DEC Memo:	Part of a long term recovery operation at the site.See also spill nos. 0702185 and 0702402.08/16/07: Notified of this spill by Ryan Piper of spill response staff on 8/15/07; sent email to Jane Staten and Harvey Roberts of URS (DDC consultant handling long-term remediation of this site under DDC consent order), with cc to Afsar Samani of DDC, stating: "I've been informed by our Spill Response staff that spills are continuing to occur related to damaged fill line to gasoline UST at Midtown South. Intitial spill (0613411)

NYPD PRECINCT MIDTOWN SOU (Continued) **S105054624**

occurred in March '07 when gasoline was found in tank sump and nearby monitoring well. According to URS's system performance reports, Franklin Co. determined that tank's fill line was damaged, and they installed direct fill to tank to bypass damaged line. Do you know if Franklin plugged up old fill port when they installed direct fill? It appears that fuel deliveries continue to be made to old fill line, and product keeps showing up in tank sump and monitoring wells. On May 23rd, spill 0702185 was reported by NYPD because sump was filled with gasoline and Veeder Root alarm was going off. Today, another spill was called in (0705553) because of product in sump. Please take necessary steps to have old fill port blocked so it cannot be used anymore (or repaired so it won't leak) as soon as possible, and please also check out entire tank system to make certain it is damaged fill line that's problem, and that there are no other leaks in system. Please get back to me on this and let me know what actions have been taken to address this situation." Afterwards, spoke again with Ryan Piper, who suggested tank be taken out of service and emptied until problem is solved. Sent email to Afsar Samani of DDC, cc's to Jane Staten & Harvey Roberts of URS: "In light of ongoing problems with gasoline UST at Midtown South Precinct, I strongly suggest that tank be taken out of service and emptied until problem(s) with tank and piping has/have been addressed. If this is not practical because police have no alternative location to fuel their vehicles, then please take whatever steps are necessary to immediately rectify problem(s) with tank system. NYCDDC is conducting remediation at this site using SVE and groundwater extraction & treatment systems, and these ongoing spills of fresh gasoline to subsurface will set back remedial efforts for months, or more likely, years, so it is in DDC's interest to resolve this situation promptly. In addition, these releases are a violation of Environmental Conservation Law, as you are aware, and if they continue to occur, our spill responders may be inclined to call Environmental Conservation Officers to site to issue summons."On 8/16/07, received email from Afsar Samani of DDC: "Harvey informed me that vac-truck is scheduled to remove product from sump today. Also, NYPD subcontractor is going to be scheduledto repair fill line. URS is looking into this and will make all necessary action to make sure tank and fill port is tight." Then, received email from Jane Staten of URS: "I just spoke with Lt. Pete Polanco for an update on problems with gasoline tank at Midtown South Precinct. According to Lt. Polanco, NYPD tank contractor inspected fuel fill line this morning and found no problems with integrity of line. Therefore, Lt. Polanco believesthat product in tank sump was caused by fuel delivery vendor. NYPD are expecting fuel delivery vendor at site this afternoon to discuss problem and also to remove gasoline currently in sump. I will keep you posted." I then sent email to Afsar Samani, with cc's to Jane Staten & Harvey Roberts of URS, Jerry Aliberti of DDC and Lt. Peter Polanco of NYPD: "Thank you for your response. Please be advised that no fuel deliveries should be made to gasoline tank at Midtown South until tank system has been tested to insure integrity of all elements of system. Documentation of tightness test results, and of any repairs made to fill line since problem was discovered in March 2007, must be submitted to NYSDEC before fuel deliveries can resume. This situation is high priority and NYPD should arrange for tightness testing immediately." Then, received phone call from Lt. Polanco of NYPD, who said repairs to damaged fill line were done in June and fill line was tightness tested and passed, and he believes current

NYPD PRECINCT MIDTOWN SOU (Continued) **S105054624**

problem is due to fuel delivery vendor not hooking up vapor recovery line (truck is parked in street long distance from fill port, so there's long length of delivery hose). He said product will be removed from sump and fill line will be tested again. I asked him to submit documentation of repair work and tightness testing, and sent him email with my address. Then, I was cc'd on email from Afsar Samani of DDC to Lt. Polanco of NYPD: "We were informed by following correspondence from NYSDEC that gasoline tank over at Midtown South Police Precinct should not receive any more deliveries until a tightness test has been scheduled. Please let DDC know when you can arrange for your subcontractor toperform a tightness test on this tank. This is very crucial to remedial effort that URS is performing to clean up site on behalf of DDC." - J. Kolleeny08/21/07: Received fax on 8/20/07 from Lt. Polanco of NYPD fuel control unit, with letter from Energy Tank & Environmental Services dated 7/16/07 describing repairs to and pressure testing of fill line to gasoline UST (in eDocs). Sent same-day email response to Lt. Polanco, cc's to Afsar Samani & Jerry Aliberti (DDC), Jane Staten & Harvey Roberts (URS): "Thank you for faxed description of repair work to fill line of gasoline UST at Midtown South and diagram of site, tank and fill port, provided by Energy Tank & Environmental Services, Inc. However, these items do not completely satisfy my request for documentation of tank repairs and testing of fill line, and they raise additional questions. Page that describes repairs and subsequent pressure testing of line is dated 7/16/07. Is that date when repairs were done? I would like to see dated invoice for repair work in addition to this description. Description states that problem was with primary fill line, and that secondary line was intact, which allowed product to go into containment sump and not into ground. However, in March when this problem was first discovered, URS field personnel reported 5 feet of fresh gasoline in groundwater extraction well that had never had gasoline in it before, so somehow product did get into ground. If repairs were done on 7/16/07, why was gasoline again reported in containment sump on top of tank on August 15th (spill number 0705553)? You mentioned that this was caused by delivery person not hooking up vapor recovery line, yet our Petroleum Bulk Storage staff say this would not result in product appearing in sump. I would greatly appreciate it if you could provide additional documentation of repair work, and if NYPD would schedule a tightness test of all lines going into and out of tank, as well as a hydrostatic test of tank's containment sump. I would like to be informed in advance when these tests have been scheduled, so that I can attend." - J. Kolleeny 09/14/07: Visited site 9/10/07 to observe hydrostatic test of tank sump and tightness test of fill line. Mike Suppe of Fenley & Nichol on hand, said sump held water, more or less (slight drip along electric conduit extending from this sump to next sump at end of tank), for over 2 hours. He said no way to test fill line (it's about 2-3 feet long from "remote" fill port) without physically removing it, but he will test entire tank system. In discussions of how product could turn up in sump, I mentioned that Lt. Polanco said it had to do with delivery person not hooking up vapor recovery line. Mike wasn't clear on how that would cause product to appear in sump. I called Lt. Polanco, who said by not hooking up vapor recovery during delivery, excessive back pressure was created, so when delivery hose was disconnected, product would back up and spill into overfill bucket, then drain to sump. Mike Suppe said this isn't possible, since any fuel spilled into spill

NYPD PRECINCT MIDTOWN SOU (Continued) **S105054624**

bucket would drain back into fill line, then into tank (not sump). Mike suggested that temporary fill, which was used while remote fill line was awaiting repair, had not been properly capped once NYPD switched back to using remote fill, and poor threading on top of direct fill extension cylinder and improperly screwed-on cap for this extension, may have resulted in product spilling out capped off temporary fill, again related to back pressure from not hooking up vapor recovery (see photos in eDocs image folder). NYPD now has on-site a long hose to be used for vapor recovery, and reportedly there have not been any more problems with product appearing in sump after deliveries. Spoke with Mike Suppe on 9/11/07, who said tank system passed test. I discussed whole situation with Jane Staten of URS, who forwarded to me email from Harvey Roberts of URS (in eDocs) indicating temporary direct fill was installed by NYPD, not Franklin Co. as stated in URS's system performance reports for site. While this may explain why product was appearing in sump, none of this adequately explains how product escaped into ground and turned up in groundwater extraction wells and monitoring wells (for site cleanup under spill no. 9512583). Mike Suppe indicated if damaged fill line was unknown for a long time, sump could've filled up with gas during deliveries and overtopped inner rim of sump, and from there it could seep into ground. URS will continue to gauge nearby wells for product levels, and see if they continue to decrease. Harvey Roberts email also calls into question when exactly NYPD had repairs done to fill line. I contact Lt. Polanco again and asked for more detailed documentation of repair work, indicating date(s) and nature of work done. He said he would work on getting me that info. - J. Kolleeny09/17/07: Received fax from Lt. Polanco, a revised version of earlier fax with statement by Energy Tank & Environmental Services regarding repair work on fuel fill line. Statement is still dated 7/16/07; it now states that they uncovered line on 7/5/07, reconnected and tested line on 7/6/07, reporting that line held pressure during backfilling, they then witnessed a fuel delivery on 7/9/07 with no leaks observed, so they re-surfaced area. - J. Kolleeny01/04/08: On 12/19/07, sent email to Jane Staten of URS: "I recently asked you to ask your field personnel to check if gasoline is still showing up in tank-top sump after fuel deliveries at this site. Do you know if they've checked on this?" On 12/26/07, received email reply from Jane: "Our field technician checked tank sumps at Midtown South on 11/29/07.One sump was dry and other contained a little water. There was no evidence of gasoline." Based on no new reports of gasoline appearing in tank top sump, it appears problem(s) that caused this and related spills has (have) been addressed; OK to close spill. - J. Kolleeny

DEC Memo: This site is already an active longterm remediation site - Spill #9512583As part of this remediation effort, there are exisiting monitoring wells on the site that are tested periodically. Today, the geologist found 4 ft of gasoline product floating on the water table in a well that previously had nothing. The manway was checked and found to be full of gasoline as well. This was clearly an overfill from a recent delivery.Franklin and/or URS is working the long term cleanup of the site and has arranged for a vac truck to clear out whatever is possible right now. On a long term basis, the existing remediation system will be used to skim the free product from the water table and remove it from the site.This problem will now be addressed by the contractor through the existing long term spill number on file.
Remarks: MATERIAL IS CONTAINED IN SUMP: POSSIBLY DUE TO OVERFILL, BUT UNCONFIRMED AT THIS TIME:

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: e2mis no. 152976:approx 5 gal of Transformer oil mixed with dirt on the floor on the vault. The source of the spill was a damaged Transformer and the cause was corrosion on the unit on the terminal covers. The sump pump was found disconnected on arrival. The spill was on the concrete structure. The unit has been condemned. Two samples were taken from the spill for PCB and ID and one from the Transformer. A partial cleanup is in progress as of now. Final cleanup will be scheduled when Feeder is taken out of Service to drain and disconnect the Unit.A Partial cleanup was done, remove 1 (one) drum of debris and ppe / final cleanup will be done when transformer is removed, Put down oil absorbent and pads.Lab Sequence Number: 04-02965-002 TOTAL PCB 5 ppmLab Sequence Number: 04-02965-001 TOTAL PCB 1 ppmAnalysis indicates the presence of a substance similar to a dielectric fluid.Pearson # 50613 of I&A reoprted to me that the cleanup was completed as of 20:15 on 5/7. No solid waste was removed. Liquids were removed by the Vactor truck. The structure was double-washed with "SLIX". the Environmental tag was removed. The source of the spill was the Transformer. It was removed and a new unit was installed.

Remarks: TRANSFORMER LEAKING NO SMOKE, WATER OR SEWERS:

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Site name: TECHNICAL CAREER INSTITUTE
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

TECHNICAL CAREER INSTITUTE (Continued) **1004762265**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110004567781

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF

EVERBRITE-DAUMAN INC (Continued) **1001222117**

ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Classification: Not a generator, verified

Date form received by agency: 02/06/2002
Site name: 475 NINTH AVENUE ASSOICATES
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

FINDS:

Registry ID: 110012197808

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

475 NINTH AVENUE ASSOICATES (Continued) **1005417266**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

E02 - Piping Secondary Containment - Vault (with Access)

Tank Location:	6
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	06/15/1984
Capacity Gallons:	10000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported

Historical Generators:
Date form received by agency: 02/09/2011
Site name: NYHPD - HUDSON YARDS A
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D001

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"01/05/90: (6) MONITORING WELLS INSTALLED,OIL TANKS BEING TESTED BY CONTRACTORS(TRINITY & FENLEY & NICOL), ALL TANKS PUMPED & CLEANED, REPAIRING WATER MAIN.10/10/2003-Vought-Spoke with LaJuana Smith (works for Clinton Housing-212-967-1644) and she is looking to resolve spill). In Nov 1996 DEC required further work from DEC. Ms Smith will call back on Wed for current site status and will possibly submit FOIL request upon her discussion with bank.10/17/2003-Vought-File review by Vought:Community Board 4 Meeting Notice-2/21/90-Meeting held with DEC, NYFD, NYPD, DCA and NYCDEP to discuss current status and plans of site.Fax to DEC from Gaseteria-2/22/90-Pedneault Associates (516-467-8477)-Groundwater analyticals from six monitoring wells and two soil disposal piles (no site plan in file). Groundwater analyticals show 275ppb benzene(W1), 341ppb benzene(W2), 327ppb benzene(W3), 448ppb benzene(W4), 158ppb benzene(W5) and 128ppb benzene(w6). Disposal samples show 1433ppb benzene(east pile) and 188ppb benzene(west pile).Groundwater analyticals-5/21/90-Pedneault Associates-Groundwater analyticals from six monitoring wells (no site plan in file). Groundwater analyticals show 2308ppb benzene(W1), 1091ppb benzene(W2), 680ppb benzene(W3), 385ppb benzene(W4), 736ppb benzene(W5) and 810ppb benzene(w6). Subsurface Investigation-7/90-Environmental Management Services. "In Jan 1990 a subsurface water line broke beneath 10th avenue near the northwest side of the site. Water entered the basement of the adjoining building along with some gasoline." DEC required installation of six monitoring wells on Gaseteria property. Gasoline vapors detected in sewers in building across 10th Avenue. This subsurface investigation consisted of eight soil borings and installation of two additional monitoring wells. Three pump islands serviced by 12 (550-gallon) gasoline USTs and one (2000-gallon) diesel UST. Local topography slopes to the north. Groundwater at depth of 7-9’ below grade. Bedrock is 7-11’ below grade and slopes downward toward the northwest and southwest corners of site. Groundwater "suspected to flow northward". All wells onsite were set "firmly on bedrock" and "there is not sufficient information available to determine specific groundwater flow". No free product detected in wells. Groundwater appears to flow from 10th Ave towards the USTs. Report recommends groundwater monitoring with possible additional delineation. No soil samples submitted for analysis nor were screened via PID.Letter from DEC to Gaseteria-7/12/90. Letter from DEC (Sigona) to Gaseteria (Oscar Porcelli) requesting subsurface investigation work plan to be apporoved by the DEC to investigate the presence of gasoline vapors. Plan must be received by the DEC by 7/17/90. Odor complaints in January 1990 and again in July 1990. Sigona performed site visit on 7/13/90.Fax to DEC-7/17/90. Letter from Environmental Management Services to DEC (Sigona) proposing: 1)investigation of subsurface utilities as potential pathways 2)determination of groundwater flow direction 3)groundwater

GASETERIA (Continued) **S100167794**

monitoring 4)installation of six soil borings along western margin of station and installation of two additional monitoring wells.Letter from DEC to Gaseteria-1/5/95. Letter from DEC (Sigona) to Gaseteria (Angel Chang) requiring "cleanup and removal of discharge". Letter also required immediate steps to abate seepage into basement of 403 W 40th Street. Response from Gaseteria required to DEC by 1/15/95.Letter from Gaseteria to DEC-1/20/95. Letter from Gaseteria (Chang) to DEC (Sigona) stating that Gaseteria will: 1)"divert the flow of surface water away from the south wall of the building" 2)install a SVE system in the basement alonside of the south wall between the concrete floor and the building foundation. Gaseteria does not believe "there is a need to install new groundwater monitoring wells or to further develop existing wells.....since the problem appears to be surface related".Sample analyticals from basement of 480 10th Ave-8/96. Soil analyticals show 20664ppb ethylbenzene(sample 48334), 59164ppb xylene(sample 48334), 11000ppb napthalene(sample 48334). Letter from DEC to Gaseteria-9/10/96. Letter from DEC(Rommel) to Gaseteria(George Esayan). "DEC in possession of analyticals from Clinton Housing(403 W. 40th Street)". Gasteria required to sample two of the onsite monitoring wells for 8021/8270/lead.Letter from Clinton Housing Development Company-9/11/96. Letter from Clinton(Joseph Tuana) to DEC(Rommel) with copies of analyticals discussed above.Letter from Carl Sulfaro (attorney for Gaseteria) to DEC (Rommel)-9/20/96. Letter stating that Sulfaro "authorized EMS Environmental Services to take two samples of the onsite monitoring wells". Samples will be taken 9/27/96.Groundwater analyticals-10/10/96. Analyticals from MW5 by EMS showing 42.56ppb methylene chloride, 5549ppb benzene, 107.33ppb toluene, 1024.75ppb ethylbenzene, 393.15ppb xylene and 0ppb MTBE.Letter from Clinton(Kathy Prioleau) to DEC(Rommel)-11/11/96. On 10/27/96 "strong fumes entered basement of 480 10th Ave". NYFD onsite. Letter requests that DEC relay information on "testing done at Gaseteria and UST inspection of Gaseteria".Letter from DEC(Rommel) to Gaseteria(Sulfaro)-11/25/96. Letter stating that requirements of fax dated 9/10/96 were not met because only one well was sampled and 8270/Lead analyses were not performed. Letter requires:1)submittal of an investigation plan to delienate soil and groundwater contamination 2)source determination 3)installation of three additional monitoring wells 4)installation of an air sampling port on the exhaust line of the venting system and monthly sampling for benzene and THC. Letter states that "action must be taken within 45 days".Letter from DEC(Rommel) to Prioleau(Clinton)-11/26/96. Letter stated that "DEC was never notified" of odor complaints as 11/11/96 letter stated. Also attached to letter was copy of 11/25/96 letter from DEC to Gaseteria.Letter from Gaseteria(Sulfaro) to DEC(Rommel)-1/15/97. Letter stating that Gaseteria "would prefer to perform site investigation, soil removal and/or remediation as needed concurrent with excavation anticipated as part of Federal EPA UST upgrade mandate" and the work is expected to take place in "Spring 1997".Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-7/29/98. Letter "serving as final notification of obligations regarding petroleum contamination and vapor incidents". On 6/28/03 petroleum contaminated groundwater infiltrated basement of 480 10th Ave due to heavy rains. This is the "seventh vapor complaint associated with Gaseteria since Jan 1990". Letter states that the "Department is alotting 30 days for Gaseteria to statisfy all requirements in DEC letter dated 11/25/96". Deadline of 8/31/98 given by DEC.Letter from

GASETERIA (Continued) **S100167794**

Gaseteria(Seth Friedland) to DEC(Rommel)-8/13/98. Letter stating that "the June 1998 episode was caused by heavy rains and appears to be an isolated event" and that Gaseteria does not agree with Departments conclusions". Letter stated that the station will be taken out of service on 9/15/98,permanently close the USTs and reinstall upgraded USTs on the northern boundary of the site.Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-8/28/98. Letter serving as a "reminder of 8/31/98 deadline".Letter from Gaseteria(Oscar Porcelli) to DEC(Rommel)-8/28/98. Letter stating that new USTs were ordered and that work will start the second week of September. Gaseteria intends to install four monitoring wells to replace those destroyed by station upgrade and will retain Environmental Management services to develop remedial plan.Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-8/31/98. Letter confirming phone conversation where an agreement was reached that Gaseteria will comply with following requirements and complete the tank upgrade prior to 9/30/98. Letter also required that a workplan be submitted prior to 9/4/03 which included 1)complete delineation 2)soil and groundwater sampling plan for use during excavation activities 3)sampling of SVE emmissions 4)installation of three monitoring wells into bedrock and 5)cleaning and proper disposal of oil in the building floor drains and all associated discharge points.Letter from Camin Cargo Control(Gaseteria's Enviro consultant) to Gaseteria-10/5/98. Letter from Camin(Patricia Badding) stating that a site investigation and report shall be prepared. Investigation with Geoprobe and subsquent insallation of monitoring wells scheduled for 10/16/98. Soil samples will also be collected during excavation for new USTs. Venting system emissions will also be sampled. "Cleaning and proper disposal of any oil in the building floor drains and all associated discharge points is the responsibility of Gaseteria".Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-10/8/03. Letter acknowledging receipt of Camin 10/5/98 proposal and requiring the following by 10/13/98: 1)Site plan with proposed boring locations 2)discussion of locations 3)discussion of endpoint sampling locations from UST excavation 4)discussion of delineation procedure 5)include MTBE with analyticals 6)collect groundwater samples from Geoprobe locations.Letter from Camin(Badding) to DEC(Rommel)-10/13/03. Submission of 1)site plan with ten boring locations 2)Collection of six endpoint soil samples from UST excavation 3)excavation and disposal of contaminated soil encountered during tank installation 4)Inclusion of MTBE analyticals 5)collection of groundwater samples(if encountered).Investigation Results from Camin(Badding) to DEC(Rommel)-11/6/98. Results of eight soil borings peformed. Soil analyticals show 2149ppb MTBE(SB1), 526ppb benzene(SB2), 188ppb benzene(SB4), 212ppb benzene(SB5), 4576ppb MTBE(SB6), 1458ppb benzene(SB7), 29114ppb napthalene(SB7), 187ppb benzene(SB8). Groundwater analyticals show 1239ppb benzene(SB4), 1975ppb benzene(SB5), 5360ppb benzene(SB6).Subsurface Investigation Report Camin Badding 908-523-0616 10/16/98). Investigation report including results above of eight soil borings performed. "There is approximately 2-4 inches of contaminated soil at the soil/bedrock interface in soil boring locations SB2, SB4, SB5, SB7 and SB8. Bedrock at depths of 6-11.5' below grade". "A sheen was detected on all samples"(groundwater). Venting system was samples on 12/11/98 via a vacuum canister attachment to vent. Removed dispenser island is the proposed location of new USTs. See analyticals above. Venting analyticals show 264ppm TPH and no other volatiles.Baseline Acquisition Assessment Report-10/10/02 Delta Environmental (Brad

GASETERIA (Continued) **S100167794**

Fisher). Purpose was to establish baseline conditions prior to proposed lease and raze and rebuild of site by BP. One soil borings peformed in 4/02 to depth of 11.5'. Two borings drilled to 24.5" via air rotary and converted to temporary monitoring wells (MW1 and MW2). Delta recommends 1)gaseteria install permanent monitoring wells to delineate contamination. "It is Delta's understanding that Gaseteria will retain the environmental liability of the subject site until spill closure has been obtained". At time of assessment three USTs on site (two 6000-gallon gasoline USTs and one 6000-gallon diesel UST) and four pump islands with six dispensers. Surrounding area is multiple story apartment buildings. "Groundwater is located within bedrock fractures at depths between approximately 12.5 and 13.5 ft bgs". Former USTS onsite which were CLOSED IN PLACE include two (6000-gallon) gasoline USTs in 1998 , one 6000-gallon diesel in 1999, ten 550-gallon gasoline USTs in 1998, one 550-gallon waste oil in 1998 and one 550-gallon fuel oil in 1996. Soil analyticals show 4570ppb xylenes(SB1) and 3970ppb isopropylbenzene(SB1) from depths of 10-11.5'. Groundwater analyticals show 148ppb benzene(MW1), 24800ppb MTBE(MW1) and 30.7ppb benzene(MW2).10/21/2003-Vought-Reviewed site with DEC(Rommel). Sent Stipulation Agreeement with the following requirements: 1)Groundwater delineation via installation of bedrock monitoring wells at former boring locations SB1, SB4, SB5, SB6, SB7 2)Monitoring of vapors and groundwater intrusion 480 10th Ave 3)current status of SVE system and submittal of historic and current SVE effluent samples for benzene analysis or collection of indoor air samples from 480 10th Ave. 10/24/2003-Vought-Called LuJuana Smith (212-967-1644) and left message and explained requirements of 10/21/03 letter.10/27/2003-Vought-Received message from Steve Muller will be taking indoor air samples from 480 10th Avenue. Vought returned call to Muller (516-395-5957).10/28/2003-Vought-returned call to Steve Muller to discuss indoor air samples. Left message to return call to DEC. Left message for LuJuana Smith to call DEC. Vought spoke with Muller and okayed PID and stated that SUMA sample as per NYSDOH guidance was not necessary until 1)closure of SVE system or 2)PID indications of petroleum vapors followed by subsequent remediation. Vought also instructed Muller to check sumps. Vought spoke to LuJuana Smith who will be sending in FOIL Request for continuous updates on site. Vought also called Muller and gave him LuJuana's phone (212-967-1644) for access arrangements.11/6/2003-Vought-Spoke with Steve Muller who was onsite. No PID readings and no olfactory evidence of petroleum and no groundwater infiltration into basement and no product in sump. Muller will produce summary letter and send to DEC.11/7/2003-Vought-Received Summary Letter from Applied Geosolutions(Muller). Site visit performed on 11/6/03 and inspection of basement at 480 10th Ave. "AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline". PID readings of 4.8ppm were attributed to moisture in basement. Small amount of standing water present near leaking hose. No signs of product in sump. Vapor abatement system unoperational during site visit. Photos of basement submitted with report show no free product or petroleum impact.11/24/2003-Vought-Received signed STIP from Adam Good(Gaseteria) with revised Corrective Action Plan.11/26/2003-Vought-Spill transferred from Rommel to Vought. Vought received call from LuJuana Smith and she requested update. Vought faxed her copy of 11/7/03 report and letter sent to Gaseteria on 10/21/03. Vought submitted STIP for implementation to DEC

GASETERIA (Continued) **S100167794**

Kunkel.12/2/03-Vought-STIP implemented by Kunkel. Copy sent and faxed to Good and Muller.12/17/2003-Vought-See closed spill 0301220 at same location.9/14/04-Vought-New file review by Vought:Letter from Applied Geosolutions (Steven Muller 516-395-5957). "On November 6, 2003 Applied Geosolutions inspected the basement of 480 10th Avenue to perform vapor monitoring and to identify the presence of groundwater". "During the inspection AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline. The air space was monitored with a portable PID indicating a measurement of 4.8 ppm... This detection is likely the result of low atmosheric pressure followed from periods of rain causing the basement to be damp." The basement floor did not indicate the presence of groundwater...".Line and Dispenser Upgrade Report (Delta Environmental Brad Fisher 914-765-8180). "This Line and Dispenser Report summarizes the results of pump island and product piping upgrade assessment activities conducted by Delta Environmental and Gasoline Installations on behalf of BP Products North America". Work performed included the removing and installing new spill containment boxes beneath each dispenser, removal and replacement of propduct piping and installation of electronic line leak detection systems. Soil analyticals onlly show minor TAGM 4046 SVOC exceedences attributable to fill.Subusurface Investigation Workplan (Applied Geosolutions)-July 2004. Bedrock at depth of 10’ below grade and groundwater at depth of 12.5-13.5’ below grade. Report proposes installation of four wells via air rotary followed by groundwater sampling. Groundwater flow direction not determined as of yet.9/14/04-Vought-Sent letter to Gaseteria approving of Subsurface Investigation Workplan. Vought received message from Lujuanna Smith (212-967-1644) and returned call. Vought spoke to Smith and no indication of vapors was noted. Ms. Smith requested info on the applicability of the BCP program for 480 10th Avenue and Vought replied that was only available if HPD was willing to take responsiblity of the spill and that she should call Albany for futher information. Vought also suggested that she return the call to DEC on 11/14/04 which is when the workplan results are due to DEC.9/17/04-Vought-Received fax from Applied Geosolutions (Muller). "466 10th Avenue-AGS is currently getting drilling quotes and will complete the Workplan within the 60 day time frame".1/6/05-Vought-Reviewed Subsurface Investigation Summary Report (Applied Geosolutions) dated December 2004 and received on 1/3/05. Location north of USTs not possible due to concrete with rebar. Installation of three monitoring wells. Groundwater from 7-11’ bgs and flow to the west. Groundwater analyticals show 48ppb xylene(MW1), 13ppb 1,2,4-trimethylbenzene(MW1), 17ppb 1,3,5-trimethylbenzene(MW1), 26ppb napthalene(MW1), 1400ppb MTBE(MW1), 23ppb MTBE(MW2), and 20ppb MTBE(MW3). "The existing groundwater monitoring wells should be monitored on a monthly schedule and sampled on a quarterly schedule to document changes in groundwater elevation and contaminate concentration trends in order to develop and appropriate remedial strategy". DEC requires: 1)installation of monitoring wells on West 37th Street north northeast of site and downgradient from abandoned tankfield along 10th Avenue.1/19/05-Vought-Meeting at DEC with ASR Tomasello. Will examine possibility of borings across 10th Avenue (may not be possible due to utilities) and also onsite adjacent to 480 10th Avenue. If onsite boring adjacent to 480 10th Avenue is not possible then boring will be installed on 37th Street.2/17/05-Vought-Spoke to Muller and site visit scheduled for

GASETERIA (Continued) **S100167794**

2/24 at 10am to discuss possible well installation locations.2/24/05-Vought-Site meeting with ASR Tomasello and no borings possible across 10th Avenue. Well will be installed onsite under canopy downgradient of abandoned tankfield. Well will also be installe on West 37th Street north northeast of site.Obligado- SITE TRANSFERRED FROM VOUGHT TO OBLIGADO10/12/05 - Spoke with Tomasello ASR, requests to talk about closure for sp0206783.10/17/05- Obligado - File Review:Final Subsurface Investigation Report, dated June 2005. 4 monitoring wells installed at the site. Wells were installed into Bedrock down to 25 ft bgs. 3 wells installed in December 2004, one additional well installed in March 2005. Groundwater encountered at approximately 7 to 11 feet. No product encountered. Initial gw samples in Dec. 2004 show ND for Benzene in all wells, 1400 ppb MTBE (MW-1), 23 ppb MTBE (MW@), 20 ppb MTBE (MW-3), 48 ppb Xylene (MW-1). March 2005 gw results show 140 ppb benzene (MW1), 2100 ppb MTBE (MW-1), 26 ppb benzene (MW-3), 16 ppb MTBE (MW-3). June 2005 results show 45 ppb benzene (MW-1), 11 ppb Ethylbenene (MW-1), 750 ppb MTBE (MW-1), 52 ppb benzene (MW4), 10 ppb toluene (MW-4), 170 ppb Napthalene (MW4), 55 ppb MTBE (MW4), 193 ppb xylenes (MW-4).4Q05 Monitoring Report, dated 10/15/05. Ground water analyticals at show 20 ppb benzene (MW-1), 580 ppb MTBE (MW1), 23 ppb MTBE (MW-2), 21 ppb benzene (MW-3), 15 ppb MTBE (MW-3), 16 ppb benzene (MW-4), 52 ppb ethylbenzene (MW-4), 140 ppb MTBE (MW-4). 11/14/05 - Obligado - Site visit with ASR Tomasello. Request to see at least 2 more quarters of monitoring at a minimum.12/8/05 - Obligado - Will do a sensitive receptor survey. Continue monitoring. Only 2 quarters of data at MW4.3/1/06 - Obligado - PHone call with Chris/STeve, ask that site be monitored quarterly not monthly.4/12/06 - Obligado - review 1Q06 monitoring report. BTEX ND to 33 ppb, MTBE ND to 800 ppb. 11/21/06 - Obligado - Reviewed Closure Petition/Sensitive Receptor Survey. Sent email to ASR denying NFA stating the following:"Due to historical vapor issues in the adjacent apartment, and the presence of benzene above guidance levels in ground water, the Department requires laboratory analyzed vapor samples from either the slub slab system (if operational) or indoor air samples to confirm no vapor intrusion. The Department also requires an additional round of ground water monitoring to confirm benzene and MTBE levels are still decreasing. NYSDOH Vapor Intrusion Guidance should be followed when collecting air samples available at http://www.health.state.ny.us/environmental/investigations/soil_gas/svi_guidance/index.html. Please submit the results of the additional investigation by January 21, 2007."12/1/06 - Obligado - Steve Muller will be onsite today to collect addtional data.5/19/09 - Obligado - Meeting with DEC, ASR, GAseteria. They conducted a groundwater monitoring event and a vapor intrusion investigation in the adjacent residential building. According to report no Vapor intrusion was occuring. Ground water results found low levels of BTEX in GW, max 23 ppb and MTBE is continuing to decrease from 1400 ppb in 2004 to 250 ppb in 1Q09. They will submit a workplan for a confirmatory soil boring investigation by 7/31/09.11/20/09 - Obligado - Reviewed a revised Investigation Work Plan. The plan proposes to install 3 montioring wells at the site. 2 wells are proposed in the area of the former abandoned 550 USTs and one is downgradient of the dispenser island. I sent a letter to Gaseteria approving the plan.3/22/10 - Obligado - Review the 4th quarter 2009 monitoring report. Max BTEX is 8 ug/L. Max MTBE is 140 ug/L. No LNAPl present.6/14/10 - Obligado - I reviewed the Remedial Investigation Report. 2 Additional soil

GASETERIA (Continued) **S100167794**

boring/monitoring wells were installed. 1 soil boring/well location was not completed due utilities in that area. Soil samples were collected from one of the 2 locations, but the other location had shallow bed rock so no soil sample was collected. No soil impacts were detected at the one location where soil was collected. Ground water results showed 13 ppb total BTEX at newly installed MW5. MW6 had no exceedences of TOGs The existing monitoring wells were sampled as well. MW4 had max MTBE at 150 ppb, and BTEX at 14 ppb, and total VOCs were 174 ppb. MW2 had 15.3 ppb BTEX and 11 ppb MTBE. This site has minimal ground water impacts the 6 wells on the site, and lack of evidence of contaminated source soils. Also a VI investigation was previously performed at the adjacent apartment building and no vapor intrusion was determined to be occuring. After discussion with DEC Tibbe, this spill has been closed.

Remarks: GASOLINE ENTERED BUILDING 478 10TH AVE & SEWER SYSTEM, (3) OFFICE BLDGS (475, 478, 483 10TH AVE) EVACUATED, EXPLOSIVE CONDITIONS IN SEWER, DEC & LOCAL AGENCIES ON SCENE. (SIGONA)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	202580
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"8/2001-Tank closure report prepared by Franklin Company Contractors. 6/29/2001-Franklin implemented bioremediation by mixing 240lbs of ORC with surrounding soils and filling in excavation. 500 gallons of Waste stream technologies W-4 bio-blend mixture also injected.. Site was bakcfilled with 3 to 6 feet of clean fill, 6 inches of crushed stone and an 8-mil polyethylene vapor barrier. Area was then covered with 6 inch reinforced concrete slab. Soil VOC pass TAGM, soil SVOC exceed TAGM but are due to fill composition. Site visit by Jacob Krimgold showed no visual evidence of contamination. Groundwater VOC and SVOC also pass TAGM. 12/13/2001 Spill closed as per Mark Tibbe, Jacob Krimgold and myself (all NYSDEC personnel).
Remarks:	SOIL SAMPLE RESULTS FROM REMOVAL OF 3 TANKS AT LOCATION. NO VISABLE SIGNS OF CONTAMINATION.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Site name: NEW YORKER HOTEL
Classification: Not a generator, verified

Date form received by agency: 07/30/1999
Site name: NEW YORKER HOTEL
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D039
Waste name: TETRACHLOROETHYLENE

NEW YORKER HOTEL (Continued) **1004761098**

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT "10/20/03. Contaminated soil letter sent to Walter Seelig (High Ridge Enterpr.). Also see spill # 9008960. YK.11/21/03 RommelMet Brian McCabe, senior geologist, on site. Soil samples

CLOSED-LACKOF RECENT INFO (Continued) **S104275619**

collected from 8 to 16 feet below grade were contaminated. Groundwater (15 to 18 feet) was also sampled during the investigation and were impacted by BTEX and MTBE.They will excavate what soil they can and install a minimum of three monitoring wells (one outside by remote fills).Spill 9008960 reported TTF of 4000 gallon gas UST 11/14/1990STIPULATION SIGNED RD 2/18/04. 3/18/04-Vought-Spoke with Rob Ferguson (631-586-4900). Subsurface Investigation report sent to DEC on 2/3/2004. Ferguson will send small CAP upon receiving subsurface investigation report review. Ferguson requires review of subsurface investigation as per STIP. Vought requested that another copy of the Subsurface investigation be sent to DEC. 4/1/04-Vought-Spoke with Tom Melia (F&N) and he requested that he be point of contact. Spill transferred from Rommel to Vought.4/6/04-Vought-File review by Vought:Contaminated soil letter sent form DEC Krimgold to High Ridge Enterprises.Site meeting minutes (Fenley & Nicol Brian McCabe)-11/25/03. Site meetin on 11/24/03. In attendance were DEC Rommel, F&N McCabe, F&N Melia and F&N Hole. "The results of the sampling indicated that the contamination is located in the northern portion of the building. The effected area extended from the north end od the 4000 gallon tank excavation to the front of the building, approximately thirty five feet and from the center for the 550-gallon tank excavation west to the side of the building, approximately twenty feet." DEC recommended additional soil excavation without comprimising structural intergrity and required 1)installation of one well inside the building after backfilling completed 2)installation of two wells on sidewalk at the location of the former remote fills and twenty feet west of the bay door. Letter from Fenley & Nicol(Thomas Melia) to DEC(Rommel)-12/18/03. "The new owner of the building indicated that his intended use for the building is as an art gallery". During building remodeling excavation was performed and tanks were discovered under floor. Two gasoline USTs (one 4000-gallon and one 550-gallon) were removed and were in separate lcoations fifteen to twenty feet apart. "Upon removal of the bottom slab the soil encountered was saturated with liquid phase hydrocarbon". Depth to water expected to be 18’ below grade. F&N proposes delineation of soil and groundwater contamination, installation of wells and additional soil excavation.See also Spill #9008960 reported in 1990 for tank test failure and administratively closed on 3/4/03.Letter from DEC Rommel-12/4/03. Letter approving installation of wells on the sidewalk on the south side of West 29th Street between 10th and 11th Avenues and requesting expediting of sidewalk permits.Letter from F&N(Melia) to DEC Rommel-12/18/03. "At this time we are continuing our efforts to delineate the extent of the contamination...". Three monitoring wells installed (one inside and two outside building). "At this time the owener of ther property feels that it would be too far costly to excavate the contaminated soil without jeopardizing the structural integrity of the building, and would prefer that we install an air sparge/soil vapor extraction (As/SVE) system to remediate the hydrocarbon impact". Please indicate your approval below. No approval indicated by DEC Rommel.Stipulation Agreement-1/15/04. Stip with deadline of 2/13/04 sent to:Walter SeelingHigh Ridge Enterprises, Inc.P.O. Box 2542York, Pa. 17405.Subsurface Investigation Report (F&N-Melia 631-586-4900x190) -3/19/04. Investigation consisted of six soil borings, six temporary groundwater monitoring points and three monitoring wells. "The central and eastern units are currently vacant and undergoing renovations for use as an art gallery". Depth to groundwater is 8-9’

CLOSED-LACKOF RECENT INFO (Continued) **S104275619**

and flows northwest. Soil analyticals show 35ppb benzene(SP-1 at 12'), 882ppb benzene(SP-2 at 12'), 14ppb (SP-3 at 12'), 4900ppb benzene(SP-4 at 12'), 817ppb benzene(SP-5 at 12'). Groundwater analyticals show 2.5 ppb benzene(TW-1), 1459ppb benzene(TW-2), 45ppb benzene(YW-3), 2109ppb benzene(TW-4), 254ppb benzene(TW-5), 11ppb benzene(TW-6), 1200ppb benzene(FN-1), 206ppb benzene(FN-2), 4.2ppb benzene(FN-3). Report recommends Air Spage/Soil Vapor extraction system.NYSDEC requires: 1)signing of Stipulation before any further correspondence I 2)presence or absence of free product and interim remedial recovery if present 3)surrounding area site plan including property usage 4)additional wells east of FN-2 and well north of FN-2 to calculate required radius of influence for system design. 4/6/04-Vought called F&N(Milea) to repeat Stipulation requirement and left message to return call to DEC.4/7/04-Vought-Received faxed copy of STIP already implemented by DEC Kunkel on 2/18/04 (Copy of original not in file).4/8/04-Vought-Sent letter to High Ridge requiring well installation north of FN2 and east of FN2, submission of monitoring well data and surrounding property sketch.4/16/04-Vought-Wells will be installed next week (tentatively). Wells for pilot test will also installed. Mailing address is:High Ridge EnterprisesP.O. Box 2542York, Pa. 174054/18/04-Vought-Received message from David Oloke (F&N-631-586-4900x144) that he is new project manager for site. Vought called David and two additional well installed (one north of FN2 and one east of FN2). All onsite wells were sampled. No free product in new wells. Four vapor wells installed and air sparge well will be installed. DEC will receive pilot test report by 7/15/04. 6/23/04-Vought-Spoke with David and initial results faxed on 6/9/04. .5" of free product in well in 1" vapor well sent for fingerprinting. EFR not effective. DEC requires recovery of free product and submission of pilot test.9/2/04-Vought-File review by Vought: Groundwater results (F&N)-6/23/04. Groundwater analyticals show 1.2ppb benzene(FN5), 1.8ppb benzene(FN4), 14ppb benzene(FN3), 26ppb xylene(FN3), 474ppb benzene(FN2), 621ppb MTBE(FN2), 8ppb toluene(FN2), 2065ppb benzene(FN1), 47170ppb MTBE(FN1), 4106ppb toluene(FN1) and 2761ppb xylene(FN1).Addendum to the direction beneath the site was found to be toward the north." Property uSubsurface Investigation Report (F&N)-7/14/04. On 5/7/04 two additional monitoring wells were installed. "On June 4, 2004 the AS/SVE pilot tests were conducted". One inch of floating product was detected in P2. "The results of the AS pilot test indicated that the introduction of air pressure into the formation below the contaminant zone is a viable remediation technique". Report recommends commencement of an interim remedial measure to recover product from P-2 via weekly EFR. Report also recommends installation of another well to replace P2. Vought called David from F&N to approve of workplan. Well installation will be included with final remedial action plan. Vought sent letter approving of proposed workplan (installation of well at P2 and IRM) and included requirement of determination of groundwater flow direction and surrounding property sketch.9/3/04-Vought-Received fax from Oloke (F&N). "The groundwater flow sage of downgradient sites to the north are a parking garage and an art studio. Vought called Oloke and approved workplan as per 9/2/04 letter. Vought called Oloke and he will begin drafting RAP for submission to DEC.9/29/04-Vought-Spoke to David F&N and he will be sending RAP in overnight.10/1/04-Vought-Reviewed RAP received by DEC on 10/30/04. "Site is currently occupied by a masonary block

CLOSED-LACKOF RECENT INFO (Continued) **S104275619**

structure which is subdivided into three sections. An art gallery occupies the western unit. The central and eastern units are currently vacant and are undergoing renovations for use as an art gallery. RAP proposes weekly recovery of free product from FN2 via a peristaltic pump until well is converted to a 2" product recovery well designated at FN6. Two additional wells will be installed in the interior of the building. Monthly groundwater monitoring and quarterly sampling. Five air sparge and four SVE wells will be installed in the interior of the building. Remedial system will be installed on the roof of the building. Daily monitoring for the first week, weekly monitoring for the first month, monthly maintenance visits and effluent sampling, quarterly effluent sampling and groundwater sampling. Vought sent letter approving of RAP.10/28/04-Vought-Spoke to David(F&N) and FN1 must be reinstalled due to it was a bent well. Wells will be installed during the next few days.9/27/05 - SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO11/9/05 - Obligado - Review System STartup Report. AS/SVE system consists of 5 HP compressor and 3.5 hp blower and 5 air sparge wells and four soil vapor extraction wells. Effluent air stack results show 31.4 ug/m3 for benzene. Operation and maintenance schedule proposes monthly SVE effluentmonitoring and Quarterly Status Reports. System started in May 2005. Due to noise generation, the system only runs from 9pm to 6am.Quarterly Status Report - Groundwater analyticals show 4.7 ppb benzene (FN3), 50.1 ppb MTBE (FN2), 78.3 ppb MTBE SVE5, 1.7 ppb MTBE SVE3. Benzene effluent show 46.74 ug/m3. 5/15/06 - Obligado - Called David Oloke. Asked that he send recent Quarterly Status Reports.5/22/06 - Obligado - 2Q06 Quarterly Status Report, submitted by Fenley Nicol, Inc. Ground water analyticals show 9 ppb benzene 35 ppb MTBE in FN3 and and 3.7 ppb benzene in FN4. Benzene effluent below STIP limits. There is duplicated data on Table 2 Air Sampling Results, probably a cut and paste error, call Dave Oloke, he said he will look into it at send a new table with the electronic copy. Report recommends continuing system operation.6/23/06 - Obligado - Called David Oloke. Asked for the corrected Table. He said he will email it to me.10/23/06 - Obligado - Called David Oloke. Left message requesting most recent quarterly status report. David Oloke call me back and said he would send the report shortly and he would correct the typo on Table 2.1/30/07 - Obligado - Review 3Q06 monitoring report. Typo in 2Q06 table has been fixed in cumulative table. AS/SVE system online and working at 100% maximum capacity. Air samples collected monthly. Benzene in gw exceeds standard at 4 ppb. in 2 wells. All effluent below STIP guidance. Benzene detected in VES/AS effluent at 4.86 ug/m3 in 6/06. Recommends continued operation of the system.Review 4Q06 monitoring report - AS/SVE system operating at 100% capacity 9 hours per day. All effluent samples below STIP guidance. BTEX effluent at 361.71 ug/m3 during 10/27/06 Report recommends continued operation of system. GW results show minor exceedences of Benzene - max concentration at 8 ppb in FN3. However gw monitoring does not include FN1 where highest contamination was found. 9/13/07 - Obligado - Review 1Q07 monitoring report. According to the report, the AS/SVE syste is running at 100% capacity. System is still pulling vapors, at a flow rate of 50 cfm and a concentration in March 07 of 111.30 ug/m3 BTEX. Benzene (12.8 ug/m3) was below the STIP limit. Recommends continued operation of AS/SVE system. 10/26/07 - Obligado - Review 2Q07/3Q07 monitoring report. Benzene detected during quarterly monitoring at MW3 adn MW4 slightly above standards. Analytical results of air stream were below the max benzene STIP

CLOSED-LACKOF RECENT INFO (Continued) **S104275619**

Limit. Recommneds continued operation of the AS/SVE System.9/3/08 - Obligado - Review 1Q08 monitoring report. AS/SVE running for 9 hours a day at 100% capacity. Effluent collected monthly. Benzene detected slightly above standards in MW2,3,4,and5. System effluent ND for BTEX. 6/3/09 - Obligado - REview 1Q09 monitoring report. Requests to shut down system for a 1 year post remedial monitoring period to determine if system was effective and monitor for rebound. Sent a letter to Seeling cc to David Oloke approving system shut down temporarily but requiring sampling of monitoring wells MW1, MW6, adn MW7 beneath the building as required by approved RAWP. Required 90 days to submit an update report on system shutdown and additional sampling. 12/3/09 - Obligad - Met with David Oloke on site. The AS/SVE system was down as proposed. According to David they were unable to collect ground water samples from the three sampling points. According to David the water he collected was too silty. He recommended doing an exposure assessment to close the spill number or to install the well in an alternate location in the building entrance. I told him I would review the spill file to determine if that location was acceptable. 12/22/09 - Sent email to Mr. Oloke - The Department has determined that the proposed location is cross-gradient and outside the of the source area, and would not provide the necessary data to confirm the site remedation was successful. As such, the Department reiterates its requirement in the June 2, 2009 letter, to sample the 3 monitoring wells FN1, FN6, and FN7 (as originally proposed in the approved RAWP) and submit a Monitoring Report within 90 days of this notice. If sufficient ground water can not be obtained from these sampling points (after exhausting all available well sampling and well development techniques), than a Remedial Investigation Work Plan (RIWP) to install a new monitoring well in the gallery in between FN1, FN6, and FN7 must be submitted within 90 days of this notice. The RIWP should contain an implementation schedule.10/9/10 - Obligado - Email from David Oloke "I would like to inform you that we’re scheduled to be onsite to install one groundwater monitoring well on the sidewalk directionally towards the source area beneath the building in order to determine the current groundwater quality beneath the site. We scheduled for Monday 25 through Wednesday 27. " 1/14/11 - Obligado - Email from David Oloke "We are set to go back to High Ridge, 524 West 29th Street in Manhattan on Monday 1/17/11 to install the groundwater monitoring well for spill inactivation. The client is making plans to be onsite as well".1/19/11 - Obligado Email from David Oloke "We core drilled through the foundation wall and could not get the well rods to the desired depth due to refusal. So we back to square one. Our client spoke with the tenant again yesterday to see if he will allow us access into the building."4/1/11 - Obligado - I sent email to David Oloke related to potential alternative methods for obtaining ground water samples at the site since the diagonal well method was not successful, such as snaking new tubing into the existing system wells, and high vaccuum extraction to obtain ground water samples from the sparge wells. I asked Mr. Oloke to look into these options, as well as any other methods and report back the findings to the DEC. 3/12/12 - Obligado - I reviewed a Site Status Report. They collected samples from MW1, MW6, and MW7 under the gallery slab using the vacuum extraction technicque. Samples were collected in June and November of 2011. During the most recent sampling event in NOvember, the maximum VOCs was 117.3 ug/L in MW-7. MW1 had 63.42 ug/L total VOCs, and MW6 had 59.75 ug/L VOCs. Several compounds were slightly

CLOSED-LACKOF RECENT INFO (Continued) **S104275619**

above standards. The greatest exceedence was 36 ug/L napthalene in MW7, which is above the standard of 10 ug/L. In NOvember they turned on the AS/SVE system and allowed it to run for four weeks. At the end of the four weeks , air samples were collected and all the targeted VOCs were ND. Based on the above, they requested closure. Ground water contamination has been greatly reduced. The AS/SVE system reached asymptotic recovery rates. Additional remediation is not warranted nor feasible. After discussion with DEC Hussein and Ketani, this spill is closed. A spill closure letter ahs been sent to Walter Seeling, cc to David Oloke.

