Educated Children Are Our Future

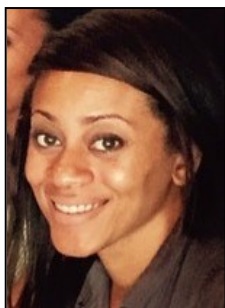

Free Workshop

Systems Development for Child Care Professionals

Are you overwhelmed by the amount of information you are required to maintain to operate a successful child care or Head Start program? Did you know that there are data systems available to help you compile the mandated information you need on new student enrollment, developmental screenings and health services?

This workshop will introduce you to two of the most widely used early childhood management systems: Child Plus and COPA (Child Outcome, Planning and Assessment). You will participate in a demonstration of these two software products to understand which can help you achieve your compliance and strategic planning goals. Participants will also identify procedures that are failing and what steps are needed to correct them.

Join us to learn how implementing a technical solution maybe exactly what you need!
