

METHODOLOGY

Relies on 2000 Census journey-to-work data

- A > At place of Residence
- > At place of Work
- > Workers from Home to Work

B Looks at each borough as a whole and also divides each borough into "Super-PUMAs"

C Examines origins and destinations of commuters, as well as modal splits

D Uses 2000 Census data instead of more recent ACS data because ACS data is limited for areas with population below 20,000.
