

1. DEVELOPMENT SUMMARY TABLES FOR ALTERNATIVE ZONING ACTIONS

Reasonable worst case development scenario summary tables for Alternative B, “Proposed Action Without Modification to Special Districts”; Alternative C, “Proposed Action Without Modification to Garment Center Districts”; Alternative I, “Lower Density Plan”; and Alternative J, “Community Plan” developed by New York City Department of City Planning are included in this section. Appendix A.2 contains the reasonable worst-case scenario Alternative A, “No Action”.

2. ALTERNATIVE J

Alternative J was derived from the Hell’s Kitchen Neighborhood Association’s (HKNA) *Hell’s Kitchen Neighborhood Plan for Rezoning Hell’s Kitchen / Hudson Yards* which was provided during the public scoping process for this FGEIS in June 2003. The HKNA plan, dated June 16, 2003, is included in this section.

3. ALTERNATIVE K

Alternative K was derived from the Manhattan Borough President’s *A Vision for the West Side Rail Yards* plan which was provided during the public scoping process for this FGEIS in June 2003. This plan, dated December 2001, is included in this section.

4. TRAFFIC

Supporting documentation for the traffic assessments for the Alternatives chapter is included in this section.

5. NOISE AND VIBRATION

Supporting documentation for the Noise and Vibration chapter is included in this section.

6. AIR QUALITY

Supporting documentation for the Air Quality chapter is included in this section.

Comments	This development site combines the Western rail yard with Block 679, assumes a southward expansion of the Convention Center (approx. 637,000 SF), and approximately 6 million SF of new commercial (office and hotel). Assumes the Convention Center expansion will be built by 2010, remainder of development by 2025.

Introduction

This document describes a plan for the Hell's Kitchen / Hudson Yards area submitted by the Hell's Kitchen Neighborhood Association (HKNA). HKNA intends that this plan be reviewed in the Hudson Yards EIS as a full, comprehensive plan that satisfies the same city-wide goals as the "Hudson Yards" plan proposed by the Department of City Planning (DCP) - although it does so in a much different way.

This document first describes the origin of the HKNA plan and then the key elements of the plan. In subsequent sections the document describes a transportation plan, the proposed zoning, and a discussion of the open space system and required mapping. Finally the document describes several planning options and HKNA's expectations for a working relationship with the DCP and MTA staffs to address these options and any suggested adjustments or modifications to the HKNA plan.

Background and HKNA Goals

The Hell's Kitchen Neighborhood Association (HKNA) is a nine-year-old community organization that addresses concerns about open space, traffic, air quality, the built environment, and affordable housing while striving to enrich the unique urban character in Hell's Kitchen South — 34th to 42nd Street, west of Eighth Avenue. Community participation is central to HKNA's mission and projects.

Since 1995, HKNA has improved the urban environment through projects, both large and small. Over fifty trees have been planted throughout the area, contributed by HKNA and by the New York City Parks Department. Many children and adults have been involved in HKNA "Adopt-A-Tree" program and summertime "Tree-Care Saturdays."

In 1995, HKNA's Urban Planning Committee investigated whether marginally used Port Authority properties could be converted to public spaces. Following the study, HKNA successfully negotiated a lease for three Port Authority-owned properties. As a result, the Hell's Kitchen Community Garden, Dog Run, and Bird Park opened on May 2, 1998.

Last year HKNA, Publicolor, and the Port Authority collaborated on a project to paint the 900-foot-long walls and steel bridges adjacent to the Port Authority's bus ramps on West 39th Street between Ninth and Tenth avenues. The "Hell's Kitchen Painted Promenade" was painted by Hell's Kitchen residents and Publicolor's Paint Club.

HKNA Urban Planning Process

Aware of the growing interest in developing the far West Side, several years ago HKNA anticipated the need for a comprehensive plan for the area. HKNA, in collaboration with the Design Trust for Public Space, began a three-year urban planning process in 1998 that brought together the local community, property owners, developers, and planning professionals. HKNA sponsored local envisioning sessions and informational exhibits leading up to a community planning conference in June, 1999. The conference was followed by public symposia, exhibitions, and invited design proposals generated by eighteen multi-disciplinary teams.

This multi-disciplinary planning process culminated in the publication in 2002 of "Hell's Kitchen South: Developing Strategies," a 160-page book that outlines community goals and documents various design options for future physical development of the Hell's Kitchen South neighborhood.

Hell's Kitchen Flea Market, mentioned in "Hell's Kitchen South Developing Strategies," recently opened on West 39th Street between Ninth and Tenth avenues, creating a local and regional destination and reinforcing the community's goal to make West 39th Street a public thoroughway to the Hudson River.

An extension of "Developing Strategies," the HKNA plan described in this document is HKNA's response to the New York City Department of City Planning's "Hudson Yards Plan" for Manhattan's West Side between 28th and 42nd streets.

Intention of the HKNA Plan

The HKNA plan was developed to ensure that the Hudson Yards rezoning is aligned with the community's goals, while meeting the City's goals as well. The plan was developed in collaboration with Manhattan Community Board 4 and the Hell's Kitchen / Hudson Yards Alliance, a growing coalition composed, to date, of the following members:

Clinton Association for a Renewed Environment
Clinton Housing Association
Clinton Housing Development Company
Harborview Tenant Association
Hartley House
Hell's Kitchen Neighborhood Association
Housing Conservation Coordinators
London Terrace Gardens Tenants Association
Manhattan Plaza Tenant Association
Project Renewal
457 West 57th Street HDFC
West 44th Street Better Block Association
West 27th Street Block Association
Hon. Christine Quinn, City Council Member
Hon. Gale Brewer, City Council Member
Hon. Richard Gottfried, State Assembly Member
Hon. Scott Stringer, State Assembly Member
Hon. Thomas Duane, State Senator
Hon. Liz Krueger, State Senator
Hon. Eric Schneiderman, State Senator
Hon. Jerrold Nadler, United States Representative

Designed with previous Community Board resolutions in mind, all of the plan's key elements were endorsed by Community Board 4 in a June 4, 2003 vote.

In coming months HKNA intends to seek support for its plan from civic and neighborhood groups, the planning and design community, and the real estate industry. A model and description of the HKNA plan are currently on view at the Municipal Art Society, in the lobby of the Urban Center at 457 Madison Avenue. A public presentation is scheduled for July 1, 2003.

Description of HKNA Plan

Predicated on the community's concerns about traffic, air quality, open space, appropriate scale of development, and affordable housing, the HKNA plan balances the development goals of the local community with those of the City of New York.

Javits Center Expansion

The key to the HKNA plan is a southward expansion of the Javits Convention Center over the Rail Yards between Eleventh and Twelfth avenues. The expansion provides for towers in the four corners of the site with lower commercial structures between them (except on the western side facing the Hudson River). In addition to the convention center, commercial development on the Javits Center expansion site would amount to about 6 million square feet. The flat roof of the new Javits Center expansion would be become a public park and community recreation area directly linked to Hudson River Park. A successful rooftop park is a main feature of the Moscone Center in San Francisco and of the Toronto Convention Centre.

The Javits Center would also expand north to 39th Street, completing the existing building. Thus while some additional space would be contiguous to existing space, a desire expressed by the Javits Center management, most new space would be in a separate building, connected to the existing building by pedestrian concourse. Dividing the space into separate buildings is advantageous in attracting smaller trade shows, which are the majority, while it does not seriously impede the ability to attract the largest shows.¹ HKNA's proposed Javits Center space distribution, shown in Table 1, would provide the same total space as expanding the Javits Center north to 41st Street.

Table 1. HKNA's Proposal for Expansion of the Javits Center (sq.ft. or seats)

	Current	South Expansion	North Expansion	Total
Exhibit Space*	814,400	450,000	126,000 ⁺	1,390,400
Meeting Space	28,000	140,000	60,000	228,000
Ballroom Space*	23,000	47,000		70,000
TOTAL*	842,400	637,000	186,000	1,665,400
Fixed Seating			3,500	3,500

* For the current building, the Ballroom, Galleria, and River Pavilion are all included as exhibit space; the TOTAL includes the Ballroom only once.

⁺ Includes a deduction of 54,000 square feet for the temporary north wing.

The orientation of the Javits Center southward expansion would put the entrance along 34th Street and the loading docks along 30th Street. Taxi and bus drop-off would be located at existing grade in the block between 33rd and 34th streets. Escalators would connect the drop-off area, at level +5, to a lobby above, at level +32. The new lobby, with a grand entrance at the corner of 34th Street and Eleventh Avenue, would be at the same level as the Eleventh Avenue entrance to the existing building.

¹ See "Taking up Space," Meetings and Conventions, December, 1998, at <http://www.meetings-conventions.com/issues/1298/features/feature3.html>.

The existing and new entrances could be connected by a pedestrian overpass crossing 34th Street, as well as at grade. This orientation would allow for retail stores along Eleventh Avenue and would provide sweeping views to the Hudson River from a pre-function lounge on the west side of the building, which could also be used for banquets, registration, or additional exhibit space.

In addition, the block between 29th and 30th streets, just south of the loading docks, would be used for truck marshaling. A multi-level marshaling facility, planned by the Javits Center corporation, would allow space for relocating the tow pound from Pier 76, and sanitation trucks currently occupying the Gansevoort peninsula. The roof of the multi-level facility would be used for sports fields, reserving the new Javits Center rooftop park for more passive uses.

Some Javits Center meeting rooms would be easily accessible from the perimeter of the exhibit halls, on the south, east, and north sides. The ballroom and additional meeting rooms would be located on the perimeter of the Javits Center rooftop park. This arrangement would give the ballroom and most meeting rooms access to the rooftop park and to views of the Hudson River.

There are several options for the 3,500-seat auditorium currently planned by the Javits Center corporation. An auditorium could be built in place of the existing plaza on Eleventh Avenue between 35th and 36th streets as part of a commercial building. Alternatively the auditorium could be located in the block owned by Javits Center corporation north of 39th Street, in the southward Javits Center expansion, or the Javits Center could share an auditorium with other cultural uses in an auditorium on the eastern rail yard site.

Central Open Space

Given the large amount of commercial space to be developed along with the southward Javits Center expansion, the HKNA plan envisions the expansion of the Midtown Central Business District occurring primarily along an east-west corridor between 30th and 35th streets.

On the eastern rail yard site, an eight-acre, multi-level urban public open space, including gardens, cafes, and other public amenities, will form the commercial center of a new mixed-use district with links in all four cardinal directions — east to the new Penn Station and 34th Street retail corridor, to a series of open spaces proceeding northward through Hell's Kitchen, west to the Javits Center rooftop park, and south to the future High Line promenade through Chelsea. The commercial center would also contain space for cultural activities.

The plan makes possible a pedestrian connection from Penn Station to the Hudson River, linking a number of public open spaces along a reintroduced 32nd Street Pedestrian Way. The plan also provides at-grade access from all directions to the central open space, allowing it to be fully functional while bridge connections to the High Line and Penn Station are added in phases. A diagram of the plan is shown in Figure 1.

32nd Street Pedestrian Way

At the center of the 30th to 35th Street commercial corridor, the HKNA plan envisions a 32nd Street Pedestrian Way. The Pedestrian Way, lined with stores and cafes, would lead from the new Penn Station to the commercial core on the eastern rail yard site, and continue to the Javits Center rooftop park.

The 32nd Street Pedestrian Way would pass through a new commercial complex behind the new Penn Station, traverse the Schulweiss/ Brookfield site between Ninth and Dyer avenues, cross over both Dyer and Tenth avenues via the third floor of the West Yards building, and enter the central open space on the eastern rail yard site. From there a set of stairs, ramps, and an elevator would lead to the Javits Center rooftop park and the Hudson River. If Madison Square Garden is relocated to the Schulweiss/Brookfield site, the arena would be elevated to allow the Pedestrian Way to pass underneath.

Other Commercial Areas

In addition to a major commercial corridor between 30th and 35th streets, the HKNA plan also provides for lower density commercial areas along Eleventh Avenue and between 40th and 42nd streets. Currently we assume that development will occur first along the 30th to 35th street corridor and on sites surrounding the Port Authority Bus Terminal before moving to Eleventh Avenue.

Blocks North of the Javits Center

The two blocks north of the Javits Center, from 39th to 41st streets, would have a mixture of residential use on the Twelfth Avenue, river-front side and office use on the Eleventh Avenue side, similar to the pattern currently envisioned for the block between 41st and 42nd streets.

The HKNA plan would preserve critical access to the Hudson River, particularly an easy 39th Street at-grade, pedestrian link between the residential community and the waterfront and between the future 39th Street ferry terminal and office uses on Eleventh Avenue. In addition, the HKNA plan would avoid extending the wall of loading docks facing the Hudson River at the back of the Javits Center by another five hundred feet between 39th and 41st streets, which would occur if the Javits Center is extended northward rather than primarily southward, as HKNA proposes.

An option for a convention hotel in the block between 39th and 40th streets is discussed below. Since the HKNA plan does not require relocating the MTA bus garage in order to expand the Javits Center, the relocation can be deferred to reduce up-front costs.

