Comments received by The Department of Health and Mental Hygiene on Proposed resolution to amend General Vital Statistics Provisions Article 207 of the New York City Health Code regarding Birth and Death records

As of October 24, 2017
I would like to comment that I think that birth records should be available to the public after 75 years, since the Census Bureau uses a 72 year cutoff before releasing their records to the public. 125 years is way too long to hide them.

As for death records, I think that 50 years is long enough to wait, since the dead no longer worry about such things...

Sincerely,
KGRUENEICHCAREY@HOTMAIL.COM

PS -- Yes, I am an enthusiastic genealogist & very much appreciate finding my relatives before I pass on (nearly 70 years old myself).
My name is Brian M. Finnegan and I was born in Brooklyn in 1946. My mother and father (both deceased and buried in New York), raised a family of 4 kids and my brothers and sister and there siblings still live in New York (this would be more then 30 nieces and nephew). I now live in California and I do Genealogy for my family and my wife's family which is also from New York. I have been doing this research for the last 10 or 12 years. If you agree with this change, it will STOP my research and all other Genealogist all over the world.

I do not see why you want to make the Amendment of Provisions of Article 207. This WILL NOT Stop Identity theft, but it will stop the public from its legal writ to view these record.

I am very opposed to this act and feel that it will affect all Genealogist over the world that have ancestors in New York. As you know, most people that came to the USA in the past came thru Ellis Island and settled in the New York Area.

Thank you, Brian M. Finnegan
Good morning,

Birth, marriage, and death records are a matter of civil record and not just personal record. Therefore, these records should be made available to the public AS SOON AS THEY ARE CREATED.

Sealing records far any time period ignores the civil status of those records.

Sincerely,

Steve Le Bel

P.s. My cousins are NY residents and will be submitting the same comments.
I was born in New York City. My parents were born raised and married in New York City. We do NOT want you to lock up all of our family records until long after we are dead. Family history is personal history. We believe genealogic access must be available to family members within a short period of time the way they are in states like Vermont.

No one has shown a need for such "privacy", especially in modern times when hackers can get millions of names, accounts, social security numbers, etc. from stupid companies like Equifax. Don't penalize normal people in your quest to protect us from non-threats.

Please do NOT make New York City vital records access any more difficult than it has been up until now. Instead, make it easier to get death certificates since the deceased has no privacy to protect. Make it easier to get other certificates as well because they are protected for too long a time period. Access should be easy and immediate to birth and marriage certificates for anyone who is deceased. They have no privacy to protect.

If you want to protect privacy, then go after the banks and credit companies and insurance companies who have been leaking our personal information for over ten years. Tying up our necessary certificates does NOTHING to protect the privacy on New Yorkers! Work on cyber security for all account, social security and other data for all people who do business in New York.

Sincerely,

Gloria A. Bailey, Ph.D.
This is an outrageous effort to further restrict information that should be public. I object to all increased restrictions on DORIS records, and in fact, think they should be reduced.

Suzanne Scheraga
Please make birth and death records, not more restrictive as proposed. It’s important to genealogy. Thank you…John in Buffalo
To the powers that be:

You're proposal to lock up birth records for 125 years and death records for 50 years will make it extremely difficult for applicants to the Daughters of the American Revolution. Currently, applicants are required to submit vital records for time periods when vital records were available. There was an applicant I worked with for several months who had difficulty in acquiring her grandmother's birth certificate because she is 92 years old and still living. Please take a broader look of how you will be hurting family members in completing genealogy research by passing this proposal into law. Thank you

Leslie Wickham
Increase Carpenter Chapter, NSDAR
As a lifelong resident of NYS I am imploring you to redact this proposal of 125 yrs embargo on birth certificates and 50 yrs on death certificates. It is imperative to the citizens of NYS to have access to these records as soon as possible. For many of us, these records hold the keys to adoptions, medical history, parentage, cultural awareness, and family lineage. To hold them from us inhibits our abilities to receive answers...sometimes life or death ones. With the emergence of publically accessible DNA, having documented proof of our lineage and culture is paramount. I understand the need to protect the citizens from identity theft, but studies and statistics show almost all identity theft occurs digitally via shopping sites to living people, not those deceased. Our current social security administration does a wonderful job of protecting re use of deceased numbers, comparatively speaking. Those thieves know this, and would not chance using outdated forms/appearance of these certs let alone the people who are listed on them. As an advocate of family history, a genealogist, and believer in the work of Reclaim the Records, as well as a citizen of NYS; I ask that this proposal be removed immediately. Thank you for your hard work, but it is not needed where this is concerned.

Other states allow access sooner without any known negative consequences.

For example, informational copies of death certificates are available to the public immediately after a person's death in California.

In some states the period is 20 years (Illinois) or 25 years (Virginia).

Birth records are available to the public in some states 100 years after birth.

As a full-time genealogist since 2012, and university level genealogy professor, I'm knowledgeable within the genealogical community, and can state without hesitation that more access is better.

I do not support the model act suggestion of 125 years for births, and I do not think 50 years is necessary for deaths. I'd propose that births and deaths be available immediately as informational copies as in California.

Clearly this leaves some people living when their birth record becomes public, but it would only be an informational copy. It is not reasonably harmful to a person for the public to have the ability to discover their birth date and names of parents. The research value to society outweighs any imagined risk of the public learning such information (names of parents, birth date).

Please adequately consider the research value of these records as a factor in decision making. Often present day research is of great importance to military repatriation experts, coroners, attorneys, forensic genealogists, and others, in their attempt to build family trees and determine next of kin to inform about the passing of a relative.
Good morning -
I just discovered the proposed amendments to general vital stats regarding birth and death records.
This is an absolutely HORRIBLE idea and for WHAT reason?
There is ZERO proof that having access to these records (like many many states provide) is any risk to ones identity security.
I am adopted, I want access to my original records long BEFORE MY DEATH...not after my great grand children's death.
This needs to be seriously considered as something that is detrimental to individuals...all...including those who are adopted. This just makes absolutely no sense to me.
Caisil Weldon
Born in Westchester NY
Dear Members of the Board of Health:

I am writing in regard to the "Proposed Amendment to General Viral Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records" (Ref: https://rules.cityofnewyork.us/content/proposed-amendment-general-viral-statistics-provisions-article-207-nyc-health-code-regarding), which is up for public review on October 24, 2017. As an experienced amateur genealogist with extensive roots in New York City, I am concerned about the chilling effect that this proposed rule change would have upon my own research and the research of my fellow genealogists and historians.

As it stands, New York City houses one of the largest collections of genealogically valuable records in the United States, yet it is also one of the most restrictive vital record jurisdictions in the country, making it extraordinarily difficult for genealogists and historians to access older records that have been released to the general public in many other jurisdictions. In point of comparison, please see the rules for the neighboring jurisdictions below:

- **New York State**: Birth certificates (in a non-certified format) are available to the general public after 75 years provided that the requester certifies that the subject is deceased, and death certificates (also in a non-certified format) become available to the general public after 50 years. (Ref: https://www.health.ny.gov/vital_records/genealogy.htm)

- **Connecticut**: Birth certificates are available to the general public after 100 years (Ref: http://www.ct.gov/dph/cwp/view.asp?a=3132&q=390652), and death certificates are available to all requesters over the age of 18. (Ref: http://www.ct.gov/dph/cwp/view.asp?a=3132&q=390664)

- **Massachusetts**: Most birth certificates are available to the general public without restrictions, and death certificates are available to the general public without any restrictions. (Ref: https://www.mass.gov/how-to/order-a-birth-marriage-or-death-certificate)

- **New Jersey**: Birth certificates (in a non-certified format) are available to the general public after 80 years provided that the requester certifies that the subject is deceased, and death certificates (also in a non-certified format) are available to the general public after 40 years. (Ref: http://www.state.nj.us/health/vital/order-vital/genealogical-records/)

- **Pennsylvania**: All birth certificates more than 105 years old, and all death certificates more than 50 years old are available to the general public. (Ref: http://www.phmc.pa.gov/Archives/Research-Online/Pages/Vital-Statistics.aspx)

- **Vermont**: There are no access restrictions to vital records. (Ref: https://www.sec.state.vt.us/archives-records/vital-records.aspx and http://legislature.vermont.gov/statutes/section/18/101/05002)

With the proposed rule change, the next release of New York City birth certificates (from 1910) to the Department of Records and Information Services (DORIS) will not occur until
2036, and the next release of death certificates (from 1949) will not occur until 2025. For the many genealogists who are researching their family but are not on the very narrow list of entitled parties, this will create a major stumbling block for many years. And for the (sizeable) demographic of researchers over the age of 60, there is a significant danger that they will not live to see the release of records that might reveal valuable information about their family history or provide potentially life-saving information about inherited health risks.

While I appreciate the desire to protect the privacy of the living, I do not believe that the proposed rule change adequately balances this goal with the legitimate interests of genealogists and historians. In all of New York City's neighboring vital record jurisdictions, including New York State, the longest embargo on death certificates is 50 years. And in some jurisdictions (Connecticut, Massachusetts, and Vermont), there is no embargo on death certificates whatsoever. For birth certificates, I can understand the desire to protect the privacy of the living, but I would note that many vital record jurisdictions (including Massachusetts and Vermont) have open access to birth certificates and have openly or tacitly affirmed that releasing the information contained therein would not be excessively intrusive upon the privacy of the subjects involved.

Regarding the risk of identity theft, I believe that this has been misrepresented. Massachusetts and Vermont have open access to birth certificates, and California (another large jurisdiction -- Ref: https://www.cdph.ca.gov/Programs/CHSI/Pages/Vital-Records-Obtaining-Certified-Copies-of-Birth--Death-Records.aspx) provides open access to "informational" copies of birth certificates, yet no evidence has been provided to suggest that individuals born in these states are more prone to identity theft than individuals born in jurisdictions with access restrictions. On the contrary, the primary risks of identity theft come not from vital records, but from insufficient security in data warehouses storing Social Security numbers and financial account information (as we have seen from the recent Equifax breach) and from inconsistent practices by businesses and government agencies in verifying an individual's identity through multiple, mutually confirming sources.

Given the issues I addressed above, I would ask that this proposed rule change be withdrawn for more careful scrutiny, for comparison with the access rules of other vital record jurisdictions across the United States, and for consideration to the longstanding damage that would be done to genealogical research in New York City should this rule change be passed as is. At the very least, I would ask the Board to consider the 50-year embargo for death certificates as a far more reasonable option than a 75-year one. I would also ask the Board to consider a 100-year embargo for birth certificates as a far more reasonable option than a 125-year one.

In addition, I would ask that the Board direct the Department of Health and Mental Hygiene (Department) to look into the lists of entitled parties for birth and death certificates within its custody. For death certificates, the current rules as stated restrict access to spouses, domestic partners, children, siblings, grandparents, and grandchildren, informants, and persons in control of disposition. (Ref: http://www1.nyc.gov/site/doh/services/death-certificates.page). In practice, "grandchildren" would appear to include individuals further down the line of direct descent such as great-grandchildren. Broadening death certificate access to a decedent's extended family (aunts/uncles, nieces/nephew, and cousins) would allow a larger population of requesters to benefit from the genealogical information and family medical history contained in these records, and it would not unduly violate the privacy of the family to release this information to family members. In some cases (especially from earlier years), a decedent
may not have surviving relatives on the list of entitled parties, which would effectively block access to any relatives until such time as the records are released to DORIS.

For birth certificates, the Department web site states that access to birth certificates is limited to the subjects and parents/registrants. (Ref: http://www1.nyc.gov/site/doh/services/birth-certificates.page) However, in my email communications with the Department, I was informed that birth certificates for deceased relatives can be requested by family members if they submit a completed, signed, and notarized application, copy of government-issued photo ID, original non-NYC death certificate or a copy of a NYC death certificate, and payment of $15.00. For the sake of clarity and consistency, I would strongly urge the Board to direct the Department to update its web site to include the rules for access to birth certificates of deceased relatives.

I strongly believe that greater access to New York City birth and death certificates rather than less would best serve the interests of the public, and I also believe it would be in the best interests of the City to avail itself of the opportunity to bring in the additional revenue that would be realized from the large population of researchers eager to explore their family history. Thank you very much for your consideration of my comments. I am

Yours sincerely,

Jason Gersh

Please, please, please do not implement this:

New York City Department of Health Proposes Adoption of 125 Years for Birth Records 50 Years for Death Records Embargoes

Thank you.
Dolores Brown
I agree that the government has an obligation to protect all persons from fraud and identity theft. I also agree that people are living longer and their right to privacy and protection are of the upmost importance. However putting such an extreme limit on when a birth or death record becomes public is overkill. Restricted access to vital records is a huge roadblock for most genealogist and family historians, this rule would make the roadblock more like a mountain. Instead of a 125 year rule for birth certificates, try providing uncertified copies that cannot be used for identification purposes as a good alternative. Clearly marking the document as unofficial, not having the official state seal and maybe even a 20 year rule should be more than enough to protect the living and satisfy the desire of the genealogist who just wants the record for record, not for harm. With respect to protecting a deceased persons information, after a person dies the social security number is removed from active use and placed into the Social Security Administration’s Death Master File database. Therefore that persons personal information cannot be used for legal reason. To my knowledge, a death certificate cannot be used to open an account, get a credit card, be used as identification or any other fraud or identity theft reasons. Again, instead of having a 75 year rule for death certificates, using the same uncertified copy suggestion above would be a great compromise. I realize that criminals have made this topic important but I hope that innocent people won't be punished by the solution. As I'm sure most of you on the board are aware, criminals don't care about the laws and will find other ways to commit identity theft and fraud. By only providing certified copies to those that can prove they are the person on the paperwork and uncertified unusable copies to everyone else, a fair and balanced compromise can be achieved. Thank you for your time.

Diana Frederick
I am writing with regard to the proposed lengthy embargoes on birth and death records. The time is so long as to make it virtually impossible for anyone alive today to locate vital information.

While it may be true that much of the information we genealogy researchers do is available on the web -perhaps after much effort - there are times when the official record is needed to resolve conflicting information.

It is non-sensical if I have to wait 150 years after the birth of my grandmother, especially for someone like me who is a senior citizen. I believe that these tightened rules only serve the bureaucrats who will have less work to do.

Thank you, Marcia Kaplan, Brooklyn born.
Why so long? Most people don't live to 100 years. This certainly would be terrible for anyone involved in genealogy research.

Jacqueline Wasserstein
East Meadow, New York
Your proposed new rules are completely unreasonable, unnecessary, and will significantly impede genealogical research. New York State Department of Health rules are more reasonable. They provide uncertified copies of the following types of records for genealogy research purposes: Birth certificates – if on file for at least 75 years and the person whose name is on the birth certificate is known to be deceased. Death certificates – if on file for at least 50 years. Marriage certificates – if on file for at least 50 years and both spouses are known to be deceased. I believe the NYC rules should reflect those of NYS.

I agree that the government has an obligation to protect all persons from fraud and identity theft. I also agree that people are living longer and their right to privacy and protection are of the upmost importance. However putting such an extreme limit on when a birth or death record becomes public is overkill. Restricted access to vital records is a huge roadblock for most genealogist and family historians.

The proposed new rules create a high barrier to finding family and historical information. There is no proof of widespread identity theft from these public records, the danger is in the large database thefts. Genealogists foster family reunification. The proposed rules put records out of reach to the point they are beyond living memory.

Thank you,

Linda Herriman

Comment:
I am not from NYC, but my mother and father-in-law are both from the city. I am trying to do the genealogy for their side of the family, which I'm already having issues because my father-in-law recently passed and my mother-in-law doesn't remember a lot of the family on both sides. If you block my ability to obtain the record for 125 years I won't be able to find cousins, aunts and uncles, great aunts and uncles, which help to find family members in earlier generations. You will be trying my hands to a degree. I can't be guaranteed my children will be interested in finding this information. I want to know myself! This was my idea and it's frustrating to know you want to limit me for people who are already deceased. Maybe change the policy on how credit is issued .vs changing how long records are released. I agree living persons should be protected, but the deceased can't be held liable for debts incurred after their death nor can family members if it's not in their name. Please support families wanting to find out more about their family history.

