TWENTY-NINTH ANNUAL AWARDS FOR EXCELLENCE IN DESIGN
Museum of the Moving Image | Monday, June 20, 2011
Established in 1898 as the Art Commission, New York City’s design review agency was renamed by Mayor Michael R. Bloomberg in July 2008 to better reflect its mission. The Design Commission reviews permanent works of art, architecture and landscape architecture proposed on or over City-owned property.

The Commission is composed of 11 members, and includes an architect, landscape architect, painter and sculptor as well as representatives of the Brooklyn Museum, the Metropolitan Museum of Art and the New York Public Library. It meets every three weeks in its temporary space at 253 Broadway across the street from its permanent home on the third floor of City Hall, where it has resided since 1914.

Since 1982, the Design Commission has recognized outstanding public projects with its Annual Awards for Excellence in Design. The winning projects are selected by the Commission from the hundreds of submissions reviewed each year, and the winners are honored at a ceremony hosted by the Mayor. In keeping with the tradition of holding the Design Awards in an innovative space, this year’s ceremony is being held at the Museum of the Moving Image, which is also receiving a Design Award this year.

The museum reopened in January 2011 after a dramatic transformation by Leeser Architecture, including graphics by Karlssonwilker. Visitors are greeted at the entrance with a triangulating grid pattern of semitransparent mirror-glass featuring the museum’s name in hot pink lettering. The three-story addition is clad in pale blue aluminum panels that create the same triangular grid, a design that is repeated inside the building on the blue felt walls and ceiling of the new main theater.
Construction of the Brooklyn Children's Museum Rooftop Pavilion

145 Brooklyn Avenue, Brooklyn

A Project of the Department of Design and Construction, the Department of Cultural Affairs and the Brooklyn Children's Museum

Toshiko Mori Architect

This vaulted open-air pavilion provides a covered, flexible space for educational, event and performance programming as well as free play and café seating on the roof of the Brooklyn Children’s Museum. Using a simple, structurally efficient geometry and lightweight ETFE (Ethylene Tetrafluoroethylene) fabric cladding, the pavilion spans an impressive 121 feet, yet appears to perch lightly on the museum’s roof. The four column bundles accommodate seating and storage space and include uplighting to highlight the structure’s graceful arches at night.

Construction of a Salt Shed
297 West Street between Canal Street and Spring Street, Manhattan
A Project of the Department of Sanitation

Dattner Architects
WXY Architecture + Urban Design
Department of Sanitation, Special Projects Division

With a capacity of 5,000 tons of roadway salt, this salt shed is designed to celebrate its critical municipal function. The shed’s powerful, crystalline form is comprised of faceted planes of exposed concrete that project upward and outward from the ground toward the Hudson River. Like a real crystal, the fractured surfaces of the structure play off of changing light: during the day, the façade is mercurial as the sun moves across the sky, and at night, it is lit dramatically from below by fixtures set into the sidewalk beneath a moat of textured cast glass.

Reconstruction of Harper Street Yard, including the Construction of a Diesel Monitoring Booth

32-11 Harper Street, Queens

A Project of the Department of Design and Construction and the Department of Transportation

Architects

Adjacent to the raised Van Wyck Expressway, the Harper Street Yard is the maintenance and refueling site for Department of Transportation vehicles. Chevron-shaped in plan, the diesel monitoring booth includes a bent ribbon window to capture a panoramic view of the yard and fueling station. The booth’s façade light-heartedly references traffic symbols and road markings with alternating black and white glazed tile cladding set in a chevron pattern and Safety Yellow accents.

Renovation of and Addition to the 122 Community Center, including the Installation of Inhale/Exhale and Independent Lines by Monika Goetz

150 First Avenue, Manhattan

A Project of the Department of Design and Construction, the Department of Cultural Affairs’ Percent for Art Program and the 122 Community Center

Deborah Berke & Partners Architects
Monika Goetz, Artist

The renovation of the 122 Community Center, home to three visual and performing arts organizations, establishes a new public entryway as well as upgraded theaters, galleries and studios. Employing expansive fenestration overlaid with perforated steel scrim, the design of the addition provides a contemporary and seemingly transparent and weightless counterpoint to the stately masonry of the original 1920s C.B.J. Snyder school building. Monika Goetz’s installations further this playful dissonance by transecting the orderly geometry of the forecourt with metal inlay and animating the building through lighting, creating the effect that it is breathing. Together, the architecture and artwork achieve a magnetic presence that conveys the vitality of artistic expression housed within this East Village institution.

Installation of a Commemorative Program at the Original Yankee Stadium Site

Macombs Dam Park, East 157th Street to East 161st Street between River Avenue and Ruppert Plaza, Bronx

A Project of the Economic Development Corporation and the Department of Parks & Recreation

Doyle Partners

Cozzolino Studio

Located in and around the footprint of the original Yankee Stadium, the commemorative program successfully conjures up the history and legacy of the former stadium within this new community park. Mixing blue synthetic fibers with natural grass, the original baseball diamond emerges as an “Indelible Field,” allowing visitors to run the bases. Momentous events in history are inscribed on benches and pavers and brought to life through contemporary viewfinders that offer snapshots in stereoscopic 3D. Large-scale graphics on the outfield fence remind visitors that baseball is a simple game: “Sometimes you win, sometimes you lose, sometimes it rains.”