FIGURE 1
CONCEPTUAL DIAGRAM OF MAJOR ELEMENTS
 06/16/03

Distribution of Bulk

The HKNA plan can accommodate the same gross amount of office and commercial space as the DCP plan, and somewhat more residential space, but it does so in a different way. With the base zoning proposed, the DCP plan allows 2.2 million square feet more commercial development south of 35th Street than north.² However the DCP plan also allows up to 2.6 million square feet of development rights to be transferred from the eastern rail yard site to sites north of 35th Street. With the bulk transferred, the balance shifts to 3.3 million square feet more commercial development north of 35th Street than south.

With the HKNA plan, on the other hand, approximately 18 million square feet of office and other commercial space could be built in the 30th to 35th street corridor. Almost 10 million square feet more commercial development would occur south of 35th Street than north. In fact, 70 percent of the commercial development would take place south of 35th Street. This distribution allows lower-scale development, including affordable housing, in Hell's Kitchen north of 35th Street and in Chelsea south of 30th Street.

Core Residential Area

The Hell's Kitchen core residential area, between Ninth and Tenth avenues from 33rd to 41st streets, would be reserved primarily for infill housing, although cultural and other uses would be permitted. Preservation of existing residential buildings as well as a comprehensive open space plan are essential for this area and are discussed below.

Other Elements of the HKNA Plan

The HKNA plan's concentration of commercial space in the 30th to 35th street corridor leads naturally to a transportation system also oriented, at least initially, in an east-west direction. The transportation plan, and the zoning and open space plans, are described in the following sections.

² These calculations do not count the current site of Madison Square Garden, nor the Schulweiss/Brookfield site on the west side of Ninth Avenue between 31st and 33rd streets, to which Madison Square Garden may relocate.

Mass Transportation

Since the HKNA plan proposes a 30th to 35th street east-west corridor as the main locus for development, mass transit access is oriented in a parallel fashion. An east-west orientation has the advantage of connecting mass transit serving the West Side to Penn Station, a major regional transit hub.

To serve this east-west development corridor, we adopt the MTA's proposal for a 33rd Street shuttle connecting Eighth Avenue, Penn Station, and the subway system to a stop between Tenth and Eleventh avenues. The MTA's studies, conducted for a 1987 development scheme over the rail yards, recommended a shuttle to serve a development consisting of 12.5 million square feet of office, hotel, and residential space. The proposed shuttle would have served surrounding development and the Javits Center as well.³ The cost of a shuttle, according to a 1989 review by DCP, would be \$110 million in 1987 dollars.

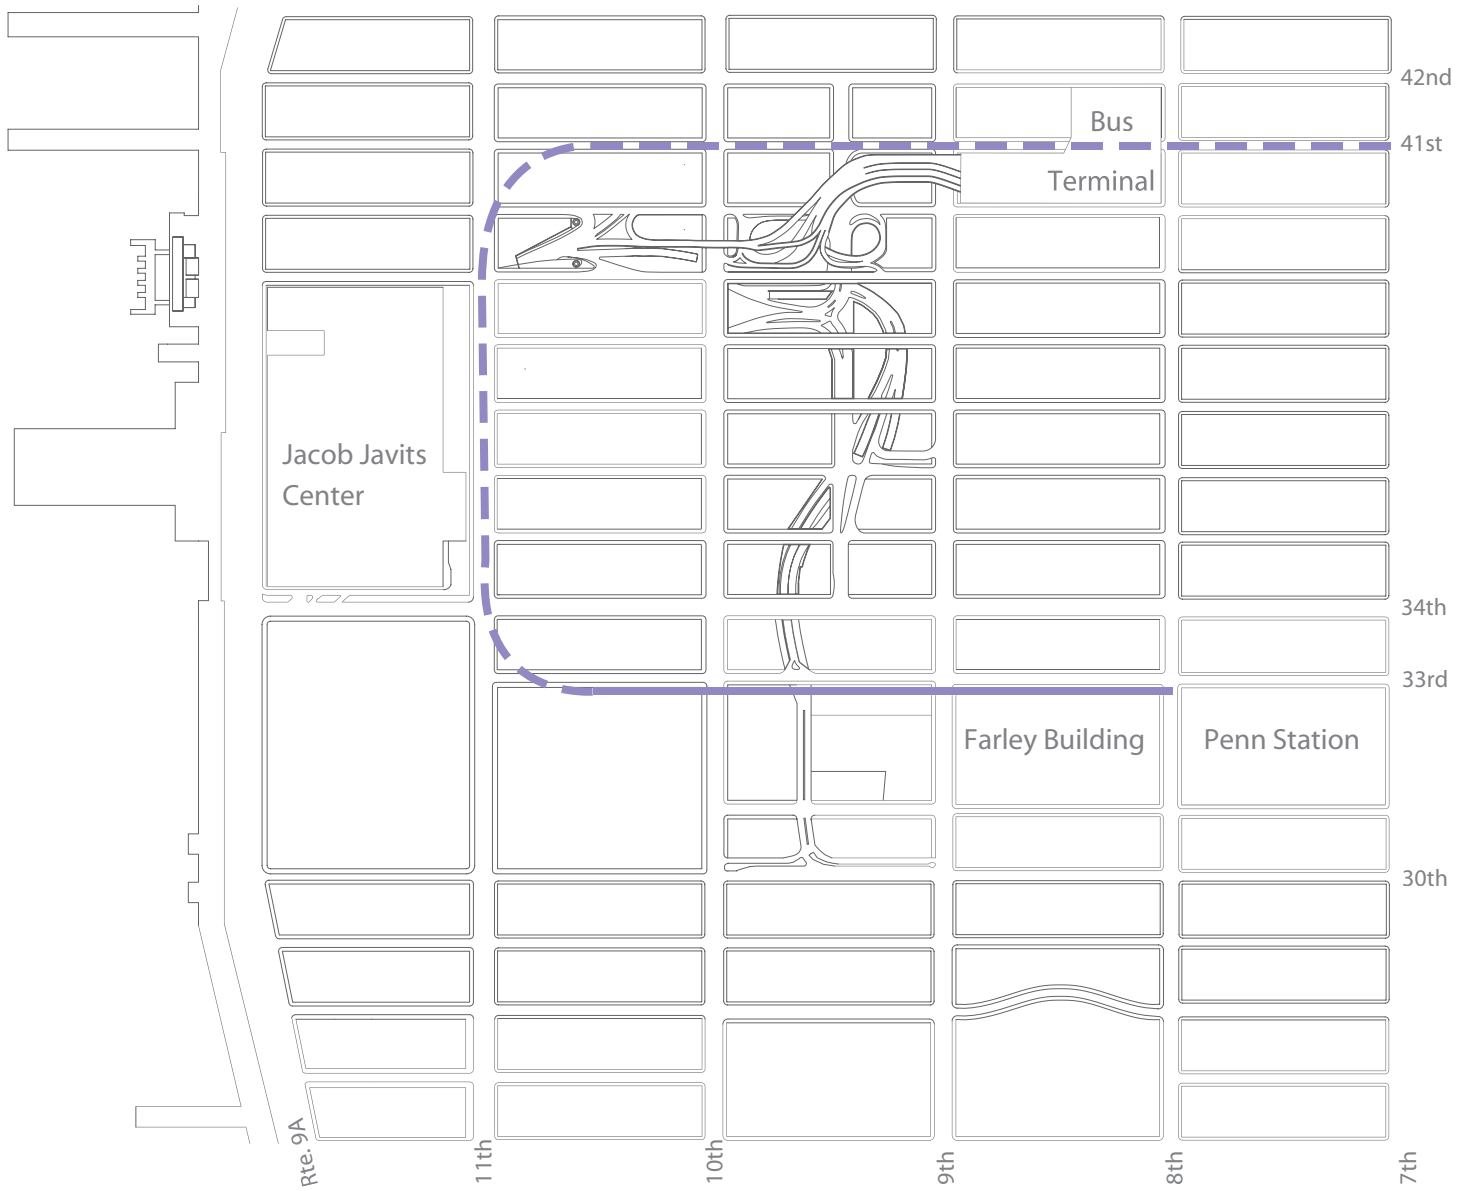

Flushing Line Extension

While a shuttle should be sufficient to support development in the short and medium term, better transit access will be required to achieve full build out. The current proposal to extend the Flushing (No. 7) subway line conceives of a 42nd Street cross-town route, extended west to Eleventh Avenue and then south to 34th Street. The 33rd Street shuttle would be designed to connect to such a cross-town route as the southern leg in a "J" configuration.⁴ This configuration has the benefit of increasing, perhaps even doubling, effective capacity with respect to the rail yards site, since passengers could reach the site in both the clockwise and counter-clockwise directions.

Since commercial development would be expected to occur first in the 30th to 35th street corridor, extension of the Flushing Line could take place in a later phase, shown on Figure 2. Conceiving of the Flushing Line extension as part of a phased project would greatly reduce the overall cost, since delaying major construction would avoid the accumulation of bond carrying charges that would otherwise occur. The HKNA plan is better able to take advantage of such cost savings because the plan concentrates so much of the total commercial space in the 30th to 35th street corridor.

³ See "Master Plan: Caemmerer West Side Yard," MTA, August, 1989. A shuttle to the Javits Center was studied in 1979, but was not built because sporadic use for the Javits Center alone could not justify the expense.

⁴ A "J" configuration to serve the project area first appeared in the 1973 "People's Plan for Clinton."

- Phase 2: # 7 Subway Extension

FIGURE 2
PROPOSED SUBWAY ALIGNMENT
06/16/03

Light Rail

Light rail could provide additional transit capacity to the West Side. Several variations of a light rail system have been proposed by others. The Institute for Rational Urban Mobility proposed "Vision 42," an auto-free 42nd Street pedestrian and transitway. An analysis of both the Flushing Line extension and a 42nd and 34th streets light rail loop by consultants to the Borough President of Manhattan argued that either would have about the same available capacity to deliver riders to the West Side, while the cost of a light rail system would be a small fraction of the cost of a subway extension.⁵ The Regional Plan Association has proposed a "Midtown Crossing" light rail route along 42nd Street, Twelfth Avenue, 34th Street, and Broadway, ending at Lincoln Center. DCP itself endorsed a light rail system in 1989, proposing a "J" configuration ending at Penn Station, with 42nd Street forming the main cross-town arm.⁶ These light rail alternatives should all be reviewed in the EIS.

⁵ Paper by George Jacquemart written as a follow-up to Buckhurst Fish & Jacquemart, Inc., "A Vision Plan for the West Side Rail Yards," November, 2001. His analysis assumed that during peak periods the Flushing Line delivers passengers to and from the West Side primarily in a single direction, while a light-rail loop could deliver passengers in both the clockwise and a counterclockwise directions.

⁶ See "West Side Transitway Planning and Feasibility Study," Department of City Planning, August, 1989. The City Council authorized a 42nd Street light rail system without the 33rd Street leg in 1993.

Proposed Zoning

To effectuate the development plan described above, HKNA has devised a zoning plan, shown in Figure 3. The intent of the zoning plan is to keep building bulk between 35th and 40th streets to a moderate level, while directing more intense development to the 30th to 35th street and 42nd Street corridors.

In general, between 35th and 40th streets commercial districts would not exceed an FAR of 12, while residential districts would not exceed an FAR of 7.5 (R9 equivalent). Between 40th and 42nd streets commercial districts could have an FAR of 18 between Eighth and Ninth Avenues and 15 between Ninth and Tenth avenues. However, in a later section, we present an option whereby the northeast corner of 42nd Street and Eighth avenue would be rezoned to an FAR of 18 in exchange for maintaining 12 FAR on all other sites between 40th and 42nd streets.

In the 30th to 35th street corridor the HKNA plan would continue a 12 FAR zone on 34th street from Eighth to Tenth avenues, while allowing 15 FAR between Tenth and Eleventh Avenues from 30th to 35th streets, and 10 FAR on the western rail yard site.

