Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

VL Towler

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Dear New York City Board of Health,

ACTUALLY, IT WOULD BE BETTER TO JUST MAKE THE DRINKS HEALTHY. USE STEVIA SWEETENED, NOT DIET, NOT SUGAR, NATURAL STEVIA DRINKS EVERYWHERE IN NYC. ALL THE HEALTH AUTHORITIES TALK ABOUT USING STEVIA. COKA COLA HAS BEGUN TO USE IT TOO. TXS.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cindy Kirkeby

Dear New York City Board of Health,

I am writing OPPOSING Mayor Michael Bloomberg's proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces.

While I know many applaud this action, I, as a FREE person, a citizen of the USA, feel that to approve this proposal is to take away yet another of MY RIGHTS. Where does it stop? Red meat isn't good for us. Is the next proposal going to be to ban the sale of red meat? How about portion control on food bought and consumed at a restaurant? I mean - the portions served in most restaurants is at least TWICE the size of a normal portion? How about super sized fries or sandwiches? Are we going to ban them too? Why pick on the soda industry? What's to keep people from going back and refilling the 16 ounce drinks?

I personally feel this ban is an affront to the American people and to be honest - it's almost laughable - thinking that cutting down on the cup size will stop people from drinking as much soda as they want.

I do approve banning the sale of sodas and other sugary drinks in public schools. Children should not be buying sodas in the place of nutritious food available in the cafeteria and that's what they do. I've seen this in my employment as the assistant manager of a middle school cafeteria.

I'm sure the people who set up this Petition aren't going to be happy that I used their form to OPPOSE it - but that's exactly what I'm doing. Thank you for listening to the other side.

Sincerely,

Pamela Redgate

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

James Nicoll  
28 Georgetown Lane  
Fairport, NY 14450

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Stephen Carl

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Victor Escobar

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Yamin Mannan

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Steve Knapp  
Ithaca, New York

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

margaret bates  
new york, New York

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

This idea makes a lot of sense to me. Many times I wish to have a drink but the only size offered is larger than I wish. Because I bought the whole thing, I feel obligated to drink it all! This allows me to better match the offered size to my need.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

M Chu

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Danielle Arfin

Dear New York City Board of Health,

Not only do sugary drinks lead to obesity; they also foster tooth decay, an equally unhealthy result. Therefore...

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Bill McMaster

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Winfield Hutton

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Terrence Glassman

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Mamadou Youssouf Thiam

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

caroline Sokol

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Aurea Walker

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Victor Rios  
Bronx, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jeremy Stanger  
Brooklyn, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. ---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Coila Wilson

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Victor Cole

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Food providers are ONLY interested in the bottom line- they don't care about our health at all. They keep making portions bigger and bigger and dousing things with fat, HFCS and so on. This is one tiny tiny step in the other direction. All of us are paying the price of all the unhealthy obese people- it impacts ALL of us in increased health care costs. I don't want to pay more for premiums to support the ill health of the obese. GOOD FOR YOU MAYOR!

Sincerely,

Penelope Evans

---

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sharon Friedman

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joseph Merrell

Dear New York City Board of Health,

As part of Bloomberg's proposal (which will inflame those who worry re our freedoms being removed....not to mention the soft drink and sugar industries), I feel that a corresponding educational program in the schools, as well as in the media, to INFORM both children and adults of how they are participating in the destruction of their own health should be undertaken. Personal choice to destroy one's own health and to expect the government to provide medical care for the resulting diseases is unreasonable use of our constitutional "freedoms."

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Dear New York City Board of Health,

Because of the severity of the obesity crisis and the importance of Mayor Bloomberg's proposal to combat it, I am writing again.

I strongly support Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Irene Van Voorhis  
Poughkeepsie, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jenny Bowman

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Andrew Cheyne

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Our portion sizes are massive compared to other countries. It is part of the reason (although not the only) that we have such an obesity problem. Portion sizes should be reduced for sugary drinks, and reduced for other unhealthy foods as well.

Sincerely,

Alaina Johnson

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I never had sodas in the house except for seltzer and would never drink any except tonic if I have night time leg cramps

Sincerely,

lilian Weissman  
75-03 190 st  
Fresh Meadows, NY 11366

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Louise Malatesta

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Allison Horton

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Hope Nastri

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

joe and mary volpe

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

caitlin engel  
Whitestone, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Gilda De Ferrari

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Allan Tanzman

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

I recognize that this type of law is not in keeping with our "free to choose" American way of life, but it is clear that people are having great difficulty self-limiting (obesity rates are alarming). Also, a law like this sends a message to restaurants and other food vendors that they need to be part of the solution, not part of the problem.

As a Clevelander, I'd like to see this law go into effect here in Ohio as well!

Thank you.

Sincerely,

Ellen Hansen-Ellis

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

I myself recently gave up sugary soft drinks (I was drinking at least one 20-oz bottle per day) and I feel so much better! It was a hard struggle, though. These drinks are unbelievably addictive, and the beverage companies have been quietly increasing portion sizes for decades now. This has been a big factor in the alarming increase in obesity and diabetes over the past 30 years. Nobody is trying to say that people shouldn't have the choice to drink sugary soda, we just think that portion sizes should fit within reasonable guidelines.

