at the Site. Wherever surface soils exist, you should place a clean 2 foot layer of soil. Any materialbrought to the site should not be a material that would be considered a regulated solid waste under 6NYCRR Part 360. Any clean soil cover which is placed on the site should be properly landscaped to effect soil erosion control. This would effectively provide a protective layer to further eliminate the possible risk to human health from any subsurface soils that do not meet TAGM soil cleanup levels. GL must implement the required remedial actions to address the VOC contamination, and submit the results of the required confirmatory laboratory testing referenced in item No. 1, by April 1, 2002. In addition, GL should include a description of any additional actions taken to prevent possible exposure to PAHs in the subsurface soils atthis site.

Remark: Caller was calling for greyhound they got the results back back in december and found petroleum constinuints in the soil.call the complaint.

DEC Remarks: Dec Sigona met with Dormitory Authority staffon July 17, 1995. Meeting included David Recino Dormitory Authority), E. Dowd Hunter College), Roy Fein ig Rose, Beaton Rose), R. Dib Aqua-X. Investigation found oil leak in tank. product leaked to soil and surrounding water table. Inspection of Con Ed vault outside of the building revealed 6 fuel was seeping into vault. Notified Con Ed who sent personnel to respond and document. Telephone call on 1/3/96 found that Woodward-Clyde was awarded bid to provide investigation of the spill. They will start advancing borings on the week of January 8, 1996. I requested that I could be present to observe the installation of monitoring wells. Roy Fein ig will be overseeing the work and I asked David Recino to have him call me ASAP to set up the drilling apointment.
Spill Cause: TANK WAS EMPTIED AND CLEANED DURING A TEST TODAY - THEY FOUND AN UNKNOWN AMOUNT OF OIL UNDER TANK. CALLED DAVID KATZEN, PREPARING TO ABANDON TANK - CLEANED OUT HTE TANK - DRILLED INSIDE THE TANK.

DEC Memo: Start DECRemark - 0406590 Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" 9/20/2004 Sangesland spoke to John Leddy to find out if this case could be closed out. Leddy said he was subcontracted to do the testing. He hasNOT done any repairs and has NOT been hired to retest the tanks again. Sangesland called "Angel"(building super???) and got no answer 07/14/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Contacted to John Leddy he said he will find the data and he will send it to me. -QA 07/19/06: Contacted Mr. Jerry William of Controlled Combustion Company. He said there is not any waste Manifest record and no soil sampling. They removed older tank and they have put in a new tank.He will fax me the supporting documents to close the spill. -QA 07/20/06: Reviewed letter from Mr. Jerry William (General Operational Manager), Controlled Combustion Co. Inc. They removed the old oil tank and they installed a brand new 10,000 gallon oil tank. He mentioned in his letter that there were only very small oil stains on the floor, which were cleaned up. The letter also included a copy of the tank test failure report, and documents indicating that the old tank had been removed andreplaced with a new tank. Based on the information provided by Mr. Jerry William, this spill is closed. -QA END DECRemark - 0406590
Remarks: Start CallerRemark - 0406590 TEST METHOD WAS EZ THREE LOCATOR PLUS. TNAK IS ON LEGS, 95 VISABLE. THE DELAY IN REPORTING WAS DUE TO CONFUSSION DUE TO WHO WAS GOING TO REPORT IT. END CallerRemark - 0406590

DEC Memo:	Start DECRemark - 0512757 02/03/06 Feroze talked with Mr. Minick (owner) 212-604-9898. He informed that there was a leak in the tank, they have closed the leak and pumped the oil out. It is above ground tank, floor is made of concrete. An environmental company is working for them. TTF is sent to : Mr. Minick 440 west 22nd Street New york, NY 10011. 02/10/06 Mr. Minick called and told me that they will close the tank by PTC. He will submit DEC the

MINICK HOME (Continued) S107523558

Remarks:	documents soon. 03/02/06 Feroze,: Mr.Minick told me that PTC has taken soil sample. He will submit soil analysis result and tank closer report to DEC soon.It was 275 gallon tank. 03/10/06 Feroze received a certificate and soil analysis result. The result shows that VOC and SVOC arewithin accepatble limit. They also submited a manifest for removal of contaminated soil. The spill is closed. END DECRemark - 0512757 Start CallerRemark - 0512757 ruptured tank in basement: END CallerRemark - 0512757

DEC Memo: Start DECRemark - 0306399 Sangesland sent contaminated soil letter Curt Schmidt said that Mark Tibbe knows about a major spill site just upgradient from this site. 2/5/03 - TRANSFERRED FROM SAWYER TO ROMMEL 3/1/04 Reassigned from Rommel to K Foley. Spill Remediation Plan received 12/22/03 for removal of four 260gal gas USTs, one 500gal gas UST, and one 500gal no. 2 fuel oil UST. Site under development but once contained three buildings. A former auto service and plastic manufacturingexisted on site. Five USTs from NW corner were removed 9/29/03 (four 260gal gas USTs and one 500gal gas UST). Soil excavation was postponed due to safety concerns. Will excavate and direct load for disposal. A minimum of four post-ex samples willbe collected at PID

555 WEST 23RD ST (Continued) **S105999938**

hot spots on each sidewall. DTW is 6'bgs and therefore a bottom sample will probably not be feasible. If there is potential for structural damage to the adjacent building, two soil samples will be collected from that sidewall.Two samples will be collected from sidewalls greater than 20' in length. Analysis by VOCs (8021) and SVOCs (8270). Spill #9704542 was previously reported for a fuel oil release from UST. Scaled site map with former tank locations/hot spots and Phase I and II reports. There have been site investigations and proposed remediation plans submitted for 543-547 West 23rd St (spill #8605848). There is documented fuel oil and gasoline contamination of groundwater associated with sites to the east that have encroached upon the site. Mendon Leasing, 527 W 23rd file(#9605688,9808740,9511782, 9513588). 3/22/06 Reassigned from Foley to Tang. (KMF) 4/3/06: Reassigned to Andersen. Three sources of contamination: Fuel oil leak from a UST in northeast corner. Gasoline leak from five USTs in northwest corner. Gasoline groundwater contamination from adjacent Mendon Leasing site. All six tanks were removed by Fleming Lee Shue (FLS). The tank closure report was not received. Spoke with FLS and they will resend a report that was sent to Albany. 4/7/06: Received and reviewed tank closure report. Soil was excavated from three areas of contamination. Residual SVOC contamination from urban fill and VOC contamination from the adjacent spill site is present. The site will be redeveloped with a vapor barrier. NFA letter sent. END DECRemark - 0306399

Remarks: Start CallerRemark - 0306399 CALLERS COMPANY PERFORMING EXCAVATIONS ON SITE, AND SOIL SAMPLES ARE SHOWING GASOLINE CONTAMINATION OF THE SOIL AROUND SOME UNDERGROUND TANK SITES ON THE PROPERTY END CallerRemark - 0306399

DEC Memo:	Start DECRemark - 0205608 Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIBBE/SANGESLAND" 12/10/2002 Sangesland reviewed a report prepared by David Winslow of ATC Associates Inc (212-353-8280). Report states that contamination was found around a buried 1000 gal tank under the floor of the building. The tank was cleaned out and excavated around. Because of foundation issues, the tank could not be removed and not all of the contaminated soil could be removed. Basedon the soil conditions, Sangesland requested goundwater samples from the area. ATC took four groundwater samples in the area of this tank. GW is at approx 8 ft below the cement floor level. 3 of 4 samples are clean. One has some VOC hits just over 8020. Based on the location and the inability to excavate further, and that the surrounding water samples were clean, we can conclude that the contamination is localized and not spreading. Spill closed END DECRemark - 0205608
Remarks:	Start CallerRemark - 0205608 CALLER STATES UPON REMOVAL OF THE UNDERGROUND TANK - FOUND HOLES IN THE TANK AND CONTAMINATED SOIL END CallerRemark - 0205608

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D008	LEAD
D009	MERCURY
D010	SELENIUM
D018	BENZENE
D035	METHYL ETHYL KETONE
D039	TETRACHLOROETHYLENE
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
U239	BENZENE, DIMETHYL- (I,T)
U239	XYLENE (I)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/20/2007
Date Data Arrived at EDR: 05/03/2007

Telephone: 415-947-4246

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/20/2007
Date Data Arrived at EDR: 05/03/2007
Date Made Active in Reports: 07/05/2007
Number of Days to Update: 63

Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/20/2007

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/27/2007
Date Data Arrived at EDR: 03/21/2007

Last EDR Contact: 06/20/2007
Next Scheduled EDR Contact: 09/17/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 03/21/2007

Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2005

LIENS 2: CERCLA Lien Information
A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 03/08/2007

Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NJ SHWS: Known Contaminated Sites in New Jersey
The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

NJ ISRA: ISRA Database
The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA. An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

NY RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

NJ HWS RE-EVAL: Site Re-Evaluation Report
The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2004

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 28 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
NEW YORK, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	3604970039B
Additional Panels in search area:	3604970031B 3604970030B 3604970038B 3604970046B 3604970047B 3402280001B 3402220001B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile South
Site Name:	MANHATTAN GENERAL MAIL FACILITY
Site EPA ID Number:	NY6180000352
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	not available. Saturated layers impacted by salt water intrusion are present in the overburden. It is generally inferred that the depth to the uppermost 'aquifer' is greater than 70 feet at the surface of the bedrock/sediment interface.
Hydraulic Connection:	Detailed hydraulic connection information is not available. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit at the site. The surface elevation of bedrock decreases to the southwest of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

* ©1998 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were compiled under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovicias
Series:	Lower Ordovician and Cambrian carbonate rocks
Code:	OC *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8056
These files contain records, in the database, of wells that have been drilled.

