**RE:** Golden Apple Award Entry for Reduce and Reuse Challenge

**GREEN PROJECT:** A documentary film by **Jane Cyphers** and the **Green Dreamers** of PS 10. This movie documents our efforts to help **PS10** dream green!

**TITLE OF MOVIE:** Take the *Pledge to Stop Global Warming~ Ride the Sea of Change!*

The Green Dreamers of PS 10 were born in October of 2008 during the days preceding the election of President Obama. As the country experienced the excitement and the anticipation of change that comes with any election, the students in class 5-403 were no different. As we studied the platforms of both candidates, the students concluded that our country was in need of a change. Letters were sent to both candidates, in which the students shared their concerns about many issues, including their concerns about global warming.

During this time our class was invited to enter an essay contest that was sponsored by then City Councilmember Bill DeBlasio called, "How to Help Your School Go Green". The students researched environmental issues for several weeks preparing for their essays. The more they researched, the more they wanted to know and the more they wanted others to know what *they* knew. They decided the best way to spread the word around the school was by *educating and entertaining*. At this point the "Green Dreamers" were born.

The *Green Dreamers* wrote a mission statement that invited the entire school to *Ride the Sea of Change* and to do their part to Stop Global Warming. They created a list of things that people of all ages could do to stop global warming. When a friend of mine donated 1000 beautiful shells to the class, the *Dreamers* knew just what to do with them. They would give every child and adult in the school a shell in exchange for a pledge to stop global warming. The shell was to be placed by the bedside and on awakening everyone would see the shell and *Ride the Sea of Change*.

The *Dreamers* started meeting several times a week during lunch breaks and before school. They invited students from other classes to join. Then each child adopted a class in the school and met with them periodically to collect pledges, present skits and sing songs they had written related to their environmental research. In addition, there were Public Service Announcements that spread the word even faster.

When the students heard that one of the *Green Dreamers* had won the essay contest and would be invited to City Hall, they were inspired to make use of this political connection. The students broke into teams and created a Green Room which was an addition to the Science Fair, where in-depth studies of environment issues were presented; cons of plastic water bottles, plastic bag use and its affect on animals and water systems, Styrofoam trays in the lunchroom and the landfills,

fossil fuels and global warming, drinking water sources, recycling in and out of school, composting, easy ways to conserve energy, eating locally, New York City's water system, animals affected by global warming, methane production in landfills, our Energy Secretary Steven Chu, and petitions banning Styrofoam and water bottles in NYC buildings. The room was decorated with posters and logo designs designed by the Green Dreamers. The petitions made their way to John Shea (NYC DOE Head of Division of School Facilities) and the NYC City Council.

We invited water expert Elaine Matthews from NASA to discuss TRASH in NYC and around the world. We visited Albert Appleton, the former DEP Commissioner and world-renowned water expert. We studied the work of UN water expert Maude Barlow and then wrote skits related to what we learned. I joined the UFT Green Committee and then brought my students one day, so they could hear the discussions about the Styrofoam concerns and meet other green leaders. They met John Shea, the head of Division of School facilities for DOE, and gave him the 1000 petitions they collected that asked for a ban on Styrofoam trays and water bottles in all NYC schools. They met other green leaders and listened to their concerns. They found that they had similar concerns.

The *Green Dreamers* also surveyed teachers about their recycling habits. They met several times with the PS10 Green Team (concerned green parents) and the custodians to plan a course of action to make the recycling more efficient at PS 10. The students created informative as well as inspirational bulletin boards and artwork that was displayed around the school to get the word out. They also offered informative literature on a variety of green subjects to teachers and students.

The older students met with the younger students and taught them about ways they could keep the earth green. They then shared their love and knowledge of nature with the younger students on trips to their classrooms and trips with them to the park. They made up green games that they presented during lunch periods and in individual classes; Frogster, Styrofoam Coin Toss and Fishing For Frogs. They even had their mascot Plasticman. They even raised money to sail on the Hudson River Sloop, the Clearwater, that is featured in the movie.

All of these green projects were photographed and videotaped by the team. We started to accumulate so much documentation, that we decided to make it all into an iMovie. The *Green Dreamers* took part in all aspects of the movie making. Students met regularly to offer suggestions and to take part in the revision and editing process.

The new Green Dreamers have carried the green torch into the 2009-2010 school year! *Green Dreamers* is now offered as an after school class. All 3<sup>rd</sup>, 4<sup>th</sup> and 5<sup>th</sup> grade students are welcome. Some of the graduates have gone on to be green leaders in their middle schools. This year we have continued some of the initiatives started last year and started some new ones. When the deputy Mayor visited PS 10, we made sure he was aware of our Styrofoam concerns. We requested that our school return to the use of reusable trays and a dishwasher.

The 2<sup>nd</sup> generation *Green Dreamers* have made up surveys for local restaurants concerning recycling and written articles for the school newspaper about these surveys and related topics.

They have written and performed several songs about food waste and how it wastes lots of money and adds to Global Warming. They have been monitoring the recycling every day in the lunchroom as well as realizing the tremendous amount of good food being thrown into the garbage every day by NYC school children. The Green Dreamers believe that it should be *eaten, not composted!* They are also in favor of food waste pick up in schools, homes and restaurants, and plan to proceed with petitions related to this issue. They are presently collecting signatures that support a plas-tax in NYC and are looking forward to lowering the plastic use in NYC by 80% like Ireland did with it's plas-tax. They educated PS 10 about World Water Day. They shared green games and songs on Earth Day with their PS 10 community.

They have plans to continue meeting with politicians and sharing their iMovie that documents almost two years of social action by the *Green Dreamers of PS10*.

*Enjoy the movie! Dream in Green!*
