

How to Comply with the Requirements of the NYC Vehicle Emissions Law

(Local Law 145 of 2013)

Does your vehicle have an **EPA certified 2007 engine or later?**

YES

Your vehicle **IS** compliant.

Update your vehicle information in the
BIC online portal.

NO

Your fleet **MUST** be
compliant by
JANUARY 1, 2020.

There are **3 ways** to become compliant:

1. Retrofit the engine (and obtain a DEP decal). Several vendors offer services to install the “Best Available Retrofit Technology” (BART) in your vehicle’s engine to comply with the law. Not all retrofits are acceptable. Obtaining a decal from the NYC Department of Environmental Protection (DEP) lets BIC and DEP know that your retrofit is compliant.

OR

2. Replace the vehicle. Purchase a vehicle with a 2007 or later engine (typically there is a 1 year lag in engine year, i.e. a 2007 truck may have a 2006 engine). You must obtain new BIC plates for any vehicles added to your fleet.

OR

3. Retire the vehicle. Return BIC issued plates to the Commission for any retired vehicle. Vehicles with a 2006 or older engine that have not been retrofitted, cannot lawfully operate on the streets of NYC as of January 1, 2020.

Does your vehicle(s) fall within the scope of this law?

You need a plan for getting your fleet into compliance AND you must let BIC know.