OTHER STATE DATABASE INFORMATION

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 100.32 Feet of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

RE: Environmental Investigation
9th Avenue and 31st Street, Manhattan

Dear Mr. Marra:

Hazardous Waste Engineering Consultants is pleased to submit this report of the environmental investigation conducted on the railroad property located at 9th Avenue and 31st Street in New York City. The investigation was conducted to identify areas of contaminated soil and railroad bedding which may require remedial action prior to the development of this property. The property is occupied by a commuter railroad yard which is located between 50' and 60' below street level.

Scope of Work

Twelve (12) grab samples of the soil and railroad bedding at the property were collected by HWEC Field Technicians on February 4, 5 and 6, 1991. The twelve sampling points were located on the transepts of a grid superimposed over the property under investigation. Sampling locations and sample designations are shown on the site map contained in Appendix I.

Grab samples were collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth interval at each sampling location. Samples from adjacent locations were composited on a per weight basis for a total of six (6) samples to be submitted for laboratory analysis. Samples OYGS-1 and OYGS-2, OYGS-3 and OYGS-4, OYGS-5 and OYGS-6, OYGS-7 and OYGS-8, OYGS-9 and OYGS-10 and OYGS-11 and OYGS-12 were composited into samples OYCS-1, OYCS-2, OYCS-3, OYCS-4, OYCS-5 and OYCS-6, respectively. Each of the six samples consisted of an "S" (shallow) and a "D" (deep) sample, collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth intervals, respectively.

The surficial (0.0'-0.5') samples were submitted for analysis for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals) and Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25).

The deeper (1.0'-1.5') samples were submitted for analysis for Priority Pollutant Volatile Organic Compounds +15 (PPVO+15), Priority Pollutant Pesticides/PCBs and Herbicides.

The samples were collected by excavating test pits with a shovel. Subsequent to the excavation of each test pit, sample material was collected using decontaminated trowels. Between the collection of each sample, the sampling equipment was cleaned with the following series of sequential decontamination procedures: washed with non-phosphate detergent, rinsed with tap water, rinsed with distilled water, rinsed with 10% nitric acid solution, rinsed with distilled water, rinsed with acetone, air-dried and rinsed with distilled water.

Three (3) additional samples were collected for Quality Control/Quality Assurance (QA/QC) purposes on each day that sampling was conducted. The QA/QC samples consisted of a field blank, trip blank and field duplicate, and these samples were submitted for analysis for the same parameters as the soil and railroad bedding samples.

A sealed trip blank was prepared at the HWEC laboratory in Ossining, New York prior to the field technician's departure. The trip blank consisted of a 40 ml glass vial filled with distilled water and it accompanied the sampling equipment and containers to the site and returned with the samples to the laboratory. A field blank was also collected and it consisted of distilled water which was rinsed over the sampling equipment after the final stage of the sequential decontamination procedure. A field duplicate was collected along with the soil and railroad bedding samples.

All samples were collected in laboratory cleaned 40 ml glass vials. All container lids were Teflon lined. Sample containers were labeled with sample identification number, location, date and time. All field samples and QA/QC samples were kept into a cooler with blue ice for transportation to the laboratory. A chain of custody accompanied each set of samples.

Analytical Results

Six (6) samples were analyzed at our laboratory in Ossining, New York for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals), Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25), Priority Pollutant Volatile Organic Compounds +15 (PPVO+15) and Priority Pollutant Pesticides/PCBs. Six (6) samples were analyzed for Herbicides at Pace Laboratories in Wappingers Falls, New York. Summaries of the analytical results, including laboratory methodology summaries, are contained in Appendix II. Complete laboratory analytical results with raw data are available upon request.

The TPHC analysis of the soil samples revealed levels of petroleum hydrocarbons between 196 milligrams per kilogram (mg/kg) in sample OYCS-5D and 3,450 mg/kg in sample OYCS-3S.

The PP Metals analysis revealed the presence of arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, thallium and zinc in the samples. The detected levels of cadmium ranged from 5.45 mg/kg in sample OYCS-3S to 10 mg/kg in sample OYCS-6S. The detected levels of copper ranged from 296.5 mg/kg in sample OYCS-5S to 921.3 mg/kg in sample OYCS-2S. The detected levels of lead ranged from 208.5 mg/kg in sample OYCS-1S to 935.4 mg/kg in sample OYCS-3SA. The detected levels of mercury ranged from 0.356 in sample OYCS-5S to 1.731 in

sample OYCS-3S. Concentrations of zinc ranged from 150.8 mg/kg in sample OYCS-1S to 649.1 mg/kg in sample OYCS-5S.

PPBNA+25 targeted compounds and Tentatively Identified Compounds (TICs) were detected in all of the samples. Acenaphthylene was detected in field blank OYFB-1. Total concentrations of targeted PPBNA+25 compounds ranged from 3,480 micrograms per kilogram (µg/kg) in sample OYCS-2SR to 33,930 µg/kg in sample OYCS-5SRE.

The detected PPBNA+25 TICs included compounds that were identified as PCBs, among other contaminants identified by the laboratory's library search as unknowns. The total concentrations of TICs (not including PCBs) in the samples ranged from 12,600 µg/kg in sample OYCS-6SRE to 55,500 µg/kg in sample OYCS-5SRE.

The only detected targeted PPVO+15 compound in the samples was methylene chloride, which was also detected in the field blank and trip blank.

The analysis of samples OYCS-2DA, OYCS-3D, OYCS-5AD and OYCS-6D revealed total PPVO+15 TIC concentrations of 8,500 µg/kg, 1,100 µg/kg, 24 µg/kg and 2,700 µg/kg, respectively. The TICs identified in the samples consisted of acetone, 2-butanone, 4-methyl-2-pentanone and 1,1,2-trichloro-1,2,2-trifluoroethane. Acetone was also detected in the field blanks as a TIC. PPVO+15 TICs were not detected in samples OYCS-1D, OYCS-2D, OYCS-4D or OYCS-5D.

The PP Pesticides analysis revealed the presence of 4,4 DDE in all of the samples. The concentrations of 4,4 DDE ranged from 0.01 mg/kg in sample OYCS-6D to 0.53 mg/kg in sample OYCS-1D. Sample OYCS-2D contained the following concentrations of PP Pesticides (in addition to the 4,4 DDE): alpha-BHC, 0.69 mg/kg; beta-BHC, 1.4 mg/kg; gamma-BHC (Lindane), 0.92 mg/kg; Heptachlor, 0.92 mg/kg and Aldrin, 0.69 mg/kg. Sample OYCS-1D also contained Aldrin, at a concentration of 0.08 mg/kg.

PCB contamination was also detected in the samples. The highest concentration of PCBs was detected in sample OYCS-2DA, 53.6 mg/kg. The detected levels in the remainder of the samples ranged from 1.2 mg/kg in sample OYCS-6D to 45.4 mg/kg in sample OYCS-2D.

Herbicides were not detected in the soil samples, however, the samples were analyzed out of holding time due to an oversight on the part of Pace Laboratories.

Conclusions

New York State has not published any threshold limits or remediation action levels for soil contamination and evaluates soil contamination on a case by case basis. However, action levels which are generally accepted as industry standards for contamination in soil are included in Appendix III. For purposes of data evaluation, these soil contamination action levels were used as a comparison to the detected contamination at the site.

The evaluation of the soil sample analytical data revealed elevated levels of TPHC, cadmium, copper, lead, mercury, zinc, PPBNA+25 compounds and PCBs when compared to the soil action

levels contained in Appendix III. Action levels for pesticides are determined on a case-by-case basis, therefore no standards are readily available for comparison.

The detection of contaminants in the field blank indicates that those particular contaminants may be stemming from a source separate from or additional to the actual media being sampled, such as the ambient atmosphere or the sampling instruments used to collect or transfer the samples. Likewise, the detection of contaminants in the laboratory method blanks indicates that these contaminants may be attributed to laboratory contamination.

Therefore, the detected concentrations of acetone as a PPVO+15 TIC in samples OYCS-5AD and OYCS-6D may be a result of airborne contamination in the field, or contamination related to the sampling instruments since it was also detected in OYFB-3.

In addition to the soil action levels for site remediation, it is necessary to compare the detected levels of contamination in the site soils to regulated levels for hazardous waste disposal. It is possible, considering the total concentrations of lead, mercury and cadmium detected, that the soil samples may classify as RCRA lead, mercury or cadmium-containing waste if analyzed in accordance with the EPA's TCLP methodology for waste classification.

As regulated by TSCA, waste material containing more than 50 ppm PCBs must be disposed of as PCB-contaminated material. The site soil represented by sample OYCS-2DA would classify as a PCB-contaminated waste material due to its detected concentration of 53.6 mg/kg.

The origin of the PCB contamination is most likely the former usage of PCBs as an additive in locomotive transformer oil or hydraulic oil. The elevated levels of TPHC at the site may be related to oil leakage from railroad locomotives and also the creosote coating applied to railroad ties as a preservative.

