How-to Guide: Supporting Documentation

In Compliance with 2020 New York City Energy Conservation Code

- GENERAL
- BUILDING ENVELOPE
- MECHANICAL SYSTEMS
- LIGHTING & ELECTRICAL POWER
- OTHER REQUIREMENTS

NOTE: In this How-To Guide: Supporting Documentation, selected Energy Code provisions have been generalized, summarized, rephrased, and/or highlighted. This guide is intended: 1) To provide general guidance for the job applications seeking compliance with the 2020 NYCECC; 2) Not to replace or represent the entire 2020 NYCECC and related regulations of the City of New York and the Department of Buildings; and 3) Not to provide complete compliance solutions for any particular type of job or work. Comprehensive mandates, applicability, exemptions, exceptions and options will be found in the 2020 NYCECC and related regulations of the City of New York and the Department of Buildings.
OVERVIEW

What is Supporting Documentation?

**A Requirement to Demonstrate Compliance with NYCECC**
- Supporting Documentation is required for all job applications that are not exempt from the NYCECC in accordance with 1 RCNY §5000-01 (e)(2).
- Job applications submitted through DOB BIS indicating NYCECC Compliance in the PW1-Section 10 must submit supporting documentation through DOB BIS.
- Job applications with Work Types requiring DOB NOW filing must submit supporting documentation through DOB NOW.
- See Quick Reference Guide: How to Demonstrate Energy Code Compliance for the summary list of requirements.
- Exempt from the NYCECC  Job applications claiming exemption from the 2020 NYCECC must:
  - Complete PW1-Section 10 to indicate the job is eligible to be exempt from the NYCECC, for DOB-BIS-filed jobs.
  - On drawings, provide Professional Statement for exemption (similar to the statement in PW1-Section 10), and specify the basis for exemption in accordance with 1 RCNY §5000-01 (e)(2).
  - On drawings, provide a simple Tabular Analysis listing the proposed work types and summary work scope to validate the exemption.

**Essentially, Construction Documents**
- To be submitted to the Department of Buildings for approval.
- To inform means and methods of construction for all energy design elements in the form of technical drawings, schedules, specification notes, etc.
- To prove that all proposed energy design elements will match or exceed the requirements of the NYCECC in their quality, quantity, size, capacity, efficiency, performance, location, configuration, composition, etc.

**Must Match the Proposed Work Type and Scope**
Supporting Documentation (Construction Documents) must provide construction data to match all proposed Work Types and work scope indicated in
- DOB BIS PW1-Section 6 Work Types
- DOB NOW filed Work Types, such as Mechanical Systems (MS), Plumbing (PL), and Boiler Equipment (BE)
- TR8-Section 3 and Section 4

**Must Support Energy Analysis**
- Construction Documents must support the Energy Analysis reports. Specifically, the values and attributes of any energy-code-regulated element proposed in the construction documents must match or exceed those of the same element listed in the Energy Analysis (e.g., Tabular analysis, REScheck, COMcheck, and EN1).
- Supporting Documentation and Energy Analysis must be submitted along with its associated work type either through DOB BIS or DOB NOW as required.
- Job applications with Energy Modeling analysis must submit the completed EN1 workbook along with the primary job filed through DOB BIS.

• Refer to Page [GE-5] for Energy Analysis options.
**KEY PRINCIPLES**

**How Should Supporting Documentation be Prepared?**

- **Identify a Correct Code Version to Follow**
  - Job applications filed on and after May 12, 2020 must comply with the 2020 NYCECC.
  - Job applications filed between October 3, 2016 and May 11, 2020 must comply with the 2016 NYCECC.
  - Refer to ‘What Codes, Rules & Forms Apply When’ to identify which ECC Code version is applicable for a particular job application.

- **Identify Correct Code Sections to Follow**
  - *Mandatory* provisions must be satisfied by *all* applications, whereas *Prescriptive* provisions must be satisfied by applications that seek to prove compliance *prescriptively*.
  - Applicable Code sections must be carefully identified and selected according to the job application/project type.
  - For a Commercial building application, the *Single* chosen Code (NYCECC or ASHRAE; indicated as the Code compliance path on PW1–Section 10) must be referenced throughout the entire set of construction documents.

KEY PRINCIPLES

**How Should Supporting Documentation be Prepared?**

- **Label Energy Design Elements Consistently Among Drawings**
  - Identification keys for all proposed energy design elements, such as wall types, window/door types, light fixture types, mechanical equipment system types, etc., must be consistent between Supporting Documentation and Energy Analysis.

- **Values and Attributes Must Match**
  - Specifications (in values and attributes) of energy design elements reported in Energy Analysis must be validated through Supporting Documentation. For example, Energy-Code-relevant specifications (e.g., insulation type, R-value, U-factor, luminaire type, luminaire wattage, equipment size, equipment efficiency, etc.) declared in the COMcheck energy analysis, but not identified in the construction documents will not be accepted for Energy Code compliance.
  - Total numbers reported in Energy Analysis must be validated through Supporting Documentation. For example, the gross values such as exterior wall/fenestration areas, roof/floor areas, luminaire/equipment counts, area-weighted average values, etc. listed in the Tabular energy analysis must be easily identified in the drawings, schedules, and/or diagrams provided in the construction documents.