Comment:
In the case of genealogical research, generalizations about average life span may not be helpful. My mother was born to her parents late in life and consequently lost her parents at a young age. Yet under the new rules she and her descendants would lose the ability to learn vital information.

Comment:
This is another step backward. It builds upon the regressive action that has taken away access to the birth indexes that were housed at the New York Public Library, which were available for adoptees to obtain their own PERSONAL records, protected by and necessarily accessible by them pursuant to HIPAA, yet denied. I would like my article on the subject to be available to those making decisions on this matter, which is equally regressive in nature. [https://adoption.com/nyc-removes-birth-index-books-from-the-public-library](https://adoption.com/nyc-removes-birth-index-books-from-the-public-library)
Bobby Clark
Comment:
This will be burdensome to people researching family history. I understand the need to protect privacy especially in the age of Identity Theft but this proposal goes way beyond what is required. A more reasonable approach would be to limit access to birth records for 100 years and death records for 30. Currently in the US only 0.0173% of the population ever lives to the age of 100. That makes it unnecessary to extend the restriction past that time. It also seems unnecessary to restrict access to death records beyond 30 years after all the person listed is deceased. I understand that maybe other family members might want privacy but still it seems like 30 years post death should be more than enough to be reasonable. Accessing these records is vital to people doing Genealogical and Family History research and Historians as well. We should be able to strike a fair balance between the right of privacy to families and the need for researchers to access those records.

Fern Gutman

Comment:
The impact this change will have on genealogists and especially family historians is unthinkable. Family history is so important! Often these documents are a starting point for someone who is just beginning their research or provide the only clue(s) that helps them break through that dreaded brick wall. We actively encourage family history research. We should be helping people find ways to learn more about their ancestors, not creating more obstacles.
Linda Hauck, Director, Tottenville Historical Society.

Comment:
Please do not implement this rule! This would be a nightmare for genealogists, adoptees, people trying to research family health conditions. There are plenty of ways to protect identities without restricting the records in this way, including: —offering "informational" or "genealogical" copies which can not be used for proof of identity — allowing direct descendants (children, grandchildren, great-grandchildren, great-great-grandchildren) access to their family members records —restricting the records for a shorter period of time (why so long for a death certificate? what identity theft will occur with a DC, especially after 20-25 years?) —allowing access to birth records with proof of death There has to be a way to balance the needs of those researching their history with identity protection. These proposed rules are incredibly burdensome and punish people who are just trying to figure out where they come from.

Kerry Neely

Comment:
As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Comment:
RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I have researched several generations of my family who were citizens of New York City. As an aspiring professional genealogist, timely access to your municipal records are both critical and essential for my research. The restrictions on when birth and death records would become available for public access that you are now considering would create an unnecessary barrier for me and millions of other descendants of New Yorkers who are seeking to trace their families within New York City’s vital records. I recommend that you consider the following guidelines for access:

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
• Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

In addition, I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Sincerely,
Gary M. Zizka
Washington, DC

Comment:

Please do not adopt this rule. The New You Genealogical and Biographical Society has a proposal for you that you should adopt instead. These records are vital for genealogists and there is no need to implement this draconian rule.

Thank you.
Ladies & Gentlemen:

I believe the Proposed Amendment to General Vital Statistics Provisions (Article 207 of the 
NYC Health Code) regarding Birth and Death Records would create undue restrictions on 
access to important public records, cause undue interference with the ability of members of the 
public to perform important functions, and should not be adopted in their current form.

I understand the concerns surrounding the possible release of Birth Certificates for living 
people now that increased longevity means many more people are living to ages in excess of 
100. Nobody wants to hear the neighbors gossiping about the fact that they might have been 
born out of wedlock, or worse yet, become the victim of identity theft, with all the financial 
and reputational damage that entails.

However, a 75 year, or even a 50 year restriction on Death Records appears to me to be 
unreasonable.

I believe the blanket restriction on Death Records should not be any longer than 25 years. That 
would allow adequate time for a deceased person’s personal representatives to wrap up the 
administration of the estate and distribution of assets, after which there should be no more 
concerns about the possibility of identity theft, and the concerns of the living should at that 
point take precedence over the privacy concerns of the deceased.

The critical importance of New York City’s official Death Records lies in the details they 
contain, such things as the person’s date and place of birth, parents’ names, and the address 
where they were residing when they died. These details are crucial to avoid problems of 
mistaken identity involving people of the same approximate age who share the same name.

These records are official proof of the fact that the person described in each one of them has 
passed beyond the petty concerns of the living, to a place where the gossips, identity thieves 
and other Nosy Parkers can no longer cause them the same intensely personal psychological 
and financial harm as they could while the person was alive.

On the other hand, closing the records can prevent the living from being able to know that a 
person of importance to them is actually dead. And this can make it difficult or impossible for 
the living to learn their own family history, eliminate concerns about long-lost relatives who 
might become their heirs in intestacy when planning the disposition of their own estates, clear 
title to land and assets, and perform all sorts of other functions of importance to the world of 
the living from which the deceased person has departed.

Having reliable death information available may help merchants and lenders avoid dealing 
with someone who purports to be the deceased person. (Once you know the person is dead, 
you can reasonably conclude the person standing there in front of you applying for a loan, or 
trying to open a new bank account in their name is up to no good.)

Closing the records also creates special problems for genealogists and family historians (both
amateur and professional), who are bound by a code of ethics that precludes sharing information about living people unless they have the living person's consent to do so. I am the family historian for my extended family and I take this duty very seriously, as do most of the genealogists and family historians I know. For example, I often find a child recorded in the US Census records who is not recorded with the family in a subsequent census. Usually this is because the child has died, but unless and until I can either find this child and obtain their consent, or else find proof that he or she has died, I must presume this child is a living person and cannot reveal even the basic fact of his or her existence to the other members of the family. An official Death Record, with those important identifying details that allows me to confirm the death of this particular person makes all the difference.

I also believe that the public should be able to have at least some form of access to the Birth Records of people whose death can be proven, even if 125 years have not elapsed since the person's birth. Many of the concerns about privacy and identity theft that make restriction of access a necessary evil, no longer apply once the person to whom the Birth Record relates is known to have died.

Sorry this letter is so long. Like the famous author once said, "If I'd had more time, I would have been able to make it shorter."

I am responding to the proposal asking for input for a 50 year vs 75 year embargo for death records. As a person involved with family history, I definitely prefer the 50 year limit rather than a 75 year embargo.

Iris Bachman
Dear Sir or Madam:

I write as a resident of Florida and Chairman of a global group of genealogists called the Guild of One-Name Studies (www.one-name.org). The Guild is a charity under British law and has almost 3,000 members, with almost 500 in North America. We wish to comment on the proposed rule outlined in the title of this note.

**About the Guild**

Most Guild members select a single surname and then study all the people with that name around the world considering things like occupation, migration patterns, social history, deriving the origin of the name, and so on. Guild members have been used as sources for television programs like "Who Do You Think You Are?" and by academic researchers into surnames.

An essential part of a full One-Name Study is the reconstruction of families of name-holders. In line with our charitable purpose, we encourage our members to share the results of their studies with the general public, although our general advice to them is not to release any information on living people. In our almost 40 years of existence, Guild members have been helpful to the public in proving accurate genealogies for individual family lines. Like most genealogists we treat information about living people with great care.

**Our reaction to the proposed rule amendment**

A restriction of the availability of certificates for periods such as you mention would, in our view, be a retrograde step for four main reasons:

1. - the proposed rule would reduce the opportunity for our members and other family historians to conduct serious research, not to mention constraining the ability of New York City residents and ex-residents to obtain documents valuable for establishing their own identity.

2. - the proposed rule is impractical in terms of the problem it seeks to solve, namely identity theft. For anyone seeking to steal another's identity, there are already records available for them to do it. They can use the Social Security Death Index, a gravestone or a newspaper report such as an obituary or birth notice.

3. - generally speaking, while there is a trend towards secrecy in vital records around the world, there remain places where birth and death certificates are readily available for the recent past. For example, England and Wales birth certificates are available up to the present day for the payment of £9.25 (about $12). UK authorities have recently trialled the issuance of uncertified copies of the records for even less money. Utah's Division of Archives and Records makes their original death certificates available for free on their website for deaths up to 1965. Other states may charge but offer more recent records. So we ask the question: what is to be gained by New York City's taking a harder line on this issue?

4. - speaking from personal experience New York City records are a global resource. So many people passed through the City or stayed to make their home there. They left a trail of breadcrumbs behind them in the form of official records. I know marital records are not covered by this proposed rule but I will give you an example. I was able to solve a puzzle for a family in the county of Somerset, England by accident one day when perusing marriage records at Chambers Street downtown. In 1891, a man named House had traveled with his bride to New York City to marry. She was his brother's widow. They then returned to rural Somerset to live legally as man and wife!

Further restricting access to such a rich global resource is, we submit, a failure of imagination.

**Suggested alternative**

We offer a suggestion for your consideration on what might be done. Could New York City offer uncertified copies of records for a moderate sum, say $15 or $20? Such documents would carry a bold message that they may not be used as evidence of identity while the City could maintain its stricter standards for obtaining certified copies of records. Such uncertified copies could well be a valuable source of potential revenue, as other departments of vital records have found elsewhere in the world.

We regret that we are unable to attend the public hearing in New York in October, but hope that our comments assist in your decision-making process.

Yours sincerely

To Whom It May Concern:

This is my complaint against the 125 year rule that is coming up on the 24th of October.

In regards to “identity thief” – that is not a problem. Other states are not having this problem. That just an excuse in my opinion.

My grandfather was born and adopted in 1911. He is dead, his wife is dead. My dad is still alive but using the “125” years – he will be dead. Me the granddaughter I am 50 so in 2036 I will be 68 – hopefully still alive. How in the world does this seem right. I’m sorry but this is wrong. Even his “birth mother and father” are DEAD. Other states allow these documents and as far as I can see are not having the issues that New York is stating. Hell if it’s such a problem then let the ones that can justify needing the information have it. I will jump through hoops to get that dang Original Birth Certificate. I have his adoption records but I can’t get the original birth certificate is crazy. I cannot go to court and ask the judge and it is not a reasonable option. My dad can’t send off for it either and he is his son.

Have any of you ever experience doing your family history and finding out that someone was adopted and no one knew. You feel like you don’t belong. I always knew my grandfather was adopted but when I was doing our family history – I found out that my mother’s mother was adopted (If I knew where she was adopted – I would be able to get hers). Can you imagine not knowing who your real family is? It’s hard. Me and my sister both have Type 1 Diabetes. No one in our “family” has it.

I just want you guys to sit back and think about this. It is not hurting anyone. I also believe it’s our right to have this information!

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to public access rules for birth and death records.

As a professional historian and genealogist who was born in Brooklyn and has multiple generations of ancestors who lived in NYC, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would impose an unnecessary and unjustifiable blackout period for myself and millions of other researchers seeking to trace their families using NYC vital records.

- There are thousands of local jurisdictions across the USA that register births, marriages, and deaths, most of whose rules for public access to such records are much less restrictive than those proposed by DOHMH.

- Furthermore, given the many massive compromises of personal information affecting tens-to-hundreds of millions of Americans within the last few years (e.g., Yahoo, Target, Home Depot, US Office of Personnel Management, Equifax, to name just a few), the risk of privacy violations or fraudulent use of NYC vital records is minuscule.

Accordingly, in keeping with best practices elsewhere, I urge DOHMH to permit public access to:

- birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified;
- death records after 50 years; or after 25 years to registered members of a New York or other bona fide genealogical society;
- the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing members of a state-based genealogical organization preferred access to death records has been implemented successfully elsewhere (e.g., Connecticut), and access to the limited information from the death index would afford genealogists key information to identify particular records necessary for research.
Finally, I ask that you consider implementation of an informational copy of birth and death records which would provide important details for genealogical and historical research in a format not suitable for proving identity. In the case of deaths, information about the deceased’s cause of death can be extremely important to those tracing and understanding their own medical history, especially those with genetically-inherited health conditions and diseases.

Sincerely,

Joseph P. Smaldone

Joseph P. Smaldone, Ph.D.

Dear NYC Gov,

There appears to be a "move afoot", to restrict vital records from families for many years, simply an outmoded antiquated idea.

As a Registrar for The NSDAR, your proposed legislation is an abomination, for families to restrict access to THEIR history, not yours. The privacy concept has turned into a nightmare.

Why is it that insurance companies and Companies touting DNA, namely 23 and me, were /are permitted to sell this data to them for their own purposes.

NYS is difficult enough to obtain records, now adding another layer of restrictions to those already there. You merely have NO right to manage family history, and keep them from knowing "where they came from". It is OUR history, and OUR privilege to do so.

June Fairhurst Fay

Dear NYC Dept. of Health Commission Members,

I am writing to comment on the proposed guidelines to change public access to birth & death Public Vital Records.

My 4 paternal great-grandparents were long time residents of NYC and died while living there. Both of my paternal grandparents were born, raised, and died in NYC. My father was born in NYC. As a family genealogist, I used the public access to NYC records to trace them. Without that access, the current generation would not know their life information, nor even where they are buried.

Please remember in setting access restrictions by a set number of years (such as 50, 75, or 105), many of us would be unable to do any research as those years added to our own age would be after our own average lifespan. People in families with ancestors who were in the Revolutionary or Civil Wars would not be able to complete the applications for membership in Sons or Daughters of the American Revolution and other such societies that require birth & death records as proof. If restrictions are set to shorter years for registered members of any genealogical society, it would be helpful. Better yet, since most genealogists do not belong to formal organizations access after 25 years to the limited information from birth & death index would allow genealogists key information to identify particular records necessary for research. I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Thank you for your attention to this important matter.

Sincerely,

Barbara Flaherty-Carchedi
Hello. My name is Charlene King. I am an amateur genealogist. Personally I think the 125 year mark for accessing birth records is way too long, as is the 75 year mark for death records.

I can partially understand the reasoning behind trying to keep these records private. But — they are public records. As such, if someone can show a relationship to the deceased with identification and other records, they should be allowed access.

All lineage societies require proof in the form of birth and death records to show relationships. For most lineage societies, an applicant must have these proofs for at least 3 generations from the applicant. Using very general numbers - life span of 75 years - this would preclude an applicant from getting the needed documentation for at least 2 generations! Thus they would not get the proofs they need to join the lineage society. A broad change like this has many ripple down effects!

Please reconsider changes to when access to records is allowed.

Charlene King

RE: The Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene’s proposed guideline changes for access to New York City birth and death records.

As a genealogist, timely access to these records are critical and essential to my family research. The proposed restrictions on when birth and marriage records would become available for public access would create an unnecessary hindrance and burden for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories in both New York and New Jersey, where I live. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementing an informational copy of birth and death records. Specifically, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases. Informational copies of vital records can provide important details for genealogical and historical research in a format not suitable for proving identity. I have already encountered this option in my research in both New Jersey and California. California death certificates are stamped with the phrase “Informational, Not A Valid Document to Establish Identity.” There are many great alternatives that can be used and are already being used by other states like California and New Jersey.
to address concerns of privacy and identity theft. A complete restriction is not necessary and is highly detrimental to the genealogical pursuits of millions of New Yorkers and families whose ancestors were born and died in New York City.

Thank you for your attention to this important matter.

Sincerely,

Mark A. J. Szep

Re: Opposition to proposed amendment to Article 207 of Health Code, covering access to public vital records

Dear Commission Members:

I'm writing in opposition to the changes that are being proposed in the amendment to Article 207 of the Health Code, which would affect access to birth and death records.

As a genealogist with family ties to New York City, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Please consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, informational details related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases or other inheritable medical conditions.

Thank you for your attention to this important matter. Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.  

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.  

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:  

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.  

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Thank you for your attention to this important matter.  

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records are essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City's vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing members of a state-based genealogical organization has been a tremendous success in states like Connecticut, and access to information from the death index allows a genealogist key information to identify particular records necessary for research.

Also, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, info related to cause of death can be very important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

Martin B. Mannlein

- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

[Signature]

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

GAIL KARLSSON

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. Ancestors on all branches of my family tree resided, had children and died in New York City. I’m not yet sure whether any died of genetically inherited diseases but I hope to research that possibility. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records are critical and essential for research. The proposed restrictions on when birth and death records would become available for public access will create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City’s vital records.