It is recommended that further sampling be conducted and coordinated with the projected structure design so that the sampling points coincide with the locations and depths of planned building excavations. The laboratory analytical results can then be used to choose appropriate worker personal protective equipment (PPE) for use during construction and excavation and to characterize excavated soil for proper disposal.

The samples collected for Herbicides analysis were not analyzed within EPA-promulgated holding times due to an oversight on the part of Pace Laboratories. Since herbicides were not detected, the results of the analysis are inconclusive. It is recommended that additional sampling for herbicides be conducted at projected locations of construction excavation.

Prior to initiating any work or site development which would disturb the site soils, it is recommended that a qualified environmental engineering firm be retained to develop a detailed, site-specific Health and Safety Program to protect workers and the general public from exposure to the contaminated soils. Once the Health and Safety Program is developed, all site work involving contact with the contaminated soil should be conducted under the supervision of a qualified Health and Safety Officer.

Any soil excavated and removed from the site, either during site remediation or during normal

construction activities, should be sampled and analyzed for waste classification purposes. The waste classification information should be used to classify the soil and to secure disposal approval from a disposal facility. Care should be taken to select a disposal facility which is permitted to accept the specific waste classification given to the soil scheduled for removal. It is recommended that a qualified environmental engineering firm be retained to supervise the classification, transportation and disposal of the waste materials.

If you have any questions about this information, please contact us at (914) 762-9000.

Sincerely,
HAZARDOUS WASTE ENGINEERING CONSULTANTS

Gregg T. Chappell
Project Manager

APPENDIX III

HAZARDOUS WASTE
SOIL REMEDIATION ACTION LEVELS

Total Petroleum Hydrocarbons (TPHC)	100 mg/kg
Surrogate Levels:	
Acid Extractables (AE)	Case-by-Case
Base Neutrals (BN)	10 mg/kg
Volatile Organics (VOC)	1 mg/kg
Pesticides	
DDT	1-10 mg/kg
Chlordane	1 mg/kg
Other	Case-by-Case
Polychlorinated Biphenyls (PCBs)	1-5 mg/kg
Priority Pollutant Metals (PP Metals)	
Antimony	10 mg/kg
Arsenic	20 mg/kg
Barium	400 mg/kg
Beryllium	1 mg/kg
Cadmium	3 mg/kg
Chromium	100 mg/kg
Copper	170 mg/kg
Lead	250-1000 mg/kg
Nickel	100 mg/kg
Mercury	1 mg/kg
Molybdenum	1 mg/kg
Selenium	4 mg/kg
Silver	5 mg/kg
Thallium	5 mg/kg
Vanadium	100 mg/kg
Zinc	350 mg/kg
Polycyclic Aromatic Hydrocarbons (PAH)	10 mg/kg

mg/kg - Parts per million (ppm)

The action levels are reference numbers used to identify presence of contamination. All contamination identified at a site above the action level should have horizontal and vertical extent delineated. Specific cleanup objectives are developed on a case-by-case basis.

- to examine the property for signs of potential contamination: stained soils, unusual odors, stressed or dead vegetation, improperly stored drums, oil slicks, on-site waste disposal/dumping, etc.

- to identify the quantity and type of toxic or hazardous substances used in the on-site operations (through interviews, site inspections, Materials Safety Data Sheets, hazardous materials inventories, reports to regulatory agencies, etc.).

- to determine if on-site toxic and hazardous materials are stored, handled and disposed of in accordance with good practice, minimizing the potential for contamination. Chemical storage areas and waste removal manifests are checked.

- to identify potential off-site sources of contamination. Adjacent uses are noted, along with topography and surface water drainage patterns.

- to identify on-site or adjacent off-site sensitive receptors, such as wetlands, surface waters, drinking water wells.

Not all of the objectives described above are applied to every site; investigations are tailored to the particular nature of the site. It should be noted that information requested from regulatory agencies may be incomplete or unavailable within a reasonable time period.

In accordance with ASTM standards, a Phase I ESA is not prepared as an environmental compliance report. This Phase I report addresses the general and typical regulations for toxic and hazardous materials, but does not necessarily stipulate the specific compliance requirements under federal, state and local laws for storage, use, transport, discharge or disposal of such materials at the subject property. (Specific compliance issues and questions about a particular site must be addressed directly by the regulatory agency with jurisdiction). In addition, no judgment is made with respect to the facility's compliance with worker exposure standards established by the Occupational Safety and Health Administration (OSHA).

V. QUALIFICATIONS

EEA, Inc. (a.k.a. Energy & Environmental Analysts, Inc.) is an environmental consulting firm that has undertaken environmental pollution investigations, development feasibility studies, and environmental site assessment studies since 1979. These site evaluation studies have been prepared for major lenders, public corporations, businesses, developers and governmental agencies. Approximately 3,000 parcels have been evaluated in the metropolitan New York-New Jersey area during the past six years, ranging from Phase I Environmental Site Assessments to comprehensive soil, water, and asbestos testing programs. EEA also prepares bid specifications for remediation programs and supervises site cleanup.

EEA's principals and senior managers for the hazardous waste investigations each have over 15 years experience in environmental consulting, with established credentials in the field.

Individual qualifications of EEA personnel, including specific credentials of persons involved in the preparation of this report, can be provided upon request.

VI. DISCLAIMER

This report is for use by Rosenman & Colin, Attorneys At Law, and is only to be used as a guide in determining the potential for contamination by toxic or hazardous materials on the subject property at the time of the site visit. This Phase I Environmental Site Assessment (ESA) was undertaken in accordance with generally accepted assessment protocols, including the ASTM Standard Practice for Phase I ESAs. This Phase I ESA is based principally on the review of historic and regulatory records (made available within a reasonable time period), relating to past occupants and usage of the subject property, as well as activities at nearby sites, and upon a visual assessment of the subject property, and makes no determinations with respect to portions of the subject property and its structures which were not inspected.

This Phase I ESA investigation does not involve any sampling, testing, or laboratory analysis of subsurface soils, groundwater or building materials or other substances on-site, but constitutes only the professional opinion of EEA, Inc. based on established procedures and protocols. This Phase I ESA is not, and should not be construed as, a guaranty, warranty, or certification of the presence or absence of toxic or hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any toxic or hazardous substances, which may be subject to regulatory approval.

RE: Environmental Investigation
9th Avenue and 31st Street, Manhattan

Dear Mr. Marra:

Hazardous Waste Engineering Consultants is pleased to submit this report of the environmental investigation conducted on the railroad property located at 9th Avenue and 31st Street in New York City. The investigation was conducted to identify areas of contaminated soil and railroad bedding which may require remedial action prior to the development of this property. The property is occupied by a commuter railroad yard which is located between 50' and 60' below street level.

Scope of Work

Twelve (12) grab samples of the soil and railroad bedding at the property were collected by HWEC Field Technicians on February 4, 5 and 6, 1991. The twelve sampling points were located on the transepts of a grid superimposed over the property under investigation. Sampling locations and sample designations are shown on the site map contained in Appendix I.

Grab samples were collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth interval at each sampling location. Samples from adjacent locations were composited on a per weight basis for a total of six (6) samples to be submitted for laboratory analysis. Samples OYGS-1 and OYGS-2, OYGS-3 and OYGS-4, OYGS-5 and OYGS-6, OYGS-7 and OYGS-8, OYGS-9 and OYGS-10 and OYGS-11 and OYGS-12 were composited into samples OYCS-1, OYCS-2, OYCS-3, OYCS-4, OYCS-5 and OYCS-6, respectively. Each of the six samples consisted of an "S" (shallow) and a "D" (deep) sample, collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth intervals, respectively.

The surficial (0.0'-0.5') samples were submitted for analysis for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals) and Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25).

The deeper (1.0'-1.5') samples were submitted for analysis for Priority Pollutant Volatile Organic Compounds +15 (PPVO+15), Priority Pollutant Pesticides/PCBs and Herbicides.

The samples were collected by excavating test pits with a shovel. Subsequent to the excavation of each test pit, sample material was collected using decontaminated trowels. Between the collection of each sample, the sampling equipment was cleaned with the following series of sequential decontamination procedures: washed with non-phosphate detergent, rinsed with tap water, rinsed with distilled water, rinsed with 10% nitric acid solution, rinsed with distilled water, rinsed with acetone, air-dried and rinsed with distilled water.

Three (3) additional samples were collected for Quality Control/Quality Assurance (QA/QC) purposes on each day that sampling was conducted. The QA/QC samples consisted of a field blank, trip blank and field duplicate, and these samples were submitted for analysis for the same parameters as the soil and railroad bedding samples.

A sealed trip blank was prepared at the HWEC laboratory in Ossining, New York prior to the field technician's departure. The trip blank consisted of a 40 ml glass vial filled with distilled water and it accompanied the sampling equipment and containers to the site and returned with the samples to the laboratory. A field blank was also collected and it consisted of distilled water which was rinsed over the sampling equipment after the final stage of the sequential decontamination procedure. A field duplicate was collected along with the soil and railroad bedding samples.

All samples were collected in laboratory cleaned 40 ml glass vials. All container lids were Teflon lined. Sample containers were labeled with sample identification number, location, date and time. All field samples and QA/QC samples were kept into a cooler with blue ice for transportation to the laboratory. A chain of custody accompanied each set of samples.

