

YOU ARE THE KEY TO PREVENTING CANCERS CAUSED BY HPV.

Give a strong recommendation for the HPV vaccine. Focus on cancer prevention.

“I believe in the importance of the HPV vaccine, as do other medical experts, like the American Academy of Pediatrics and the American Cancer Society. I strongly recommend you vaccinate your child today to prevent cancers caused by HPV later in life.”

Bundle adolescent vaccines. Recommend HPV vaccine as you would Tdap and meningococcal vaccines.

“Your child needs three shots today: Tdap, HPV and meningococcal vaccines.”

Avoid missed opportunities to vaccinate your patients against HPV.

“Don’t miss an opportunity to protect your child against deadly cancers caused by HPV. Since you’re already in the office, let’s vaccinate your child today.”