My genealogical research involves multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

RE: Proposed Guidelines to Further Limit Access to Public Vital Records

Dear Commission Members:

This letter regards the proposed changes for accessing birth and death records in the New York City Department of Health and Mental Hygiene.

Timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

My genealogical research involves multiple records from numerous repositories. My goal is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing access to paying members of a state-based genealogical organization has proved successful in states like Connecticut and South Dakota, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

I also ask that you consider developing and offering an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. An individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for considering these ideas.

Sincerely,

Linda Waite Smith

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records are essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City's vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing members of a state-based genealogical organization has been a tremendous success in states like Connecticut, and access to information from the death index allows a genealogist key information to identify particular records necessary for research.

Also, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, info related to cause of death can be very important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

Linda Mallalieu

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years. Sometimes we have no idea when an ancestor was born and cannot give dates, which is why we need to be able to access whatever is available and depending on the certificate to tell us and also their parents' names. This is SO VITAL to finding the right people.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
- Also, the release of original birth certificates for adoptees. I understand this has been in the courts for a number of years. Adoptees, like my children, need to have some kind of medical background especially when they are facing life threatening diseases.

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.  

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Thank you for your attention to this important matter.  

Sincerely regards,  

Patricia Otterberg

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization with these records has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

As a native New Yorker and genealogy enthusiast, I ask that you DO NOT restrict access to NYC birth and death records as far back as 75 and 125 years. Those records are needed to further genealogy research and unlock family history mysteries. It is already hard enough to research NYC records without adding these restrictions.

Also, I would imagine that restricting those records would greatly impact the revenue stream generated by those requests. I know that I have spent a considerable amount of money on my family records and travel to NYC. I think you would enjoy continuing to receive that revenue, but I can't send it you if access to records is restricted.

Please consider an alternate option like other cities and states. Suggestions include: issuing a redacted death certificate or writing "For genealogy purposes only" across the record if lawsuits and identity fraud are the reasons for these proposed changes.

I hope you consider another option other than the one being proposed.

Thanks for reading this.

Sincerely,
Michele Lagoy

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

In a time when our personal data is for sale everywhere, it is mind-boggling to me that you are considering further restricting access to data that is so necessary to so many people, though it may have little monetary value. As a genealogist, timely access to these records are critical and essential for my research. Moreover, information about an individual’s cause of death is extremely important to those tracing and understanding their medical history, particularly in relation to genetically inherited diseases. The proposed increased restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. Indeed, particularly for those seeking medical information, I would argue that those restrictions are in fact unfair and unethical encumbrances.

I ask that you consider less restrictive, rather than more restrictive, rules regarding access to birth and death records. Further, I ask that you consider developing and implementation of an informational copy of birth and death records that would provide important details for genealogical and historical research in a format not suitable for proving identity.

Thank you for your attention to this important matter.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access of birth and death records.

I am a professional genealogist in Bridgeport, Connecticut. A number of my clients have ancestors who moved to Connecticut after arriving in New York City from their place of birth. Many of these families lived in New York for one or more generations and married, had children and died there. I’ve visited the Municipal Archives numerous times to do research in the wonderful vital records of the City of New York.

I can’t begin to tell you how important it is to people to discover the place of origin of an ancestor, or to find the name of a grandmother or grandfather or earlier ancestor on a marriage or death record. So many of immigrants came to this country because of strife or starvation in their homeland, and many would not speak of home. Your wonderful records help me to fulfill the dreams of my clients to understand what happened in their families and to allow them to visit the place where their ancestors lived.

My state of Connecticut allows anyone aged 18 and up to purchase a certified copy of any marriage or death record, regardless of date, and provides even more access to members of genealogy societies incorporated in the State. This has allowed me and thousands of other researchers to unravel many mysteries here, and has never resulted in identity theft or legal suit. I ask you to consider loosening, rather than tightening, the date restrictions you have on your records. At the very least, I ask that the City use the access guidelines of the State of New York. Waiting as long as you are now proposing means that people living today might not be able to learn about their grandparents. This seems cruel and unnecessary. In fact, it would make it almost impossible to recreate families in order to research earlier ancestors.

I thank you for keeping such excellent records, and allowing access to the people who, I believe, have a right to learn about their ancestors.

Sincerely yours,

[Signature]

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Specifically, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Karen Flaherty

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely regards,

<NAME>           <CITY AND STATE>

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

As a genealogist with many ancestors who lived in New York State, timely access to birth and death records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access is concerning, to say the least.

My research involves multiple records from numerous repositories in order to discover information about my ancestors. Please consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Access to the limited information from the death index would allow me and other genealogists, key information to identify particular records necessary for research.

Finally, please sanction the development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. (Items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.)

Thank you for your attention to this important matter.

Warm regards,

Carol Fountaine Guthrie

Long Island City, NY 11101-4132

Dear Commission members,

As a genealogist and family history researcher and author, I am extremely concerned about the Department’s proposed limitations regarding access to New York City birth and death records.

My family history research and writing has brought an understanding and appreciation of history to scores of people across the country who have ancestral roots in New York City. The proposed reduced access to birth and death records would unnecessarily bar access to key pieces of this information. At a time when all of us need to better understand the trials our ancestors encountered as new immigrants to America and how they overcame them, your proposal to limit access to information regarding such families and their descendants would, in turn, have an adverse impact on our ability to provide current generations with an appreciation of who their ancestors were and what they accomplished. This is true because very often, the information on birth and death records is the key to being able to identify a particular ancestor. Limitations to access, thus, in effect, limit and reduce our understanding of history.

I know that the New York Genealogical & Biographical Society has made suggestions for easing your proposed restrictions and I support their efforts. Despite the fact that I do not live anywhere near New York, I would have no objection to being required to join a New York genealogy society to maintain timely access to death records. Further, regarding the Society’s proposal for the Department to develop an informational copy of birth and death records that would include such key items as cause of death and names of parents and spouse, please know that I would have no objection to being required to reimburse the Department through an additional, modest fee for the time this process might take.

Thank you for your time and attention to this important matter.

Respectfully,

[Signature]

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. All of my personal family research is in the 5 Boro area. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Marie Varrelman Melchiori

RI: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

Let me note that in 2012 the Virginia General Assembly’s Joint Commission on Healthcare studied recommend changes to lengthen Virginia’s closed period for deaths and marriages from 50 to 75 years (the closed period for births was not challenged). Instead of lengthening these time periods, and after considering privacy and medical condition concerns, the legislation recommended by the Commission reduced the closed period for deaths and marriages from 50 to 25 years. This legislation (2012 HB272, 2012 SB 660) was overwhelmingly approved by the legislature, which also provided that all public vital records (index and underlying certificates) would be put online. Even for closed period records, a public online index was to be established showing names, place and date of event, etc.

The online index for all records (and online copies of public vital records) was launched in 2015, and has been very well received by the public. It has greatly reduced demands on vital records staff, greatly helped in genealogical research, and there have been no reported problems.

All vital records are public records, and should be readily accessible and available to the public absent compelling privacy or security concerns.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 25 years; or after 10 years to registered members of a New York genealogical society.
• Access to the index to death records after 10 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my personal comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

For MY Mental Health, timely access to these records has been critical and essential for my research. My parents were Jewish immigrants arriving in New York in 1939, and I was born in the City. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. Finding other family that preceeded my immediate family here is of utmost importance to me.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter. Those that came before us have much to teach us, in many ways.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

Mary Beth Walsh

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records is essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City’s vital records. My family arrived in NY in the 1830's and my husband’s a few decades later and removing records that have already been available is regressive, and almost punitive.

I hope that logic prevails and that someone voting realizes how important genealogy is to so many people, and how much would be lost by restricting birth records for 125 years and death records to 75 years.

Please do the right thing and reject this proposal.

Pam Miller

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

This letter is to voice my concerns regarding the New York City Department of Health and Mental Hygiene's proposed changes to access birth and death records.

Timely access to these records is critical and essential for my research as a professional family historian and genealogist. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City's vital records.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing access to paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut and I would support New York City creating a similar program. Access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Finally, please consider developing and implementing a process for acquiring an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. It is important to note that items related to an individual's cause of death can be extremely important for my research, especially when I am tracing medical history relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing to comment on the proposed changes to access birth and death records.

As a genealogist, timely access to these records are essential for family history research.

Many states offer easy access to vital records, because they see no risk in it. An example is the state of Virginia, which allows downloading of birth, death, marriage, and divorce certificates.

These certificates are for information only, and can’t be used for proving identity.

Cause of death information is widely available, and frequently cited in obituaries. There is no harm at all in allowing researchers to see these data, especially if they inform a family’s health history.

Thank you for considering a more open policy on vital records availability

Sincerely yours,

McKelden Smith
New York City Department of Health and Mental Hygiene

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing individuals access has seen a tremendous success in states like Louisiana, the online search of birth, marriage and death records is invaluable and the index would allow a genealogist key information to identify particular records necessary for research. Go check it out; https://www.sos.la.gov/HistoricalResources/ResearchHistoricalRecords/Pages/OnlinePublicVitalRecordsIndex.aspx

This is an important tool which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Kenneth C Hughes

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a long time family historian with centuries long ties to New York City access to the New York City vital records are essential. The proposed draconian restrictions on when birth and death records would become available for public access will create an unnecessary burden for countless people living worldwide who are seeking to trace their families within New York City’s vital records.

It will also cause New York City businesses and the New York City Government a significant loss of revenue from the fees spent annually within New York City by genealogists and family historians. While visiting New York City for the day or much longer Genealogists and family historians willingly spent lots of money in New York City while obtaining the records they need. They spend their money on taxis, public transportation, hotels, restaurants, tourist attractions and on the actual fees for the vital records.

While I now live in Connecticut and I am a current dues paying member of the Middlesex Genealogical Society, I was born, raised and married in New York City. Generations of my family members have been born, married and are buried in the City.

New York City has always been the leader in the advancement of scholarship. Please do not enact a policy that will cause my beloved New York City a loss of revenue and reputation.

The Scotslandspeople website in the United Kingdom is a worldwide positive example of how a government while respecting a person’s privacy can make a very healthy profit for itself by making its genealogical records available in a timely manner to the general public.

Thank you for your attention to this important matter.

Sincerely regards,

Mary Jane Cameron

RE: Proposed Guidelines for Restricting Access to Public Vital Records

Dear Commission Members,

It distresses me greatly to learn of your well-intentioned but ill-conceived attempts to seal birth and death records for even longer periods than you do now.

Having been the victim of identity theft or credit card fraud three times, I understand more than most how important it is to safeguard certain personal information – but blocking access to birth and death records for extra decades is not the answer.

Further restrictions on when birth and death records would become available for public access would create an unnecessary burden for everyone seeking to trace their family trees by using New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 100 years if no death date is verified.
- Access to death certificates after 50 years; or after 25 years to registered members of a New York genealogical society. Once someone has passed away the courts have ruled they have no right to privacy anyway.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

One suggestion I have read makes the most sense: give the records to the NYC Archives but make it possible for genealogists to obtain the information while not being able to get an official copy of that record which could be used to commit identity theft or fraud.

Respectfully submitted,

[Signature]

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, certified by the Board for the Certification of Genealogists, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace families within New York City’s vital records. My work is done primarily with the Department of the Army, Conflict Repatriations Branch, to identify and help the Army locate and contact family members of fallen soldiers who were lost in WWII or Korea; the hope is to be able to identify the remains of fallen soldiers through DNA testing, so that they can be brought home, properly honored for their service and their sacrifice, and to give the family the peace of knowing that their loved one is once again home.

Like many, my genealogical pursuits involve multiple records from numerous repositories. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society and to credentialed genealogists working on behalf of the military to facilitate the identification and repatriation of fallen soldiers.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization access to a record set has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify specific records necessary for research.

Further, I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Constance T. Shotts, Ed.D., CGSM

RE: Proposed Rules Public Vital Records Access

Dear Commission Members:

I wish to comment on the Department of Health and Mental Hygiene’s proposed changes to public access of birth and death records.

I am a New York State native, historian, and past (and future) user of the New York City Archives. Timely access to birth and death records is critical and essential to my ongoing research. The proposed restrictions on when birth and death records would become available for public access, if approved, will create an unnecessary hindrance for myself and other historians conducting research using New York City’s vital records.

I understand for privacy purposes why certain restrictions may be applicable. Instead, I suggest restrictions of no longer than 70 years for birth records and 25 years for death records as more reasonable and conducive to demographic and historical research.

Moreover, establishing longer periods of restriction would set a very bad precedent that may serve as an encouragement for adoption by other municipal and state keepers of vital records. New York should be a leader in public access not a hinderer.

Sincerely yours,

Robert L. Worden, Ph.D.
James Henderson
Comment:
As a NYC genealogist, timely and easy access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within NYC’s vital records. The NYS Department of Health rules are more reasonable and provide for uncertified copies of the following types of records for genealogy research purposes: Birth certificates if on file for at least 75 years and the person whose name is on the birth certificate is known to be deceased; death certificates if on file for at least 50 years; and marriage certificates if on file for at least 50 years and both spouses are known to be deceased. I recommend the following guidelines: - Access to birth records after 75 years (if the individual’s death can be verified) or 90 years if no death date is verified; - Access to death records after 25 years; or after 10 years to registered members of a genealogical society; - Access to the index to death records after five years; - Issuance of uncertified facsimile copies of original birth and death records, marked with a stamp indicating that the facsimile copy is not suitable for proving identity.
Agency: DOHMH

Alex Friedlander
Comment:
While I can understand the privacy concerns involved in proposing this rule, such a change will create considerable difficulties for people doing genealogical research. In particular, the 75 year limit for death records is very problematic, and I do not understand how death records older than 50 years (a common standard in other localities) would compromise the privacy of such individuals or their families. I would urge you to consider two modifications: preferably, change the limits to 50 years for deaths and 110 years for births; or alternatively, create a process that would permit valid members of genealogical societies and/or professional genealogists to access death records older than 50 years and birth records older than 100 years.

Jane Wilcox
Comment:
Access to vital records is vital to my livelihood. As a professional forensic genealogist, I need to quickly provide vital records to courts, attorneys, and others for probate and other cases. Birth and death records rightly need to have reasonable periods of access restrictions. Those periods that the NYC DOHMH proposes are unnecessary burdens to me as a professional as well as the general public. Birth records should not be closed after 100 years, and should be open within 100 years if the person is deceased and
should be available to anyone in that instance. Death records should not be closed at all. The perceived threat of identity theft is just that -- perceived. Having open records allows open access to check for identity. Preventing access to records does nothing to thwart the problem.

Comment:
the impact this change will have on genealogists and especially family historians is unthinkable. Family history is so important! Often these documents are a starting point for someone who is just beginning their research or provide the only clue(s) that helps them break through that dreaded brick wall. We actively encourage family history research. Please dont do this- this was the only way I found out about my grandmother's death was due to breast cancer.

Louise Perrotta
Comment:
I am NOT a professional genealogist but I DO need access to these records. I am researching MY extended family. Your proposed new rules are excessively restrictive. I understand that New York State Department of Health rules are more reasonable. They provide uncertified copies of the following types of records for genealogy research purposes: Birth certificates – if on file for at least 75 years and the person whose name is on the birth certificate is known to be deceased. Death certificates – if on file for at least 50 years. Marriage certificates – if on file for at least 50 years and both spouses are known to be deceased. If a person is DECEASED what is the problem? There is no need to restrict it for an arbitrary/excessive number of years.

Comment:
Please do not adopt this rule. I have been able to use these records to find my grandfather who died in 1917 when my father was only 2yrs old. Dad was never told anything about his father and had no memory of him. Through the records on this site I was finally able to find Grandpa’s death certificate and was able to give my dad a chance to visit Grandpa’s grave before my dad died of Alzheimer's disease. Your records are vital to those of us trying to piece together our families, especially for those of us whose family members died so long ago. Now I am researching my father's uncle. Without your site I may never find him since I have no living relatives who can fill in
some of the gaps. We are up against so many road blocks that prevent us from ‘finding our roots’. Please do not add another.

