Extension Cords are a useful source of temporary power. But don’t take extension cords for granted.

- Reduce tripping hazards by elevating cords above travel areas.
- Group multiple cords together with a twine or string and keep to one side of walkways.
- When using extension cords outdoors, apply the same rules.
Follow safety procedures to avoid defective cords or tripping hazards:

- Use only hard service cords with polarized plugs.
- Inspect extension cords before each use.
- Remove from service if there are cuts, strains or damage.
- Repair damaged cords immediately. Test polarity and continuity before use.

CALL 311 TO REPORT DANGEROUS CONDITIONS.