Remarks: caller was hired to remove a few tanks from the site - x-ref spill # 9008960 - they encountered contaminated soil - they are stockpiling soil now

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"10/25/00 - REASIGNED FROM O'DOWD TO SANGESLAND.12/2/2003 Transferred from Sangesland to Rommel.1/8/04-Vought-Spill transferred from Rommel to Vought.4/8/04-Vought-Spoke with Mathew Schieferstein (Anson Environmental 631-351-3555). Recently contracted by owners. Tradewinds were former contractor. Three monitoring wells onsite were abandoned. No groundwater analyticals on file. Vought approved Geoprobe samples at former well locations. Groundwater will be sampled for 8260/8270 and will take deepest dry soil samples or the highest PID. DEC will see report by 6/15/04.9/23/05-FILE TRANSFERRED FROM VOUGHT TO OBLIGADO2/2/06 - Obligado - called Anson Environemntal, Mathew Schieferstein no longer works there. Company

FOUR B REALTY (Continued) **1001128017**

was bought in 7/04. No recollection of this project. Will call back with any information they can dig up.2/3/06 - Obligado - Received call from Fritzy Gros-Daillon at Anson Environmental. She said Anson in 2004 recommended geoprobing to owners however the Owners never approved work. No work was ever done.10/16/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Called Steven Rosen Baum (212)687-3440 and left message to call me back. -QA05/15/07: Called Mr. Steven Rosenbaum at (212)972-0902 to discuss regarding spill. He was not there left message to call me back. -QA06/19/07: Called Ms. Fitzi Mazzola (Anson Environmental) at (631)351-3555 to discuss regarding present status of the spill. She said that she will find out about the information of spill with in three four days and then she will call me back. -QA10/03/07: Called Ms. Firtzi Mazzola (Anson Environmental) to discuss regarding spill. She was not there left message to call me back. -QA06/26/2008: Thia spill case was transferred to A. Doronova. - AD11/05/2008: Looked in Internet for the owner information without success. Spoke with Mr. Rosenbaum - attorney. Asked him about the owner of the property and contact information. He said that in order to obtain the contact number for his previous client (Four B's Realty) I have to submit him an official request. I spoke with Anson Environmental representative, he promised to get back with some information. AD11/06/2008: Found name of the Company and its president. It is - Aviv Midtown Realty, Corp. and the president - Eyal Farage. Issued an Investigation Needed Letter. Sent it as a certified mail. DL to eDocs. AD12/01/2008: Received an email from Jason Green of Aviv Realty saying:"Dear Ainura Doronova:Please be advised that Aviv-Midtown Realty Corporation no longer owns 524 West 36th Street, New York, New York. On or about August 1, 2007, the City of New York acquired the property pursuant to eminent domain law.Best regards,Aviv-Midtown Realty Corporation"The NYC Department which owns the property now is - DCAS. General phone: 212-669-7000 (ext - 5). Stuart Barth, Environmental Issues - 212-669-8722. Called and left him a message. He returned my call later. Explained him the situation. Mr. Barth said that he need to look in the files and that he will get back with some information. AD12/29/2008: Did not receive any response yet. Called and left a new message to Mr. Barth of DCAS. AD01/06/2009: Called and left a message to Mr. Barth. AD02/11/2009: Called and spoke with Mr. Barth of DCAS. He asked to send him an email with information request. AD02/11/2009: Sent an email letter to Mr. Barth. Response deadline is due March 27, 2009. AD03/27/2009: No response was submitted yet. AD04/01 2009: Called and left a message to Mr. Barth of DCAS. AD04/07/2010: Contacted DDC office regarding the spill case. AD05/19/2009: Received an e-mail from M. Asbagh of DDC saying:"Dear Ainura: On or about April 7, 2009 you notified our office of an existing spill atthe above site left unattended since Aug 2007 when NYCDCAS acquireownership of the property. According to the time line records providedto the URS, Jane Staten, your last contact on 4/01/09 to Mr. Barth ofDECAS reg. Environmental issues went unanswered. I assume you have notheard from him yet. After a careful review of this case, we have decided to assign URS tobegin the site history research, analysis and spill investigative processpending your official request directly to the DDC Transportation Unit,Deputy Program Director, Mrs Samani's attention at your earliestconvenience. Thank you. Marcy Asbagh, Project ManagerDDC/ Transportation UnitTel: (718) 391-1292"05/28/2009: Discussed the site with J. Kolleeny of DER. Will send a Investigation Needed Letter to Ms. Samani of DDC.

FOUR B REALTY (Continued) **1001128017**

AD05/29/2009: Sent the letter to A. Samani. (cc: J. Kolleeny-DEC; URS and eDocs). Response is due July 29, 2009. AD06/08/2009: Received a phone call from J. Staten of URS. She asked if we have any investigation reports from Anson Environmental, Inc. (Anson) in our files. Told Ms. Staten that according to DEC remarks, Anson did not performed the site investigation, thus such reports were not submitted to DEC. Spoke with J. Vought of DER (one of the first PM for the site), he confirmed that no report was received. No PBS registration was found for this address. AD06/09/2009: Called and spoke with J. Staten of URS. Confirmed the absence of reports from Anson Env. and absence of PBS registration. Suggested to look in Sanborn map for USTs. There is some info in DEC remarks, about previous contractor - Tradewinds. Looked through old files and found hard copies of Tradewinds' investigation reports. Scanned the copies and DL them to eDocs. Sent an e-mail to J. Staten. AD11/13/2009: Received the Soil and Groundwater Sampling Plan, submitted by URS Corporation (URS). Will review. AD11/20/2009: Reviewed the work plan. The work plan proposes a soil and groundwater investigation in the vicinity of two former gasoline USTs and in a previously excavated area. URS will advance three soil borings followed by collection of soil samples, and install three groundwater monitoring wells, with soil and groundwater sampling. A summary report with conclusions and recommendations will be provided to DEC. AD12/01/2009: Issued an approval letter to DEC with the following comment:" Two soil samples should be collected for analysis per boring/well: one sample from directly above the water table and a second from the sampling interval with the highest PID reading. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table."DL the letter to eDocs. AD02/16/2011: Received an e-mail from URS saying:"Hello Ainura,Recently URS mobilized to this site to conduct the site investigation plan that was approved by DEC but found that there was significant demolition occurring at the site. We have prepared a revised investigation plan based on these changed site conditions (see attached pdf). We would like a quick review and approval of this revised approach if possible as we now have an opportunity to aggressively address any impact present through excavation. I will call you later today to discuss. Figure 1 is the previous plan and Figure 2 is the new plan. The photos illustrate current site conditions.Thanks,Kevin J. ShanahanProject ManagerURS Corporation77 Goodell StreetBuffalo, New York 14203716-923-1215"AD02/17/2011: Reviewed the Revised Soil and Groundwater Sampling Plan. The work plan proposes a soil and groundwater investigation in the vicinity of two former gasoline USTs. URS will advance six soil borings and install three permanent groundwater monitoring wells, with soil and groundwater sampling. A summary report with conclusions and recommendations will be provided to DEC. Discussed the plan with J. Kolleeny of DEC. AD02/18/2011: Approved the work plan with the following comments:"If the previously installed wells MW-02 and MW-03 have been destroyed or are not functional, then of the six proposed soil borings, the one with the greatest field indications of contamination should be converted into an additional permanent groundwater monitoring well;Two soil samples should be collected for analysis per boring/well: one from the sampling interval with the highest PID reading and a second from directly above the water table. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table."Sent

FOUR B REALTY (Continued) **1001128017**

the letter to A. Samani. DL pdf copy to eDocs. AD06/28/2011: Received an e-mail from K. Shanahan of URS saying:"Ainura,Today URS issued the findings of our recent soil and groundwater investigation plan for the above referenced site. We posted a pdf version to the web site and you will receive a hard copy in the mail. The report contained the following information:1. Background/site history2. Description of field work3. Results of investigation work4. Recommendations for additional groundwater investigations5. Recommendations for remediationThis e-mail is intended to notify you that URS needs approval from you to proceed with installation of additional groundwater monitoring wells and for excavation in the area of the two former 550-gallon gasoline USTs. URS would like to proceed with the excavation work soon as the property is being redeveloped as part of the Hudson Yards project. It is our belief that it is appropriate to aggressively remediate the petroleum-impacted soils prior to property redeveloped since it may be difficult to access. Please expedite your approval given the fact the site is currently being redeveloped by HPD.Thanks,Kevin J. ShanahanProject ManagerURS Corporation77 Goodell StreetBuffalo, New York 14203716-923-1215"Reviewed the report. It states that six soil borings (B-3 through B-8) were installed and soil samples were collected on February 22, 2011. Two samples were collected from boringB-8. Only one sample was collected from each of the other borings since the driller encountered refusal at shallow depths, prior to reaching the water table. Although three monitoring wells were specified in the approved investigation plan, five monitoring wells were installed on March 15 and March 16, 2011. Groundwater and product levels were measured in the monitoring wells using an oil/water interface probe. The depth to groundwater ranged from 3.14 feet to 7.65 feet below the top of casing. Free product was detected in well MW-06 (0.1 foot). MW-06 was not sampled because product was present. Atotal of 0.25 gallons of product was removed from well MW-06 on March 31, 2011.There were no exceedances of the Title 6 NYCRR Part 375 Unrestricted Use standards for VOCs. However, the standards for one or more PAHs were exceeded in all samples. The type of contaminant (PAHs) is not typically associated with gasoline contamination as reported at this site. The presence of PAHs is commonly encountered in urban fill. Typical gasoline constituents (e.g. BTEX, MTBE, etc.) were detected in soil samples, but at very low concentrations.Groundwater analytical results show that there were numerous exceedances of VOCs in groundwater and a few exceedances of SVOCs. These contaminants are more typical of gasoline constituents. Summary tables with analytical results are missing in the report.The groundwater results show that product is present at the site and that groundwater contamination is significant in the general area of former USTs. VOC concentrations in samples collected from the wells closest to the former tanks, piping and fill (MW-07S and MW-07D) had the lowest VOC concentrations. This is contradictory to expectations and could support the case for other sources of contamination either on-site or off-site. The extent of groundwater contamination has not been completely delineated, suggesting that further groundwater investigation is necessary.URS' recommendations for additional groundwater investigations are below:1. Interim Remediation Measure (IRM): All monitoring wells including well MW-06 with a free product will be gauged on a monthly basis with an oil/water interface probe and froduct will be removed from impacted wells using a vacuum truck. URS will implement these measures

FOUR B REALTY (Continued) **1001128017**

immediately.2. Soil Remediation: URS will excavate soils to the top of bedrock in an area measuring 30-feet by 30-feet in the vicinity of the USTs vault. Soil will be excavated to the top of bedrock which was encountered at a depth ranging from 4 to 8 feet bgs at the site. If it isconservatively assumed that the depth to bedrock in the excavation area will average 7 feetbgs, then approximately 230 cubic yards of soil will be excavated from the 900 square footarea.3. Groundwater Remediation: The extent of the groundwater plume on site will be further defined by installing five new monitoring wells (MW-08 through MW-12). The final groundwater remediation approach will be based on the data collected from the additional groundwater investigation. Two general approaches will be considered for remediation as follows: 1.) groundwater extraction and treatment or;2.) in-situ groundwater remediation by injection of oxidants, bioremediation stimulants, or surfactants into the bedrock aquifer. A detailed design for groundwater remediation will be submitted to the NYSDEC after the results of the groundwater investigation have been evaluated. Implementation of the groundwater remediation will depend on the redevelopment plan for the site and surrounding area and the schedule for redevelopment.To request submission of the missing tables. Will discuss it with J. Kolleeny of DEC. Changed site priority to P1. AD06/29/2011: Called and spoke with K. Shanahan of URS. Asked to submit the tables. Later received the report with summary tables. Discussed the recommendations with J. Kolleeny of DEC. Issued and sent a letter to A. Samani approving the proposed recommendations with a comment regarding a soil sampling during new wells installation. DL pdf copy of the letter to eDocs. AD05/16/2012: Called and spoke with K. Shanahan of URS regarding site status update. He said that EDC retained LiRo to do the excavation of the contaminated soil, and that the work will probably start in summer of 2012. URS is responsible for IRM, which consist of free product monitoring. He will send me an e-mail with summary info. AD08/02/2012: met with DDC and URS on quarterly meeting. Discussed the site current situation and the next course of actions. Site status update report will be submitted to DEC. AD09/14/2012; received the following e-mail from K. Shanahan:"Ainura, Liro completed the tank removal and soil adjacent to the tank to bedrock this week (see attached photos). They want to replace well MW-7D and not well MW-7S since MW-7S only monitors the perched water in the tank excavation; the natural water table on-site is in the bedrock. Please let me know if DEC will require replacement of well MW-7S.I have attached the previous report we issued for this site.Thanks, Kevin J. ShanahanSenior Project ManagerURS Corporation"Will review. ADLooked at the data. Called and spoke with Kevin. Confirmed that re-installation of well MW-7S is not neccesary. AD09/17/2013: Received the following e-mail from K. Shanahan:"Ainura,Recently URS was provided a report from LiRo Engineers documenting the remediation work they have completed at 524 West 36th Street under their contract with NYCEDC. LiRo is the Construction Managers involved with the Hudson Yards construction project in the area and they have control of the site. LiRo performed an excavation, removed an abandoned hydraulic oil tank, installed some wells and completed groundwater monitoring. URS now if back performing quarterly groundwater sampling. Today, we posted a new report to the website documenting the work completed at this site by URS and LiRo and we will be sending you a hard copy in the mail. If you have the time, it would be beneficial to review the report before our meeting on Thursday. If

FOUR B REALTY (Continued) **1001128017**

not, I will review during the meeting. Please note the area with groundwater contamination in the bedrock appears to be where a new road will be constructed.The report is attached for your convenience.Kevin J. ShanahanSenior Project ManagerURS Corporation"DL the report to eDocs. Will review. AD09/19/2013: Attended quarterly meeting with DDC and URS. Discussed the site on this meeting. I was informed that due to some construction issues some of the proposed wells could not be installed. A meeting should be scheduled with all involved parties to discuss the different remediation scenaries after report will be reviewed. AD09/24/2013: Received a hard copy of the URS's report. AD09/16/2013: Reviewed the report. It states that 2011 Site Investigation - July Drilling for the additional site investigation was completed by Associated Environmental Services,Inc. (AES) between July 25 and July 27, 2011. Only three of the five proposed monitoring wells(MW-08A, MW-09A, and MW-10A) were installed. The remaining two wells could not be installedbecause there was insufficient clearance for the well proposed in the sidewalk and a second proposed well was located too close to the existing building foundation. The boring logs from these wells are generally consistent with the logs from previous borings at the siteshowing a 4-inch concrete layer and 6-inch stone layer underlain by fill and schist bedrock. Bedrock was encountered at depths between 3 and 9 feet bgs in these borings.On August 4, 2011, URS collected analytical samples from wells MW-04, MW-05, MW-07D, MW-07S, and newly installed wells MW-08A and MW-09A. Newly installed well MW-10A was found to be buried due to on-going construction at the site. Analytical results the August 2011 groundwater samples showed that no VOCs exceeded the NYSDEC Groundwater Quality Criteria in monitoring wells MW-07S, MW-08A, and MW-09A. However, total VOC concentrations in the remaining wells were elevated with 24,820 ppb in MW-04, 12,438 ppb in MW-05, and 5,705 ppb in well MW-07D.On October 11, 2011, URS met with representatives from HPD, EDC, the Hudson Yards DevelopmentCorporation (HYDC), and LiRo to discuss the on-going construction activities at the site and their impact on URS and the spill remediation efforts. During the meeting URS indicated the nature of the impacts and the need to complete the soil excavation (and possibly groundwater remediation) prior to new development. HYDC acknowledged the environmental conditions on-site and indicated a willingness to work toward environmental cleanup goals. Following this meeting it was determined that the best course of action would be for LiRo to oversee excavation of the contaminated soil and installation of the remaining monitoring wells from the original URS work plan (in addition to replacement of wells damaged during the soil excavation).Remedial Actions 2012-2013:In September 2012, LiRo completed excavation of the contaminated soil and the concrete vault as recommended by URS in the June 26, 2011 work plan. The remnants of what appeared to be ahydraulic system were also removed at this time. According to the report, all overburden soil from an area of approximately 30 feet by 30 feet was excavated to the top of bedrock and then backfilled with clean fill. A total of 57.71 tons of soil were removed for offsite disposal. LiRo reported that the bedrock in this area (outside of the tank vault) was encountered at depths of 2 to 3 feet bgs instead of 4 to 8 feet as reported in previous documents. Because of the shallow nature of the excavation, LiRo determined that sidewall samples from the excavation would not be possible. According to their report, no confirmation soil samples were collected.Monitoring wells MW-07S and MW-07D were destroyed

FOUR B REALTY (Continued) **1001128017**

during the excavation and were replaced bymonitoring well MW-07R located approximately 9 feet to the east. LiRo also installed newmonitoring wells MW-08 through MW-12 as presented in URS' June 26, 2011 work plan.The depth to groundwater at the site has varied significantly in the past two years ranging from as little as 2 feet to as much as 18 feet bgs. It is possible that the fluctuatinggroundwater elevations are due to the contaminated soil excavation and other construction activities at the site. Free product has been detected primarily at location MW-06. When this well was first installed in 2011, a product thickness of 0.10 feet was observed. URS collected an estimated total of 1.75 gallons of product from this well through 2012. Product thickness declined until only a sheen was observed during the last measurement on February 14, 2013. During the subsequent monitoring event on February 28, 2013, well MW-06 was reported as being destroyed. Occasional product sheens have been reported at other monitoring wells since 2011; however, these appear to be random occurrences and are not believed to indicate any significant quantity of free product at the site. The most recent product detections occurred in wells MW-08 and MW-09, which along with MW-06, are located west of the previous UST area.Groundwater samples were collected by LiRo in November 2012 and March 2013. A total of seven events have been conducted, the most recent by URS on June 28, 2013 where samples were collected from wells MW-04, MW-05, MW-08, MW-09, and MW-12. Results from this event show that no VOCs were detected above the NYSDEC Groundwater Quality Criteria in wells MW-05, MW-09, and MW-12. Well MW-04 was the most contaminated with 12,037 ppb total VOCs; well MW-08 contained only 75 ppb total VOCs. Well MW-07R was not sampled in June, but was sampled during the previous sampling event in March 2013 and found to have 12,233 ppb total VOCs. Based on the analytical data, URS concludes that the soil excavation had a positive impact in regard to the dissolved phase impacts at well MW-05. Total VOC concentrations at this well were on the order of 12,000 ppb prior to excavation of the contaminated soil, but have not been detected in three sampling events conducted following the excavation. Well MW-04 also showed similar improvement until the most recent sampling event in June. It appears that a small area of dissolved phase contamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. Results from well MW-08 show that the dissolved phase plume may extend somewhat to the north from the site.URS states that all known USTs, piping, fill ports, and other structures have been removed from the site. In regard to soil contamination, they expect that the 2012 excavation removed most or all of the contaminated soil at the site. Due to the apparent shallow depth to bedrock in the affected area, any remaining soil contamination at the site would be limited.Free product at the site was primarily limited to monitoring well MW-06. URS collected product from this well on eight separate occasions and the product levels appeared to be declining. However, the last measurement from this well before it was destroyed indicated that a product sheen still remained in the groundwater. Recent product detections occurred in wells MW-08 and MW-09, which along with MW-06, are located west of the previous UST area. It is expected that free product is no longer present in any significant quantity; however, this should be verified with future monitoring data.The most recent groundwater analytical data indicates that a small area of dissolved phasecontamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. Only a few rounds of

FOUR B REALTY (Continued) **1001128017**

groundwater data have been collected following the excavation and removal of the contaminated soil. The extent of the contamination generally appears to be defined to the south, east, and west, assuming that the contaminant concentrations from the June sampling event remain relatively consistent. It is expected that the groundwater contaminant concentrations will decline further with continued monitoring. Based on the depth to groundwater and bedrock, it appears that the groundwater contamination is located within the bedrock zone.Based on the most recent groundwater monitoring data and other remedial actions at this site as summarized above, URS recommends the following:Actions:- Continue monitoring of the site product and water levels on a quarterly basis.- Continue quarterly groundwater sampling of all available monitoring wells.URS recommends that monitoring well MW-06 be replaced since there are no other monitoring wells in the immediate area and a product sheen was observed in the last measurement at this well. Monitoring well MW-06R will be used to determine whether free product is still present in this area and to delineate dissolved phase contamination to the west of the former USTs.- Install a monitoring well to the north and to the south of the most contaminated wells (MW-04 and MW-07R) to delineate dissolved phase contamination.- Reinstall a well at location MW-07D based on its historic indications of groundwatercontamination, and to potentially serve as a groundwater treatment well.- URS will also assess the condition of the remaining monitoring wells and replace damaged or destroyed wells as site conditions will allow.- All four wells (and any additional replacement wells) will be constructed as four inch diameter wells to allow the wells to function as potential groundwater treatment wells in addition to monitoring wells. Because the wells are primarily replacements for previous wells, and since soil contamination was remediated, soil samples will not be collected for analysis. URS will document the presence of petroleum impacts by the field screening of soil recovered during drilling, including PID readings.DEC and DDC discussed this site on quarterly meeting and I was informed that due to some construction issues some of the proposed wells could not be installed. A meeting should be scheduled with all involved parties to discuss the site remediation. AD10/15/2013: Left a message to A. Samani regarding a possible meeting. AD10/29/2013: Called and spoke with A. Samani regarding the meeting with all involved parties. AD11/01/2013: Scheduled the meeting for November 21, 2013. AD11/21/2013: I and J. Kolleeny met with A. Samani, M. Asbad of DDC, K. Shanahan and Harvey Roberts of URS, Steve Frank and Dan Brodcen of LiRo. Discussed the site conditions and remediation options. DEC will approve the work plan proposed by URS with some modifications regarding well MW-6. LiRo will submit the GW analytical data from the excavation pit in the vicinity of the former MW-6. URS proposed to use EFR on most contaminated wells MW-04 and MW-07R and installation of ORC socks. AD11/26/2013: Issued and sent an approval letter for the wells installation work plan. DL pdf copy of the letter to eDocs. AD01/28/2014: Received the following e-mail from K. Shanahan of URS:"Ainura,The purpose of this e-mail is to provide you with an update on our progress at this site and to request approval from you to adjust the locations of the proposed monitoring wells. We have attached our report dated September 19, 2013 for reference. During the meeting on November 21, 2013, it was decided that the following course of action should be implemented:1. URS will redevelop the two most contaminated wells since the water table is within the bedrock

FOUR B REALTY (Continued) **1001128017**

and it the redevelopment may reduce the contaminant levels.2. URS will sample all existing wells on-site.3. Liro will provide as-built and existing utility drawings to allow URS to adjust proposed well locations, as necessary.4. URS will install ORC socks into MW-04 and MW-07R, the two most contaminated well to stimulate bioremediation processes.5. URS will install, develop and sample new wells MW-13, MW-14 and MW-15.Since the meeting, items 1 through 4 have been completed. Well MW-07R has been destroyed so the only remaining wells on-site are MW-04, MW-09 and MW-12. The groundwater sampling results from the December 30th event showed negligible VOCs in wells MW-09 and MW-12 but approximately 12,000 ppb in well MW-04 which is consistent with previous sampling events. The ORC socks were installed in well MW-04 on January 16, 2014.We requested from EDC (and their consultants) the base mapping for the new site developments including the new road, Hudson Boulevard East. The attached Figure 1 illustrates the current site conditions including the new road, the new power and storm sewer utilities, the two remedial excavation areas, the existing and previous wells, the three proposed well locations as specified in the last URS report and three alternate locations (shown in magenta color). We moved proposed well MW-13 from the middle of the road to one foot from the curb. This would allow future sampling when the road is open. We moved proposed well MW-14 from next to the underground cable TV line to inside the construction fence in between the new power utilities. Sampling this well after the new road opens may be impossible, but it will provide valuable delineation data in the near term.We moved proposed well MW-15 from directly over the new power conduit to one foot from the curb. This would allow future sampling when the road is open. Please let us know if you approve of these locations so we can schedule the drilling work.Thanks, Kevin J. ShanahanSenior Project ManagerURS Corporation77 Goodell StreetBuffalo, New York 14203kevin.shanahan@urs.comOffice: 716-923-1215Cell: 716-480-7352"Will review. AD01/30/2014: Reviewed the submitted data. Discussed the proposed changes with J. Kolleeny of DEC. Issued and sent an approval letter to A. Samani of DDC. DL copy of the letter to edocs. AD03/07/2014: Received a groundwater monitoring report for 3rd and 4th quarters of 2013. DL the report to eDocs. Will review. AD04/10/2014: Reviewed the report. It states that during both the third and fourth quarter sampling events, groundwater samples were collected only from wells MW-04, MW-09, and MW-12. Results from the most recent event in December show that no VOCs were detected in wells MW-09 and MW-12. Well MW-04 contained 8,740 ppb total VOCs.Only minor concentrations of only a few semi-volatile organic compounds (SVOCs) were detected in the groundwater sample collected from well MW-09. Naphthalene was the only SVOC detectedabove criteria in well MW-04.Acording to URS, it appears that the soil excavation had a positive impact in regard to the dissolved phase impacts at the surrounding wells. It appears that a small area of dissolved phase contamination remains in the vicinity of monitoring wells MW-04 and MW-07R (which was destroyed), east of the original UST location. Results from well MW-08 through June 2013 (the well was destroyed prior to the subsequent sampling event) show that lower concentrationsof the dissolved phase plume may extend somewhat to the north from the site. Installation of the three additional monitoring wells as discussed above will help to delineate theremaining dissolved phase groundwater contamination at the site and facilitate future remediation.Conclusions:URS states that the most recent

FOUR B REALTY (Continued) **1001128017**

groundwater analytical data indicates that a small area of dissolved phase contamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. The extent of the contamination generally appears to be defined to the south, east, and west. It is expected that the groundwater contaminant concentrations will continue to decline during future monitoring events. Based on the depth to groundwater and bedrock, it appears that the groundwater contamination is located within the bedrock zone.Proposals:Based on the most recent groundwater monitoring data and other remedial actions at this site as summarized above, URS recommends the following:Actions:- Complete installation of monitoring wells MW-13, MW-14, and MW-15 in accordance withthe January 2014 NYSDEC correspondence. Proposed well locations are shown on Figure 5.- Continue monitoring of the site product and water levels on a quarterly basis.- Continue quarterly sampling of all available monitoring wells. The newly-installed wells will be included in future groundwater sampling events once they become available. Additionally, future groundwater samples will be analyzed for VOCs and naphthalene only.- Continue to install ORC socks in well MW-04 and other wells as appropriate.There is no proposals requiring DEC approval. AD

Remarks: underground storage tanks each 550 gal have caused soilcontamination over a period of 10 yrs-tanks were tested for tightness and do not appear to be leaking-contaminationlikely to have been caused by overfill at different periodsbased upon delineation by engineer contamination localized aroundfill pipe based on geo-probe boring and results of lab sample

DEC Region:	2
DER Facility ID:	75604
DEC Memo:	According to the NYSDEC records, on August 5, 1998, the on-site 2,000gallon UST failed a tank tightness test and was issued Spill #98-05607.After review of information received from the client, it has beendetermined that after the UST failed tank tightness testing, the UST wascleaned, sandblasted, and relined with an epoxy lining, and theassociated piping was replaced in September 1998. On July 10, 2003, the 2,000 gallon UST failed a tank tightness test wasissued Spill #03-03799. It appears that soil borings were performed todetermine the extent of the UST leak/spill. Upon reviewing datareceived from the NYSDEC Spills Database, the NYSDEC notes sectiondetermined the soils were "slightly above" TAGM guidelines due to levelsconsistent with "old coal ash fill materials" and was granted "closure"status on September 2, 2003. The UST was emptied and taken out ofservice, and an 1,080 gallon steel registered AST was installed in asmall cellar area near the north bay door area. On September 28, 2005, EnviroTrac contacted the NYSDEC regarding Spill #98-05607 to determine what isneeded to "close" the Spill. It was determined that since Spill#98-05607 was prior to Spill #03-03799 which is "closed", and was thesame tank and area, it should be "closed" as well.
Remarks:	TANK TO BE EVACUATED, CLEANED, AND LINES TO BE TESTED.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Tank Info:

Tank Number:	NEW OIL 1
Tank Id:	78794
Material Code:	0013
Common Name of Substance:	Lube Oil

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
D00 - Pipe Type - No Piping
J01 - Dispenser - Pressurized Dispenser
I00 - Overfill - None

Tank Location:	3
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/01/1994
Capacity Gallons:	175
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: FEDERAL EXPRESS
Owner/operator address: 538 W 34TH ST
NEW YORK, NY 10001
Owner/operator country: US
Owner/operator telephone: (212) 465-4261
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Owner/operator name: BULWARK CORP
Owner/operator address: 224 12TH AVE
NEW YORK, NY 10001
Owner/operator country: US
Owner/operator telephone: (212) 695-8090
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Classification: Not a generator, verified

Date form received by agency: 08/26/1992
Site name: FEDERAL EXPRESS CORP
Classification: Small Quantity Generator

FEDERAL EXPRESS CORP (Continued) **1000474245**

Hazardous Waste Summary:

Waste code:	NONE
Waste name:	None
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Violation Status:	No violations found

Evaluation Action Summary:

Evaluation date:	07/27/1999
Evaluation:	COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation:	Not reported
Date achieved compliance:	Not reported
Evaluation lead agency:	EPA

FINDS:

Registry ID: 110004441630

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"4/12/04-Vought-Spill transferred from Tomasello to Rommel as per Rommel.3/5/08 - Austin - Assigned to Ketani for further investigation - end5/5/08 - Raphael Ketani. I re-opened the case. There is no paper file. The spill was the discovery of oil contaminated soil in the process of closing some tanks. The discovery took place on 3/14/90. I tried to contact Don Scicutella of Federal Express in Manhattan at (212) 465-4310, but found out that the phone number belonged to a different business. The PBS case #2-600488 lists 13 tanks numbered #1 to #12 and #OO5. Tanks #1 to #12 had diesel, gas, #2 oil, and #6 oil. Tanks #3 and #4 are each 275 gals. and were converted to non-regulatory use. They contain waste oil. Tank #OO5 is

FEDERAL EXPRESS CORP (Continued) **1000474245**

500 gals. and contains waste oil. Tanks #1, #2, #5 to #12 were closed in place. There is a local contact person and phone number, but the number doesn't work anymore.The local Federal Express address is: 538 West 34 Street, NY, 10001.The main business address is: 3620 Hacks Cross Road, Bldg. B, 2nd Floor, Memphis, TN, 38125. I sent a CSL to the main business address for Federal Express.6/2/08 - Raphael Ketani. I spoke to Tony Gulla (goo-la) (973) 565-2305 of FED EX. He said that he talked to a number of people and no one can recall the spill. He said that FED EX just vacated the site. I told him that DEC has no documentation that the spill was remediated. So a new investigation needs to take place. I told him that the tanks are registered to FED EX. He asked for a copy of the PBS registration. I sent it to him by FAX (973) 565-2363.8/15/08 - Raphael Ketani. In preparation for case transfer, I am annotating the database as regards what needs to be done at the site to resolve the alleged or known environmental contamination. A followup phone call and maybe a letter need to be sent to find out if an investigation is taking place. A subsurface investigation is needed for the site. 09/03/08-HRAHMED-Charla Reinganum of FedEx (847 215 4115) called, she is the Project Manager for this case. She asked for any documentation that DEC might have. DEC Ahmed would look for any documentation that DEC might have and call her back. Ahmed found another spill case 9007639, that might be a duplicate of this case.09/04/08-HRAHMED-Ahmed Called Charla to inform that no paper documatation was found. Ahmed suggested charla to find any kind of documentation that support that remedial action was taken place. Charla will call back in a week with feedback.9/15/09 - Raphael Ketani. Lou Wunderlick of the LIRR called today. He wanted to know whether FEDEX had or was going to initiate a remediation project at the site. He said that work was taking place at another part of the site and they are recovering a lot of oil. I told him that Mr. Ahmed is out of the office for a couple of weeks. He said that he will try and contact Ms. Reinganum to find out if FEDEX is going to do anything about the USTs under the site and the released oil.10/25/10-HRAHMED-Received email from Lew Wunderlich of MTA. As per the email, The Hudson Yards Development Corporation (HYDC) contracted with the NYC Housing & Preservation Department (NYC HPD) to demolish the FEDEX building. NYC HPD completed the demolition in June 2010, removed the concrete fill tank, all contaminated soil and backfilled.The site has not been turned over to the MTA as of yet; however, this is anticipated by the end of September 2010.HYDC or NYCHPD would contact DEC in the future regarding this matter.Contact for MTA:Lew Wunderlich Env Construction Manager MTACC - Env & Sustainability Services lwunderlich@mtacc.info 646-252-3152 (O) 347-237-6249 (C)2/8/11-Vought-See also open spill #1010766 at same location.10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end12/08/11-Hiralkumar Patel. after discussing with DEC Austin, case transferred from DEC Ketani to my name as working on other spill #: 1010766 at the subject site.alternate address: 528-556 W 34th Street, 527-551 W 33rd StreetPBS #: 2-600488.other spills: 8910499, 9000078, 9007639, 9011459, 9300804as per PBS # 2-600488, the site has/had following tanks:- one (1) 20,000 gal diesel UST closed-in-place in Aug. 1992- one (1) 5,000 gal #2 oil AST (in contact with soil), installed in Dec. 1993 and closed-in-place in Mar. 1996- four (4) 10,000 gal gasoline USTs closed-in-place- two (2) 10,000 gal diesel USTs closed-in-place- two (2) 10,000 gal #6 oil USTs closed-in-place in Aug. 1992- one (1) 500 gal waste oil AST (in

FEDERAL EXPRESS CORP (Continued) **1000474245**

contact with soil), installed in Jan. 1989 and closed-in-place in Jun. 2008- two (2) 275 gal waste oil ASTs (in contact with soil) were converted to non-regulated usespill #: 8910499 was reported on 02/02/1990 due to 20 gal #6 oil spilled on sidewalk due to overfill. case closed.spill #: 9000078 was reported on 04/04/1990 due to findings of contaminated soil during gasoline tanks abandonment. case is still open.spill #: 9007639 was reported on 12/12/1990 after finding low level of contamination in soil and groundwater samples. case closed. a notification for tanks abandonment on e-docs.spill #: 9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed.spill #: 9300804 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed.during review, found a groundwater investigation report on e-docs under the spill #: 9011459. but based on following infromation, the investigation report is related to the spill #: 9000078 (duplicate spill #: 9007639) and not to the spill #: 9011459:- the investigation report dated 07/25/1990 and the spill #: 9011459 was reported on 01/31/1991- the spill #: 9011459 was reported as leak suspected from the 10,000 gal UST, but the investigation report summarize work regarding monitoring well installation and groundwater sampling around the previously abandoned six USTs (possibly four gasoline and two diesel USTs) in building's basement- based on caller's remarks from spill #: 9007639, three monitoring wells were installedcurrrently, the site is being used by MTA as part of # 7 line extension project.Rose-May Toussaint-PortesEnvironmental ManagerSustainability and Environmental ManagementNYCTPh. (646) 252-3291email: rose-may.toussaint-portes@nyct.com reviewed available documents*-*1) 06/29/1989: International Technology Corporation (IT Corp.) sent letter to DEC including a PBS application. PBS application was submitted notifying abandonment of six USTs as it will not be used by FedEx. 2) Feb. 1990: Report on Tank Abandonment Activities:- abandoned six USTs- dispensing pumps for the tanks were disconnected- pipelines were backwashed and aboveground (suspended from the ceiling) lines were removed- soil was removed to expose the tanks- groundwater was encountered in the excavation at a depth of approx. 2 ft below the floor surface- petroleum odor was detected in the excavation- piping which ran below grade was cut, flush and filled with cement- tanks were filled with a cement grout- five soil samples were collected from staged soil pile for waste classification <-------- staged soil was classified as non-hazardous and was disposed of at a sanitary landfill <---- sample of the groundwater encountered in excavation was collected- found only one VOC - chloroform (13,000 ppb) in groundwater3) 04/06/1990: notification from FedEx regarding findings of soil contamination during tank abandonment.4) 09/10/1990: Groundwater Investigation:- three (3) 2 inch monitoring wells (FX-MW1, FX-MW2 and FX-MW3) were installed on the basement level of the fedex building- well FX-MW1 was installed in the northeast corner of the basement- groundwater was not encountered in the soil above the bedrock- strong petroleum odors detected at 1-1.5 ft below floor surface in FX-MW1- two soil samples were collected from boring FX-MW1- boring FX-MW1 was terminated at 9 ft below floor surface and a well was installed- well FX-MW2 was installed southwest of the well FX-MW1- strong petroleum odors detected at 1.5-1.75 ft below floor surface in FX-MW2- bedrock cores collected from approx. 10 ft below floor surface in FX-MW2 were fractured and appeared to be wet- boring FX-MW2 was terminated at 16

FEDERAL EXPRESS CORP (Continued) **1000474245**

ft below floor surface- well FX-MW3 was installed southeast of well FX-MW2- petroleum odors detected at 1.5-2 ft below floor surface in FX-MW3- bedrock cores from approx. 7 ft below floor surace in FX-MW3 were fractured and appeared to be wet- boring FX-MW3 was termianted at 15 ft below floor surface- bedrock was encountered at 4 ft below floor surface in FX-MW1 and FX-MW2 and at 3 ft below floor surface in FX-MW3- free product was not detected in any of the wells- based on site map, groundwater flows to the southwest direction- found only minor benzene in soil sample (max: 3.85 ppb)- found minor VOC contamination in water samples from downgradient wellsgroundwater analyticals:----------WS2A----------WS3 (FX-MW2)
(FX-MW3)

------145) 05/05/2008: DEC Ketani sent letter to FedEx requiring submission of an investigation report.6) 10/28/2008: response from FedEx to DEC's letter dated 05/05/08: David Jensen from FedEx sent letter to DEC Hasan. he mentioned that FedEx leased the property in Oct. 1988 and retained IT Corp. in 1989 to abandone the tanks. as per Mr. Jensen, the property was under renovation during the time of tank abandonment and FedEx was not operating at the site.*-*12/12/11-Hiralkumar Patel.1:23 PM:- spoke with Rose-May. she mentioned that all the buildings on site were demolished including the former fedex building. they have dug down to bedrock in most of the site, but not planning any excavation in former fedex building area and there will a building in future. she doesn't know the future use of the former fedex building area. she mentioned that the six tanks under the former fedex building basement were removed by HPD in 2010. she will send copy of tank removal report.2:40 PM:- received email from Rose-May. she mentioned that HPD handled removal of six USTs below the basement slab and a storage tank sitting on the basement slab under the entrace ramp area.12/13/11-Hiralkumar Patel.10:15 AM:- spoke with Mr. Mathew at NYC HPD. asked him to submit documents about all tanks removed by HPD from the subject site.10:18 AM:- sent email to Mr. Mathew requesting copies of all tank removal reports. email copied to Rose-May.Chacko MathewNYC HPDPh. (718) 636-3320 (718) 623-9911 (917) 578-4679 (C)Fax (718) 636-3325 email: mathewc@hpd.nyc.gov2:06 PM:- received email from Mr. Mathew. including a letter with sample results. he menitoned that as tanks were legally closed in past, another tank removal report was not prepared. in letter, Mr. Mathew mentioned that HPD contractor removed total of six 5,000 gal (or two 10,000 gal) tanks. HPD collected endpoint samples and found some SVOC contamiantion. so area was further excavated. found clean endpoint samples after two rounds of excavations. VOC compounds were not found during any sampling events. 550 cubic yards of soils were removed.2:25 PM:- spoke with Mr. Mathew. he mentioned that the tanks mentioned in the report were removed by the general contractor. after removing tanks, they noticed stained soil and called HPD. before HPD arrived to the site, tanks were gone. so Mr. Mathew doesn't know whether those were six 5,000 gal tanks or six 10,000 gal tanks (as recorded on PBS) or two 10,000 gal tanks. but these tanks were removed from the basement of the former FedEx building.as per reports from 1990, the former gasoline/diesel tanks were in the basement of the fedex building.as per Rose-May from MTA, all on-site buildings were demolished and most of the site has been excavated as part of redevelopment and they removed any tanks found during excavation.after discussing with DEC

Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Site Code:	416201
Acres:	.259
HW Code:	C231065
SWIS:	3101
Town:	New York City
Update By:	JAQUINN
Site Description:	Location: The site is located at 403 West 37th Street and 501-505 9th Avenue in the Borough of Manhattan, New York County.Site Features: Currently, the site is vacant. An entrance roadway to the Lincoln Tunnel beyond the retaining wall shared with the site, is to the west.Current Zoning: The site is currently inactive, and is zoned for commercial use. The surrounding neighborhood is also commercial, with some residential.Historical Uses: A former iron works was identified on the Sanborn maps spanning the years from 1911 to 1930 on the south-west portion of the Site. From approximately 1930 to 1968 the site was home to a plumbing business as well as a painter.Site Geology and Hydrogeology: Groundwater is about 10 to 15 feet below

HUDSON MEWS PROPERTY - MARTY FINE PARCEL (Continued) **S110487608**

the surface and, because it is diverted by the Lincoln Tunnel's retaining wall, generally flows to the northwest. Soils are mainly historic fill and sand.

Env Problem: Nature and Extent of Contamination: Soil contains elevated SVOCs and metals indicative of historic fill. The depth of the historic fill varies across the site from three to 15 feet deep. SVOCs exceeding Restricted Residential SCGs include benzo-a-anthracene, benzo-a-pyrene, benzo-b-fluoranthene, benzo-k-fluoranthene, chrysene, dibenzo(a,h)anthracene, and Indeno(1,2,3-cd)pyrene. Several were found at levels approaching 50 ppm. Metals exceeding Restricted Residential SCGs include lead (maximum detection 9000 ppm vs Track 2 Restricted Residential Use SCG of 400 ppm) and barium (maximum 615 ppm vs 400 ppm.)Groundwater sampling showed contamination in one well for chlorobenzene (29 ppb)and 1,4-dichlorobenzene (97 ppb.)

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F008
Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F009
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: P104
Waste name: SILVER CYANIDE

Waste code: P106
Waste name: SODIUM CYANIDE

Waste code: P121
Waste name: ZINC CYANIDE

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 01/10/1986
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F009
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Violation Status: No violations found

FINDS:

Registry ID: 110004335087

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S3 II TUNNEL CONSTRUCTORS JOINT VENTURE (Continued) **1012186676**

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Violation Status:	No violations found

DEC Memo:	Spill Case is part of a long term Brownfields project.March 2009: As part of the Site BCP Project, all the on-site soil was removed to bedrock during the fall of 2007. During this process, an unknown UST was discovered and reported as Spill No. 0706755. The UST was decommissioned and properly removed from the site during the soil removal activities and therefore this Spill is closed. J. durnin

DEC Memo:	need to contact either jeff bohlen at envirotrack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site.No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC.10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac.3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasolne UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additonally, 8- 550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June-August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's , SVOC's, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline.From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046.Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that VOC's were not present above TAGM 4046, however SVOC's were.In additon to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM

MEUSHER 34TH ST LLC (Continued) **S104275609**

4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil.As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. ~45 feet bgs.In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is ~200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST

BROWNFIELDS:

Program:	BCP
Site Code:	359020
Acres:	1.020
HW Code:	C231049
SWIS:	3101
Town:	New York City
Update By:	JAQUINN
Site Description:	Location: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City, New York County.Site Features: The property is identified as Block 706, Lot 1 in New York Citys tax records and consists of a 37,800 square-foot (1.020 acre) rectangular-shaped vacant parcel. The surrounding urban area consists primarily of retail and commercial business. The Amtrak Railroad tunnel (and easement) runs through the northwest corner of the site. Current Zoning/uses: This site was designated as C6-3 on the NYC Zoning Map 8b which is a general central commercial district. This site is also an e-designation requiring NYCDEP approval. In January 2005, this site was rezoned as part of the City-led Hudson Yards District to allow for commercial and residential uses. The NYC MTA constructed a permanent entrance in the middle of this BCP site for the 34th Street Station of the No.7 Subway Extension. Historic Use: From 1890 to 1962, the site was used for commercial, residential, and manufacturing including a wagon house, black smith shop, electrical supplies and a warehouse. In 1973, the most recent business that covered the entire site was a 2-story commercial communications facility including numerous petroleum underground storage tanks (USTs). Six petroleum spills have occurred at this site between 1990 and 2007. Site Geology and Hydrogeology: The site is approximately 25 feet above mean sea level. Groundwater is 17 feet to 32 feet below ground surface. Surface water and groundwater flow is towards the Hudson River which is approximately 1,500 feet to the west of the site. The subsurface soil profile consists of urban fill overlying sand and silt deposits. Bedrock is located between 15 and 25 feet below grade. Between 2007 and 2012, all soil above bedrock was removed and replaced with clean fill. 12/19/12-DEC signed the Certificate of Completion for this site. Not reported
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was low level petroleum (diesel/gasoline) in soil and in shallow groundwater.
Health Problem:	No site-related contaminants of concern were identified beyond the boundaries of the site, therefore no exposure pathways exist.

BROWNFIELDS:

Program:	BCP
Site Code:	477443
Acres:	.510
HW Code:	C231082
SWIS:	3101
Town:	New York City
Update By:	JAMORAS
Site Description:	Location: The BCP site is located at 505 - 507 West 28th Street in New York City, New York County and has an area of approximately 0.51 acres. It is between 10th and 11th Avenues and is bounded to the north by West 28th Street and the south by West 27th Street. Commercial structures are adjacent to the east and west boundaries. Site Features: The site is currently vacant of operating businesses. Until recently, it included a large trailer body, sheds, and storage areas. Presently, there are no structures. The majority of the site surface is covered by a non-uniform, uneven concrete surface with the remainder having patches of asphalt paving and open soil cover with no vegetation.Current Zoning and Land Use: The site is zoned commercial (C6-3) and is located in a commercial and residential area of the West Chelsea section of the Borough of Manhattan. Past Use of the Site: The site has been occupied by several residential structures, laundry cleaning, metal works, manufacturing, motor freight storage, automobile repair and a scrap yard.Site Geology and Hydrogeology: Subsurface material present below the site includes historic fill from prior developments that may have been used to stabilize soil or to elevate the existing ground. The fill includes concrete, brick, cinders, and other construction debris mixed, silt, sand and gravel and is generally present from 1-10 feet below ground. Below the fill the shallow subsurface soil at the site consists of sands and silts, glacial till intermixed with lean clay. Depth to bedrock ranges from 15 to 25 feet below grade.The surface geology of Manhattan generally includes very thin layers of unconsolidated glacial deposits underlain by bedrock. Groundwater at the site is encountered at approximately 8 to 11 feet below ground surface. Regional groundwater flow direction is westerly toward the Hudson River which is approximately 1,500 feet west of the site.
Env Problem:	Based on the investigations conducted to date the following is a summary of the site conditions:Soil:Recent investigations found no evidence of significant VOC contamination. Trimethylbenzenes and xylenes were present in one of the 21 soil samples at concentrations

WEST 28TH STREET (Continued) **S112818548**

above their unrestricted use SCOs, but well below residential use SCOs. PAHs were observed in about half of the samples at concentrations indicative of historic fill. Metals are also present in soil at concentrations typical of historic fill and urban background. However, mercury concentrations ranged from non-detect to 69.6 parts per million (ppm). The unrestricted use SCO for mercury is 0.18 ppm; restricted residential is 0.81 ppm. Groundwater:Cis-1,2-dichloroethene (DCE) was found in groundwater samples from two wells near the north-west corner of the site at concentrations up to 260 ppb. DCE has been documented in up-gradient groundwater and is not due to an on-site source.Soil Vapor:The presence of chlorinated VOCs in soil vapor and groundwater presents the possibility of vapor intrusion to future on-site buildings. The maximum concentrations of tetrachloroethene (PCE) and trichloroethene (TCE) were detected along the west boundary at the respective concentrations of 308 micrograms per cubic meter (ug/m3) and 828 ug/m3.Four USTs were reported to be present on the site. Two USTs were exhumed in August 2013 and disposed of off-site. The presence of the other two tanks has yet to be confirmed.