### Key Principles

**How Should Supporting Documentation be Prepared?**

- **Specific Design Data in Proper Locations**
  - *Specific design values and characteristics* proposed for the work scope in the application must be provided in the construction documents in sufficient detail and clarity. For example, window schedules on drawings must list each proposed window assembly's U-factor, SHGC, air leakage rating, and Visible Transmittance (as required) values furnished/published by the respective window manufacturer.
  - *Notes directly relevant to achieve the proposed design* must be provided in the construction documents in sufficient detail and clarity. In other words, mere duplicates of general Energy Code sections placed on the drawings will *not* be construed as Energy Code compliance.
  - *In proper locations within construction documents,* construction data must be presented. For example, 1) HVAC mechanical equipment schedules and a sequence-of-operations narrative must be found on Mechanical drawings; 2) Lighting control notes must be placed in conjunction with lighting fixture plans and schedules on drawings (typically on RCP drawings).

- **List of Progress Inspections on EN-Sheet**
  - All *applicable* progress inspections required for Energy Code compliance must be listed on an EN-labeled sheet in tabular format as shown in 1 RCNY §5000-01(h), and must match those identified on the TR8.

</tbody>
</table>

**NOTES:**
1. PROVIDE MOTORIZED SHUT-OFF DAMPER AT THE OA INTAKE WITH MAXIMUM LEAKAGE RATE OF 4 CFM/SF AT 1 IN. WG. DAMPER SHALL CLOSE WHEN THE UNIT IS OFF.
2. IN ECONOMIZER MODE, MINIMUM OCCUPIED AIRFLOW SETPOINT ON VAV TERMINALS SHALL BE AUTOMATICALLY RESET BASED ON PERCENTAGE OF OUTSIDE AIR ABOVE DESIGN MINIMUM.
   A. AS PERCENTAGE OF OA DAMPER AT 100% AND AS ECONOMIZER OUTPUT INCREASES FROM 0-100%, MINIMUM AIRFLOW SETPOINT AT TERMINAL UNITS SHALL PROPORTIONATELY RESET LOWER TO MAINTAIN REQUIRED MINIMUM FRESH AIR VENTILATION.
   B. RESETTING SHALL OCCUR BASED ON INCREMENTS OF 10% CHANGE OF VALUE OF ECONOMIZER OUTPUT.
3. PROVIDE HEAT WHEEL THAT SHALL RECOVER MINIMUM 50% OF THE ENTHALPY. HEAT WHEEL SHALL CONTAIN A BYPASS FOR ECONOMIZER MODE.
4. AT A MINIMUM, ALL VAV TERMINAL UNITS SERVED BY AN AHU SHALL BE LINKED WITH ASSOCIATED VAV AHU CONTROLLER TO PERFORM THE FOLLOWING FUNCTIONS.
   A. ZONE OCCUPANCY SCHEDULE (USER DEFINED FROM GRAPHIC INTERFACE) SHALL NORMALLY AUTOMATICALLY SELECT THE OCCUPIED OR UNOCCUPIED OPERATING MODE OF AIR HANDLING UNIT.
      1) ACTIVATION OF TIMED OVERRIDE SWITCH ON ZONE THERMOSTATS SHALL ONLY RESET ZONE HEATING AND COOLING SETPOINTS TO "OCCUPIED" VALUES, BUT SHALL NOT AFFECT OTHERWISE SCHEDULED UNOCCUPIED OPERATING MODE OF AIR HANDLING UNIT.
   B. DUCT STATIC PRESSURE RESET AS DESCRIBED IN FAN CONTROL SECTION.
   C. DISCHARGE AIR TEMPERATURE SETPOINT –OPTIMIZED AS DESCRIBED IN THE DISCHARGE TEMPERATURE CONTROL SECTION.
5. FAN POWER LIMITATION CHECK – PER Table C403.2.12.1(1)
   - HP ≤ CFM x 0.0015
   - 25 ≤ 26000 x 0.0015 = 39 >> OK

ENERGY ANALYSIS

to Demonstrate ECC Compliance in conjunction with Supporting Documentation

ENERGY ANALYSIS Methods

---

**Prescriptive Compliance**

**Tabular Analysis**
- All Systems complying Prescriptively:
  - Envelope complying per Table R402.1.2 / R402.1.4

**Prescriptive Compliance**

**REScheck**
- Envelope Trade-off per Total UA Alternative (R402.1.5) by REScheck +
  - Mechanical/Lighting/Power systems complying Prescriptively by Tabular Analysis, as applicable

**Performance Compliance**

**Simulated Performance Alternative**
- All Systems complying by Performance simulation analysis
  - Whole-Building Trade-off per Simulated Performance Alternative (R405)

**Energy Rating Index (ERI) Compliance Alternative**
- All Systems complying by ERI analysis
  - Whole-Building Trade-off per ERI Compliance Alternative (R406)

**Prescriptive Compliance**

**Tabular Analysis**
- All Systems complying Prescriptively:
  - Envelope complying per Table C402.1.3/ C402.1.4 for ECC, or
    - per Table 5.5-4 for ASHRAE

**Prescriptive Compliance**

**COMcheck**
- Mechanical/Lighting/Power systems complying Prescriptively +
  - Envelope Trade-off by Component Performance Alternative (C402.1.5) for ECC, or
    - by Building Envelope Trade-Off Option (5.6) for ASHRAE

**Performance Compliance**

**Energy Modeling + Envelope Backstop Compliance**
- All Systems complying by Performance:
  - Whole-Building Trade-off by ASHRAE Section 11, or Appendix G Energy modeling +
    - Envelope Backstop complying per Section 5.5, or Appendix C (COMcheck Envelope Backstop Report)