I agree completely with an earlier comment made by Diana Frederick, who said: "With respect to protecting a deceased persons information, after a person dies the social security number is removed from active use and placed into the Social Security Administration's Death Master File database. Therefore that persons personal information cannot be used for legal reason. To my knowledge, a death certificate cannot be used to open an account, get a credit card, be used as identification or any other fraud or identity theft reasons." So far, my research has only been in the State of Delaware, where I was able to obtain death certificates of relatives. Some contained Social Security numbers, some did not but they all have the word "GENEALOGY" stamped on them in plain sight. I also had to provide proof of identification in order to obtain these documents. In summation, removing the social security numbers from both birth and death certificates for genealogical research would be a better solution than blocking research for 75 -100 years. Thank you for the opportunity to comment.

Comment:
I feel it's not a sensible or acceptable change of rule for Genealogist. It is very important for us to find this information to continue with our work. The years you propose are too long of a period for us to wait out. Genealogy is not only for our own personal reasons it is also a job. This rule is stopping a professional Genealogist's work, which effects their livelihood. I believe lawyers also need this info for court cases as proof, etc.

Comment:  
Please reconsider this proposed rule. I am an avid genealogist whose Great Grandparents and Grandfather, entered, married, had children, and lived in New York. Access to these records are really important to me. I am even planning a trip to New York to research my relatives. This rule would put a stop to my research and my visit. There have to be alternatives to this rule. I know you will find a workable solution to this. Thank you, Michele Carroll

Sheila Perino S...  
Comment:  
Clearly the city does need to take measures against the theft of identity. However, as the proposal currently stands it becomes a road block to those who have a legitimate right to these records. The proof of death for a birth certificate would be impossible if the individual in question was long lived and his/her death was in itself not seventy five years old. In my own case my father and mother were born in 1915 and 1917 respectively. My father passed in 1995 and my mother in 2005. Even though I do have their death certificates it would still be impossible to get their birth certificates because they are ‘recently’ deceased. These documents should belong to their heirs. I think that the law should have allowances for those who can prove their relationship to the deceased. It also should also provide some other way for genealogical groups to have access to death indexes after 25 years.

Claire Kegerise  
Comment:  
As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.
Edward Patton
Comment:
This proposed rule is very poorly crafted. In New York State it is very hard for family historians to discover their ancestor's information. Other states, such as Ohio, give a researcher access to their family history with much more liberal terms. People research their family for many reasons, including health issues, and to discover their ancestral roots, and as a pleasant pastime. Amazingly enough, the Federal government releases Social Security information very shortly after a person dies. At the very least any family member should be able to access their family information no matter how long their relations have been dead. Millions of people are pursuing this family research hobby. I believe that people have the right to the information that this rule would suppress even more than it currently allows. As president of a well respected genealogical organization I believe that this proposed ruling will only make our research efforts extremely harder. In my own case obtaining certificates on my grandparents would not be legal until 2016. Since I am now 76 years old it would be 9 more years before I would be able to get a copy of a record. I think this proposed rule is way to restrictive for those seeking more information on their families for health or other reasons including pursuit of a highly popular hobby.

Nancy Serra-Spencer
Comment:
putting a 125 year and 75 year hold on vital records will severely restrict the ability of genealogists and the public to access the records of their deceased loved ones. I have encountered this in other states and it has served no one interests. My grandmother is dead since the 70’s. With this law I could never find her birth record and the birth and death records of her 10 siblings, including 2 sets of twins who died before the age of 4 months and where they are buried. As a result of finding this information I was able to visit their graves and honor my grandmother. This is a bad Idea and will not save us from identity theft. This has been done in Colorado where I live with marriage records. It is devastating and I bed that you not do the same thing!

mark foster
Comment:
As a member of the Italian Genealogy Group and the German Genealogy Group for many years, and having used the resources of the NYC Municipal Archives since 1993 for my genealogy work, I fully support the proposal made by the RPAC concerning the availability of NYC Vital Records. Thank you, Mark Foster
Comment:
I agree with many of the comments already posted here. Under the proposed guidelines I would not have lived long enough to have been able to discover my great grandparents' names, which I was able to obtain from my grandparents' 1969 and 1973 NYC death certificates. The death certificate restriction already existing, that post-1948 you must be directly related to the deceased, and no further than a grandchild, is also too restrictive to be able to find and verify grand aunts' and uncles' relationships. Under the proposed guidelines I would not have been able, several years ago, to discover and contact over fifty second cousins, previously unknown to me. Public access to these important records should be made less restrictive, not more.

Comment:
I agree with the many posted comments as to the unduly harsh restrictions proposed. It would seem we should have access to the information we seek for genealogical purposes (or other family interests). It has not been proven that this would prevent identity theft or even great diminish it.

Comment:
Hello. I am a very proud 2nd generation American & native New Yorker. I am my family's historian & genealogist. I have been able to trace my family history back to Europe, Ukraine, Russia & Great Britain because I have been able to access my great grandparent's & other ancestor's vital records from the time they arrived in New York as far back as 1895. Because of the availability of these records to me, I have been able to construct a very decent sized family tree, re-connect with living relatives I had lost contact with, connect with cousins I knew of, but, didn't know personally & have even found cousins I had no idea existed & that I now, very happily, have relationships with. I BEG of you to NOT APPROVE 'Proposed resolution to amend Article 207. These records are of extreme importance to family historians/genealogists everywhere. In many cases, we find that our ancestors played a crucial part in American history on the whole, because, some family members know stories & historical facts about an ancestor that other family members do not know. Our ancestors are the foundation of ourselves, our children & all future generations. Being able to see certain information about our ancestors also answers personal questions & provides fun facts to us. For example, both my grandfathers were women's fashion designers on 7th Ave in women's fashion design houses. I have always known this & always knew that my children have artistic talents that were inherited from these 2 men, but, many people don't find out their grandparent's occupations until they see it on a census record, a military record, a
naturalization declaration certificate, etc. They then have an 'ah ha moment' as to why they have a special talent or enjoy a certain activity. They realize they or their children have inherited a certain trait from an ancestor. Being able to access a birth and/or death record confirms a maiden name, a married name, a great grandparent's unknown name, which can lead to tracing the ancestor(s) back to their country of origin, the ancestor's history in their country of origin, how they lived there & frequently & sadly, the conditions in which they lived, survived or died. These are things that instill family pride in people, make people want to set life goals for themselves, honor the family members that didn't survive the atrocities of genocide & want to have their own effect on the present & future society. Knowing the vital information on birth/death records can even lead to the answers of why some family members have certain medical conditions & can tell a medical provider of the patient many important things about why the person is ill, how to treat the person so that there might be a cure, a remission or long term treatment so as to allow the person a better quality of life. Thank you for taking the time to read this & weighing my words when you are trying to decide to vote for or against the proposed rules. Thank you in advance for your NO vote.

Steven Rosenberg
Comment:
California has a better solution for Genealogists. They provide certificates with a stamp that states that the document cannot be used for identification purposes so that only official documents with a raised seal can be used for identification purposes. Issuing of death certificates and births where proof of death is provided are vital information for researchers. Your proposal will prevent those who can prove a relationship from continuing to obtain these documents which does violate the rights of relatives from tracing their family history. Modifications to documents are not a very good reason for blocking a family researcher due to extreme time frames and unreasonable regulations for what should be information on deceased individuals.

Harriet Simons
Comment:
Contrary to making it more difficult for legal, genealogical or medical research I believe that New York City should be making this kind of information more available. In fact I think all records should be available no later than three years after death. I certain instances records of living people should be available to authorized researchers.
Jim Spero
Comment:
While I understand the need to protect against identity theft, the current proposal goes too far and tramples the legitimate needs of genealogists. The compromise plan put forward by the NYB&G sufficiently protects against identity theft while providing genealogists access to the vital records they need. The compromise proposal can be found at: https://www.newyorkfamilyhistory.org/nyc-vital-records-access#letter The site has other steps that can be taken to voice the concerns of genealogists regarding this proposal. Jim

Dara Markowitz
Comment:
The stated rule change: “The Department believes that these proposed schedules balance the need to protect the personal information of people who may be alive, especially as it relates to the problem of identity theft as well as other privacy issues, with the public’s right to access historically important records, including the specific interests of families, genealogists and other researchers.” The rule change indicates that the proposers are "concerned" about identify theft. This idea of reducing identity theft by extending the closure of records seems unfounded and the use of this excuse could be considered in my mind as irresponsible fear mongering. The problem of “ghosting” has nothing to do with obtaining death certificates. Please reference an article by AARP on this topic http://www.aarp.org/money/scams-fraud/info-03-2013/protecting-the-dead-from-identity-theft.html. Other similar articles are available as well from consumer organizations. It is also important to point out that these historic records are not certified copies which are needed for legal transactions and which require additional documents (i.e. photo ID, letters from a gov. agency) in order to be released. The statement that there are privacy, “the state of being free from public attention”, issues at stake is a tricky one. In fact the Federal Privacy Act is clear that once dead, their information isn’t generally protected under the law. Furthermore, people searching for historic documents, often genealogists, are aware that surprises may occur and that those surprises could be unpleasant. Yet, as adults, they seek information willingly, and the government really has no place to deny them. So I ask myself, what could be a real reason for this suggested rule change? I considered if these government offices are deriving some stream of income that the release of these records could impact? Fiscal issues are often behind the scenes. Another issue that comes to mind is the work of a group called Reclaim the Records (I have no affliction with this group but have seen their work on genealogical forums). After consulting this group’s website, I noted that they have successfully required NY to release materials but that they were obstructed and needed attorneys to prove these cases. The have an upcoming Freedom of Information request that notes the the NY Dept Dept of Health has been out of compliance for 7 years with the current NY directives that release these birth record after 100 years. After looking though these materials, I believe that this rule change is an attempt to hide their non compliance, derail this and possible future
Freedom of Information Act requests, and avoid potential costs of compliance and or possible litigation. It my hope that these public comments will be taken seriously. I see no reason to extend these closures and every reason to make them less restrictive.

Shelley Mitchell
Comment:
Your proposal for a change to longer non-disclosure is preposterous. Not only will it make it impossible for genealogists to do research but the chance of misuse of the information is minimal compared to the chance of misuse by anyone using a computer. With all the record hacking going on, you should not jump to the extreme conclusion that we don't have a right to know our heritage while we are alive. When a mother gives up a child for adoption, the birth records are changed so as to remove the biological birth mother's name and replace it with the adoptive mother's name. And even the father named isn't always the real name of the father. Your caution, while being sincere, is unnecessary. I have not searched for my Roots for all these years to be blocked by my own government. It's bad enough that many records in Europe were destroyed and we can't get into most Russian records or Chinese records. The past is the past. It often helps to shape the future to know the events of the past. To not repeat the mistakes of the past, like having a child out of wedlock. Or to learn that someone died of cancer so you can screen more often. Please don't go backwards and limit access.

Betty MATTIFORD
Comment:
I am a genealogist who is researching Italian relatives who came into NYC in the late 1890's and early 1900's. My grandparents and their siblings lived into the 1970's and 1980's. It is ridiculous to forbid me to have access to their record for 125 years after their birth or 75 years after their death. 75 years from 1983 is 2057. I may not be alive then as I am already 72 years old. Most people don't get interested in their genealogy until they are retired; so they are already in their 60's trying to find out information of parents and grandparents who have probably died. I think the time period is entirely too long.
Chuck Weinstein
Comment:
Identity theft is a huge problem in the US and around the world. However, today, there are much easier ways to steal or create an identity than to go through files looking for a birth or death certificate to appropriate. In recent years, data breaches from large corporations, including Anthem Health, Equifax, Target, Home Depot, and many others have put the personal information of most of the US population on line and easily accessible. The proposed solution to a non-existent problem is like taking a cannon to go after mosquitoes. It will harm the genealogy industry and provide little, if any protection, to individuals on record. This is a giant step backward in making public records available to the public. My suggested solution is to provide a genealogical certificate that is a matter of public record but redacts private information. These would be available 75 years after birth and 25 years after death. Remove home addresses from the birth certificate and addresses and social security numbers from death certificates. The cause of death may be extremely important in determining diseases that run in families. By law, including the HIPAA Act, the dead have no privacy rights. Birth records before 1942 and death records before 1992 should be made available for family historians and genealogists immediately. Full records should be available 100 years after birth and 50 years after death. A provision to allow families to opt out of the genealogical records program can be made available. This how many states have chosen to handle this issue. In order to obtain a genealogical certificate, one must either demonstrate an existing family relationship or sign a sworn statement that he/she is either related or has been engaged by a direct relative to obtain this information. One option may be to create a genealogy registry. Many other states have adopted this solution. Vital Records are called that because their existence is vital, both to the state and to the families of individuals. Please reconsider this poorly thought-out rule and make records easier to access for families rather than harder.

Linda Hirsh
Comment:
As a member of the Jewish Genealogical Society of New York, and the greater genealogical community, I suggest NYC follow the existing guidelines of the state of New York: • Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified. • Access to death records after 50 years, or after 25 years, to registered members of a New York genealogical society. • Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information)
Michael Whitton
Comment:
There is virtually no evidence that suggests that vital records have contributed to the risk of identity theft. Residents of states with open access, such as Ohio, are no more vulnerable to identity theft than people living in more restrictive jurisdictions. Restricting access to PUBLIC records does not protect the public in any discernible way. The DOHMH should be focusing on making records MORE accessible, not less. Reasonable limits of 100 years for birth records and 25 years for death records is more than adequate.

Todd Leavitt
Comment:
The Proposed Rule fails to recognize needs and standards of the genealogical community and will only make matters exceedingly MORE difficult for those most effected by the rule change. Kindly revert to the same rules as are presently practiced by the State of NY in its historical records access regulations.

Rich Venezia
Comment:
As a genealogist, I find this proposed rule extremely restrictive and I hope that you don't enact it. The idea that restricting records like this will combat identity theft has been proven wrong in states that have open access to records, like Massachusetts and California. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.
Robert Sweeney
Comment:
As a professionally trained historian and active genealogist, I find your proposed rule change to be mystifying. Whose interest is being protected by extending the exclusion period for birth and death dates of no longer living persons? The only practical effect of such a rule change will be to make it much harder for historians, genealogists or just simply curious members of the public to find and examine information about our ancestors. Government agencies should be trying to further research into the past, not making it harder to carry out.

Elizabeth Rothman
Comment:
I am an avid family historian and, although I live in Seattle, I have accessed records from the New York City Archive many times. I am concerned about the changes proposed concerning birth and death records. The increase in the time that the records are to be held will create a hardship on genealogists and historians, as well as for individuals with concerns that may involve health, identity, religious issues, and personal interest. I am particularly concerned about the restriction of individuals allowed to access records during the sequestered time. Although I could not easily confirm it by studying your website, I understand that only parent and child will be able to access a birth record. It is still rare that a parent or child will be alive in 100 years. By the new rules, a grandchild would need to wait an additional 25 years before accessing the birth record! I understand that the primary concern behind the rule changes is the risk of identity theft. Besides a few anecdotal cases, there is no evidence that identity theft due to records taken from an archive has been a problem. Meanwhile, computer hacking continues to jeopardize the personal information of millions. Please do not increase the length of time that these records are held. All living descendants should have a right to know, and to request to view these records.

Gina Carpentieri
Comment:
I am totally opposed to this change in the law. It does nothing to protect people's privacy and only hinders what should be available to the populace. I cannot accept your reasoning for the change in this law. These are public records and should be available to people as they have been in the past.
Joyce Lambert
Comment:
I believe your new proposed ruling on vital records is unfair to genealogists and denies us vital information that gives us the opportunity to learn about our ancestors. Birth records (to be discontinued) from the 1890’s to 1925 are vital to genealogical research. They give us the parents’ names, especially the mother’s maiden name which opens numerous additional avenues to research. Also, the birth record shows the child’s number in birth order. This tells us the family size and allows us to know how many more children to research. The 1900 census shows a women’s history of the number of children born and her children still alive. Without the opportunity of having access to birth records, from 1892 to 1900, our relatives born & died during those years will be lost to us. In addition, children born and survive from 1900 – 1925 will only be found on census records. These records are vague and many times do not use the child’s proper name. We will not be able to search for other records/information on these relatives.
Again, a part of our family will be lost. Death records give us immense history of our ancestors and also let us know where our family members are buried. Visiting cemeteries & gravesites also gives us a wealth of information and further avenues to research. Death dates and social security numbers, as well as a person’s residence, are already available on line by the United States Federal government. THAT IS A PROBLEM with identity theft- NOT death records available at your facilities. Please reconsider your proposed ruling. I am 70 years old and researching my ancestors brings joy and gratification to me and my family. Since all my ancestors came from Europe and settled in NYC, your records are vital for my research. Through these different records, I have been able to locate and visit the gravesites of many of my great grandparents. I also have been able to discover where in Europe they originated. Please don’t take this opportunity away and consider the following: Birth records become a public record on January 31st of the year following 85 years after the date of birth, Death records become a public record on January 31st of the year following 50 years after the date of death.
Gary Parisi
Comment:
I strongly oppose the proposed amendment to the birth and death law. This proposed law would severely limit my ability to obtain records of my family history. NYC should keep the law as it currently is without any changes.