Analytical Results

Six (6) samples were analyzed at our laboratory in Ossining, New York for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals), Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25), Priority Pollutant Volatile Organic Compounds +15 (PPVO+15) and Priority Pollutant Pesticides/PCBs. Six (6) samples were analyzed for Herbicides at Pace Laboratories in Wappingers Falls, New York. Summaries of the analytical results, including laboratory methodology summaries, are contained in Appendix II. Complete laboratory analytical results with raw data are available upon request.

The TPHC analysis of the soil samples revealed levels of petroleum hydrocarbons between 196 milligrams per kilogram (mg/kg) in sample OYCS-5D and 3,450 mg/kg in sample OYCS-3S.

The PP Metals analysis revealed the presence of arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, thallium and zinc in the samples. The detected levels of cadmium ranged from 5.45 mg/kg in sample OYCS-3S to 10 mg/kg in sample OYCS-6S. The detected levels of copper ranged from 296.5 mg/kg in sample OYCS-5S to 921.3 mg/kg in sample OYCS-2S. The detected levels of lead ranged from 208.5 mg/kg in sample OYCS-1S to 935.4 mg/kg in sample OYCS-3SA. The detected levels of mercury ranged from 0.356 in sample OYCS-5S to 1.731 in

sample OYCS-3S. Concentrations of zinc ranged from 150.8 mg/kg in sample OYCS-1S to 649.1 mg/kg in sample OYCS-5S.

PPBNA+25 targeted compounds and Tentatively Identified Compounds (TICs) were detected in all of the samples. Acenaphthylene was detected in field blank OYFB-1. Total concentrations of targeted PPBNA+25 compounds ranged from 3,480 micrograms per kilogram (µg/kg) in sample OYCS-2SR to 33,930 µg/kg in sample OYCS-5SRE.

The detected PPBNA+25 TICs included compounds that were identified as PCBs, among other contaminants identified by the laboratory's library search as unknowns. The total concentrations of TICs (not including PCBs) in the samples ranged from 12,600 µg/kg in sample OYCS-6SRE to 55,500 µg/kg in sample OYCS-5SRE.

The only detected targeted PPVO+15 compound in the samples was methylene chloride, which was also detected in the field blank and trip blank.

The analysis of samples OYCS-2DA, OYCS-3D, OYCS-5AD and OYCS-6D revealed total PPVO+15 TIC concentrations of 8,500 µg/kg, 1,100 µg/kg, 24 µg/kg and 2,700 µg/kg, respectively. The TICs identified in the samples consisted of acetone, 2-butanone, 4-methyl-2-pentanone and 1,1,2-trichloro-1,2,2-trifluoroethane. Acetone was also detected in the field blanks as a TIC. PPVO+15 TICs were not detected in samples OYCS-1D, OYCS-2D, OYCS-4D or OYCS-5D.

The PP Pesticides analysis revealed the presence of 4,4 DDE in all of the samples. The concentrations of 4,4 DDE ranged from 0.01 mg/kg in sample OYCS-6D to 0.53 mg/kg in sample OYCS-1D. Sample OYCS-2D contained the following concentrations of PP Pesticides (in addition to the 4,4 DDE): alpha-BHC, 0.69 mg/kg; beta-BHC, 1.4 mg/kg; gamma-BHC (Lindane), 0.92 mg/kg; Heptachlor, 0.92 mg/kg and Aldrin, 0.69 mg/kg. Sample OYCS-1D also contained Aldrin, at a concentration of 0.08 mg/kg.

PCB contamination was also detected in the samples. The highest concentration of PCBs was detected in sample OYCS-2DA, 53.6 mg/kg. The detected levels in the remainder of the samples ranged from 1.2 mg/kg in sample OYCS-6D to 45.4 mg/kg in sample OYCS-2D.

Herbicides were not detected in the soil samples, however, the samples were analyzed out of holding time due to an oversight on the part of Pace Laboratories.

Conclusions

New York State has not published any threshold limits or remediation action levels for soil contamination and evaluates soil contamination on a case by case basis. However, action levels which are generally accepted as industry standards for contamination in soil are included in Appendix III. For purposes of data evaluation, these soil contamination action levels were used as a comparison to the detected contamination at the site.

The evaluation of the soil sample analytical data revealed elevated levels of TPHC, cadmium, copper, lead, mercury, zinc, PPBNA+25 compounds and PCBs when compared to the soil action

levels contained in Appendix III. Action levels for pesticides are determined on a case-by-case basis, therefore no standards are readily available for comparison.

The detection of contaminants in the field blank indicates that those particular contaminants may be stemming from a source separate from or additional to the actual media being sampled, such as the ambient atmosphere or the sampling instruments used to collect or transfer the samples. Likewise, the detection of contaminants in the laboratory method blanks indicates that these contaminants may be attributed to laboratory contamination.

Therefore, the detected concentrations of acetone as a PPVO+15 TIC in samples OYCS-5AD and OYCS-6D may be a result of airborne contamination in the field, or contamination related to the sampling instruments since it was also detected in OYFB-3.

In addition to the soil action levels for site remediation, it is necessary to compare the detected levels of contamination in the site soils to regulated levels for hazardous waste disposal. It is possible, considering the total concentrations of lead, mercury and cadmium detected, that the soil samples may classify as RCRA lead, mercury or cadmium-containing waste if analyzed in accordance with the EPA's TCLP methodology for waste classification.

As regulated by TSCA, waste material containing more than 50 ppm PCBs must be disposed of as PCB-contaminated material. The site soil represented by sample OYCS-2DA would classify as a PCB-contaminated waste material due to its detected concentration of 53.6 mg/kg.

The origin of the PCB contamination is most likely the former usage of PCBs as an additive in locomotive transformer oil or hydraulic oil. The elevated levels of TPHC at the site may be related to oil leakage from railroad locomotives and also the creosote coating applied to railroad ties as a preservative.

It is recommended that further sampling be conducted and coordinated with the projected structure design so that the sampling points coincide with the locations and depths of planned building excavations. The laboratory analytical results can then be used to choose appropriate worker personal protective equipment (PPE) for use during construction and excavation and to characterize excavated soil for proper disposal.

The samples collected for Herbicides analysis were not analyzed within EPA-promulgated holding times due to an oversight on the part of Pace Laboratories. Since herbicides were not detected, the results of the analysis are inconclusive. It is recommended that additional sampling for herbicides be conducted at projected locations of construction excavation.

Prior to initiating any work or site development which would disturb the site soils, it is recommended that a qualified environmental engineering firm be retained to develop a detailed, site-specific Health and Safety Program to protect workers and the general public from exposure to the contaminated soils. Once the Health and Safety Program is developed, all site work involving contact with the contaminated soil should be conducted under the supervision of a qualified Health and Safety Officer.

Any soil excavated and removed from the site, either during site remediation or during normal

construction activities, should be sampled and analyzed for waste classification purposes. The waste classification information should be used to classify the soil and to secure disposal approval from a disposal facility. Care should be taken to select a disposal facility which is permitted to accept the specific waste classification given to the soil scheduled for removal. It is recommended that a qualified environmental engineering firm be retained to supervise the classification, transportation and disposal of the waste materials.

If you have any questions about this information, please contact us at (914) 762-9000.

Sincerely,
HAZARDOUS WASTE ENGINEERING CONSULTANTS

APPENDIX III

HAZARDOUS WASTE
SOIL REMEDIATION ACTION LEVELS

Total Petroleum Hydrocarbons (TPHC)	100 mg/kg
Surrogate Levels:	
Acid Extractables (AE)	Case-by-Case
Base Neutrals (BN)	10 mg/kg
Volatile Organics (VOC)	1 mg/kg
Pesticides	
DDT	1-10 mg/kg
Chlordane	1 mg/kg
Other	Case-by-Case
Polychlorinated Biphenyls (PCBs)	1-5 mg/kg
Priority Pollutant Metals (PP Metals)	
Antimony	10 mg/kg
Arsenic	20 mg/kg
Barium	400 mg/kg
Beryllium	1 mg/kg
Cadmium	3 mg/kg
Chromium	100 mg/kg
Copper	170 mg/kg
Lead	250-1000 mg/kg
Nickel	100 mg/kg
Mercury	1 mg/kg
Molybdenum	1 mg/kg
Selenium	4 mg/kg
Silver	5 mg/kg
Thallium	5 mg/kg
Vanadium	100 mg/kg
Zinc	350 mg/kg
Polycyclic Aromatic Hydrocarbons (PAH)	10 mg/kg

mg/kg - Parts per million (ppm)

The action levels are reference numbers used to identify presence of contamination. All contamination identified at a site above the action level should have horizontal and vertical extent delineated. Specific cleanup objectives are developed on a case-by-case basis.

- to examine the property for signs of potential contamination: stained soils, unusual odors, stressed or dead vegetation, improperly stored drums, oil slicks, on-site waste disposal/dumping, etc.

- to identify the quantity and type of toxic or hazardous substances used in the on-site operations (through interviews, site inspections, Materials Safety Data Sheets, hazardous materials inventories, reports to regulatory agencies, etc.).

- to determine if on-site toxic and hazardous materials are stored, handled and disposed of in accordance with good practice, minimizing the potential for contamination. Chemical storage areas and waste removal manifests are checked.

- to identify potential off-site sources of contamination. Adjacent uses are noted, along with topography and surface water drainage patterns.

- to identify on-site or adjacent off-site sensitive receptors, such as wetlands, surface waters, drinking water wells.

