Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Vanessa Tercero

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Nancy Stetter

Dear New York City Board of Health,

TAX sugar laden drinks.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

TAX sodas. People who consume such unhealthy drinks and thus contribute to our soaring health costs SHOULD PAY for it.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

Sincerely,

Carol Bennett

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Michal Lynch

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. ---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Ian Gebhart

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Billy Kemp

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Bharat Ratra

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rebecca Borrero  
Bellerose, New York

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

kristal Gump

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Gerry Jennings

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Melanie Klein  
199 President Street  
Brooklyn, NY 11231

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Henry Weinberg

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Trisha Winn

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Omar Siddique

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Tim Allen

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Michelle Pillen

Dear New York City Board of Health,

I believe in the phrase "for the common good". Our society has an obligation to do the right things to improve our health and well being, after all its for the common good. Its the right thing to do and I support Mayor Bloomberg's proposal.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Maria Millar

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

corinne painter

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Brittany Reynolds  
North Tonawanda, New York

Dear New York City Board of Health,

We have to start somewhere! The number of grossly fat Americans is totally absurd. Doctors will tell you that a ver few folks can not avoid being fat but that 90+% of the really fat people are that way because of what they eat. Not long ago I was in a restaurant when a family of four came in. They needed eight chairs in order to seat themselves. Woa!

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

JOHN HORKULIC

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

ELAINE FOLGAR  
VALLEY COTTAGE, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Nora Misiolek  
Pleasant Valley, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Leititia Bailey

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joan walker

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Gillian Austin

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Alice Parra

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

I am a registered dietitian working in community health center as a nutrition educator of children, teens and adults. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Serpil Celik-Ramsay

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

jamal fuller

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Matthew Humphrey

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kristian Borysevicz  
New York, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. ---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joanne Ryan

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joan Houchin

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sena Clara Creston  
Troy, New York

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

As a Physician Assistant in Family Practice, I am dismayed at the pervasiveness of childhood obesity I see in my practice daily. I know these children will have a shortened life expectancy and reduced quality of life purely because of the choices of their parents. This devastates me and in some cases I believe it borders on child abuse, certainly medical neglect. In I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal, though I believe his proposal does not even go far enough to address the issue. However, it is a start and one I hope you will support.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

J Ehrlich  
347 East 58th Street  
NYC, NY 10022

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

This is a wonderful idea. USA should adopt this all over the country to help in the fight against obesity.

Sincerely,

Nancy Wolfe

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sage Ealey  
Cortland, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Eventhough, both Pepsi and Coke are changing to coconut water as as sugar alternative for their soft drinks....limits and boundaries need to be set for young people to follow for better health. I am teaching children how to choose healthier foods for a better way of lifestyle for the rest of their lives, since they are going to be high risk for environmental pollutants, too.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Dale Newman  
Stephentown, New York

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jon Yuhasz

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages [especially those with high fructose corn-syrup] sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

High fructose corn-syrup is treated by the body as an alcohol and is responsible for the increase childhood cirrhosis of the liver.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Eunice Chen  
580 Bedford Road  
Unit 14  
Pleasantville, NY 11206

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joel Teitler

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

R H

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Emily Taylor

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of sodas and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32- and 64-ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving.

Mayor Bloomberg's plan is backed by extensive scientific research, which shows that increasingly larger portion sizes for sugary drinks are among the driving forces of the continuing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce overconsumption of sugary drinks, which are a top source of calories in American diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of Type 2 diabetes, heart disease, hypertension and even some cancers.

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we cannot wait!

New York is one of the greatest cities in the world. You have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity.

I am counting on you to approve Mayor Bloomberg's proposal and serve up a healthy change for New York.

Sincerely,

J Rigney

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Carlos Rodriguez

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I am writing in support of Mayor Michael Bloomberg's proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces.

I view this as a sensible step and applaud the mayor for taking action to lower obesity rates in New York City.

I urge you to approve the proposal.

The standard serving size for nutritional calculation is 8 oz. Sadly, 32 and 64 ounce sodas are commonplace across the city. I would note that even the proposed limit of 16 ounces is still double a standard 8-ounce serving.

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Dear New York City Board of Health,

Banning soda is absurd and counter-productive.

It IS easy and makes it look like something is being done. It's not.

The hard work is to change hearts and minds. This is the only thing which will work. Ban advertising, especially to children. Forget the adults. Go into the schools. Kids soak up information, if presented well. They will change parental behavior.

---

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Chris Porowski

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Lisa D'Ambrosio

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Karen Lind

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I think that there is more to be done to help people learn how to nourish themselves properly. Please consider offering larger sizes of no-sugary drinks at a lower price. There needs to be an alternative so that the public thinks they are really getting a better deal by not drinking soda!

Sincerely,

Linda Lambert

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

David Rauenzahn

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Edward T. Lewis

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Thomas Wicks

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Randy Lopez

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rose Bruno

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

KAREN SIGNORILE

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Tom Gable  
19 Barney Rd  
Clifton Park, NY 12065

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Randi Ross  
Brooklyn, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

diane miller

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Christopher Pond

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Patricia Hofrichter

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.