Adam Cherson
Comment:
I don't find any evidence from what is stated in the proposal that the problems with the current regulations are significant enough to merit a change in the periods of privacy for birth or death records in the City of New York. You cite these statistics: "During the five-year period from 2012 to 2016, the Department processed 1,030 birth record corrections and amendments for individuals born in 1940 and earlier, including 24 delayed registrations of birth and amendments for individuals aged 90 and above. During the same five year period, the Department also processed 257 death record corrections and amendments for individuals who died in 1970 and earlier." For the birth record changes, you are not telling us how many people over 100 years had their birth records corrected or amended. It is only people born between 100 and 125 years prior to the study year that would be treated differently under the new regulation. So how many corrections and amendments of already public records would have been prevented if the 125 year regulation had been in place? WE DON'T KNOW. For the death record, you should be telling us how many people who died between the years 1895 and 1920 had their death records amended, because these are the only people who would have been treated differently under the 75 year versus the 50 year regulation. Again, WE DON'T KNOW. Only having these particular statistics would be able to evaluate whether the current regulations should be changed because they are causing too many administrative problems. Therefore I am not convinced that there is any need to make a change.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Carol Nazario

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I have carefully read this letter and it expresses my concerns accurately and succinctly — I am not just signing a form letter! I have been researching my ancestors since I was thirteen but only in the last 10 years have discovered that I have ancestors that started out in New York City. Haven't so many of our great American families started out in NYC? That is one of the reasons why such a policy change will affect so many researchers young and old. My children, as do many now a days, did a family history project in school and my ability to be able to help them find copies of their ancestors' original documents made the project come to life. It is therefore that I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

Pamela White Shea  
Secretary, Middlesex Genealogy Society  
New Canaan, CT  
pamelashead2@aol.com
New York City Department of Health and Mental Hygiene  
Gotham Center

Long Island City, NY 11101-4132  

To Whom It May Concern,

I am writing as a genealogist who frequently uses the vital records provided by the NYC Department of Health. A very large number of my ancestors were residents of New York City, particularly Manhattan and Brooklyn, and having access to birth and death records has been a crucial part of my research.

An effective approach to the problem of privacy might be to limit records access to members of certified genealogical societies. Genealogists subscribe to a set of ethical practices that would minimize any privacy issues.

Genealogy has become a joyous activity for so many people, helping us connect with our heritage and with each other. I urge the Department of Health and Mental Hygiene not to limit access to these vital records.

Thank you for your time and consideration.

Sincerely,

Wendy Wagner  
Resident of New York State for over 27 years

Dear Commission Members,

I would like to submit my comments to the New York City Department of Health and Mental Hygiene on the proposed changes to access birth and death records.

I do not understand why you believe it necessary to restrict access to vital records for such a long time - longer time than we have lived. Nor can I find in your Statement of Basis and Purpose any valid reason for making such a drastic change. There is no evidence that the current time limits have created untreatable problems.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

RE: Proposed Guidelines for Access to Public Vital Records

October 7, 2017

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials is critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely yours,

[Signature]

Dear Commission Members,  

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.  

As a lifelong genealogist, I rely on timely access to these records for my own family research. I also perform a lot of pro bono work for adoptees and others who are unable to do their own research. Restrictions that are now being proposed would greatly hinder millions of Americans like me who have roots in New York City.  

I ask that the commission consider the following guidelines for access:  

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
- Access to death records after 50 years  
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

If you have concerns about identity fraud, it should be possible to create “informational” records in a format not suitable for proving identity. Genealogists perform an important societal function: helping Americans understand our shared history in the context of our individual families. Please help us continue our important work.  

Thank you for your time and attention.  

Sincerely,  

Rachel Unkefer

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
• Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Donald McMahon

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records. I was born in North Tarrytown, New York in 1956 and graduated from high school in Ossining.

As a genealogist, timely access to these records are critical and essential for my research. I also believe that these are vital to health-related research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families and learn more about their health history within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.  
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.  

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Thank you for your attention to this important matter.  

Sincerely regards,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

These proposed restrictions would needlessly hinder vast swaths of legitimate historical research. Normal citizens, whether or not they are professional historians or genealogists, should be able to conduct research on their families.

The role of municipal birth and death records in the identity-theft racket is trivial; identity thieves traffic in credit card and Social Security numbers. It’s hard to avoid the suspicion that the real reason for this proposed policy is simply to save money. In fact the maintenance of access to vital records has been regarded as one of the jobs of government for centuries, and it ill behooves New York City to shirk this obligation.

It is particularly outrageous that a governmental department called the Department of Health and Mental Hygiene should be proposing regulations that would hamstring the ability of individuals to research their family medical history.

I strongly feel that this entire proposal should be abandoned.

Yours very truly,

Patrick Nielsen Hayden

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Here in Washington State, records are becoming more available, rather than less. Recently, adoption records were opened to the adoptee. Open access to records was a fundamental part of the Founding Fathers' ideas about open government. Closing records and restricting access is actually likely to cause more fraud, as the true information is no longer accessible and cannot be verified. This applies to information about most branches of government, not just vital records.

Further, I ask that you consider development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a someone who has been doing genealogical research, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

I have been extremely successful in finding information about my family, but lack of access to birth records after 1909 has been a major impediment.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

Dear Sirs:

I understand that there is a proposal to restrict access to New York City birth records for 125 years and death records for 75 years. This proposal is unnecessarily restrictive and would profoundly affect my work as a professional genealogist.

I have made many crucial connections using these records both for my own family and for clients. While I understand the need to help prevent fraud, I believe that informational copies which cannot be used for identity purposes can be provided to researchers.

Please reconsider this proposal.

Sincerely,

Anna B Caulfield

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a family genealogist and professional genealogist, timely access to these records are critical and essential for my research. Not only my family but many other client families came through New York before coming to the Midwest. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. The popularity of TV shows like “Ancestry Roadshow”, “Who Do You Think You Are” and others indicate the intense interest in family ancestry.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, cause of death and burial/cremation information).

Providing paying members of a genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Dear Commissioners:

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

The entire State of California makes all its birth and death records available. Do not change your policy. Be like California!

Thank you.

Sincerely,

Gilja Jones
New York City Department of Health and Mental Hygiene
Gotham Center, 42-09 28th Street, CN 31
Long Island City, NY 11101-4132

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely yours,

Carol Weeks Nister

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.  

I was born in New York City, although I now live elsewhere. Much of my family came to NYC in the 1800s and still live there.  

As a genealogist, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City’s vital records.  

I also ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. An individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Thank you for your attention to this important matter.  

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Members of the Commission:

I wish to make a public comment to the New York City Department of Health & Mental Hygiene regarding the proposed changes to access birth and death records. I work full-time as a professional genealogist, and having timely access to these records are critical and essential for my research.

The proposed restrictions on the public availability of birth and death records would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

I would like to request that the commission consider the following guidelines for access:

- Access to birth records after 75 years if the death can be verified, or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has been quite successful in states like Connecticut, and access to the limited information from the death index would provide genealogists with key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementing an informational copy of birth and death records to provide important details (including cause of death) for genealogical and historical research in a format not suitable for proving identity.

Thank you for your attention to this important matter.

Katherine R. Willson

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records  
October 13, 2017

Dear Commission Members,

I am writing to you to share my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records. I am the author of an award-winning memoir, BECAUSE OF EVA: A Jewish Genealogical Journey, that was fortified and enriched by Vital Records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Yours truly,

/Mark Shapiro/
Dear Commission Members,

I am writing today about the proposed changes to access birth and death records being put forth by the New York City Department of Health and Mental Hygiene.

Access to these records has been essential to my genealogical research on my mother’s family and my husband’s family. Both families emigrated to NY from Eastern Europe in the late 19th and early 20th century. Without access to New York City birth and death records from this period through the mid-20th century, I would have not been able to trace the family’s settlement in New York, their lives and deaths and make ongoing connections with surviving members of those families today.

If the concern for implementing the proposed policy is to prevent identity theft, I request that you consider developing a format of birth and death records which would be useful for genealogists but would not be suitable for proving identity. It is key, too, that genealogists have a record of the medical reason for death so that identities can be verified and any genetic basis for disease in families can be traced.

I would urge you to consider a much less draconian policy on record access to allow genealogists to continue work on determining and certifying family connections.

Thank you for your consideration,

Rod MacNeil
New York City Department of Health and Mental Hygiene  
Gotham Center, 42-09 28th Street, CN 31

RE: Proposed Guidelines for Access to Public Vital Records

October 6, 2017

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials is critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincere regards,

Bobbie Purdue

The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my and my husband's ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Elizabeth P. Handler

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. Much of my family history originated in the New York City and surrounding region and as such the proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementing an informational copy of birth and death records. This would provide important details essential for genealogical and historical research. This copy of records would be in a format not suitable for proving identity. In addition providing items related to an individual's cause of death could be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

James Tremper

RE: Proposed Guidelines for Access to Public Vital Records

October 7, 2017

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States— and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials is critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City's vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincere regards,

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, personally and professionally, though my work as a librarian, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and for millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. I don’t belong to one now, but would join if it became necessary.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Candace G. Cox

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records. As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

In addition, those records should not be treated like gold in Fort Knox, as most if not all of the information on your forms may be obtained from other sources but only with a great deal of unnecessary work on the part of people doing family history research. I know a little about protecting family information from identify theft and not making your information available to historians and genealogists in a timely manner does not in any way increase that danger, as like I said the information is available if a crook wishes to find it, unless you wish to create a law that provides that no records of birth or death are to be created by anyone.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

October 7, 2017

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials is critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincere regards,
New York City Department of Health and Mental Hygiene

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Georgia Robinson Sanders

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research as I am 80 this year and my family and many ancestors were born in NYC. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Long Island City, NY 11101-4132

Access to New York City Birth and Death certificates is already too restrictive, in my opinion. With the proposed new rules, I would not have even been able to discover my great grandparents’ names, as my grandparents died in 1969 and 1974, and I would not have been alive when their death certificates became available. As it is, I was able to link my grandparents with their siblings, most of whom I knew nothing about, and subsequently discover and contact over fifty second cousins.

Birth and death certificates should be available EARLIER than they are now, and you should be able to have access to them with a less direct and further distance relationship than, for example, a grandchild for death certificate access. How else could I discover the parents of a possible grand uncle or grand aunt, without access to their death certificates?

Sincerely,

Robin Schectman

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing you to voice my dismay at your proposed ruling to restrict access to birth and death records in New York. As a longtime genealogist, it is imperative that I continue to have access to these records so that I may document my family ancestry and those who I help to find theirs. I frequently write to the public vital records departments, send them the normal fees, and am very pleased to obtain the information I’ve requested. It is a small miracle for me.

I encourage you to rescind your proposal and allow the general public to have continued to have access to their records.

Thank you very sincerely,

Robert S. Sullivan

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We are writing today to provide our comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records. The Capital District Genealogical Society is based in the Albany, New York area and we represent 290 family historians from New York and from around the United States. Our organization volunteers at the New York State Library and Archives and provides assistance to those seeking to research their family history. Many of us frequently use birth and death records from the New York City Municipal Archives, which are not available at the New York State Library.

Timely access to these records is critical and essential for our research as genealogists. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for us and for millions of others seeking to trace their families within New York City’s vital records.

Like many, our genealogical pursuits involve multiple records from numerous repositories. Our intention is to discover information about our ancestors and understand their place within a larger social and historical context. We ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
Providing paying members of a state-based genealogical organization access to these records has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, we ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. In addition, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing to you today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

At one time in the not so recent past, it was possible for genealogists and family historians, such as myself, to view the Indexes to the NYC Birth and Death Records at the NYC Department of Health if one applied for a daily pass of $15.00 or an annual pass of $100. I and many of my colleagues felt a huge loss and deprivation when that option to view just the NYC Birth and Death Indexes was abruptly taken away from us without any public review or public hearing.

For a time I was still able to view the more limited collection of printed NYC Birth and Death Indexes at the Genealogy Division at the NY Public Library at 42nd Street but, unhappily, even that very useful research option and ability has also recently been taken away from us.

As a genealogist, researching both for myself as well as for clients, timely access to these vital records are critical and essential for my research. The proposed new restrictions as to when birth and death records would become available for public access would obviously create an unnecessary obstacle for myself and millions of others seeking to trace their families using New York City's vital records.

I would like to give two examples of how being able to view the indexes in the past has helped me and my clients and why not being able to view them would be a great impediment:

(1) A woman wanted to apply for a US Passport but she did not have a copy of her NYC Birth Certificate. She first wrote to the NYC Department of Health and supplied her name and date of birth, but the NYC DOH informed her they could not locate her birth certificate with the data she had provided which was her actual birthdate and her full legal name. She then contacted me and asked me to try to search for her birth certificate. At that time I went to the Genealogy Division of the NY Public Library and searched the pertinent Birth Index for her birth date. After checking for all variant possible spellings of her surname, I found her Italian surname listed ~ but with multiple vowel spelling changes. I sent her the number of the birth certificate, along with the misspelling of her surname, and she was then able to apply first for her NYC Birth Certificate and then for her US Passport. If I could not have searched the NYC Birth Indexes she would never have obtained her NYC Birth Certificate and US Passport.

(2) Frequently for New York City and New York State probate cases, one needs to search for the birth dates of children in a family in order to help find and identify the correct next of kin. It was very helpful when I could go to the NYC Department of Health or the Genealogy Division of the NY Public Library to peruse and comb through the NYC Birth Indexes to search for all children with a specific surname born
in a given time frame. It is thus a great research obstacle to no longer be able to search the NYC Birth Indexes for when probable members of family were born when assisting lawyers with genealogical research for probate cases.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors as well as the ancestors of others and understand their place within a larger social and historical context. I respectfully suggest that the commission consider the following:

- Providing verified professional genealogists and members of a NY state-based genealogical organization with access to vital records indexes (as has been successfully done in states like Connecticut) via an annual application as has been offered in the past.

I further recommend the following guidelines for general access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
- Access to the index to birth indexes after 50 years

Further, I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Additionally, it would also be appropriate if the current guidelines for birth records being turned over to the NYC Municipal Archives 100 years after the birth and for death records being turned over 50 years after the death of people were actually being followed. When I first began doing genealogical research into my own family over 25 years ago, the birth records at the NYC Municipal Archives went up to 1909 and the death records went up to 1948. If these original guidelines had been followed, the birth records publicly available would now be going up to 1916 and the death records publicly available would now be going through 1966. However, the actual situation appears to be that these guidelines have not been followed for many years and as a result no additional records, either birth nor death, have been relinquished by the NYC Department of Health and turned over to the NYC Municipal Archives. Thus, the most recent birth record year available to the public has remained fixed at 1909 and the most recent death record year has remained fixed at 1948 for well over 25 years, if not more. It would be very helpful to all concerned if the NYC Department of Health would set and adhere to a regular schedule of transferring both Indexes and actual NYC Birth and Death Records to the NYC Municipal Archives as these vital records enter the public realm according to agreed upon pre-set time frames.

Thank you for your attention to this important matter, and I look forward to your response to this letter at Judith27@aol.com or Judith Caplan, 27 West Penn Street, Long Beach, NY 11561.

Sincerely yours,

Judith Shulamith Langer Caplan

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records is critical and essential for research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for millions of people seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. Immediate access for proof of relationship to the deceased.
- Access to the index to death records after 15 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Marian Q. Brannen

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide comments regarding the proposed changes for access to New York City birth and death records.