Not all of the objectives described above are applied to every site; investigations are tailored to the particular nature of the site. It should be noted that information requested from regulatory agencies may be incomplete or unavailable within a reasonable time period.

In accordance with ASTM standards, a Phase I ESA is not prepared as an environmental compliance report. This Phase I report addresses the general and typical regulations for toxic and hazardous materials, but does not necessarily stipulate the specific compliance requirements under federal, state and local laws for storage, use, transport, discharge or disposal of such materials at the subject property. (Specific compliance issues and questions about a particular site must be addressed directly by the regulatory agency with jurisdiction). In addition, no judgment is made with respect to the facility's compliance with worker exposure standards established by the Occupational Safety and Health Administration (OSHA).

V. QUALIFICATIONS

EEA, Inc. (a.k.a. Energy & Environmental Analysts, Inc.) is an environmental consulting firm that has undertaken environmental pollution investigations, development feasibility studies, and environmental site assessment studies since 1979. These site evaluation studies have been prepared for major lenders, public corporations, businesses, developers and governmental agencies. Approximately 3,000 parcels have been evaluated in the metropolitan New York-New Jersey area during the past six years, ranging from Phase I Environmental Site Assessments to comprehensive soil, water, and asbestos testing programs. EEA also prepares bid specifications for remediation programs and supervises site cleanup.

EEA's principals and senior managers for the hazardous waste investigations each have over 15 years experience in environmental consulting, with established credentials in the field.

Individual qualifications of EEA personnel, including specific credentials of persons involved in the preparation of this report, can be provided upon request.

VI. DISCLAIMER

This report is for use by Rosenman & Colin, Attorneys At Law, and is only to be used as a guide in determining the potential for contamination by toxic or hazardous materials on the subject property at the time of the site visit. This Phase I Environmental Site Assessment (ESA) was undertaken in accordance with generally accepted assessment protocols, including the ASTM Standard Practice for Phase I ESAs. This Phase I ESA is based principally on the review of historic and regulatory records (made available within a reasonable time period), relating to past occupants and usage of the subject property, as well as activities at nearby sites, and upon a visual assessment of the subject property, and makes no determinations with respect to portions of the subject property and its structures which were not inspected.

This Phase I ESA investigation does not involve any sampling, testing, or laboratory analysis of subsurface soils, groundwater or building materials or other substances on-site, but constitutes only the professional opinion of EEA, Inc. based on established procedures and protocols. This Phase I ESA is not, and should not be construed as, a guaranty, warranty, or certification of the presence or absence of toxic or hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any toxic or hazardous substances, which may be subject to regulatory approval.

APPENDIX I

RESUMES

ISABEL RIBEIRO
Project Manager

EDUCATION

B.S., Environmental Engineering, Catholic University of Portugal, Portugal, 1999

PROFESSIONAL SUMMARY

Ms. Ribeiro is a Project Manager for ATC's New York City Environmental Division. She has more than seven years of experience in environmental site assessments, subsoil investigations, auditing and waste and wastewater management. Ms. Ribeiro has worked for such private sectors groups as petroleum, chemical, pharmaceutical, metallurgical, consumer goods and agricultural industries as well as European government agencies.

TRAINING AND CERTIFICATIONS

- 40-Hour Hazardous Materials Operation & Emergency Response
- AHERA/EPA/NYSDOL Asbestos Inspector

PROFESSSIONAL EXPERIENCE

- **Environmental Site Assessments / Community Preservation Corporation / New York.** Project Manager for Phase I Environmental Site Assessments on various types of sites throughout the five boroughs for the purpose of revitalization and redevelopment to mixed-income communities and residences. Project activities included asbestos and lead based paint surveys and Phase I ESA for each site performed according to ASTM 1527 and 40CFR.312 AAI screening and additional remedial investigation activities associated with volatile organic compounds in the soil and groundwater.

- **Environmental Site Assessments / Prudential Mortgage Corporation / New York.** Project Manager for Phase I Environmental Site Assessments on various types of sites and facilities for the purpose of site redevelopment financing. Project activities included asbestos and lead based paint surveys and Phase I ESA for each site performed according to ASTM 1527 and 40CFR.312 AAI screening and additional remedial investigation activities associated with volatile organic compounds in the soil and groundwater.

- **Environmental Site Assessments / Safeguard / New York.** Project Manager for Phase I and Phase II investigations for former industrialized parcels of land and developed urban sites for the purpose of revitalization and redevelopment to Self Storage facilities. Project activities included asbestos and lead based paint surveys and Phase I ESA for each site performed according to ASTM 1527 and 40CFR.312 AAI screening and additional remedial investigation activities associated with volatile organic compounds in the soil and groundwater.

- **Environmental Site Assessments / Thor Equities, LLC / New York.** Project Manager for Phase I and Phase II investigations for the sale and acquisition of various residential and commercial buildings throughout the five boroughs. Project

activities included asbestos and lead based paint surveys and Phase I ESA for each site performed according to ASTM 1527 and 40CFR.312 AAI screening and additional remedial investigation activities associated with volatile organic compounds in the soil and groundwater.

- **Environmental Site Assessments / ExxonMobil / Portugal & Spain** Performed Phase I and Phase II investigations for gas station construction; Phase II investigations for seaport diesel stations; and soil investigations during UST removal as part of station closures.

- **Subsurface Investigations / Honeywell / Portugal** Managed subsurface investigation of metal products manufacturing facility. Off-site tasks included remediation plan design, negotiation and presentation to regulatory agencies and community relations for those affected residences until new connections to municipal water services were established.

- **Environmental Report / U.S. Air Force / Azores Islands, Portugal** Prepared comprehensive report on Portuguese environmental legislation and Final Government Standard for the U.S. Air Force at its base in the Azores Islands.

- **Groundwater Investigation / British Petroleum / Lisbon, Portugal** Managed Phase II and groundwater investigation of petroleum storage terminal.

- **ESA and Groundwater Investigation / Confidential Pharmaceutical Company / Lisbon and Madrid** Conducted Phase I and Phase II soil and groundwater investigation of facility and office buildings in multiple locations.

PAMELA OELERICH
Senior Project Manager

EDUCATION

B.S., Civil Engineering, University of New Hampshire, 2000

PROFESSIONAL SUMMARY

Ms. Oelerich is a Senior Project Manager with ATC's New York City Environmental Division. She has more than six years of professional experience serving the public and private environmental sectors with Phase I and II site investigations; subsurface investigations, including soil and groundwater investigations, petroleum tank closures, soil boring and test pit excavation, monitoring well installation and associated sampling. She has experience in a wide range of client projects, including assessment, investigation and remediation services for school facilities, urban redevelopment sites, transportation hubs and waterfront redevelopment for both private sector and local and federal government clients.

PROFESSSIONAL EXPERIENCE

- **Environmental Consulting Services / NYC School Construction Authority / New York.** As project manager, assesses soil, groundwater, and soil vapor analytical results to determine whether petroleum and/or chlorinated solvent contamination is present; if so, estimate extent of contamination and present findings to upper management and client. Review findings and data from a faulty dual-phase oil recovery system to determine whether the system is failing or whether the initial estimate of product to be recovered was incorrect. Prepare specification sections pertaining to underground storage tanks, earthwork, hazardous material handling and disposal to be used in the contract documents for bidding purposes. Responsible for review of investigative reports for accuracy and submittal to client. Facilitate weekly project status meetings to balance workload among team players and to maintain the team's focus.

- **Environmental Impact Statements / NYC Economic Development Corporation / New York.** Project manager. Performed a hazardous materials survey of the site and its surrounding area to identify potential environmental issues for disclosure in the Draft Environmental Impact Statement (DEIS). Co-authored DEIS hazardous materials chapter. Prepared cost estimate and scope of work for the Phase II ESI to be performed at the site. Coordinated field work mobilization including, scheduling of geophysical surveyor, driller and staff, and negotiation and preparation of sub-contractor agreements. Responsible for completion of field work and preparation of Phase II ESI findings report according to agreed upon scope of work.

- **Site Investigations / NYC Transit Authority – No. 7 Subway Extension Project / New York.** Project manager. Coordinated the preparation of more than 50 Phase I ESAs for sites slated to be used to accommodate the No. 7 Subway Extension; prepared Phase II ESI scopes of work based on results of the Phase I ESAs. Managed efforts between client and consultant team, performed oversight of fieldwork, prepared numerous sampling and analysis plans and Phase II ESA reports. Co-authored the Hazardous Materials chapter of the Final Environmental Impact Statement.

- **Site Investigations / LIRR Property Acquisition / New York and Long Island.** Project manager. Assisted in the preparation of the Phase II ESI, which included subcontractor and client coordination, scheduling and cost monitoring, subsurface site investigation, and findings report preparation.

- **Asbestos and Lead Management Services / MTA/LIRR East Side Access Project / New York.** Environmental Engineer. Inspected the 63rd Street Tunnel for active water leaks, asbestos containing material and lead based paint. Collected representative water samples, analyzed lab data and prepared findings report summaries that formulated conclusions and recommendations regarding the sites' environmental integrity.

- **Site Investigation / U.S. General Services Administration Champlain Border Crossing / Vermont.** Project manager. Responsibilities included coordination with client, government officials and interdepartmental personnel, budget management, site assessment, and report preparation.