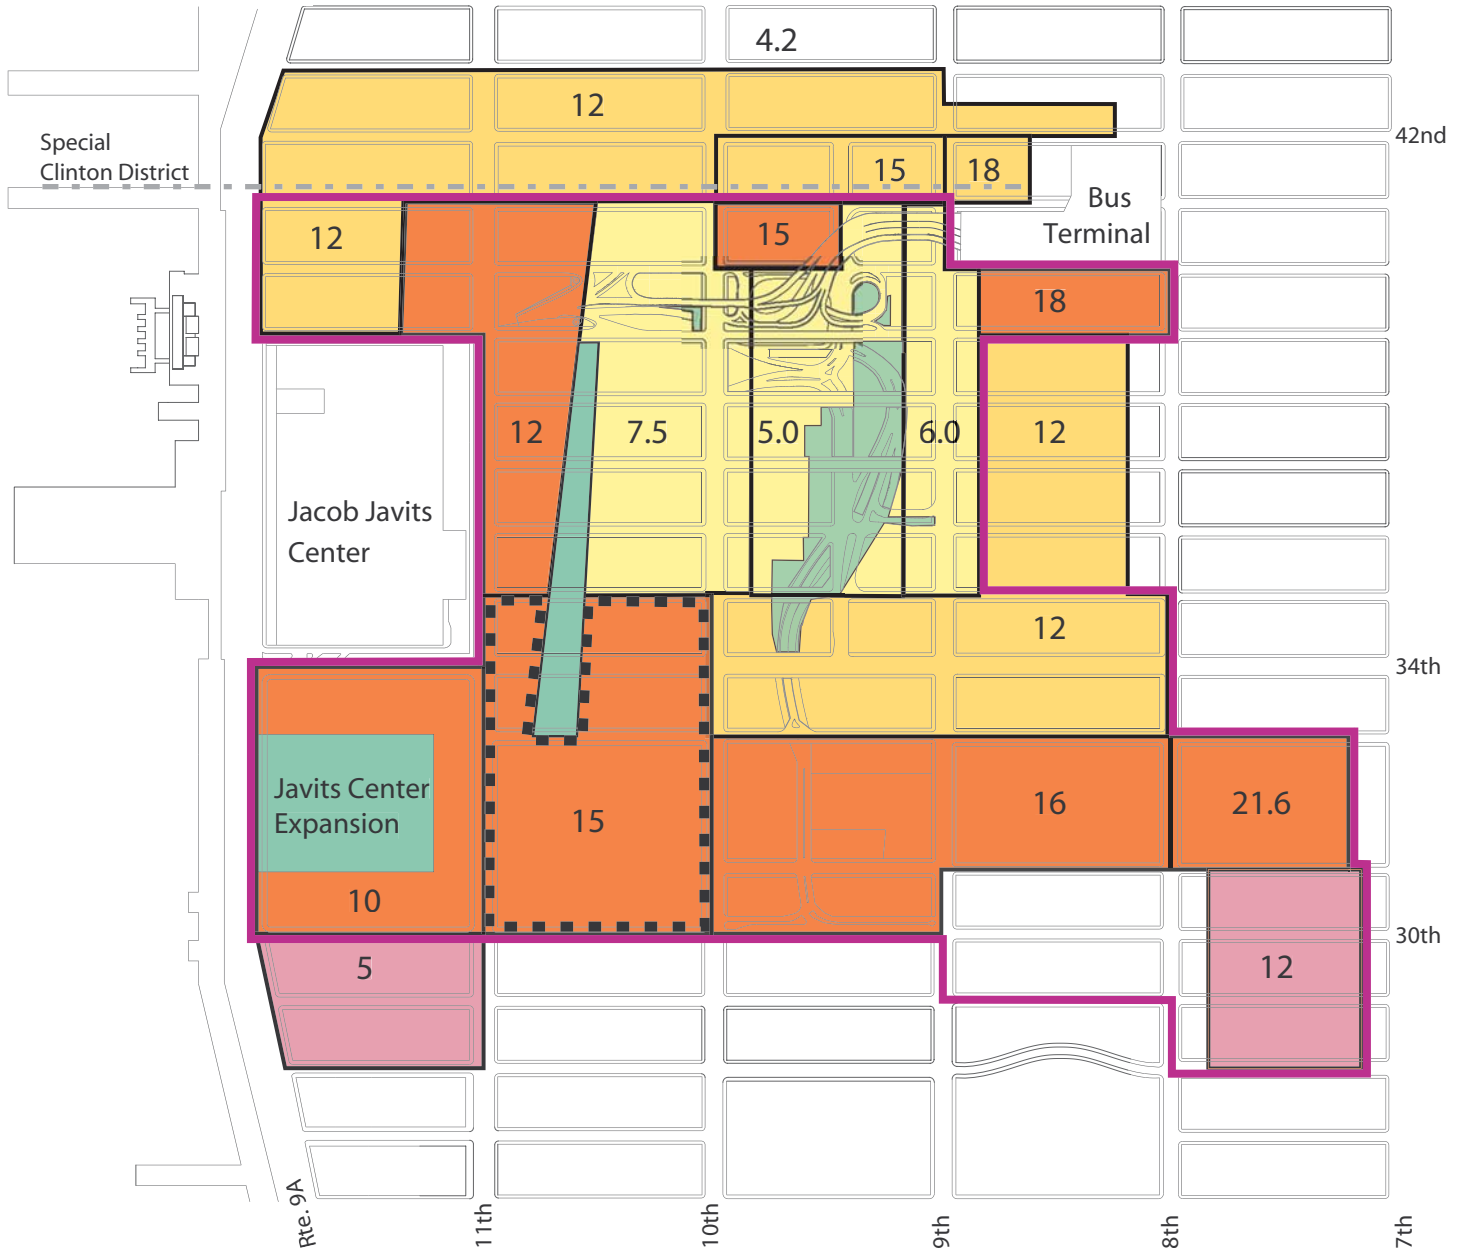

GLSD and Bulk Transfer

The HKNA plan, similar to the DCP plan, would provide for a General Large-Scale Development (GLSD) district between Tenth and Eleventh avenues, with bulk transfer permitted from the eastern rail yard site to other development sites. However, unlike the DCP plan, the GLSD district in the HKNA plan would not extend north of 35th Street. HKNA is currently reviewing the amount of bulk that could be transferred within the GLSD district and intends to discuss this issue, among others, with the DCP staff.

Protections for Existing Residential Areas

Three existing residential areas will be subject to development pressure as a result of this plan. The vulnerable areas are 33rd to 41st streets between Ninth and Tenth avenues, 29th and 30th streets between Eighth and Ninth avenues, and areas of Clinton north of 43rd Street.

To protect the residential uses, these blocks should be zoned with an FAR that matches the bulk of existing buildings, in order to reduce incentives to demolish and rebuild. Existing buildings in the vulnerable areas have FAR's of approximately 3.0 to 4.5. The preservation area of the Special Clinton District limits FAR to 4.2. The recent Chelsea rezoning changed the 29th and 30th Street blocks to R8B, which limits FAR to 4.0. Thus two of the three vulnerable areas are protected with respect to FAR. The HKNA plan would rezone the blocks from 35th to 41st streets between Ninth and Tenth avenues (except 40th to 41st streets between Tenth and Dyer avenues) to limit FAR to 4.2 in the mid-blocks and to permit residential use. The blocks between 33rd and 35th streets, which have larger structures, would be zoned at an FAR of 10 to 12.

- Large Scale Plan
- Special Hudson Yards District

2.0 Proposed FAR

FIGURE 3
OPTION 1 - CONCEPTUAL ZONING MAP
 06/16/03

Second, the non-demolition and anti-harassment provisions currently in the Special Clinton District would, under the HKNA plan, be included in a Special Hudson Yards District and would be applied to those same vulnerable blocks. Those provisions would also be applied to the remaining buildings on Tenth Avenue and to buildings on both sides of Ninth Avenue. Nevertheless, a higher FAR would be allowed for new construction on the Avenues — 6.0 FAR (R8 equivalent) on Ninth Avenue and 7.5 FAR (R9 equivalent) on Tenth Avenue.

Sustainable Development

HKNA's proposed zoning will include requirements for "green" building techniques to mitigate impacts on water consumption, sewer systems, storm water drainage, solid waste and sanitation services, and energy consumption. These techniques should follow the Leadership in Energy and Environmental Design (LEED) Green Building Rating System, a voluntary, consensus-based national standard for developing high-performance, sustainable buildings. The zoning should require LEED-certified gold level for new commercial buildings and LEED-certified silver level for residential buildings.

Zoning Bonus Provisions

HKNA expects to recommend that zoning bonuses be used to finance infrastructure improvements as well as inclusionary housing. However we cannot be sure of the specific manner in which this might be done until we have a better idea of the costs of this project and the financing options that the City is considering.

Blocks East of Ninth Avenue

HKNA included zoning changes for the blocks east of Ninth Avenue merely to be consistent with the DCP zoning plan outside our area of main concern, and so that the overall plan meets DCP goals for new residential housing. The HKNA plan does not address zoning changes advocated by DCP for the blocks of the Garment Center between Eighth and Ninth avenues and the blocks south of Penn Station.

Open Space and Mapping

The HKNA plan contemplates an extensive and varied system of open spaces. These include the eight-acre central open space on the eastern rail yard site, the ten-acre rooftop park on the western rail yard site, the rooftop recreation area on top of a multi-level marshaling yard, and mid-block open spaces next to Dyer avenue between Ninth and Tenth avenues and adjacent to a mid-block boulevard between Tenth and Eleventh avenues. The plan anticipates development of the High Line promenade by providing for a direct connection from the High Line to the central open space on the eastern rail yard site, leading from there to the Javits Center rooftop park and the waterfront.

Mid-block Open Spaces

From 35th to 38th streets, between Tenth and Eleventh avenues, the HKNA plan proposes a primarily commercial district west of a new mid-block boulevard and a residential (R9) district east of the boulevard. Given that configuration, we find that a string of parks between lanes of traffic is less useful than attaching the parks to the residential area. Consequently HKNA proposes to map an 80-foot-wide boulevard with a set of mapped public park spaces on its eastern edge. The public parks could be developed and maintained by the adjacent property owners, under guidance of special district regulations, reducing the cost of acquiring the boulevard right-of-way.

The HKNA plan would also map all the open spaces next to Dyer Avenue shown on the DCP's "Illustrative Open Space Diagram," which was included in the Draft Scoping Document. HKNA would like to see below grade portions of the Lincoln Tunnel access roads decked over for recreational use. We will address the financing of these open spaces once the City releases its own financing plan.

Street Mappings

To accommodate the southward expansion of the Javits Center, 33rd Street would be demapped between Eleventh and Twelfth avenues. In addition, 30th Street between Ninth and Twelfth avenues will probably need to be widened to provide greater capacity for vehicular access to future parking garages under the deck of both rail yard sites, from 30th and 31st streets, and to the truck marshaling structure between Eleventh and Twelfth avenues.

HKNA has long complained about the fact that Dyer Avenue is an unmapped street, complicating housing development on adjacent sites. Portions of Dyer Avenue that residential building would face should be mapped to permit legal lot-line windows.

Planning Options

HKNA expects to discuss planning options with the DCP and MTA staffs. These include a zoning option for the northeast corner of 42nd Street and Eighth Avenue; a possible convention hotel on the block north of the Javits Center; possible reuse of the LIRR yard, if it can be relocated; and options for a Port Authority bus garage.

42nd Street Zoning Option

In deference to the Clinton community, the DCP plan proposes no map changes in the Special Clinton District north of 42nd Street, but it does propose upzoning the blocks south of 42nd Street even though they, too, are in the Special Clinton District. To forestall such changes to the Special District, Community Board 4 has indicated, in a recent vote, that it might be willing to support upzoning the northwest corner of 42nd Street and Eighth Avenue to an FAR of 18 if the FAR on the rest of 42nd Street remains at 12.