Health Problem: The site is fenced and covered by concrete, people will not come into contact with site related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site related contaminants due to soil vapor intrusion does not represent a concern for the site in its current condition.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	09/25/95: PIN-4169 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES.10/6/03 See also PIN 4169, spill #s 8605682, 8606807, 9410208, 9410209.1/8/04 Reassigned from Tomasello to K Foley.06/20/06: Re-assigned from Foley to Yau. (Yau)06/22/06: Prepared and sent an old spill letter to property owner through certified mail. A site investigation report (SIR) is expected to be due on 07/22/06. (Yau)06/27/06: Owner called to inquire about the spill. Stated that he brought the property

M&L WESTSIDE AUTO REPAIR (Continued) **S102671142**

recently (around 2002) and had no idea where is the spill was. Told him that DEC will look into it and call him back with the exact location of the spill. (Yau)08/02/06: Owner called to request an update to the site. Told him that a review is underway. Found that DEC had a PIN job for this site. Unsure whether the cleanup is complete. If the cleanup is incomplete, the owner might have to re-do the cleanup. Will call owner back as soon as review is completed. (Yau)10/16/06 Reassign from Yau to Chanda (Chanda)12/12/06-Vought-Spill reassigned from DEC Chanda to DEC Vought.03/20/07-Vought-File review by Vought:See also open spill #0603967 at same location. Videotape-unknown date (circa 19884)-tape showing well being bailed with free product thickness of 1".Registered CSL Letter sent by DEC Yau to Tenth Gas Inc (address as per Property Shark).FOIL request from Brinkerhoff-8/18/06.Vought called AG Bechard for status of PIN case. PIN case assigned to AG John Nyhoff. Vought called Nyhoff and left message to return call.3/20/07-Vought-See also closed spill numbers: 8605682, 9410208, 9410209 and 8302630(Open pin #). Vought spoke to DEC Krimgold who is preparing Consent Order for PBS violations and requested to add remedial requirements. Conference call with DEC Urda, AG Nyoff and AG Riggi showed that approximately 354K still owed to AG for past cleanup costs. Due to same ownership (Citigas) prior costs may be included in Consent Order. Vought submitted CAP for below requirements to DEC Urda. Riggi and Nyhoff also approved submission of Final ISR and closure of spill as any new funds spent by the DEC need a new PIN number since settlement already reached with old responsible party. Vought called Snyder, summarized consent order and left message to return call. 03/21/07-Vought-Left message for AG Nyhoff to call Vought with status of PIN. Vought and DEC Urda spoke with AG Nyoff and as per Nyoff default judgement was made against former owner of property resulting in lean of approximately 354K. 3/26/07-Vought-Received ISR from Nyoff. Vought left message for Nyoff to return call with which party was found responsible (Alex Goffman or Westside Tripple Auto Repair).4/23/07-Final ISR submitted to DEC Austin for review and spill closed by Vought.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:
Waste code: D008
Waste name: LEAD

Violation Status: No violations found

FINDS:

Registry ID: 110058880778

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Violation Status:	No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"This spill case was reassigned from DEC (Sigona) to Rommel on01/07/2004.On December 22, 2000, DEC (Sigona) observed the

GAS STATION (Continued) **S106702998**

excavation and removal of 4 x 550 gallon USTs. The contents of 3 x 550 gallon USTs was found to contain a mixture of gasoline and water. 1 x 550 gallon UST contained water only. The excavation was being performed by Fenely & Nicol for Public Parking, Inc. The project was also supervised by DEC contractor EAR under PIN project for New York Auto Service which was impacting the Jacob Javits Center. Does not appear to be related to New York Auto Service spill or have an impact on the Javits Center. 2/24/05-Vought-Spoke with Phillip Rizzuto (973-470-25510) who is agent for property owners. Rizutto asked for status of Tank Closure Report review and Vought required that a copy be sent to DEC for review. Spill transferred from Rommel to Vought.3/16/05-Vought-Reviewed Tank Closure Report(Fenley & Nicol - Angel Ramirez) dated 1/18/01 and received on 3/2/05. Project was prepared for:Mr. Phil RizzutoClassic Sanitation Corporation99 Route 3 Clifton, NJ 07014Removal and closure of one (275-gallon) fuel oil AST and four (550-gallon) gasoline USTs. Subject site is used as a public parking garage. Three (550-gallon) gasoline USTs were removed from the north-east front of the interior of the building(Tank Area 1) and one (550-gallon) gasoline UST was removed from southwest of Tank Area 1. Depth to groundwater at site estimated to be 20 feet below grade and flow to the west. "Inspector Anthony Sigona of the NYSDEC was present at the time of the excavcation to inspect the tanks and excavated area". "The bottom and sidewalls of the excavation consisted of Manhattan Schist and bedrock". "...it was discovered that soil above the tanks exhibited evidence of gasoline contamination". All product lines were removed and disposed. Soil were analyzed for 8260/8270 TCLP as per Sigona. Soil analyticals only showed on minor exceedence of napthalene at 11ug/L (Guidance value is 10ug/L). No PID readings were detected. Report recommends No Further Action. Spill closed by Vought due to one minor TAGM 4046 Soil Cleanup Objective exceedence.

Remarks: DURING TANK REMOVAL SOIL CONTAMINATION HAS BEEN DISCOVERED.CONTAMINATION IS ON TOP OF TANKS. AREA TO BE EXCAVATED AND FURTHER SAMPLING/TESTING TO BE DONE. NO CALL BACK REQUESTED.CALLER HAS BEEN IN CONTACT WITH REGION 2 OFFICE.

DEC Memo: 12/14/05: This spill transferred from J.Kolleeny to S.Kraszewski.9/22/06: Spill transferred from Kraszewski to Kann.1/19/10: J.Kann - revised work plan received 11/17/09. WP approved 1/19/10.9/23/10: J.kann - Quarterly Report recieved 9/01/10.5/11/12: J.Kann - quarterly report recieved on 5/9/12.9/6/12: J.kann - quarterly report received on 8/21/12.1/16/13 : J.kann - 10/24/12 QR rcvd on 1/16/13.5/21/14: J.Kann - email sent to NYCHA today stating:The Department understands that a recovery system is operating, that monthly VEFR is being performed and that quarterly monitoring is currently being done at the following five sites: Amsterdam HousesElliott HousesManhattanville HousesMelrose HousesBaruch Houses Since wells at these five sites have consistently (based on quarterly reports received over the past year) had no product, a sheen or <0.08 inch of product in their wells, the Department would like NYCHA to temporarily cease operation of the systems and VEFR at these sites. For the next 4 months, the wells must be monitored to determine if any significant recharge of product occurs. Accurate readings of product thickness must be made, which may require using the gauging method used at South Jamaica Houses on May 19, 2014. In addition, during this 4 month time period, no absorbent socks should be placed in the wells. Data from this monitoring, along with recommendations, must be included in the 2014 3rd quarter monitoring report for these sites, which is due to the Department by October 1, 2014. In the event that a significant recharge is noticed in any of the wells during these 4 months, the Department must be contacted immediately (within 72 hours of gauging).

DEC Memo:	Case started as a TTF on March 13, 2012On May 30, 2012 Sangesland spoke to property manager (Pedro Martin 212-868-3888). He said there is a 5,000 gal #6 tank that has some contamination issues (he didn't know details). Owner hired Riteway Tank to deal with the problems. Sangesland sent an e-mail to both David at Riteway and Veronica Zhune to ask them to work together on this site. Unknown if tank is being repaired or closed/removed?5/29/2012 Sangesland got an e-mail from David Chan at Riteway. He said they just got a signed proposal back from the owner. They will move forward with additional sampling and work in the next few weeks. 7/6/2012 Sangesland received an e-mail from Riteway:Sampling was performed this past Monday we core drilled through the bottom of the tank to retrieve samples. The samples

APARTNMENT BUILDING TTF (Continued) **S111738872**

returned dirty (verified onsite via PID). Ground water is at the tank, as soon as we core drilled through the bottom, water rushed in. We are currently writing an action plan for Veronica. We propose to IMMEDIATELY cut/install perforations on the interior of the tank of various sizes and at various heights to minimize the spreading of the contamination and to aid in the migration of loose product back into the tank. We are working on a delineation proposal for the client. Due to the location of the tank (buried in the basement), To perform an accurate delineation may be extremely difficult, if not near impossible. Access to the area is limited, especially when trying to get "geo probe" equipment onsite.7/27/2012 - Sangesland sent this message to Riteway today after a site visit:Earlier today I inspected the basement of 245 West 29th St and discussed the project with Joe Ostrowski.Based on the inspection and discussion, the NYSDEC is requiring two tasks to be completed before the tank can be closed in place.1) The NYSDEC requests that several additional holes be drilled in the sidewall of the buried tank to allow groundwater (and petroleum) to freely flow back into the tank.This liquid should be pumped out weekly for a period of 4-6 weeks. An inspection should be made of this liquid to determine what percentage is petroleum. 2) Two additional soil borings need to be drilled through the basement floor at a location approx 8 feet North of the buried tank and another 8 feet South of the buried tank down below the Groundwater level in the area. A soil sample should be taken at the Groundwater interface level and tested for VOC's and SVOC's per Methods 8260 & 8270.Based on the results of these two tasks, the NYSDEC may require additional work, or may close the case out and allow the existing tank to be closed in place.Please provide a short writeup of the results of this investigation.Thanks,
SS**********
********** 10/26/2012 Sangesland spoke to David Chan at Riteway. He tried to take soil borings around the tank as requested. He hit refusal at about 6ft. He got minor "hits" on some VOCs. Slots were cut in the buried tank and they have pumped out several hundred gallons of water from the tank about 6 times over the last 1-2 months. Visual inspection of this water shows no oil. Riteway will return one more time to take a water sample and do a "sniff" test. If the sample smells at all, a sample will be sent to the lab.
**********11/27/2012 Sangesland spoke to David Chan at Riteway. He said they put slots in the existing buried tank and have pumped out groundwater from the tank several times over the last month. The water appears clean and there is no oil mixed in. Based on this information, DEC has approved closing the spill case and allowing the property owners to go ahead with closing this tank and constructing a new tank.

Remarks: test failure, no loss of product, tank has been pumped

DEC Memo:	Church thought they were using more oil than usual. Hired ProTest to pressure test the tank (outside/buried 1080 gal)(Non-PBS site). Tank could not hold any pressure (gross failure).ProTest is working with the church to set up temp tanks and will begin the process of opening the old tank to see how much of a problem there is.Tank has been pumped and cleaned. Soilborings will be coducted shortly.5/5/08- DECP iper reviewed closure report. As per report, tank was cut open and inspected. no holes were identified in tank. Geporobe invesigation revealed no vocs and no elevated SVOC.s Tan kwill be abandonded and new tan kwill be installed in basemnt. CLosed. see e-docs if warranted.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"Formerly assigned to Tomasello4/10/2002 - Someone from Penske Truck Leasing called looking for a closure letter on this site. Sangesland spoke to him.DeMeo was on duty for the day, therefore it was assigned to DeMeo. Sangesland suggested the rep from Penske should send a copy of the original closure report to DeMeo along with a request for closure.8/29/03 TJDWork plan approved.12/9/03 TJDTransferred Demeo greater than greater than greater than Rommel.1/7/04Reviewed 12/31/03 report from GES proposing 5 additional delineation wells. Spoke to Tony Dellaria, GES, verbally approved additional well locations with the addition of one well downgradient of MW4. Letter to Penske, Route 10, Green Hills, PO Box 7635 Redding PA 19603-7635 Rommel3/8/04Spoke to Debra Kaplan,GES. Wells are scheduled for 3/22/04. Rommel. greater than greater than greater than 05/13/04 10:46AM greater than greater than greater than Ms. Rommel,Attached please find the Subsurface Investigation Report for theabove-referenced site. The hard copy of the report was sent to you today. If you have any questions, please feel free to call Anthony Dellaria at (631) 420-5095. Thank you. greater than greater than greater than Jennifer Rommel 05/13/04 03:43PM greater than greater than greater than DEC approves the work proposed in the Subsurface Investigation Report dated 5/13/04. At the end of the three months of HIT events, please submit an evaluation of the need for a permanent recovery system. 5/17/04Received summary, 4 mw installed. Total 8 wells.Product in MW1 and MW4 - quarterly bailing recommended.Rommel10/14/04 Reassigned from Rommel to Sun.10/31/04 File Update by Sun: - On 11/22/04, Sun sent a letter to Richard Saut of Penske requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 12/10/04 for signing the Stipulation Agreement. The Stipulation Agreement was signed by Penske on 12/10/04 and implemented by the Department on 12/27/04.-On 12/21/04, Sun sent a letter to Richard Saut of Penske informing him that the Department has approved the Remedial Action Plan (RAP)/HypeAir Work Plan prepared by his Consultant, Groundwater & Environmental Service (GES) for the subject site; specifically two in-situ chemical oxidation events at the site via "HypeAir" air and Hydrogen peroxide injection system.The Department requires that due to the proximity of existing utility corridors, temperature, pH, pressure, oxidation-redox potential (ORP), conductivity and dissolved oxygen (DO) shall be monitored on all the monitoring wells. Any potential accumulation of vapors during the injection activities shall be avoided. (Sun)02/21/06: Sun received 4th Quarter 2005 Site Status Update Report. Review of this report is pending. (Sun)02/27/06: The Department approves the GES's request for two (2) additional injection events to be completed in April and May 2006; specifically two in-situ chemical oxidation (Chem-Ox) events at the above referenced site utilizing a hydrogen peroxide, ozone, and persulfate injection system (HypeAir). (Sun)07/23/07-Sun: On 07/23/07 the Department approves the GES's request for performing enhanced product recovery through the injection of surfactant into MW-5. The Department also approves a series of high intensity targeted (HIT) remediation events using high vacuum extraction at monitoring wells MW-3, MW-4, and MW-5 to reduce residual hydrocarbons impacts on-site for 8-hour events for approximately four (4) months. (Sun) 08/09/07-Sun: On 7/18/07 Joe Sun of DEC was informed by Kevin Heaphy of Parson Brinckerfoff Amercica (PB) that the MTA will be using this

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

site (Lot 60) and the adjacent Fed Ex lot for a mocking pit to build the initial shaft for Tunnel boring machine to be used for the No. 7 subway extension project. In general, the site is slated to be used as a staging area for the project. A meeting was held on 8/9/07 to discuss project among all the key parties, including DEC, MTA, NYCT, Developer, Parson Brinckerfoff (PB), Penske, property owner (Michael Silvermintz)and Penske's consultant, GES. The meeting concluded that PB will first review the GES's investigation and remediation reports and then will discuss with GES and MTA project team to assess if other viable remedial action plans (RAP) can be implemented to expedite the cleanup process. Any new proposed RAP will be submitted to DEC for review and approval. (Sun)08/23/07-Sun: Sun received 2nd Quarter 2007 Site Status Update Report. Based on laboratory analytical results, a 64% reduction of disslved benzene, toluene, ethylbenze, and total xylenes (BTEX) concentrations has been observed on and off-site since initiating hydrogen peroxide and ozone injections at the site. (sun) 08/30/07: Sun received the following email from Heather Cloud of GES "Joe, Penske and GES submitted all historical documents to Kevin Heaphy for his review. He reviewed the documents and we had a follow up call with him and the MTA this past Monday (8/27). During the call, Kevin brought up a suggestion of relocating the wells off-site or installing remote access points in the sidewalk. As discussed at the NYSDEC meeting, we told Kevin that that locating the wells offsite was not an option, and installing remote access points in the sidewalk could not be sufficient for our liquid level measurements and groundwater sampling activities. Additionally, there is a high pressure gas main in the sidewalk, so we would not be able to drill safely in this area. They did not have any additional suggestions orideas beyond relocating the wells. (Sun) Since they did not have any additional suggestions, it was decided that GES is going to proceed with our approved work plan. We are actually scheduled to conduct our surfactant injection on September 5 and the high vacuum extraction events on the 6th and 7th. Once we get the data back from the first event, we will evaluate the effectiveness and moveforward from there." (Sun) 11/19/07-Sun: Sun received the following email from Heather Cloud of GES, "Hi Joe, We conducted the Surfactant Injection at MW-5 on September 5, 2007 followed by a high vacuum extraction event on September 7, 2007 to remove and recover residual product at MW-5. Since conducting the injection event, we have not seen any product at MW-5. Groundwater data at MW-5 prior to the injection (July 3, 2007) was 489 ppb BTEX (144 ppb benzene). Following the injection (October 12, 2007), groundwater data at MW-5 was 87 ppb BTEX (66 ppb benzene).Since the injection event, we have conducted 2 high vacuum extraction events on MW-3 and MW-4. These events were completed in September and October. Between the 2 high vacuum extraction events, we have recovered 5 pounds of mass and 1,300 gallons of water. We were at the site today and are at the site tomorrow to complete our 3rd high vacuum extraction event on MW-3, MW-4, and MW-5. The 3rd QTR Site Status Update Report is currently being reviewed by the client, so you should have it shortly." (Sun) 02/15/08-Sun: DEc received the following email from Andrew Cullen of Penske,"All, After much review, we have come to the conclusion that we will make an attemp to meet the requirements of the contractor and complete the necessary remediation work required by the NY DEC on two Saturday's per month. However, I need all the parties to understand that our agreement specifically states we need 2 to 3 days per month to perform the

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

necessary remediation. Limiting us to only two days per month may cause the remedial efforts to go past our original estimates. Moreover, MTA also agreed to reimburse Penske for "any premium costs assoicated with work that must be scheduled outside of normal working hours (i.e. Monday to Friday 8:00am to 5:00pm)". If at any time we find the contractor is not cooperating, our remedial efforts will require more than 2 days per month, or any invoices forpremium costs or damage by the contractor are not paid in accordance with our agreement, we will alert the appropriate parties. I do not anticpate this happening, but given the events that have lead us to this point, I feel compelled to remind everyone of the terms andconditions of our agreement." (Sun)03/04/08-Sun: Sun sent the following email to all the parties invloved,"Penske may have to conduct remedial efforts more often than 2-3 days a month if project demands. The required frequency and nature of remedial efforts will depend on results of on-going remediation to be received in future. If current extraction method does not produce acceptable (to the NYSDEC) results, DEC reserves its rights to require Penske to undertake more aggressive remedial efforts. NYSDEC is not a party to any of the agreements between Penske and MTA, and reserves all rights under the existing Laws and Regulations." (Sun) 03/25/08-Sun: Sun received the 4th Quarter 2007 Site Status Update Report. (Sun)07/03/08-Sun: Sun received from Heather Cloud of GES on the current site status:We are currently conducting quarterly groundwater monitoring and sampling. Our next groundwater sampling event is scheduled for this month.- Based upon the recent groundwater data, we are not seeing a reduction in the BTEX concentrations. See attached groundwater analytical tables. Therefore, the high vacuum extraction events don’t appear to be overly effective at this time. We are currently evaluating alternate options to address the dissolved phase impacts. We are looking at potentially injecting sodium percarbonate or other potential oxidizers. The total BTEX concentrations are primarily comprised of benzene. We have seen great success in reducing benzene levels with sodium percarbonate at other sites. Also, this type of technology is not intrusive at all.With the MTA project going on, we are limited with the technologies that we can go with. - The 1st QTR QMR is currently being reviewed by Penske. You should have this report within the next week or so. (Sun) 8/4/08 - Carlson: Case reassigned to Carlson. Reviewed 1st Quarterly 2008 report. Wells sampled on 1/3/08. Maximum BTEX concentration 5,425 ppb (MW3), maximum MTBE concentration 64 ppb (MW3). Report notes that VEFR is not effective. Sent letter requiring submission of a new RAP and additional delineation by 9/12/08. 9/11/08 - Carlson: Approved extension to 11/14/08 for submission of a new RAP. Scheduled site visit for 9/25/08 to discuss potential locations for an additional delineation well.9/30/08 - Carlson: Performed site visit on 9/25/08. Met with Heather Cloud of GES, Richard Saut of Penske, Charles Stives of Liro Engineering, as well as representatives from MTA and NYCT. Five monitoring/remediation wells have be destroyed during recent activities. A location was identified for the installation of an additional monitoring well. RAP due 11/14/08.10/6/08 - Carlson: Reviewed update report dated 9/23/08. Wells sampled on 4/26/08. Maximum BTEX concentration 3,537 ppb (MW3). They are pilot testing sodium percarbonate.3/20/09 - Carlson: Reviewed Site Status Report dated 2/25/09. Delineation well discussed during 9/30/08 site visit was not installed. Destroyed wells were not replaced. Sodium percarbonate solution was injected into MW-1, MW-2, and MW-4 on

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

9/20/08. Wells were sampled on 10/25/08. Decreased concentrations were found in MW1 and MW2, but BTEX increased in MW4. Spoke to Heather Cloud at GES. She will submit workplan.Received Remediation and Delineation Work Plan dated 2/10/09. 4/16/09 - Carlson: Meeting held with Penske. Mark requested the addition of another boring.4/23/09 - Carlson: Meeting held MTA. Access to most of the site not possible for 1 year because the TBM is in operation. Access to the sidewalk can be arranged. MTA will submit a construction timeline.5/4/09 - Carlson: Received phone message from Sal McCabe - construction timeline will be submitted.5/7/09: Received update report. Received email from Christopher Ward - mw5 has been located and will be abandoned (under future muck bin).5/15/09 - Carlson: Received email. MW5 will be abandoned tomorrow.7/1/09 - Carlson: Received cc of penske access request to sample wells on 7/257/2/09 - Carlson: Paul matthews of mta responded - requested sampling be delayed for one month. 7/2/09 - Carlson: I replied saying one month delay is ok. Construction timeline was not submitted as requested at the last meeting. 7/6/09 - Carlson: Received cc of penske access request to sample wells on 8/22/09.9/18/09 - Carlson: Left voice message for Chris Ward to followup on case status.11/5/09 - Carlson: Received cc of letter requesting access from MTA to sampling wells. Left voice message for Chris Ward to see if they were given access - need to get phone number for MTA contact Paul Matthews.11/10/09 - Carlson: GES received access from MTA to sample wells.2/12/2010: Received cc of letter from GES to MTA - access requested to sample wells on 2/20/2010. Spoke to Chris Ward. Update report will be submitted.5/26/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010.6/25/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010. Left message for MTA Philip McGrade to followup on status of construction.6/29/10 - Carlson: Spoke to Paul Matthews at MTA (212-616-4462). TBM is still in operation 5 days/wk 24hr/day. No construction on weekends when GES samples wells. Remedial work on Saturdays would be very difficult due to access on site. Project completion scheduled for 2013.7/27/2010 - Carlson: Meeting held with Penske on 7/27. NYSDEC to organize meeting with MTA to discuss access/remedial plan.8/24/2010 - Carlson: Meeting held with MTA and Penske on 8/24. Penske to reinstall wells on a weekend. Wells to be covered with roadplates. Contractor will remove roadplates prior to remedial activitiy at the site. Penske/MTA/NYSDEC to perform site visit to confirm locations of new wells.9/22/2010 - Carlson: Site meeting held to discuss well installation locations and procedures. GES will prepared updated site plan.3-11-11. - Breen: Consultant, GES, sent in Site Status Update Report on CD today. Heather Cloud is Operations Manager. Sarken Dressler is the Staff Hydrogeologist. Report for 9610811 is on the same CD. 6/6/12 - Carlson: Reviewed Site Status Update Report dated 4/30/12. Wells sampled on 2/25/12. Wells destroyed in 2008 were not replaced. Max BTEX only 588 in MW-4. Max MTBE only 3 ppb in MW-8. Called MTA Philip McGrade at number in file. Voice mail indicated this is not his number anymore. Left message at this number for help getting status of MTA 7-line extension project at this site. 6/8/12 - Carlson: Left message for Phil McGrade (646 252 8315) to follow up on 7 train extension project.7/11/12 - Carlson: See new spill 1201147 at site - MTA found a diesel/#2 fuel oil in tank shaft location. Tank was removed. 9/14/12 - Carlson: Reviewed 2nd quarter 2012 update report. Existing wells show low concentrations. Destroyed wells were never replaced. Continue to

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

followup on status of 1201147. Need to contact MTA to get status of MTA project. 11/19/12 - Carlson: Spoke to Paul Matthews at MTA - he isn't involved in project anymore. New contact is Steve Asquith 646-252-8326. Left message for Steve Asquith. 11/26/12 - Carlson: Spoke to Steve Asquith (917-217-4765). He is arranging access with Penske/GES. Send him my email address, he will cc me on correspondence with penske/GES; 11/27/12 - Carlson: Emailed Steve Asquith (sasquith@mtacc.info) - please cc me on correspondence with Penske/GES as discussed during yesterdays phone conversation.12/11/12 - Carlson: Site meeting with Healther Cloud (GES) and Dave Mariani (Skanska). Well locations were marked out. Wells will be installed in january.9/17/2013 - Carlson: Received FOIL request from Michael Silvermintz (michaelsilvermintz@gmail.com, 646-831-1443). Forwarded to DEC Silva for processing.9/23/13 - Carlson: Received phone call from Steve Cambruschini - new owner will purchase this property and redevelop. They intend to sign a new stip. They plan on excavating impacted soil. He will email me for a FOIL request of file. Need to get contact info of new owner to send new stip.10/10/13: received phone call from Christopher McMahon requesting FOIL review. Sent email to email Gloria Silva for FOIL review. Also, I requested he send me contact info for new owner so I can send new stipulation agreement.10/28/2013 - Carlson: Reviewed 3rd Quarter 2013 Site Status Report. Monitoring wells gauged and sampled on 9/28/2013. Sheen (0.04ft) in MW-3R. Maximum BTEX concentration 1,410 ppb (MW-3R). 10/29/2013 - Carlson: Issued new Stipulation Agreement to 293 Tenth Ave. Corp, c/o Michael Silvermintz. Signed Stip due by 11/12/2013. RAWP due 30 days after effective date of the Stipulation.2/21/14 - Carlson: Reviewed RAWP dated January 2014. Site to be excavation, dewatered, and redeveloped. Site will be excavated in former tank area to 11 ft below grade (4 ft below gw table). Excavation will be dewatered in order to extend below groundwater table. Hotspots encountered will be overexcavated, to the extent feasible. Two downgradient wells will be reinstalled in southern portion of property that will not contain a basement. Endpoint samples will be collected as per DER-10. Issued approval letter.3/31/14 - Raphael Ketani. As of today, I am taking over case management from Ms. Carlson. The contact person is Chris McMahon at Langan Engineering, River Drive Center 1, 619 River Drive, Elmwood, NJ, 07407, (201) 794-6900. The proposed development of the site is as a 7 story combined commercial and office building.4/9/14 - Raphael Ketani. I made an unannounced site visit. The site contained triple stacked office trailers on the West 26th Street side of the site. Standing from the outside, I could see that there was a lot of activity and equipment on site from the MTA construction next door for the 7 Train tunnel construction. So, I didn't enter the bounds of the site. However, I did take pictures of the site from the outside. I could see that workers were still finishing the brick work outside the MTA building that had been constructed above the tunnel shaft. 4/10/14 - Raphael Ketani. I tried to contact Steve Asquith (917) 217-4765 of the MTA to let him know that I was the new DEC project manager, but I could only leave a message.Later, I contacted Mr. McMahon (201) 794-6900. He told me that the MTA plans to be done with their work and off of the site by the second week in May 2014. Mr. McMahon added that the new owner intended to first demolish the former Fed Ex building that is adjacent to the east of the site during July 2014. Excavation of the entire site will take place to 14 feet below grade. Endpoint samples will be taken as per the plan included in the

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

approved RAWP. I told Mr. McMahon that Langan should follow the soil contamination as much as possible before taking endpoint samples. This way, the samples will be low or non-detect with regard to any analytes and the whole process will go smoothly. Mr. McMahon stated that groundwater was about 8 or 9 feet below grade and asked about sampling the groundwater after the MTA leaves. I told him that this wont be necessary as Langan will dig out all of the contamination below the water table. Mr. McMahon stated that the beginning of redevelopment is planned for either September or October of 2014. I asked Mr. McMahon to send me the endpoint sampling map with a cover letter describing what will take place regarding the endpoint sampling and sample processing. I added that, later, the DEC will need the letter of acceptance from the facility that will receive the soil. Also, I stated, the DEC will need a letter from the facility that will accept the contaminated water that is collected. Mr. McMahon stated that once they know where everything will go, then he will send these letters. After this point, I said, the DEC will need a schedule describing the excavating, endpoint sampling, sample processing, foundation construction and so forth. Mr. McMahon said that he will send this to the DEC. At the end of our conversation, Mr. McMahon asked about the request by the owner for a change in the Stipulation Agreement whereby Penske is let off of the hook. I told Mr. McMahon that this is something Lou Oliva, Region 2 Chief Counsel, will have to work out with Penske. With that, the conversation ended.Mr. Asquith (917) 217-4765 called me back. He said that Skanska, the construction company building the ventilation shaft, is presently cleaning up the site. They told him that they expect to be off of the site by the end of April 2014.5/2/14 - Raphael Ketani. I reviewed the First Quarter 2014 Site Status Update Report dated 4/29/14 that was submitted by GES. Groundwater sampling took place on 3/15/14 for wells MW-1, MW-2, MW-3R, MW-4, MW-6 to MW-8 and MW-10. MW-9R was not sampled as MTA equipment was over it. There was 0.02' of product in MW-3R. All of the analyses were for just BTEX. MW-1 had results from non-detect to just above the TOGS 1.1.1 standards. MW-3R had the results 660 ppb total xylenes, 913 ppb ethylbenzene, 95.5 ppb benzene, 13.1 ppb toluene. MW-4 results were 237 ppb ethylbenzene, 215 ppb benzene, 18.4 total xylenes, 10.7 ppb toluene. MW-10 had 2 non-detects and 2 very low hits. For MW-2, MW-6 to MW-8, the results were either entirely non-detect or mostly non-detect with one very low hit. MTBE varied in concentration from mostly non-detect to 8.98 ppb. Quarterly sampling is planned for June 2014.5/19/14 - Raphael Ketani. Today I received a copy of the signed Stipulation Agreement from 293 Tenth Avenue Corporation. It was signed by Michael Silvermintz, President of the corporation, on 5/2/14. I hand delivered the Stip to the Region 2 legal division.According to the schedule in the approved Remedial Action Work Plan dated 1/24/14, the remedial activities are anticipated to take 4 months beginning in October 2014.Later, I was informed that the DEC needed the original signature page in order to make the executed Stipulation Agreement. I contacted Mr. McMahon (201) 794-6900 and asked him to have his client send the original signature page with Mr. Silvermintz' original signature as soon as possible by regular mail. Mr. McMahon agreed to do this.6/13/14 - Raphael Ketani. The Stipulation Agreement with the original signature of the president of 293 Tenth Avenue Corporation, Mr. Silvermintz, was given to me today.6/17/14 - Raphael Ketani. The Stipulation Agreement was submitted to the Region 2 legal division for processing.6/23/14 - Raphael Ketani. The Stipulation Agreement

PENSKE TRUCK LEASING CO L P (Continued) **1000382741**

was signed by Venetia Lannon, Region 2 Director, and the original was sent to Mr. Silvermintz.8/1/14 - Raphael Ketani. I reviewed the second quarter 2014 groundwater monitoring report for the site. The document was titled Site Status Update Report and dated 7/31/14. On 6/21/14, groundwater sampling took place at 6 onsite wells. Groundwater elevations were from 6.04' bgs at MW-8 to 6.71' bgs at MW-6. Flow was to the south. The wells sampled were MW-1, 2, 4, 6, 7 and 8. Wells MW-3R, 9R and 10 were inaccessible at the time. Well MW-5 had been abandoned some time ago. The VOC results for wells MW-1, 2, 6 and 7 were entirely non-detect for BTEX and MTBE. The sample from MW-8 had hits just above and just below the TOGS 1.1.1 standards. The results for MW-4 had 260 ppb of benzene and 424 ppb of ethylbenzene. In addition, a sample was taken from IW-2R on 3/21/13 and had 3530 ppb of benzene. Why this well was not sampled again was not explained. The contamination in the groundwater at MW-4 needs to be addressed. IW-2R needs to be sampled again. Also, wells MW-3R, 9R and 10 need to be made available for sampling, given that their loss is significant as there are not many wells for sampling.Additionally, I checked the property database ACRIS for the current ownership information. The property is still owned by 293 Tenth Avenue Corporation at 5 Rosewood Lane, Wesley Hills, NY, 10901. The property block and lot are 697 and 56. There is a UCC1 with 540 West 26th Street Property Debt Investors IIA, LLC at 10 East 53rd Street, 37th Floor, NY, NY, 10022.8/4/14 - Raphael Ketani. A letter was sent today to Mr. Silvermintz of 293 10th Avenue Corporation. In the letter, I stated that the work plan was overdue and that 293 10th Ave was in violation of the Stip. I added that if the work plan is not received by August 22, 2014, then the Department will take legal action.

Remarks: CALLER RESPONDED TO ABOVE LOCATION TO REMOVE FUEL TANKS.UPON REMOVAL SOME SOIL CONTAMINATION DISCOVERED. TANKSREMOVED AND SOIL EXCAVATION IN PROGRESS. NO CALL BACK REQUESTED.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste name: B007

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CON EDISON - W. 28TH STREET SERVICE CENT (Continued) **1000111675**

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 24612
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"6/8/05 - Project transferred to TLGibbons in Central Office, Albany8/16/05 - Spoke with Brenden Keany, Mutual Redevelopment Houses, Inc., (212) 675-3200. Spill reported 5/23/96 by CDM during removal of twelve (12) 20,000 gal. #2 and #6 fuel oil USTs. The large fuel usage was for a cogen plant which generates electricity for ~3,000 people. After removing tanks and cleaning, went to dual fuel system, reinstalling only six 20,000 gal. #2 fuel oil USTs. Spoke with David Marabello (732-225-7000), CDM project manager during spill. He said that they excavated to the lateral and vertical limits possible, using shoring, without compromising structure of building. Southern portion of excavation encountered bedrock. Sixteen post-excavation samples were collected and evaluated for VOCs and SVOCs. All samples greater than 10 feet bgs. Elevated levels of VOCs and SVOCs were encountered in several samples, hovever, according to 10/2/98 CDM tank closure report, levels not indicative of gross tank failure, rather indicative of chronic spills over time. While some sporadic elevated levels of petroleum remain, everything that was reasonable to be done, was done. Close spill.
Remarks: OLD TANK APPEARED TO HAVE FAILED. TANK IS BEING REMOVED, CONTAMINATED SOIL WAS FOUND DURING REMOVAL PROCESS. INVESTIGATION IS UNDERWAY AT THIS TIME.

Tank Info:

Tank Number:	AST #2
Tank Id:	54517
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
E07 - Piping Secondary Containment - Trench Liner
F01 - Pipe External Protection - Painted/Asphalt Coating
H00 - Tank Leak Detection - None
B01 - Tank External Protection - Painted/Asphalt Coating
I02 - Overfill - High Level Alarm
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G01 - Tank Secondary Containment - Diking (Aboveground)
G10 - Tank Secondary Containment - Impervious Underlayment
J02 - Dispenser - Suction Dispenser
K99 - Spill Prevention - Other
L09 - Piping Leak Detection - Exempt Suction Piping

Tank Location:	3
Tank Type:	Steel/Carbon Steel/Iron

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"Hole in tank caused spill onto basement floor. No sumps or drains impacted. NYFD responded stopped leak and contained spill. Owner is Athena (718)271 8452. Remainder of oil cleaned from basement floor using absorbents. Owner reports problem not due to hole in tank but a failed suction line. Repairs completed.
Remarks: spill from hole in tank onto basement floor. fd on scene attempting to plug hole but still leaking

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"Question on proper address of this building. Originally called in as 525 W 25th. Later called 543-545 West 25th St.5/22/02 -

SPILL NUMBER 0201897 (Continued) **S105995914**

Sangesland spoke with Mark Robbins of Hydro Tech (631-462-5866) cell # 516-996-5559Property owner Jack Fuchs - Whitehall Business Archives, Inc.40 Worth Street, NY, NY 10013Hydro Tech was pulling a buried 3,000 gal #2 oil tank from a parking lot. 15 ft to nearest neighbor, south end of tank is at the sidewalk line.They discovered 10 large holes in the tank. The pit has product in it. Hydro will vac out the hole and will excavate out contaminated soil to clean endpoints.If all contamination can not be excavated a remediation plan will be prepared and submitted.7/2/2002 - Mark Robbins of Hydro Tech submitted a report which outlines the removal of a UST and the over excavation of the tank pit area. Sidewall endpoint samples were all below TAGM levels for VOC and SVOC's except for a handful of slight exceedences. No bottom soil samples were taken because of the presence of ground water.Hydro Tech recommends the installation of a monitoring well in the north side of the excavation area. The well should be monitored for the presence of separate-phase and dissolved phase product.DEC instructs Hydro Tech to install a monitoring well on the site, develop the well and sample for VOC's and SVOC's. The DEC will require 2 rounds of "Clean" samples taken at least 3 months apart in order to close out. 10/29/2002 - Sangesland reviewed submittal from Hydro Tech Environmental. Water sample taken from monitoring well on site showed no product and sample was clean for everything except a minor hit 1.1 ug/l of Benzene. SVOC all below detect. 4/11/2003 - Sangesland reviewed a submittal from Hydro Tech dated Feb 28, 2003. This report shows the second round of GW sampling. All results were ND, therefore the spill can be closed out.Spill Closed.

Update By: BXANDERS

Site Description: Location: The site is located at the northwest corner of the intersection of West 24th Street and 10th Avenue. The site is approximately 0.13 acres in size. Site Features: The site currently is occupied by a non-operating gasoline service station, including a recently vacated 1-story commercial building last used as a convenience store. Current Zoning and Land Use: The subject property is zoned as M1-5, which allows for commercial and mixed-use buildings. The intended use of the site is for residential and commercial. The site is bounded directly adjacent by an 11-story residential building to the north, a car wash and mixed-use (residential and commercial) building to the south, and across 10th Avenue 4- and 6-story mixed-use buildings and a 20 story residential building. The site is approximately 100 feet away from the High Line Park, which overlooks the site to the east, separated by a one-story art gallery. Past Use of the Site: The site was operated as a small portion of a gas light fixture manufacturing facility that occupied the eastern third of the block in the 1890s. The site then operated as a gasoline filling station from at least 1930 until recent decommissioning in 2013. Since 1988 the site had 8 spill numbers assigned to it, out of which one spill number still remains open. In 1998 twelve 550-gallon gasoline USTs, three 4,000-gallon gasoline USTs, one 275-gallon fuel oil UST, and two fueling pump islands were removed and 1,853 tons of impacted soil was removed. Post excavation soil sampling results identified concentrations of volatile organic compounds (VOCs) exceeding NYSDEC Recommended Soil Cleanup Objectives (RSCOs). Petroleum impacted groundwater was also detected on-site which still remains. Site Geology and Hydrogeology: The geologic conditions at the site consists mainly of fine to medium grained sands mixed with gravels, boulders, construction debris and interbedded layers of silt down to 25 feet below grade (fbg). The Sites topography is generally flat and the surface elevation is approximately 43 feet above mean sea level. Groundwater occurs within the unconsolidated soils at depths ranging from approximately 7 to 10 fbg; based on historical gauging data, there appears to be an appreciable degree of seasonal variation in the direction of groundwater flow at the site, periodically fluctuating between south, southwest and west.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum hydrocarbon related volatile organic compounds (VOCs) compounds. Soil: Per 1998 lab results for the end point soil samples collected from 10 feet below grade (SW-7) the highest benzene concentration was detected as 44.5 ppm which exceeded the soil cleanup objective (SCO) for commercial use (to 44 ppm). Other SCO exceedances were ethylbenzene at 198 ppm (restricted residential SCO = 41 ppm), xylene at 1,990 ppm (industrial SCO=1000 ppm), toluene at 479 ppm (resrricted residential SCO=100 ppm) and MTBE at 124 ppm (restricted residential SCO= 100 ppm). Groundwater: Since 2001 twelve (12) monitoring wells have been installed on and off-site (3 on site and 9 off-site) related to the current open spill. Per August 2012 (latest available) monitoring data the highest on-site concentrations detected were: benzene (32 ppb), ethylbenzene (139 ppb), xylene (80.5 ppb) and MTBE (18.3 ppb). Groundwater standards have been exceeded for all of the above analytes. Site related soil vapor and indoor air samples never been analyzed.Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact

DEC Memo:	Sangesland spoke with Roux Assoc. Tank excavation with some spillage around tanks. (Tanks had been previously abandoned in place). Now tanks are being pulled. Sangesland asked for several end point soil samples taken from tank grave after removal. Test for VOC & SVOC.3/16/2005 Sangesland reviewed a report from Roux Assoc. dated 3/9/05On 2/18/05 Roux collected 6 post-ex samples. One per each side & 2 bottomVOC's - All samples contained low levels of VOC's, but they were ALL BELOW RSCO Stds.SVOC's - Some minor "Hits" on PAHs consistant with historical fill levels. Results show some contaminants exceed regulatory standards.Samples taken on removed (waste) soils showed much higher VOC & SVOC levels.Roux conclusion says that the contamination "source" has been removed and the site should be closed out.Based on the soil sampling work performed on the site and the report prepared by Roux Assoc., the NYSDEC agrees with the conclusion and the spill case is closed with: "No Further Action - Does Not Meet Standards"

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"SEE ALSO 91-10075 & 92-13026.12/1/05- DEC Piper spoke w/ property manger. Charlie Reed, 499 Fashion Tower, LLC. 212.471.4351 in regards to status of the spill. I had discussed this with Mark Tibbe. Mark had informed me that the spill file has been transferred to ALbany. Piper had e-mailed DEC lead as to phone call from property manager.7/7/06 - Spoke with Charlie Reed concerning status of spill in which Reed indicated that the oil spill had been cleaned and signed off by the building managers. The spill case itself was due to a report of a oil vapor spreading into a subway line. However, since then no further reports have been made. Reed indicated he needed to gather his files and speak with current property manager Peter Nichols at 212-471-4351 concerning possibly closing the site. Johnathan Antonizio, NYSDEC8/9/06 - Additional steps needed to attempt to close site: Call Charlie Reed and/or Peter Nichols to gather files together. Would like to see documents to confirm oil spill cleanup. Since no reports of vapor smell since the time of the spill, site can be closed when documents are available. Johnathan Antonizio, NYSDEC-Albany10/29/10 - Austin - Reassigned from Antonizio in Albany to Patel in Region 2 for following up and closing - end12/07/10-Hiralkumar Patel.3:30 PM:- visited site. met Steve Corbo, building super. he is working on-site since 2007. site has one 7,500 gal #4 oil AST on saddles. tank is located inside a tank vault with access. tank vault is under the sidewalk of W 37th Street. during inspection, found monitoring well inside the boiler room, near the sump. Steve doesn't know purpose of well inside building.alternate addresses: 491-499 7th Ave, 154 W 37th StreetPBS #: 2-404861, 2-404888other spills: 9110075, 9213026spill #: 9110075 was reported on 12/22/1991 due to 1,000 gal #6 oil spill. case closed and referred to this open spill case.spill #: 9213026 was reported on 02/21/1993 due to tank overfill. case closed and referred to this open spill case.as per PBS #: 2-404861, site has one 3,000 gal #2 oil UST installed in Jan. 1925. tank was tested on 10/13/06.as per PBS #: 2-404888, site has/had following tanks:- one 7,500 gal #2 oil AST in contact with soil which was removed in Jan. 2002- one 7,500 gal #6 oil AST on saddles which was installed in Jan. 2002as per permit dated 11/21/96, permit was filed to replace two boilers and two oil

spoke with Steve regarding another tank on property. Steve mentioned
that building 491 has 3,000 gal tank wrapped in concrete. building
491 is along 7th ave, south of building 499. Steve mentioned that
building 499 is called north tower and building 491 is called south
tower.12:55 PM:- left message for property manager.reviewed documents
available under spill #:
9110075.*-*-*-

499 7TH AVE (Continued) **S102142464**

fuel tank int he north tower was left open. the line is used to transfer oil between the two tanks when necessary. outside contractor was called into to clean the spill. free standing oil was vacuumed up. some oil also spilled into the sump and sump was cleaned.- as per building employee who was present at the time of 1993 spill (spill #: 9213026): spill occurred during the filling of 3,000 gal tank in the south tower. employee estimated that up to 1,000 gal oil may have been spilled and that some of the oil was discharged through the tank vent into the trench adjacent to the building (which may be subway vents). outside company cleaned up the spill- an unidentified caller reported spill (spill #: 9406980) in Aug. 1994. as per building super, who was present at the time of spill, it was in Aug. 1994 that the NYC Transit Authority noted oil in a subway tunnel adjacent to the building. representative of several city agencies inspected the 499 7th ave building but could find no evidence that the source of the oil was the building. it is possible that one of the transit worker reported spill, but was unable to provide any information since no spill was observed and no source could be found <---------- tank was tested in Sep. 1994 and tank found tight (this tank test doesn't include information about which tank was tested: 7,500 gal tank in north tower or 3,000 gal tank in south tower) <---------- during site inspection, ERM noted a small sump underneath one of the boiler and that small sump connects to the larger sump in the boiler room (most probably in south tower)- ERM cleaned out both sumps- found oil seepage through sump walls about one ft below top of sump- PID survey done in basements of both towers and also in vaults on sidewalk (MTA vents)- found high PID readings in MTA vaults: 100 ppm in vaulted area and 190 ppm in northwest corner of the vaulted area4) 05/09/96: letter from ERM with boring proposal for delineation purpose. abstract:- there are no accessible locations for borings on the east or on the west side of the boiler room in the south tower- there is no open area on the east side of building- the sidewalk and 7th ave are located on the west side of the building at ground level, and a ConEd vault is located on teh basement level- an alley on south side of the boiler room at ground level; this alley belongs to 485 7th ave- boiler room of the north tower is on the north side of the boiler room of the south tower5) 01/21/97: update status letter from ERM. abstract:- installed three wells (MW-1, MW-2 and MW-4), between 2 and 3 ft deep as bedrock encountered in each well- proposed well MW-3 in the next door alley was not installed as no access allowed- MW-1 (probably 6 inch diameter) was installed adjacent to the oil tank in south tower boiler room- MW-2 (probably 6 inch diameter) was installed in the service elevator shaft in the south tower basement- MW-4 (probably 2 inch diameter) was installed in the boiler room of the north tower- no oil found in wells MW-1 and MW-4- approx. 1 ft of product found in well MW-26) 02/17/00: Oil Remediation Closure Report. abstract:- injected Biosolve surfactant through the basement wall and into soil underlying the trench, adjacent to building- did high vacuum extraction of product, water and air- upgraded monitoring/recovery well in the elevator pit in north tower, by replacing 6 inch diameter well with 10 inch diameter well- well was installed to 2.5 ft bg where bedrock found- conducted monthly monitoring of wells- no oil found in well MW-4 from 09/98 to 10/99- found no petroleum to a thin layer of oil in well MW-2 in elevator shaft- during 13 month monitoring period (09/98 to 10/99), a total of approx. 10 gal of petroleum recovered from MW-2*-*-*-

499 7TH AVE (Continued) **S102142464**

-*-*-*-*-*-*-*-*3:45 PM:- visited site again and inspected south tower. found a 3,000 gal tank completely wrapped in concrete in the boiler room. no tank label found near gauge. found a monitoring well near the tank (this could be well MW-1). during inspection, found one boiler and one water tank in the boiler room. also found three horizontal PVC pipes in southern wall of the tank room (this wall towards the alley at building 485). one PVC pipe is near the tank and remaining two pipes are near the elevator shaft area. another well found in elevator shaft (this could be well MW-2). found sump in boiler room near the elevator shaft area. found dry oil stains on southern foundation wall- both in tank room (closer to elevator shaft area) as well as elevator shaft.met Robert Facciola (212-967-8797) in south tower. Robert is working on-site since 1996. he mentioed that building was using #6 oil and then switched to #4 oil. also, tanks in both north and south towers are no longer connected. as per Robert, tank/boiler room and elevator shaft are the two lowest points in entire basement. they stopped monitoring the site about four years ago as no more oil found in wells. he also mentioned that MTA cleans out their vents every two years to prevent drain plugs which cause water flooding in the south tower. Robert did not got any complaints from MTA for long time.found vent pipe in foundation wall towards the next door alley and fill port on sidewalk near the building foundation wall, on north side of the south tower entrance (on other side from the alleyway). alley is about 4.5 ft wide.after reviewing available information, changed address in spill report from 499 7th ave to 491 7th Ave.discussed with DEC Austin. based on available information, Austin asked for monitoring and sampling from existing wells in both towers and soil and groundwater investigation in alley at building 485. he also asked to find out location of pipe which was connecting two tanks in past.alternate addresses for building 485: 481-489 7th Ave, 155-163 West 36th Streetno spill reports found at building 485.PBS for building 485: 2-606511. as per the PBS record, building 485 has one 10,000 gal #6 oil AST on legs. tank was installed in Oct. 1981.3:32 PM:- left message for Robert Kelly, super of building 485.Robert Kelly **super of building 485**PH. (917) 295-2958Gedula 26, LLC. and 485 Shur LLC. **owners of building 485**c/o Eretz Group **management company**485 7th Avenue, Suite 717New York, NYAttn.: Danny TalassPh. (212) 714-2270 (212) 971-4000email: jrose@eretzgroup.com12/13/10-Hiralkumar Patel.11:50 AM:- visited site. met Mr. Kelly at building 485. building 485 has one 10,000 gal #6 oil AST on legs. tank is in secondary containment. tank is location along 7th ave and almost in middle of basement. tank at building 485 is away from alley between the building 485 and building 491. as per Mr. Kelly, the tank is about 28 years old and he is working in the building for about 26 years. Mr. Kelly never observed any oil leak into the building from alley side. all the lines for tank are aboveground. fill box for the tank at the building 485 is in middle of the sidewalk, close to E 36th street.12:11 PM:- left message for Mr. Robustelli.12/14/10-Hiralkumar Patel.11:55 AM:- left message for Mr. Robustelli.12:28 PM:- received message from Mr. Robustelli.12:31 PM:- spoke with Mr. Robustelli and informed him that based on available information, the Department requires further investigation in alleyway and monitoring/sampling of wells.12:45 PM:- left message for Mr. Talass, property manager for building 485.12:51 PM:- spoke with Mr. Kelly, super of building 485. he mentioned that the alley between two buildings is the community alley and serves five building in total. he mentioned that the alley doesn't belong to

