

CHAPTER 4.S

ENERGY

The proposed the *Mosquito Population Control Program in the Rockaways* is not expected to raise any significant issues related to long-term demands for or significant impacts on the Rockaway's or the City's energy system. Depending on the method of application of adulticides (e.g., backpack, all terrain vehicle, or truck), these activities may require the use of equipment or vehicles to apply the adulticides. These can either be portable units or vehicles fueled by fossil fuels. Energy consumption associated with the proposed activities would not result in any significant adverse effects on energy fuel resources. G