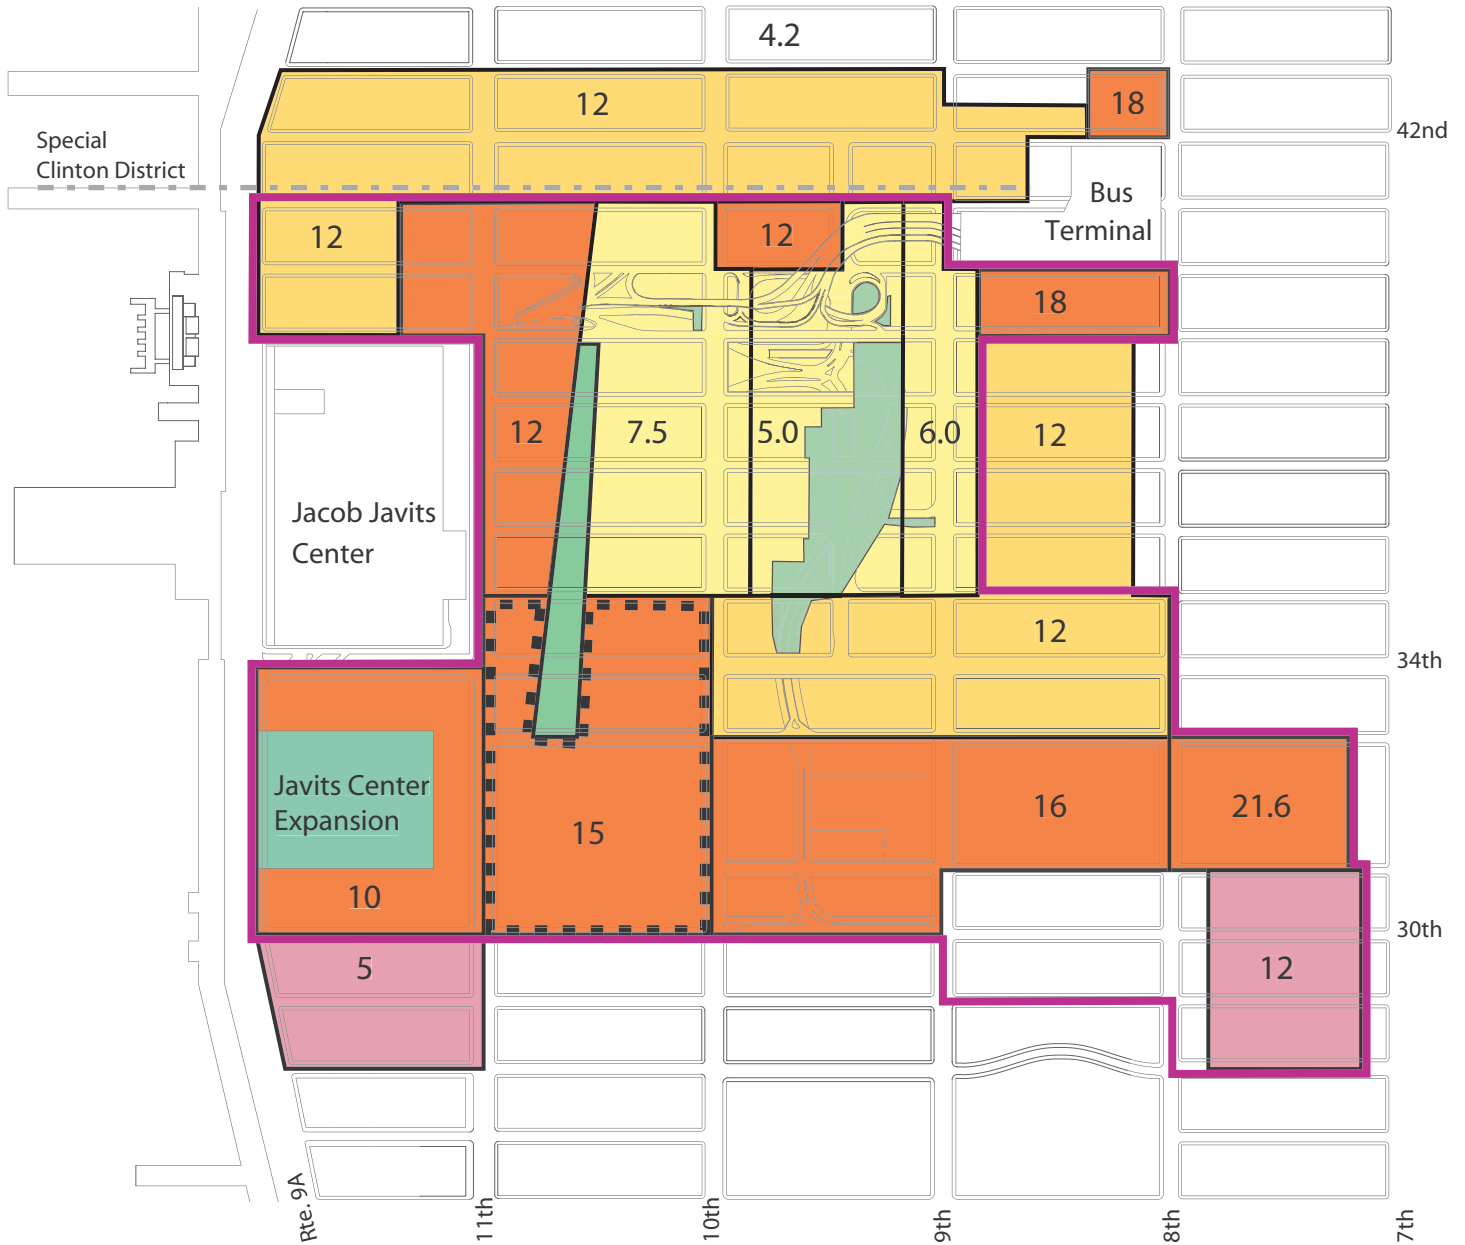

The northwest corner of 42nd Street and Eighth Avenue, currently zoned for 12 FAR, is adjacent to a major transportation node that includes the Port Authority Bus Terminal and a major subway station. Since the DCP plan calls for upzoning the block south of the bus terminal to an FAR of 18, the northwest corner of 42nd Street and Eighth Avenue could be up zoned in a similar manner. Our calculations show that an FAR 18 office building on that site would contain about 900,000 square feet, equivalent to 3 FAR on development sites between Ninth and Tenth avenues from 40th to 42nd streets plus 6 FAR on site between the Port Authority Bus Terminal and Ninth Avenue (DCP sites 1050A, 1051A & B, and 1032A).

Thus starting with the HKNA zoning plan shown in Figure 3, the sites on the border of the Clinton Special District can be maintained at 12 FAR if the site on the northwest corner of 42nd and Eighth Avenue is zoned for an FAR of 18. If this option is adopted, the proposed zoning would appear as shown in Figure 4.

Convention Hotel Option

Anticipating a northward expansion, the Javits Center operating corporation bought the block north of the existing facility. In the HKNA plan, a northward expansion of the Javits Center is not needed or desired if it would require closing or bridging over 39th Street, the main access route to the waterfront and the new ferry terminal. However recognizing that the Javits Center owns the property and planned for a Hotel north of its convention hall, HKNA is willing to consider a convention hotel on the site as long as that convention space is physically separate from convention space in the Javits Center. A convention hotel could provide an additional 130,000 square feet of exhibit space to the area, matching the amount proposed by the New York Jets.

If the block north of the Javits Center does become a convention hotel, the residential space in the HKNA plan would be slightly reduced, although the total would still exceed the amount provided for by the DCP plan.

2.0 Proposed FAR

FIGURE 4
 OPTION 2 - CONCEPTUAL ZONING MAP
 06/16/03

The LIRR Storage Yard

Both the DCP and HKNA plans provide approximately equal expansion space for the Javits Center. Demands to expand the convention center seem to appear on a schedule, usually starting only a few years after completion of the most recent expansion. In both the DCP and HKNA plans, however, the current Javits Center expansion might well be the last (at least in Manhattan).

Nevertheless, there is a difference between the two plans regarding the possibility for a future Javits Center expansion. The DCP plan would expand the Javits Center northward onto a cramped site with no possibility for future expansion. By contrast the HKNA plan would expand the Javits Center southward over a vast open structure used by the MTA for midday train storage. If the LIRR West Side storage yard could be eliminated or reduced in size, any space thus made available could be used for a future Javits Center expansion.⁷

A Port Authority Bus Garage

HKNA has advocated construction of a garage to house busses that currently lay over during the day in surface lots around the Port Authority Bus Terminal. DCP intended its Hudson Yards plan to include such a garage. Both DCP's proposed zoning map (Fig. S-7) and DCP's "Illustrative Open Space Diagram" in the Draft Scoping Document show the garage over the Lincoln Tunnel exit plaza between 38th and 39th streets, east of Tenth Avenue. A bus garage should be evaluated as part of the proposed action.

HKNA has been told, however, that a new study of possible sites is needed. But the Port Authority has already examined nineteen sites in a study it conducted in 1986.⁸ Only three sites would be consistent with current plans for the West Side. One of those sites is the Lincoln Tunnel exit plaza suggested by DCP, which was not among the sites studied previously. However, a similar site, the Lincoln Tunnel entrance plaza, was previously studied. The third site is the top of the Port Authority Bus Terminal. Preliminary plans were drawn up for the latter two sites, as part of the 1986 study, along with cost estimates. Thus it appears that there is no need conduct yet another study. The three feasible sites should be evaluated in the Hudson Yards EIS.

⁷ The MTA should study the possibility of reducing or eliminating midday train storage on the West Side. This might be made possible through a combination of through-running LIRR trains with New Jersey Transit trains, through-running LIRR trains with Metro-North trains, relocating some storage to New Jersey, or relocating some storage under Riverside Park north of 72nd Street. The options involving Metro-North and storage under Riverside Park would require routing LIRR trains north via the Empire Connection. In that case, a two-track connection between Penn Station and the Empire Connection might also be required. A right-of-way for such a connection, possibly branching from the existing storage yard tracks between Tenth and Eleventh avenues to the proposed mid-block right-of-way, could be reserved now.

⁸ Parsons Brinkerhoff Quade and Douglas, Inc., "West Side Manhattan Bus Storage Feasibility Study," December, 1986.

Relationships with EIS and Agency Staffs

HKNA's plan for the Hell's Kitchen / Hudson Yards area, described in this document, represents the first phase of an ongoing study. HKNA's consultants expect to concentrate now on the rail yard sites and on the financial and real estate implications of the plan. HKNA views this submission as part of a continuing dialog with both the DCP and the MTA.

HKNA Work Program

HKNA has contracted with a team of professionals to develop this proposed plan. The team includes urban designers, an urban planning and transportation planner, structural engineers, a construction cost estimator, real estate consultants, including the following:

Urban Design / Project Coordination	Meta Brunzema Architects P.C.
Urban Planning & Transportation	Daniel Gutman
Structural Engineering	Connell Wagner Consulting Engineers
Real Estate & Financial Analyst	Freeman/Frazier, & Associates
Olympic Stadium Consultant	Ian Chodikoff, R.A.

So far the team has completed a comprehensive planning and urban design concept, presented in this document and on display at the Municipal Art Society lobby at 457 Madison Avenue. The effort will now shift to producing a more detailed design for the rail yard sites, including an analysis of potential structural systems to accomplish project goals. Real estate and financial questions will be addressed in a subsequent phase after the team has had a chance to study the City's proposed financing scheme.

Expected Nature of the EIS Review

We believe that the HKNA plan has many clear advantages. Since the HKNA plan is intended as a comprehensive alternative for the DCP plan, we would like it to receive equal treatment in this EIS. At a minimum we believe it would be prudent to study the plan in the EIS to a sufficient degree that it could be certified by the City Planning Commission and adopted by both the City and the MTA. As described above, HKNA is seeking wide support for its plan. If the Administration ultimately decides to adopt it, failure to study it sufficiently in this EIS would cause an extensive, unwanted delay while the EIS is revamped.

Furthermore the HKNA plan may potentially reduce the complexity of the EIS by substituting for a number of the listed alternatives. The HKNA plan covers perhaps four of the eleven alternatives in the Draft Scoping Document, since it is an alternative rezoning, it has all the elements of the DCP plan except the proposed multi-use facility, it proposes a different expansion option for the convention center, and it has an alternative subway alignment.

Moreover, the HKNA plan should be considered as a whole because each part of the plan depends on the others. In particular, the goal of maintaining moderate densities adjacent to the core residential area north of 35th Street depends on shifting building bulk to the rail yards sites. Such a shift is possible only in conjunction with a southward expansion of the Javits Center, which fulfills another goal — preserving easy access to the waterfront along 39th Street. Meanwhile, the value of a 33rd Street shuttle as the first phase of a Flushing Line extension is enhanced if building bulk is concentrated in the 30th to 35th Street corridor. While it might be possible to graft one or two parts of the HKNA plan onto the DCP plan, the inherent synergy of the plan requires that all of the parts also be considered together.

Future Discussions with DCP, MTA, and EIS Staffs

Since HKNA intends for this plan to meet the City's and the MTA's goals, HKNA expects to have discussions with both the DCP and MTA staffs to refine and adjust elements of the plan. HKNA also anticipates that environmental review of the plan will uncover issues that HKNA's professional consultants will need to address. Consequently HKNA expects to have periodic communication with the EIS staff, as well, as the review proceeds.

Finally while HKNA's plan meets the City's stated goals for development on the West Side, both the community and the Hell's Kitchen / Hudson Yards Alliance view skeptically justifications for the proposed density and the proposed proportion of commercial versus residential use. Since both of these issues appear to be linked to the financial viability of the plan, HKNA will propose a lower density and/or mixed-use version of this plan once the City releases its financial plan for the Hudson Yards project.

HKNA looks forward to working with DCP and MTA staffs on achieving a plan that meets local, municipal and regional goals.

3. Alternative K

A VISION FOR THE WEST SIDE RAIL YARDS

OFFICE OF THE MANHATTAN BOROUGH PRESIDENT, C. VIRGINIA FIELDS

BUCKHURST FISH & JACQUEMART, INC.