499 7TH AVE (Continued) **S102142464**

any particular building, but a combined property.12/17/10-Hiralkumar Patel.9:10 AM:- visited site. met Robert Facciola. Robert showed old pipe which was connecting tanks in both tower. old connecting pipe was running aboveground along ceiling. piece of old pipe found in northern wall of the boiler room, no top of the 3,000 gal tank. during visit, Robert opened valve on pipe installed in southern wall of the boiler room and this pipe goes under the alleyway. no oil or water came out of this pipe. Robert mentioned that they open this valve every six months. sometimes they get water, but no oil observed in last couple of years. inspected alley. vent pipe for the 3,000 gal tank is running aboveground along the foundation wall of the south tower. alley is about 4.5 ft wide in front, but about 15 ft wide in rear, but alley is full of stuff (AC units, storage etc.).12/22/10-Hiralkumar Patel.7:41 AM:- received message from Mr. Robustelli.3:10 PM:- left message for Mr. Robustelli.01/03/11-Hiralkumar Patel. after discussing with Randy, case closed as no product found in wells or sump in south tower and no oil from recovery pipes installed in southern wall under the alleyway.summary:- 3,000 gal tank in south tower was used to store #6 oil, but now contains #2 oil- tanks in south and north towers were connected in past- about 1,000 gal oil spilled from valve on pipe connecting tanks in both towers- about 1,000 gal oil spilled due to tank overfill; some oil got into MTA vent on 7th ave sidewalk- tank test from Sep. 1994 doesn't include information about which tank was tested: 7,500 gal tank in north tower or 3,000 gal tank in south tower- wells installed in south tower boiler room, south tower elevator shaft and in boiler room in north tower- an alley on south of south tower and this alley belongs to 485 7th Ave

DEC Memo:	08/28/11-Hiralkumar Patel.9:45 PM:- visited site. met Todd from Recovery. inspected boiler room. found water and oil in boiler room. Todd mentioned that they could not inspect the entire boiler room as water in rear of the boiler room is deeper and water level was rising. spoke with Mario, building super. he mentioned that there are no drains in the boiler room floor and only one sump pit in entire boiler room. sump pit has four pumps inside it. they had 3,000 gal vacuum truck which can not hold all the water/oil in the boiler room. also, they were not sure about condition in rear of the boiler room. absorbent pads were on water.as water level was rising, Todd was worried about impact to electric panels which is about 10" higher than water level in boiler room. Todd requested to turn on sump pumps to throw water only from bottom into city sewer system. he mentioned that by lowering water level, oil may impact the wall and other structure, but that can be cleaned easily with power wash at later time. but he was worried about impacting electric panels and other

601 WEST 26TH STREET (Continued) **S104275653**

part of basement as water level was rising.after discussing with DEC Austin, approved Todd's request to turn on sump pumps so they can lower the water level in boiler room. after they remove most of the water (only), they will remove remaining water/oil into vacuum truck. asked Todd to secure sump area with absorbent pads and booms to prevent any oil get into city sewer system. also asked him to turn off pumps frequently to check boiler room for any unusual thing. asked Todd to call with update. Mario mentioned that the entire tank system is turned off.Mario Onichimiuk **building super**Ph. (917) 817-1927Todd HassoldRecovery Environmental Services, Inc.PH. (973) 940-3144 (O) (973) 896-6185 (C)Fax (973) 940-3146 email: thassold@recoverysrvs.com08/29/11-Hiralkumar Patel.9:45 AM:- visited site. cleanup crew was still on-site removing oil. two sump pumps were still working. currently, contractor is skimming off oil from top of water. after water level dropped, super inspected the rear end of the boiler room and found two buckets were knocked down during flooding and caused spill.inspected tank room which is in garage area. site has two 20,000 gal #6 oil ASTs. no spill inside the tank room. boiler room is right underneath the tank room location. as per super, no leak noticed from any fuel piping. asked Mario to call back for re-inspection, once basement is dry.5:09 PM:- received call from Tom from Recovery. he mentioned that during cleanup, they found oil/water separator in back of the boiler room. he requested a site inspection.08/30/11-Hiralkumar Patel.11:00 AM:- visited site. met Tom from Recovery. inspected boiler room. Tom mentioned that sump pumps were turned off yesterday night and when they left, area around sump was clean. but they found more oil this morning. during cleanup last night, they found oil/water separator in boiler room. inspected oil/water separator. found oil on top of oil/water separator, but no indication of any oil overflowed the separator.two pipes enters into oil/water separator. one pipe goes to a loading dock above the boiler room (contractor will find out where this pipe comes from) and second pipe goes into a tunnel located at the west end of the boiler room. there is an hatch boiler room ceiling in area where the oil/water separator inlet pipe crosses to loading dock.tunnel is located along the boiler room ceiling in west end of the boiler room. this tunnel runs east-west and then north-south. this tunnel structure is completely within building footprint and underneath the loading dock area. found oil leak from the northern most end of the tunnel. currently active tanks are located right above the northern end of the tunnel and currently active supply/return lines running aboveground in tunnel. no sign of leak found from currently active lines. found two sumps in the tunnel: first along the western wall of the north-south portion of the tunnel and another along the southern wall of the east-west portion of the tunnel. found a pipe coming out of the western wall of the tunnel in the area south of sump in north-south section. Tom closed the valve on this pipe and water flow into the separator was dropped. as purpose of this inlet pipe was unknown, asked Tom to leave valve open. Mario mentioned that there were three 20,000 gal #6 oil USTs abandoned-in-place behind the western wall of the tunnel (north-south section). found oil seepage from the northern wall of the ease-west section of the tunnel.as sump pumps in tunnel are connected to the oil/water separator, it looks like whatever oil seeped into the tunnel was thrown into oil/water separator. as there was no oil recovery from the separator, oil followed the water discharge pipe into the main sump.informed Mario that main sump pumps must not be used until the cleanup is completed

601 WEST 26TH STREET (Continued) **S104275653**

as water coming into sump may be contaminated (dissolved phase). all water from basement must be disposed off as contaminated material.as per Mario, the former 20,000 gal tanks were under the loading dock platform. Mario gave copy of tank abandonment documents. as per the documents:- Don Carlo Environmental abandoned three (3) 20,000 gal USTs on 07/10/2001. tanks were abandoned using foam and lines were discontinued and closed- Malbro Inc. abandoned three (3) 20,000 gal USTs in Aug. and Sep. of 2005. tanks and all associated piping were filled with lightweight cellular concrete slurry mixtureduring inspection, found a 3,000 gal diesel AST for emergency generator. Mario mentioned that emergency generator is located on first floor.during inspection, found a coned vault in boiler room containing high voltage lines. this coned vault is located on other side of boiler room, opposite of the main sump in the boiler room.met with Sandy Hahn, property manager. informed her that leak in the boiler room, could be left over spilled material inside the concrete vault (if any) around the former 20,000 gal USTs. due to heavy rain over the weekend (harricane Irene), water may have entered around the abandoned tanks and pushed oil into the tunnel which end up into main sump via oil/water separator. asked her to submit a scaled site map with old/current tanks, piping, tunnel, sumps (in passage as well as boiler room) and oil/water separator. asked her to find out purpose of the pipe that comes out from the old UST area. also asked her to investigate in the old tank area.RXR SL Owner LLC. **property owner**c/o RXR Realty601 West 26th Street, Suite 1260New York, NY 10001Attn.: Sandra Hahn **property manager**Director of OperationsPH. 601 WEST 26TH STREET (Continued) **S104275653**

#: 0311818.spill #: 0911011 was reported on 01/12/2010 due to dielectric fluid spilled in vault (probably vault in boiler room). case closed.found files on e-docs for spill #: 9304676, 0406966 and 0407003.review of documents under spill #: 9304676*-*-*-

601 WEST 26TH STREET (Continued) **S104275653**

investigation was performed to delineation contamination around eastern tank field and to complete delineation of contamination (by installing more monitoring wells) found around the western tank field- Emteque installed three (3) 4-inch monitoring well through the sidewalk equally spaced around the northeast corner of the intersection of 12th Ave and 26th street- three wells (MW-6, MW-7 and MW-8) were installed to a depth of 14 ft bg with 10 ft of screen- wells were set aprpox. 7 ft into the water table- no evidence of fuel oil contamination was identified in wells- soil samples collected at the water table during the well installation- no contamination found in soil samples collected during well installation- advanced five (5) soil borings (ETFSB-1 through ETFSB-5), to a depth of 12-16 ft bg, through the basement floor over the eastern tank field, collecting soil samples to a depth of approx. 4 ft below the groundwater table- soil samples collected at the water table during soil boring installation- no contmaination found in soil samples collected from soil boring in eastern tank field- 1 inch piezometers installed in three borings (ETFSB-1, ETFSB-2 and ETFSB-3) surrounding the tank field to the south and east- tunnel's wall contains groundwater on west side of eastern tank field- access was not provided to the north side of the eastern tank field- free phase product found on water in eastern tank field area- investigation revealed that contamination associated with leak from the house tank appears to be contained within the vicinity of the house tank between the south wall, the north adjacent tank, the western tank tunnel and has not migrated more than 10 ft east of the tank4) 06/16/2003: Revised Proposed Petroleum Contamination Corrective Action Plan:- groundwater local to the western tank field is approx. 10 ft below the first floor slab, approx. 6 ft below surrounding grade and flowing predominantly westerly- groundwater lcoal to the eastern tank field is approx. 10 ft below the parking garage of the FBI unit and apparently not flowing, since the groundwater flow is restricted on its western margin by the tank tunnel and to the south and east by basement boiler room walls- a small local easterlly gradient in the vicinity of the plume around western tank field and also in eastern tank field is being induced by dewatering to prevent flooding of the building basement5) Spill Closure Petition Report: <--------- missing6) 05/12/2006: Spill Closure Petition Report - Update #1:- collected groundwater samples from well MW-1 and recovery wells RW-1, RW-2, RW-3 and RW-4- found minor VOC contamination during second round (maximum 46 ppb Benzene in RW-1)- removed almost 53,000 gal of contaminated groundwater and 1,637 tons of soil from the site*-*-*-

601 WEST 26TH STREET (Continued) **S104275653**

obstruction) and was abandoned.during installation of SB2-6, strong petroleum odor and black staining were noted in the soil (PID: 83 ppm) at 6 ft bg. boring was extended to 11 ft bg. strong petroleum odors persisted in entire boring length (PID from 60 to 70 ppm). boring SB2-4 was temianted at 11 ft bg (due to obstruction) and was abandoned.based on notes from MTA, both borings were installed on eastern property line, but the #6 oil storage tanks (associated with spill #: 9304676) were located along the western side of the property. contamination found in borings under the west sidewalk of 11th ave, could be result of petroleum release from other tanks on property (owned by tenants).+-/+based on available site map in Phase II investigation report dated 06/11/2002 and based on information available in preliminary investigation report dated 03/19/2002:- in July 2001 by Don Carlo: tank # 1 and 2 were converted to store #2 oil for on-site generators, tank # 3, 4 and 5 were abandoned and tank #6 was filled up with #6 oil for on-site boiler- tank # 1 and 2 were the northern most tanks in western tank field- tank # 3 was the southern most tank in western tank field- tank # 4 and 5 were the northern most tanks in eastern tank field- tank # 6 was the southern most tank in the eastern tank field- tank # 1, 2 and 6 were abandoned by Malbro Inc. in Aug/Sep. 2005- tunnel between two tank fields was used to house pipes from these tanks08/31/11-Hiralkumar Patel.9:00 AM:- visited site. inspected boiler room and tunnel. found oil/water inside the boiler room. spoke with Tom. he mentioned that they pumped out oil/water from entire room before leaving site yesterday night, but more came back this morning. he mentioned that last night they closed the valve on pipe (recovery pipes installed next to western tank field) which discharges into oil/water separator so less water accumulated in boiler room.inspected tunnel again, specifically to see any seepage from tanks on eastern side of the tunnel. found oil seepage from eastern side tanks also.found multiple wells on and around property: one well in loading dock on west of western tank field, one well in loading dock ramp, one well on northern sidewalk of W 26th street, one well at the intersection of W 26th street and 12th ave, one well on eastern sidewalk of 12th ave, two wells on southern sidewalk of the W 27th street met with Todd and Michael Borello (from EBS). based on observations during site visits, asked Mr. Borello for following:- general scaled site map of entire property including all closed/in-service oil tanks (must include tanks owned/operated by tenants)- scaled site map (including old/current oil tanks, pipings, sumps, oil/water separator, seepage points, previous monitoring wells etc.) of area of concern- power wash of impacted areas in entire boiler room (pipes, walls, columns, floor etc.)- detailed cleaning of oil/water separator- turn on the oil/water separator system with proper DEP discharge permit- pump out of all water/oil from boiler room for off-site disposal until oil/water separator system turned on- collection of water sample (either from oil/water separator or from its discharge pipe) for 8260/8270 analyses- correction of PBS record (registration of existing in-service tanks, 3,000 gal diesel AST in loading dock ramp area and any other unregistered tank)Mr. Borello mentioned that they are planning to open small access in both east and west wall of the tunnel for preliminary inspection. they will consult with structural engieer and if safe, they will open larger access to both tank fields to clean any leftover contamination.Michael BorelloEnvironmental

Building Solutions, LLC.Ph. (646) 290-5925 Ext. 225 (917) 217-7334 (C)Fax (212) 867-9715email: mborello@ebsllcnyc.combased on given information, a FBI rents building space on north side of eastern tank vault.10:03 AM:- left message at FBI (212-384-5000).09/01/11-Hiralkumar Patel.8:00 AM:- received message from Mr. Borello.12:25 PM:- spoke with Mr. Borello. he mentioned that based on available information, the new tanks are located right above the old western tank vault. they have collected water sample yesterday. he will submit scaled site map and water sample result by 09/08/11.12:58 PM:- spoke with Eric at Emteque regarding missing initial spill closure report. Eric will check file and submit report, if available. Eric mentioned that they did Phase I report for Chase bank (lender) in 2010.Eric TelemaqueEmtequePH. (212) 631-9000email: eric@emteque.com 9/2/11-Vought-Received call from and spoke to Todd Hassold (Recovery Environmental Ph:973-896-6185) who noted that he had urgent issue on hand in that he was recovering approximately 25,000-gallons of oil/water mixture a day from the oil/water separator (source of water was seepage from adjacent Hudson River) and source of oil still undetermined. Hassold noted the liquid is mostly water with minor petroleum sheen. Hassold noted also that he was in the process of submitting a NYCDEP Discharge Permit Application to dispose of the water from the oil/water separator. Hassold noted that Clean Harbors was closed (disposal facility) and that he did not have the storage capacity for the 25,000-gallons per day over the weekend and such was requesting an emergency permit to discharge to the sewer. Vought spoke to DEC Elburn who noted that due to Hurricane (causing of flooding) that DEC had an emergency permit reqiuirement exemption and as such no permit was needed for DEC. DEC Elburn noted however that NYCDEP also needed to be contacted (NYCDEP Leslie Lipton Ph:718-595-4730). Hassold called Lipton and as per Hassold, Lipton did not respond but Hassold was told by another DEP employee to call 311. Vought suggested that Hassold send an email with a description of the issue to DEC Vought as soon as possible so that he may forward email to DEC Patel, Elburn and DEP Lipton. Vought received email from Thomas Domke (VP Operations Recovery Environmental) confirming phone conversation but not including any details of issue. Vought sent reply email with cc to DEC Patel, Elburn and DEC Lipton that a full description is needed and that Vought on vacation for next two weeks and as such all parties should be copied on full description. Vought and all parties received full description and Vought reviewed description with DEC Water Unit Elburn and sent reply email that DEC had no objections to discharge to sewers as long as NYCDEP requirements were met also.09/07/11-Hiralkumar Patel.10:41 AM:- received call from Todd. he mentioned that NYC DEP approved water discharge to city sewer. now the entire boiler room is dry.10:50 AM:- received call from Mr. Borello. he mentioned that no dissolved contamination found in water sample collected from boiler room last week. asked him to submit result for review. he also mentioned that they are waiting for result of water sample that was collected to get DEP permit to discharge water from oil/water separator into city sewer system. currently, they are planning to drill some holes in tunnel walls for further investigation. Mr. Borello will submit scaled site map today.12:21 PM:- received message from Eric. he did not found spill closure report prepared probably in Oct. 2005.09/08/11-Hiralkumar Patel.10:22 AM:- received email from Mr. Borello including site map (including oil tanks on property), desgin of oil/water separator system and

601 WEST 26TH STREET (Continued) **S104275653**

groundwater sample result. no dissolved contmaination found in water sample. as per the submitted site map, the entire site has total of fifteen (15) tanks: - one 5,000 gal tank at the end of garage ramp (from W 27th street), owned by property owner- two 20,000 gal tanks (currently in-service #6 oil tanks) in loading dock area, owned by property owner- one 10,000 gal tank in loading dock area, owned by Broadview- one 3,000 gal tank (diesel tank) in loading dock ramp, owned by Level III- four 275 gal tanks on 3rd floor, owned by property owner- four 275 gal tanks on 4th floor, owned by Broadview- two 250 gal tanks on 6th floor, owned by Level IIIreviewed PBS record again.PBS #: 2-600389 - three 20,000 gal in-service #6 oil ASTs in vault with access and three 20,000 gal closed-in-place #6 oil ASTs in vault with access. this PBS registration has expired in July 2006. as per PBS record, tanks owned by previous property owner. as per available information, the remaining three tanks were also closed-in-place in 2005. this PBS registration needs to be renewed/updated/closed with correct information (tanks closed/new property owner).PBS #: 2-604877 - one 10,000 gal diesel AST on legs/saddles. as per PBS record, tank owned by Wiltel Communications Group, Inc. this registration has expired in Dec. 2010. this registration needs to be renewed.PBS #: 2-607987 - one 275 gal waste oil AST on legs/saddles. as per PBS record, tank owned by Verizon. registration currently active.PBS #: 2-611131 - one 10,000 gal diesel AST in contact with imprevious barrier. tank was installed in Jan. 2000. as per PBS record, tank owned by Level III Communications LLC. registration currently active. this registration may need to be updated because as per Mr. Borello, Level III owns a 3,000 gal diesel AST (which is located in loading dock ramp).2:27 PM:- spoke with Timothy Kimball at Level III Communications. he confirmed that Level III owns 10,000 gal diesel tank which is located in loading dock area and a generator is located next to the tank. he mentioned that they don't own 3,000 gal diesel tank. he also confirmed that they don't have any day tanks on 6th floor. during conversation, he mentioned that Level 3 Communication acquired Wiltel Communications Group in 2007-2008. informed him that the tank registration under Wiltel Communication (for 10,000 gal diesel tank) has not been closed out properly. asked him to close the PBS registration that is under Wiltel Communications's name.Timothy KimballLevel 3 Communications LLC. (also owns Wiltel Communications Group)Ph. (720) 888-4744email: timothy.kimball@level3.com2:51 PM:- left message Gregory Myka (315-432-8486) at Verizon to confirm that Verizon only owns one 275 gal waste oil tank at the site.3:05 PM:- left message for Mr. Borello and informed him that tanks' information provided on map is not accurate.4:36 PM:- received message from Mr. Myka from Verizon. he confirmed that they have only one 275 gal waste oil tank at the site. they don't have any other tanks.4:42 PM:- received message from Mr. Borello. he mentioned that he got tank's information from chief engineer. but they will do site survey and talk to each tenant to find out exact number of tanks and its owners.09/09/11-Hiralkumar Patel.9:18 AM:- visited site. inspected boiler room. no oil or sheen found on water in entire boiler room. boiler room walls/floor and other oil impacted structures were cleaned. found clean water going into main sump from oil/water separator. frac tank was on W 27th street, but wasn't connected to main sump.9:27 AM:- spoke with Mr. Borello. informed him that there are multiple PBS records for the subject site. he requested copy of PBS records.3:49 PM:- sent email to Mr. Borello including PBS records. asked him to submit all on-site

601 WEST 26TH STREET (Continued) **S104275653**

tank's information (location, size, owner etc.) by the end of 09/16/11. informed him that PBS registrations must be updated/renewed immediately. email copied to Ms. Hahn.09/14/11-Hiralkumar Patel.10:43 AM:- spoke with Todd. he mentioned that insurance company requested an estimate for investigation. Todd is preparing the estimate and will submit to insurance company.09/19/11-Hiralkumar Patel. received PBS application package in FedEx. as per submitted application, site has following tanks:- two 20,000 gal #6 oil ASTs in loading dock area; tank owned by property owner- one 5,000 gal #2 oil AST in basement (at end of garage ramp from W 27th street); tank owned by property owner- one 250 gal #2 oil AST in generator room on 3rd floor; tank being used to start up the generator; tank owned by property owner- one 250 gal #2 oil AST on 3rd floor along 12th Ave side by Verizon; tank being used to start up the generator; tank owed by property owner- two 250 gal ASTs on 3rd floor along 11th ave side; both tanks are closed-in-place; tanks owned by property owner- one 10,000 gal diesel tank in loading dock; tank owned by Broad View Network- one 250 gal #2 oil tank under the generator in central office on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank closed-in-place in central office on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank under the generator in data center on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank closed-in-place in data center on 4th floor; tank owned by Broad View Network- one 10,000 gal diesel tank in loading dock (PBS #: 2-611131); tank owned by Level 3 Communication- one 247 gal waste oil tank in basement (PBS #: 2-607987); tank owned by Verizon- one 1,000 gal waste oil tank in basement; tank owned by FBI- one 500 gal oil tank on 2nd floor; tank owned by FBIthere is no information about 3,000 gal AST observed in loading dock area.09/20/11-Hiralkumar Patel.12:18 PM:- received message from Mr. Borello.4:29 PM:- spoke with Mr. Borello. he mentioned that they drilled some holes in both side tank vaults and found oil pouring out from holes. as such they will break larger access to these vaults for further inspection/cleanup. he will send pics that he collected today. he will also schedule a site inspection, once larger holes made in wall.4:31 PM:- receive email from Mr. Borello including a pic and a video showing oil pouring out of vault.09/23/11-Hiralkumar Patel.1:18 PM:- received call from Todd. he mentioned that they drilled small holes in both vaults and found product coming out from eastern vault only. only water came out through holes in western vault. based on that observations, they made 18 inches by 24 inches hole in western wall of the eastern vault (vault towards the boiler room). found free product in the vault. Todd mentioned that the hole is about 2 ft above the product level in vault, so they are not concerned about overflow through this hole. as there is heavy rain for today and tomorrow, asked Todd to secure the hole to prevent any spill in boiler room, if water level rise in vault. scheduled a site inspection at 3:30 PM on 09/26/11.1:55 PM:- spoke with Mr. Borello. informed him about possibilty of oil overflow from hole in eastern vault due to heavy rain. Mr. Borello has already spoken with building management/super and they will inspect area frequently. if any spill noticed, they will call contractor for cleanup.also informed Mr. Borello about no information on PBS application about 3,000 gal tank observed in loading dock area. Mr. Borello will confirm that and will submit revised PBS application.09/26/11-Hiralkumar Patel.3:30 PM:- visited site. inspected hole made in eastern tank vault area. found free product and water in hole. the area behind the wall was filled

601 WEST 26TH STREET (Continued) **S104275653**

with construction debris and filled with large concrete/stone pieces. met Ms. Hahn, Todd, Tom and Mike. informed them that the department requires delineation of soil/groundwater contamination on north and east side of eastern tank vault. no investigation needed on west and south of the eastern tank vault (as it is in tunnel area). Tom mentioned that they only found some water from holes mades in western tank vault area. asked Mike to prepare a scaled site map for area around tank vaults. asked Ms. Hahn to submit an investigation work plan for delineation.during meeting, Mike confirmed that the 3,000 gal diesel AST observed in loading dock area is owned by Broad View Network and there is no 10,000 gal tank owned by Broad View Network. Mike will submit revised PBS application to DEC Nick.forwarded previously received (incorrect) PBS application (which includes a check) to DEC Nick. asked him not to process application as a new updated PBS application will be submitted.10/12/11-Hiralkumar Patel. received email from Ms. Hahn (at 11:39 AM on 09/30/11) including copy of revised PBS application and letter describing tank owners. PBS application was sent to PBS unit. as per revised tank owner letter, Broad View Network owns 3,000 gal diesel tank in loading dock and not the 10,000 gal diesel tank as mentioned in earlier PBS application submitted on 09/19/11. all other tank info is the same.10/26/11-Hiralkumar Patel.4:18 PM:- received email from Joe Horowitz (Horow137@aol.com) including copy of letter from DEP with conditional authorization for water discharge.11/02/11-Hiralkumar Patel.3:21 PM:- received email from Mike including a draft work plan for review. he proposed to install nine soil borings which will be converted to monitoring wells. these borings/wells are proposed around two sets of abandoned USTs. draft work plan doesn't include a work schedule. also need a site map with structures in basement (tunnel, sumps in tunnel, main sump in boiler room, oil/water separator and boring/well locations).11/14/11-Hiralkumar Patel.9:45 AM:- spoke with Mike. informed him that the draft work plan looks fine except it is missing two things: work schedule and a site map with structures in cellar (tunnel, sumps in tunnel etc.). he will submit final work plan.02/03/12-Hiralkumar Patel.4:31 PM:- left message for Mike.4:32 PM:- sent email to Mike, Ms. Hahn and Todd inquiring update.5:08 PM:- received email from Mike. they are in process of obtaining bids from drilling companies and will start work once contractor is selected. he mentioned that oil/water separator is working fine and no additional oil observed in basement.02/07/12-Hiralkumar Patel.2:13 PM:- sent email to Mike and asked him about schedule for contractor selection. also asked him about the amount of oil recovered since the oil/water separator turned on. email copied to Ms. Hahn.02/21/12-Hiralkumar Patel.11:15 AM:- received email from Mike. they are in final stage of hiring drilling contractor and will schedule work shortly. till now, they recovered less than 55 gal of oil.07/24/12-Hiralkumar Patel.2:27 PM:- received email from Mike. they have installed numerous borings and wells at the site. they are having some logistical problems in few areas and requested a site visit.07/26/12-Hiralkumar Patel.3:42 PM:- left message for Mike. asked him to submit status report for work done till now, prior to any site visit.3:47 PM:- sent email to Mike and asked to submit status report for work done till now. informed him that site visit can be done only after completing review of the additional information. email copied to Ms. Hahn.07/27/12-Hiralkumar Patel.9:51 AM:- received email from Mike including site map and field notes. as per field notes, four wells installed at the site: two

601 WEST 26TH STREET (Continued) **S104275653**

wells (Point A and Point B) on the west side and two wells (Point G and Point H) on the east side of the former tank field. fuel oil smell noted during installation of wells Point A and Point B. Mike mentioned that a third well could not be installed on east side (in the FBI space) due to refusal. he also mentioned that driller is hesitant to drill in the boiler room due to possible flooding.11:28 AM:- spoke with Mike. he mentioned that installation of four wells was completed on 07/23/12. dark soil and petroleum odors were noted during installation of wells Point A and Point B on the west side of the tank field. no sign of contamination observed in wells on east side (Point G and Point H) in FBI parking space. he does not know about any product on water as wells are not developed yet. asked him to develope the four wells, define site-specific groundwater flow direction and collect groundwater samples for VOC/SVOC analysis. informed him that wells should not be installed in basement boiler room due to possible flooding issues. asked him to submit detailed boring/well logs for review.11:47 AM:- sent email to Mike and asked to submit boring/well logs, results of groundwater samples and site-specific groundwater flow direction by the end of 08/20/12. email copied to Ms. Hahn.09/07/12-Hiralkumar Patel.11:53 AM:- received email from Mike including soil boring logs and soil/gw data.received boring logs for borings Point A, Point B, Point G and Point H. Point A and Point B were installed in RXR Parking Garage and fuel oil smell noted in both borings at 10 ft depth. wells were installed to 25-30 ft depth in Point A and Point B. borings Point G and Point H were installed in FBI parking space. in Point G, bedrock encountered at 16 ft depth. found PID readings in Point A and Point B, but PID unit is not included in logs.as per lab report, four soil samples collected. one soil sample from 10 ft depth from each of four borings. no VOC contamination found in soil samples, but some SVOC compounds were detected (below cleanup standard) in soil samples.as per lab report, four groundwater samples collected from borings. no contamination found in groundwater samples.the site map does not show location of Point H. needs revised boring logs (with PID unit) and site map (with boring locations).10/03/12-Hiralkumar Patel.2:28 PM:- sent email to Mike. asked him to submit revised boring logs and site map. also asked him about amount of product removed till date using on-site recovery system. email copied to Ms. Hahn.11/26/12-Hiralkumar Patel. went to site for inspection to see impact after hurricane Sandy. met with Mario. he mentioned that the entire basement was full of water, but no more oil observed on water. the oil/water separator, as part of the on-going cleanup, was emptied out right before storm. as boilers were damaged during storm, they have temporary boilers on street. they are also in process of converting to #2 oil.01/15/13-Hiralkumar Patel. received message from Mike (at 1:11 PM on 01/14/13). he mentioned that he is waiting for response for data he submitted on 09/07/12.11:33 AM:- sent email to Mike and informed him that the department responded on 10/03/12 and asked for revised boring logs and product recovery data, which has not received yet.11:37 AM:- received email from Mike including copy of email that he sent on 10/09/12. email included revised boring logs and site map.12:14 PM:- received email from Mike. they recovered less than 55 gal oil since oil/water separator installed.reviewed available boring logs, site map and sample results. borings A, B, G and H were installed to a depth of 25-30 ft bg (except boring G which was installed at 16 ft bg). maximum PID reading of 2 ppm was recorded at 10 ft in boring B which is located southwest of the former tank

601 WEST 26TH STREET (Continued) **S104275653**

rooms. soil and groundwater samples were collected from these four borings. no contamination found in soil or groundwater samples.12:23 PM:- spoke with Mike. asked him to submit depth of borings/wells and former tank room reference to single point.3:14 PM:- received email from Mike. he mentioned that points G and H inside the FBI space were to a depth of 15 ft and would be below the 6 USTs that were closed in place. he also mentioned that points A and B were advanced to a depth of 20 ft but from street grade and are not below the USTs.01/30/13-Hiralkumar Patel. discussed with DEC Austin. based on site history, available sampling data and observations during site visit after hurricane Sandy, Austin asked to close the case.1:59 PM:- sent email to Mike. asked him to submit spill closure report. email copied to Ms. Hahn.02/28/13-Hiralkumar Patel.2:43 PM:- sent email to Mike inquiring about closure report. email copied to Ms. Hahn.03/22/13-Hiralkumar Patel.4:50 PM:- received email from Sharon Dyal (sdyal@ebsllcnyc.com) from Environmental Building Solutions, including spill closure report.03/26/13-Hiralkumar Patel. based on available information, case closed.2:45 PM:- sent spill closure letter to Ms. Hahn. letter emailed to Ms. Hahn and Mike.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"05/18/2001Reassigned from Tomasello to Demeo3/25/2004 Reassigned from Demeo to Sangesland2/28/2005 Sangesland received a note from John Raguso stating that Emteque was going to begin it's remediation process at the site. The contractor will mobilize and then clean and close the remaining tanks onsite. Once the permits have been finalized, the contractor will then begin the major construction phase of the project to break ground, put in the required shoring and conduct the required remediation/soil removal activities.Contact: John Raguso 631-271-66227/7/05 Excavation has begun on the western tank field. When all soil is removed down to the water table (10-13 ft) the pit will be kept open and a vac truck will be on site for several days to vac out any petroleum floating on the water table. The site has several structural issues with surrounding buildings and a "Security wall"Several end points will be taken, but we already know that this whole area was "coal ash fill" from the late 1800's. We will expect to see SVOC's, but we do NOT want to see any VOC's. They will dig down to the water table, so that is as much soil removal as can be done. This work (on western tank field) should be finished by 7/15/05.Then similar work will be done on the eastern tank fieldJohn Raguso cell #646-529-65313/13/2006 Sangesland completed the review of a "Spill Closure Petition Report" prepared by Emteque Corp. (John Raguso - 631-774-9519)The report provides a history of the site including details of the 6 USTs on site. 3 were closed out several years ago and the other 3 were closed out in 2005 during this closure process. In additon, large soil excavations were made in the areas around these 6 tanks (3 eastern tanks & 3 western tanks) Due to structural issues, all of the contaminated soil could not be removed, but an overwhelming majority (over 95% according to Emteque) of the contaminated soil was removed. The end point sampling conducted in Oct 2005, show VOC and SVOC below TAGM and the GW samples were very good, with only some minor "hits".The one item of some concern was Benzene. All 5 GW samples taken were above TAGM for benzene.The TAGM GW limit is 0.7ppb and the levels in all 5 GW samples ranged from 8.2ppb up to 43ppb.3/30/2006 Sangesland confirmed with John Raguso at Emteque that another round of GW samples will be taken in April '06. If these numbers show a decline, the case may be closed due to natural attenuation. 5/22/2006 Sangesland reviewed a submittal from John Raguso of Emteque. As requested by the DEC, another round of groundwater samples were taken at the site. These samples showed the expected drop in contamination levels. While there are still some slight exceedences of the GW standards, the NYSDEC

601 WEST 26TH STREET (Continued) **S104275653**

believes these levels will attenuate naturally over time. Based on the high commercial usage level of the area and the history of "train yards, gas stations and historical fill" the site is OK to close out as is with "no further action" Closure letter was sent to 601 West Associates c/o John Raguso with specific requirement to properly close out all monitoring wells on the site.

Remarks: GAGE LINE BROKE ? CONTAINED IN BOILER RM. AND TANK ROOM - PETROL TANK CLEANER IS SUCKING UP OIL NOW. SENT TO DEP.

Date form received by agency: 06/05/1991
Site name: AWAD REALTY CO
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: NONE
Waste name: None

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: P029
Waste name: COPPER CYANIDE

Waste code: P106
Waste name: SODIUM CYANIDE

Violation Status: No violations found

DER Facility ID:	231035
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"01/13/95: SPILL REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 01/13/95. TRANSFEREWD FROM HALE TO TIBBE ON 12/28/00. INVESTIGATION ONGOING.Formerly Greyhound.see also 9112032.11/12/10 - spill re-assigned from Tibbe to Joe O'Connell5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross2/27/12 - Raphael Ketani. The spill case was transferred to me during February 2012. Monthly progress meetings with the NYCT are taking place.4/26/12 - Raphael Ketani. Groundwater monitoring and product collection are taking place by URS. 7/26/12 - Raphael Ketani. I was informed today by DER Region 2 staff that there may be comingled spills at the site. During 1983, there was a spill at the site from the USTs under a building. This was when the site was owned by Greyhound Lines Inc. Later, the NYCT bought the property. Then on March 8, 1993, the contractor Warren George was doing some work through the side walk for Con Ed and penetrated a feeder line. The line is right next to the the building with the USTs. The loss of dielectric was later determined to be 4,000 gal. The location of the feeder penetration was at MW-3. I told staff that I would contact Gregory Mathelier of NYCT [(646) 252-3470/gregory.mathelier@nyct.com] and tell him to contact Mathew Madsen [(718) 267-3866/madsenm@coned.com] and Barry Cohen [(718) 204-4252/cohenb@coned.com] of Con Ed in order to coordinate the remediation of the spills. I sent an e-mail to Mr. Mathelier today with the above information and asked him to let me know whether he is successful in contacting Con Ed. I also attached the Con Ed feeder drawings and a few pages from the Greyhound report.10/5/12 - Raphael Ketani. Today I received the Site Specific Remedial Plan and Design for Surfactant Flushing. I began my review.10/22/12 - Raphael Ketani. I finished my review of the 10/5/12 SSRP/RD. Product was originally

MJ QUILL DEPOT -NYCT (Continued) **S101340929**

seen in wells URSMW-7 and URSMW-9 (southwest corner), which are in the diesel UST vault. Product has most consistently been seen in URS-3 (southwest corner). Product was seen as sheen 11 times at URSMW-11. Product has been present as a sheen to 0.01 feet at URSMW-12. In 2004, URS did 3 one well injections of BioSolve at URS-3 and recovered 33 gals. of product. Three more BioSolve injections into URS-3 during 2005 recovered 27 gals. of product. NYCT had 6 more monthly injections done at once a month from September 2005 to March 2006 and recovered 103 gals. of product. Groundwater sampling showed that there was no significant dissolving of the diesel fuel into the water due to the use of the surfactant. Also, the levels of the product at URS-3 were not significantly reduced. About 540 gals. of RegenOx were injected into URSMW-13 as 3 injection events on 10/14/08, 12/17/08 to 12/18/08, and from 2/17/09 to 2/18/09. However, product was still found at URS-3. To determine the feasibility of using excavation as a remedial measure, 4 borings were done. These were GP-16 to GP-19 in the southwestern corner sidewalk. All 4 borings were penetrated fill. Only GP-17 had odors and staining. The petroleum impacts are likely adjacent to the foundation. The foundation goes down 14 feet below grade and has likely kept the product from migrating. The petroleum is in the smear zone and possibly beneath the asphalt at 12th Avenue and 40th Street. The NYCT determined that excavation was not practical for various reasons and the DEC did not require it. The SSRP was designed so reduce the impacts at URSMW-7 and URS-3. URSMW-11 will likely be used for the flushing. Six wells will be used in the program. They will be 4 inch wells. URSMW-15 to 18 will be installed. URSMW-18 will be used as a monitoring well. The other wells and URS-3, URSMW-7 and URSMW-13 will be used for injecting, flushing and extraction. A 3% solution of BioSolve will be injected at 5 gpm. About 133 gals. will be injected per well. URS-3, URSMW-7, URSMW-13 will be used as extraction/hydraulic control wells. The minimum residence time for the solution will be 12 hours following injection. A truck will be used to remove twice the volume injected. Groundwater sampling will take place every two weeks during the flusing program.I found the SSRP/RD to acceptable and drafted a letter for the review of Hassan Hussein, EE III of Unit C in DER Region 2.10/23/12 - Raphael Ketani. Mr. Hussein and I discussed the letter. He told me to send it out and I did.Later, Mr. Mathelier sent me an e-mail stating that the surfactant flushing could not take place this year due to contractural issues. He requested a postponement of the work until May 2013. I responded to his request by approving the postponement.

Remarks: CONTAINED IN CLAY SOIL. OIL IN GROUNDWATER WINSTON CONTRACTOR HIRED TO PUMP OIL OUT OF THE CONTAMINATION. (FACILITY SOLD TO MATA/NYCTA)

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

BROWNFIELDS:
Program: BCP
Site Code: 460494
Acres: 2.296
HW Code: C231077
SWIS: 3101
Town: New York City
Update By: MJKOMORO
Site Description: Site Location: The site is located at 536 West 41st Street in New York City, New York County and consists of one tax parcel. Historically this was a number of lots which recently consolidated into one lot which is 2.296 acres in size and is in the Hell's Kitchen neighborhood.Site Features: The site has a one to two story brick and concrete building with a partial basement and an asphalt-paved parking lot. Unused Amtrak tunnels and the No.7 train extension tunnels are located approximately 25 to 30 feet beneath the ground surface. It is bordered by a utility building to the north, a church and abandoned gas station to the east, bus parking to the south, and a NYC Transit Authority bus depot to the west.Current Zoning/Uses: The site is currently vacant and is zoned C6-4 which is a mixed commercial/residential zone. Mixed use residential/commercial sites are locared to the west of the site. Commercial buildings are located to the north while to the east are two churches and an abandoned commercial site. North east of the site are condominiums and a police station.Historical Uses: The site has included a bottling company and warehouse, an auto repair station, and a filling station in the past. Site Geography and Geology: The surface topography slopes down to the east and is approximately 20 feet above mean sea level. Due to the topography, it is expected that groundwater would flow from the southwest towards the Hudson River. However,the groundwater flow can be affected by factors such as bedrock, fill and other factors. Depth to bedrock ranges from 4 feet on the west side of the site to 19 feet on the east side. Bedrock consists of schist with granite intrusions.
Env Problem: Nature and Extent of Contamination - There have been three reported spills on the Site since 1996, including diesel and hydraulic oil.Soil - The BCP investigation soil sampling results indicate seven SVOCs exceed the NYSDEC Unrestricted Soil Cleanup Objectives (SCOs). Most notable of the SVOCs was benzo(a) pyrene, which slightly exceeded the commercial SCO of 1 ppm at two location with a maximum concentration of 1.33 ppm. Metals exceeding unrestreicted SCOs were detected in 10 of 11 locations sampled during the RI. The primary metal contaminant was lead, found above unrestricted SCOs in 8 of the original 11 samples and all 14 summplemental lead samples. Maximum lead concentration was 6590 ppm, which exceeded both the unrestricted SCO of 63 ppm as well as the commercial SCO of 1000 ppm. PCBs also exceed the unrestricted SCO of 0.1 ppm at two location, with a maximum concentration of 0.348 ppm. The pesticide 4,4'-DDT exceeded the unrestricted SCO of 0.0033 ppm at 6 locations with a maximum concentration of 0.0826 ppm. 4,4'-DDD and 4,4' DDE also exceeded unrestricted SCOs in one location.Groundwater - Groundwater impacts are limited to slight exceedances of groundwater standards by one

MERCEDES-BENZ MANHATTAN INC (Continued) **1000168670**

Health Problem: SVOC (2.4-dichlorophenol at a concentration of 8 ppb compared to the standard of 5 ppb) and several common metals.Soil Vapor - Tetrachloroethene at a maximum concentration of 120 ug/m3. Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"5/12/04. J.Krimgold spoke to Grag Peterson (Langan Engineering)@ 201-794-6900 a consultant for a potential buyer. He will submit a proposal for remediation of this site.3/15/05. J.Krimgold reviewed the Tank Closure Report submitted by LANGAN Eng. on December 8, 2004. Based on information provided 4000 gal #4 oil tank has been removed. Slightly contaminated soil found during tank's removal was excavated. Post-excavation samples show no residual soil contamination. NFA letter.
Remarks:	TANK DOSEN'T SEEM TO BE LEAKING - BUT LINED TO TANK ARE VERY OLD- TANK WILL BE CLEANED AND LINES ISLOATED - THAN RETESTED

No free product at this time in wells.They have initiated the peroxide injections.A report will be generated toward the end of the year.10/29/03 - ANC Rental Corporation liable for this new spill.6/22/05-Vought-Received call Jed Smith (GES 303-861-2200x196) who is consultant for Realm (consultant for old spill number). GES does not work for national. Two different responsible parties USTs removed in late 2003 and new spill number issued.GM formerly owned National Car Rental prior to the merger with Alamo and Vanguard.See also Spill # 0308028 reported by American Envmtl removing two 1000 gallon tanks. American Environmental contracted by ANS Rental Corporation 200 South Andrews Avenue, 2nd Floor, Ft. Lauderdale, FLA 3330195 spill and 03 spill being handled by diffent RPs and consultants.RommelGM retained liability for this spill prior to merge with Alamo, Vanguard. 02/03/04Drilling scheduled 2/4/04.LBG, Ed DeStepanus 914-694-5711Rommel4/7/05-Vought-Spill transferred from Rommel to Vought as per Tang.6/23/05-Vought-Spoke to Jed Smith (GES 303-861-2200x196) who is consultant for Realm (former ownwer of site). USTs removed in late 2003. Report was sent to DEC on 2/15/05. Peroxide injections peformed in 2002-2003 and report recommended NFA. An additional copy will be sent for review. Sensitive receptor survey performed in 1999. A copy of sensitive receptor report, tank closure report and NFA request will be sent for review.8/1/05-Vought-See also closed spill #0308028. New file review by Vought:Final Results of Soil Investigation at 252 W. 40th Street-October 1995. Installation of sixteen soil borings. Bedrock encountered at 4' below grade in basement. Free phase product was observed in soil sample SB12-2[2-4'] and also in SB15-2[2-4']. Soil analyticals show: 310ppb MTBE(SB7-1 0-2'bg), 3000ppb MTBE(SB9-1 0-2'bg), 460ppb benzene(SB11-1 0-2'bg), 12400ppb xylene(SB11-1 0-2'bg), 7700ppb MTBE(SB12-1 0-2'bg), 980ppb benzene(SB12-2 2-4'bg), 4800ppb toluene(SB12-2 2-4'bg), 21400ppb xylene(SB12-2 2-4'bg), 25000ppb MTBE(SB12-2 2-4'bg), 1520ppb xylene(SB15-1 0-2'bg), 550ppb benzene(SB15-2 2-4'bg), 14000ppb ethylbenzene(SB15-2 2-4'bg), 4600ppb toluene(SB15-2 2-4'bg), 72000ppb xylene(SB15-2 2-4'bg). Subsurface Investigation for Underground Storage Tanks (EnecoTech 303-861-2200)-1/10/00. Installation of three soil borings around two (550-gallon) gasoline USTs. Three monitoring wells were advanced into bedrock. "Soil impacts appeared greatest adjacent to and downgradient of the dispenser. "EnecoTech is requesting that the site be closed under risk based corrective action criteria since no complete exposure pathways have been identified". Site is located within a parking garage and two USTs are in basement of garage. USTs were in

NATIONAL CAR RENTAL (Continued) **S106123829**

bedrock. "The results of the survey indicated that none of the thirteen adjoining property occupants had complaints of vapors". Soil analyticals show no TAGM 4046 Required Soil Cleanup Objective exceedences. Groundwater analyticals show: 37ppb benzene(GW1), 18ppb toluene(GW1), 1270ppb ethylbenzene(GW1), 4095ppb xylene(GW1), 8.5ppb toluene(GW2), 91ppb ethylbenzene(GW2), 181ppb xylene(GW2), 109ppb benzene(GW3), 27600ppb MTBE(GW3). Phase I Additional Subsurface Investigation (EnecoTech)-January 2002. Installation of thirteen soil borings. "USTs are filled through street level fill pipes on the west side of the garage". "In its letter of June 11, 2001 the NYSDEC requested further soil and groundwater investigation at the site with emphasis being placed on the two areas where ENSR encountered free product..." Groundwater flow to the west/southwest. "EnecoTech recommends 1)installation of two monitoring wells for downgradient delineation 2)the injection of dilute hydrogen peroxide into the monitoring wells to enhance natural biodregradation". Soil analyticals show: 1655ppb MTBE(GP4), 8800ppb MTBE(GP12), 1540ppb xylene(GP13), 3560ppb xylene(GP13). Groundwater analyticals show: 120ppb benzene(GW1), 735ppb ethylbenzene(GW1), 1360ppb xylene(GW1), 73ppb MTBE(GW1), 1510ppb MTBE(GW3). Underground Storage Tank Closure Report (American Environmental)-November 2003. Removal of two (1000-gallon) gasoline USTs. Two dispenser islands were present (one on basement level and one on the first floor level of the garage). The fill box to the tanks was on West 40th Street. A total of 22 (55-gallon) drums of impacted soil was removed from the site. Soil excavation was limited due to the presence of a sewer line on the east side of the excavation and "the spatial constraints of maintaining an active facility on the north side of the excavation". Five endpoint soil samples were collected. 8/3/05-Continued file review by Vought:Underground Storage Tank Closure Report (American Environmental)-November 2003. Endpoints from UST excavation show: 6600ppb toluene(west wall 5’bg), 13000ppb xylene(West wall 5’bg), 3100ppb benzene(bottom 8’bg), 65000ppb toluene(bottom 8’bg), 38000ppb ethylbenzene(bottom 8’bg), 140000ppb xylene(bottom 8’bg), 10000ppb MTBE(bottom 8’bg).Phase II Investigation and Initial Corrective Action Report(Eneco Tech)-5/2/03. "Eneco Tech is proposing injection of dilute hydrogen peroxide solution at the facility in order to increase dissolved oxygen concentrations...". Installation of six monitoring wells and one injection well. Free product in GW-7. Groundwater flow to the southeast. Soil analyticals show: 1540ppb xylene(GP13), 3560ppb xylene(GP15), 1655ppb MTBE(GP4), 8800ppb MTBE(GP4). Groundwater analyticals show: 237ppb benzene(GW1), 974ppb ethylbenzene(GW1), 935ppb xylene(GW1), 44400ppb MTBE(GW1), 820ppb MTBE(GW3), 4360ppb MTBE(GW4), 9ppb benzene(GW5), 5ppb toluene(GW5), 19ppb ethylbenzene(GW5), 416ppb MTBE(GW5), 325ppb benzene(GW7), 1860ppb toluene(GW7), 1700ppb ethylbenzene(GW7), 13300ppb xylene(GW7), 2890ppb MTBE(GW7), 7ppb benzene(GW8), 12ppb ethylbenzene(GW8), 67ppb xylene(GW8), 510ppb MTBE(GW8), 12ppb xylene(GW9).Letter from DEC Sawyer to Roberta Barkman (Paul, Hastings, Janfosky and Walker LLP)-10/30/03. "The NYSDEC has received notification that petroleum contaminated soil was discovered at the above referenced site".Letter from Paul Hastings to DEC Sawyer-11/11/03. "This letter is to confirm our understanding that the Department of Environmental Conservation is flexible on the two week deadline contained in your October 30, 2003 letter to me".Letter from DEC Rommel to ANC Rental Corporation (Paula Rickborn)-12/8/03. Department reviewed UST Closure Report and requires additional

NATIONAL CAR RENTAL (Continued) **S106123829**

investigation both onsite and offsite. Letter also required the installation of two monitoring wells in the "vicinity of the west wall soil sample and in the southwest corner, northwest of the floor drain". Report due to the DEC by 1/31/04. Letter from Leggette, Brashears and Graham(Destefanis) to ANC(Rickborn)-12/11/03. Proposal for installation of ten soil borings in vicinity of former UST location and preparation of a RAP. Letter from Paul Hastings to DEC Rommel-12/23/03. "...this letter is a request for an extension of the January 31, 2004 deadline for investigation and reporting..." Request to extend deadline to 3/31/04. Request due to coordination with General Motors (previous ownwer of site). General Motor's consultant is EnecoTech.Corrective Action Progress and Groundwater Sampling Report (Eneco Tech)-3/11/04. Application of hydrogen peroxide during six monthly site visits. Eleven monitoring wells onsite. "The dissolved oxygen measurements indicate that a general increase has been effected across the site , in particular in the vicinity of the former UST pit (GW-1) and along the south wall of the garage(W-7) where free product has been detected". "The application of hydrogen peroxide solution at a 10% concentration is scheduled for March and April". Depth to groundwater is 1-3' below grade and flow to the south. Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), dry well(GW4), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8).Remedial Investigation Report (Leggette, Brashears and Graham)-March 2004. Consultant hired by National Environmental. Installation of two additional monitoring wells. Two samples were collected "for forensic analysis in order to determine approximate aging...". Groundwater flow to the east-southeast. Soil analyticals show:140ppb MTBE(GW10 4-8'). Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8), 19ppb benzene(GW10), 16ppb ethylbenzene(GW10), 76ppb toluene(GW10), 97ppb xylene(GW10), 1700ppb MTBE(GW10), 35ppb benzene(GW11), 23ppb ethylbenzene(GW11), 91ppb toluene(GW11), 198ppb xylene(GW11), 390ppb MTBE(GW11).Corrective Action Progress and Groundwater Sampling Report (EnecoTech)-2/15/05. Application of dilute hydrogen peroxide during monthly site visits. Eleven monitoring wells onsite. Groundwater flow to the south-southeast. "The data show that oxygen levels have generally returned to those observed prior to the hydrogen peroxide treatments". "it would be expected that concentrations of STARS VOCs will continue to show a decline toward the applicable New York Standards. Therefore regulatory closure of this site is requested". Groundwater analyticals show: 1.4ppb benzene(GW1), 15ppb ethylbenzene(GW1), 7ppb xylene(GW1), 55ppb MTBE(GW1), 10ppb benzene(GW7), 6ppb toluene(GW7), 49ppb ethylbenzene(GW7), 121ppb xylene(GW7), 470ppb MTBE(GW7), 36ppb benzene(GW8), 6ppb ethylbenzene(GW8), 908ppb MTBE(GW8), 10ppb benzene(GW10), 96ppb toluene(GW10), 25ppb ethylbenzene(GW10), 192ppb xylene(GW10), 291ppb MTBE(GW8), 40ppb benzene(GW11), 100ppb toluene(GW11), 37ppb ethylbenzene(GW11), 139ppb xylene(GW11), 333ppb MTBE(GW11).Letter from GES Jed Smith to DEC Vought-6/29/05. Sent copies of 2/15/05 sampling report, 5/04 remedial investigation report, 11/03 UST Closure Report and 1/00 request for closure.

