Proportion of Patients in Care with Suppressed Viral Load in 2017

A person is considered to be established in HIV care if they had two CD4/VL tests at least 3 months apart in 2017.

Viral Load Suppression: Last quantitative HIV RNA value <200 copies/mL.
Transmission Threshold: Last quantitative HIV RNA value <1,500 copies/mL. For most patients, a low level of HIV viremia indicates that they are engaged in HIV medical care.

Goal: Targets for both indicators are based on 90% local Viral Load Suppression goal.

*NYC 2014: 85.2% *NYC 2017: 88.7%
*All 60 CCD Sites 2014: 86.1% *All 60 CCD Sites 2017: 89.5%

Progress on Viral Load Suppression between 2014 and 2017 are color coded as follows:
- Stayed on/above target since 2014
- Became on/above target since 2014
- Stayed below target since 2014
- Went below target since 2014

Viral Load Suppression:
- *90% Goal * 90% Goal *

Data source: Laboratory data reported to the NYC HIV surveillance registry.