December 2001

STUDY GOALS

WEST SIDE RAIL YARDS VISION PLAN

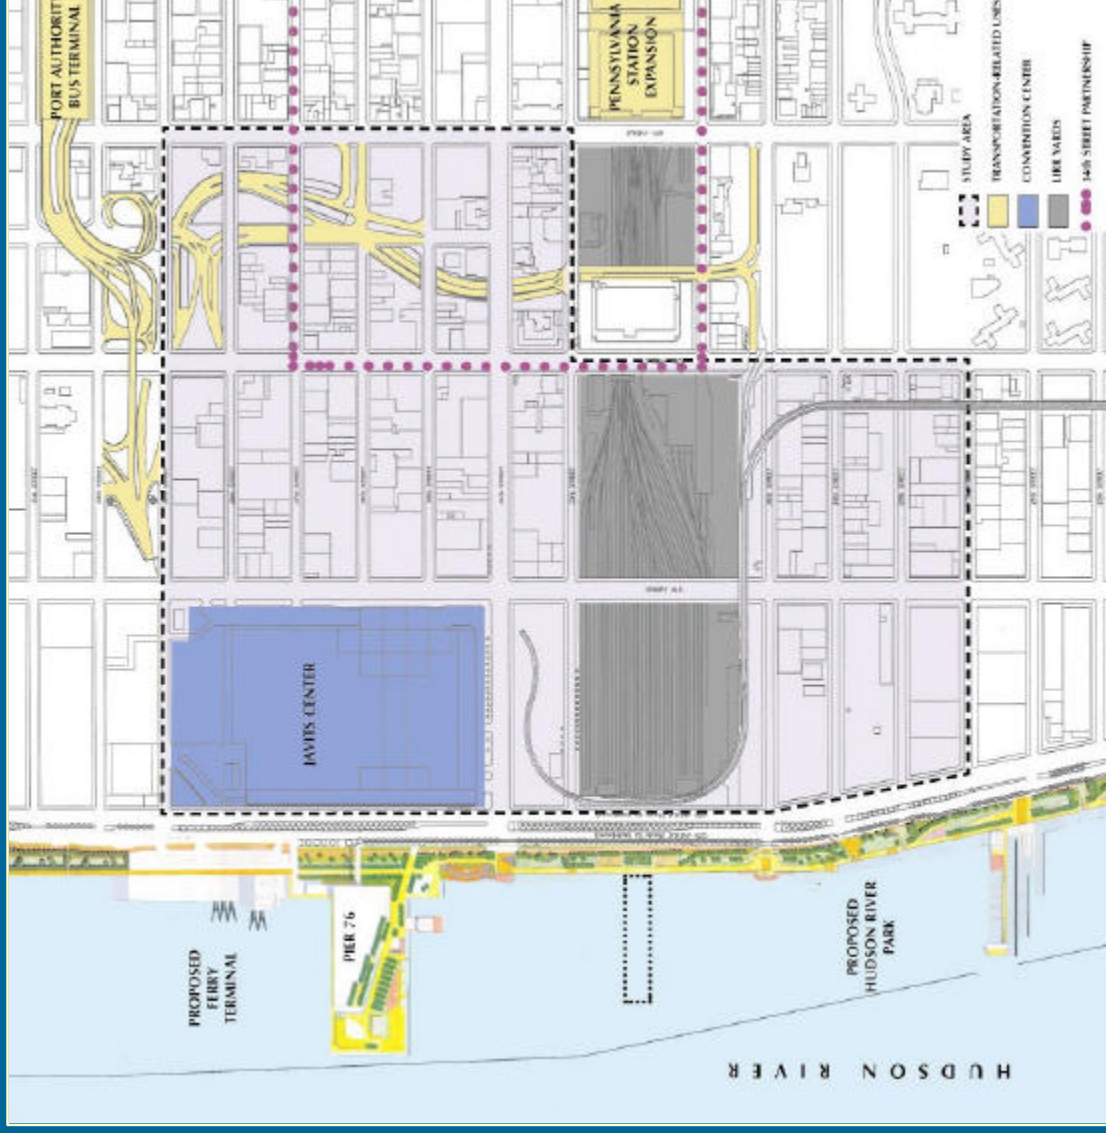

- **An alternative to stadium development**
- **Support and retain mixed uses**
- **Provision of community open space**
- **Inclusion of new housing development**
- **Address transportation needs**

EXISTING CONTEXT

Study Area Boundaries

- 27th Street and 10th Avenue to the south
- 39th Street to the north
- Route 9A/12th Avenue to the west
- 34th Street and 9th Avenue to the east

MAJOR ELEMENTS

WEST SIDE RAIL YARDS

- **New Development**
- **Javits Center Expansion**
- **Major Mixed Use Corridor on 34th Street**
- **Preservation of Existing Buildings**
- **Public Open Space Needs**
- **Public Transit Needs**
- **Street Grid Expansion**
- **Transition to Surrounding Neighborhoods**

PLANNING FRAMEWORK

PROPOSED LAND USES

PROPOSED LAND USAGE

WEST SIDE RAIL YARDS VISION PLAN

Proposed Land Use	Area
Residential	4,200,000 sf
Commercial	3,000,000 sf
Institutional	100,000 sf
Open Space	350,000 sf
Street/Sidewalk	250,000 sf
Total Developed Building Area	7,300,000 sf
Average FAR over Entire Decked Area	6.08
Average FAR, excluding Streets and Sidewalks	7.68

RETAINED BUILDINGS

Many of the existing buildings in the Clinton and Chelsea neighborhoods are preserved, and infill development is designed as mixed use and at an appropriate scale.

PROPOSED NEW RESIDENTIAL DEVELOPMENT

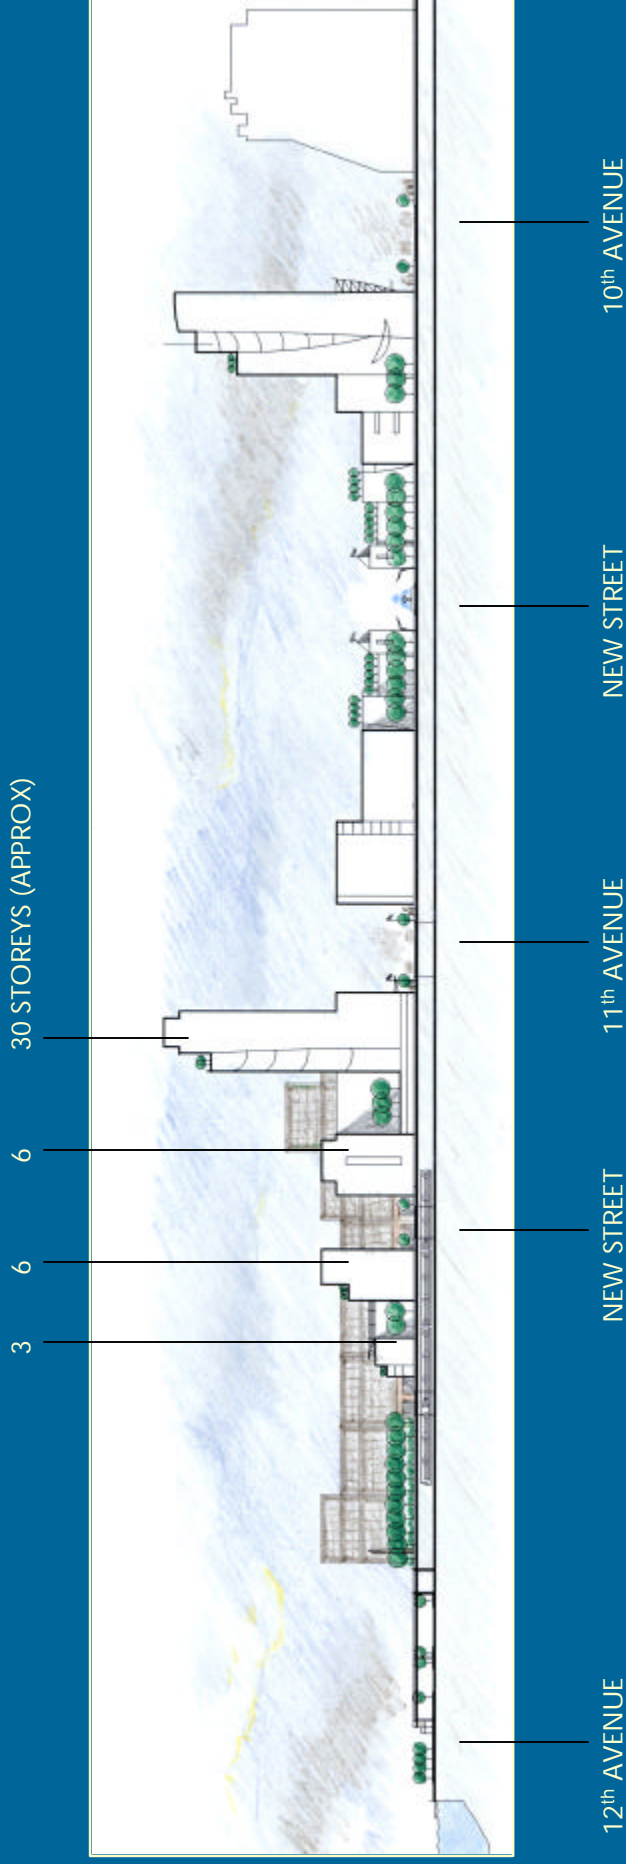

WEST SIDE RAIL YARDS VISION PLAN

- **New housing built on the decks over the Rail Yards is designed to maximize views of the river and the future Hudson River Park. Of the 5000 new units created, at least 20% are set aside for affordable housing.**
- **Infill housing and mixed use development is concentrated to the 34th Street corridor, and the northern and southern portions of the study area.**

SITE SECTION

ALONG 32nd STREET

Proposed development has a stepped form to maximize views of the Hudson River, and to maintain higher densities along the avenues.

The Vision Plan proposes an extended street grid across the decked Rail Yards to reduce the block size and encourage pedestrian traffic.

PROPOSED NEW COMMERCIAL DEVELOPMENT

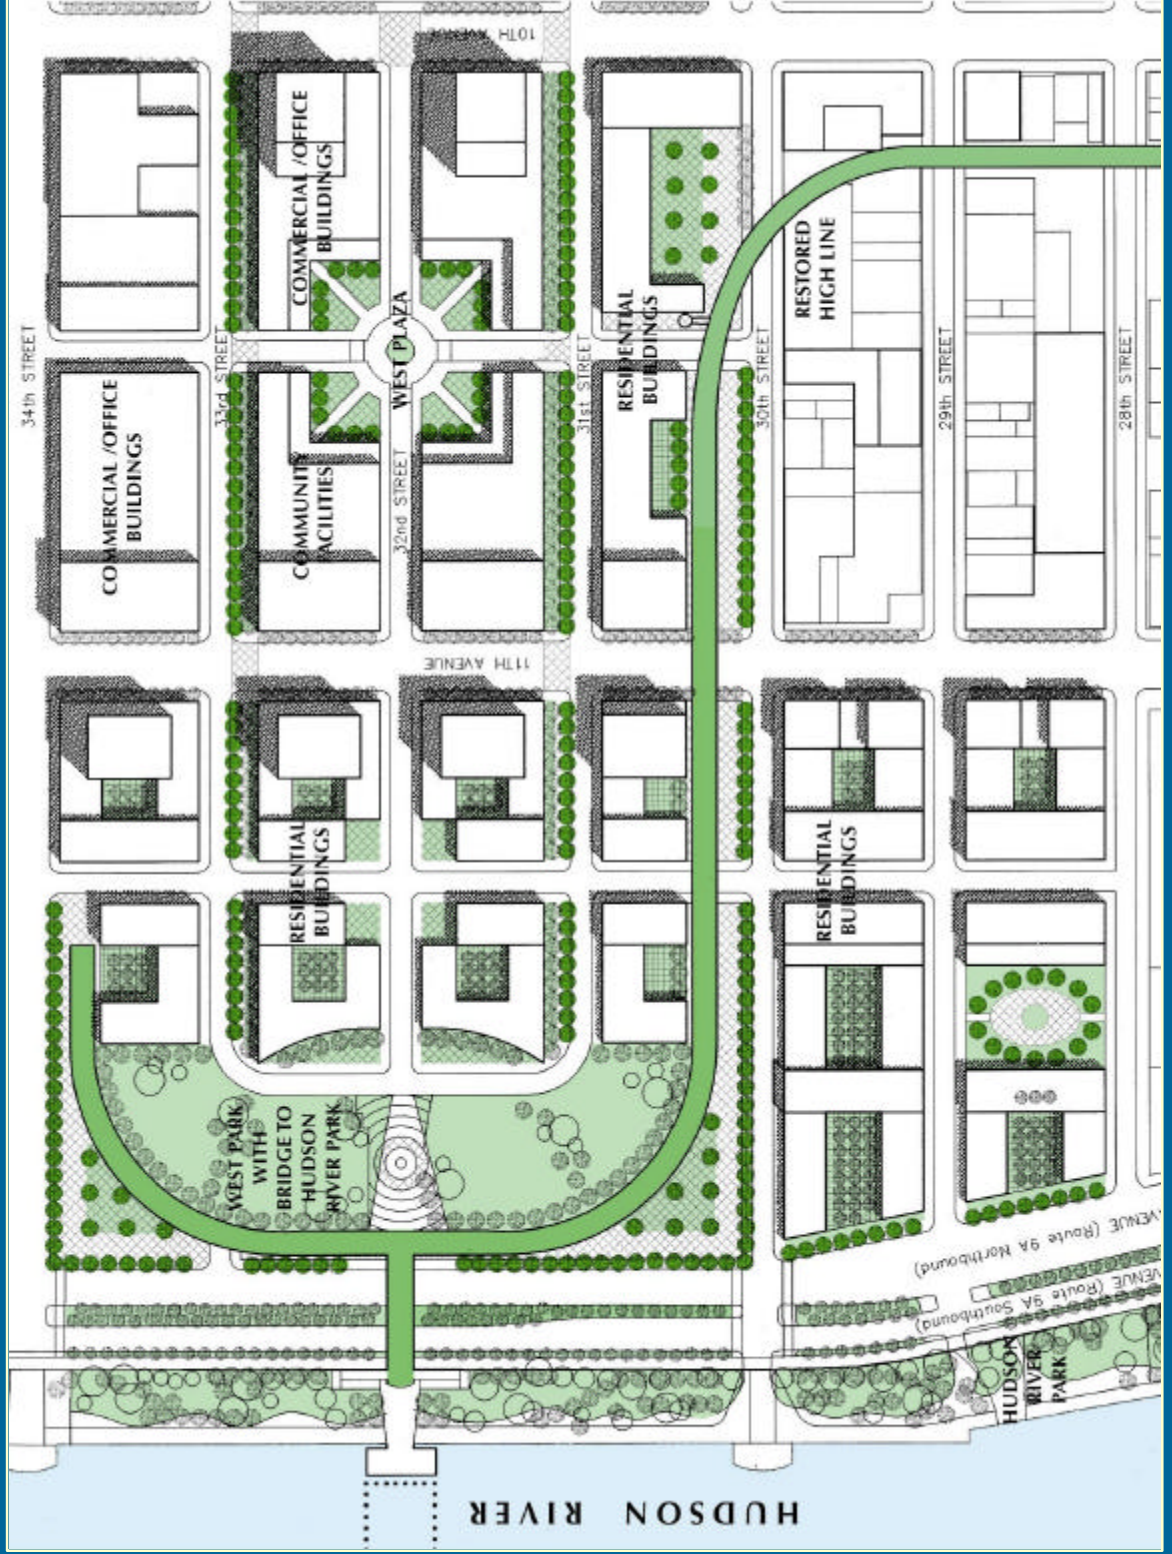

WEST SIDE RAIL YARDS VISION PLAN

- Approximately 3 million square feet of new office, commercial and retail uses is proposed near 10th Avenue and along 34th Street.
- The proposal shows an expansion of the Javits Center to the north, maintaining pedestrian access along 39th Street.

