

SERVICE UPDATE

Inspection Ready: Scenarios for Boiler Inspection Work-Type Requests

Effective May 20, 2016, Licensed Professionals requesting a boiler inspection on a job application containing a Boiler (BL), Fuel Burner (FB), and Fuel Storage (FS) work-type are required to only make a single request under the highest boiler work-type hierarchy.

The scenarios in the table below detail the boiler work-type hierarchy. The job application upload will only be required for the work-type of the inspection request being made.

Boiler Multiple/Single Work-Type Hierarchy Scenarios

Number of Work-Types	Boiler Job Work Type(s) Hierarchy Scenarios	Inspection Ready Work Type Request
3	BL – Boiler FB – Fuel Burner FS – Fuel Storage	BL - Boiler
2	FB – Fuel Burner FS – Fuel Storage	FB – Fuel Burner
1	FS – Fuel Storage	FS – Fuel Storage
1	LAA – Limited Alteration Application (Boiler-related Inspections)	LAA

The inspection result (pass or fail) will be reflected under the work-type associated with the inspection request. This will also include any checklist items, gas authorizations, Boiler Cards and/or 16A Cards. When an inspection has passed, the Department will sign-off on all of the related work-types under the same job application.

For more information, please see the Department’s Inspection Ready page at <http://www1.nyc.gov/site/buildings/industry/inspection-ready.page>.