NATIONAL CAR RENTAL (Continued) **S106123829**

8/5/05-Vought-After file review DEC requires: 1)continued monitoring to ensure conditions exist (DO concentrations) Vought called Smith (303-861-2200x196) and application of peroxide was performed in May 2004 and DO levels still capable of supporting MNA. If groundwater concentrations show continued decrease spill be closed.Letter should be sent to:David FaveroFavero Geosciences1210 South 5th StreetSuite 2Springfield, Ill. 62703Fax; 217-522-67278/9/05-Vought-Sent letter with above requirement.9/12/05- Obligado -FILE TRANSFERRED FROM VOUGHT TO OBLIGADO9/14/05- Obligado- Review letter from Paul Hastings Attorneys, dated 9/8/05, which requested that Spill #0308028 be combined with Spill #9502512. Called Roberta Barkman and informed her that the 03 spill number was already closed by DEC Vought on 8/1/05 and consolidated with previous 95 spill number.3/29/06 - Obligado - Called Smith (303-861-2200x196). He no longer works for company. Directed call to Joel Young (ext 144), left message to call DEC. 9/1/06 - Obligado - Review Corrective Action Progress and Ground Water Monitoring Report, dated May 18, 2006. Requests closure based on decreasing trends in most wells, source removal (USTs and dispensers) and sensitive receptor survey which found no complete exposure pathways. Max total VOCs is 3708 ppb in GW5 with 1106 BTEX and 1590 MTBE. 8 of the 11 wells show an overall decreasing trend. 2 of the 11 wells (MW5 and MW2) show increasing trend. 1 well (MW10) shows fluctuating trend. Will discuss closure with Joe Sun.9/5/06 - Obligado - After discussion with DEC Sun, issue NFA. Call Eric Harvey at GES (845) 878-8067, ext 20. Asked him if there were any plans to redevelop the site as residential. He said he was unaware of any redevelopment plans. The site is still a rental facility with a carwash. I Asked thim where to send the NFA letter. He said he will email the information.

MARY BOONE GALLERY (Continued) **S104782023**

DEC Region: 2
DER Facility ID: 189550
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"4/22/03 SAMUEL- RCVD TANK CLOSURE & SITE ASSESSMENT REPORT.CONTACT PERSON:- HUGH J FREUND 212 705 7000- ATTORNEY FOR THE MARY BOONE GALLERY (R.P)2/9/06- DEC Piper spoke w/ LEE WESTCHOTT at Whitman CO. As per conversation there was free floating product discovered at the property. There is a monitoring well network. It has been recently sampled and Lee will forward a summary status report to the dept. including analytical summaries within the next month. Case referred to Koon Tang.06/08/06: This spill transferred to S.Kraszewski. - SK08/14/06: Received a voicemail from Ira Whitman, concerning the status of the site. He gave no callback number. SK reviewed the Tank Closure Report from Fall 2001. It is evident that high levels of VOCs were detected around the fuel oil UST. Lower exceedances were also found around the gasoline USTs and the Oil/Water separator. No mention if GW was encountered; the site lies next tothe Hudson River so GW is probably shallow. No MWs were installed during the investigation. Must know the GW condition above all else at this point. - SK08/15/06: Called Ira Whitman (732-553-4333) after he left a voicemail. He is no longer the consultant involved with this site, in fact he believes that no firm is involved at all. He was involved on a site project adjacent from this one: Dynamic Delivery was the contractor involved with the clean-up. He said this site already received an NFA. I said, based on the report, the GW condition must be established. He said it might be worth-while to review the reports from the neighboring site, which is also downgradient from this one (closer to the Hudson.) He said to contact a John Houshmand, of Clark Construction, who discovered the tanks during renovation work on the property. - SK08/18/06: Left a message for John Houshmand (917-553-4333). - SK08/22/06: John Houshmand called back. He gave me the contact info for Mary Boone, owner of the gallery. Gallery: 212-753-2929, Cell: 917-861-2929. She is not the property owner of the site, she only rents the space. According to John, contractor for the building and several others nearby, after the abatement of the gasoline tanks, fuel oil tank and sump pit the entire area was covered in concrete and established as the Mary Boone Gallery. He also mentioned the adjacent site which supposedly has GW wells and may be useful in characterizing the GW condition for this site. I told John I would look into this other site and get back to him, since he regularly deals with the owner. - SK08/29/06: I discussed the site situation with JK. The site needs a GW investigation, unfortunately their is no access to the interior so the MWs need to be placed on the sidewalk next to the former gasoline USTs and oil/water separator pit. Also, a soil boring next to the gasoline fill port will be needed. I called John Houshmand (917-553-4333) and explained what work would need to be done. I also asked him for the property owner's contact info since it is not on file. He will find out, plus he asked about other consultants to do the work since The Whitman company had a falling out with Mary Boone. I said to convince her that he seems like a reputable company based on the report. Letter was sent out asking for two MWs, a soil boring and sub-slab soilgas sampling. Property owner is a Samuel Weinberg. - SK11/09/06: Reassigned from Stephen Kraszewski to Chanda. (Chanda)01/02/07:Kartik Chnada of DEC sent a letter to Property Owner(Mr.Samuel Weinberg), requring that an additional investigation of GW and additional monitoring wells at the site. A work plan is

MARY BOONE GALLERY (Continued) **S104782023**

mandated by 03/02/07 for approval.01/10/07: Chanda received an e-mail from John Houshmand, Clark Construction Corp.He said that the RP will be retained Long Island Analytical Laboratories(LIAL), Inc. to perform this work. 2/27/07: Chanda received a limited subsurfsce investigstion work plan prepared by LIAL dated on 2/26/07.2/28/07: Chnada reviewed the limited subsurface investigation work plan. on 2/28/07, the Department conditionaly approves this work plan. On 2/28/07, Chanda sent a letter to RP(Samuel Weingberg)and his consultant (John Hushmand), Michael Veraldi (LIAL), requiring that an investigation summary report be submitted to DEC for review by April 16, 2007.4/19/07: Chnada received a phone call from Michael Veraldi, LIAL concerning the status of the site. He explained to me the cause of the delay on the investigation work report. 4/23/07: Chanda received a letter from Michael veraldi, LIAL regarding an extension to complete the approved work plan at the site.4/24/07: Chanda sent a time extension approval letter to the RP(Samuel Weingberg) and his consultant (John Hushmand), Michael Veraldi (LIAL). An Investigation Summary Report must be submitted to the Department by May 4, 2007. (Chanda)5/24/07: Chanda called John Hushmand (Clark Construction Corp.)and Micheael Veraldi (LIAL) regarding the investigation Summary Report and present site status. Micheal told me all work has been done and he is wating for analytical results. The report will be submited to DEC for review by 5/31/07. 6/6/07: On 6/5/07, Chanda received a Limited sub-surface site investigation report prepared by LIAL dated May 30, 2007.6/8/07:Kartik Chanda of DEC reviewed the imited sub-surface site investigation report regarding this spill.
The soil samples, grondwater samples and soil vapor samples showed that results is not exceed our NYSDEC and NYSDOH guideline. Chanda discussed with Joe Sun (NYSDEC) regarding the results of soil, groundwater, and soil vapor samples. Based on the information presented to the Department DEC closed this spill case. 6/11/07: Chanda sent a NFA letter to Samual Weinberg, Weinberg Properties and his consultants (John Houshmand, and Miclael Vrraldi) regarding closed this spill case.

DEC Memo:	TTF letter was sent to A B C Realty 152 W 57th Street 12th FloorNew York, NY 10019Attn: William HarraTTF in edocs.03/09/11-Hiralkumar Patel.3:00 PM:- visited site as inspecting property at 535 W 23rd street, a property two doors west from the subject site.met Fraser (917-921-8309), building super. site has building on slab and a photo gallery is located on groundfloor. Fraser mentioned that the tank is located somewhere underneath the gallery floor. he mentioned that after the tank system failed the test, tank was drained using supply line connection in boiler room. boiler room is sub-grade and west of the tank location. inspected boiler room wall adjoining the tank location and found no oil staining or seeping. fill port found sealed. Fraser mentioned that management is planning to remove tank and install new tank at the same location. currently, site is using temp. tank.6/7/11 Spoke to Seth Freedland, attorney representing the tenant, which is an art gallery. Phone: (212)344-1400 ext.202. He requested that they delay the work for the spill closure until July 2011. I would consider it, but would require a plan to do the investigation. He will contact the condo association and e-mail me back. Case has been open since January 2011. bf6/7/11 bf: received the folowing e-mail:Resending. Below bounced back. Sorry. Seth D. Seth D. FriedlandSubject: 521 West 23rd Street, NYC -- DEC Spill No. 1010869 - PBS No. 2-304158 Brian: Thanks for taking the time to discuss the above matte this morning. As mentioned, I represent the Steven Kasher Gallery which is theground level tenant at the condominium building which is the subject of the above PBS case. Our client operates a gallery at the location,and the tank is suspected of being buried under the galleryfloor. To accommodate our client's business requirements and to avoidundue disruption of our client's operations, as discussed, I would like tocoordinate the proposed tank closure work to be performed during the monthof July on a date or dates to be selected. You indicated that you wouldbe amenable to the work being done in July. I will coordinate with the building manager and its consultant in order to propose the scheduleof work and let you know. Should you have any questions, of course, please let me know. Thanks again for your assistance. Regards, Seth D. FriedlandFriedland Laifer & Robbins, LLP62 William Street, Third FloorNew York, New York 10005Tel. 212.344.1400 x. 202Fax 212.344.8735email: sfriedland@friedlandlaifer.comThis message and any attachments are solely for the use of the intended recipient(s). report.----------start----------Hi Brian, I sent this package back on Sept 27, 2011. I did not follow up with you and thought that you had closed it. I just received another violation from the client dated 8/14/2012 inspection #31107. Please let me know if you need anything else.----------end----------On 9/28/12, received the following e-mail from David Chan which included the same attachments as the 9/25/12 e-mail:----------start----------Hi Brian....----------end----------Tank failed because of hole in vent line. Submitted photos show the vent line with a corrosion hole and no visual contamination. Four samples were taken and were below DER- 10 allowances. A tank system test is required to close the spill case. today, responded to Mr. Chan's e-mail with the following:----------start----------David, The spill case can not be closed until the Department receives a passing tightness test for the whole system. The owner needs to correct the following registration information:1. The product stored is #4 oil not #2 oil.2.The tank overfill prevention is registered as a gauge. A gauge used for overfill prevention is only applicable to aboveground tanks.3. The tank spill prevention is a catch basin. It is registered as none.4. Pipe secondary containment is blank. The information correction application is attached. There is no fee for this application transaction and an original copy must be submitted (fax or e-mail copies will be returned unprocessed).Brian----------end---------- bf11/13/12 received the following e-mail from David Chan:Dear Brian, Please find the final tank and system test verifying the integrity of the system for the spill closure. I am following up with the owner with regards to their PBS. Please let me know if you need anything else for the closure. Thank you in advance. Best regards, David Chan Riteway Tank Maintenance Corp.700 Hicks StreetBrooklyn, NY 11231718-855-7272 phone718-855-7244 faxdavid@petroleumtek.com11/27/12 Based on sampling results, case closed. bf

DEC Memo:	SEE ALSO 86-05564, 95-11782, 98-08740, 95-13588.4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.4/19/04 Reassigned from Rommel to K Foley.5/24/04 Tibbe received voicemail from Curt Schmidt, Fleming Lee Shue (212-675-3225). Replacing AKRF.5/27/04 Added diesel and #2FO to material spilled to address spills #9808740 and 9511782. Spoke to C. Schmidt. Will set up a site meeting next week. 555 W 23th St(spill #0306399), the Tate building, is adjacent to Mendon property which has a system installed on the first floor (no basement). 6/3/04 Set up meeting with A. Fleming for Monday, 6/7. A. Fleming (office 212-675-3225, cell 917-885-1475). 6/7/04 Met with A. Fleming. System located inside Tate has not been in operation. Arnie needs to look into system manufacturer data to see if they can make changes to the system. Wells haven't been sampled since AKRF lost the job. Will arrange to have wells sampled.7/15/04 Received call from C. Schmidt, FLS. Wells will be sampled 7/19-7/20. FLS still looking into making changes to existing system.9/21/04 Spoke with Mohammed Ahmed, Fleming Lee Shue (917-612-6018). He was previously with AKRF. Would like to present all data and propose NFA. He will need to FOIL the file to get AKRF data.10/13/04 Received summary from FLS proposing closure of site.Background:Site is currently a luxury apartment building with art galleries on the ground floor. The site was historically used for freight transportation and warehouse facilities. The Hudson River is approx 0.25mi to the west. Site was

MENDON LEASING (Continued) **S104275477**

mainly used as a truck rental, fueling and maintenance yard. Hertz formerly occupied the site and built a two-story garage in 1963. Hertz installed six 550gal gas USTs in the adjacent parking area located along 24th Street. Hertz also installed a gas distribution system with 4 dispensers. In 1965, Hertz installed four additional 550gal diesel USTs and a separate dispenser. One 7500gal heating oil tank was installed in the SW portion of the building.CMCR, LTD acquired the site from Hertz and also used the site as a truck rental/leasing facility. In 1985, the site was leased to Mendon Leasing Corp. Mendon reported four spills, 9511782(diesel), 9513588(gas), 9605688(gas), 9808740(#2FO). Costco Wholesale purchased the site in 1998 in anticipation of zoning that would allow a retail development at the site and closed the fuel and gas tanks in place. In July 2000, the Related Companies purchased the property and built the current apartment building that covers the site.Tank testing:In July 1990, Mendon was issued an NOV from the FDNY for failing to do the 10yr tightness testing on the six gas tanks.In March 1991, Mendon has all the gas and diesel tanks tested. The gas tanks passed but the diesel tank failed. The diesel tank was repaired and passed retest.In 1993, the heating oil tank was tested and passed.In 1995, the diesel tanks were tested again and failed. The contents were emptied in 5/96 and filled with polyurethane foam.In Feb 1997, the gas tanks were also emptied and filled with water.Previous Investigations:Several invetigations were conducted between 1993 and 2001. ES Engineering did work on behalf of Greyhound Lines. ERM Northeast did work for DEC. AKRF did work for Costco and Related.Soil and GW has been impcated by on-site releases of petroleum and possibly also off-site sources. Areas within the parking lot on the north side of the former two-story garage building and inside the building, in the vicinity of the heating oil tank, contained free product in soils and GW. Free product in the former parking lot ranged from 0.08 to 1.63'. Free product found inside the former garage building was as thick as 4'. Dissolved-phase VOCs were also detected in GW as high as 5408ppb. No SVOCs were detected.Soil/GW interface is located at approx 8'bgs, flowing west toward Hudson. GW is not tidal. Bedrock approx 63'bgs, sloping S-SW.Remedial Actions:In Dec 1999, four 550gal diesel USTs and six 550gal gas USTs were removed from beneath the open parking lot. The heating oil tank was removed in Oct 2000. Approx 1000 tons of grossly contaminated soils were excavated and disposed of. The free product appeared on the groundwater surface and removed with absorbant pads. The excavations were left open to monitor for free product. No additional free product was observed and excavations were backfilled. No post-ex sampling was completed.The Department issued a letter on 2/12/01 with comments. A remedial workplan consisting of an in-situ remediation for soil and GW using SVE and bioremediation was presented and approved by the Dept.In March-April 2001, six geoprobes were completed. NMW-1 showed total BTEX in GW at 275400ppb, NWM-2 at 156200ppb, and NMW-4 at 1330ppb. Insufficient GW was recovered from NMW-3 and NMW-5. NMW-6 was non-detect.In October 2000, an SVE pilot was performed. An underslab SVE system was designed and installed to remove residual VOCs and to add atmospheric oxygen to allow bioremediation to occur. Air extracted from below the slab was carbon treated before venting to the roof. A vapor barrier was installed beneath the slab.Operation of the system began August 2002 and operated thru August 2003 for 1615hrs. VOCs, carbon dioxide, oxygen and moisture levels were monitored before the input and at the output of the carbon canisters. System inspection and monitoring were

MENDON LEASING (Continued) **S104275477**

conducted daily for the first two weeks and then weekly inspections were made.At startup, VOCs were measured at 20-50ppm. Concentrations dropped from the initiation in August 2002 thru November 2002 when the system was stopped for seven weeks due to equipment problems. Upon restarting the system in Jan 2003, a rebound was measured with VOCs rising to 60ppm. The system was operated for two weeks with a second 4 week idle period(1/7/03-2/25/03). After this rest period, the rebound did not occur. The system operated for a period of four weeks with a continual decrease of VOC concentration. Equipment failure again shut the system down for five weeks(3/27/03-5/1/03). A slight rebound to several ppm occured when the system restarted.The system continued to operate thru June 2003 with day-long shutdown for maintenance with no rebounds observed. Levels of VOCs in the extracted air in June 2003 were zero. Between July 2003 and July 2004, the SVE system was out of service due to major damage in the main section of the blower.In August 2004, the SVE blower and motor were downsized to a 10HP regenerative blower capable of 200 scfm at 80 inches of water. VOCs were measured two days after startup which detected levels of VOCs in extracted air between 2 and 5ppm, indicating that no significant VOCs are being extracted from beneath the building.A total of 10 MWs exist on site. Four(MW-3, ERM-4, MW-14, MW-15) are currently located on the sidewalk. The other six(NMW-1 to NMW-6) are inside the Tate building. Max total BTEX detected in MW-14 at 1990ppb(7/16/02). Max MTBE detected in NMW-2 at 410ppb(8/8/03). By the concentrations of MTBE detected in upgradient wells, MW-14 and MW-15, there may be an off-site source. (There are two gas stations upgradient at 24th St and 10th Ave.) Concentrations of BTEX have been decreasing in source areas. It appears that removal of grossly contaminated soils and free product at the time of the UST removal in 2001 eliminated the primary source of GW contamination. Groundwater samples to be collected 10/16/04.11/1/04 Spoke to Mohammed Ahmed, FLS (212-675-3225). Approx 3" of free product(gasoline) was detected in MW-14 (sidegradient of tank field) on 8/17/04. One week later, there was no product detected. Sampled again on 10/14/04, no product detected. He suspects that it is from an off-site source. There is a LukOil Station at 239 10th Avenue (open spills #9810383, 9707190). Oct 2004 monitoring report to be submitted this week.11/16/04 Received status update (FLS, 11/11/04). GW sampling conducted 10/12-10/13/04. No samples were collected from MW-15 located on the sidewalk of 24th St and NMW-1 located inside the Buia Gallery on 23rd St. MW-15 was backfilled during construction of the Tate Bldg. NMW-1 was inaccessible due to an exhibit. BTEX ranged from ND to 1086ppb(MW-14). MTBE ranged from ND to 130ppb(NMW-2).Off-site sources of contamination may be contributing to site conditions. However, it is not clear that it is not from onsite sources.12/7/04 Issued letter requiring additional delineation around MW-14 and at former upgradient well location MW-15. Report to be submitted by 3/15/05.12/20/04 Spoke to M. Ahmed, FLS. Will propose re-installation of upgradient MW-15, one well further upgradient (to confirm possible off-site impacts), and one west of MW-14(sidegradient).12/29/04 Received proposal from FLS to install three additional MWs.12/30/04 Issued letter approving workplan.2/18/05 Received report for the installation of MW-14, 15A and 17. According to the report, there appears to be an off-site source on the northwest portion of property along W24th St. Concentrations of BTEX increased from 1086ppb to 2067ppb in MW-14. Report also states that the LukOil station may be contributing to the

MENDON LEASING (Continued) **S104275477**

MTBE concentrations across the site. 3/15/05 Spoke to Mohammed Ahmed, FLS. Requested two Geoprobes across W 24th St to eliminate the Motor Freight Station and Auto Repair Shop as potential sources.8/15/05 Spoke to M. Ahmed. A. Fleming spoke to NYSDOH at K. Tang's recommendation. NYSDOH requested subslab and indoor air samples. Results expected next week. FLS proposes to use this data to support closure. Explained that there is still dissolved which remains on the corner of the property. Agreed to wait for results to decide next steps.11/29/05 Email to A. Fleming and M. Ahmed, FLS, provided comments on the October 17th request for spill closure. Regarding the indoor air and soil gas sampling which was performed, it is unclear if the concentrations detected within the building are due to any background interferences within the building. Directed FLS to conduct a full inventory as directed by the NYSDOH guidance for evaluating soil vapor intrusion. An additional round of indoor air samples must be taken at least 24hrs following the removal of any possible VOC sources. Results will be forwarded to NYSDOH. The Departments will determine further action for vapor mitigation, if required, following review.The groundwater data collected to date has been sporadic with five sampling rounds completed within the last three years. Quarterly groundwater sampling and monthly gauging must be completed and results submitted to the Department. Groundwater direction must be confirmed.The groundwater concentrations at MW-14 were as high as 4340ppb total VOCs in the last sampling round in January and have historically been fluctuating. MW-17, which was recently installed west of MW-14, also had readings of 2777ppb total VOCs. The Department requires additional wells be installed across W 24th street, north of MW-14 and MW-17, and west of MW-17. A proposal to remediate the contamination in this area will be required. It is expected that the additional delineation, groundwater and indoor air sampling results, with scaled site and contour maps, will be submitted by the beginning of February. 4/20/06 Requested update from M. Ahmed of FLS.6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM7/06/06 Requested update from A. Flemming of FLS. Mr. Flemming and I spoke about the history of the site. He still believes the impacts to groundwater at wells MW-14 and MW-17 are from off-site contamination (possibly Lukoil site on 10th Ave and 24th Street). These wells are supposedly up-gradient side of the site. I requested Arnie send me the latest data on the site including groundwater sampling and indoor air sampling data. - JAM7/25/06 Spoke with A. Flemming a number of times. I do not believe a second round of indoor air sampling was conducted, however a vapor barrier is in place. They conducted site-wide groundwater sampling in May 06. Mr. Flemming believes the latest GW results show that off-site sources are contributing to the GW contamination along W24th Street. He will submit a report of the wells that were sampled (not all were sampled because they were inaccessable). I requested that he state his justification for spill closure in the groundwater sampling report.10/16/06 Received a call from Steve Panter of Fleming Lee Shue (212) 675-3225. He said the report is ready and will be submitted this week. - JAM11/14/06 Received the report dated October 20, 2006 via email. The report summarizes all the groundwater analytical data since April 2003. FLS makes the argument that off-site sources are contaminating the sidewalk wells. A summary of all the off-site sources is included as well as a two part technical explanation for the difference between groundwater contamination in the sidewalk MWs and on-site MWs. The first part is a "multivariate analysis," and the

MENDON LEASING (Continued) **S104275477**

second is a comparison between Benzene and MTBE. The report is uploaded into edocs. - JAM11/22/06 Received SVE System Data and Indoor Air Quality Data Summary Report from FLS. Report uploaded to eDocs.01/22/07 Issued a letter to Greg GusheeThe Related Companies, Inc.60 Columbus CircleNew York, NY 10022with the NYSDEC's position on the FLS report. Chris Magee in Central Office reviewed the report and based on the material presented he does not concur with FLS' conclusion that off-site sources are contributing to the contamination found in the sidewalk wells. The letter states that The Related Companies, Inc. is responsible to monitor and remediate the site. Groundwater must be gauged and sampled quarterly and based on the results the NYSDEC will determine if a remedial strategy is necessary. The letter is uploaded into edocs. - JAM8/21/07 Reviewed FLS letter submitted to the DEC on April 13, 2007 in response to DEC comments sent on 1/22/07. FLS believes that contamination found in off-site wells on West 24th Street stems from a different source. I sent the letter to Chris Magee in Central Office for review. - JAM9/06/07 Sent email to Steve Panter at FLS. The email states that, "the data are inconclusive and do not prove that an off-site source is affecting the groundwater in the monitoring wells in the sidewalk... The Department cannot approve spill closure at this time. A round of groundwater samples should be collected from all wells to obtain up-to-date groundwater quality data. Results should be submitted with appropriate recommendations for further monitoring and/or remedial activities if necessary." - JAM1/18/08 Received an email from Jim Harrington in Central Office. Steve Panter from FLS contacted Mr. Harrington stating that they will do another round of sampling but he wants assurance that after the next round of GW sampling the spill case will be closed. Mr. Harrington said he will review the spill case and material forwarded by Mr. Panter. Afterwards, he will contact Region 2 staff for further discussion before responding to Mr. Panter. - JAM9/22/08 Reviewed the Groundwater Sampling Report/Spill Closure Request submitted by Flemming Lee Shue dated May 12, 2008. All on- and off-site monitoring wells were sampled in February 2008. Groundwater monitoring results show no signicant change in contaminant levels in any of the on-site or off-site wells. The sidewalk wells continue to show exceedences for VOCs in groundwater (i.e. 748ug/L total VOCs in well MW-14 and 829ug/L total VOCs in MW-16) however, the exposure risk from these contaminants is low. The groundwater monitoring report is uploaded to eDocs.Senior technical staff in Central Office supports closure of this spill without meeting recommended objectives because of the low risk of exposure.This spill case was closed and a NFA letter was issued. NFA uploaded to eDocs. - JAM

Remarks: CALLER FOUND .7 FEET OF GASOLINE IN A TWO INCH GROUNDWATER MONITORING WELL. LOCATION IS A TRUCK LEASING COMPANY. MARK TIBBE NOTIFIED OF RESULTS. ADDITIONAL MONITORING WELLS TO BE INSTALLED AND SIX TANKS ARE TO BE PULLED.

DEC Memo:	9/6/12-Vought-Primary off-hours responder. Called Anthony Milanese (East Coast Petroleum Ph:(718)402-5107) Fax:(718)402-4336) and left message to return call to Vought. Vought received call back from and spoke to Milanese and tank is a 20,000-gallon #2 AST. Vought spoke to John and leak was dry leak and tank was emptied and potential source was removed. No visible signs of oil. Entire system failed test and failure was due to faulty manwway gasket and gasket and inspected and possibly repaired and tank retested. Milanese will callback with owner info for TTF letter and PBS# as no PBS registration in database and building may have alternate address. Vought received callback from Milanese who noted that AST was in conctact with the concrete as well and that the fillport was capped to prevent deliveries until repair is completed. Milanese also noted that site was registered under PBS #2-056227 and that mailing address on PBS Registration was correct address for owner. Spill assigned to DEC Demeo as site is TTF for PBS site. Vought prepared TTF letter with cc to East Coast for signature by Demeo and mailing address of letter was:Penn Tower, LLC132 West 31st StreetNew York, NY 10001Attn: Toby TenenbaumPh:(212)564-1521Demeo signed letter and Vought added to E-docs, sent to East Coast via Fax and original mail to Penn Tower. Spill assigned to DEC Demeo as TTF at PBS site.

DEC Memo:	9/19/07 Called 212-593-9100 (# on FIR) and left message for Scott Ross (contact on FIR). Mr. Ross returned my call and left a message. I called him back and he said the tank was not tested. He confirmed that the tank is 2K (consistent with registration) and is not 5K as in the spill report. He said that the tank is a concrete wrapped tank. I called Mark Salamack of Petroleum Tank Cleaners (they did the test). I left a message and requested that he call me back. M. Salamack called me back and said the technician believes the failure is in the fill line. Also he told me the address was incorrect on the Spill Report. The address is 312 NOT 12. Sent ttf letter to:Ivy SteeleChelsea London Co.c/o Buchbinder & WarrenOne Union Square WestNew York, NY 10003Attn: Eva MatosCalled Ms. Steele at

APT. BUILDING (Continued) **S108765788**

212-243-6722 and left message to call me back. Eva Matos called me back and told me the line failed and that PTC will be making the repairs. She also told me to send letter to her attention. I confirmed the mailing address with her. bf10/9/07 Received fax from Eva Matos Letter included an invoice from PTC showing that the tank was retested and passed. Also, the fill line and vent line were replaced. No mention of contamination. I called Ms. Matos back and left a message on her voice mail. I stated that a letter is needed from PTC regarding any contamination found. Phone: 646-637-9019. bf10/11/07 On 10/10/07, I received a letter by fax from Mark Salamack. Letter states that the failure was caused by a broken vent line. The fill line was compromised, but not broken. Both were replaced and no contamination was encountered. Tank was tightness tested on 9/27/07 and passed. NFA. bf10/15/07 On 10/12/07, received message from Eva. She requested a call back regarding whether or not I received letter from PTC. I called her back (646-637-9019) and told her that I received the letter. bf

DEC Memo:	Sangesland sent contaminated soil letter Curt Schmidt said that Mark Tibbe knows about a major spill site just upgradient from this site.2/5/03 - TRANSFERRED FROM SAWYER TO ROMMEL3/1/04 Reassigned from Rommel to K Foley.Spill Remediation Plan received 12/22/03 for removal of four 260gal gas USTs, one 500gal gas UST, and one 500gal no. 2 fuel oil UST. Site under development but once contained three buildings. A former auto service and plastic manufacturing existed on site. Five USTs from NW corner were removed 9/29/03 (four 260gal gas USTs and one 500gal gas UST). Soil excavation was postponed due to safety concerns. Will excavate and direct load for disposal. A minimum of four post-ex samples will be collected at PID hot spots on each sidewall. DTW is 6'bgs and therefore a bottom sample will probably not be feasible. If there is potential for structural damage to the adjacent building, two soil samples will be collected from that sidewall. Two samples will be collected from sidewalls greater than 20' in length. Analysis by VOCs (8021) and SVOCs (8270). Spill #9704542 was previously reported for a fuel oil release from UST. Scaled site map with former tank locations/hot spots and Phase I and II reports. There have been site investigations and proposed remediation plans submitted for 543-547 West 23rd St (spill

555 WEST 23RD ST (Continued) **S105999938**

#8605848). There is documented fuel oil and gasoline contamination of groundwater associated with sites to the east that have encroached upon the site. Mendon Leasing, 527 W 23rd file(#9605688,9808740,9511782, 9513588).3/22/06 Reassigned from Foley to Tang. (KMF)4/3/06: Reassigned to Andersen. Three sources of contamination: Fuel oil leak from a UST in northeast corner. Gasoline leak from five USTs in northwest corner. Gasoline groundwater contamination from adjacent Mendon Leasing site. All six tanks were removed by Fleming Lee Shue (FLS). The tank closure report was not received. Spoke with FLS and they will resend a report that was sent to Albany.4/7/06: Received and reviewed tank closure report. Soil was excavated from three areas of contamination. Residual SVOC contamination from urban fill and VOC contamination from the adjacent spill site is present. The site will be redeveloped with a vapor barrier. NFA letter sent.

Remarks: CALLERS COMPANY PERFORMING EXCAVATIONS ON SITE, AND SOIL SAMPLES ARE SHOWING GASOLINE CONTAMINATION OF THE SOIL AROUND SOME UNDERGROUND TANK SITES ON THE PROPERTY

DEC Memo:	Tank has been emptied and temp tank set up in place5/30/2012 - Sangesland got an e-mail from Donna at ABC Tank - They submitted a proposal to the owner a while ago, but never heard back. Job was "Probably done" by someone else 5/31/2012 Sangesland spoke with Edwin Colon, Facilities Mgr 212-245-6600 x250. He said Eastmond was hired to do repairs. Neil Tomasetti at Eastmond said both fill line and vent line failed test. Sidewalk was opened and fill line went directly through old coal chute down to tank vault (former coal room). Fill line dripped into coal chute and ran down to tank vault. Tank was cleaned (no holes) but ulltrasound showed pitting on tank bottom. Tank was raised into saddles and bottom of tank was relined with metal plates. New fill lines and vent lines installed. No contamination was found and the new system passed a pressure test. Spill Closed.

DEC Memo:	sharif sent a ttf ltr 0n 2/24/05.06/21/05-SR: Spoke with Stuart Smoller of Andrews Building Corp. who is the managing agent now for the building. They are going to convert the oil heating system to gas burn heating system. So, tank will be abandoned and documentation will be sent to DEC.10.06.05 //Sharif- rec'd tank test failure report from Eastmond and Sons Boiler. The fillline and the return line failed. Apparently, oil leaked through the pipeline and contaminated the surrounding environment. Needs subsurface investigation around the tank. Tried to contact Mr. John Wellmann of Andrews Corp.212-529-5688* 276. He is on vacation. 12/21/05 Sharif//I spoke with Rene Lewis of EastMond. He said they pumped out the tank, cleaned it and later on they found oil water mix coming into the tank. So they installed a monitoring well to identify if any oil has escaped from the tank to the surrounding environment. They checked the well again and found only water coming into the well, a sample was taken from the well. Contaminated soil around the return line was removed and manifest will be sent to DEC along with closure report.03/15/06 Sharif Rahman- Rec'd waste disposal manifest, analytical result for the water sample from the well.VOC/SVOC non detect. Spill is closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE/SANGESLAND"12/10/2002 Sangesland reviewed a report prepared by David Winslow of ATC Associates Inc (212-353-8280).Report states that contamination was found around a buried 1000 gal tank under the floor of the building. The tank was cleaned out and excavated around. Because of foundation issues, the tank could not be removed and not all of the contaminated soil could be removed.Based on the soil conditions, Sangesland requested goundwater samples from the area. ATC took four groundwater samples in the area of this tank. GW is at approx 8 ft below the cement floor level. 3 of 4 samples are clean. One has some VOC hits just over 8020. Based on the location and the inability to excavate further, and that the surrounding water samples were clean, we can conclude that the contamination is localized and not spreading.Spill closed

DEC Memo:	02/03/06 Feroze talked with Mr. Minick (owner) 212-604-9898. He informed that there was a leak in the tank, they have closed the leak and pumped the oil out. It is above ground tank, floor is made of concrete. An environmental company is working for them. TTF is sent to :Mr. Minick440 west 22nd StreetNew york, NY 10011. 02/10/06 Mr. Minick called and told me that they will close the tank by PTC. He will submit DEC the documents soon.03/02/06 Feroze,: Mr.Minick told me that PTC has taken soil sample. He will submit soil analysis result and tank closer report to DEC soon.It was 275 gallon tank.03/10/06 Feroze received a certificate and soil analysis result. The result shows that VOC and SVOC are within accepatble limit. They also submited a manifest for removal of contaminated soil. The spill is closed.

Updated By:	RXSCHICK
Site Description:	Location:The site is located at 27-35 West 24th Street in the Borough of New York, New York. It is located on the northern side of West 24th Street. The site is designated as Block 826, Lot 19.Site Features:The site is a rectangular shaped parcel of land which measures approximately 9,000 square feet and is improved with one 11-story building with a basement. Current Zoning/ Uses: The building on site is used for office space and a restaurant/ bar on the first floor and part of the basement. The site has a zoning code of M1-6,

FORMER GUARDIAN CLEANERS (Continued) **S113916768**

which allows industrial and manufacturing. The current use of the site complies with the zoning code. Historic Uses:A former dry cleaning facility occupied restaurant/ bar space until approximately 1990. The former dry cleaning operations may have contributed to the known contamination found in soil and soil vapor.Site Geology and Hydrogeology:The subsurface lithology was homogenous throughout the site. The subsurface soil was noted to consist of urban fill material and brown coarse grain sand. No site-specific hydrogeological information is available concerning groundwater depth and flor direction. However, based upon data for sites in the surrounding area groundwater is anticipated to be encountered at 30 feet below the surface and is likely to flow in a westerly direction.

Env Problem: Nature and Extent of Contamination:Chlorinated volatile organic compounds (VOCs) such as tetrachloroethene (PCE), trichloroethene (TCE), and cis1,2-dichloroethene (cis 1,2-DCE) were detected in soil samples in two separate sampling events. TCE and PCE were detected in both sub-slab and indoor air samples during vapor intrusion sampling. No groundwater data is available. The presence of chlorinated VOCs in soil and soil vapor is most likely due to former operation of the dry cleaner, which commonly used chlorinated solvents for dry cleaning purposes.Previous investigations included a Phase I Environmental Assessment, a Phase II Subsurface Investigation, a Supplemental Phase II Investigation- Vapor Intrusion Sampling, as well as a Supplemental Phase II Investigation and Conceptual Design. Soil-A total of nine borings (SP-1 through SP-9) in a radial pattern extending from the sump were installed. Chlorinated VOCs were detected in soil samples collected from 0 to 4 feet. The maximum concentrations were as follows: PCE 5,990 ppm; TCE 94 ppm; and DCE 69 ppm.Soil Vapor-A vapor intrusion investigation was performed and included one indoor air quality sample (IA-01) and four sub-slab samples (SS-01 through SS-04) in the existing building. One ambient background sample (OA-01) was also collected to consider background influence. The sub-slab concentrations were as follows: TCE 760 ug/m3 and PCE 6600 ug/m3. The NYSDOH guidance recommends mitigation based on these elevated detections. Significant Threat: NYSDEC and NYSDOH have not made a decision yet as to whether this site poses a significant threat to environment and human health.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/29/2014

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/10/2014

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

NY RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 09/24/2014

State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Next Scheduled EDR Contact: 03/02/2015
Data Release Frequency: Varies

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Biennially

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 28 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
NEW YORK, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	3604970039B - FEMA Q3 Flood data
Additional Panels in search area:	3604970031B - FEMA Q3 Flood data 3604970030B - FEMA Q3 Flood data 3604970038B - FEMA Q3 Flood data 3604970047B - FEMA Q3 Flood data 34017C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile South
Site Name:	MANHATTAN GENERAL MAIL FACILITY
Site EPA ID Number:	NY6180000352
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	not available. Saturated layers impacted by salt water intrusion are present in the overburden. It is generally inferred that the depth to the uppermost 'aquifer' is greater than 70 feet at the surface of the bedrock/sediment interface.
Hydraulic Connection:	Detailed hydraulic connection information is not available. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit at the site. The surface elevation of bedrock decreases to the southwest of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT		**GEOLOGIC AGE IDENTIFICATION**	
Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Certified Sanborn® Map Report

12/30/14

Site Name:	**Client Name:**
Lot 60	Cardno ATC #15
401 Ninth Avenue	104 East 25th Street
New York, NY 10001	New York, NY 10010
EDR Inquiry # 4171325.3	Contact: Denise Cosenza

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #15 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Isabel Ribeiro
Project Manager/ Site assessor

Pamela Oelerich
Senior Project Manager/ Environmental Professional

1.2 Findings and Conclusions Summary

ATC Associates Inc. (ATC) has performed this Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05. ATC conducted this Phase I ESA for WCD Consultants. The Site consists of two parcels that are located along 9th Avenue, between west 31st Street and West 33rd Street, on the west side of Manhattan, New York (Block 729, lots 50 and 60). Currently, the Site consists of train yards of the Long Island Railroad (LIRR) and three parking lots used by parking management companies. Two of the parking lots are located along West 33rd Street and one along West 31st Street. The train yards are located 60 feet below street level. The objective of the Phase I ESA was to identify the presence of recognized environmental conditions (RECs) as defined by ASTM and/or to identify areas of environmental concern that may represent RECs. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has not revealed evidence of *recognized environmental conditions (REC) with the exception of the following* in connection with the Site:

FINDINGS AND CONCLUSIONS SUMMARY							
Report Section		**No Further Action**	**De Minimis Condition**	**Recognized Environmental Condition (REC)**	**Historical REC**	**ASTM Non-Scope Condition**	**Description**
4.0	**User Provided Information**	X					
5.1.1	**Federal Database Findings**	X					
5.1.2	**State and Tribal Database Findings**			X			The Site is classified as an "E" designated Site. Refer to note (1) below.
5.1.3	**Local Environmental Record Sources**			X			The Site is classified as an "E" designated Site. Refer to note (1) below.
5.3	**Historical Records Sources**			X			Prior use of the Site as filling station, auto repair shop, mechanical shops and buildings with buried petroleum tanks See note (2) below. Review of a prior soil investigation report identified petroleum related contamination and PCBs at the Site's train yards. See note (3) below.
6.2	**Hazardous Substance Use,**	X					

	Storage and Disposal						
6.3	**Underground Storage Tanks**			X			Potential presence of abandoned USTs beneath the Site.
6.4	**Aboveground Storage Tanks**	X					
6.5	**Other Petroleum Products**	X					
6.6	**Polychlorinated Biphenyls (PCBs)**			X			PCBs were identified at the Site during a phase II Site investigation report prepared by HWE. Refer to note (3) below.
6.7	**Unidentified Substance Containers**	X					
6.8	**Non-hazardous Solid Waste**	X					
6.9	**Wastewater**	X					
6.10	**Waste Pits, Ponds and Lagoons**	X					
6.11	**Sumps**	X					
6.12	**Septic Systems**	X					
6.13	**Stormwater Management System**	X					
6.14	**Wells**	X					
7.0	**Interviews**	X					
8.1	**Asbestos-Containing Material (ACM)**	X					
8.2	**Radon**	X					
8.3	**Lead in Drinking Water**	X					
8.4	**Lead-Based Paint (LBP)**	X					
8.5	**Mold Screening**						
8.6	**Additional User Requested Conditions**	X					

(1) The review of New York City Department of City Planning and New York City Department of Building records, as well as the review of the regulatory agencies database identified both lots of the Site as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "Hazmat, Noise and Air". An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The classification of the Site with an "E" designation is considered to represent a *recognized environmental condition* for the Site.

(2) The review of the historical uses of the Site identified the Site to be used as a train yard, a car repair shop, filling stations, auto repair and mechanical shop. Identified on the adjoining properties were a filling station, the train yards, printing facilities, motor shops, metalwork companies and dying facilities. These identified historical activities typically use petroleum products, solvents, and other hazardous chemicals in their routine operations. Therefore, the historical uses of the Site and surrounding area are considered to represent a *recognized environmental condition* for the Site. Additionally, the historical on-

Site USTs identified in the historical sanborn maps and certificates of occupancy were not identified on the NYSDEC database; however since the structures were demolished more than 40 years ago, no records are expected to be found. Any buried tanks that were not removed during demolition operations could potentially remain on-Site, either located in collapsed basement or buried.

(3) ATC's review of the Site investigation report prepared by Hazardous Waste Engineering Consultants (HWE) dated April 9, 1991, identified the presence of petroleum related contamination, metals and polychlorinated biphenyls (PCBs) contamination at the Site. No remedial action or additional investigation reports were provided for review. Since the contamination may still be present at the Site, ATC considers the reported contamination to represent a *recognized environmental condition* for the Site.

1.3 Significant Data Gap Summary

The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gaps* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gaps* identified.
5.1	**Standard Environmental Records**	No *significant data gaps* identified.
5.2	**Physical Setting Sources**	No *significant data gaps* identified.
5.3	**Historical Records Sources**	No *significant data gaps* identified.
6.1	**Methodology and Limiting Conditions**	No *significant data gaps* identified.
7.0	**Interviews**	No *significant data gaps* identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC recommends the performance of a phase II Environmental Site Investigation (ESI) at the Site. The phase II ESI shall include the collection of soil and groundwater samples to assess whether the subsurface of the Site has been impacted by the environmental conditions identified during this phase I ESA. As part of the phase II ESI, a geophysical survey shall be performed to attempt to determine if USTs are burried beneath the Site.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify *recognized environmental conditions* and certain potential environmental conditions outside the scope of ASTM Standard Practice E 1527-05 in connection with the Site at the time of the site reconnaissance. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E 1527-05, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the Site through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the Site, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current Site usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, non-hazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties on the Site.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the Site.

The scope of the assessment also included consideration of the following environmental issues or conditions that are beyond the scope of ASTM Standard Practice E 1527-05:

- Mold Screening to report the findings of a baseline survey of readily observable mold and conditions conducive to mold on the Site identified by limited interview, document review and physical observation and to provide an opinion on whether an identified condition warrants further action. The scope of work for the Mold Screening was intended to be consistent with ASTM Standard Practice E 2418-06: S*tandard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process*. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to one knowledgeable person from Site management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein,

ATC observed the HVAC equipment room(s) and readily accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed readily accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the Site.

- Visual observation of suspect ACM, consisting of providing an opinion on the condition of suspect ACM on the Site based upon visual observation during the site reconnaissance.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the Site.

- Lead in drinking water data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the Site meets or exceeds drinking water standards for lead.

- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for LBP based on the construction date of buildings on the Site and visual observation of the condition of suspect LBP.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the Site is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the Site is identified as being located within a flood plain.

2.3 Significant Assumption

Any assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the Site.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products at the Site. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E 1527-05 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any Site.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the Site and environmental conditions on such Site.

- *Past Uses of the Site* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of Site at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E 1527-05 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other Site construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the Site are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the Site during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial

Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the Site in this report, represent a comprehensive definition or precise delineation of Site ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The *Environmental Professional* Statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E 1527-05 and the scope of work for this assessment.

Per ASTM Standard Practice E 1527-05, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the Site. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E 1527-05, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice 1527-05 and therefore, the entire report must be updated to reflect current conditions and Site-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by WCD Consultants (WCD), and third parties authorized in writing by WCD, and ATC, including the lender(s) in connection with a secured financing of the Site, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual Site conditions may change with time, and that hidden conditions may exist at the Site that were not discovered within the authorized scope of the assessment.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either expressed or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of $100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The Site is located at 371 9th Avenue and 401 9th Avenue in New York County, New York 10001. According to information obtained from the New York City Department of Finance, the Site is identified as Block 729, Lots 50 and 60. According to the New York City Department of City Planning zoning map, the Site is currently zoned as M1-6 "Manufacturing District." The current owner of lot 50 is identified as "Brookfield Properties" and the current owner of lot 60 is identified as "9th & 33rd Associates." A Site Vicinity Map is provided in Appendix A and a Site Plan is provided in Appendix B.

3.2 Surrounding Area General Characteristics

Land use in the vicinity of the Site consists mainly of commercial and residential buildings. The specific usage of adjoining and contiguous properties is summarized in Section 3.5.

3.3 Current Use of the Site

The Site is currently developed with the train yards of the Long Island Railroad (LIRR) and three parking lots used by parking management companies; two along West 33rd Street and one along West 31st Street. The train yards are located 60 feet below street level. The three parking lots are paved with asphalt and have no buildings. The depressed train yards were not accessible for inspection at grade, but were viewed from street level at west 31st Street and West 33rd Street. The total area of the Site is approximately 5 acres. There are currently no buildings on the Site.

3.4 Description of Site Improvements

The following table provides general descriptions of the Site improvements.

