

Reducing Flood Risk through a Multi-Layered Resiliency Strategy

Maintain and improve **connections between neighborhoods and waterfronts** for the use and enjoyment of the park in non-storm conditions

Coastal protection should be integrated into the **existing infrastructure** of shoreline parkland

Make tower in the park buildings resilient by developing **alternative floodproofing strategies** that focus on **perimeter or individual building protection**

Support **possible alternative uses for ground floor sub-BFE spaces** beyond storage, parking and access to include **building amenities or commercial space.**

Make **multifamily mid-rise** buildings resilient by developing feasible **floodproofing strategies for critical systems.**

Provide guidance to property owners and managers for **operational preparedness planning to support partial mitigation strategies**

Preserve existing dwelling units to maintain affordability for area residents.