PROPOSED NEW DEVELOPMENT AND OPEN SPACE

WEST SIDE RAIL YARDS VISION PLAN

PROPOSED TRANSPORTATION IMPROVEMENTS

WEST SIDE RAIL YARDS VISION PLAN

- **Light Rail Transit system extending to 11th Avenue along 42nd Street and 34th Street.**
- **Extension of the No.7 Subway line**
- **Additional Bus Lines**
- **Extending the traditional city street grid across the Rail Yards deck.**
- **Other Transportation Considerations:**
 - **Parking – Incorporated into new developments**
 - **Bus Storage Facilities**
 - **Truck Marshalling – Incorporated into the Javits Center Expansion**

PROPOSED NEW OPEN SPACE

WEST SIDE RAIL YARDS VISION PLAN

- A major public park is proposed, overlooking Route 9A/12th Avenue and the Hudson River Park, with a connection across 12th Avenue via a pedestrian bridge linked to a renovated High Line.
- Javits Plaza is redesigned as a green park.
- A small public plaza is proposed between 10th and 11th Avenues at 32nd Street.
- The High Line is preserved as a pedestrian and recreational trail, with a retail arcade below along 12th Avenue.

JAVITS PLAZA

LOOKING WEST TOWARDS THE JAVITS CONVENTION CENTER

WEST PARK

LOOKING WEST TOWARDS THE HUDSON RIVER

HIGHLINE ARCADE

LOOKING NORTH ALONG 12th AVENUE

WEST PLAZA

LOOKING EAST TOWARDS THE WEST YARDS BUILDING

SITE DEVELOPMENT COSTS AND INCOME

WEST SIDE RAIL YARDS VISION PLAN

Site Development	Development Costs (\$000's)	Development Income (\$000's)
Decking	\$ 360,000	
New Roads and Sidewalks	\$ 5,000	
Landscaped Open Space	\$ 14,000	
Soft Costs	\$ 97,750	
Residential		\$ 270,000
Commercial		\$ 238,000
Institutional		\$ 4,000
Total Costs	\$ 473,000	
Total Potential Income		\$ 512,000

With the exception of major transit improvements, the lease of the development rights over the Rail Yards will generate enough revenue to pay for the cost of the decking and amenities.

6. Air Quality

This appendix comprises documentation for the air quality analyses performed relating to emissions from mobile sources and supporting tables for the mobile source analyses follow.

LIST OF TABLES

Air Quality Mobile Source Methodology for Alternatives

ALTERNATIVE B

- Table WB-1: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative B)
- Table WB-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative B)
- Table WB-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative B)

ALTERNATIVE C

- Table WC-1: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative C)
- Table WC-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative C)
- Table WC-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative C)

ALTERNATIVE H

- Table WH-1: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative H)
- Table WH-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative H)
- Table WH-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative H)

ALTERNATIVE I

- Table WI-1: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2010 W/Alternative I)
- Table WI-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2010 W/Alternative I)
- Table WI-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2010 W/Alternative I)
- Table WI-4: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative I)
- Table WI-5: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative I)
- Table WI-6: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative I)

ALTERNATIVE L

- Table WL-1: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2010 W/Alternative L)
- Table WL-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2010 W/Alternative L)
- Table WL-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2010 W/Alternative L)
- Table WL-4: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative L)
- Table WL-5: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative L)
- Table WL-6: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative L)

ALTERNATIVE M

- Table WM-1: Tier I: Maximum 8--Hour CO Concentrations without Mitigation (2010 W/Alternative M)
- Table WM-2: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2010 W/Alternative M)
- Table WM-3: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2010 W/Alternative M)
- Table WM-4: Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2025 W/Alternative M)
- Table WM-5: Tier I: Maximum 24-Hour and Annual PM₁₀ Levels without Mitigation (2025 W/Alternative M)
- Table WM-6: Tier I: Maximum PM_{2.5} Incremental Impacts without Mitigation (2025 W/Alternative M)

LIST OF TABLES (CONTINUED)

ALTERNATIVE O

Table WO-1:	Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2010 W/Alternative O)
Table WO-2:	Tier I: Maximum 24-Hour and Annual PM ₁₀ Levels without Mitigation (2010 W/Alternative O)
Table WO-3:	Tier I: Maximum PM _{2.5} Incremental Impacts without Mitigation (2010 W/Alternative O)

ALTERNATIVE P

Table WP-1:	Tier I: Maximum 8-Hour CO Concentrations without Mitigation (2010 W/Alternative P)
Table WP-2:	Tier I: Maximum 24-Hour and Annual PM ₁₀ Levels without Mitigation (2010 W/Alternative P)
Table WP-3:	Tier I: Maximum PM _{2.5} Incremental Impacts without Mitigation (2010 W/Alternative P)

ALTERNATIVE Q: AIR QUALITY ANALYSIS

Route 9A Deck Analysis, Analytical Approach

Table WQ-1	Route 9A Deck: CO Emission Factors (2010)
Table WQ-2:	Route 9A Deck: PM ₁₀ Emission Factors (2010)
Table WQ-3:	Route 9A Deck: PM _{2.5} Emission Factors (2010)
Table WQ-4:	Route 9A Deck: Traffic Volumes (W/Alternative Q 2010)
Table WQ-5:	Route 9A Deck: Vehicle Mixes (W/Alternative Q 2010)
Table WQ-6:	Route 9A Deck: Traffic Speeds (W/Alternative Q 2010)
Table WQ-7:	Route 9A Deck: Signal Timing (W/Alternative Q 2010)
Table WQ-8:	Route 9A Deck: Queue (W/Alternative Q 2010)
Table WQ-9:	Route 9A Deck: CO Emission Rates (W/Alternative Q 2010)
Table WQ-10:	Route 9A Deck: PM ₁₀ Emission Rates (W/Alternative Q 2010)
Table WQ-11:	Route 9A Deck: PM _{2.5} 24-hour Emission Rates (W/Alternative Q 2010)
Table WQ-12:	Route 9A Deck: PM _{2.5} Annual Emission Rates (W/Alternative Q 2010)
Table WQ-13:	Route 9A Deck: Traffic Volumes (W/O Alternative Q 2010)
Table WQ-14:	Route 9A Deck: Vehicle Mixes (W/O Alternative Q 2010)
Table WQ-15:	Route 9A Deck: Traffic Speeds (W/O Alternative Q 2010)

AIR QUALITY MOBILE SOURCE METHODOLOGY

Air Quality Estimates

Pollutant concentrations were estimated near each of the mobile source analysis sites under each of the proposed project alternatives as follows:

- Maximum 8-hour CO concentrations near each analysis sites under each alternative using the Tier 1 methodology utilized for estimating concentrations under the Proposed Action and traffic data (i.e., volumes, speeds, vehicle mix, etc.) projected as described in Chapter 21, Section 21.F.1.
- Maximum PM10 and PM2.5 concentrations near four of the analysis sites (i.e., intersections where a Tier I analysis was conducted) were estimated under each alternative using the same methodology utilized for estimating concentrations under the Proposed Action and traffic data projected as described in Chapter 21, Section 21.F.1.
- Maximum Tier 1 results for CO, PM10 and PM2.5 are shown in the following tables:
 1. Tables WB-1 to WB-3 for Alternative B
 2. Tables WC-1 to WC-3 for Alternative C
 3. Tables WH-1 to WH-3 for Alternative H
 4. Tables WI-1 to WI-6 for Alternative I
 5. Tables WL-1 to WL-6 for Alternative L
 6. Tables WM-1 to WM-6 for Alternative M
 7. Tables WO-1 to WO-3 for Alternative O
 8. Tables WP-1 to WP-3 for Alternative P
 9. Tables WS3-1 to WS3-18 for Alternative S with and without mitigation measures and Alternative S with 41st Street Open.
 10. Tables WT-1 to WT-6 for Alternative T
- PM10 and PM2.5 Tier II analyses under Alternative S were conducted using the same approach as under the Proposed Action as described in Chapter 21 and Appendix T. The same ten Tier II analysis sites as for the Proposed Action were analyzed under Alternative S. The results of this analysis are in Tables WS3-19 through WS3-26 for PM10 and Tables WS3-27 through WS3-34 for PM2.5.
- Maximum PM10 concentrations near ten of the analysis sites (i.e., intersections where a Tier II analysis was conducted) were estimated under each alternative (except Alternative S) by multiplying the results (i.e., estimated total pollutant concentrations) of the Tier II PM10 analysis conducted at each site under the Proposed Action and the ratio of projected the total 24-hour traffic volume on all approaching roadway links under this alternative to the projected total 24-hour traffic volume on all approaching links under the Proposed Action. Tables

WRatios-1 to WRatios-4 display the PM10 results for each alternative for the ten analysis sites.

- With the exception of the intersection of Route 9A and 34th Street, PM2.5 impacts at each analysis site under each alternative (except Alternative S) were estimated by multiplying the results (i.e., estimated incremental change in pollutant concentrations) of the detailed (i.e., Tier II) PM2.5 analysis conducted at that site under the Proposed Action and the ratio of projected changes in the total 24-hour traffic volume on all approaching roadway links between this alternative and future No Action conditions to the projected change in the total 24-hour traffic volume on all approaching roadway links between the Proposed Action and future No Action conditions. Tables WRatios-5 to WRatios-8 display the PM2.5 results for each alternative for the nine analysis sites.
- Using the ratio of traffic volume changes between alternatives and the Proposed Action does not work for the intersection of Route 9A and 34th Street because of changes in roadway geometries and traffic mitigation measures applied at this analysis site under the Proposed Action and some of the proposed alternatives. Instead, PM2.5 impacts at this intersection under each alternative (except Alternative S) were estimated by multiplying the results (i.e., estimated incremental changes in pollutant concentrations) of the detailed (i.e., Tier II) PM2.5 analysis conducted at this site under the Proposed Action and the ratio of impacts estimated using a Tier I analysis under this alternative and Tier I impacts estimated for the Proposed Action. WRatios-5 to WRatios-8 displays the PM2.5 results for each alternative (except Alternative S) for this analysis site.

This methodology which uses relative changes in traffic volumes between a project alternative and the Proposed Action in order to estimate Tier II-level pollutant concentrations is applicable for the following reasons:

- Changes in estimated PM10 and PM2.5 concentrations near a mobile source analysis site are generally directly proportional to the traffic volumes entering and exiting the intersection.
- Changes in vehicular speeds and traffic parameters associated with queuing (i.e., signal timing, etc.) do not significantly affect PM10 and PM2.5 levels.

Traffic Estimates

The methodology used to develop the traffic data for the Proposed Action and Alternative S are discussed in detail in Appendix S.1 to S.5 of the FGEIS. Unlike these alternative, which are fairly similar in terms of overall development and project elements, the other alternatives contain lower amounts of development or do not include some of the project elements (i.e., the Convention Center expansion and the proposed Multi-Use Facility). To reflect these differences, 24-hour vehicle trip generation calculations were made for each alternative and were used to project incremental volumes (which were be added to the Future Without the Proposed Action Conditions).

For each intersection analyzed for air quality, 24-hour traffic volume increments were projected by dividing the sum of the incremental traffic from the Weekday AM, MIDDAY,

and PM peak hours by the ratio of the particular alternative's total vehicle trip generation for these same three peak hours to the alternative's 24-hour total vehicle trip generation. This methodology was applied to each intersection in the 2010 and 2025 analysis years for the Proposed Action and Alternative S.

These results were compared to the results of the previous detailed Tier II volume projections to evaluate the accuracy of the overall methodology. For both the Proposed Action and Alternative S, separate correction factors were developed for each intersection during each analysis year (the ratio of the detailed Tier II projection to the projection using this methodology). To further evaluate the accuracy of this methodology, comparisons were made after applying opposite correction factors to the projections (i.e., the projected Proposed Action increment was multiplied by the Alternative S correction factor and vice versa). It was determined that the most conservative correction factor (that which will result in the highest volumes) would be selected for each intersection and analysis year. This correction factor was applied to the projections for all alternatives.