SITE IMPROVEMENTS	
Size of Site (approximate)	5-acres
General Topography of Site	Flat with a slight downward slope towards the southwest. The train yards at the Site are located 60 feet below street level and unleveled with the rest of the Site.
Adjoining and/or Access/Egress Roads	Access to the Site available along 9th Avenue, West 33rd Street, and West 31st Street.
Paved or Concrete Areas (including parking)	Parking lot and access roads paved with asphalt and concrete sidewalks along the exterior of the Site.
Unimproved Areas	The Site is fully improved and is occupied by the train yards and parking lots.
Landscaped Areas	No landscaping areas were observed at the Site.
Surface Water	No surface water was observed on or near the Site.
Potable Water Source	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer Utility	None
Storm Sewer Utility	NYCDEP
Electrical Utility	Consolidated Edison (Con Ed)
Natural Gas Utility	Con Ed
Current Occupancy Status	100% occupied with three parking lots and the LIRR train yards

SITE IMPROVEMENTS	
Unoccupied Buildings/Spaces/Structures	No buildings on Site.
Number of Occupied Buildings	None
General Building Description	No buildings on Site.
Number of Floors	0
Total Square Feet of Space (approximate)	Not applicable (N/A)
Construction Completion Date (year)	The train yard on the Site was constructed by approximately 1911 and the parking lots were on Site by approximately 1944.
Construction Type	N/A
Interior Finishes Description	N/A
Exterior Finishes Description	N/A
Cooling System Type	None
Heating System Type	None
Emergency Power	None

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Site	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
North	424-434 West 33rd Street	Multi-tenant office building	Commercial	One tenant of this adjoining facility, identified as Knickerbocker Graphic Services, is listed in the regulatory agency database as a RCRA SQG. The facility is also listed NYSDEC UST database with one active tank. Refer to sections 5.1.1 and 5.1.2
	411 9th Avenue, New York	Restaurant	Commercial	None
	408 West 34th Street, New York	Parking lot	Commercial	None
	414 West 34th Street, New York (aka 425 West 33rd Street)	St. Michaels church and school	Commercial	The St. Michaels School is listed in the NYSDEC UST database and LTANKS database. Refer to section 5.1.2
	431 West 33rd Street, New York	Commercial (parking lot)	Commercial	None
East	372 9th Avenue, New York	United States Postal Service	Commercial	None
West	450 West 33rd Street, New York	Multi tenant office building with deli on ground floor	Commercial	Two tenants of this facility identified as Daily News and Art Carved Inc. are listed in the RCRA- SQG database Refer to section 5.1.1. This facility is also listed NYSDEC UST and AST databases with

Direction from Site	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
				one active tank UST and one active AST. Refer to sections 5.1.1 and 5.1.2
South	400 West 31st Street, New York	Commercial (office building)	Commercial	None
	406 West 31st Street, New York	Fashion Institute of Technology (FIT) Residence Hall	Residential	Two tenants of this facility identified as James Byron Photo Engraving and Expansion Group are listed in the RCRA- SQG database. This facility is also listed in the NYSDEC AST database and NY Spills database. Refer to sections 5.1.1 and 5.1.2
	432 West 31st Street, New York	Residential building with deli on ground floor	Commercial and residential	None
Southwest	450 West 31st Street, New York	Residential and commercial (art studios and apartments)	Residential and commercial	One tenant of this facility identified as Evergreene Painting Studio is listed in the RCRA- SQG database Refer to section 5.1.1
Southeast	362 9th Avenue, New York (aka 360 West 31st Street)	Multi-tenant office building	Commercial	Two tenants of this facility identified as GHG Realty and Eastman Kodak are listed in the RCRA- SQG database. Refer to section 5.1.1
Northwest	448 West 34th Street, New York	Parking lot	Commercial	None
Northeast	420 9th Avenue, New York	B&H photo/video/audio store	Commercial	B&H is listed in the RCRA-SQG database. Refer to section 5.1.1

Several listings for the surrounding properties were identified on the Federal and State regulatory databases (See Section 5.1 for details).

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by WCD Consultants (the User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

ATC was not provided with title record information from the User.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

User provided no information regarding environmental liens or activity of use limitations; however, the User contracted ATC to obtain the information. An environmental lien search was requested for the Site from EDR.

According to the Environmental Lien Search Reports, included in Appendix L, no records of environmental liens against the Site Site's lots 50 and 60 were found. The Environmental Lien Search Reports further state that no records of AULs in place at the Site were found.

4.3 Specialized Knowledge

User provided no specialized knowledge regarding *recognized environmental conditions* associated with the Site.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the Site.

4.5 Owner, Site Manager and Occupant Information

The User informed ATC that the Site is developed with two parking lots and the train yards.

4.6 Reason for Performing Phase I ESA

According to the User, the reason for conducting this ESA is in connection with a potential redevelopment of the Site.

4.7 Other User Provided Documents

Per the ASTM Standard Practice E 1527-05 ATC obtained the documents listed below from User. Further discussion may be found in relevant sections of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
ASTM-05 Questionnaire completed by WCD	August 13, 2007	Mr. Rick Gimello
Environmental Investigation Report	April 9, 1991	Hazardous Waste Engineering Consultants (HWE)
Environmental Site Assessment Report (block 729, lot 60)	February 1995	EEA, Inc

Copies of the abovementioned questionnaire and reports are provided in Appendices D and H.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the Site. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the Site based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as a being within the approximate minimum search distance from the Site based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. It is noted that the search radius for the LTANKS database has been reduced from one-half mile to one-quarter mile based on the densely developed urban nature of the Site area. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Site Listed?**	**# Sites Listed**
Federal National Priority (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	1
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Site & Adjoining	No	8
Federal Institutional Control/Engineering Control Registry	Site	No	0
Federal Emergency Response Notification System (ERNS)	Site	No	0
Federal Facility Index System (FINDS)	Site	No	0
State and Tribal NPL	1 mile	No	0
State and Tribal CERCLIS	½ mile	No	0
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	2
State and Tribal Leaking Storage Tank Incident Reports (LTANKS)	¼ mile	No	31
State and Tribal Registered Petroleum Bulk Storage Tank (UST/AST)	Site & Adjoining	No	7
State and Tribal Institutional Control/Engineering Control Registry	Site	No	N/A
State and Tribal Voluntary Cleanup Site (NY VCP)	½ mile	No	1
State and Tribal Brownfield Sites	½ mile	No	0
State Spills (NY Spills)	Site & Adjoining	No	4
NY MANIFEST	Site & Adjoining	No	7

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Site Listed?**	**# Sites Listed**
EDR Manufactured Gas Plants	1 mile	No	6
NY E Designation	Site	**Yes**	N/A

As the above table indicates, the Site was identified on the NY E Designation database. The following subsections provide a discussion of the listings for the Site and surrounding properties, which have been identified within the corresponding search radii.

5.1.1 Federal Agency Database Findings

The following listings with a potential for release and impact on the Site were identified in the Federal agency databases searched:

James Banyon Photo Engraving / Expansion Group (basement)
406 West 31st Street
New York, NY
Databases: Resource Conservation and Recovery Act (RCRA)-Small Quantity Generator (SQG), NY Manifest
Approximate Distance from the Site: Adjacent to the South
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, the tenant James Banyon Photo Engraving of this adjoining property is identified as a small quantity waste generator with one reported violation. The reported violation is associated with annual reporting requirements and compliance was achieved on 09/24/97. According to the NY Manifest, this facility has disposed of 885 gallons of Silver waste in 1996 and 60 gallons in 1997. Another tenant of the same adjoining property, Expansion Group, is identified in the RCRA-SGQ database with no reported violations.
Discussion: This adjoining property is depicted with a multi tenant commercial building which occupies the full footprint of the lot. The building is connected to the municipal sanitary/sewer services. Based on the fact that no significant violations were reported for the adjoining property coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider these listings to represent a *recognized environmental condition* for the Site.

GHG Realty Co Inc / Eastman Kodak
360 West 31st Street
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the Southeast
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, the tenant GHG Realty of this adjoining property is identified as a small quantity generator with no reported violations. According to the NY Manifest, this facility disposed of 185 gallons of Non-listed corrosive waste in 2006 and 220 gallons of Halogenated Solvents and Still Bottoms waste in 1995. Another tenant of the same adjoining property, Eastman Kodak, is also identified in the RCRA-SGQ database with no reported violations. Reportedly, this tenant disposed of several small amounts of D-001 Non-ignitable wastes in 2002.

Discussion: This adjoining property is depicted with a multi tenant commercial building which occupies the full footprint of the lot. The building is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported for the adjoining property coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider these listings to represent a *recognized environmental condition* for the Site.

Knickerbocker Graphic Services
424 West 33rd Street, 8th floor
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the north
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, one tenant of the 8th floor of this adjoining property, identified as "Knickbocker Graphic Services", is listed in the RCRA- conditionally exempt SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed of several amounts of halogenated solvents and still bottoms.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Daily News LP NY Headquarters / Art Carved Inc.
450 West 33rd Street
New York, NY
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the West
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, one tenant of the 3rd floor of this adjoining property, identified as "Daily News", is listed in the RCRA- SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed of 50 gallons of Silver of in 1995. Another tenant of the same adjoining property is also listed in the RCRA-SQG with no reported violations. No manifests were available for review on this facility.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

B&H Inc
420 9th Avenue
New York, NY
Databases: RCRA- SQG
Approximate Distance from the Site: Adjacent to the East
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: According to the regulatory agency database report, this adjoining property is listed in the RCRA- SQG database with no reported violations. No waste manifests were available for review.

Discussion: This adjoining property is used as photographic equipment /electronics store. The area is connected to the municipal sanitary/sewer services and the building occupies the full footprint of the lot. Based on the fact that no violations were reported, coupled with the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Evergreene Painting Studios
450 West 31st Street – 7th Floor
Databases: RCRA- SQG, NY Manifest
Approximate Distance from the Site: Adjacent to the Southwest
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: According to the regulatory agency database report, this tenant of the 7th floor of this adjoining property is listed in the RCRA- SQG database with no reported violations. As reported in the NY Manifests, this facility has disposed several amounts of Halogenated solvents and still bottoms between 1988 and 2006. Additionally, this facility disposed of unknown waste between 2000 and 2006.
Discussion: This adjoining property is connected to the municipal sanitary/sewer services. Based on the fact that no violations were reported, the tenant occupies an upper floor of the building and the long-term connection of the area to the municipal sewer system, ATC does not consider this listing to represent a *recognized environmental condition* for the Site.

Manhattan General Mail Facility
West 29th & 9th Avenue
New York, NY
Databases: Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) - Federal CERCLIS No Further Remedial Action Planned (NFRAP)
Approximate Distance from the Site: 721 feet to the south
Assumed Groundwater Gradient: Crossgradient
Regulatory Data Summary: This CERCL-NFRAP facility identified as "Manhattan General Mail Facility" was not listed on the NPL and became an archive facility on September 15, 1993.
Discussion: Based on the distance, regulatory status, lack of reported releases, and assumed crossgradient position, ATC concludes that this listing does not represent a *recognized* environmental condition for the Site.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release on the Site.

5.1.2 State and Tribal Database Findings

The following listings with a potential for release and impact on the Site were identified in the state and tribal databases searched:

Lot 50, Tax block 729
371 9th Avenue
Manhattan, NY
Databases: NY E DESIGNATION
Approximate Distance from the Site: on-Site
Assumed Groundwater Gradient: N/A

Regulatory Data Summary: The Site's block 729 lot 50 is listed in the NY E Designation database. The E designation is associated with air, noise and hazardous chemicals (petroleum storage tanks).
Discussion: According to the review of the New York City Department of City Planning zoning maps and New York City Department of Building records, The Site's block 729, lot 60 is also identified as having an "E" designation. An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The classification of the Site with an "E" designation is considered to represent a *recognized environmental condition* for the Site.

424 West 33rd Street Associates
424 West 33rd Street
New York, NY
Databases: UST
Approximate Distance from the Site: adjacent to the north
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: This adjoining property is listed in the underground storage tanks (UST) database with an active 7,500-gallon #6 fuel oil UST. No spills or releases were reported associated with this facility.
Discussion: Based on the lack of reported releases, the on-Site UST is not considered to represent a *recognized environmental condition* for the Site.

St. Michaels School
425 West 33rd Street
New York, NY
Databases: LTANKS, AST
Approximate Distance from the Site: adjacent to the north
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The Site was identified on the AST database (PBS number 2-056022) with one active 7,500-gallon #2 fuel oil aboveground storage tanks (AST). This adjoining facility is also listed in the LTANKS database with two closed spills. Spill number 9608649 was attributed to the Site on 10/11/96 due to a tank overfill that caused the release of approximately 25-gallons of oil into the ground. The spill was cleaned up and the spill case was closed on 10/11/1996. Spill number 0606006 was attributed to this facility on 08/24/06 due to a tank leak that caused the release of approximately 200 gallons of fuel oil. The fuel oil was contained in the secondary containment and no drains or sewer were reportedly affected. The oil was pumped out and the tank was reportedly replaced. The spill case was closed on 09/11/2006.
Discussion: Based on regulatory status, ATC concludes that this adjoining facility is not considered to represent a *recognized environmental condition* for the Site, since all of the listed spill cases have regulatory closure.

450 West 33rd Street
450 West 33rd Street
New York, NY
Databases: UST, AST
Approximate Distance from the Site: adjacent to the west

Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This adjoining property is listed in the underground storage tanks (UST) database with an active 3,000-gallon #2 fuel oil UST. This property is also listed in the AST database with two active 3,000-gallon diesel ASTs. No spills or releases were reported associated with this facility.
Discussion: Based on the lack of reported releases, the adjoining property UST and ASTs are not considered to represent a *recognized environmental condition* for the Site.

406 West 31st Street
406 West 31st Street
New York, NY
Databases: AST, NY Spills
Approximate Distance from the Site: adjacent to the south
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This adjoining property is listed in the AST database with one closed and removed 550-gallon AST, a closed and removed 14,500-gallon #2 fuel oil AST, a closed 15,000-gallon #6 fuel oil AST, an active 2,000-gallon #2 fuel oil AST and a 16,000-gallon #2 fuel oil AST. The two active ASTs were installed on 05/17/2006. This facility is also listed in the NY Spills database with two closed cases.

- Spill number 0310638 was attributed to this property on 12/15/2003 due soil contamination identified in the fill ports. Reportedly, during a phase I/phase II investigation preformed at the Site soil borings installed next to two fill ports evidenced soil contamination down to approximately 4-5 feet below ground. The sidewalks were removed and the soils were excavated until soil samples results were below the New York City criteria. The spill case was closed by the NYSDEC on 03/21/2007.
- Spill number 9914517 was attributed to this property on 03/23/00 due to a transformer oil spill identified on vaulted ConEd transformer. Reportedly, 5 gallons of dialectic transformer fluid were identified in a vault. Reportedly there were no entryways to sewer or waterways. The oil spill was cleaned up on 03/29/2000 and the equipment was removed and replaced. The spill case was closed by the NYSDEC on 10/03/03
- Spill number 9606711 was attributed to this facility on 06/01/96. Reportedly, "Kingsklawn Press", a former tenant of the 13th floor of the building was dumping printing chemicals down the toilets. The building is reported to be connected to the municipal sewer. The spill case was closed by the NYSDEC on 08/26/1996.

Discussion: Based on the remedial activities preformed at this facility, closed status of the spills and aboveground of the tanks, the adjoining property listings are not considered to represent a *recognized environmental condition* for the Site.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release on the Site.

5.1.3 Local Environmental Records Sources

New York City Department of Health and Mental Hygiene (NYCDOHMH)

The NYCDOHMH maintains files of health-related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen complaints regarding asbestos issues, lead-based paint violations, or reports of chemical odors or fumes. NYCDOHMH information

concerning the Site was requested in a Freedom of Information letter (FOIL). As of the writing of this report, ATC had not yet received a response from the NYCDOHMH. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Department of Environmental Protection (NYCDEP)

NYCDEP information concerning the Site was requested in a FOIL request. As of the writing of this report, ATC had not yet received a response from the NYCDEP. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Fire Department (FDNY)

The FDNY, Bureau of Fire Prevention maintains information pertaining to gasoline and petroleum bulk storage tanks. FDNY information concerning the Site was requested in a Record Search Request Application. As of the writing of this report, ATC had not yet received a response from the FDNY. Should a response change the conclusions of this report, ATC will notify the Client.

New York City Department of City Planning (NYCDCP)

ATC reviewed the NYCDCP Zoning Map from the NYCDCP website (http://www.nyc.gov/html/dcp/home.html), which indicated that the Site is located in an area that is currently zoned as M1-6– "Manufacturing District. Both lots of the Site have been identified as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "hazmat, noise and air." An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. Additionally, according to the review of the "*No. 7 Subway Extension - Hudson Yards Rezoning and Development Program Final Generic Environmental Impact Statement, dated 2004*" available at the NYCDCP website http://www.nyc.gov/html/dcp/html/hyards/eis.shtml, both lots of the Site were proposed to be mapped with an "E" designation for hazardous materials (related to petroleum and non-petroleum contamination), noise attenuation, and air.

New York City Department of Buildings (NYCDOB)

ATC reviewed available building department information, provided by the NYCDOB via the on-line Building Information System website (http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp). The Site is designated as Block 729, Lots 50 and 60. There are no open Environmental Control Board (ECB) or Department of Buildings (DOB) violations on lot 60 of the Site. Lot 50 of the Site has no open ECB violations; however, this lot has five active Department of Buildings (DOB) violations relating to boiler issues. These reported violations are not related to environmental issues and therefore are not considered to represent a recognized environmental condition for the Site.

New York City Department of Finance

ATC reviewed available tax files at the New York City Department of Finance website (http://www.nyc.gov/html/dof/html/home/home.shtml) for information on the Site. The current owner of Lot 50 is identified as "Brookfield Properties" and the current owner of lot 60 is identified as "9th and 33rd Associates." The review of tax files did not identify conditions indicating *recognized environmental conditions* at the Site or surrounding area.

Water Utility

Within the City of New York, potable water is supplied to Manhattan primarily from upstate New York reservoirs. ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website (http://www.nyc.gov/html/dep/home.html) for the year 2004. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the United States Environmental Protection Agency Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the Site.

Sewer Utility

The NYCDEP is responsible for the municipal combined sanitary and stormwater sewer system. This system is operational in all five boroughs of New York City, with the exception of certain remote areas of the City, namely Queens and Staten Island, which have separate operating systems for sewage and stormwater. The New York City sewer infrastructure consists of a 6,000-mile grid of sewers beneath the streets, from which a daily 1.3-billion gallon wastewater effluent travels to 14 separate water pollution control plants (WPCPs) throughout the City to be processed. This system enables the City's sewage and stormwater, pursuant to various municipal, state and federal regulations, to be treated to near drinking water-quality standards.

Electrical and Natural Gas Utility Companies

The local utility, Consolidated Edison, provides electric service and natural gas to the Site.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle, *Central Park, N-Y* dated 1995; the elevation of the Site is approximately 28 feet above mean sea level. The area surrounding the Site indicates topography that slopes to the southwest.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

According to the New York Department of Environmental Conservation, Water Power and Control Commission report titled *Ground Water in Bronx, New York, and Richmond Counties, with Summary Data on Kings and Queens Counties, New York City, New York*, the Site Area is located in a southern extension of an upland area that covers a large part of New England. Manhattan has been extensively eroded by pre-glacial stream action, modified by later glacial erosion and deposition. A thick layer of unconsolidated glacial and glaciofluvial deposits are present beneath the section of Manhattan in which the Site is located. The sediments were deposited into a deep north-south oriented depression in bedrock in the area. The process that formed the depression is unknown, but may be attributable to the differential

weathering rates of various rock types through pre-glacial alluvial erosion. In addition, a major east-west oriented fault is present in bedrock in the area. The thickness of the unconsolidated sediment beneath the Site is 40 to 100 feet.

5.2.3 Soils

According to EDR, soils beneath the Site are classified as Urban Land, with variable soil textures. Urban Land refers to soils that have been altered by urban development such as buildings and streets, where at least 85 percent of the surface is covered with asphalt, concrete or other impervious building material. Typically, these soils have been mixed with other materials, such as brick and concrete, and characteristics can only be determined by on-site investigation.

5.2.4 Hydrology

Based on the surface topography at the Site, groundwater flow is assumed to be to the southwest. Estimated groundwater levels and/or flow direction may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations. ATC observed no evidence of active or inactive water supply wells at the Site. There are no surface water bodies or streams located at the Site. The nearest water body, the Hudson River, is located at approximately 1,300 feet to the west of the Site. Based on the Site's elevation and close proximity to the Hudson River, groundwater beneath the Site is estimated to be encountered at approximately 20 feet below ground.

Stormwater runoff originating from the Site is discharged to the combined municipal sanitary/stormwater system located in the streets surrounding the Site.

5.2.5 Other Physical Setting Sources

Flood Plain Map

ATC reviewed a Flood Insurance Rate Map (FIRM) depicted in the EDR Radius Map regulatory agency database report. According to FIRM map – Community Panel # 3604970039B, the Site is not located within a 100- and 500-year floodplain zone. A copy of the flood plain map is available for review in the EDR Radius Map report included in Appendix E.

Wetlands Map

ATC reviewed a National Wetlands Inventory Map depicted in the EDR Radius Map regulatory agency database report. According to wetlands map – *Central Park, NY* quadrangle, the Site is not located within a designated wetlands area.

A copy of the National Wetlands Inventory map is available for review in the EDR Radius Map report included in Appendix E.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical Site and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Site	**Surrounding Area**		
Prior to 1940	Train yard and a furniture warehouse since at least 1911. A garage with underground storage tank in 1930.	Commercial and light industrial	Sanborn maps (1890, 1899, 1911 and 1930), City Directories (1920, 1923, 1927, 1931, 1934 and 1938), Topographic maps (1897)	First map reviewed dated 1890. Data gaps between 1899 and 1911, and between 1912 and 1920.
1940-1960	Train yard, furniture warehouse, auto repair shop, filling station, contractor's yard, and parking lots.	Commercial and residential	Sanborn maps (1950), City Directories (1942, 1947, 1950, 1956 and 1958), Topographic maps (1947, 1955 and 1956)	No significant data gaps.
1961-1980	Train yard, parking lots, and a vacant lot.	Commercial and residential	Sanborn maps (1976 and 1979), City Directories (1963,1968,1973 and 1978), Topographic maps (1967 and 1979)	No significant data gaps.
1981 to present	Train yard and parking lots.	Commercial and residential	Sanborn maps (1982, 1985, 1987, 1988, 1991, 1992 and 1993), City Directories (1983, 1988, 1993, 1998, 2000), Topographic maps (1981 and 1995)	No significant data gaps.

In accordance with ASTM standards, ATC attempted to review the historical uses of the site back to obvious first development, or back to 1940, whichever is earlier. Despite the data gaps noted in the Historical Use Summary table, the Site usage appeared unchanged over the period in which the gaps were identified. Historical information sources researched in this assessment allowed uses of the Site to be traced from the present back to 1895. This does not predate the Site's obvious first developed use, per ASTM Standard Practice E 1527-05 § 8.3.2., and therefore constitutes historical data failure. Based on the documented use of the Site, this historical data failure does not significantly impact the findings of this report. As such, the requirements of ASTM Standard Practice E 1527-05 §8.3.2.1 §8.3.2.2 have been satisfied and, as stated in ASTM Standard Practice E 1527-05 §8.3.2.3, the historical research is considered complete.

5.3.1 Aerial Photographs

ATC did not review aerial photographs as part of this assessment. Based on ATC's experience, little useful information was expected from a review of aerial photographs due to the urban density and long-term development of the Site and surrounding area.

5.3.2 Fire Insurance Maps

ATC reviewed available historical Sanborn fire insurance maps of the Site and surrounding areas in order to identify historical land use that may have involved hazardous substances and petroleum products. Historical fire insurance maps from the years 1890 through 1996 were reviewed to determine historical uses of the Site. The following are descriptions and interpretations from the fire insurance map reviews:

FIRE INSURANCE MAP SUMMARY	
Year	**Comments**
1890	**Site:** The Site is not shown on this Sanborn map. **Surrounding Area:** Surrounding properties to the north, east, and west are not depicted on these Sanborn maps. Surrounding properties to the south are depicted with a paper hangings manufacturer and a church.
1899	**Site:** The Site is not shown on this Sanborn map. **Surrounding Area:** Surrounding properties to the north, east, and west are not depicted in these Sanborn maps. Surrounding property to the south that was formerly occupied by the paper hangings manufacturer is now vacant.
1911	**Site:** The Site appears to be depicted with a train yard on the central portion of the Site, a chair manufacturer on the southwest portion of the Site (429-435 West 31st Street), a fire house on the northern portion of the Site (440 West 33rd Street), and residential dwellings. **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a wood working shop, church/school, news company, and hospital. Surrounding properties to the west are depicted with a chocolate factory and residential dwellings. Surrounding properties to the south and east are not shown on this map.
1930	**Site:** The Site is depicted with a train yard on the central portion, a furniture warehouse on the southwest portion of the Site (429-435 West 31st Street), an iron works facility on the northern portion of the Site (412 West 33rd Street), a garage with an 2,000-gallon buried gasoline tank on the northeast portion of the Site (401-405 9th Avenue), and residential dwellings. **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a wood working shop, church/school, a wood supply storage building, and a printing company. Surrounding properties to the west are depicted with a theatrical storage building, filling station with underground tanks, and a film studio. Surrounding properties to the south and east are not shown on this map.
1950	**Site:** The Site is depicted with a furniture warehouse on the southwest portion of the Site (429-435 West 31st Street), auto repair shop on the southern portion of the Site (427 West 31st Street), train yard on the central portion of the Site, filling station on the northeast portion of the Site (401 9th Avenue), parking lots, and a contractor's yard on the northwest portion of the Site (440-442 West 33rd Street). **Surrounding Area:** Surrounding properties to the north and northwest are depicted with a parking lot, church/school, a printing company, residential dwellings, and a vacant lot. Surrounding properties to the west remain largely unchanged from the 1930 Sanborn map, aside from the apparent addition of a machine shop and another filling station. Surrounding properties to the south and east are not shown on this map.
1976,1979, 1980,1982, 1985,1987,	**Site:** The Site is depicted with a train yard on the central portion of the Site, two parking lots, and a vacant lot on the southern portion of the Site. **Surrounding Area:** Surrounding properties to the north and northeast appear relatively

1988,1991, 1992	unchanged from the 1950 Sanborn map. Surrounding properties to the west are depicted with one large building labeled as the Westyard Distribution Center. Surrounding properties to the south and east are not shown on this map.
1993,1994, 1995,1996	**Site:** The Site appears to be depicted with the current improvements. It is shown to have a train yard on the central portion of the Site and three parking lots. **Surrounding Area:** Surrounding properties appear relatively unchanged from the 1992 Sanborn map.

According to the review of the historical sanborn maps, the train yards that currently occupy the central portion of the two lots (lot 50 and lot 60) of the Site were built in approximately 1911. Prior to their construction, this portion of the Site was occupied with the West 32nd Street, dwellings with stores on ground floor and a church.

The northern parking lots, on lot 60, along West 33rd Street have been present at the Site since approximately 1950. The 1950 Sanborn map identifies the presence of a filling station on the northeastern portion of the parking lot, on the corner of 33rd Street and 9th Avenue. Prior to be used as parking lots, the northern portion of the Site was used as dwellings and stores and a garage on which a buried tank is identified.

The parking lot on lot 50 of the Site, along West 31st Street has been present at the Site since approximately 1993. Prior to being used as a parking lot, this portion of the Site was depicted with dwellings and a hanging factory in 1899; dwellings and a furniture factory from 1911 to 1930; a dwelling, an auto repair shop, a mechanical shop, an auto parking on which a gas tank is identified, and a warehouse in 1950. From 1976 to 1993 this portion of the Site was depicted as vacant

Surroundings properties were historically used as dwellings, commercial buildings, the train yards, a printing facility and a filling station.

The review of the historical uses of the Site identified the Site to be used as a train yard, a car repair shop, filling stations, auto repair and mechanical shop. A filling station, the train yards and a printing facility were identified in the surrounding properties. These identified historical activities typically use petroleum products, solvents, and other hazardous chemicals in their routine operations. Therefore, the historical uses of the Site and surrounding area are considered to represent a *recognized environmental condition* for the Site. Copies of the fire insurance maps are provided in Appendix G.

5.3.3 Site Tax Files

ATC reviewed available tax information from the New York City Department of Finance website for historical ownership information on the Site. ATC reviewed the available final assessment rolls available for the years 2003, 2004, 2005, 2006, and 2007. The owner of lot 50 of the Site is identified as Brookfield Properties, Ltd for the years 2006 and 2007 and West 31st Street Inc for the years 2003 through 2005. The owner of lot 60 of the Site is identified as 9th and 33rd Associates for all years reviewed. Documentation is included in Appendix G. The review of tax files did not identify past uses indicating *recognized environmental conditions* at the Site.

5.3.4 Recorded Land Title Records

The acquisition of a chain-of-title report was not a part of the scope of services for this ESA.

5.3.5 Historical USGS Topographic Quadrangles

ATC reviewed five historical USGS topographic quadrangles of the Site and surrounding area dated 1947, 1966, 1979, and 1995. All of the maps depict the Site with the train yards. The surrounding areas are depicted with scattered structures, which include the United States Postal Service on 9th Avenue and Madison Square Garden. The review of historical topographic maps did not identify past uses indicating any *recognized environmental conditions* at the Site or surrounding areas; however, the long term use of the Site as a train yard is considered to represent an environmental concern for the site.

5.3.6 City Directories

ATC reviewed historical city directories for the Site for 1920, 1923, 1927, 1931, 1934, 1938, 1942, 1947, 1950, 1956, 1958, 1963, 1968, 1973, 1978, 1983, 1988, 1993, 1998 and 2000 as provided by EDR. The following table summarizes the city directory review:

YEAR	DESCRIPTION
1920	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with a printing facility, embroidery works, a book binding company, a linotyping company, and a trucking company.
1923	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including printing, publishing, typesetting, engraving and lithography facilites, a book bindery, a glue company, a stone company, motor transportation companies, and a gold company.
1927	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including printing, publishing and lithography facilities, a book bindery, a glue company, a stone company, motor transportation companies, and a gold company.
1934	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/ light industrial listings including an electro chemical company, a shoe shiner, and printing and publishing facilities.
1938, 1942	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, and a textile company.
1947	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, a check duplication company, a plastic manufacturer, and a textile company.
1950, 1956, 1958, 1963	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including lithography, printing and publishing facilities, a fur dying facility, a metal company, a clothing company, a check duplication company, and a textile company.
1968, 1973	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a parking lot, printing/publishing/lithography facilities, a jewelry manufacturer, a fur dressing facility, a truck company, and a check duplication facility.
1978	**Site:** Site address is not listed in research source.

YEAR	DESCRIPTION
	Surrounding Properties: Surrounding properties are listed with multiple commercial/light industrial listings including a parking lot, a mounting/finishing facility, printing/publishing/lithography facilities, a jewelry manufacturer, a fur dressing facility, a truck company, and a check duplication facility.
1983	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, and printing/publishing/lithography facilities.
1988, 1993	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, a belt manufacturer, and a machine manufacturer, and printing/publishing/lithography facilities.
1998, 2000	**Site:** Site address is not listed in research source. **Surrounding Properties:** Surrounding properties are listed with multiple commercial/light industrial listings including a sealing service company, a photo studio, a mounting/finishing facility, a belt manufacturer, and a machine manufacturer, a thermography facility, a towing company, and printing/publishing/lithography facilities.

ATC's review of historical city directories identified no listings for the Site. Surrounding properties listings included several printing, publishing, and lithography facilities, motor companies, an electro chemical company, fur dressing and dying facilities, and a metal company. The identified historical uses of the surrounding properties are considered to represent a *recognized environmental condition* for the Site. Copies of the EDR City Directory Abstract are provided in Appendix G.

5.3.7 Building Department Records

ATC reviewed available building department information provided by the NYCDOB via the on-line Building Information System website (http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp). The Site is designated as Block 729 Lots 50 and 60. Certificates of Occupancy and building permits were available for review. The following are descriptions and interpretations from the department of building records: review:

LEGAL DESCRIPTION	CERTIFICATES OF OCCUPANCY REVIEW	ENVIRONMENTAL CONCERNS
Block 729, Lot 50: 371 9th Avenue	Five certificates of occupancy were available for years 1937, 1939, and 1970. Two each for the years 1939 and 1970. In 1937, 425 West 31st Street on the Site is identified as a storage area in the cellar and a garage for two cars on the first story. The 1939 certificates identify 415-417 West 31st Street on the Site as a gasoline service station and parking and storage for more than five motor vehicles. It identifies one 550-gallon gasoline tank on the Site. The 1970 certificates identify 425 West 31st Street on the Site as a public parking lot for 149 cars and two temporary attendants' shelters.	Historic gasoline tank
Block 729, Lot 60: 9th Avenue	Four certificates of occupancy were available for the years 1921, 1944, 1947 and 1972. The 1921 certificate identifies 401-405 9th Avenue on the Site as a garage on the first floor with a boiler room in the cellar. The 1944 certificate identifies 401-409 on the Site as parking and storage for more than five motor vehicles and a gasoline service station. It identifies gasoline tanks on the Site. The 1947 certificate identifies 405 9th Avenue on the Site as a gasoline service station, parking lot and office. It identifies gasoline tanks on the Site. The 1972 certificate identifies 401-409 9th Avenue and 400-410 West 33rd Street on the Site as parking for 115 motor vehicles.	Historic gasoline tanks

ATC's review of historical department of building records identified several historical petroleum tanks at the Site. None of the identified tanks appear to be registered in the NYSDEC Petroleum bulk storage database provided in the EDR report. The historical use of the Site as filling stations is considered to represent a *recognized environmental condition* for the Site. Copies of the department of building records are provided in Appendix D.

5.3.8 Zoning/Land Use Records

ATC reviewed the NYCDCP Zoning Map from the NYCDCP website, which indicated that the Site is located in an area that is currently zoned as M1-6 – "Manufacturing." Historical zoning information would require a manual search of past zoning maps at the NYCDCP. Since historical information regarding the Site dating back to the late 1800s was obtained from other sources used for this assessment and no significant data gaps were identified, ATC did not request a search of past zoning maps.

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H.

OTHER USER PROVIDED DOCUMENTS		
Title	**Date (if known)**	**Author and/or Source (if known)**
Environmental Site Investigation of 9th Avenue and 31st Street	April 9, 1991	Hazardous Waste Engineering Consultants, Inc. (HWE)
Phase I Environmental Site Assessment at Block 729 lot 60	February 1995	EEA, Inc

Environmental Site Investigation of 9th Avenue and 31st Street, dated April 1991 prepared by HWE

HWE conducted an Environmental Site Assessment (ESA) for Olympia and York Construction Co. in April 1991. The purpose of the investigation was to identify areas of contaminated soil and railroad bedding which may require remedial action prior to the development of the Site. A total of 12 grab samples of the soil were collected from 12 point locations on the railroad tracks. The soil samples were collected from 0 to 0.5 feet (surficial) and 1 to 1.5 feet (deep) intervals below ground. The 12 samples (12 shallow samples and 12 deep samples) were composited in 6 samples (6 surficial samples and 6 deep samples). The 6 surficial samples were analyzed for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals) and Priority Pollutant Base/Neutral/Acid Extractable Compounds + 25 (PBNA+25). The 6 deeper samples were submitted for analysis for Priority Pollutant Volatile Organic Compounds+15 (PPVO+15), Priority Pollutant Pesticides/PCBs and Herbicides. Based on the results obtained HWE concluded that elevated levels of TPHC, cadmium copper, lead, mercury, zinc, PPBNA+25 and PCBs were identified, when compared to industrial standards action levels (no New York State standards were available in 1991). HWE recommended additional investigation at the Site.

ATC's review of the HWE Site investigation report identified the presence of petroleum related contamination, metals and PCBs contamination at the Site. No remedial action or additional investigation reports were provided for review. Since the contamination may still be present at the Site, ATC considers the identified contamination to represent a *recognized environmental condition* for the Site.

Phase I Environmental Site Assessment at Block 729 lot 60 prepared by EEA Inc., dated February 1995

EEA conducted a Phase I Environmental Site Assessment (ESA) for Rosenman & Colin in February 1995. The purpose of the investigation was the identification of environmental conditions indicating the potential for significant contamination of the subject property by toxic and hazardous materials and chemical products.

EEA identified the subject property to be depicted with the train railroads and two parking lots. The review of historical information identified former uses of the subject property as residential; two industrial buildings used as printing facilities; an iron works facility, a garage with a 1,000-gallon buried gasoline tank and a filling station. The fire department records requested to the FDNY did not reveal that the former tanks at the Site were closed or removed; therefore EEA concluded that there is the potential for the presence of buried tanks at the Site.

ATCs review of the former phase I ESA preformed at the northern portion of the Site (block 729, lot 60) by EEA revealed the same concerns related to historical uses of the Site as ATC identified by the review of historical information (refer to sections 5.3.1 to 5.3.8).

5.3.10 Other Historical Sources

No other historical sources were reviewed during this assessment.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the Site on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of: the Site and improvements; adjoining properties as viewed from the Site; and, the surrounding area based on visual observations made during the trip to and from the Site. Unimproved portions of the Site were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. The site visit and area reconnaissance were conducted by Ms. Isabel Ribeiro, ATC Project Manager, on August 16, 2007. Weather conditions during the site visit consisted of clear skies with no visibility limitations. ATC was not provided access to the train yards.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC did not observe the use, storage or disposal of hazardous substances, including hazardous wastes, on the Site.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs at the Site and no active USTs were identified in the UST database (Section 5.1.2); however ATC identified the presence of historical USTs at the Site (Section 5.3.2). None of the former tanks were identified in the NYSDEC database; however since the former on-Site structures were demolished more than 40 years ago, no records are expected to be found. Any buried tanks that were not removed during demolition operations could potentially remain on-Site.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs at the Site and no active ASTs were identified in the AST database (Section 5.1.2).

6.5 Other Petroleum Products

ATC did not observe the use, storage or disposal of petroleum products on the Site.

6.6 Polychlorinated Biphenyls (PCBs)

ATC did not observe evidence of the use, storage or disposal of potential PCB-containing transformers, lifts, or other equipment at the Site; however, transformers are typically present on railroads and train yards. Since no access was provided to the train yards located at the Site, the presence of transformers could not be confirmed.

The review of a prior report prepared by HWE in 1991 identified the presence of PCB contamination within the train yard at the Site. Refer to section 5.3.9 for details.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the Site.

6.8 Non-hazardous Solid Waste

No municipal waste is currently generated at the Site.

6.9 Wastewater

No industrial or domestic wastewater is generated at the Site.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons at the Site.

6.11 Sumps

ATC did not observe evidence of sumps at the Site.

6.12 Septic Systems

ATC did not observe evidence of a septic system at the Site.

6.13 Stormwater Management System

Stormwater runoff at the Site drains to catch basins located along West 33rd Street and Wes 31st Street that discharge to the municipal combined sanitary and stormwater sewer system.

6.14 Wells

ATC did not observe evidence of wells on the Site.

7.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the Site:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Site**	**Interview Type**
Developer	Mr. Rick Gimello	Vice President – Senior Consultant of WCD	unknown	Telephone and email
Local Govt. Official	New York City Fire Department	New York City Fire Department	N/A	FOI letter
Local Govt. Official	New York City Department of Environmental Protection	New York City Department of Environmental Protection	N/A	FOI letter
Local Govt. Official	New York City Department of Health and Mental Hygiene	New York City Department of Health and Mental Hygiene	N/A	FOI letter

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

8.0 OTHER ENVIRONMENTAL CONDITIONS

8.1 Asbestos-Containing Material (ACM)

Based on the absence of buildings at the Site, no asbestos survey was conducted.

8.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

According to the USEPA, New York, is located within Zone 3, indicating that the average predicted indoor screening level for radon will generally be less than 2.0 picoCuries per liter (pCi/L). Based on this Zone designation, ATC does not consider radon to represent an environmental concern for the Site.

8.3 Lead in Drinking Water

Within the City of New York, potable water is supplied to Manhattan primarily from upstate New York reservoirs. ATC reviewed New York City's most recent Drinking Water Supply and Quality Report made available through the NYCDEP website (http://www.ci.nyc.ny.us/html/dep/home.html) for the year 2005. Review of the analytical data provided in the report confirmed that the municipally supplied water meets all drinking water standards established by the United States Environmental Protection Agency Safe Water Drinking Act, including those for lead. No drinking water supply wells exist at the Site.

8.4 Lead-Based Paint (LBP)

Based on the absence of buildings at the Site, no LBP survey was conducted.

8.5 Mold Screening

Based on the absence of building structures at the Site, no mold screening was conducted.

RE: Environmental Investigation
9th Avenue and 31st Street, Manhattan

Dear Mr. Marra:

Hazardous Waste Engineering Consultants is pleased to submit this report of the environmental investigation conducted on the railroad property located at 9th Avenue and 31st Street in New York City. The investigation was conducted to identify areas of contaminated soil and railroad bedding which may require remedial action prior to the development of this property. The property is occupied by a commuter railroad yard which is located between 50' and 60' below street level.

Scope of Work

Twelve (12) grab samples of the soil and railroad bedding at the property were collected by HWEC Field Technicians on February 4, 5 and 6, 1991. The twelve sampling points were located on the transepts of a grid superimposed over the property under investigation. Sampling locations and sample designations are shown on the site map contained in Appendix I.

Grab samples were collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth interval at each sampling location. Samples from adjacent locations were composited on a per weight basis for a total of six (6) samples to be submitted for laboratory analysis. Samples OYGS-1 and OYGS-2, OYGS-3 and OYGS-4, OYGS-5 and OYGS-6, OYGS-7 and OYGS-8, OYGS-9 and OYGS-10 and OYGS-11 and OYGS-12 were composited into samples OYCS-1, OYCS-2, OYCS-3, OYCS-4, OYCS-5 and OYCS-6, respectively. Each of the six samples consisted of an "S" (shallow) and a "D" (deep) sample, collected from the 0.0'-0.5' and 1.0'-1.5' below grade depth intervals, respectively.

The surficial (0.0'-0.5') samples were submitted for analysis for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals) and Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25).

The deeper (1.0'-1.5') samples were submitted for analysis for Priority Pollutant Volatile Organic Compounds +15 (PPVO+15), Priority Pollutant Pesticides/PCBs and Herbicides.

The samples were collected by excavating test pits with a shovel. Subsequent to the excavation of each test pit, sample material was collected using decontaminated trowels.
Between the collection of each sample, the sampling equipment was cleaned with the following series of sequential decontamination procedures: washed with non-phosphate detergent, rinsed with tap water, rinsed with distilled water, rinsed with 10% nitric acid solution, rinsed with distilled water, rinsed with acetone, air-dried and rinsed with distilled water.

Three (3) additional samples were collected for Quality Control/Quality Assurance (QA/QC) purposes on each day that sampling was conducted. The QA/QC samples consisted of a field blank, trip blank and field duplicate, and these samples were submitted for analysis for the same parameters as the soil and railroad bedding samples.

A sealed trip blank was prepared at the HWEC laboratory in Ossining, New York prior to the field technician's departure. The trip blank consisted of a 40 ml glass vial filled with distilled water and it accompanied the sampling equipment and containers to the site and returned with the samples to the laboratory. A field blank was also collected and it consisted of distilled water which was rinsed over the sampling equipment after the final stage of the sequential decontamination procedure. A field duplicate was collected along with the soil and railroad bedding samples.

All samples were collected in laboratory cleaned 40 ml glass vials. All container lids were Teflon lined. Sample containers were labeled with sample identification number, location, date and time. All field samples and QA/QC samples were kept into a cooler with blue ice for transportation to the laboratory. A chain of custody accompanied each set of samples.

Analytical Results

Six (6) samples were analyzed at our laboratory in Ossining, New York for Total Petroleum Hydrocarbons (TPHC), Priority Pollutant Metals (PP Metals), Priority Pollutant Base/Neutral/Acid Extractable Compounds +25 (PPBNA+25), Priority Pollutant Volatile Organic Compounds +15 (PPVO+15) and Priority Pollutant Pesticides/PCBs. Six (6) samples were analyzed for Herbicides at Pace Laboratories in Wappingers Falls, New York. Summaries of the analytical results, including laboratory methodology summaries, are contained in Appendix II. Complete laboratory analytical results with raw data are available upon request.

The TPHC analysis of the soil samples revealed levels of petroleum hydrocarbons between 196 milligrams per kilogram (mg/kg) in sample OYCS-5D and 3,450 mg/kg in sample OYCS-3S.

The PP Metals analysis revealed the presence of arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, thallium and zinc in the samples. The detected levels of cadmium ranged from 5.45 mg/kg in sample OYCS-3S to 10 mg/kg in sample OYCS-6S. The detected levels of copper ranged from 296.5 mg/kg in sample OYCS-5S to 921.3 mg/kg in sample OYCS-2S. The detected levels of lead ranged from 208.5 mg/kg in sample OYCS-1S to 935.4 mg/kg in sample OYCS-3SA. The detected levels of mercury ranged from 0.356 in sample OYCS-5S to 1.731 in

sample OYCS-3S. Concentrations of zinc ranged from 150.8 mg/kg in sample OYCS-1S to 649.1 mg/kg in sample OYCS-5S.

PPBNA+25 targeted compounds and Tentatively Identified Compounds (TICs) were detected in all of the samples. Acenaphthylene was detected in field blank OYFB-1. Total concentrations of targeted PPBNA+25 compounds ranged from 3,480 micrograms per kilogram (µg/kg) in sample OYCS-2SR to 33,930 µg/kg in sample OYCS-5SRE.

The detected PPBNA+25 TICs included compounds that were identified as PCBs, among other contaminants identified by the laboratory's library search as unknowns. The total concentrations of TICs (not including PCBs) in the samples ranged from 12,600 µg/kg in sample OYCS-6SRE to 55,500 µg/kg in sample OYCS-5SRE.

The only detected targeted PPVO+15 compound in the samples was methylene chloride, which was also detected in the field blank and trip blank.

The analysis of samples OYCS-2DA, OYCS-3D, OYCS-5AD and OYCS-6D revealed total PPVO+15 TIC concentrations of 8,500 µg/kg, 1,100 µg/kg, 24 µg/kg and 2,700 µg/kg, respectively. The TICs identified in the samples consisted of acetone, 2-butanone, 4-methyl-2-pentanone and 1,1,2-trichloro-1,2,2-trifluoroethane. Acetone was also detected in the field blanks as a TIC. PPVO+15 TICs were not detected in samples OYCS-1D, OYCS-2D, OYCS-4D or OYCS-5D.

The PP Pesticides analysis revealed the presence of 4,4 DDE in all of the samples. The concentrations of 4,4 DDE ranged from 0.01 mg/kg in sample OYCS-6D to 0.53 mg/kg in sample OYCS-1D. Sample OYCS-2D contained the following concentrations of PP Pesticides (in addition to the 4,4 DDE): alpha-BHC, 0.69 mg/kg; beta-BHC, 1.4 mg/kg; gamma-BHC (Lindane), 0.92 mg/kg; Heptachlor, 0.92 mg/kg and Aldrin, 0.69 mg/kg. Sample OYCS-1D also contained Aldrin, at a concentration of 0.08 mg/kg.

PCB contamination was also detected in the samples. The highest concentration of PCBs was detected in sample OYCS-2DA, 53.6 mg/kg. The detected levels in the remainder of the samples ranged from 1.2 mg/kg in sample OYCS-6D to 45.4 mg/kg in sample OYCS-2D.

Herbicides were not detected in the soil samples, however, the samples were analyzed out of holding time due to an oversight on the part of Pace Laboratories.

Conclusions

New York State has not published any threshold limits or remediation action levels for soil contamination and evaluates soil contamination on a case by case basis. However, action levels which are generally accepted as industry standards for contamination in soil are included in Appendix III. For purposes of data evaluation, these soil contamination action levels were used as a comparison to the detected contamination at the site.

The evaluation of the soil sample analytical data revealed elevated levels of TPHC, cadmium, copper, lead, mercury, zinc, PPBNA+25 compounds and PCBs when compared to the soil action

levels contained in Appendix III. Action levels for pesticides are determined on a case-by-case basis, therefore no standards are readily available for comparison.

The detection of contaminants in the field blank indicates that those particular contaminants may be stemming from a source separate from or additional to the actual media being sampled, such as the ambient atmosphere or the sampling instruments used to collect or transfer the samples. Likewise, the detection of contaminants in the laboratory method blanks indicates that these contaminants may be attributed to laboratory contamination.

Therefore, the detected concentrations of acetone as a PPVO+15 TIC in samples OYCS-5AD and OYCS-6D may be a result of airborne contamination in the field, or contamination related to the sampling instruments since it was also detected in OYFB-3.

In addition to the soil action levels for site remediation, it is necessary to compare the detected levels of contamination in the site soils to regulated levels for hazardous waste disposal. It is possible, considering the total concentrations of lead, mercury and cadmium detected, that the soil samples may classify as RCRA lead, mercury or cadmium-containing waste if analyzed in accordance with the EPA's TCLP methodology for waste classification.

As regulated by TSCA, waste material containing more than 50 ppm PCBs must be disposed of as PCB-contaminated material. The site soil represented by sample OYCS-2DA would classify as a PCB-contaminated waste material due to its detected concentration of 53.6 mg/kg.

The origin of the PCB contamination is most likely the former usage of PCBs as an additive in locomotive transformer oil or hydraulic oil. The elevated levels of TPHC at the site may be related to oil leakage from railroad locomotives and also the creosote coating applied to railroad ties as a preservative.

It is recommended that further sampling be conducted and coordinated with the projected structure design so that the sampling points coincide with the locations and depths of planned building excavations. The laboratory analytical results can then be used to choose appropriate worker personal protective equipment (PPE) for use during construction and excavation and to characterize excavated soil for proper disposal.

The samples collected for Herbicides analysis were not analyzed within EPA-promulgated holding times due to an oversight on the part of Pace Laboratories. Since herbicides were not detected, the results of the analysis are inconclusive. It is recommended that additional sampling for herbicides be conducted at projected locations of construction excavation.

Prior to initiating any work or site development which would disturb the site soils, it is recommended that a qualified environmental engineering firm be retained to develop a detailed, site-specific Health and Safety Program to protect workers and the general public from exposure to the contaminated soils. Once the Health and Safety Program is developed, all site work involving contact with the contaminated soil should be conducted under the supervision of a qualified Health and Safety Officer.

