

Please review the attached document summarizing COVID-19 vaccine updates.

This includes:

1. The new Pfizer vaccine for children 5-11 (vaccine code 218),
2. Pfizer booster shot (same vaccine code and same dosage amount) and
3. Moderna booster shot (same vaccine code but half the dosage amount).

Make sure that adult Pfizer vaccine (208) and child Pfizer vaccine (218) are properly distinguished in your system.

When reporting Moderna booster shots, please document the correct dosage amount in the RXA-6 field (0.25 mL).

If reporting priority group codes, you may document '3HEALTH' for those individuals that are immunocompromised and receiving a third dose. You may document all other priority groups for those receiving a booster shot. Priority group 'AGE' may be used for children.

UAT updates

1. The CIR will transliterate non-ASCII characters. This feature will be available in our test environment next week. When the CIR encounters non-ASCII characters, the HL7 message will not be rejected, but a warning will be returned like this:

```
ERR||QPD^1^8^1^1^2|102^Data type  
error^HL70357|W|Transliterated^^HL70357|||Patient_Address_Street: Transliterated|
```

2. The CIR will return the facility name of where an immunization was administered in the response (RSP) message in RXA-11.4. This feature is now available in our test environment.

```
RXA|0|1|20201217|20201217|208^Pfizer COVID-19^CVX|999|||00^New immunization  
record^NIP001||^CIR Test facility|||1027||PFR^Pfizer^MVX|||CP|
```
