*Mobile syringe access services only. Please call SSPs for hours of operation, location, and services.

WHAT DO SYRINGE SERVICE PROGRAMS DO?

Syringe Service Programs (SSPs) provide immediate services for people who use drugs. SSP services include:

Access to safer drug use and safer sex supplies

Care coordination and referrals to other services

Access to naloxone

Safer drug use and health education

Hepatitis C and HIV testing

Hepatitis care coordination and treatment counseling

SAFETY TIPS:

FENTANYL,

a drug stronger than heroin, is being mixed into heroin, cocaine, and pills marked as Xanax.

USE WITH OTHERS

and take turns, or have someone check on you.

GET NALOXONE.

Leave it out when you use. Naloxone is a medication that can reverse an overdose from fentanyl, heroin and other opioids.

AVOID MIXING DRUGS.

Using different drugs together, including alcohol, increases your risk of overdose. If you do mix drugs, go slow.

For more information, go to nyc.gov/health and search **prevent overdose**.