Any soil excavated and removed from the site, either during site remediation or during normal

construction activities, should be sampled and analyzed for waste classification purposes. The waste classification information should be used to classify the soil and to secure disposal approval from a disposal facility. Care should be taken to select a disposal facility which is permitted to accept the specific waste classification given to the soil scheduled for removal. It is recommended that a qualified environmental engineering firm be retained to supervise the classification, transportation and disposal of the waste materials.

If you have any questions about this information, please contact us at (914) 762-9000.

Sincerely,
HAZARDOUS WASTE ENGINEERING CONSULTANTS

Gregg T. Chappell
Project Manager

APPENDIX III

HAZARDOUS WASTE
SOIL REMEDIATION ACTION LEVELS

Total Petroleum Hydrocarbons (TPHC)	100 mg/kg
Surrogate Levels:	
Acid Extractables (AE)	Case-by-Case
Base Neutrals (BN)	10 mg/kg
Volatile Organics (VOC)	1 mg/kg
Pesticides	
DDT	1-10 mg/kg
Chlordane	1 mg/kg
Other	Case-by-Case
Polychlorinated Biphenyls (PCBs)	1-5 mg/kg
Priority Pollutant Metals (PP Metals)	
Antimony	10 mg/kg
Arsenic	20 mg/kg
Barium	400 mg/kg
Beryllium	1 mg/kg
Cadmium	3 mg/kg
Chromium	100 mg/kg
Copper	170 mg/kg
Lead	250-1000 mg/kg
Nickel	100 mg/kg
Mercury	1 mg/kg
Molybdenum	1 mg/kg
Selenium	4 mg/kg
Silver	5 mg/kg
Thallium	5 mg/kg
Vanadium	100 mg/kg
Zinc	350 mg/kg
Polycyclic Aromatic Hydrocarbons (PAH)	10 mg/kg

mg/kg - Parts per million (ppm)

The action levels are reference numbers used to identify presence of contamination. All contamination identified at a site above the action level should have horizontal and vertical extent delineated. Specific cleanup objectives are developed on a case-by-case basis.

- to examine the property for signs of potential contamination: stained soils, unusual odors, stressed or dead vegetation, improperly stored drums, oil slicks, on-site waste disposal/dumping, etc.

- to identify the quantity and type of toxic or hazardous substances used in the on-site operations (through interviews, site inspections, Materials Safety Data Sheets, hazardous materials inventories, reports to regulatory agencies, etc.).

- to determine if on-site toxic and hazardous materials are stored, handled and disposed of in accordance with good practice, minimizing the potential for contamination. Chemical storage areas and waste removal manifests are checked.

- to identify potential off-site sources of contamination. Adjacent uses are noted, along with topography and surface water drainage patterns.

- to identify on-site or adjacent off-site sensitive receptors, such as wetlands, surface waters, drinking water wells.

Not all of the objectives described above are applied to every site; investigations are tailored to the particular nature of the site. It should be noted that information requested from regulatory agencies may be incomplete or unavailable within a reasonable time period.

In accordance with ASTM standards, a Phase I ESA is not prepared as an environmental compliance report. This Phase I report addresses the general and typical regulations for toxic and hazardous materials, but does not necessarily stipulate the specific compliance requirements under federal, state and local laws for storage, use, transport, discharge or disposal of such materials at the subject property. (Specific compliance issues and questions about a particular site must be addressed directly by the regulatory agency with jurisdiction). In addition, no judgment is made with respect to the facility's compliance with worker exposure standards established by the Occupational Safety and Health Administration (OSHA).

V. QUALIFICATIONS

EEA, Inc. (a.k.a. Energy & Environmental Analysts, Inc.) is an environmental consulting firm that has undertaken environmental pollution investigations, development feasibility studies, and environmental site assessment studies since 1979. These site evaluation studies have been prepared for major lenders, public corporations, businesses, developers and governmental agencies. Approximately 3,000 parcels have been evaluated in the metropolitan New York-New Jersey area during the past six years, ranging from Phase I Environmental Site Assessments to comprehensive soil, water, and asbestos testing programs. EEA also prepares bid specifications for remediation programs and supervises site cleanup.

EEA's principals and senior managers for the hazardous waste investigations each have over 15 years experience in environmental consulting, with established credentials in the field.

Individual qualifications of EEA personnel, including specific credentials of persons involved in the preparation of this report, can be provided upon request.

VI. DISCLAIMER

This report is for use by Rosenman & Colin, Attorneys At Law, and is only to be used as a guide in determining the potential for contamination by toxic or hazardous materials on the subject property at the time of the site visit. This Phase I Environmental Site Assessment (ESA) was undertaken in accordance with generally accepted assessment protocols, including the ASTM Standard Practice for Phase I ESAs. This Phase I ESA is based principally on the review of historic and regulatory records (made available within a reasonable time period), relating to past occupants and usage of the subject property, as well as activities at nearby sites, and upon a visual assessment of the subject property, and makes no determinations with respect to portions of the subject property and its structures which were not inspected.

This Phase I ESA investigation does not involve any sampling, testing, or laboratory analysis of subsurface soils, groundwater or building materials or other substances on-site, but constitutes only the professional opinion of EEA, Inc. based on established procedures and protocols. This Phase I ESA is not, and should not be construed as, a guaranty, warranty, or certification of the presence or absence of toxic or hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any toxic or hazardous substances, which may be subject to regulatory approval.

IV. SCOPE OF WORK

V. QUALIFICATIONS

VI. DISCLAIMER

APPENDIX A - Photographs
APPENDIX B - Agency FOIL Requests and Responses

I. INTRODUCTION

EEA, Inc. has undertaken a Phase I Environmental Site Assessment (ESA) of the subject property referred to as Ninth Avenue and 33rd Street (Block 729, Lot 60), New York, New York. It is presently occupied by Edison Parking (street level parcels) and a portion of the Long Island Rail Road tracks (depressed parcel).

The purpose of this Phase I ESA is the identification of environmental conditions indicating the potential for significant contamination of the subject property by toxic and hazardous materials (including petroleum products), and/or chemical products. Such environmental conditions can include past and present operations and disposal practices, on-site spills, contamination from on-site or off-site sources, and the presence of sensitive off-site receptors. This Phase I ESA investigates such potential sources of contamination in its evaluation of the property through a visual site inspection, historical research, and regulatory agency records and database checks.

The scope of work for this Phase I ESA investigation is based on generally accepted industry protocols, as well as the ASTM Standard Practice for Phase I Environmental Site Assessments (E 1527-94). A description of the scope of work is outlined in Section IV.

It should be noted that the scope of work for this Phase I did not include physical inspection of the depressed rail parcel portion of the property. Information concerning this portion of the parcel was therefore limited to that obtained from observations made from street grade (i.e., views from the subject parking lots, and the parking lot off West 31st Street), historical documents and records, and regulatory agency files.

A detailed description of the Phase I ESA findings is presented in Section II, below. The conclusions based on the Phase I investigation are presented in Section III. Photographs are attached as Appendix A. Copies of Freedom of Information Law (FOIL) requests to agencies, and agency responses, are attached as Appendix B.

II. REPORT OF FINDINGS

The subject property was inspected on January 23, 1995, and January 25, 1995, by EEA, Inc. investigator Bonnie Braine.

The findings of EEA's investigation, including our regulatory agency checks, are presented in the following sections.

A. Property Description

i). Site Description

The subject property at Ninth Avenue and 33rd Street is located on the south side of West 33rd Street, between Ninth and Tenth Avenues, in the Borough of Manhattan, New York City, New York (see Figures 1 and 2). Tax map identification of this parcel is: Block 729, Lot 60.

The subject property, which consists of two separate vacant lots used for parking, and a depressed right-of-way for the Long Island Rail Road, totals 80,663 square feet in surface area (see Photos 1, 2, and 3). The subject property does not include the industrial loft building at 424 West 33rd Street, which separates the two parking lots.

The depressed railroad right-of-way, which is located at approximately 60 feet below street level on the southern portion of the property, is 44,492 square feet in area. This portion of the site was not accessible for inspection at grade, but was viewed from street level at West 31st Street (see Photos 4 and 5). The rail yard right-of-way included tracks leading to the yards further west, with overhead signal bridges, electrical equipment bridges, track switching equipment, etc. However, no specific "yard" areas (for repair, maintenance, storage of rolling stock) were noted; numerous trains were observed running through this area at the time of both inspections.

The two vacant parking lots total 36,171 square feet in area. The larger of the two lots, the east lot, located at 401-409 Ninth Avenue (aka 400-422 West 33rd Street), consists of an unfenced parking lot (207-car capacity) with an attendant's booth off West 33rd Street (see Photos 6 and 7). A small second metal structure on a concrete base, possibly a former attendant's booth or office associated with a former gasoline station, is located at the southeast corner of the east lot (see Photos 8 and 9). This structure is vacant and is presently only used for signs.

The west lot, located at 440-444 West 33rd Street, has an 82-car capacity and is fenced off from the street. An attendant's booth is located at the northwest corner of this lot (see Photos 3 and 10).

Subject Property Location
USGS Topographic Map

Figure 1

Subject Property Location
1993 Sanborn Atlas

Figure 2

ii). Current Occupants

The current occupants of the property are Edison Parking, which operates a parking lot serving hourly, daily, and monthly customers on the north half of the site, and the Long Island Rail Road, which has an easement through the depressed track right-of-way.

B. Site History

Primary sources for the history of New York City sites include historical fire insurance/real estate atlases, as well as the records of the New York City Buildings Department concerning permits for new buildings, certificates of occupancy, alterations, demolitions, and other changes at the site. Reverse telephone directories such as those published by New York Telephone and Cole provide annual listings of occupants (with telephone service) from 1940 to the present.

i). N.Y.C. Buildings Department

The New York City Buildings Department has the following New Building applications (NB), records of major alterations (ALT), demolition (DEMO), Certificates of Occupancy (COs), and other records of additions and changes on file for the subject property:

Year Completed	NB/ALT/CO No.	Structure/Use/Change
o 401-409 Ninth Avenue

ii). Historical Atlases

The 1890, 1899, 1911, 1930, 1950, 1980, and 1993 Sanborn fire insurance/real estate atlases were reviewed (see Figures 2 through 8). These atlases are another source for the history of structures on the site, and may indicate property use and the presence of buried gasoline tanks. (If atlases indicate buried tanks, this information is also discussed in Section II.E. and, for adjoining properties, Section II.K.).

The 1890 and 1899 atlases indicate that the property was then occupied by multiple residential tenements buildings, and New York City Fire Department Engine Company No. 34 (440 West 33rd Street). The railroad cut had not yet been created; the entire site was occupied by buildings (see Figures 3 and 4).

The 1911, 1930, 1950, 1980, and 1993 atlases all indicate the present rail cut for the depressed railroad right-of-way on the southern portion of the property. The following table summarizes the contents of these atlases (see also Figures 2, 5, 6, 7 and 8).

Year	Structures	Use
o 1911 ATLAS		
East Lot	eleven 3-, 4- and 5-story tenement structures	residential, retail, light manufacturing
	one 8-story loft building (416-422 W. 33rd St.)	industrial/stores

West Lot	2-story structure (444 W. 33rd St.)	machine shop
	vacant	contractor's yard
Southern Portion	railroad tracks (rail cut/retaining wall)	part of Long Island Rail Road car yard

- 1980 and 1993 ATLASES

East Lot	vacant	parking
West Lot	vacant	parking
Southern Portion	railroad tracks (rail cut/retaining wall)	part of Long Island Rail Road car yard

It should be noted that, although earlier Sanborn atlases indicate fairly accurately the presence (or former presence) of buried gasoline tanks at a site, the fact that no such tanks are shown on subsequent atlases does not indicate that Sanborn has verified the removal of such tanks. According to the Sanborn Map Company, detailed "fire insurance" surveys of sites to determine the presence of gasoline tanks were not undertaken after the early 1950s. Atlases prepared after the early 1950s reflect general building types and uses rather than specific occupants and features such as buried tanks.

Information from Sanborn atlases concerning past neighborhood land uses is described in Section II.K.i.

iii). Address Directories

Listings for the subject property from selected years of both New York Telephone (1940 to 1965) and Cole (1971 to 1995) address directories are presented in the following table:

Occupant	Directories Listed
o 406 West 33rd Street	
Residential	1940
o 412 West 33rd Street	
State Iron Works	1940
o 416 West 33rd Street

- **407 Ninth Avenue**

Finn Press	1940
No listings	1945 to 1995

iv). Summary of History of Use

EEA's research into the history of site use indicates that, at the turn of the century, the subject property was occupied by residential tenement buildings (which may also have contained small stores and industrial uses, although no occupants were specified), and a Fire Department engine company, as referenced on the 1890 and 1899 Sanborn atlases. The buildings along the southern portion of the site were demolished when the rail cut was excavated, as indicated on the 1911 atlas.

The 1930 atlas indicates the addition of two industrial buildings (printing industries at 416-422 West 33rd Street and iron works at 412 West 33rd Street) to the site, as well as a 1-story garage with a 1,000-gallon buried gasoline tank at 401-405 Ninth

Avenue. This garage was demolished in 1943, and replaced by a gasoline station at 401-409 Ninth Avenue in 1944. This gasoline station operated until 1972, when it was demolished.

The 1950 atlas also indicated that most of the east lot was then vacant and used for parking, and that the west lot was partially occupied by a contractor's yard. Both east and west lots are shown as vacant parking lots on the 1980 and 1993 atlases.

The rail cut portion of the property is indicated as a part of the Long Island Rail Road "car yard" on the 1911, 1930, 1950, 1980, and 1993 atlases.

Some of the past occupants of the parking lot parcels (i.e., garage, gasoline station, contractor's yard, printing businesses, iron works, etc.) were types of operations that store, use, or produce significant quantities of toxic or hazardous materials and/or wastes: e.g., inks, printing and plate developing solutions and wastes, oils, solvents, gasoline, automotive fluids used in repair (if any), etc. In addition, rail yards have typically been the location for the use, storage, and/or spills of toxic or hazardous materials and wastes, e.g.: petroleum products, solvents, various herbicides/pesticides (used in track maintenance), creosote (wood preservative for rail ties), paints, and polychlorinated biphenyls (PCBs), which were formerly used as an additive in various oils, including locomotive transformer oil and hydraulic oil, etc.

C. Site Characteristics

i). Hydrogeology and Site Topography

The island of Manhattan is composed mainly of consolidated bedrock known as the Manhattan Schist Formation. Overlying the bedrock are unconsolidated sediments consisting of quaternary glacial deposits such as sand, silt, clay, fill, gravel and various sized boulders.

These sediments known as the ground moraine are usually found to range from 2 to 35 feet in thickness. In many places the bedrock outcrops at the surface (i.e., Central Park and Harlem). In lower Manhattan unconsolidated sediments may extend to depths up to 200 feet. Locally where relic stream channels scoured out the surrounding bedrock unconsolidated sediments are found to thicknesses of 75 feet or more.

Groundwater is generally found where substantially thick unconsolidated sediments exist. Manhattan Schist is unimportant as an aquifer because of its relative impermeability, although in highly fractured areas (i.e., Morningside Park, Morningside Heights) bedrock wells have produced up to 40 gallons per minute.

There are no public or domestic drinking water supply wells in Manhattan. Uses of groundwater are limited to private wells installed for industrial purposes such as non-contact cooling.

Site specific hydrogeology can only be determined through a specific program of drilling and core sampling to confirm groundwater depth, direction, and composition of soils. No such drilling program was undertaken as part of this investigation.

The schist and gneiss are also relatively impermeable, and have historically yielded relatively minor quantities of water to wells. Uses of groundwater in the Bronx, other than for domestic purposes, have included water withdrawals of cooling, air conditioning, washing and flushing, and laundering. Today, public water supply for the Bronx comes from the upstate reservoirs which supply the City of New York.

Site specific hydrogeology can only be determined through a specific program of drilling and core sampling to confirm groundwater depth, direction, and composition of soils. No such drilling program was undertaken as part of this investigation.

b). Site Topography

The local topography of the property consists of relatively level parking lot areas at street grade, and the depressed rail cut, at approximately 60 feet below street level. The two levels are separated by a concrete retaining wall.

ii). Site Drainage

a). Sanitary Sewage Discharge

Sanitary sewage in Manhattan is discharged to the municipal sewage system, and treated at one of New York City's 14 wastewater treatment plants. It is likely that most of the previous structures on the site were connected to the municipal sewer system.

However, as indicated on the 1911 and 1930 Sanborn atlases, some of the previous tenement buildings on the adjacent lot at 424-438 West 33rd Street had outhouses in the rear yards, suggesting that some of the original structures in the area may not have been hooked up to the sewer system at that time.

b). Parking Lot Drainage

The parking lot portion of the property was inspected for the presence of drainage structures (e.g., drywells, grates, storm drains, etc.), which can provide routes of hazardous and toxic materials to surface soils or sewer systems.

Only three drainage structures were found in the parking lot areas: these were located in the narrow strip to the rear of the building at 424 West 33rd Street, which runs between the two parking lots (see Photo 13). Bags of rock salt and wood pallets were observed stored in this rear area; some of this rock salt had leaked, and was also noted around the easternmost drain (see Photos 12 and 13). The destination of these drains is not known; they may connect to the municipal sewer system, or discharge to soils or the rail cut below.

It should be noted that drainage structures in active parking areas may have been covered by vehicles, etc., and therefore may not have been visible at the time of inspection.

c). Rail Cut Drainage

As noted previously, the depressed rail cut portion of the subject site was not accessible for physical inspection, and was only observed from street level. Therefore, the presence of any drainage structures, sumps, etc., to handle run-off from this area could not be confirmed.

It is presumed that a storm water drainage system is located throughout the rail cut, to handle runoff from depressed track areas. Since this area is 60 feet below grade, it is likely that run-off is collected in sumps and pumped to grade. The final discharge point (i.e., the municipal stormwater system, the Hudson River, soils) cannot be confirmed without specific drainage plans from the Long Island Rail Road/Amtrak. Any such discharges of rail yard runoff would require a SPDES or other permit from New York State and/or the New York City Department of Environmental Protection, depending on the final discharge destination (see Section II.F.ii.).

iii). Flood Plain Information

The subject property lies in Zone C, an area of minimal flooding, on the Flood Insurance Rate Map #3604970039B (Federal Emergency Management Agency, November 16, 1983). The subject property is not in a flood plain.

iv). Sensitive Receptors

Sensitive receptors (e.g., wetlands, surface waters, well fields, groundwater recharge basins) were checked for the immediate vicinity of the subject site. In the event of an incident involving the spill of a toxic or hazardous material at the subject site, more costly remedial actions may be required when sensitive receptors are present.

No surface waters, wetlands, drinking water well fields or groundwater recharge basins were observed on or adjacent to the subject property.

v). **Water Supply**

Drinking and service water is available to the site by the New York City municipal water supply system, which distributes water from upstate reservoirs.

D. Toxic or Hazardous Materials, and/or Chemical Products

Toxic or hazardous substances include every substance, material or waste listed in Federal regulations (40 CFR Part 116, 40 CFR Part 261, or 40 CFR Part 302) or in applicable New York State regulations (6 NYCRR Part 371 or 6 NYCRR Part 597).

No significant quantities of toxic or hazardous materials or chemical products were observed on the parking lot portion of the property.

The Long Island Rail Road operates in the depressed rail cut portion of the property. From the vantage point of street level, no obvious indications of storage of toxic or hazardous materials were observed (i.e., large containers, drums, etc.). However, it should be noted that rail yard operations (particularly in the past) typically involved a variety of toxic and hazardous materials and wastes: e.g., PCB-laden oils, other petroleum products, solvents, pesticides, wood preservatives, possible asbestos-containing materials in electrical equipment, paints, etc. (see Sections II.G. and II.I. for a discussion of possible asbestos and PCB materials).

E. Petroleum and Chemical Storage Tanks

i). **Fuel Oil Tanks**

The former structures on the northern (parking lot) portion of the property were most likely heated by coal- or oil-fired systems. The New York City Fire Department (NYCFD) has no records of former petroleum storage tanks for this portion of the subject property, since most of these structures were demolished over 40 years ago. Therefore it could not be determined if any previous fuel oil tanks associated with these buildings were buried, located in building basements, etc. Any fuel oil tanks not removed at the time of building demolition could potentially remain on-site, either located in collapsed basement areas or buried.

If any such tanks are encountered during site redevelopment, it is recommended that the New York State Department of

Environmental Conservation be contacted to supervise tank removal and any necessary clean-up of soils.

ii). Gasoline Tanks

Historic atlases indicate the former presence of a gasoline station, plus a former garage with a buried gasoline tank, located on the east end of the east lot of the property, along Ninth Avenue (see Section II.B.ii.).

NYCFD has a record of a "voided" gasoline service station account for the subject property at 401-409 Ninth Avenue. However, no records or files corresponding to this account could be located after several requests (see Section II.L.iii.). Therefore, no information was available concerning on the number or specific locations of buried tanks that were previously located (and may remain) on the subject property.

Indications of the existence of at least two remaining buried gasoline tanks (e.g., two gasoline fillports, only one of which was sealed with concrete) were noted during the site inspection. These fillports were observed in the sidewalk along Ninth Avenue (see Photo 14). In addition, a small patched area was observed next to the old "attendant's booth" at the southeast corner of the east parking lot (see Photo 15). This may indicate a former tank or gasoline pump location.

NYCFD Engine Company 34 at 440 West 33rd Street, demolished in 1944, may have had a gasoline or diesel tank on-site for fueling its trucks. There are no NYCFD records for this address. It should be noted that many such engine companies stored fuel in aboveground tanks.

F. <u>Waste Products and Waste Disposal</u>

i). Toxic and Hazardous Wastes

Toxic or hazardous wastes include wastes identified or listed in the Solid Waste Disposal Act of 1980 (42 USC Section 6903, 42 USC Section 6921).

No significant quantities of toxic or hazardous wastes are currently generated on the parking lot portion of the subject property. The operators on the property (Edison Parking and the Long Island Rail Road) are not listed by the USEPA as RCRA hazardous waste generators or transporters, or as RCRA treatment/storage/disposal facilities for the subject property location. However, the adjacent Amtrak Erie Yard is listed as a large quantity hazardous waste generator (see Sections II.L.i.c. and II.L.i.d.).

Possible generation of any toxic or hazardous wastes on the rail cut portion of the property could not be determined during the course of this investigation. However, as noted previously, this area appeared to be currently used for active tracks leading to the yard to the west, and did not appear to have any repair or storage areas.

ii). Stormwater Discharge

No indications of non-sanitary wastewater discharge from the parking areas into the municipal sewer system were observed at the time of the site inspection. It is possible that some run-off from parking areas into street storm drains may contain very minor amounts of oils, greases, etc. from parked cars, but this would be typical of run-off from the street as well.

The rail cut, as previously noted, most likely has a separate drainage system to handle run-off. Run-off from the rail cut areas would be expected to include silt, petroleum products, as well as other contaminants typical of rail yards, such as solvents, pesticides, creosote, and PCBs.

This system may not discharge to the municipal stormwater system. In that event, a SPDES (State Pollutant Discharge Elimination System) permit would be required for any discharges made into the Hudson River, soils, etc. No Significant SPDES permits are listed for the Amtrak/LIRR rail yard areas (see Section II.L.ii.d.).

If this drainage system does discharge to the municipal stormwater system, a wastewater discharge permit/regulatory monitoring may be required by the New York City Department of Environmental Protection.

iii). On-site Waste Disposal

The exterior areas of the parking lots on the property were generally well maintained and clear of debris. No storage of toxic or hazardous materials was observed.

The subject property was inspected for ease of access by vehicles, and for signs of improper disposal or dumping of toxic or hazardous materials by on-site or off-site operators. Dumping is particularly a concern for vacant properties that are not well secured.

No visible indications of on-site waste disposal were observed on the parking lot areas or the depressed rail areas at the time of inspection. This includes drums, barrels, trash, building debris, waste piles, discolored soils, odors, etc.

G. Asbestos-Containing Materials

i). Definitions

According to New York City regulations, friable types of asbestos, i.e., ACM that can be crushed, crumbled or pulverized using hand or mechanical pressure, are hazardous when in a deteriorating condition.

It should be noted that the New York City definition of friable differs from the USEPA definition. The definition of friable under USEPA's Asbestos Hazardous Emergency Response Act (AHERA) regulations defines friable ACM as ACM that can be crushed, crumbled, or pulverized using hand pressure only. Mechanical pressure is not identified in AHERA's definition, so materials containing asbestos fibers embedded in a cement or glue-like matrix (i.e., vinyl asbestos tiles [VATs], linoleum, roofing materials, transite) are not typically considered friable, unless in a damaged state where fiber release by hand pressure is possible.

However, for the purpose of New York City regulations, such materials would be considered friable, since they could be crushed or pulverized using mechanical means. It should be noted that such materials are not considered hazardous under normal conditions of use, unless severely damaged or in a badly deteriorated state, or unless the material is cut, drilled, sanded or otherwise broken up during construction or renovation.

In New York City, ACM repair, removal, and disposal is required to be undertaken in accordance with the rules and regulations of the New York City Asbestos Control Program, as promulgated under Title 15, Rules of the City of New York, Chapter 1 (15 RCNY 1), as well as applicable federal and state regulations.

ii). On-Site Suspected Asbestos-Containing Materials

Given the age of the previous buildings on the parking lot portion of the site, it is likely that they contained asbestos-containing materials. These buildings have all been demolished. Depending on the extent of on-site demolition of these buildings (and excavation of basement areas), it is possible that some asbestos-containing materials may remain mixed in with underlying soils.

The remaining structures on the property (three attendant's booths) would not be expected to contain significant amounts of asbestos.

The electrical and switching equipment in the rail cut area may include several types of asbestos-containing materials: e.g., transite panels in electrical or switching boxes/panels, transite

pipes or conduits, woven insulation material (for wiring for lights, signal lamps, etc.).

No close visual inspection of the rail cut area and its equipment was undertaken to identify the possible presence of such suspected ACM. The above-mentioned suspected materials are types of asbestos that would typically be found in similar equipment. A complete delineation of all suspected materials, and confirmation of the presence or absence of asbestos content in such materials, would require a full asbestos inspection with appropriate sampling and laboratory analysis.

H. Lead-based Paint

Consumer sale of lead-based paint (containing over .06 percent metallic lead) was banned by the U.S. Consumer Products Safety Commission in 1977. Given the age of the previous buildings on the parking lot portion of the site, it is likely that they contained lead-based paints. These buildings have all been demolished, and therefore it is unlikely that any significant amounts of lead based paints remain on this portion of the site. Depending on the extent of on-site demolition of these buildings, it is possible that some amounts of lead-based paints may remain mixed in with underlying soils.

The rail cut portion of the property included several electrical and signal bridges, which may have exterior paint coats containing lead (see Photo 16).

U.S. Occupational Safety and Health Administration (OSHA) regulates occupational lead exposure for construction and general industries. All work related to construction, alteration, or repair (including painting) is included under the current standard, as well as transportation, storage, disposal or containment of lead-containing materials at the site, and maintenance operations associated with such construction activities. Lead-based paint debris removed during renovation or demolition work may be required to be disposed of as hazardous waste under RCRA.

I. Polychlorinated Biphenyls (PCBs)

Prior to 1979, PCBs were widely used in electrical equipment such as transformers, capacitors, switches, and voltage regulators for their cooling properties. The manufacture, processing, commercial distribution, and use (except in a "totally enclosed manner") of PCBs was banned in 1979, under the Toxic Substances Control Act (40 CFR Part 761). PCB spills are subject to strict reporting, clean-up and disposal requirements, due to the toxicity of the substance, and its threat to human health and the environment.

The U.S. Environmental Protection Agency (USEPA) classifies transformers in three categories: Non-PCB Transformers, which contain less than 50 parts per million (ppm) PCBs, PCB-Contaminated Transformers, which contain 50 to 500 ppm PCBs, and PCB Transformers, which contain more than 500 ppm PCBs. Transformers whose PCB concentration is unknown are assumed to be PCB-Contaminated.

No transformers were observed on or adjacent to the parking lot portions of the subject property.

The rail yard area includes electrical and switching equipment that may contain PCB-contaminated oils.

J. Radon

Radon, a naturally occurring radioactive gas, is the product of the decay of radium. It is found most frequently in relatively high concentrations in rock formations containing uranium, granite, shale, phosphate, and pitchblende. Radon may also be found in soils contaminated with industrial waste from uranium and phosphate mining. Radon as a gas can move through the soil and water, and into the atmosphere, and is a potential health concern if confined in sufficiently high concentrations in indoor environments. The U.S. Environmental Protection Agency (USEPA) has set an "action level" of 4.0 picocuries per liter for continuous long term exposure to radon gas. If radon gas is measured above this level, USEPA suggests follow-up testing and remediation measures.

According to data compiled by the Bureau of Radiation Protection, New York State Department of Health, New York City has one of the lowest average levels of basement radon measurements in New York State. The latest March 1994 statistics indicate an average of 1.4 picocuries/liter for New York City (an average of the five counties), compared to a statewide average of 5.6.

Based on these low average levels for New York City, it is unlikely that radon gas levels within any future buildings would exceed the USEPA action level of 4.0 picocuries per liter, and therefore basement radon testing is typically not recommended. However, if specific readings of radon gas levels within a particular building are needed, testing for continuous radon gas levels would be necessary.

K. Neighborhood Land Use

Past land uses surrounding the subject property were obtained from historical atlases (see Figures 2 through 8). Present nearby land uses (within a 500-foot radius of the subject property) were visually surveyed at the time of the site inspection.

Properties identified within one mile of the subject property by regulatory agencies as hazardous waste sites or facilities are identified in Section II.L.

i). Past Neighborhood Land Use

The 1890 and 1899 Sanborn atlases indicate that land use in the neighborhood of the subject property was then predominately residential, as indicated by the tenement-type structures on the atlases (no specific uses are noted).

The 1911 atlas shows the newly created open rail cut running west (from the rear of the new U.S. Government Post Office building) under Ninth Avenue through to Twelfth Avenue. The rest of the immediate neighborhood was still predominantly residential, with some small, new industrial uses, including a chocolate factory and a chair manufacturer to the south along West 31st Street. St. Michael's Roman Catholic Church and School was indicated to the north of the subject site across West 33rd Street.

The 1930 atlas indicates additional industrial buildings in the vicinity, including the printing industries building at 424 West 33rd Street, woodworking and contractor's offices to the north of the site, across West 33rd Street, and a "Master Printer's Building" at the northeast corner of West 33rd Street and Tenth Avenue. A gasoline station was located at the northeast corner of West 31st Street and Tenth Avenue, at 368 Tenth Avenue.

The 1950 Sanborn atlas indicates the U.S. Post Office rear annex building (built 1934) across Ninth Avenue from the subject site. This annex building covered the previous open cut for the rail yard on the east side of Ninth Avenue. Other uses included the rail yard areas at 31st and Ninth Avenue (now known as Amtrak Erie Yard), St. Michael's Church, Convent, and School, as well as parking and residential tenement buildings to the north across West 33rd Street. In addition to the gasoline station at 368 Tenth Avenue, a corner gasoline service station had been added at 400 Tenth Avenue, the southeast corner of Tenth Avenue and West 33rd Street.

The 1980 and 1993 Sanborn atlases indicate most of the same structures and land uses in the neighborhood as on the 1950 atlas. The west end of the subject block had been redeveloped with the Westyard Distribution Center (also known as the Merchandise Mart) built in 1968 over the west portion of the rail yards, as well as the former gasoline service stations at 400 and 368 Tenth Avenue. In addition, the approach roadways to the Lincoln Tunnel had been created in the 1950s, bisecting the subject block and adjacent blocks.

ii). Present Neighborhood Land Use

The following adjoining land uses were observed at the time of the site inspection:

Area	Business or Use
North/East/West	12-story industrial loft building, containing printing industry offices, Le Croissant Shop on ground floor (424 West 33rd Street) (see Photo 17)
West	Westyard Distribution Center building (450 West 33rd Street) built over rail yards;Depressed roadway (approach to Lincoln Tunnel) (see Photo 18);
North (across West 33rd Street)	Parking lot (431 West 33rd Street); St. Michael's Roman Catholic Church, Elementary School small parking lot (405-407 West 33rd Street); Cheyenne Diner (411 West 33rd Street)
East (across Ninth Avenue)	U.S. Government Post Office, Main Facility
South	LIRR and Amtrak tracks and Amtrak Erie Yard (see Photo 19)

The adjacent 12-story loft building at 424 West 33rd Street includes numerous printing, graphics, lithography, bindery businesses (one of which is listed as a hazardous waste generator - see Section II.L.i.d.).

Since this building is connected to the municipal sewer system, it is expected that toxic and hazardous materials involved in printing activities within the building would be unlikely to affect surrounding sites.

The Amtrak Erie Yard is located immediately adjacent to the south of the rail cut portion of the property. Various maintenance equipment and platforms were noted in this area (see Photo 19). Based on the nature of this site, and past uses, it is likely that contamination is present. Any spills, leaks, etc. at the Amtrak Erie Yard could pose a contamination threat to the depressed portion of the subject property.

A visual survey of the surrounding land within an approximate 500-foot radius of the subject property was taken. Land uses in the

neighborhood of the subject site consist of transportation uses (Pennsylvania Station, the Long Island Rail Road and Amtrak yards, the Lincoln Tunnel access ramps), commercial uses (office buildings, support retail), industrial (manufacturing and warehouse uses), institutional (church, school, U.S. Post Office Main Facility), as well as scattered residential, parking and auto-related uses.

The New York City land use map (N.Y.C. Department of City Planning, 1988), which identifies general classifications of land uses for the area, indicates that the neighborhood within a 1/4-mile radius of the property has a mix of transportation, parking, industrial, commercial retail and office, residential uses (see Figure 9). The subject site is zoned MI-6, for commercial and manufacturing uses.

L. Regulatory Records and Databases

Sites identified by federal and state regulatory agencies as known or suspected hazardous waste sites or facilities (e.g., Superfund, CERCLIS, Inactive Hazardous Waste Disposal sites, RCRA Treatment/Storage/Disposal Facilities, Major Oil Storage Facilities, etc.) are listed for a one mile radius of the subject property (see Figure 10). In addition, other documented sites or incidents that have the potential to contribute to groundwater contamination (such as active and inactive landfills, SPDES permitees, RCRA Hazardous Waste Handlers, NYSDEC Spill Logs, PCB [PADS] generators, transporters, storage sites, ERNS incidents, FINDS facilities, gasoline stations, etc.) are also identified for the general vicinity of the site. These documented sites and incidents are listed in the following section for descriptive purposes. Their inclusion does not necessarily suggest any potential impacts to the subject property, but provides an indication of the potential for general groundwater and soil contamination in the larger area.

Local groundwater flow direction in the vicinity of the property cannot be determined without specific groundwater investigations. No definitive assessment of the potential for property groundwater contamination from documented hazardous waste sites, gasoline dispensing facilities, and spill incidents, etc. in the area can be made without testing.

i). U.S. Environmental Protection Agency

a). Superfund Sites

A check was made of the U.S. Environmental Protection Agency's (USEPA) National Priorities List of Superfund hazardous waste sites (February 1994 listings) which fall under CERCLA (Comprehensive

Subject Property Location
New York City Land Use Map (1988)

Selected Lists of USEPA and NYSDEC Sites Within a One-Mile Radius of the Subject Property

Figure 10

Environmental Response, Compensation, and Liability Act of 1980) and SARA (Superfund Amendments and Reauthorization Act of 1986).

The subject property is not on the list.

No Superfund sites are listed within approximately one mile of the subject property.

b). CERCLIS Sites

A check was made of the USEPA's CERCLA Information System (CERCLIS, February 1994 listings), USEPA's comprehensive database and management system that inventories and tracks sites addressed or needing to be addressed by the Superfund program. Sites that USEPA decides do not warrant further evaluation are given a "No Further Action" (NFA) designation, but are not removed from the database. USEPA's NFA designation does not necessarily indicate that there is no hazard associated with a given site, only that, based on available information, USEPA does not plan further action under CERCLA.

The subject property is not on the list.

The following CERCLIS sites are listed within approximately one mile of the subject property:

Site Name	Location	EPA ED #	Approximate Distance from Site
Manhattan General Mail Facility	West 29th St. & 9th Ave.	NY6180000352	0.2 mile S
NY Times Co.	229 West 43rd St.	NYD001315613	0.6 mile NE
Federal Building	252 7th Ave.	NY2470000157	0.5 mile S
Anchor Casting Co.	38 West 38th St.	NYD001617059	0.7 mile E
Int'l Dial Co.	22 West 19th St.	NYD075253807	1.0 mile S

It should be noted that the all of the above sites have received an NFA (No Further Action) designation.

c). RCRA Treatment/Storage/Disposal Facilities

A check was made of the U.S. Environmental Protection Agency's USEPA's RCRA Treatment/Storage/Disposal Facilities (TSDF) report (February 1994 listings). This report lists facilities that transport, treat, store and/or dispose of hazardous wastes, or have engaged in these activities in the past. TSDF operators, as with hazardous waste transporters and generators, are regulated under the Resource Conservation and Recovery Act (RCRA).

The subject property is not listed the RCRA TSDF report.

There are no facilities listed in the RCRA TSDF report within an approximate one-mile radius of the subject property.

d). RCRA Hazardous Waste Handlers

RCRA Hazardous Waste Handlers (which include waste generators and transporters are regulated by the federal government under the Resource Conservation and Recovery Act (RCRA). The 1994 USEPA List of RCRA Hazardous Waste Handlers was checked for the subject property and adjoining businesses, as well as for facilities within an approximate 1/4-mile radius of the site. An inventory of hazardous waste handlers is useful to assess the kinds of hazardous materials in the vicinity of the site, as well as on the subject property. It should be noted that the presence of hazardous waste generators or transporters in the neighborhood does not necessarily imply risk of contamination to the subject property.

The subject property was not identified on the list. However, the rail yard facility to the immediate south of the property is listed:

Amtrak Erie Yard is listed as a large quantity generator (facility ID NYD9869455582).

The following additional adjoining businesses are listed as hazardous waste handlers:

Knickerbocker Graphic Service (business at 424 West 33rd Street) is listed as a generator (facility ID NYD987040805).

Art Carved (business at 450 West 33rd Street) is listed as a small quantity generator (facility ID NYD053542015).

An additional 19 hazardous waste handlers were identified within an approximate 1/4-mile radius of the subject site.

e). PCB Activity Database System

A check was made of the U.S. Environmental Protection Agency's PCB Activity Database System (PADS, October 1993 listings). This database lists PCB generators, storers, transporters and permitted disposers that have registered with the Pesticides and Toxic Substances Branch of the USEPA.

The subject property is not on this list. No adjoining properties or facilities are listed in the PADS database.

f). Emergency Response Notification System

A check was made of the most recent USEPA's Emergency Response Notification System (ERNS) database, which is a list of reported

CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, from 1986 to the present.

There were no reported ERNS releases or spills listed on the subject property.

g). Facility Index System (FINDS)

A check was made of the USEPA's Facility Index System (FINDS), February 1994 listings. This database contains all facilities subject to regulation under one or more federal environmental programs.

The subject property is not on the FINDS list.

The following FINDS facilities are listed adjoining the subject property:

Site Name	Location	FINDS Facility ID#	USEPA Program Regulating Site
Amtrak Erie Yard	31st & 9th Ave.	NYD986945582	RCRIS
Art Carved, Inc.			
Knickerbocker	450 W. 33rd St.	NYD053542015	RCRIS
Graphic Services	424 W. 33rd St.	NYD987040805	RCRIS
U.S. Postal Service -	8th Ave. & 33rd St.	NYD1180000134	FFIS/FATES
Main Facility		3606100125	AFS/AIRS

The following is a key to the above USEPA environmental program abbreviations noted on FINDS list:

AIRS (Aerometric Information Retrieval System) - This system contains information pertaining to facilities which submit air emissions reports. This database also maintains data on compliance status and enforcement actions.

FATES (FIFRA and TSCA Tracking System) - This is an index of selected federally-owned facilities which are monitored for pollution abatement programs.

RCRIS (Resource Conservation Recovery Act Information System) - This database identifies and tracks hazardous waste from the point of generation to the point of disposal, under the Resource Conservation Recovery Act.

ii). N.Y.S. Department of Environmental Conservation

a). Freedom of Information Law Request

A Freedom of Information Law (FOIL) request was sent to the New York State Department of Environmental Conservation (NYSDEC), Region 2, on January 10, 1995, for information concerning hazardous materials regulation and remediation, petroleum bulk storage, and related issues on the subject property.

No response has been received to date. Responses typically take at least ten weeks.

b). Inactive Hazardous Waste Disposal Sites

A check was made of the latest lists of NYSDEC Inactive Hazardous Waste Disposal Sites (April 1994 Annual Report and Quarterly Updates).

The subject property is not on this list. No NYSDEC Inactive Hazardous Waste Disposal Sites are listed within approximately one mile of the subject property.

c). Spill Logs

The most recent (June 1994) NYSDEC computerized spill logs for Region 2 were reviewed by EEA for spill incidents with an approximate 1/2-mile radius of the site.

No spills were listed on the subject property.

Three spills were listed within an approximate 500-foot radius of the site:

Spill #	Date	Location	Material	Cause	Status
8604454	10/10/86	Penn Sta. Track 4	PCB Oil	Equip. failure	Closed
9008732	11/09/90	430 W. 34th St.	#6 fuel oil	Equip. failure	Closed
9402020	not given	454 9th Avenue	not specified	not specified	not specified

In addition, another 70 NYSDEC spill incidents were identified within an approximate 1/2-mile radius of the subject property.

Spills listed as tank test failures indicate the possibility of oil or gasoline seepage to the surrounding soils or groundwater. Other spills (i.e., accidents, sloppy housekeeping, equipment failures, etc.) may only affect surface soils.

d). Significant SPDES Facilities

Facilities with SPDES (State Pollutant Discharge Elimination System) permits must submit routine monitoring reports to the government, and are subject to regulatory review and compliance with discharge limits established by the NYSDEC and USEPA. SPDES permitees discharge to cesspools and/or local water bodies, and thus, may affect the quality of the groundwater and/or nearby waters.

A check was made of the NYSDEC database (January 1995) of "significant SPDES facilities" (approximately 1,700 of a total of 8,600 SPDES permitees statewide). The facilities excluded from the

NYSDEC list do not require regulation or a discharge monitoring report due to their small size (typically these involve sanitary wastewater discharges only).

The subject property is not on this list.

There are no significant SPDES facilities listed within approximately one mile of the subject property.

e). Toxic Release Inventory System (TRIS)

A check was made of the most recent NYSDEC Toxic Release Inventory System (TRIS) database (1988 to 1995). The TRIS database includes all facilities which use toxic chemicals in reportable quantities under SARA (Superfund Amendments and Reauthorization Act of 1986), Title III, Section 313 and their releases of such chemicals to the air, water, and land.

The subject property and adjoining properties are not on the list.

f). Petroleum Bulk Storage Facilities

A check was made of the most recent NYSDEC Petroleum Bulk Storage (PBS) database (June 1994). Petroleum bulk storage facilities have petroleum storage capacities in excess of eleven hundred (1,100) gallons, and less than four hundred thousand (400,000) gallons.

The subject property is not on this list.

The following adjoining property is listed as a PBS facility:

Site Name	Location	PBS #	Total Capacity Stored (gallons)
NY Clearing House	450 West 33rd Street	2-600927	3,000

g). Chemical Bulk Storage Facilities

A check was made of the most recent NYSDEC Chemical Bulk Storage (CBS) database (June 1994). Chemical bulk storage facilities store regulated hazardous substances in aboveground tanks with capacities of one hundred eighty-five (185) gallons or greater, and/or in underground tanks of any size.

The subject property and adjoining properties are not on this list.

h). Major Oil Storage Facilities

A check was made of the most recent NYSDEC Major Oil Storage Facilities (MOSF) database (June 1994), which lists all facilities (onshore facilities or vessels) with petroleum storage capacities of 400,000 gallons or greater.

There are no MOSF facilities listed within an approximate one-mile radius of the subject property.

i). Permitted Hazardous/Industrial Waste Transporters

A check was made of the most recent list of NYSDEC Permitted Hazardous/Industrial Waste Transporters (Pursuant to 6 NYCRR Part 364) (October 28, 1993). This list includes the types of waste transported by the permitted facility and the TSDF (Treatment Storage and Disposal Facility) to which each waste is transported.

The subject property and adjoining properties are not on this list.

iii). N.Y.C. Fire Department

A New York City Fire Department (NYCFD) records search was undertaken for the subject property to determine if there are any files for petroleum storage tanks (buried or aboveground) at the subject site. NYCFD records were checked for fuel oil, diesel, gasoline, waste oil, etc.

NYCFD has a record of a voided gasoline account for the portion of the subject property at 401-409 Ninth Avenue (see Section II.E.). There were no other records of petroleum storage tanks for the range of addresses at the subject property.

iv). N.Y.C. Department of Environmental Protection

A Freedom of Information Law (FOIL) request was sent to the NYC Department of Environmental Protection (NYCDEP) on January 10, 1995, for information concerning this property.

No response has been received to date from NYCDEP.

v). N.Y.C. Department of Sanitation

The following inactive landfills are located in New York City: Pelham Bay, Bronx; Pennsylvania and Fountain Avenues, Brooklyn; Edgemere Avenue, Queens; and Brookfield Avenue, Staten Island,. Only one active landfill is located in New York City: Fresh Kills, Staten Island. None of these landfills are located within 0.5 mile of the subject site.

III. CONCLUSIONS

EEA has performed a Phase I Environmental Site Assessment of the subject property known as Ninth Avenue and 33rd Street in conformance with the scope and limitations of the ASTM Practice for Phase I ESAs (E 1527-94). Any exceptions to, or deletions from, this practice are described in Section IV of this report.

The conclusions of this Phase I ESA, based on EEA's visual site inspections (1/23/95 and 1/25/95) and review of available historical records and regulatory documents and databases, are outlined in the following paragraphs.

A. ON-SITE FINDINGS

- **Present Operations**

The current occupants of the property are Edison Parking, which operates a parking lot serving hourly, daily, and monthly customers on the north half of the site, and the Long Island Rail Road, which has an easement through the depressed track right-of-way.

The rail yard right-of-way includes active tracks leading to the yards further west, with overhead signal bridges, electrical equipment bridges, track switching equipment, etc. However, no specific "yard" areas (for repair, maintenance, storage of rolling stock) were noted; numerous trains were observed running through this area at the time of both inspections.

- **Past Occupants and Uses**

EEA's research into the history of site use indicates that, at the turn of the century, the subject property was occupied by residential tenement buildings (which may also have contained small stores and industrial uses, although no occupants were specified), and a Fire Department engine company, as referenced on the 1890 and 1899 Sanborn atlases. The buildings along the southern portion of the site were demolished when the rail yard cut was excavated, as indicated on the 1911 atlas.

The 1930 atlas indicates the addition of two industrial buildings (printing industries at 416-422 West 33rd Street and iron works at 412 West 33rd Street) to the site, as well as a 1-story garage with a 1,000-gallon buried gasoline tank at 401-405 Ninth Avenue. This garage was demolished in 1943, and replaced by a gasoline station at 401-409 Ninth Avenue in 1944. This gasoline station operated until 1972, when it was demolished.

The 1950 atlas also indicated that most of the east lot was then vacant and used for parking, and that the west lot was

partially occupied by a contractor's yard. Both east and west lots are shown as vacant parking lots on the 1980 and 1993 atlases.

The rail cut portion of the property is indicated as a part of the Long Island Rail Road "car yard" on the 1911, 1930, 1950, 1980, and 1993 atlases.

Some of the past occupants of the parking lot parcels (i.e., garage, gasoline station, contractor's yard, printing businesses, iron works, etc.) were types of operations that store, use, or produce significant quantities of toxic or hazardous materials and/or wastes: e.g., inks, printing and plate developing solutions and washes, oils, solvents, gasoline, automotive fluids used in repair (if any), etc. The larger industrial buildings (i.e., printing operations at 416 West 33rd Street) were most likely connected to the sewer system, and therefore would have been unlikely to have resulted in the significant residual contamination of the site. However, the extent and nature of operations at other former industrial facilities, such as the contractor's yard at 440-442 West 33rd Street, could not be determined. It is possible that past activities could have resulted in some contamination at that location.

Rail yards have typically been the location for the use, storage, and/or spills of toxic or hazardous materials and wastes, e.g.: petroleum products, solvents, various herbicides/pesticides (used in track maintenance), creosote (wood preservative for rail ties), paints, and polychlorinated biphenyls (PCBs), which were formerly used as an additive in various oils, including locomotive transformer oil and hydraulic oil, etc., and their waste products.

No definitive assessment of the potential for surface and subsurface contamination from any past industrial/rail-related yard activities can be made without specific testing.

- **Site Drainage**

  - **Sanitary Sewage Discharge**

It is likely that most of the previous structures on the site were connected to the municipal sewer system. However, as indicated on the 1911 and 1930 Sanborn atlases, some of the previous tenement buildings on the adjacent lot at 424-438 West 33rd Street had outhouses in the rear yards, suggesting that some of the original structures in the area may not have been hooked up to the sewer system at that time. It is possible, therefore, that some older sanitary systems, floor drains, etc. on the subject property portion of the site, may have discharged to soils at one time. It is not known if any such discharges involved toxic or hazardous materials. Most industrial operations on-site at the time would have been small scale in nature.