- **Site Investigation / Westchester County Department of Public Works – Taxiway Reconstruction and Extension Phase IV / New York.** Performed subsurface and supplemental ESA including determining the extent of any remaining impacted material and documented the closure of areas where contaminated material was removed.

Dear Ms. Bryant:

ATC is writing pursuant to the New York Freedom of Information Law to request access to certain information available from your agency for the above referenced properties. ATC would like to receive information concerning the following:

- Chemical and petroleum storage tanks, spill records, toxic waste dump/wastewater discharge; and
- Monitoring data, regulatory non-compliance notices, documents or studies regarding any health and environmental problems.

Please let me know if there are any costs associated with this request prior to processing. Your response can either be faxed or mailed to us at the fax number and/or location identified above. If you have any questions, please call me at (212) 353-8280 extension 372.

Thank you for your prompt attention to this matter.

Sincerely,

ATC Associates Inc.

IV. SCOPE OF WORK

V. QUALIFICATIONS

VI. DISCLAIMER

APPENDIX A - Photographs
APPENDIX B - Agency FOIL Requests and Responses

II. REPORT OF FINDINGS

The subject property was inspected on January 23, 1995, and January 25, 1995, by EEA, Inc. investigator Bonnie Braine.

The findings of EEA's investigation, including our regulatory agency checks, are presented in the following sections.

A. Property Description

i). Site Description

The subject property at Ninth Avenue and 33rd Street is located on the south side of West 33rd Street, between Ninth and Tenth Avenues, in the Borough of Manhattan, New York City, New York (see Figures 1 and 2). Tax map identification of this parcel is: Block 729, Lot 60.

The subject property, which consists of two separate vacant lots used for parking, and a depressed right-of-way for the Long Island Rail Road, totals 80,663 square feet in surface area (see Photos 1, 2, and 3). The subject property does not include the industrial loft building at 424 West 33rd Street, which separates the two parking lots.

The depressed railroad right-of-way, which is located at approximately 60 feet below street level on the southern portion of the property, is 44,492 square feet in area. This portion of the site was not accessible for inspection at grade, but was viewed from street level at West 31st Street (see Photos 4 and 5). The rail yard right-of-way included tracks leading to the yards further west, with overhead signal bridges, electrical equipment bridges, track switching equipment, etc. However, no specific "yard" areas (for repair, maintenance, storage of rolling stock) were noted; numerous trains were observed running through this area at the time of both inspections.

The two vacant parking lots total 36,171 square feet in area. The larger of the two lots, the east lot, located at 401-409 Ninth Avenue (aka 400-422 West 33rd Street), consists of an unfenced parking lot (207-car capacity) with an attendant's booth off West 33rd Street (see Photos 6 and 7). A small second metal structure on a concrete base, possibly a former attendant's booth or office associated with a former gasoline station, is located at the southeast corner of the east lot (see Photos 8 and 9). This structure is vacant and is presently only used for signs.

The west lot, located at 440-444 West 33rd Street, has an 82-car capacity and is fenced off from the street. An attendant's booth is located at the northwest corner of this lot (see Photos 3 and 10).

ii). Historical Atlases

The 1890, 1899, 1911, 1930, 1950, 1980, and 1993 Sanborn fire insurance/real estate atlases were reviewed (see Figures 2 through 8). These atlases are another source for the history of structures on the site, and may indicate property use and the presence of buried gasoline tanks. (If atlases indicate buried tanks, this information is also discussed in Section II.E. and, for adjoining properties, Section II.K.).

The 1890 and 1899 atlases indicate that the property was then occupied by multiple residential tenements buildings, and New York City Fire Department Engine Company No. 34 (440 West 33rd Street). The railroad cut had not yet been created; the entire site was occupied by buildings (see Figures 3 and 4).

The 1911, 1930, 1950, 1980, and 1993 atlases all indicate the present rail cut for the depressed railroad right-of-way on the southern portion of the property. The following table summarizes the contents of these atlases (see also Figures 2, 5, 6, 7 and 8).

Year	Structures	Use
1911 ATLAS		
East Lot	eleven 3-, 4- and 5-story tenement structures	residential, retail, light manufacturing
	one 8-story loft building (416-422 W. 33rd St.)	industrial/stores

Figure 8

o 1980 and 1993 ATLASES

East Lot	vacant	parking
West Lot	vacant	parking
Southern Portion	railroad tracks (rail cut/retaining wall)	part of Long Island Rail Road car yard

It should be noted that, although earlier Sanborn atlases indicate fairly accurately the presence (or former presence) of buried gasoline tanks at a site, the fact that no such tanks are shown on subsequent atlases does not indicate that Sanborn has verified the removal of such tanks. According to the Sanborn Map Company, detailed "fire insurance" surveys of sites to determine the presence of gasoline tanks were not undertaken after the early 1950s. Atlases prepared after the early 1950s reflect general building types and uses rather than specific occupants and features such as buried tanks.

Information from Sanborn atlases concerning past neighborhood land uses is described in Section II.K.i.

iii). Address Directories

Listings for the subject property from selected years of both New York Telephone (1940 to 1965) and Cole (1971 to 1995) address directories are presented in the following table:

Occupant	Directories Listed
o 406 West 33rd Street	
Residential	1940
o 412 West 33rd Street	
State Iron Works	1940
o 416 West 33rd Street

No listings	1975, 1979, 1983, 1986, 1990, 1994, 1995

Avenue. This garage was demolished in 1943, and replaced by a gasoline station at 401-409 Ninth Avenue in 1944. This gasoline station operated until 1972, when it was demolished.

The 1950 atlas also indicated that most of the east lot was then vacant and used for parking, and that the west lot was partially occupied by a contractor's yard. Both east and west lots are shown as vacant parking lots on the 1980 and 1993 atlases.

The rail cut portion of the property is indicated as a part of the Long Island Rail Road "car yard" on the 1911, 1930, 1950, 1980, and 1993 atlases.

Some of the past occupants of the parking lot parcels (i.e., garage, gasoline station, contractor's yard, printing businesses, iron works, etc.) were types of operations that store, use, or produce significant quantities of toxic or hazardous materials and/or wastes: e.g., inks, printing and plate developing solutions and wastes, oils, solvents, gasoline, automotive fluids used in repair (if any), etc. In addition, rail yards have typically been the location for the use, storage, and/or spills of toxic or hazardous materials and wastes, e.g.: petroleum products, solvents, various herbicides/pesticides (used in track maintenance), creosote (wood preservative for rail ties), paints, and polychlorinated biphenyls (PCBs), which were formerly used as an additive in various oils, including locomotive transformer oil and hydraulic oil, etc.

C. Site Characteristics

i). Hydrogeology and Site Topography

The island of Manhattan is composed mainly of consolidated bedrock known as the Manhattan Schist Formation. Overlying the bedrock are unconsolidated sediments consisting of quaternary glacial deposits such as sand, silt, clay, fill, gravel and various sized boulders.

These sediments known as the ground moraine are usually found to range from 2 to 35 feet in thickness. In many places the bedrock outcrops at the surface (i.e., Central Park and Harlem). In lower Manhattan unconsolidated sediments may extend to depths up to 200 feet. Locally where relic stream channels scoured out the surrounding bedrock unconsolidated sediments are found to thicknesses of 75 feet or more.

Groundwater is generally found where substantially thick unconsolidated sediments exist. Manhattan Schist is unimportant as an aquifer because of its relative impermeability, although in highly fractured areas (i.e., Morningside Park, Morningside Heights) bedrock wells have produced up to 40 gallons per minute.

Only three drainage structures were found in the parking lot areas: these were located in the narrow strip to the rear of the building at 424 West 33rd Street, which runs between the two parking lots (see Photo 13). Bags of rock salt and wood pallets were observed stored in this rear area; some of this rock salt had leaked, and was also noted around the easternmost drain (see Photos 12 and 13). The destination of these drains is not known; they may connect to the municipal sewer system, or discharge to soils or the rail cut below.

It should be noted that drainage structures in active parking areas may have been covered by vehicles, etc., and therefore may not have been visible at the time of inspection.

c). Rail Cut Drainage

As noted previously, the depressed rail cut portion of the subject site was not accessible for physical inspection, and was only observed from street level. Therefore, the presence of any drainage structures, sumps, etc., to handle run-off from this area could not be confirmed.

It is presumed that a storm water drainage system is located throughout the rail cut, to handle runoff from depressed track areas. Since this area is 60 feet below grade, it is likely that run-off is collected in sumps and pumped to grade. The final discharge point (i.e., the municipal stormwater system, the Hudson River, soils) cannot be confirmed without specific drainage plans from the Long Island Rail Road/Amtrak. Any such discharges of rail yard runoff would require a SPDES or other permit from New York State and/or the New York City Department of Environmental Protection, depending on the final discharge destination (see Section II.F.ii.).

iii). Flood Plain Information

The subject property lies in Zone C, an area of minimal flooding, on the Flood Insurance Rate Map #3604970039B (Federal Emergency Management Agency, November 16, 1983). The subject property is not in a flood plain.

iv). Sensitive Receptors

Sensitive receptors (e.g., wetlands, surface waters, well fields, groundwater recharge basins) were checked for the immediate vicinity of the subject site. In the event of an incident involving the spill of a toxic or hazardous material at the subject site, more costly remedial actions may be required when sensitive receptors are present.