Access to these records is essential for historical and genealogical research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for persons seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing members of a state-based genealogical organization has been a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Also, please consider implementing an easily accessible informational copy of birth and death records, which could provide important details for genealogical and historical research in a format not useful to person attempting to steal identity.

Sincerely,

Norman K. Scarpulla

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Timely access to these records are **critical and essential** for my genealogical research. Access to recent vital records is essential for me to prove my lineage in order to be eligible for membership in organizations such as the DAR (Daughters of the American Revolution), the Society of Mayflower Descendants, etc.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify specific records necessary for research.

Further, I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Vital documentation related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

Teresa Bourbonais Carlson

Long Island City, NY 11101-4132

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

First, I want to point out that I was born in Astoria, Queens, NYC. My brother and sister were also. My parents were born and married in New York City. My grandparents were married and died in New York City. We are New Yorkers, even though I now live upstate. New York City is my home! And I am appalled that you would like to remove my access to my own family records. I am an epidemiologist and suffer from several genetic diseases. I track my family health history in order to keep my own doctors and those of my family members informed about the sicknesses and causes of death were for my parents, grandparents, aunts and uncles. I NEED access to their documents and other New Yorkers including my cousins also NEED that access in order to protect our own health!

And as a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely yours,

Yours sincerely,

NAME

CITY AND STATE

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

Therese K. Sheridan

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely regards,

<NAME> <CITY AND STATE>

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I strongly object to the proposed rules regarding access to public birth and death records of New York City.

Why does this matter to me? I am so proud of my lineage – so proud of how my ancestors became Americans. I want my granddaughters to understand how their family has helped form this great country. One of the ways I do this is to join Lineage Societies which require documented proof (such as birth and death records) to quality for membership. Being admitted into a genealogy society dispels wives-tales which may have been handed down by word of mouth. My granddaughters will be able to believe, understand, and view their descendants because I have produced documentation and, in the future, they will be able to obtain documents they will need to continue their own research.

Access to these original materials are critical and essential for my family’s genealogy. The proposed restrictions would create an excessive interference for myself, family, and my fellow researchers seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
• Access to death records after 25 years.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I urge you to vote against the proposed changes to access birth and death records.  

Timely access to these records are essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City’s vital records.  

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:  

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing members of a state-based genealogical organization has been a tremendous success in states like Connecticut, and access to information from the death index allows a genealogist key information to identify particular records necessary for research.  

Also, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, info related to cause of death can be very important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Sincerely,  

Matthew Mannlein

Re: Proposed Changes to Vital Records

NYC Dept of Health and Mental Hygiene  
Gotham center

Sirs:

You have the wrong understanding of your duty to preserve vital records. That duty includes making the information available to the public, not hiding it away in private cabinets.

No one has used this information for “identity theft”…that is just an ungrounded fear from folks who don’t understand the issues….they buy shredders too.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Re: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members:

I am writing today to provide my comments regarding the proposed changes to access NYC birth and death records.

As a genealogist, timely and easy access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines:

- Access to birth records after 75 years (if the individual’s death can be verified) or 90 years if no death date is verified;
- Access to death records after 25 years; or after 10 years to registered members of a genealogical society;
- Access to the index to death records after five years;
- Issuance of uncertified facsimile copies of original birth and death records, marked with a stamp indicating that the facsimile copy is not suitable for proving identity.

Providing members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the death index would allow a genealogist key information to identify particular records necessary for research.

I ask that you consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, including genetically inherited diseases.

Sincerely,

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Note: I have family in New York City that I am researching and there are more family members that I have not verified yet - I need access to these records!

Thank you for your attention to this important matter.

Sincerely,

Linda S. Johnson

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing to share my comments to the New York City Department of Health and Mental Hygiene with you regarding the proposed changes to access birth and death records. I am proud of my family history and the fact that my ancestors, the Stephensons, lived in New York City. One of my ancestors, Edmund Stephenson, served as a Commissioner at Castle Garden. Edmond’s obituary in the New York Times says that he’s a cousin of John Stephenson, who invented the street car.

I’m thrilled to find that I’m related to such notable people, and after years of searching, access to birth and death records is vital for my research. The proposed restrictions on when birth and death records would become available for public access would create a totally unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

My research involves multiple records from numerous repositories. I want very much to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify records necessary for research.

Also please consider implementing an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Thank you for your consideration! It means the world to me and millions of others who are fascinated with their family histories.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

As a resident of the City of New York, I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.  

My family has a long and proud history in this City, dating back to the 1880s. For ensuring that we can preserve this history, timely access to these records are critical and essential. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.  

Like many, my family history pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:  

* Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
* Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
* Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Thank you for your consideration.  

Sincerely yours,  

Derek Dorn

RE: Proposed Guidelines for Access to Public Vital Records  OCT 18 2017

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records are essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City's vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Also, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, info related to cause of death can be very important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

Gina Margolis Rosen

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

I am a genealogist and perform research both on my own ancestry and for clients. As it happens, I was born in New York, as was my father born in 1922 and now deceased. I have multiple ancestors from New York going back for centuries. New York has been a crossroads for American immigrants all through our nation’s history. For my research access to vital records is critical. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary burden to no point as the proposed restrictions go back far more than would serve to protect the privacy of living people.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Thank you for your attention to this important matter.

Sincerely regards,

Erica Hahn, born 1946 in New York City

Re: Proposed Guidelines for Access to Public Vital records

Dear Members of the Commission,

I write this letter on behalf of the Michigan descendants of New York families. I am the President of the Oakland County (Michigan) Genealogical Society and, as you may know, many Michigan residents are descended from New York roots. We would urge upon you access to birth records after 75 years (or 105 years if no death date can be verified). We would also urge access to death records after 50 years and access to the index to death records after 25 years with name, date of death, place of death, and burial or cremation information. I have researched family records when the cemetery was known and found them vital to correct records which are found on line.

I would further ask that you consider developing and implementation of an informational copy of birth and death records to provide important details for historical and genealogical research in a format not suitable for proving identity. If this could be included, items related to the cause of death could be very important to those with genetically inherited diseases.

Thank you for your consideration.

Richard F. Fellrath

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Lindell Johnson

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I feel it is necessary that I send you my comments regarding the proposed changes to access of birth and death records.

Tracing my family in order to understand where I have come from is why I need access to these records.

Using multiple records is necessary to find various family members. I agree with these suggested guidelines:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, and in understanding relating genetically inherited diseases.

Please consider these suggestions.

Sincerely regards,

Laurine Griffin

Re: Proposed Guidelines for Access to Public Vital Records

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a family genealogist with many ancestors who resided in New York City, I am appalled by the new guidelines for accessing birth records (125 years) and death records (75 years) that have been proposed. It often is necessary in genealogical research to begin with recent individual’s vital records in order to backtrack to find older ancestors referenced on these records. The new guidelines would prevent this expeditious methodology.

I support the New York Genealogical and Biographical Society’s recommendations:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Thank you for your attention in regards to this matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Jance C. Colvin
South Cairo, New York

RE: Comment on Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,

I am a genealogist with family in New York City dating back to 1850. Timely access to vital records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me as well as millions of others seeking to trace their families within New York City's vital records.

I urge the commission to consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing records to paying members of a state-based genealogical organization has been successful in states like Connecticut, and access to limited information from the death index allows a genealogist key information to identify records necessary for research.

Lastly, please consider developing and implementing an informational copy of birth and death records, which would provide important details for genealogical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records. Without these records, I would not have been able to identify my ancestors who immigrated to New York during the late nineteenth century. This has meant so much to my family and me. I have visited your website and offices numerous times and have gladly paid the fees.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

• Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
• Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

I am a genealogist and a 12th generation New Yorker. While I don't currently live in New York, 99% of my research is in the Empire State.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.
Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

I implore you to not make these changes that would be detrimental to the important work of genealogists, historians and families interested in their own history.

Thank you for your attention to this important matter.

Sincere regards,

RE: Proposed Guidelines for Access to Public Vital Records

Date: Wednesday, October 11, 2017

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

- Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those
tracing and understanding their medical history, relating to those with genetically inherited diseases.

- As a Certified Fraud Examiner, I would also like to note that having the publicly available register of dead people is a huge deterrent to the identity theft crimes.

- And another point to consider in your decision should be “How it will influence outside world”. Making vital records non-public could make a VERY BAD NEGATIVE EXAMPLE, which will be quoted over and over in different places around the world when the record access will be terminated or made more complicated.

Thank you for your attention to this important matter.

Yours sincerely

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

In addition to the attached standard letter, I wish to say that anyone needing records may need them at any time of their life. The time that you propose for obtaining records is excessively long. The United States census uses 70 years.

Access to death records should be available at least by 25 years after confirmed death, to anyone, not just members of a New York genealogical society.

Remember, these are Public Records, and they should be available to the public easily and early after birth/marriage/divorce/death occur.

Sincerely yours,

Stephen M. Seltzer, M.D.
New York City Department of Health and Mental Hygiene  
Gotham Center, 42-09 28th Street, CN 31  
Long Island City, NY 11101-4132  

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

Timely access to these records are essential for research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for the millions seeking to trace their families within New York City’s vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Also, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, info related to cause of death can be very important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

Stephen Seltzer, MD  
5001 E Camino Guebabi  
Tucson, AZ 85718

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like...
Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like
Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am a member of 2 genealogist groups. I have voted on line to NOT support your current changes to our Vital Records. For years I have been helped well by your departments help in locating past deceased members of our families. Our children appreciate this ability to search in the past and one as a young child accompanied me to find a great-grandfather record while we did with lots of pleasant memories with our visit to City Hall.
At the time.

Please consider using the suggested guidelines from the NYG+B and CGB instead of your proposals.

In appreciation of your thoughtful considerations.

I am, Ellen Kramer,

Hi I feel for the sake of people’s medical history the fact a gov’t body wants to withhold vital info about people’s family history for longer periods of time is wrong. Sometimes decisions have to be made in the now not 50 years later. In my family heart issues and breathing issues caused many deaths and for others it was accidental. The birth and death records helped knowing all of the health issues of my family, so I and my brother’s grandkids will know what to avoid to live longer lives. Please don’t restrain access to knowledge that can be most helpful NOW. Karen

Comment:
I strongly oppose this provision. I believe personal information is adequately protected by the current regulation. The only result from this provision, if passed, would be to keep historical information locked away from legitimate historians and researchers.

RE: Amendment to Provisions of Article 207 of New York City Health Code Regarding Proposed Transfer Schedule of Birth and Death Records to DORIS

The International Association of Jewish Genealogical Societies (IAJGS) is very concerned with the changes for access to birth and death records being proposed by the New York City Department of Health and Mental Hygiene. Seventy-five percent of all immigrants to the United States during the turn of the century entered through Ellis Island.¹ Ellis Island estimates that close to 40 percent of all current U.S. citizens can trace at least one of their ancestors to Ellis Island.² A recent report cites over 37 percent of New York City residents were born in another country—more foreign born immigrants live in New York City than any other city in the world.³ For that reason, access to New York City birth and death records can be crucial for New Yorkers, for all Americans, and those outside the United States. IAJGS has members worldwide who are interested in access to New York City birth and death records.

IAJGS respectfully requests the following guidelines for access be considered rather than what is currently proposed, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

There are many reasons for our opposition to the proposed guidelines as currently presented, and why we have put forward the alternative guidelines shown above.

Genealogists Are Not the Cause of Identity Theft

We understand that the impetus for the recommended lengthy embargo periods before accessing birth and death records centers around the concern about identity theft. The genealogical community condemns identity theft whether it is perpetrated against the living or the dead. Data breaches in business, government and medical arenas are the cause of identity theft, not genealogists. The most recent large data breaches exemplify this point, as indicated by the Equifax data breach affecting more than 145 million Americans and the Yahoo data breach, most recently estimated to exceed 3 billion people.⁴
There are no known instances where states with open records access have more identity theft than states with long embargo dates.

The proposed embargo periods of 125 years from date of birth and 75 years from date of death originate from the 2011 version of the Model State Vital Statistics Act which has not been approved by the U.S. Department of Health and Human Services. In fact, in January 2013, the U.S. Department of Health and Human Services promulgated final regulations on protected health information and privacy which now permit medical information about a deceased person to be released 50 years after the date of death. The 50-year embargo is consistent with the guideline we are suggesting rather than the proposed 75-year period. It is our understanding that the leadership team at that National Association for Public Health Statistics and Information Systems (NAPHSIS) is giving sympathetic consideration to revisiting the embargo periods specified in the 2011 version of the Model State Vital Statistics Act.

Informational Copies of Birth and Death Certificates

Except for heir research, holocaust restitution, probate issues, and forensic work, most genealogists do not require a certified birth or death certificate. Many jurisdictions offer an informational copy of a birth or death record for these purposes that are marked across the front of the record stating it is for information and not to be used for identification. Issuing this type of record will provide a further assurance that New York City vital records are not being used for fraudulent purposes. We ask that the New York City Department of Health and Mental Hygiene offer informational copies which would provide important details for genealogical and historical research, and not impose elongated embargo periods.

Informational copies and earlier release of birth and death records would be particularly useful for forensic work. The Department of Defense sometimes contracts with genealogists to identify next of kin of deceased military personnel. Genealogists also work with local, county, and state coroners to help find the next of kin of deceased persons to determine heirship and to provide proper family burial.

Family Medical Information

Genealogy assists researchers in tracing family medical traits that are passed on from generation-to-generation. Information included in birth and death records is critical to reconstructing families and tracing genetically-inherited attributes in current family members. Increasing numbers of physicians are requesting that their patients provide a “medical family tree” in order to more quickly identify conditions common within the family. Information on three generations is the suggested minimum. The US Surgeon General includes preparing a family medical history as part of the American Family Health Initiative.

There are many genetically inherited diseases, but for the purposes of this statement, we will just mention the **BRCA1** and **BRCA2** genes’ mutations and breast, ovarian, stomach, prostate and pancreatic cancers. The following information is from the National Cancer Institute.

"A woman's risk of developing breast and/or ovarian cancer is greatly increased if she inherits a deleterious (harmful) **BRCA1** or **BRCA2** mutation. Men with these mutations also have an increased risk of breast cancer. Both men and women who have harmful **BRCA1** or **BRCA2** mutations may be at increased risk of other cancers."
The likelihood that a breast and/or ovarian cancer is associated with a harmful mutation in \textit{BRCA1} or \textit{BRCA2} is highest in families with a history of multiple cases of breast cancer, cases of both breast and ovarian cancer, one or more family members with two primary cancers (original tumors that develop at different sites in the body), or an Ashkenazi (Central and Eastern European) Jewish background.

Regardless, women who have a relative with a harmful \textit{BRCA1} or \textit{BRCA2} mutation and women who appear to be at increased risk of breast and/or ovarian cancer because of their \textit{family history} [emphasis added] should consider genetic counseling to learn more about their potential risks and about \textit{BRCA1} and \textit{BRCA2} genetic tests."

The likelihood of a harmful mutation in \textit{BRCA1} or \textit{BRCA2} is increased with certain familial patterns of cancer [emphasis added]. These patterns include the following for women of Ashkenazi Jewish descent:

- Any first-degree relative diagnosed with breast or ovarian cancer; and
- Two second-degree relatives on the same side of the family diagnosed with breast or ovarian cancer."

People who have had members of their families diagnosed with breast cancer need to know whether past family members may have also died from this disease, in order to determine if it is inherited. Both current and future generations need to have this information to make decisions about whether to prophylactically remove both breasts and ovaries (which can mean the difference between early detection and treatment versus possible early death). Information needs to be available for both men and women as either can carry the gene mutation. Timely access to birth and death records is essential to assuring researchers that the records they have located on possible ancestors are indeed the correct persons, especially when they have a common name.

The example above is but one sample of the thousands of genetically-inherited diseases that by giving access to birth and death records in a timely fashion could save lives of current and future generations. Providing an individual with information as to potential medical issues they may have inherited allows for the opportunity to take proactive measures. For this reason, access to an individual’s cause of death is extremely important for those tracing and understanding their medical history relative to genetically-inherited diseases.