In the 2010 analysis year, several intersections (particularly West 42nd Street at Route 9A and Eleventh Avenue) had significantly lower accuracies of projected volumes. This is directly attributable to the effect of street closures in that total volumes for some hours would decrease between 2010 Future Without the Proposed Action Conditions and 2010 Future With the Proposed Action Conditions. In essence, there are negative incremental traffic volumes for some hours because the effect of traffic diversions outweighs the addition of new incremental trips. For these situations, an alternative methodology was devised to compare the ratio of hourly incremental traffic volumes in the Proposed Action to the incremental traffic volume for an alternative in the Weekday AM, MIDDAY, and PM peak hours. As was done with the initial methodology, the volumes projected with the alternative methodology were compared to the detailed Tier II volume projections and correction factors were established for each intersection. The most conservative correction factors were applied to the projections for all alternatives.

For each intersection and analysis year, the methodology used to project volumes was determined by a review of the accuracies of projected volumes (i.e., the methodology with the most accurate projection were utilized).

Notes:
 Significant Threshold Values:
 24-hour = 5 µg/m³
 Annual = 0.1 µg/m³

NAAQS:
 PM₁₀ 24-hr = 150 µg/m³
 PM₁₀ Annual = 50 µg/m

All values are the maximum estimated concentrations under all time periods considered and include the following background concentrations:

24-hour PM₁₀ = 43 µg/m³
 Annual PM₁₀ = 21 µg/m

Tier I analyses assume peak period traffic conditions occur every hour of the 24-hour and annual analysis periods. Concentrations were estimated for the following time periods:

- AM - AM peak period (8-9 AM)
- MD - Midday peak period (12-1 PM)
- PM - PM peak period (5-6 PM)
- EV - Evening Special Event peak period (8-9 PM)
- SUN - Sunday Special Event peak period (4-5 PM)

Notes:
 Significant Threshold Values:
 24-hour = 5 µg/m³
 Annual = 0.1 µg/m³

NAAQS:
 PM₁₀ 24-hr = 150 µg/m³
 PM₁₀ Annual = 50 µg/m³

All values are the maximum estimated concentrations under all time periods considered and include the following background concentrations:
 24-hour PM₁₀ = 43 µg/m³
 Annual PM₁₀ = 21 µg/m³

Tier I analyses assume peak period traffic conditions occur every hour of the 24-hour and annual analysis periods. Concentrations were estimated for the following time periods:

- AM - AM peak period (8-9 AM)
- MD - Midday peak period (12-1 PM)
- PM - PM peak period (5-6 PM)
- EV - Evening Special Event peak period (8-9 PM)
- SUN - Sunday Special Event peak period (4-5 PM)

Notes:
 Significant Threshold Values:
 24-hour = 5 µg/m³
 Annual = 0.1 µg/m³

NAAQS:
 PM₁₀ 24-hr = 150 µg/m³
 PM₁₀ Annual = 50 µg/m³

All values are the maximum estimated concentrations under all time periods considered and include the following background concentrations:
 24-hour PM₁₀ = 43 µg/m³
 Annual PM₁₀ = 21 µg/m³

Tier I analyses assume peak period traffic conditions occur every hour of the 24-hour and annual analysis periods. Concentrations were estimated for the following time periods:

- AM - AM peak period (8-9 AM)
- MD - Midday peak period (12-1 PM)
- PM - PM peak period (5-6 PM)
- EV - Evening Special Event peak period (8-9 PM)
- SUN - Sunday Special Event peak period (4-5 PM).

Alternative Q
Route 9A Deck Air Quality
Analysis

ROUTE 9A DECK AIR QUALITY ANALYSIS **ANALYTICAL APPROACH**

Introduction

An analysis was conducted to estimate the potential air quality impacts of the approximately 1,000 foot deck of Route 9A associated with this alternative. Pollutant levels near the two tunnel portals (i.e., one northbound and one southbound) were estimated using the same methodology and general assumptions as those used for the Lincoln Tunnel portal analysis. Modifications to this methodology however were required to account for:

1. Stop lights (and therefore queuing vehicles) near the deck's exit portals; and
2. Emissions generated within the Javits Center marshalling yards (which will be used by loading/unloading trucks servicing the Center) that will be vented by the facility's ventilation system into the decked roadway.

In addition, because of the potentially high emission rates that will be released through these portals during peak period, a detailed analysis was conducted using hour-by-hour traffic data over a peak 24-hour analysis period (i.e., a Tier II analysis).

Emission Sources

In accordance with the procedures utilized in the Lincoln Tunnel portal analysis, the following emission sources were considered:

- Emissions generated by the moving vehicles inside the deck and emitted out of the portals in the wakes of exiting vehicles;
- Emissions generated by the queuing vehicles inside the deck during the red signals located just outside the exit portals and emitted out of the portals in the wakes of exiting vehicles;
- Emissions generated within the marshalling yards that will be vented into the decked roadway;
- Emissions generated by the vehicles traveling on Route 9A downstream of the portals; and
- Emissions of moving and queuing vehicles on all roadway links within 1,000 feet of the exit portals.

The total impacts of these emission sources were added to the area's background concentrations to estimate total pollutant concentrations, which were then compared to the NAAQS.

Traffic data

Hourly information for each link and each intersection considered in the analysis was provided by the project's traffic engineers. Traffic data for the Future with the Alternative Q conditions were based on the projected traffic demands, including those associated with the various anticipated office and residential developments in the area and stadium events. Traffic volumes are in tables WQ-4 (Future with the Alternative Q scenario, year 2010), WQ-13 (Future without Alternative Q scenario, year 2010), WQ-23

(Future with the Alternative Q scenario, year 2025), and WQ-32 (Future without Alternative Q scenario, year 2025). Vehicle classifications are in tables WQ-5, WQ-14, WQ-24, and WQ-33. Traffic speeds are in tables WQ-6, WQ-15, WQ-25, and WQ-34. Signal timing information for the intersections along Route 9A are in tables WQ-7, WQ-16, WQ-26, and WQ-36.

Emissions and Emission Rates

Emissions from vehicles traveling along the links downstream of the portal or inside the tunnel were estimated based on the number of cars, the length of the link or tunnel, and pollutant emission factors.

CO emission factors were estimated using MOBILE 6.2 with NYSDEC's input files with the project site parameters. PM₁₀ and PM_{2.5} emission factors were estimated using the latest USEPA approach and Mobile 6.2 as described in the Air Quality Chapter (Chapter 21). CO, PM₁₀ and PM_{2.5} emissions in the tunnel were also estimated using MOBILE 6.2 emission factors for tailpipe exhaust, break, and wear emissions the same factors as used for the open sections of the roadway. The in-tunnel fugitive dust emission factor used, which is much lower than the factor used for open roads due to enclosed conditions (i.e., no re-entrained dust from the outside sources, and tunnel cleaning and maintenance operations), was developed from the results of a two-year monitoring study conducted for the Ted Williams Tunnel (part of the Central Artery/Tunnel Project) in Boston, Massachusetts. CO emission factors are in Table WQ-1 (for 2010) and WQ-20 (for 2025); PM₁₀ emission factors are in WQ-2 and WQ-21; PM_{2.5} factors are in WQ-3 and WQ-22.

Emissions from idling vehicles at the traffic lights near the deck's portals, both within the deck itself and on the cross streets, were included. Following the CAL3QHC approach, it was assumed that vehicles will be moving only during the green phase of the cycle, and queuing during the other times. Idling emission rates were estimated based on the hourly average number of vehicles in the queue per lane during the analysis period, the number of lanes, and the idle emission factor. The number of cars in each queue was obtained using CAL3QHC's queuing algorithm, which estimates an average number of cars in a queue based on traffic volumes, saturation flow rates, and signal timing. The hourly queue length and the number of cars in it under each scenario analyzed are in tables WQ-8, WQ-17, WQ-27, and WQ-36.

Marshalling Yard Emissions

Emissions from the Javits Center marshalling yards will be exhausted into the Route 9A deck and these emissions, together with the emissions generated by the vehicular traffic under the deck, will be exhausted to the atmosphere through the deck's portals. Emission rates from marshalling yard's ventilation system were estimated by the project's ventilation group based on the estimated number of trucks that will travel and idle within the yards as well as the design of the ventilation systems. These emissions were added to the portal jet emissions during the truck loading/unloading periods (8 AM through 5 PM). The number of truck operations per hour of the day was conservatively assumed to be the highest anticipated for the major exhibition. It was assumed that these trucks would operate only two days prior and two days after an exhibition.

Modeling Approach

The following assumptions were applied to the modeling analysis:

- Roadway links were considered as sequences of volume sources that are 6 feet high and have a horizontal dimension equal to the width of the roadway;
- Free flow links included only free flow emissions;
- Idling links included free flow emissions during the green portion of the signal and idle emissions during other (idling) time;
- Idling links start at the beginning of an intersection's queue and end at the distance of the queue link that was determined from the number of cars in the queue by the CAL3QHC queuing algorithm;
- Marshalling yard emissions were added to free flow link emissions or to idle and free flow link contributions outside the exit portals, as applicable;
- The lengths of the under deck links are assumed to be the full length of the deck;
- The lengths of the portal jet links (the links containing under deck contributions downstream of the exit portals) were estimated based on the vehicular speeds and the roadway configuration right outside of the portals; and
- Link lengths and emission rates varied hourly based on traffic projections.

Emission rates for each link were estimated on an hour-by-hour basis for the 24-hour analysis period. Tables containing CO emission rates for the Future with Alternative Q are WQ-9 and WQ-28, PM₁₀ emissions rates – WQ-10 and WQ-29. The PM_{2.5} daily emission rates are in tables WQ-11 and WQ-30, while the annual PM_{2.5} emission rates are in tables WQ-12 and WQ-31. The PM_{2.5} emission rates for the Future without Alternative Q are in tables WQ-18 and WQ-19 (daily and annual 2010) and WQ-37 and WQ-38 (daily and annual 2025).

Receptors

Receptors for the Route 9A portal analysis were placed along the sidewalks on the eastern side of the road and along the proposed bike path (the closest public-accessed land use) on the western side of the road. Additional receptors were placed on the top of the deck where, according to conceptual design plans, the public may have access. See figures WQ-1 and WQ-5 for the North and South portal areas.

Receptors for the annual “neighborhood” PM_{2.5} analysis were placed at 15 meters from the roadway's edge, consistent with NYCDEP's “Interim Guidance for PM_{2.5} Analyses.” The annual receptors are on figures WQ-2 and WQ-6 for the North and South portals respectively. Receptors for the future scenario without Alternative Q are on figures WQ-3 and WQ-7 (daily) and WQ-4 and WQ-8 (annual).

Concentrations were also analyzed at the sidewalk along the east side of the Route 9A that would be under the deck under this alternative.

Meteorological Data

Five years of the most recently available surface meteorological observations from LaGuardia airport combined with the upper air data from Brookhaven were used in the analysis.

Scenarios Considered

Two years -- 2010 and 2025 with the Alternative Q -- were analyzed. For the PM_{2.5} analysis, which considers the increments of the future with the Alternative Q over the future without Alternative Q, future without Alternative Q conditions (i.e., without the deck) for these years were also analyzed.

Results:

Estimated concentrations of the criteria pollutants are presented in the Tables WQ-39 through WQ-41 for the north and south portals of the deck, respectively. The result of the analysis is that estimated CO and PM₁₀ concentrations will not exceed the NAAQS at the sensitive land uses near the portals. However, estimated incremental PM_{2.5} impacts (i.e., Future with the Alternative Q minus the Future without Alternative Q values) are greater than the NYCDEP PM_{2.5} significant threshold values in the areas immediately adjacent to each portal. This result indicates that the project may cause a potentially significant adverse air quality impacts at these locations. However, these significant adverse air quality impacts could be avoided through the incorporation of a mechanical ventilation system into the design of the deck, by shortening the deck or by developing two shorter decks rather than one longer deck.

Analysis Year	Pollutant	Roadway Type	SILT LOADING	K FACTOR	FLEET WEIGHT	C FACTOR	Paved Dust*
							g/vmt
2010	PM10	Arterial	0.10	7.30	3.00	0.2119	0.750
					Total Measured PM	Total Exhaust PM	Paved Dust
2010	PM10	Tunnel			0.153	0.066	0.087

Notes:

1. Number of rainy days in New York is 140 per year.
2. Total in-tunnel emissions factor 0.153 g/vmt as measured in the Ted Williams Tunnel.
3. Paved dust for tunnels is estimated using the latest AP-42 approach.
4. Idle emissions were obtained from the Mob 6.2 program.