Sincerely,

Michael McClennen

Dear New York City Board of Health,

I not only support Mayor Bloomberg's proposal but would limit the size even further. If those suffering from obesity cannot help themselves then it is up to us to help them. Obesity is a national problem because of our diets, lack of exercise and life choices. It goes to say that advertising and business has a great deal of credit in pushing our society towards obesity.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kimberly Asa  
brooklyn, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Stewart Crawford

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Alice Dugar

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Chad Van Dam

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Elizabeth Songalia

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Richard M Vartanian

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Thomas Lewis

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Emily Greenspan

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kirk Dangler  
341 E.90th St. Apt. 1  
New York, NY 10128

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Linda Michalek

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

I please support Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

I'm tired, almost sick, of seeing so many people on the busses I ride all the time, who are more and more grossly obese as time passes. Especially these are poor people and young people, who live in neighborhoods where good inexpensive nutrition is not readily available.

Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Prudence Barber

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cynthia Fricano

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

I absolutely agree with Mayor Michael Bloomberg that sugar-sweetened soda poses a grave risk to human health, the cost of obesity-related health care, and economic growth.

I therefore write in support of the Mayor's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Giulia Sesana

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Donna Jaggard

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

I would advise a clause in the approval that restricts businesses from raising the prices on the lesser size beverages served claiming they are compensating for the lost expense of sales lost on the larger sizes. Most of the expense was in the ice, cups and lids, which will no longer be purchased due to fact they are not needed. It should save them and the consumer money while promoting better health.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

candis hamilton

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Ben Borg  
Barrie, New York

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Richard Snook

Unfortunately corn syrup is often the sweetener used which can also lead to type 2 diabetes so reducing the size of servings helps but we need to push using plain sugar. Servings sizes overall need to be reduced. A lot of us were brought up to clean our plates and somehow we need to quit when we are full! What we do not eat will not feed hungry children overseas. I applaud you for daring to take the first step against super sizing Thank You  
Sincerely, Marie Leven

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Elinor Metzger

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

roger williams

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces.

His proposal sounds radical and is for now, but it is a step forward to shift our food expectations back to reasonable portions. It protects us all. Overtime more reasonable, and healthy serving sizes might become the norm. Wouldn't it be great if New Yorkers shifted in their food and beverage choices and were healthier. The rest of the US and world would take notice.

Sincerely,

Karen Farley, RD, IBCLC

Please approve the ban on super-sized sugary drinks. Portions, in just about everything, have crept up more and more over the years. If we don't put on the reins somewhere, within 10 years, restaurants will be offering 100oz. drinks. That seems too extreme to be true now, but the sizes people are now consuming would have seemed too big to be true a while ago.

People can say that this is no one's business, but obesity affects us all, in myriad ways.

Thanks for considering my comments.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cathleen Caffrey

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces.

The obesity epidemic is putting unnecessary strain on the health care system. I think that it's responsible of the mayor to take sugary drinks, which are a high percentage of America's daily caloric intake, into consideration while thinking of the public's health.

New York is a great city because of ideas like this.

Sincerely,

Paola Paniagua

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

David Landskron

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jeannie O'Donnell

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

jonathan memmert  
501 West 123 St

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

DeDe Johnson

I would hope this might help. If you are "on the go" and not sitting next to the machine, you would probably benefit from a smaller size drink. However, if you are addicted to soda, you buy as many as it takes. I have a dear friend, good smart person, who now weighs around 400 pounds. She "only" drinks 4 cans of soda a day. She started this habit only 5 years ago. She weighed only 180 pounds at the time (which was too much then as she's only 5'5"). Highlighting this problem will make people not drink so much in public, but they may become closet soda drinkers. My friend is addicted to all the garbage in the soda. Do what ever you can to take all this sewage off the market all together. I want her to live to see her 62 birthday in January 2013.

Sincerely,

Linda Ruggiero

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Melodee Kornacker

Dear New York City Board of Health,

I am writing because I do not Mayor Michael Bloomberg's proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces.

What do you want to bet that two 16 ounce drinks costs far more than one 32 ounce drink in most establishments. The difference between the price of four 16 ounce drinks versus one 64 ounce drink would be an even greater price differential. All of this does not even account for the increased trash from so many smaller drinks if one opts to still buy an equivalent amount of product. What's more, the larger cups leave a lot more room for ice which better cools the drink which in turn better cools the person leaving them wanting less overall liquid. On top of this, the ice melts to water down the drink and the effective sugar content in the larger drinks. In the smaller drinks there would be far less overall ice melting and far less dilution of the drink from melting ice. Partially because the drink would not last as long before its contents are totally emptied by human consumption. Thus overall, the sugar content per unit of thirst would actually increase if the consumer opts to quench his or her thirst to the same degree. Worse yet, many consumers may now opt to simply buy their drinks in plastic bottles since the need for ice is far less because the drink is not apt to last so long that it would get too hot to drink. This would add to the plastic trash that is filling our land-fills and the no-ice option is sure to add to obesity and type 2 diabetes.

But even more than being opposed to this approach to controlling obesity, I am opposed to the "Nanny-State" approach to controlling the lives of full grown adults and reducing their options to control the lives of their own children. Yes maybe something needs to be done to reduce sugar in children's diets but try starting with the sugary snack industry and get them to cut back on some of their fattening ingredients.

Sincerely,

Ralph Harrison

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rahul Mehrotra

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Dear New York City Board of Health,

I've always thought an alternative to limiting soda size, making sodas sugar free--and you add sugar, would be another approach.

Since sodas are around 20% sugar--a 20 ounce soda would contain about 1/2 cup sugar. Can you imagine someone putting that much sugar in a 16 ounce cup of coffee (giving you 20 ounces total)?

I think people are clueless. And unfortunately, sugar substitutes don't seem to help as they cause their own issues.

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Wanda Huelsman

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Patty Bonney

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.