Why Genealogists Should Have Access to Records in a Timely Manner

In the proposed rule, the Department specifically requests feedback from genealogists about adopting a 50-year rule for death records rather than the proposed 75-years. We strongly encourage the 50-year rule be adopted for the following reasons:

- Genealogists are \textbf{NOT} the cause of identity theft.
- Genealogists have legitimate, professional and life-saving reasons to have timely access to birth and death records. The embargo periods being proposed are unnecessarily long and may cause accelerated health issues or premature death.
Genealogists that belong to a genealogical society, with proof by letter from the society or membership card, should be afforded earlier access to birth and death records—such as 25 years.

Informational, non-certified, birth and death records should be made available and are not useable for identity purposes.

IAJGS respectfully and strongly encourages the New York City Department of Health and Mental Hygiene to reduce the proposed embargo periods for birth and death records to those mentioned on the first page of this letter.

The International Association of Jewish Genealogical Societies is the umbrella organization of 75 genealogical societies and Jewish historical societies worldwide whose approximately 10,000 members are actively researching their Jewish roots. In the New York City–Long Island region, we have five member societies who collectively represent approximately 1,400 genealogists with interest in the New York City area records. The IAJGS was formed in 1988 to advance genealogical study, to elevate research standards and to provide a common voice for issues of significance to its members. Our societies’ members include both professional and hobbyist genealogists. In 2017, we held our 37th consecutive annual International Conference on Jewish Genealogy (www.iajgs.org). One of our primary objectives is to promote public access to genealogically relevant records.

If you have any questions, please feel free to contact us at the email addresses listed below.

Sincerely,

Kenneth A. Bravo

RE: Proposed Guidelines for Access to Public Vital Rec-

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Mary Lavins

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Regards,

Office of the Secretary

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Christine Whalen

P.S. Small honesty, this is totally ridiculous!

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

This would have stopped me from learning a lot about my family as my paternal Grandparents came to NYC in in the 1890’s married here and raise 15 children, many of whom died before they were 21. My maternal grandparents came to NYC around 1900 and raised a family of 3, my grandmother died in 1911. The birth and death records were critical in my learning critical information about my families past that would not be possible if these rules went into effect.

Further, I ask that you consider: developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

My family and I recently learned of important family connections that we never knew about. We learned about the life and death of my husband’s grandfather, about whom the family absolutely nothing. We learned that our family has tremendous significance in American history, including lineal ascendants who were Revolutionary War heroes. We learned about a great uncle who was an intimate friend of Franklin Delano Roosevelt. Most importantly, we were able to reach out to family members who are alive and well today, with whom we have new, wonderful relationships. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. RE: Proposed changes to access of New York City Birth & Death Records

Dear Commission Members,

I have been doing research on my family’s history for many years and there are still records I have not been able to locate, being able to access these records is critical and essential for my research. The proposed restrictions limiting access to these birth and death records would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

My family came from both overseas (Germany and Ireland) as well as Kentucky, but we were all brought up in New York (Brooklyn). I have yet to find the birth & death certificates for many of these members, but refuse to give up. These birth & death certificates provide us with leads to other family members and confirm our family member’s very existence in our family heritage.

Some years I am able to travel to New York City and spend a week at a hotel travelling downtown daily to see what I can locate, at other times I hire a professional genealogist who has helped me greatly to find the birth and death records over the years. I wish I had a total of all the money I have paid to New York over the years for each one of these records I have obtained. Multiply that by millions of researchers and you have created a huge hole in the city’s budget.

I had heard for years that my great grandfather had come to an untimely death by falling off a brownstone on New Year’s Eve. I finally located his birth certificate and it confirmed the stories we had heard for years. That is why access to these birth certificates is so very important. Families have a right to know about the relatives and their medical histories and where and how they passed away.

Thank you for taking the time to consider my request.

Sincerely,

Claudia Williams

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I write to provide my comments regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records is critical and essential for my research. The current restrictions and costs already hinder research of my family. The proposed restrictions on when birth and death records would become available for public access would create additional unnecessary hindrances for myself and millions of others seeking to trace their families, as well as local history, within New York City’s vital records.

The New York Genealogical and Biographical Society is asking that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

I would go further and request that you make the indexes public for all vital records within a year of the event, freely accessible to all on the internet.

In addition, I request that you digitize the actual records, from the most recent individual certificates back through the older ledger books, and make them available on the internet, freely accessible for all. A restriction on birth and marriage certificates for fifty years may be reasonable.

In this day and age, it is archaic that a researcher must travel to New York City or request individual records for excessive fees to assemble history. This is not a selfish pursuit. Acquisition and promulgation of these records benefits everyone with any connection to the history of New York.

Thank you for your attention to this important matter.

Yours truly,

Jody Lutter

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records is **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Thomas Risinger

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

Although I can appreciate your desire to extend the waiting period for public access to death and birth certificates beyond the current period due to the privacy needs of people with increasing life expectancy, to do so will hamper me, and my fellow genealogists, severely. As you know, because so many of our immigrant ancestors first made land in New York City, your vital records are a rich source of family heritage research.

I urge you to continue to allow members of the public with proper identification and a legitimate interest in viewing these records to have ongoing access to the current collections without placing further restrictions on them.

Thank you for your sensitivity to family heritage seekers.

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

This month, I was confirmed as a new member of the Daughters of the American Revolution. It took me over 10 years of research in order to locate every document that I needed to prove my OWN family lineage. One of the biggest hurdles was getting birth certificates from New York City. Please do not make this process even more difficult.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Re: Amendment to NYC Health Code Regarding Proposed Transfer Schedule of Birth and Death Records to DORIS

The Jewish Genealogical Society, Inc. (New York) supports and encourages the efforts of family historians – both professional and amateur, both novices and experts – who are researching their Jewish roots. In pursuit of this goal, we present educational programs, publish a journal, and contribute to the preservation of and access to historical records and documents of the Jewish people. The JGS was founded in New York City in 1977, the first in what is now a world-wide network of more than 70 Jewish genealogical societies, members of the International Association of Jewish Genealogical Societies (IAJGS).

The JGS is concerned about the proposed new restrictions on access to NYC birth and death records and wishes to endorse the accompanying statement submitted by the IAJGS. As that document points out, the proposed restrictions will adversely affect not only New Yorkers, but also vast numbers of Americans whose ancestors were born in NYC.

We understand that the proposed lengthy embargo on vital records access stems in part from concern about identity theft and wish to repeat the IAJGS’s statement that “there are no known instances where states with open records access have more identity theft than states with long embargo dates.” The IAJGS’s suggestion that NYC issue informational copies of birth and death certificates, rather than lengthening the embargo period, speaks to security concerns while not adversely affecting genealogical research.

Restricting access to vital records also limits the ability of researchers to reconstruct family medical histories, and, in particular, information relevant to genetically inherited diseases.

The JGS strongly endorses the protocols suggested by the IAJGS in its statement of October 19th in place of the current proposal of the NYC Department of Health and Mental Hygiene.

Sincerely,

Jane Rosen Berenbeim, President
Birth and Death Records are useful and required for many reasons and should not be placed out of reach of users. If they are useful enough for a State to invest in making and maintaining the record, they should be available to taxpayers who pay for these services.

Susan Abernathy
From: Linda Westrom
To: Resolution Comments
Subject: Please do not lengthen the time that records would be inaccessible for us. As family historians, we want to know who our ancestors were, where they lived, when they were born and where they died. We don't use these records for fraud, just want to know.
Date: Monday, October 23, 2017 4:22:51 PM
I am writing to express my opposition to the Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records.

Contrary to the Department’s notice, the proposed amendment fails to properly balance the need to protect the personal information of people who may be alive, especially as it relates to the problem of identity theft as well as other privacy issues, with the public’s right to access historically important records, including the specific interests of families, genealogists and other researchers.

The idea that secrecy of birth certificates may significantly deter identity theft of persons over the age of 75 is no longer reasonable, if it ever was. For example, the records of the 1940 and earlier censuses, which are now publically available, are convenient sources of parents’ names.

(According to the U.S. Census website, “The U.S. government will not release personally identifiable information about an individual to any other individual or agency until 72 years after it was collected for the decennial census. This "72-Year Rule" (92 Stat. 915; Public Law 95-416; October 5, 1978) restricts access to decennial census records to all but the individual named on the record or their legal heir.”)

Every pharmacy and credit card company has their customers’ birth dates.

Such wide availability of identity information does not appear to have been considered in proposing the amendment.

I suggest that a very few of the approximately 462 thousand New Yorkers over the age of 75 have protection-worthy privacy issues of the type described in the notice of the proposed amendment. (The example given is “a teenage mother named on the death certificate of an infant may still be alive 75 years after her infant had died or the birth certificate of a transgender person may reveal information that person may prefer to keep private”). Such persons’ interests and balancing of interests would be better served by permitting such persons to have the records sealed during their lifetimes.

The notice of the proposed amendment also suggests that the 1,030 birth record corrections and amendments for individuals born in 1940 and earlier 257 death record corrections and amendments for individuals who died in 1970 and earlier is a justification for the proposed amendment. That is disproportionate to the records of approximately 462 thousand living persons that would be affected.

Finally, I point out the relative importance of certified birth and death records in proof of identity, and suggest that New York City continue to take care that they are issued only in appropriate situations.

Therefore, I suggest that the proposed amendment is not “to the extent practicable and appropriate … narrowly drawn to achieve its stated purpose” as asserted in the August 31, 2017 certificate from the Acting Corporation Counsel, and does not “minimize compliance costs for the discrete regulated community or communities consistent with achieving the stated purpose of the rule,” as asserted in the September 1, 2017 letter from Mayor’s Office of Operations,

In more colloquial terms, the proposed amendment would use a sledge hammer in an attempt to kill a mosquito.

Respectfully submitted,

John B. Pegram

RE: Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records, and

Proposed resolution to amend Article 207 (General Vital Statistics Provisions) of the New York City Health Code to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services (“DORIS”)

Dear Commissioner and Board of Health:

I would like to register my opposition to the proposed changes to Article 207 that are the subject of the public hearing on October 24, 2017.

I received an MS degree in Environmental Health Science from Hunter College (CUNY) more than 30 years ago. My public health career began at the Essex County, NJ, Department of Community Health Services, continued for more than a decade at the New York State Department of Labor Division of Safety and Health, and culminated at the New York City Department of Health and Mental Hygiene Lead Poisoning Prevention Program.

During my training as an environmental and occupational health specialist, I learned to appreciate the many scientific and medical applications for vital statistics. I also became aware of the necessary restrictions placed upon such data to protect the confidentiality of the individuals whose records became the basis for such studies.

Concurrently with my work in public health, more than 20 years ago I began conducting genealogical research on my own time. Ultimately I left government service, obtained an MS in Library and Information Science, and became Director of the Ackman and Ziff Family Genealogy Institute at the Center for Jewish History in Manhattan. In 2010 I founded Steps to the Past Genealogical Research Services, LLC and began work for private clients. I am a member of the New York Genealogical and Biographical Society (NYG&B), Jewish Genealogical Society (JGS), and Association of Professional Genealogists (APG).
Quoting from the APG Code of Ethics and Professional Practices:

“Purpose: The APG Code of Ethics and Professional Practices serves to promote: (1) a truthful approach to genealogy, family history, and local history; (2) the trust and security of genealogical consumers; and (3) careful and respectful treatment of records, repositories and their staffs, other professionals, and genealogical organizations and associations.

“Consistent with these purposes, I agree to…

• Maintain confidentiality of client communications and research, except as permitted in writing by the client or required by court or professional disciplinary proceedings;
• Treat information concerning living people with appropriate discretion;
• Refrain from violating or encouraging others to violate laws or regulations concerning copyright, rights to privacy, business practices, or other pertinent subjects;
• Refrain from mutilating, rearranging, or removing from their proper custodians printed, original, microfilmed, or electronic records”

Thus the highest standards of the genealogical community also recognize the need to uphold confidentiality and privacy rights.

Because of my many years of experience dealing academically and professionally with such issues, I am particularly interested in the proposed changes to the New York City Health Code regarding birth and death records. I read the online “Statement of Basis and Purpose” and found several sections troubling.

First, the paragraph on “fraudulent and inappropriate use of birth and death certificates and information” does not cite any statistics on the incidence of fraudulent activities involving New York City birth and death records. The cited risks are “potential” and therefore entirely speculative. Similar speculation about the use of Social Security numbers has also never been substantiated. The fact remains that the vast majority of identity theft can be traced to breaches of large electronic databases such as Equifax, Yahoo, etc. The potential vulnerability of DOHMH’s own computer systems to hacking is a much greater risk than misuse of vital records.

Second, the statistics cited under “amendment and correction of birth and death records/issuance of new birth certificates” are not put in context. Stating the numerator without the denominator is meaningless. For example, from 2012-2016 the Department processed about 1,000 birth record changes for individuals born in 1940 and earlier. That is out of how many total pre-1940 birth records? What is the annual rate? Is it 10%? 0.10%?

The same questions arise regarding delayed registrations and death record corrections, and have a bearing on the size of the potential risk involved. The Department’s numbers on deaths of New Yorkers over the age of 100 also lack information on the denominators. 585, 806, 901 deaths—out of how many total? What proportion of the total records created each year do they represent?

According to the next paragraph, “amending a birth certificate after it has been released into the public domain undermines the Department’s ability to fully substitute the amended certificate
for the original. Over time, multiple versions of the same birth records could even be circulating in the public domain, diminishing the reliability of these records and creating confusion around authenticity. Where is the evidence that this has ever been a real problem, rather than an imagined one, in jurisdictions that have open records laws?

The Department proposes to adopt regulations based on a “model law” last revised in 2011. The proposal, however, says nothing about any statistics that were used to formulate that revision, and offers no statistics about the experience of other jurisdictions since 2011. Did implementing the 2011 revisions lead to a decrease in identity theft or privacy violations? If not, why propose them?

Other commenters (IAJGS and NYG&B, for example, along with individuals who posted public comments) explained in detail the value of open records to genealogists and the harm that would be done if the new restrictions were adopted, and I will not repeat those arguments here.

Some commenters offered alternatives that would allow DOHMH to transfer additional records to DORIS, including the option of providing “informational copies” that could not be used to establish a person’s identity. Since DORIS has been scanning its vital records, I suggest that non-certified copies could be digitally altered or redacted to meet any remaining concerns about confidentiality.

In summary, I urge you not to adopt the proposed code amendment. The need for the change has not been demonstrated, and imposing new restrictions on access to public records would cause far more harm than good.

Sincerely,

Robert J. Friedman

Robert J. Friedman
President, Steps to the Past
I am writing to you in strong opposition to your proposed restrictions on birth & death records.

You are about to lock up my family history, and the history of millions of people, for nearly six generations.

Locking up birth records for 125 years and death records for 75 years not reasonable. This is an overreaction with dire, unnecessary consequences.

I am a genealogist with deep ties to the original American colonies, particularly New York. Your rule shuts off research into our ancestors for far longer than any state has ever imposed before.

The single most important records in our research are proof of birth and proof of death. Without those confirmations, a family tree is not considered valid.

Is it really reasonable to say no one is allowed to research their ancestors until they’ve been gone for 125 years? Impossible.
This means we cannot do the research at all. We won’t live long enough.

This Proposed Resolution to amend Article 207 is a gross overreaction.

I urge you to reject it.

Vince Patton
Lake Oswego, OR
To the Attention of the New York City Board of Health:

The New York State Department of Health, Bureau of Vital records is writing in support of the New York City (NYC) Department of Health and Mental Hygiene’s proposal to amend Article 207 of the Health Code to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services.

As you may know, New York State has two reporting districts pertaining to vital event recording, the New York City District and the Upstate NY District that record vital events outside NYC. The National Association for Public Health Statistics and Information Systems (NAPHSIS) is the national nonprofit membership organization representing the 57 vital records and public health statistics offices (the 50 states, 5 territories, New York City, and the District of Columbia) in the United States.