Rehabilitation of the Delancey and Essex Municipal Parking Garage

107 Essex Street and 120 Ludlow Street between Delancey Street and Rivington Street, Manhattan

A Project of the Department of Design and Construction and the Department of Transportation

Michielli + Wyetzner Architects

The redesign of this late 1960s parking garage utilizes a simple membrane to wholly transform each façade, allowing for natural light and ventilation within. Inspired by geometric abstraction and Op Art, the design overlays two off-set planes of diagonal cables, which, when viewed together, create a rippling moiré pattern. Phosphorescent rubberized paint is applied to select cables and the garage façade to form an integrated supergraphic. The use of woven cables is a clever nod to both standard highway and bridge materials and the legacy of the garment industry on the Lower East Side.

Construction of the Hunter’s Point Community Library

Center Boulevard between 47th Road and 48th Avenue, Queens

A Project of the Department of Design and Construction, the Queens Library and Queens West Development Corporation

Steven Holl Architects
Michael Van Valkenburgh Associates

Prominently located on the Queens waterfront, the Hunter’s Point Community Library capitalizes on the expansive views of Manhattan with large, free-form openings cut into the façade of recycled aluminum rainscreen. While the interior program space is clearly delineated, circulation is open and flowing to cultivate community and intergenerational learning. Flanked by a bosque of Gingko trees and a reflecting pond set in a field of native grasses, the library is a welcome addition to this former industrial site and serves as a glowing, sculptural beacon for this new community.

Reconstruction of the Staten Island Animal Care Facility

3139 Veterans Road West, Staten Island

A Project of the Department of Design and Construction, the Department of Health and Mental Hygiene and Animal Care & Control of NYC

Garrison Architects

The Staten Island Animal Care Facility is designed to provide a calm and welcoming environment for homeless and abandoned animals and for their potential adopters. The building’s gold anodized aluminum framing system is sheathed in insulated, translucent polycarbonate panels, a combination that creates light-filled animal living quarters during the day and produces a soft glowing effect at night. The dual-level roof provides an interior clerestory that aids natural ventilation and ingeniously screens the HVAC equipment. The use of durable materials and sustainable strategies ensures an attractive and low-maintenance home for the facility’s furry friends for years to come. Adopt a little New Yorker today!

Rehabilitation of the Sands Street Gatehouses

Brooklyn Navy Yard Industrial Park, 63 Flushing Avenue, Brooklyn
A Project of the Brooklyn Navy Yard Development Corporation

Beyer Blinder Belle

Built circa 1900 to resemble a medieval fortress, the Sands Street Gatehouses suffered numerous alterations over the last century that all but destroyed the impressive western entrance to the Brooklyn Navy Yard. Working from historic photographs and archival drawings, the design recreates the two front turrets, reproducing the intricate corbels, blind arches and crenellations, and repairs the brickwork and masonry detailing of the façades. The design successfully restores the grandeur of this idiosyncratic architectural gem and works to publicly signal the revitalization of the Brooklyn Navy Yard as a thriving industrial park.

Renovation and Expansion of the Museum of the Moving Image

35th Avenue at 37th Street, Queens

A Project of the Economic Development Corporation, the Department of Cultural Affairs and the Museum of the Moving Image

Leeser Architecture
Karlssonwilker

The renovation and expansion of the Museum of the Moving Image add 98,000 square feet of exhibition, education and theater space to the museum’s converted 1920s studio complex. Inspired by the matrices used for computer-generated imagery (CGI), the design employs a triangular grid motif that is expressed in the pale blue aluminum cladding of the addition, the semitransparent mirror-glass at the entrance, the blue felt-covered acoustic panels in the main theater and the distinctive typeface used throughout the museum. In consort with the historic building, the contemporary interventions align with the museum’s mission to celebrate the interplay of the history of the moving image with the innovative technology of film, television and digital media today.

SPECIAL RECOGNITION AWARD

Renovation of and Addition to the Office of Emergency Management Headquarters

165 Cadman Plaza East, Brooklyn
A Project of the Department of Design and Construction and the Office of Emergency Management

Swanke Hayden Connell Architects

The headquarters of the Office of Emergency Management, the agency tasked with preparing for and coordinating emergency response and recovery, was completed in 2006. While the building functions as a secure stronghold, its exterior design belies the insular nature of the interior program with an attractive and visually porous façade. This is achieved by wrapping the original 1950s brick building and the new addition in a frame of limestone panels, which references traditional civic architecture, and maximizing glazing, even in the stairwells. The building, which has a LEED Silver Rating, is a forerunner in sustainable municipal design.