Environmental Conservation be contacted to supervise tank removal and any necessary clean-up of soils.

ii). Gasoline Tanks

Historic atlases indicate the former presence of a gasoline station, plus a former garage with a buried gasoline tank, located on the east end of the east lot of the property, along Ninth Avenue (see Section II.B.ii.).

NYCFD has a record of a "voided" gasoline service station account for the subject property at 401-409 Ninth Avenue. However, no records or files corresponding to this account could be located after several requests (see Section II.L.iii.). Therefore, no information was available concerning on the number or specific locations of buried tanks that were previously located (and may remain) on the subject property.

Indications of the existence of at least two remaining buried gasoline tanks (e.g., two gasoline fillports, only one of which was sealed with concrete) were noted during the site inspection. These fillports were observed in the sidewalk along Ninth Avenue (see Photo 14). In addition, a small patched area was observed next to the old "attendant's booth" at the southeast corner of the east parking lot (see Photo 15). This may indicate a former tank or gasoline pump location.

NYCFD Engine Company 34 at 440 West 33rd Street, demolished in 1944, may have had a gasoline or diesel tank on-site for fueling its trucks. There are no NYCFD records for this address. It should be noted that many such engine companies stored fuel in aboveground tanks.

F. Waste Products and Waste Disposal

i). Toxic and Hazardous Wastes

Toxic or hazardous wastes include wastes identified or listed in the Solid Waste Disposal Act of 1980 (42 USC Section 6903, 42 USC Section 6921).

No significant quantities of toxic or hazardous wastes are currently generated on the parking lot portion of the subject property. The operators on the property (Edison Parking and the Long Island Rail Road) are not listed by the USEPA as RCRA hazardous waste generators or transporters, or as RCRA treatment/storage/disposal facilities for the subject property location. However, the adjacent Amtrak Erie Yard is listed as a large quantity hazardous waste generator (see Sections II.L.i.c. and II.L.i.d.).

G. Asbestos-Containing Materials

i). Definitions

According to New York City regulations, friable types of asbestos, i.e., ACM that can be crushed, crumbled or pulverized using hand or mechanical pressure, are hazardous when in a deteriorating condition.

It should be noted that the New York City definition of friable differs from the USEPA definition. The definition of friable under USEPA's Asbestos Hazardous Emergency Response Act (AHERA) regulations defines friable ACM as ACM that can be crushed, crumbled, or pulverized using hand pressure only. Mechanical pressure is not identified in AHERA's definition, so materials containing asbestos fibers embedded in a cement or glue-like matrix (i.e., vinyl asbestos tiles [VATs], linoleum, roofing materials, transite) are not typically considered friable, unless in a damaged state where fiber release by hand pressure is possible.

However, for the purpose of New York City regulations, such materials would be considered friable, since they could be crushed or pulverized using mechanical means. It should be noted that such materials are not considered hazardous under normal conditions of use, unless severely damaged or in a badly deteriorated state, or unless the material is cut, drilled, sanded or otherwise broken up during construction or renovation.

In New York City, ACM repair, removal, and disposal is required to be undertaken in accordance with the rules and regulations of the New York City Asbestos Control Program, as promulgated under Title 15, Rules of the City of New York, Chapter 1 (15 RCNY 1), as well as applicable federal and state regulations.

ii). On-Site Suspected Asbestos-Containing Materials

Given the age of the previous buildings on the parking lot portion of the site, it is likely that they contained asbestos-containing materials. These buildings have all been demolished. Depending on the extent of on-site demolition of these buildings (and excavation of basement areas), it is possible that some asbestos-containing materials may remain mixed in with underlying soils.

The remaining structures on the property (three attendant's booths) would not be expected to contain significant amounts of asbestos.

The electrical and switching equipment in the rail cut area may include several types of asbestos-containing materials: e.g., transite panels in electrical or switching boxes/panels, transite

The U.S. Environmental Protection Agency (USEPA) classifies transformers in three categories: Non-PCB Transformers, which contain less than 50 parts per million (ppm) PCBs, PCB-Contaminated Transformers, which contain 50 to 500 ppm PCBs, and PCB Transformers, which contain more than 500 ppm PCBs. Transformers whose PCB concentration is unknown are assumed to be PCB-Contaminated.

No transformers were observed on or adjacent to the parking lot portions of the subject property.

The rail yard area includes electrical and switching equipment that may contain PCB-contaminated oils.

J. Radon

Radon, a naturally occurring radioactive gas, is the product of the decay of radium. It is found most frequently in relatively high concentrations in rock formations containing uranium, granite, shale, phosphate, and pitchblende. Radon may also be found in soils contaminated with industrial waste from uranium and phosphate mining. Radon as a gas can move through the soil and water, and into the atmosphere, and is a potential health concern if confined in sufficiently high concentrations in indoor environments. The U.S. Environmental Protection Agency (USEPA) has set an "action level" of 4.0 picocuries per liter for continuous long term exposure to radon gas. If radon gas is measured above this level, USEPA suggests follow-up testing and remediation measures.

According to data compiled by the Bureau of Radiation Protection, New York State Department of Health, New York City has one of the lowest average levels of basement radon measurements in New York State. The latest March 1994 statistics indicate an average of 1.4 picocuries/liter for New York City (an average of the five counties), compared to a statewide average of 5.6.

Based on these low average levels for New York City, it is unlikely that radon gas levels within any future buildings would exceed the USEPA action level of 4.0 picocuries per liter, and therefore basement radon testing is typically not recommended. However, if specific readings of radon gas levels within a particular building are needed, testing for continuous radon gas levels would be necessary.

K. Neighborhood Land Use

Past land uses surrounding the subject property were obtained from historical atlases (see Figures 2 through 8). Present nearby land uses (within a 500-foot radius of the subject property) were visually surveyed at the time of the site inspection.

ii). Present Neighborhood Land Use

The following adjoining land uses were observed at the time of the site inspection:

Area	Business or Use
North/East/West	12-story industrial loft building, containing printing industry offices, Le Croissant Shop on ground floor (424 West 33rd Street) (see Photo 17)
West	Westyard Distribution Center building (450 West 33rd Street) built over rail yards;Depressed roadway (approach to Lincoln Tunnel) (see Photo 18);
North (across West 33rd Street)	Parking lot (431 West 33rd Street); St. Michael's Roman Catholic Church, Elementary School small parking lot (405-407 West 33rd Street); Cheyenne Diner (411 West 33rd Street)
East (across Ninth Avenue)	U.S. Government Post Office, Main Facility
South	LIRR and Amtrak tracks and Amtrak Erie Yard (see Photo 19)

The adjacent 12-story loft building at 424 West 33rd Street includes numerous printing, graphics, lithography, bindery businesses (one of which is listed as a hazardous waste generator - see Section II.L.i.d.).

Since this building is connected to the municipal sewer system, it is expected that toxic and hazardous materials involved in printing activities within the building would be unlikely to affect surrounding sites.

The Amtrak Erie Yard is located immediately adjacent to the south of the rail cut portion of the property. Various maintenance equipment and platforms were noted in this area (see Photo 19). Based on the nature of this site, and past uses, it is likely that contamination is present. Any spills, leaks, etc. at the Amtrak Erie Yard could pose a contamination threat to the depressed portion of the subject property.

A visual survey of the surrounding land within an approximate 500-foot radius of the subject property was taken. Land uses in the

Major Oil Storage Facilities

None Listed

Selected Lists of USEPA and NYSDEC Sites Within a One-Mile Radius of the Subject Property

Figure 10

There are no facilities listed in the RCRA TSDF report within an approximate one-mile radius of the subject property.

d). RCRA Hazardous Waste Handlers

RCRA Hazardous Waste Handlers (which include waste generators and transporters are regulated by the federal government under the Resource Conservation and Recovery Act (RCRA). The 1994 USEPA List of RCRA Hazardous Waste Handlers was checked for the subject property and adjoining businesses, as well as for facilities within an approximate 1/4-mile radius of the site. An inventory of hazardous waste handlers is useful to assess the kinds of hazardous materials in the vicinity of the site, as well as on the subject property. It should be noted that the presence of hazardous waste generators or transporters in the neighborhood does not necessarily imply risk of contamination to the subject property.

The subject property was not identified on the list. However, the rail yard facility to the immediate south of the property is listed:

Amtrak Erie Yard is listed as a large quantity generator (facility ID NYD9869455582).

The following additional adjoining businesses are listed as hazardous waste handlers:

Knickerbocker Graphic Service (business at 424 West 33rd Street) is listed as a generator (facility ID NYD987040805).

Art Carved (business at 450 West 33rd Street) is listed as a small quantity generator (facility ID NYD053542015).

An additional 19 hazardous waste handlers were identified within an approximate 1/4-mile radius of the subject site.

e). PCB Activity Database System

A check was made of the U.S. Environmental Protection Agency's PCB Activity Database System (PADS, October 1993 listings). This database lists PCB generators, storers, transporters and permitted disposers that have registered with the Pesticides and Toxic Substances Branch of the USEPA.

The subject property is not on this list. No adjoining properties or facilities are listed in the PADS database.

f). Emergency Response Notification System

A check was made of the most recent USEPA's Emergency Response Notification System (ERNS) database, which is a list of reported

No response has been received to date. Responses typically take at least ten weeks.

b). Inactive Hazardous Waste Disposal Sites

A check was made of the latest lists of NYSDEC Inactive Hazardous Waste Disposal Sites (April 1994 Annual Report and Quarterly Updates).