- **Parking Lot Drainage**

Only three drainage structures were observed in the parking lot portion of the site: these were located in the narrow strip to the rear of the building at 424 West 33rd Street. Bags of rock salt were observed stored in the rear area; some of this had leaked, and was also noted around the easternmost drain. The destination of these drains is not known; they may connect to the municipal sewer system, or discharge to soils or the rail cut below. However, this rock salt material would not be expected to pose a significant contamination threat to the subject site.

It should be noted that drainage structures in active parking areas may have been covered by vehicles, etc., and therefore may not have been visible at the time of inspection.

- **Rail Cut Drainage**

It is presumed that a storm water drainage system is located throughout the rail cut, to handle runoff from depressed track areas. Since this area is 60 feet below grade, it is likely that run-off is collected in sumps and pumped to grade. The final discharge point (i.e., the municipal stormwater system, the Hudson River, soils) cannot be confirmed without specific drainage plans from the Long Island Rail Road/Amtrak.

Any discharges of rail yard runoff to the Hudson River, soils, etc. would require a SPDES (State Pollutant Discharge Elimination System) permit from the New York State Department of Environmental Conservation. If this drainage system discharges instead to the municipal stormwater system, a wastewater discharge permit and/or regulatory monitoring would be required by the New York City Department of Environmental Protection (see Section II.F.ii.).

o **Fuel Oil Tanks**

The former structures on the northern portion of the property were most likely heated by coal- or oil-fired systems. The New York City Fire Department has no records of former petroleum storage tanks for this portion of the subject property, since most of these structures were demolished over 40 years ago. Therefore it could not be determined if any previous fuel oil tanks that may have been associated with these buildings were buried, located in building basements, etc. Any fuel oil tanks not removed at the time of building demolition could potentially remain on-site, either located in collapsed basement areas or buried.

If any such tanks are encountered during site excavation and redevelopment, it is recommended that the New York State Department of Environmental Conservation be contacted to supervise tank removal and any necessary clean-up of soils.

any train maintenance/repair areas may have also involved paints contaminated with other metals, including mercury and cadmium.

- **Polychorinated Biphenyls**

No transformers were observed on or adjacent to the parking lot portions of the subject property.

The rail yard area includes electrical and switching equipment that may contain PCB-contaminated oils.

- **Regulatory Records and Databases**

EEA's review of available agency records did not disclose any evidence of documented on-site spills or other reported contamination at the subject property. (As noted in the report, there was no information concerning the presence, integrity, or closure status of gasoline storage tanks associated with former gasoline station use.)

The subject site is not included on the following USEPA databases: the Superfund or CERCLIS lists, the ERNS database, the FINDS database, the RCRA Hazardous Waste Handlers and Treatment/Storage/Disposal Facilities lists. There are also no listings for the subject property on the following NYSDEC databases: Spill Logs, Petroleum Bulk Storage and Chemical Bulk Storage, the TRIS database, the NYSDEC Inactive Hazardous Waste Disposal Site Registry, Permitted Hazardous/Industrial Waste Transporters, Major Oil Storage Facilities, and significant SPDES facilities lists.

B. OFF-SITE FINDINGS

The subject property is located in a section of Manhattan that has been characterized by a mix of transportation, industrial, residential, and commercial uses since the early 20th century. No Superfund sites, Inactive Hazardous Waste Disposal sites, RCRA Treatment/Storage/Disposal Facilities, Major Oil Storage Facilities, or Significant SPDES Facilities are listed within approximately one mile of the subject property (see Section II.L.). Five CERCLIS sites are located within this one-mile radius; all of these sites have received "No Further Action" designations.

A total of 70 NYSDEC spill incidents are listed within an approximate 1/2-mile radius of the site; only three of these are listed within 500 feet of the subject property. Two of the three nearby spills have been closed by NYSDEC.

Immediately adjacent to the site are several properties involving the handling of toxic and hazardous materials, including the Amtrak Erie Yard in the depressed rail area at 31st Street and

Ninth Avenue (a large quantity hazardous waste generator), the printing industries building at 424 West 33rd Street, and the main facility of the U.S. Post Office at West 33rd Street and 9th Avenue. Both the U.S. Post Office and the printing industries buildings are connected to the sewer system; the storage and use of toxic or hazardous materials at these sites would not be expected to have an impact on adjacent facilities such as the subject property. However, any spills, leaks, etc. at the Amtrak Erie Yard could pose a potential contamination threat to the depressed portion of the subject site.

In addition, the neighborhood of the subject site includes former and present gasoline stations and other facilities (garages and warehouses) that may have past or present buried gasoline or diesel tanks. Any major leaks of buried tanks could be a potential source of subsurface contamination in the vicinity of the subject site.

Vice President

IV. SCOPE OF WORK

A. Purpose and Limitations

This Phase I Environmental Site Assessment (ESA) involves research into the history of uses of the subject property, checks with appropriate government agencies, and a visual inspection of the facilities and property to determine the possible presence of toxic and hazardous materials, and/or chemical products. An evaluation is then made regarding the potential for significant site contamination by toxic or hazardous materials and/or chemical products from past or present use.

Since the Phase I scope of work does not typically include testing of building materials (for asbestos, lead-based paints, PCBs, etc.), or of subsurface soils or groundwater, no definitive assessment of the presence of asbestos, lead-based paint, PCBs, soil or groundwater contamination (from on-site or off-site sources) is made. In addition, specific testing for radon levels is also not undertaken. It should be noted that other issues that may relate to property value impairments (e.g., ambient air quality, noise pollution, perceived risk from electromagnetic fields, etc.) are outside the scope of a Phase I ESA, and are not addressed.

If further determination of any potential contamination or analysis of specific materials is needed, then testing and/or further investigation (Phase II) would be necessary.

B. Conformance with ASTM Standard Practice

This report has been prepared in conformance with the scope of the ASTM Standard Practice for Phase I ESAs (E1527-94), as well as generally accepted industry protocols. In several aspects the scope of work exceeds the recommended ASTM scope (e.g., additional database searches, asbestos, radon, lead-based paint issues, wetlands), etc. It should be noted that any limitations to the site inspection (e.g., inaccessible areas of the subject property, etc.) are specified in the report.

C. Sources of Information and Research Methods

A Phase I ESA investigation typically consists of three major components: research into the history of the site, on-site inspection, and review of applicable regulatory agency records and databases.

Historical site research is important in the assessment of the likelihood of past releases of hazardous substances (which include

petroleum products). Sources of historical information for the subject property include:

- Local library documents (historical, maps, atlases, address directories).
- Interviews with site contacts, current site operators, adjacent site operators, neighbors or other "old timers."
- Historical aerial photographs, USGS topographic maps, LUNR maps, land use and zoning maps, flood plain maps.
- New York City Buildings Department for building history including construction and alteration permits.

The following regulatory agency lists and databases of documented hazardous waste sites, waste handlers, and spills are checked:

- U.S. Environmental Protection Agency for location of Superfund and CERCLIS sites, ERNS, FINDS, and PADS databases, and RCRA Hazardous Waste Handlers and Treatment/Storage/ Disposal Facilities (TSDF) lists.
- New York State Department of Environmental Conservation, Region 2, for hazardous waste spill logs, and the current lists of significant SPDES facilities, Inactive Hazardous Waste Disposal Sites, Major Oil Storage Facilities, Chemical Bulk Storage and Petroleum Bulk Storage Facilities, Permitted Hazardous/Industrial Waste Transporters, etc.
- New York City Fire Department, and New York City Department of Environmental Protection for permits for petroleum storage tanks, and other flammable materials, and records of environmental violations, storage issues, hazardous waste spill incidents and activity.

The site visit involves a review of current operations, interviews with knowledgeable on-site occupants or operators, and inspection of the property for visible indications of any significant contamination by toxic or hazardous materials. The investigation includes the following objectives:

- to identify sources of potential on-site contamination, such as underground storage tanks, septic systems, dry wells, interior floor drains, transformers and fluorescent light ballasts (which may contain PCBs), suspected asbestos-containing materials, and suspected lead-based paints, etc.

ATC Project No. 015.31558.0008; Task 2

Dear Mr. Gimello:

ATC Associates Inc. (ATC) was retained by WCD Consultants (WCD) to perform a Phase II Environmental Site Investigation (Phase II ESI) to evaluate the subsurface conditions at the above referenced property in accordance with the requirements outlined in the November 16, 2007 letter from the New York City Department of Environmental Protection (NYCDEP).

Attached is the Phase II ESI report. If you have any questions regarding this report, please feel free to contact either of the undersigned at (212) 353-8280.

Sincerely,

ATC ASSOCIATES INC.

1.0 EXECUTIVE SUMMARY

WCD Consultants (WCD) retained ATC Associates Inc. (ATC) to perform a Phase II Environmental Site Investigation (Phase II ESI) of the parking lots above the Long Island Railroad/Amtrak 9th Avenue Train Yards (Train Yards). The property consists of three (3) individual parking lots located west of 9th Avenue; two along West 33rd Street and one along West 31st Street in Manhattan, New York (herein after referred to as the "Site"). The Site encompasses approximately 1.57 acres of land and is currently developed with three (3) individual asphalt paved parking lots which are operated by separate management companies. The Train Yards are located in a recessed area 60 feet below the parking lots and are, according to the New York City Department of Finance, identified as occupying portions of the same block and lots (Block 729; Lots 50 &60) as the Site. Please note that although the Train Yards occupy the same property, they are not considered part of the Site for this investigation. Refer to Figure 1 for a United Stated Geological Survey (USGS) Site Area Map. The purpose of this investigation was to evaluate the subsurface conditions at the Site to assess whether it has been impacted by the *recognized environmental conditions* identified in the Phase I Environmental Site Assessment (ESA) prepared by ATC and dated September 10, 2007.

The Phase I ESA identified the following *recognized environmental conditions* associated with the Site:

- The Site is identified as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "Hazmat, Noise and Air";
- Historical use of the Site and surrounding area as a train yard, an auto repair/mechanical shop, filling stations, printing facilities, motor shops, metalwork companies and dying facilities; and,
- ATC's review of an Environmental Investigation Report prepared by Hazardous Waste Engineering Consultants (HWE) dated April 9, 1991, identified the presence of petroleum related contamination, metals and polychlorinated biphenyls (PCBs) contamination at the Train Yards.

It should be noted that although the Train Yards were included as part of the Phase I ESA and occupy the same block and lots as the parking lots, the Train Yards were not included as part of the Site for this investigation. Therefore, the *recognized environmental condition* associated with the Train Yards was not assessed. Section 2.1 discusses the abovementioned *recognized environmental conditions in detail.*

The review of New York City Department of City Planning and New York City Department of Building records, as well as the review of the regulatory agencies database identified the Site as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "Hazmat, Noise and Air". An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The scope of this Phase II ESI was developed to assess the hazardous materials portion of the "E" designation for the Site. The Phase II ESI consisted of a geophysical survey and the advancement of fifteen (15) soil borings to facilitate the collection of the thirty-four (34) soil samples; three (3) of which were composite samples of each lot for future analysis should it be required for disposal purposes.

The geophysical survey was conducted to clear all fifteen (15) boring locations of subsurface utilities and anomalies and to locate the suspect petroleum storage tanks historically associated with the Site. The results of the geophysical survey did not identify any underground storage tanks (USTs) or anomalies consistent in size and shape of USTs in any of the accessible areas of the Site.

Fifteen (15) soil borings were advanced from grade to refusal where bedrock was encountered at depths ranging from 7 to 24 feet below grade. Refer to Figure 2, the attached Soil Boring Location Plan for locations of soil borings. Continuous soil quality field screening was performed at all boring locations. Visual and olfactory methods of screening were utilized during the field efforts to identify evidence of potential contamination. Additionally, a portable photo ionization detector (PID) was used to obtain real-time qualitative measurements of volatile organic vapors. With the exception of SB-02, two (2) soil samples were collected from each boring; one from the surface (0-2 feet bgs) and one from the identified historic fill material. Based on the presence of minor staining observed at approximately 11 feet below grade at SB-02, a third soil sample was collected from this impacted zone. Boring logs are provided in Appendix A.

The Site is underlain by fill material consisting of glass, metal, ash, concrete, asphalt, wood fragments, brick, and course to fine sand. The presence of fill materials were most evident in the southern parking lot along West 31st Street in SB-11 through SB-15 where fill material was observed at depths of 10 to 15 feet below grade. In the remaining areas, the northwest and northeast parking lots, fill materials were observed to a lesser extent from approximately 6 to 12 feet below grade. Soils encountered below the fill material consisted of course to fine sands with silts and clays ranging in color from light browns to dark reddish browns underlain by heavily weathered Manhattan Schist were encountered below fill materials. Visual evidence of impacts (other than the identified fill material) was observed only in a small interval at SB-02 approximately 11 feet below grade.

A total of thirty-four (34) soil samples were collected and submitted to the laboratory as part of this investigation; three (3) of which were composite samples of each lot for future analysis should it be required for disposal purposes. The remaining thirty-one (31) soil samples were submitted and analyzed for target compound list (TCL) volatile organic compounds (VOCs), TCL semi volatile organic compounds (SVOCs), target analyte list (TAL) metals, polychlorinated biphenyls (PCBs), and pesticides. The soil sampling results were then compared to the New York State Department of Environmental Conservations (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) to evaluate whether remedial actions were required. Additionally, soil samples whose lead concentrations exceeded Eastern USA Soil Background Levels were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) for lead.

The soil analytical results indicate concentrations of VOCs, SVOCs, metals, PCBs, and pesticides above the laboratory MDL for samples collected. Concentrations of SVOCs above the NYSDEC TAGM RSCOs were detected in seventeen (17) of the thirty-one (31) soil samples analyzed. One or more concentrations of metals were detected above NYSDEC TAGM RSCOs and/or Eastern USA Soil Background Levels in each of the soil samples analyzed. Concentrations of lead in fourteen (14) of the soil samples collected exceed their respective Eastern USA Background levels and were therefore analyzed for TCLP lead. According to the TCLP results, only SB-03 (5-10') contained concentrations of lead in leachate above 5.0 mg/l and therefore meets the EPA definition of hazardous material. Concentrations of VOCs, PCBs, and pesticides were not detected above their respective NYSDEC TAGM RSCOs in any of the soil samples collected.

ATC understands that all soil and approximately ten feet of bedrock from each of the three parking lots will be removed prior to construction of the proposed development. Additional Site characterization is not required at this time, provided that any fill material and soil removed during

development and/or construction is handled as regulated waste and sampled in accordance with the receiving facilities protocols. Soils within the vicinity of SB-03, which could potentially contain hazardous concentrations of lead, should be delineated and handled separately as hazardous material. Furthermore, procedures should be followed to ensure human health is protected during excavation and/or construction activities. At time of construction, procedures should be in place to properly remove, handle and transport UST(s) should they be encountered during excavation and/or construction pertaining to the redevelopment of the Site; however they are not expected to be present.

ATC recommends a submittal of the Phase II ESI as per the requirements set forth by The New York City Department of Environmental Protection (NYCDEP) in the September 2007 letter to WCD. The NYCDEP may also require the submittal of a Remedial Action Plan (RAP) and a Construction Health and Safety Plan (CHASP) for approval prior to initiating any construction activities proposed for the Site.

2.0 INTRODUCTION

WCD Consultants (WCD) retained ATC Associates Inc. (ATC) to perform a Phase II Environmental Site Investigation (Phase II ESI) of the parking lots above the Long Island Railroad/Amtrak 9th Avenue Train Yards (Train Yards). The property consists of three (3) individual parking lots located west of 9th Avenue; two along West 33rd Street and one along West 31st Street in Manhattan, New York (herein after referred to as the "Site"). The Site encompasses approximately 1.57 acres of land and is currently developed with three (3) individual asphalt paved parking lots which are operated by separate management companies. The Train Yards are located in a recessed area 60 feet below the parking lots and are, according to the New York City Department of Finance, identified as occupying portions of the same block and lots (Block 729; Lots 50 & 60) as the Site. Please note that although the Train Yards occupy the same property, they are not considered as part of the Site for this investigation. Refer to Figure 1 for a United Stated Geological Survey (USGS) Site Area Map. The purpose of this investigation was to evaluate the subsurface conditions at the Site to assess whether it has been impacted by the *recognized environmental conditions* identified in the Phase I Environmental Site Assessment (ESA) prepared by ATC and dated September 10, 2007.

2.1 Background

ATC performed a Phase I Environmental Site Assessment (ESA) for Safeguard dated September 10, 2007. The purpose of the ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in American Society for Testing and Materials (ASTM) Practice E 1527-05 as a *recognized environmental condition.*

Recognized Environmental Conditions

- The review of New York City Department of City Planning and New York City Department of Building records, as well as the review of the regulatory agencies database identified the Site as having a City Environmental Quality Review (CEQR) Declaration (also known as an "E" designation) for "Hazmat, Noise and Air". An "E" designation is assigned to certain blocks or lots by a New York City agency (i.e., New York City Department of Environmental Protection, New York City Department of City Planning) as a result of an environmental assessment performed in conjunction with a zoning map amendment. This designation is assigned when there is physical or historical evidence of uses related to hazardous materials, air quality and noise pollution. The classification of the Site with an "E" designation is considered to represent a *recognized environmental condition* for the Site.

- The review of the historical uses of the Site identified the Site to be used as a train yard, a car repair shop, filling stations, auto repair and mechanical shop. Identified on the adjoining properties were a filling station, the train yards, printing facilities, motor shops, metalwork companies, and dying facilities. These identified historical activities typically use petroleum products, solvents, and other hazardous chemicals in their routine operations. Therefore, the historical uses of the Site and surrounding area are considered to represent a *recognized environmental condition* for the Site. Additionally, notations regarding the presence of underground storage tanks (USTs) were identified on both the historical Sanborn Fire Insurance Maps obtained from Environmental Data Resources (EDR) and certificates of occupancy obtained from the New York City Department of Buildings. The Site was not identified on any of the NYSDEC petroleum bulk storage databases; however since the structures were demolished more than 40 years ago, no records are expected to be found. Any buried tanks that were not removed during demolition operations could potentially remain on-Site, either located in collapsed basement or buried.

- ATC's review of an Environmental Investigation Report prepared by Hazardous Waste Engineering Consultants (HWE) dated April 9, 1991, identified the presence of petroleum related contamination, metals and polychlorinated biphenyls (PCBs) contamination at the Train Yards. No remedial action or additional investigation reports were provided for review. Since the contamination may still be present at the Site, ATC considers the reported contamination to represent a *recognized environmental condition* for the Site.

It should be noted that although the Train Yards were included as part of the Phase I ESA and occupy the same block and lots as the parking lots, the Train Yards were not included as part of the Site for this investigation. Therefore, the *recognized environmental condition* associated with the Train Yards was not assessed.

2.2 Scope of Work

The project scope of work included the following:

- Preparation of a Site-Specific Health and Safety Plan consistent with applicable and appropriate requirements;
- A utility clearance in the areas of the proposed soil borings;
- The advancement of fifteen (15) soil borings; and,
- The collection of thirty-four (34) soil samples for laboratory analysis.

3.0 PHYSICAL SITE SETTING

The Site consists of three (3) individual parking lots located west of 9th Avenue; two along West 33rd Street and one along West 31st Street in Manhattan. The general vicinity of the Site is comprised of land that slopes downward to the south and west. The area is characterized by a mixture of commercial and residential usage. Access is available to the northern two lots from the north via West 33rd Street and to the southern lot from the south via West 31st Street.

3.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle, *Central Park, New York, NY* dated 1995; the Site is located approximately 28 feet above mean sea level (MSL). The contour lines in the vicinity of the Site indicate that the area slopes gradually downward to the southwest. The Hudson River is located approximately one-half of a mile west of the Site. A copy of the topographic map is included as Figure 1.

3.2 Geology

The bedrock in the vicinity of the Site is Precambrian in age and consists of gneiss and schists that are part of the Manhattan Prong sequence, which is a portion of the Appalachian Piedmont. The older of the Manhattan Prong sequence, found in central Manhattan and referred to as the Manhattan Schist, is overlain by the Hartland Formation, a granulite. Both units are of very high metamorphic grade having been metamorphosed at a great depth in the earth's crust and later thrust to the surface during the Appalachian mountain building episode.

During the last glacial period, ending approximately 12,000 to 15,000 years ago and referred to as the Wisconsin, a mantling of glacial drift was deposited over the older bedrock. In places, the glacial

deposits are unsorted until characterized by boulder to pebble-sized rocks erratically intermixed with a clay matrix. Elsewhere, the deposits are sorted and stratified sand and gravel, which is the result of glacial outwash.

The results of the Phase II ESI indicated that shallow bedrock consisting of Manhattan Schist was encountered below the surface at the Site ranging in depth from 7 to 24 feet below grade.

3.3 Soils

The results of the Phase II ESI revealed that soils beneath the Site contain fill materials consisting of glass, metal, ash, concrete, asphalt, wood fragments, brick, and course to fine sand to depths ranging from 6 to 15 feet below grade. Coarse to fine sand with silts and clay underlain by heavily weathered Manhattan Schist was encountered below fill materials.

4.0 GEOPHYSICAL INVESTIGATION

On March 12 and 13, 2008 ATC and NOVA Geophysical & Environmental Services of Forest Hills, New York (NOVA) were on-Site to perform a geophysical survey to identify subsurface structures, utilities, and anomalies in the areas of the proposed soil boring locations, as well as identify the location, size, and orientation of suspected USTs, if present. The geophysical survey cleared all soil borings from subsurface structures and utilities so that they may be avoided during drilling activities. The geophysical survey consisted of Noggins ground penetrating radar with 750 megahertz (MHz) antenna, Mala's Utility Locator and GPR with 350 MHz antenna and Conquest Concrete Image Reader with 1,000 MHz antenna. A survey grid was established across accessible areas of the Site and GPR data was collected in all areas where access was provided. Reconnaissance GPR profiles were completed in various orientations and lengths to determine the general characteristics of the subsurface. Any areas where the geophysical survey identified subsurface structures or utilities located in the vicinity of the proposed soil borings; the locations were relocated to avoid conflict. Figure 2 presents the soil boring locations at the Site.

The results of the geophysical survey did not identify any underground storage tanks (USTs) or anomalies consistent in size and shape of USTs in any of the accessible areas of the Site. Refer to Appendix A for a copy of the geophysical survey report.

5.0 SOIL SAMPLING ACTIVITIES

On March 12 and 13, 2008, ATC was on Site with Zebra Environmental Corp. of Lynbrook, New York (Zebra) to perform a Phase II ESI at the Site. The Phase II ESI consisted of the advancement of fifteen (15) soil borings to facilitate the collection of the thirty-four (34) soil samples; three (3) of which were composite samples of each lot for future analysis should it be required for disposal purposes. All soil borings were advanced from grade to refusal where bedrock was encountered at depths ranging from 7 to 24 feet below grade. Groundwater was not encountered at any of the boring locations. Refer to Figure 2, the attached Soil Boring Location Plan for locations of soil borings. Continuous soil quality field screening was performed at all boring locations. Visual and olfactory methods of screening were utilized during the field efforts to identify evidence of potential contamination. Additionally, a portable photo ionization detector (PID) was used to obtain real-time qualitative measurements of volatile organic vapors. With the exception of SB-02, two (2) soil samples were collected from each boring; one from the surface (0-2 feet bgs) and one from the identified historic fill material. Based on the presence of minor staining observed at approximately 11 feet below grade at SB-02, a third soil sample was collected from this impacted zone. Boring logs are provided in Appendix A.

The presence of fill materials were most evident in the southern parking lot along West 31st Street in SB-11 through SB-15 where fill material was observed at depths of 10 to 15 feet below grade. In the remaining areas, fill materials were observed to a lesser extent from approximately 6 to 12 feet below grade. Soils encountered below the fill material consisted of course to fine sands with silts and clays ranging in color from light browns to dark reddish browns with some rock fragments. Visual evidence of impacts (other than the identified fill material) was observed only in a small interval at SB-02 approximately 11 feet below grade. Continuous field screening of soil samples with a PID did not indicated levels of volatile organic vapors in any of the soil samples collected.

Soil samples were placed in appropriate laboratory supplied containers and cooled to 4 degrees centigrade (wet ice) during shipment to the laboratory. ATC completed all chain of custody documents prior to sample shipment. Samples were submitted to AmeriSci Boston Environmental Laboratories (AmeriSci) in Weymouth, Massachusetts (NY State ELAP ID No. 10982) and analyzed for target compound list (TCL) volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260, TCL semi volatile organic compounds (SVOCs) via EPA Method 8270, target analyte list (TAL) metals via EPA method 6010, polychlorinated biphenyls (PCBs), via EPA method 8081, and pesticides via EPA Method 8081. The soil sampling results were then compared to the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) to evaluate whether remedial actions were required. Additionally, soil samples with concentrations of lead that exceed Eastern USA Soil Background Levels were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) for lead.

6.0 SOIL ANALYTICAL RESULTS

Thirty-one (31) of the thirty-four (34) soil samples collected from the fifteen (15) soil borings were analyzed for TCL VOCs, TCL SVOCs, TAL metals, PCBs, and pesticides. The remaining three (3) composite soil samples were submitted to the laboratory and held for analysis to be determined. Soil sample analytical results were compared to NYSDEC TAGM RSCOs. A summary of the soil sample analytical results is provided in Tables 1 through 5 and a complete copy of the analytical report is provided in Appendix B.

6.1 Volatile Organic Compounds (VOCs) in Soil

The laboratory analytical results indicate that detected concentrations of VOCs, specifically acetone in SB-07 (5-10’) and SB-11 (0-2’), and tetrachloroethene (PCE) in SB-11 (5-10’), SB12 (0-2’), SB-12 (5-10’), SB13 (0-2’), SB-13 (5-10’), and SB-14 (0-2’) were below their respective NYSDEC TAGM RSCOs. No other VOCs were detected above their laboratory method detection limits (MDL) in the remaining soil samples collected. A summary of the analytical results for TCL VOC analysis is presented in Table 1.

6.2 Semi-Volatile Organic Compounds (SVOCs) in Soil

The laboratory analytical results indicate that concentrations of one or more of the following SVOCs were detected above NYSDEC TAGM RSCOs in seventeen (17) of the thirty-one (31) soil samples analyzed: benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(k)fluoranthene; chrysene; dibenzo(a,h)anthracene; and indeno(1,2,3-cd)pyrene. With the exception of detectable concentrations of chrysene, fluoranthene, phenanthrene, and pyrene in SB-04 (5-10') and SB-05 (0-2'), none of the remaining samples collected contained detectable concentrations of SVOCs above their respective laboratory MDLs. A summary of the analytical results for TCL SVOC analysis is presented in Table 2.

6.3 Target Analyte List (TAL) Metals in Soil

The laboratory analytical results indicate that concentrations of the following metals were detected above NYSDEC TAGM RSCOs and/or Eastern USA Soil Background Levels in each of the soil samples analyzed: arsenic; barium; cadmium; calcium; chromium; copper; iron; lead; magnesium; mercury; nickel; and zinc. Concentrations of mercury were detected at levels an order of magnitude above Eastern USA Background levels in soil sample SB-09 (0-2') and SB-12 (0-2'). Additionally, concentrations of lead were detected in SB-02 (5-10'), SB-03 (0-2'), SB-03 (5-10'), SB-04 (0-2'), SB-04 (5-10'), SB-06 (0-2'), SB-07 (0-2'), SB-07 (5-10'), SB-08 (0-2'), SB-08 (5-10'), SB-09 (0-2'), SB-11 (5-10'), SB-14 (0-2') and SB-15 (0-2') at concentrations ranging from 501 ppm in SB-04 (0-2') to 2,150 ppm in SB-03 (0-2'). These samples, which exceed the Eastern USA Background levels of 200-500 ppm, were additionally analyzed for TCLP lead to assess whether the elevated concentrations would meet the USEPA definition of hazardous material; i.e., greater than 5.0 milligrams per liter (mg/l) present in the leachate. A summary of the analytical results for TAL Metals analysis is presented in Table 3, and a summary of TCLP lead in soil is presented in Table 6.

6.4 Polychlorinated Biphenyls (PCBs) in Soil

The laboratory results indicate that with the exception of aroclor 1254 in SB-01 (0-2') and aroclor 1260 in SB-02 (0-2') and SB-15 (0-2') detected well below their respective NYSDEC TAGM RSCOs, no detectable concentrations of PCBs were present in any of the soil samples collected. A summary of the analytical results for PCB analysis is presented in Table 4.

6.5 Pesticides in Soil

The laboratory results indicate that concentrations of 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT were detected in samples SB-01 (0-2'), SB-01 (5-10'), SB-02 (0-2'), SB-14 (5-10'), and SB-15 (0-2'). 4,4'-DDT was also detected in samples SB-08 (0-2'), SB-08 (5-10'), SB-09 (0-2'), and SB-10 (0-2'). However, all detectable concentrations of pesticides were found to be at least one order of magnitude below their respective NYSDEC TAGM RSCOs. No detectable concentrations of pesticides were present in any of the remaining soil samples collected. A summary of the analytical results for PCB analysis is presented in Table 5.

7.0 CONCLUSIONS

The Site is underlain by fill material consisting of glass, metal, ash, concrete, asphalt, wood fragments, brick, and course to fine sand. The presence of fill materials were most evident in the southern parking lot along West 31st Street in SB-11 through SB-15 where fill material was observed at depths of 10 to 15 feet below grade. In the remaining areas, fill materials were observed to a lesser extent from approximately 6 to 12 feet below grade. Soils encountered below the fill material consisted of course to fine sands with silts and clays ranging in color from light browns to dark reddish browns with heavily weathered Manhattan Schist. Refusal was encountered on bedrock at all soil boring locations at depths ranging from 7 to 24 feet below grade. Groundwater was not encountered at any of the boring locations. Visual evidence of impacts (other than the identified fill material) was observed only in a small interval at SB-02 approximately 11 feet below grade. Continuous field screening of soil samples with a PID did not indicated levels of volatile organic vapors in any of the soil samples collected.

The soil analytical results indicate concentrations of VOCs, SVOCs, metals, PCBs, and pesticides above the laboratory MDL for samples collected. Concentrations of SVOCs above the NYSDEC TAGM RSCOs were detected in seventeen (17) of the thirty-one (31) soil samples analyzed. One or more concentrations of metals were detected above NYSDEC TAGM RSCOs and/or Eastern USA Soil Background Levels in each of the soil samples analyzed. Concentrations of lead in fourteen (14) of the soil samples collected exceed their respective Eastern USA Background levels and were therefore analyzed for TCLP lead. According to the TCLP results, only SB-03 (5-10') contained concentrations of lead in leachate above 5.0 mg/l and therefore meets the EPA definition of hazardous material. Concentrations of VOCs, PCBs, and pesticides were not detected above their respective NYSDEC TAGM RSCOs in any of the soil samples collected.

8.0 RECOMENDATIONS

ATC understands that all soil and approximately ten feet of bedrock from each of the three parking lots will be removed prior to construction of the proposed development. Additional Site characterization is not required at this time, provided that any fill material and soil removed during development and/or construction is handled as regulated waste and sampled in accordance with the receiving facilities protocols. Soils within the vicinity of SB-03, which could potentially contain hazardous concentrations of lead, should be delineated and handled separately as hazardous material. Furthermore, procedures should be followed to ensure human health is protected during excavation and/or construction activities. At time of construction, procedures should be in place to properly remove, handle and transport UST(s) should they be encountered during excavation and/or construction pertaining to the redevelopment of the Site; however they are not expected to be present.

ATC recommends a submittal of the Phase II ESI as per the requirements set forth by The New York City Department of Environmental Protection (NYCDEP) in the November 16, 2007 letter to WCD. The NYCDEP may also require the submittal of a Remedial Action Plan (RAP) and a Construction Health and Safety Plan (CHASP) for approval prior to initiating any construction activities proposed for the Site.

Summary of Experience

Mr. Myers is a Senior Project Manager for Cardno ATC Environmental Group. He has over twenty five years of experience managing large scale environmental assessment and remediation projects within the tri-state area. He has a broad range of consulting and management experience in the areas of environmental construction projects, UST removal and replacement, site remediation, emergency response, remedial system installation, environmental assessments, hazardous waste management, regulatory compliance.

Mr. Myers has completed numerous projects for clients in different market sectors including industrial, commercial, petroleum and public sector government facilities throughout New York and New Jersey. He is experienced and familiar with EPA, NYDEC and NJDEP regulations, policy and guidance.

Significant Projects

> **Brownfield Project / Cargo Ventures Inc / Long Island, New York / 2007-Present / $2.2 Million**. Provided consulting services for the redevelopment of an industrial property within the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program. Developed and executed a Remedial Investigation Workplan to define the nature and extent of soil and groundwater contamination. Delineated the horizontal and vertical extent of a combined hydrocarbon and chlorinated groundwater plume. Aquifer properties and natural attenuation parameters were investigated to evaluate possible remedial options. To evaluate soil vapor intrusion, soil vapor samples were collected near the perimeter of the Site and sub-slab vapor samples were collected from beneath an on-site building. Developed a remedial action plan that includes the excavation of impacted soil, in-situ oxidation of a portion of the petroleum and chlorinated groundwater plume and reductive dechlorination for the remaining chlorinated groundwater plume. The NYSDEC has conditionally approved the remedial approach and are awaiting implementation.

> **Remedial Action / Leon Petroleum / Long Island, New York / 2006 – 2011 / $50K**. Designed and implemented a remedial action approach to for a gasoline retail facility to obtain regulatory closure. Previous remedial systems had achieved asymptotic groundwater contaminant levels. Remedial approach included, enhance fluid recovery events surrounding existing USTs, and in-situ chemical oxidation and enhance bioremediation of remaining groundwater plume. Submitted remedial action report to the NYSDEC and obtain case closure using natural attenuation as the final remedy.

> **In-Situ Chemical Oxidation / Macerich / Yonkers, New York / 2006-2010 / $140K**. As part of redevelopment activities for a major shopping center, directed the investigation and design for the remediation of petroleum impacted groundwater at a former service station.Completed subsurface investigations to delineate soil and groundwater impact both on and off-site. Designed and executed an In-Situ Chemical Oxidation/Enhanced Bioremediation approach to remediate impacted groundwater. Submitted remedial action report to the NYSDEC and obtain case

closure using natural attenuation as the final remedy.

> **Remedial System Operation / NYC Department of Design & Construction (URS Corporation) / New York, New York / 2007 – 2009 / $960K**. Managed the operation & maintenance of eight remedial systems at city-managed commercial sites throughout Manhattan, New York. Responsible for the continuous operation, weekly monitoring, and monthly reporting of dual phase high-vac extraction systems. Successfully dismantled and closed six of the eight sits. Designed and completed a combined soil vapor and aquifer pump test as part of a system redesign.

> **Project Oversight / Resource Environmental LLC / Red Bank, New Jersey / 2006-2010 / $1.1 Million**. Implemented the remedial action plan for commingled plumes originating from two retail gasoline service stations at two separate locations within New Jersey. Supervised semi-annual groundwater monitoring and sampling events and submitted annual Remedial Action Status Reports to NJDEP. Prepared and submitted documentation to establish a Groundwater Classification Exception Area for monitored natural attenuation of an off-site petroleum hydrocarbon groundwater plume. Prepared work plan for approval by NJDEP, implemented plan and submitted investigation report to NJDEP for vapor intrusion investigations at residential properties. Successfully completed post-remedial soil investigation to achieve no further action for soils.

> **Remedial System Installation / Resource Environmental LLC / Englewood, New Jersey / 2006-2008 / $3 Million**. Completed the assessment and implemented the remedial action plan for commingled plumes originating from two retail gasoline service stations at two separate locations within New Jersey. To select and implement the remedial actions, completed an assessment of both the horizontal and vertical extent of off-site groundwater plumes, supervised and directed UST closure and excavation of over 3,000 tons of petroleum impacted soil, and oversaw the design and installation of a vapor mitigation system for new construction.

> **In-Situ Chemical Oxidation / Golf Course / Staten Island, New York / 2007-2008 / $55K**. Successfully executed a pneumatic fracturing and atomization process to inject oxidizing and bio-enhancing chemicals to remediate soil and groundwater at a former petroleum underground storage tank area. Obtained site closure from the New York State Department of Environmental Conservation.

> **Site Redevelopment / Mega Contracting / Bronx, New York / 2007-2008 / $1.2 Million**. Successfully executed the remedial action plan for the redevelopment of a New York City e-designated site as a 7-story residential and commercial building. Oversaw and coordinated the proper disposal of over 18,000 tons of impacted soil. To facilitate dewatering for soil excavation activities, designed and installed a groundwater treatment system. Oversaw the installation of a vapor barrier under the new building and a topsoil cap for landscaped areas of the site. Prepared final closure report and Operations and Management Plan for the vapor barrier and landscape cap, and received site closure from the New York City Department of Environmental Protection.

> **Superfund Site / Performing Parties Group / Long Island, New York / 2000-2007 / $120K per Year**. Responsible for the monitoring, and operations and maintenance of an integrated air sparge/soil vent, groundwater pump & treat and bioremediation system. A thermal oxidizer and shallow tray air stripper was used to treat groundwater and effluent from the system, which utilizes 5 groundwater extraction wells, 21 vertical and horizontal soil vapor extraction (SVE) and 54 air sparge (AS) wells. Extracted groundwater was treated to remove dissolved iron,

and nutrients were added before the water was re-injected on-site. Designed and supervised a system modification to optimize performance and obtained regulatory approval to shutdown sections of the system where cleanup objectives had been achieved.

> **Remedial Design / Exxon Mobile / New York / 1990-1995 & 2000-2006 / $5 Million per Year.** Principal hydrogeologist responsible for the technical oversight of hydrogeological investigations and remedial system designs of over 100 retail petroleum locations for major oil companies. Responsibilities included the leadership of project managers each overseeing a group of technical staff. Responsible for group profitability and productivity, technical and regulatory guidance, training and client relations. Was presented a personal 1993 Quality Recognition Award from Exxon Company, USA, for overall management of Exxon programs.

> **Remedial System Installation / NYC Department of Design & Construction / New York / 2004-2006 / $1.8 Million**. Successfully managed the installation and operation & maintenance of six remedial systems at city-managed commercial sites and reservoirs throughout New York and Westchester Counties. This included soil vapor extraction and dual phase high-vac extraction systems.

> **Exposure Assessments / Tartan Oil Company / Long Island, New York / 1989-2000 / $100K per Year.** Completed exposure assessments using RBCA approach for the closure of petroleum retail sites, including the application of Fate & Transport groundwater models. Designed and installed contaminant remediation systems, including soil vapor extraction, pump and treat and air sparging.

> **Environmental Projects / Confidential Land Developers / New York City and Long Island / 1989-2000 / $100K per Year**. Supervise environmental projects ranging from real estate audits, UST closure assessments, drywell (UIC) remediation, soil and groundwater contaminant investigations and studies, remediation system O & M and monitoring, and regulatory interfacing for the redevelopment and resale of contaminated properties.

> **Hazardous Waste Management / British Petroleum / Amoco / NY City and Long Island / 1995-2000 / $500K per Year**. Manage technical team responsible for hazardous waste management and transportation services, including condensate removal from gasoline storage tanks, contaminated from UST removals and tank bottom sludge.

> **Environmental Services / Getty Petroleum-Equiva / New York and Connecticut / 1989-1993 / $1 Million per Year**. Technical director for environmental services specializing in soil and groundwater remediation for petroleum marketers and refiners. Programs included design and installation of remediation technologies, soil and ground water investigations, environmental audits and emergency spill response.

> **Emergency Response / NYS Department of Environmental Conservation / New York City and Long Island, NY / 1991-1995 / $250K per Year**. Managed contract and staffing for emergency oil spill response including site cleanup, hazardous material containment, waste disposal and close out documentation.

> **Regulatory Compliance / U.S. Air Force / Tyndall Air Force Base, FL / 1985-1989 / Part of $25 Million US Air Force Project**. Responsible for evaluating rapid setting polymer concrete and advanced to program manager assuring all company projects complied with RCRA and company health & safety procedures.

Education
B.S., Environmental Science and Geology, City University of New York, Queens College, 2002

Summary of Experience

Ms. Cosenza has over eleven years experience managing large environmental projects for both public/private sector clients. Her project experience includes Phase I and II Environmental Site Assessments, UST closures, soil and groundwater investigation and remediation projects and preparation of associated technical documents and client reports. She is well versed in the interpretation of drawings and specifications and is familiar with New York City, New York State and New Jersey environmental regulations and standards.

Significant Projects

> **Phase I and II Environmental Site Assessments / Department of Design and Construction / New York. Project Manager.** Coordinate all aspects of Phase I and II ESAs under $2.0M on-call Requirements Contract for DDC. Project activities include management and execution of site activities including asbestos, mold and lead based paint inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

> **Phase I and II Environmental Site Assessments / Preliminary Assessment / Bed, Bath & Beyond / New York / New Jersey.** Project Manager. Coordinate all aspects of Phase I and II ESA and New Jersey Department of Environmental Protection (NJDEP) Preliminary Assessment (PA) for the sale and acquisition of commercial properties as well as redevelopment of commercial properties. Project activities include management and execution of site activities including asbestos, mold and lead based paint inspections as part of Phase I ESA; background research, including interviews and extensive document review; determinations as to the potential impact of hazardous materials on soil and groundwater on site via a subsurface investigations and final reporting.

> **Phase I and II Environmental Site Assessments / Prudential Real Estate Investors / New York / New Jersey. Project Manager.** Coordinate all aspects of Phase I and II ESAs for potential purchase and redevelopment. Project activities include management and execution of site activities including asbestos, mold and lead based paint inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

> **Water Well Evaluation Assessments / Bank of America / New York / New Jersey. Project Manager.** Coordinate all aspects of the water well evaluation services to determine the compliance status of on-site wells at banking facilities. Project activities include management and execution of site activities including site investigation including well water sampling as required by local and federal regulatory agencies, background research, including interviews, document review and regulatory research; determinations as to the potential impact of hazardous materials on

groundwater on sites and final reporting.

> **Phase I and II Environmental Site Assessments / Verizon / New York. Project Manager.** Coordinate all aspects of Phase I and II ESAs for potential purchase and redevelopment for franchising purposes. Project activities include management and execution of site activities including asbestos and lead based paint inspections as part of Phase I ESA; background research, including interviews and extensive document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites and final reporting.

> **Phase I and II Environmental Site Assessments / T-Mobile / New York. Project Manager.** Coordinate all aspects of Phase I and II ESAs for potential lease of land for wireless antennas and associated equipment. Project activities include management and execution of site activities including asbestos and lead based paint inspections as part of Phase I ESA; background research, including interviews and document review; determinations as to the potential impact of hazardous materials on soil and groundwater on sites; collecting and field screening soil samples, and final reporting.

> **Site Investigation and Remediation / Safeguard Self Storage / New York.** Coordinate all project activities for Phase I ESAs, Phase II ESIs, development and implementation of remedial action work plans to achieve closure for USTs, historic releases, and identified petroleum impacted soil and groundwater. Project sites include former dry cleaners, auto repair facilities, warehouses, former filling stations, and auto wrecking yards.

> **Tank Closure Services / Various Properties / New York & New Jersey.** Project Manager. Managed the closure of over a multitude of USTs, ASTs, and subsurface systems at residential, commercial, and industrial properties in New York and New Jersey in accordance with applicable regulatory agency requirements. Properties included tanks of various types and sizes containing gasoline, fuel oil, kerosene, solvents, waste oil and septic systems. Activities associated with the successful closure of these systems included but were not limited to geophysical investigations, excavation of subsurface systems, screening of subsurface environment, collection of soil and groundwater samples, inspection of tank interiors, managing the removal of hazardous and non-hazardous tank contents, and documenting all aspects of the closure activates for submittal to appropriate regulatory agencies.

Re: Freedom of Information Law Request
401 Ninth Avenue – Block 729, Lot 60
New York, NY

Dear Ms. Bryant:

Cardno ATC is writing pursuant to the New York Freedom of Information Law to request access to certain information available from your agency for the above referenced property. Cardno ATC would like to receive information concerning the following:

- Chemical and petroleum storage tanks, spill records, toxic waste dump/wastewater discharge; and
- Monitoring data, regulatory non-compliance notices, documents or studies regarding any health and environmental problems.

Please let me know if there are any costs associated with this request prior to processing. Your response can either be faxed or mailed to us at the fax number and/or location identified above. In addition, I can receive responses via email at denise.cosenza@cardno.com. If you have any questions, please call me at (212) 432-8541.

Thank you for your prompt attention to this matter.

Sincerely,

Cardno ATC

The EDR Environmental LienSearch™ Report

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

LIBER 1058 PG 68

THIS INDENTURE, made the 24th day of April, nineteen hundred and eighty-six

BETWEEN

9th and 33rd Corporation, a Delaware corporation, having its principal office at One Rockefeller Plaza, New York, NY 10020,

party of the first part, and

9th and 33rd Associates, L.P., a Delaware limited partnership having its principal office at 666 Fifth Avenue, New York, NY 10103,

party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the southerly side of West 33rd Street and the westerly side of Ninth Avenue;

RUNNING THENCE westerly along the said southerly side of West 33rd Street, 268 feet 9 inches;

THENCE southerly and parallel with the westerly side of Ninth Avenue 98 feet 9 inches;

THENCE westerly and parallel with the southerly side of West 33rd Street, 131 feet 3 inches;

THENCE northerly and parallel with the westerly side of Ninth Avenue 98 feet 9 inches;

THENCE westerly along the southerly side of West 33rd Street, 98 feet;

THENCE southerly and parallel with the westerly side of Ninth Avenue 188 feet;

THENCE easterly and parallel with the southerly side of West 33rd Street, 498 feet;

THENCE northerly along the westerly side of Ninth Avenue 188 feet to the corner first mentioned at the point or place of BEGINNING.

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
371 9th Avenue
New York, New York 10001

Dear Ms. DeGrandis:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: Commercial Property, 371 9th Avenue, New York, New York (the "Site"). Please see attached Site Location and Geophysical Survey maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey at the site. The purpose of this survey is to locate and identify USTs, anomalies, utilities and other substructures and to clear and mark proposed environmental boring areas on January 29, 2015.

The equipment selected for this investigation was Noggin's 250 MHz ground penetrating radar (GPR) shielded antenna and Ditch-witch Electro-magnetometer (EM) with multi-frequency / utility locator.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

The project site was screened using the GPR to search the entire area and inspected for reflections, which could be indicative of major anomalies and substructures. Specific borehole locations were screened in a smaller grid prior to finalizing placement.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed areas consisted of dirt, concrete and asphalt surfaces.

DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

Step 1. Import raw RAMAC data to standard processing format

Step 2. Remove instrument noise *(dewow)*

Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

Commercial Property
371 9th Avenue
New York, New York 10001

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Sunny

Temp: 20 Degrees (F).

Surface: Paved (concrete-asphalt) and dirt surfaces

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was medium to high at the site. The noise was a direct result of the survey site being located in an urban environment. Added noise was the result of the site being an active construction site and close by railroad tracks.

RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- GES survey identified scattered anomalies located throughout the project site. Based on their rates and proximity, these anomalies were inconsistent with any USTs. These areas were indicated on the on-site markout.
- CSUL survey did not yield any subsurface live utilities (sewer, gas and electric) that were located on the site.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services

Project Number: 14-7469 **Report Date:** 02/06/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on January 29, 2015. The canister certification results are provided as an addendum.

Samples L1502049-01, -02 and WG760604-5 Duplicate have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

Samples L1502049-01, -05, and WG760604-5 Duplicate The presence of 2,2,4-Trimethylpentane could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

Samples L1502049-02 The presence of Acetone could not be determined in this sample due to a non-target compound interfering with the identification and quantification of this compound.

Samples L1502049-03, -06, and -07 results for Acetone should be considered estimated due to co-elution with a non-target peak.

The sample designated WCD-SV-01 (L1502049-01) had a RPD for the pre- and post-flow controller calibration check (29% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.6 mL/minute; the final flow rate was 23.5 mL/minute. The final pressure recorded by the laboratory of the associated canister was 1.4 inches of mercury.

The sample designated WCD-SV-02 (L1502049-02) had a RPD for the pre- and post-flow controller calibration check (25% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.7 mL/minute; the final flow rate was 22.8 mL/minute. The final pressure recorded by the laboratory of the associated canister was -3.5 inches of mercury.

Project Name: MANHATTAN WEST NE TOWER **Lab Number:** L1502049
Project Number: 14-7469 **Report Date:** 02/06/15

Case Narrative (continued)

The sample designated WCD-SV-03 (L1502049-03) had a RPD for the pre- and post-flow controller calibration check (22% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.8 mL/minute; the final flow rate was 22.3 mL/minute. The final pressure recorded by the laboratory of the associated canister was 1.5 inches of mercury.

The sample designated WCD-SV-05 (L1502049-05) had a RPD for the pre- and post-flow controller calibration check (25% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.4 mL/minute; the final flow rate was 22.4 mL/minute. The final pressure recorded by the laboratory of the associated canister was -2.3 inches of mercury.

The sample designated WCD-SV-06 (L1502049-06) had a RPD for the pre- and post-flow controller calibration check (26% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.7 mL/minute; the final flow rate was 22.9 mL/minute. The final pressure recorded by the laboratory of the associated canister was -3.4 inches of mercury.

The sample designated WCD-SV-07 (L1502049-07) had a RPD for the pre- and post-flow controller calibration check (22% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 17.5 mL/minute; the final flow rate was 21.9 mL/minute. The final pressure recorded by the laboratory of the associated canister was -3.3 inches of mercury.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: Data Usability Report

Project Name:	MANHATTAN WEST NE TOWER	**Lab Number:**	L1502049
Project Number:	14-7469	**Report Date:**	02/06/15

Data Qualifiers

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F,**
EPA 353.2: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.