Table WQ-3

**PM2.5 Emission Factors
2010**

							Heavy Gas	Heavy Diesel		Idle	Idle
Analysis Year	Pollutant	Roadway Type	Auto	SUV	Taxi	Light Truck	Truck	Truck	Diesel Bus	Heavy Diesel	Diesel Bus
			g/vmt	g/vmt	g/vmt	g/vmt	g/vmt	g/vmt	g/vmt	g/veh-hr	g/veh-hr

Analysis Year	Pollutant	Roadway Type	SILT LOADING	K FACTOR	FLEET WEIGHT	C FACTOR	Paved Dust*
							g/vmt
2010	PM2.5	Arterial	0.10	1.80	3.00	0.1617	0.086
2010	PM2.5	Tunnel					0.086

Notes:

1. Number of rainy days in New York is 140 per year.
2. Fugitive dust EF for open roads was is conservatively used in this analysis.
3. Idle emissions were obtained from the Mob 6.2 program.

Analysis Year	Pollutant	Roadway Type	SILT LOADING	K FACTOR	FLEET WEIGHT	C FACTOR		Paved Dust*
								g/vmt
2025	PM10	Arterial	0.10	7.30	3.00	0.2119		0.750
					Total Measured PM	Total Exhaust PM		Paved Dust
2025	PM10	Tunnel		g/vmt	0.153	0.066		0.087

Notes:

1. Number of rainy days in New York is 140 per year.
2. Total in-tunnel emissions factor 0.153 g/vmt as measured in the Ted Williams Tunnel.
3. Paved dust for tunnels is estimated using the latest AP-42 approach.
4. Idle emissions were obtained from the Mob 6.2 program.

Alternative S
Air Quality Analysis

Lincoln Tunnel Portal Analysis

LINCOLN TUNNEL EXIT PORTALS ANALYSIS

Lincoln Tunnel exit portals analysis under Alternative S followed the same approach as under the Proposed Action as described in Chapter 21 and Appendix T1.

Emissions used in the analysis are in Tables WS1-1 through WS1-6.

The results of this analysis are presented in Tables WS1-7 through WS1-11.

Lincoln Tunnel Ventilation Building Analysis

LINCOLN TUNNEL VENTILATION BUILDING ANALYSIS

Lincoln Tunnel ventilation buildings analysis under Alternative S followed the same approach as under the Proposed Action as described in Chapter 21 and Appendix T2.

The results of this analysis are presented in Tables WS2-1 through WS2-8.

Table WS2-1

7 LINE SUBWAY LINCOLN TUNNEL VENTILATION BUILDINGS MAXIMUM CO CONCENTRATION (ppm)					
Alternative S					
Year	2010			2025	
	Direct Plume	Wake Effects	Direct Plume	Wake Effects	Wake Effects

Annual neighborhood PM_{2.5} impacts were estimated by averaging concentrations over a 1 kilometer by 1 kilometer grid centered around the location with the highest estimated concentration (as per the DEP's Interim Guidance).

PA - Proposed Action.

Tier I, Tier II and Ratios Analyses

AIR QUALITY MOBILE SOURCE METHODOLOGY

Air Quality Estimates

Pollutant concentrations were estimated near each of the mobile source analysis sites under each of the proposed project alternatives as follows:

- Maximum 8-hour CO concentrations near each analysis sites under each alternative using the Tier 1 methodology utilized for estimating concentrations under the Proposed Action and traffic data (i.e., volumes, speeds, vehicle mix, etc.) projected as described in Chapter 21, Section 21.F.1.
- Maximum PM10 and PM2.5 concentrations near four of the analysis sites (i.e., intersections where a Tier I analysis was conducted) were estimated under each alternative using the same methodology utilized for estimating concentrations under the Proposed Action and traffic data projected as described in Chapter 21, Section 21.F.1.
- Maximum Tier 1 results for CO, PM10 and PM2.5 are shown in the following tables:
 1. Tables WB-1 to WB-3 for Alternative B
 2. Tables WC-1 to WC-3 for Alternative C
 3. Tables WH-1 to WH-3 for Alternative H
 4. Tables WI-1 to WI-6 for Alternative I
 5. Tables WL-1 to WL-6 for Alternative L
 6. Tables WM-1 to WM-6 for Alternative M
 7. Tables WO-1 to WO-3 for Alternative O
 8. Tables WP-1 to WP-3 for Alternative P
 9. Tables WS3-1 to WS3-18 for Alternative S with and without mitigation measures and Alternative S with 41st Street Open.
 10. Tables WT-1 to WT-6 for Alternative T
- PM10 and PM2.5 Tier II analyses under Alternative S were conducted using the same approach as under the Proposed Action as described in Chapter 21 and Appendix T. The same ten Tier II analysis sites as for the Proposed Action were analyzed under Alternative S. The results of this analysis are in Tables WS3-19 through WS3-26 for PM10 and Tables WS3-27 through WS3-34 for PM2.5.
- Maximum PM10 concentrations near ten of the analysis sites (i.e., intersections where a Tier II analysis was conducted) were estimated under each alternative (except Alternative S) by multiplying the results (i.e., estimated total pollutant concentrations) of the Tier II PM10 analysis conducted at each site under the Proposed Action and the ratio of projected the total 24-hour traffic volume on all approaching roadway links under this alternative to the projected total 24-hour traffic volume on all approaching links under the Proposed Action. Tables

WRatios-1 to WRatios-4 display the PM10 results for each alternative for the ten analysis sites.

- With the exception of the intersection of Route 9A and 34th Street, PM2.5 impacts at each analysis site under each alternative (except Alternative S) were estimated by multiplying the results (i.e., estimated incremental change in pollutant concentrations) of the detailed (i.e., Tier II) PM2.5 analysis conducted at that site under the Proposed Action and the ratio of projected changes in the total 24-hour traffic volume on all approaching roadway links between this alternative and future No Action conditions to the projected change in the total 24-hour traffic volume on all approaching roadway links between the Proposed Action and future No Action conditions. Tables WRatios-5 to WRatios-8 display the PM2.5 results for each alternative for the nine analysis sites.
- Using the ratio of traffic volume changes between alternatives and the Proposed Action does not work for the intersection of Route 9A and 34th Street because of changes in roadway geometries and traffic mitigation measures applied at this analysis site under the Proposed Action and some of the proposed alternatives. Instead, PM2.5 impacts at this intersection under each alternative (except Alternative S) were estimated by multiplying the results (i.e., estimated incremental changes in pollutant concentrations) of the detailed (i.e., Tier II) PM2.5 analysis conducted at this site under the Proposed Action and the ratio of impacts estimated using a Tier I analysis under this alternative and Tier I impacts estimated for the Proposed Action. WRatios-5 to WRatios-8 displays the PM2.5 results for each alternative (except Alternative S) for this analysis site.

This methodology which uses relative changes in traffic volumes between a project alternative and the Proposed Action in order to estimate Tier II-level pollutant concentrations is applicable for the following reasons:

- Changes in estimated PM10 and PM2.5 concentrations near a mobile source analysis site are generally directly proportional to the traffic volumes entering and exiting the intersection.
- Changes in vehicular speeds and traffic parameters associated with queuing (i.e., signal timing, etc.) do not significantly affect PM10 and PM2.5 levels.

Traffic Estimates

The methodology used to develop the traffic data for the Proposed Action and Alternative S are discussed in detail in Appendix S.1 to S.5 of the FGEIS. Unlike these alternative, which are fairly similar in terms of overall development and project elements, the other alternatives contain lower amounts of development or do not include some of the project elements (i.e., the Convention Center expansion and the proposed Multi-Use Facility). To reflect these differences, 24-hour vehicle trip generation calculations were made for each alternative and were used to project incremental volumes (which were be added to the Future Without the Proposed Action Conditions).

For each intersection analyzed for air quality, 24-hour traffic volume increments were projected by dividing the sum of the incremental traffic from the Weekday AM, MIDDAY,

and PM peak hours by the ratio of the particular alternative's total vehicle trip generation for these same three peak hours to the alternative's 24-hour total vehicle trip generation. This methodology was applied to each intersection in the 2010 and 2025 analysis years for the Proposed Action and Alternative S.

These results were compared to the results of the previous detailed Tier II volume projections to evaluate the accuracy of the overall methodology. For both the Proposed Action and Alternative S, separate correction factors were developed for each intersection during each analysis year (the ratio of the detailed Tier II projection to the projection using this methodology). To further evaluate the accuracy of this methodology, comparisons were made after applying opposite correction factors to the projections (i.e., the projected Proposed Action increment was multiplied by the Alternative S correction factor and vice versa). It was determined that the most conservative correction factor (that which will result in the highest volumes) would be selected for each intersection and analysis year. This correction factor was applied to the projections for all alternatives.

In the 2010 analysis year, several intersections (particularly West 42nd Street at Route 9A and Eleventh Avenue) had significantly lower accuracies of projected volumes. This is directly attributable to the effect of street closures in that total volumes for some hours would decrease between 2010 Future Without the Proposed Action Conditions and 2010 Future With the Proposed Action Conditions. In essence, there are negative incremental traffic volumes for some hours because the effect of traffic diversions outweighs the addition of new incremental trips. For these situations, an alternative methodology was devised to compare the ratio of hourly incremental traffic volumes in the Proposed Action to the incremental traffic volume for an alternative in the Weekday AM, MIDDAY, and PM peak hours. As was done with the initial methodology, the volumes projected with the alternative methodology were compared to the detailed Tier II volume projections and correction factors were established for each intersection. The most conservative correction factors were applied to the projections for all alternatives.

For each intersection and analysis year, the methodology used to project volumes was determined by a review of the accuracies of projected volumes (i.e., the methodology with the most accurate projection were utilized).

		24-hour Increment (µg/m ³) (With Project Alternative)	24-hour Increment (µg/m ³) (With PA)	Tier Level of Analysis (Peak Time Period)	Annual Increment (µg/m ³) (With Project Alternative)	Annual Increment (µg/m ³) (With PA)	Tier Level of Analysis (Peak Time Period)
1	Route 9A & West 57th St.	0.08	0.60	I (AM/PM)	0.01	0.05	I (PM)
4	Eleventh Ave. & West 37th St.	0.65	1.40	I (PM)	0.02	0.03	I (PM)
10	Eighth Ave. & West 42nd St.	0.29	0.35	I (PM)	0.01	0.02	I (AM/MD/PM)
11	Second Ave. & East 36th St.	0.11	0.73	I (PM)	0.00	0.02	I (AM/MD/PM)

Notes:

Significant Threshold Values:
 24-hour = 5 µg/m³
 Annual = 0.1 µg/m³

NAAQs:
 PM₁₀ 24-hr = 150 µg/m³
 PM₁₀ Annual = 50 µg/m

All values are the maximum estimated concentrations under all time periods considered and include the following background concentrations:
 24-hour PM₁₀ = 43 µg/m³
 Annual PM₁₀ = 21 µg/m

Tier I analyses assume peak period traffic conditions occur every hour of the 24-hour and annual analysis periods. Concentrations were estimated for the following time periods:

- AM - AM peak period (8-9 AM)
- MD - Midday peak period (12-1 PM)
- PM - PM peak period (5-6 PM)
- EV - Evening Special Event peak period (8-9 PM)
- SUN - Sunday Special Event peak period (4-5 PM).

TABLE WT-6
2025 FUTURE WITH THE PROJECT ALTERNATIVE T WITHOUT TRAFFIC MITIGATION MEASURES
MAXIMUM PM_{2.5} INCREMENTAL IMPACTS) (TIER I ANALYSIS)

Site #	Analysis Site	24-Hour Results			Annual Results		
		24-hour Increment (µg/m ³) (With Project Alternative)	24-hour Increment (µg/m ³) (With PA)	Tier Level of Analysis (Peak Time Period)	Annual Increment (µg/m ³) (With Project Alternative)	24-hour Increment (µg/m ³) (With PA)	Tier Level of Analysis (Peak Time Period)
1	Route 9A & West 57th St.	0.38	0.65	I (AM)	0.02	0.05	I (AM/PM)
4	Eleventh Ave. & West 37th St.	1.96	3.41	I (AM)	0.04	0.09	I (AM/PM)
10	Eighth Ave. & West 42nd St.	0.56	0.76	I (PM)	0.02	0.03	I (PM)
11	Second Ave. & East 36th St.	0.56	1.12	I (AM)	0.02	0.03	I (AM)

Notes:
 Significant Threshold Values:
 24-hour = 5 µg/m³
 Annual = 0.1 µg/m³

NAAQS:
 PM₁₀ 24-hr = 150 µg/m³
 PM₁₀ Annual = 50 µg/m

All values are the maximum estimated concentrations under all time periods considered and include the following background concentrations:
 24-hour PM₁₀ = 43 µg/m³
 Annual PM₁₀ = 21 µg/m

Tier I analyses assume peak period traffic conditions occur every hour of the 24-hour and annual analysis periods. Concentrations were estimated for the following time periods:

- AM - AM peak period (8-9 AM)
- MD - Midday peak period (12-1 PM)
- PM - PM peak period (5-6 PM)
- EV - Evening Special Event peak period (8-9 PM)
- SUN - Sunday Special Event peak period (4-5 PM).

Tier 2 Mobile Source Analysis

*PM2.5 impacts at this intersection under each alternative were estimated by multiplying the impacts under the Tier II analysis conducted under the Proposed Action and the ratio of impacts estimated using a Tier I analysis under this alternative and Tier I impacts estimated for the Proposed Action.