The subject property is not on this list. No NYSDEC Inactive Hazardous Waste Disposal Sites are listed within approximately one mile of the subject property.

c). Spill Logs

The most recent (June 1994) NYSDEC computerized spill logs for Region 2 were reviewed by EEA for spill incidents with an approximate 1/2-mile radius of the site.

No spills were listed on the subject property.

Three spills were listed within an approximate 500-foot radius of the site:

Spill #	Date	Location	Material	Cause	Status
8604454	10/10/86	Penn Sta. Track 4	PCB Oil	Equip. failure	Closed
9008732	11/09/90	430 W. 34th St.	#6 fuel oil	Equip. failure	Closed
9402020	not given	454 9th Avenue	not specified	not specified	not specified

In addition, another 70 NYSDEC spill incidents were identified within an approximate 1/2-mile radius of the subject property.

Spills listed as tank test failures indicate the possibility of oil or gasoline seepage to the surrounding soils or groundwater. Other spills (i.e., accidents, sloppy housekeeping, equipment failures, etc.) may only affect surface soils.

d). Significant SPDES Facilities

Facilities with SPDES (State Pollutant Discharge Elimination System) permits must submit routine monitoring reports to the government, and are subject to regulatory review and compliance with discharge limits established by the NYSDEC and USEPA. SPDES permitees discharge to cesspools and/or local water bodies, and thus, may affect the quality of the groundwater and/or nearby waters.

A check was made of the NYSDEC database (January 1995) of "significant SPDES facilities" (approximately 1,700 of a total of 8,600 SPDES permitees statewide). The facilities excluded from the

h). Major Oil Storage Facilities

A check was made of the most recent NYSDEC Major Oil Storage Facilities (MOSF) database (June 1994), which lists all facilities (onshore facilities or vessels) with petroleum storage capacities of 400,000 gallons or greater.

There are no MOSF facilities listed within an approximate one-mile radius of the subject property.

i). Permitted Hazardous/Industrial Waste Transporters

A check was made of the most recent list of NYSDEC Permitted Hazardous/Industrial Waste Transporters (Pursuant to 6 NYCRR Part 364) (October 28, 1993). This list includes the types of waste transported by the permitted facility and the TSDF (Treatment Storage and Disposal Facility) to which each waste is transported.

The subject property and adjoining properties are not on this list.

iii). N.Y.C. Fire Department

A New York City Fire Department (NYCFD) records search was undertaken for the subject property to determine if there are any files for petroleum storage tanks (buried or aboveground) at the subject site. NYCFD records were checked for fuel oil, diesel, gasoline, waste oil, etc.

NYCFD has a record of a voided gasoline account for the portion of the subject property at 401-409 Ninth Avenue (see Section II.E.). There were no other records of petroleum storage tanks for the range of addresses at the subject property.

iv). N.Y.C. Department of Environmental Protection

A Freedom of Information Law (FOIL) request was sent to the NYC Department of Environmental Protection (NYCDEP) on January 10, 1995, for information concerning this property.

No response has been received to date from NYCDEP.

v). N.Y.C. Department of Sanitation

The following inactive landfills are located in New York City: Pelham Bay, Bronx; Pennsylvania and Fountain Avenues, Brooklyn; Edgemere Avenue, Queens; and Brookfield Avenue, Staten Island,. Only one active landfill is located in New York City: Fresh Kills, Staten Island. None of these landfills are located within 0.5 mile of the subject site.

partially occupied by a contractor's yard. Both east and west lots are shown as vacant parking lots on the 1980 and 1993 atlases.

The rail cut portion of the property is indicated as a part of the Long Island Rail Road "car yard" on the 1911, 1930, 1950, 1980, and 1993 atlases.

Some of the past occupants of the parking lot parcels (i.e., garage, gasoline station, contractor's yard, printing businesses, iron works, etc.) were types of operations that store, use, or produce significant quantities of toxic or hazardous materials and/or wastes: e.g., inks, printing and plate developing solutions and washes, oils, solvents, gasoline, automotive fluids used in repair (if any), etc. The larger industrial buildings (i.e., printing operations at 416 West 33rd Street) were most likely connected to the sewer system, and therefore would have been unlikely to have resulted in the significant residual contamination of the site. However, the extent and nature of operations at other former industrial facilities, such as the contractor's yard at 440-442 West 33rd Street, could not be determined. It is possible that past activities could have resulted in some contamination at that location.

Rail yards have typically been the location for the use, storage, and/or spills of toxic or hazardous materials and wastes, e.g.: petroleum products, solvents, various herbicides/pesticides (used in track maintenance), creosote (wood preservative for rail ties), paints, and polychlorinated biphenyls (PCBs), which were formerly used as an additive in various oils, including locomotive transformer oil and hydraulic oil, etc., and their waste products.

No definitive assessment of the potential for surface and subsurface contamination from any past industrial/rail-related yard activities can be made without specific testing.

- <u>Site Drainage</u>

  - **Sanitary Sewage Discharge**

It is likely that most of the previous structures on the site were connected to the municipal sewer system. However, as indicated on the 1911 and 1930 Sanborn atlases, some of the previous tenement buildings on the adjacent lot at 424-438 West 33rd Street had outhouses in the rear yards, suggesting that some of the original structures in the area may not have been hooked up to the sewer system at that time. It is possible, therefore, that some older sanitary systems, floor drains, etc. on the subject property portion of the site, may have discharged to soils at one time. It is not known if any such discharges involved toxic or hazardous materials. Most industrial operations on-site at the time would have been small scale in nature.

any train maintenance/repair areas may have also involved paints contaminated with other metals, including mercury and cadmium.

- **Polychorinated Biphenyls**

No transformers were observed on or adjacent to the parking lot portions of the subject property.

The rail yard area includes electrical and switching equipment that may contain PCB-contaminated oils.

- **Regulatory Records and Databases**

EEA's review of available agency records did not disclose any evidence of documented on-site spills or other reported contamination at the subject property. (As noted in the report, there was no information concerning the presence, integrity, or closure status of gasoline storage tanks associated with former gasoline station use.)

The subject site is not included on the following USEPA databases: the Superfund or CERCLIS lists, the ERNS database, the FINDS database, the RCRA Hazardous Waste Handlers and Treatment/Storage/Disposal Facilities lists. There are also no listings for the subject property on the following NYSDEC databases: Spill Logs, Petroleum Bulk Storage and Chemical Bulk Storage, the TRIS database, the NYSDEC Inactive Hazardous Waste Disposal Site Registry, Permitted Hazardous/Industrial Waste Transporters, Major Oil Storage Facilities, and significant SPDES facilities lists.

B. OFF-SITE FINDINGS

The subject property is located in a section of Manhattan that has been characterized by a mix of transportation, industrial, residential, and commercial uses since the early 20th century. No Superfund sites, Inactive Hazardous Waste Disposal sites, RCRA Treatment/Storage/Disposal Facilities, Major Oil Storage Facilities, or Significant SPDES Facilities are listed within approximately one mile of the subject property (see Section II.L.). Five CERCLIS sites are located within this one-mile radius; all of these sites have received "No Further Action" designations.

A total of 70 NYSDEC spill incidents are listed within an approximate 1/2-mile radius of the site; only three of these are listed within 500 feet of the subject property. Two of the three nearby spills have been closed by NYSDEC.

Immediately adjacent to the site are several properties involving the handling of toxic and hazardous materials, including the Amtrak Erie Yard in the depressed rail area at 31st Street and

IV. SCOPE OF WORK

A. Purpose and Limitations

This Phase I Environmental Site Assessment (ESA) involves research into the history of uses of the subject property, checks with appropriate government agencies, and a visual inspection of the facilities and property to determine the possible presence of toxic and hazardous materials, and/or chemical products. An evaluation is then made regarding the potential for significant site contamination by toxic or hazardous materials and/or chemical products from past or present use.

Since the Phase I scope of work does not typically include testing of building materials (for asbestos, lead-based paints, PCBs, etc.), or of subsurface soils or groundwater, no definitive assessment of the presence of asbestos, lead-based paint, PCBs, soil or groundwater contamination (from on-site or off-site sources) is made. In addition, specific testing for radon levels is also not undertaken. It should be noted that other issues that may relate to property value impairments (e.g., ambient air quality, noise pollution, perceived risk from electromagnetic fields, etc.) are outside the scope of a Phase I ESA, and are not addressed.

If further determination of any potential contamination or analysis of specific materials is needed, then testing and/or further investigation (Phase II) would be necessary.

B. Conformance with ASTM Standard Practice

This report has been prepared in conformance with the scope of the ASTM Standard Practice for Phase I ESAs (E1527-94), as well as generally accepted industry protocols. In several aspects the scope of work exceeds the recommended ASTM scope (e.g., additional database searches, asbestos, radon, lead-based paint issues, wetlands), etc. It should be noted that any limitations to the site inspection (e.g., inaccessible areas of the subject property, etc.) are specified in the report.

C. Sources of Information and Research Methods

A Phase I ESA investigation typically consists of three major components: research into the history of the site, on-site inspection, and review of applicable regulatory agency records and databases.

Historical site research is important in the assessment of the likelihood of past releases of hazardous substances (which include

ENVIRONMENTAL LIEN REPORT

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

ENVIRONMENTAL LIEN REPORT

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;