It is significant to note, that the proposal would align New York City’s proposal with the 2011 Model State Vital Statistics Act and Model State Vital Statistics Regulations. Section 27(g) of the Model Act, Confidentiality and Disclosure of Information from Vital Records or Vital Reports, provides that “When 125 years have elapsed after the date of live birth, or 75 years have elapsed after the date of death or fetal death, or 100 years after the date of marriage, or (divorce, dissolution of marriage, or annulment), the live birth, death, fetal death, marriage, and (divorce, dissolution of marriage, annulment) records available for issuance under Section 28, whether paper, electronic or other media in the custody of the State Registrar may be transferred to the State Archives in accordance with archival procedures which shall provide for the continued safekeeping of the records. There shall be no cost to the (Office of Vital Statistics) for such transfer or maintenance. Prior to transferring live birth, death and fetal death records to the State Archives, the State Registrar shall redact all information identified in the U.S. Standard Certificates of Live Birth, Death, and Report of Fetal Death, or as identified by the State (in regulation) as medical or health use only.”

There are many critical factors for considering amending the City Health Code from the perspective of the New York State Registrar. Birth death and marriage records are confidential records because they contain identifiable information that could be obtained and used improperly by criminals to establish a fictitious identity. A birth certificate contains an individual’s first and last name, date of birth, sex, home address, and mother’s maiden name. In addition, a death certificate contains an individual’s first and last name, sex, date of death and birth, gender, Social Security Number, marital status, full name of surviving spouse, residence, and full names of both parents. All this information can be used to identify an individual. Marriage records contain similar confidential information.
A birth certificate is considered a "breeder document". 1 A birth certificate is typically the first document obtained by criminals for illegal purposes, because it facilitates the acquisition of other identity documents. Possession of a birth certificate allows someone to breed other documents such as a driver's license, Passport, and Social Security Number. Similar to breeding identity documents with a birth certificate, criminals use death certificates to commit a form of identity theft called "ghosting". 2 Access to information available on a death certificate allows criminals to claim personal use of an existing identity that is already listed in government records – an identity that is dormant because its original possessor is deceased. Someone with illegal intentions can potentially use a death certificate to establish a false identity, as well as redirect benefits and/or control over property.

These regulations must be updated to reflect the current needs of today's society. Due to advances in public health, technology, and medicine, the United States will continue to have higher life expectancies than seen before; this fact coupled with the ever-present threat of identity theft and fraud, means New York State's elderly population is more vulnerable than ever to scammers and criminals seeking to steal their identity. The Model Law is a collaborative effort among state governments and the federal National Center for Health Statistics of the Centers for Disease Control and Prevention to provide "guidance for vital event registration, issuance, security and fraud prevention, and protection of confidential information in an electronic environment."

If you have any questions or would like additional information about the 2011 Model State Vital Statistics Act, you may contact me directly at robert.locicero@health.ny.gov or (518) 474-2503.

Sincerely,

[Signature]

Robert LoCicero; Esq.

23 October 2017

New York City Department of Health and Mental Hygiene
Gotham Center, 42-09 28th Street, CN 31
Long Island City, NY 11101-4132

Dear Commission Members,

I am writing today as President of the New York Genealogical and Biographical Society (NYG&B). As the oldest – and largest – genealogical organization in the state of New York, we strive to discover, share, and preserve the stories of all New York families from the 1600s to the present day. While our offices are located in Manhattan, we represent thousands of members and constituents across the United States and serve millions of individuals who have a connection to New York City at some point in their ancestral past.

We applaud the Commission’s stated desire to hear from genealogical organizations and those who would be impacted by the proposed limitations on access to New York City’s birth and death records.

The process of genealogical research and discovering family history requires access to public records. Birth and death records are core materials used by genealogists for research. They are often the only records that provide precise information relating to parentage, places and dates of birth and death, cause of death, and other related information critical to establishing articles of evidence to advance our research. They can show crucial generational linkages or other relationship information.

The proposed limitations on transfer of birth and death records to the NYC Municipal Archives would greatly impede open access to these materials for millions of individuals who are searching for their connection to New York City.

The Proposed Regulations Are Not Aligned with Current Practices

The 2011 Revision of the Model Vital Statistics Act, on which the proposed restrictions are based, has not found mainstream support. To date, only one state (Oklahoma) has put the proposed restrictions in place, and had to make immediate revisions due to the hastiness in which the regulations were written. Rather, multiple states have allowed greater levels of access to vital records:

- The Commonwealth of Virginia now allows access to death records after only 25 years, and in working with the Library of Virginia and Ancestry.com, has made vital records accessible from 1912–2014.
- Pennsylvania, working with Ancestry.com, has digitized death records from 1906 to 1963 and made them available online, while death records are only closed for 50 years.
- Michigan offers free digitized copies of death records through the Michigan State Archives from 1921 to 1952.
The U.S. Department of Health and Human Services released final regulations on protected health information and privacy in September 2013. These processes permit the release of information about a deceased individual 50 years after their death.\(^1\)

We also believe that the leaders of the National Association for Public Health Statistics and Information Systems (NAPHSIS) are considering revising the proposed periods provided in the 2011 version of the Model State Vital Statistics Act and encourage members of the Commission to open a dialogue with NAPHSIS in the course of making this decision.

**Access to Birth and Death Records is NOT A Leading Cause of Identity Theft**

Please rest assured that genealogists themselves share the same fears of identity theft and privacy concerns – just as any citizen of the United States. We ourselves have been victims of major data breaches from Yahoo, Target, Home Depot, Anthem, and most recently Equifax.

In recent years, the pages of news magazines have reported the theft of millions of identities, which makes access to verified information – particularly in the course of deaths – even more vital. The ability for various financial and commercial organizations to verify death dates through access to public death records is an efficient way to prevent the stolen identity from deceased individuals. Without access to such records, verification of a person’s death cannot be easily obtained.

There is no evidence that those states mentioned above that have adopted more moderate open records policies have seen higher levels of identity theft due to access to vital records. Instead, identity theft has centered on commercial companies, such as Equifax, rather than on those seeking to identify their ancestors through genealogical research.

**Genealogists Require Access to Birth and Death Records**

Working to find evidence of connections between individuals, many advanced genealogical techniques require the use of the F.A.N. approach (Family, Associates, and Neighbors), whereby individual genealogists require access to a variety of public records to identify relationships between individual family members.

We request that the Commission consider the following alternative as a means to provide access to these necessary materials for genealogical research:

- Access to New York City Birth Records after 105 years or with proof of death. While we recognize that a very small percentage of the population are expected to live beyond this period, there are also other sources (such as the U.S. census) that already provide basic information relating to these individuals. These alternative resources alone are not sufficient for genealogical research.

• Access to New York City Death Records after 50 years.
• Access to New York City Death Indexes after 25 years.

As a potential deterrent to identify theft, we also propose that the Commission considering providing early access to death records to known members of the genealogical community (perhaps, even those who are identified members of a New York-based genealogical, lineage, or historical organization). These materials could include:

• Access to New York City Death Records after 25 years.
• Access to informational certificates

The creation of an “informational certificate” that would provide a non-certified copy of the key information from a record, without the record itself being able to be used to substantiate identity.

**Preservation of these Records is Crucial**

As an organization, we exist to discover, share, and preserve the stories of New York’s families. Without open access to public records, and the proper conservation and preservation of these materials, the potential to lose these documents remains high. We strongly encourage the Department of Health to work in close conjunction with the New York City Municipal Archives to ensure safe and timely transfers of New York City’s birth and death records.

Modern technology offers the resources to ensure the property preservation and organization of birth and death records for New York City.

Further, in examining the records that would be negatively impacted by record restrictions, people seeking to trace the first generation of their immigrant family born in New York City would be greatly impeded. Members of New York City’s diverse communities – including those of Puerto Rican, Vietnamese, Chinese, Korean, and other backgrounds would be unable to gather these essential resources to trace and document their families. In addition, those who work to celebrate and recognize their ancestors through a variety of lineage organizations (including those who recognize settlers from the Dutch period, the American Revolution, and other entities) would be unable to gather the documentation needed to complete their lineage applications. These barriers to understanding and preserving New York City’s past – across its diverse and long history – would be devastating.

**Access to Medical Data**

Information relating to causes of death and patterns of genetic diseases is crucial to understanding one’s family health history. The United States Surgeon General has noted families should produce a medical history. There are numerous cases in which understanding a family’s extended health history can be essential to treatment and prevent of genetically inherited diseases. In particular, tracing the BRCA1 or BRCA2 genes aides in an individual’s understanding of certain cancers that might be persistent within the branches of a family. This is just one reason why limited access to death records through a direct descendant is not sufficient, and why even a 50-year restriction could cause harm.
Thank you for the opportunity to provide a comment on this important matter. The NYG&B asks the New York City Department of Health to strongly consider the regulations above in substitution of the proposed restrictions.

We are happy to answer any questions or provide any further details as needed.

Sincerely,

D. Joshua Taylor
President
New York Genealogical and Biographical Society

Long Island, NY 11101-4132

RE: Concerned About Proposal to Amend Article 207
Hearing October 24, 2018

To NYC Dept. of Health and Board of Health:

Although we support the proposal to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services (DORIS), we do not support longer embargo dates for birth or death records in New York City.

We understand that NAPHSIS and other vital records jurisdictions need to replace the 1992 Model Act to reflect changes in electronic records, legal requirements, and cultural shifts. However, we see no justified reason to extend the number of years vital records are embargoed from public access. There is no evidence that the states with open public records experience any greater occurrence of identity theft than states with more limited access. Most cases of identity theft occur when large electronic databases are hacked, not because someone walks into a Court House and copies a vital record. In fact, the opposite is true: Making death records readily available decreases the likelihood that someone will succeed in assuming the identity of a deceased person.

Since 2004, the Surgeon General and the U. S. Department of Health and Human Services have publicized the importance of knowing a family’s health history extending to third degree relatives\(^\text{1}\). Genealogists need access to the full death record, including cause of death, for grand aunts and uncles and great-grand aunts and uncles, to determine which branch of a family carries a genetic disease. In a recent newspaper article,\(^\text{2}\) Dr. David Fermin, the medical director of Spectrum Health HCM in Grand Rapids, Michigan, has identified a possible serious genetic heart condition in the MYBPC3 gene, which may affect several thousand Dutch descendants who live in western Michigan. A similar problem could exist for descendants of early New York Dutch settlers or some other nationality that lived for generations in an isolated community. Dr. Fermin goes on to report “these families likely share a

\(^\text{1}\) Consanguinity Chart, [http://www.familypedia.wikia.com/wiki/consanguinity](http://www.familypedia.wikia.com/wiki/consanguinity)

common ancestor, which may date back to as many as 25-plus generations ago.” A priority for all health departments should be the prevention of an early death due to genetic diseases.

Therefore, we support the proposal of the New York Genealogical and Biographical Society to provide:

1. Access to birth records after 75 years if the individual’s death can be verified or 105 years if no death date is verified;
2. Access to death records after 50 years; or after 25 years to active members of a New York Genealogical Society or any other genealogical society affiliated with the organizations listed in the descriptive paragraph of RPAC members below; and
3. Access to the index of death records after 25 years, which includes the name, date of death, place of death, date of birth, and burial or cremation information.

We support the right to privacy, but believe that the embargo periods supported by the NYG&B Society adequately guard the privacy of individuals concerned.

The 1906 birth certificate3 attached is an example of a document which would not be accessible under the new NYC Health Department proposal even though Hector Bonanno died in 1969. Fortunately, the record was available when I visited New York City in 2015 and obtained a copy of the birth certificate and other vital records related to the Bonanno family for a descendant who lives out of state.

RPAC is sponsored by the Federation of Genealogical Societies, the International Society of Jewish Genealogists, the National Genealogical Society, and supported by the Association of Professional Genealogists, the Board for Certification of Genealogists, the American Society of Genealogists, and the International Commission for the Certification of Accreditation of Professional Genealogists. The genealogical societies and professional organizations listed above represent several thousand local, state, and regional societies, more than 400,000 members researching family history, and over 2,000 professional and forensic genealogists whose important work includes tracking relatives with possible inheritable diseases; working with coroners to identify unclaimed persons; finding next of kin of unclaimed persons for repatriation of military remains; and heir research.

For more information see http://www.fgs.org/rpac. I may be contacted at janalpert@aol.com.

Sincerely,

Janet A. Alpert,

---

West Michigan, a region largely settled by immigrants from the Netherlands, has thousands of residents of Dutch descent who are vulnerable to a potentially deadly genetic heart disorder, likely tied to a common ancestor.

Hypertrophic cardiomyopathy, or HCM, is a life-threatening heart condition that can cause sudden death. It affects about 1 in 500 people and is one of the most common genetic cardiovascular disorders, according to Dr. David Fermin, medical director of the Spectrum Health HCM program.

"We estimate that between 2,000 to 4,000 people in West Michigan may be affected by HCM," Fermin told Spectrum Health Beat. "Although HCM is a potentially serious genetic heart condition, with specialized medical care and family screening, the long-term outcomes for HCM are very good, with a similar life expectancy to the general population."

HCM is a leading cause of sudden death in the young, particularly athletes.

One of Spectrum's success stories is Ken Whitcomb, 53. Several of his relatives have died from the condition.

Whitcomb, an athlete who excelled in track and field in high school and college, was diagnosed in his 20s after running caused him to cough up blood.

His heart condition originates from his Dutch heritage. The particular genetic mutation is common in the northern part of the Netherlands, where his ancestors lived.

Treatment for the condition ranges from medication to a heart transplant.

In 2011, Whitcomb had a defibrillator installed. The device is

Ken Whitcomb's maternal grandfather, Cornelius "Kasey" Kroll, died as a result of the genetic condition Ken and his mother, Lucille, share. It likely has been haunting the family for many generations. Taylor Ballek, Spectrum Health Beat

"These families likely share a common ancestor, which may date back to as many as 25-plus generations ago."

Ryan Rodarmer, a genetic counselor with Spectrum Health
DUTCH
FROM A1

designed to jump-start his heart if it stops.

The next year, he underwent septal myectomy, a surgical procedure to correct the obstruction of the heart caused by HCM. The operation involves stopping the patient’s heart and putting it on a heart-lung machine while surgeons slice off part of the enlarged muscle to remove the obstruction.

The procedure, typically done at a few major centers around the country, now is performed with increasing frequency at Spectrum Health.

“It was life changing,” Whitcomb told Spectrum Healthbeat. “There’s a huge difference in what I was able to do and what I can do today. I have been able to resume activities that I couldn’t even think about doing before.

He is running again — for the first time in 25 years.

“I had thought there was no chance I would ever be able to do that again. I’m just in a whole different place.”

Spectrum Health can identify people at increased risk for the disease with a blood test.

Thousands of genetic mutations in more than 25 genes now are known to cause HCM.

“Many of these mutations are unique to just one or two families worldwide,” said Ryan Rodarmer, a genetic counselor with Spectrum.

In the Netherlands, however, the majority of mutations occur in just one gene — the MYBPC3 gene, he said.

The majority of those with HCM in the Netherlands have the disease because of one of just three particular mutations within this gene. Each of the three genetic mutations is a founder mutation, and each traces back many generations to a common ancestor from the Netherlands.

“We have recognized that many of our HCM families who report Dutch ancestry carry one of these three founder mutations,” Rodarmer said.

“These families likely share a common ancestor, which may date back to as many as 25-plus generations ago.”
October 20, 2017

To the Attention of the New York City Board of Health,

We are writing in support of the New York City Department of Health and Mental Hygiene’s proposal to amend Article 207 of the Health Code to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services.

The National Association for Public Health Statistics and Information Systems (NAPHSIS) is the national nonprofit membership organization representing the 57 vital records and public health statistics offices (the 50 states, 5 territories, New York City, and the District of Columbia) in the United States.

The proposal would align New York City’s proposal with the 2011 Model State Vital Statistics Act and Model State Vital Statistics Regulations. Section 27(g) of the Model Act, Confidentiality and Disclosure of Information from Vital Records or Vital Reports, provides that “When 125 years have elapsed after the date of live birth, or 75 years have elapsed after the date of death or fetal death, or 100 years after the date of marriage, or (divorce, dissolution of marriage, or annulment), the live birth, death, fetal death, marriage, and (divorce, dissolution of marriage, annulment) records available for issuance under Section 28, whether paper, electronic or other media in the custody of the State Registrar may be transferred to the State Archives in accordance with archival procedures which shall provide for the continued safekeeping of the records. There shall be no cost to the (Office of Vital Statistics) for such transfer or maintenance. Prior to transferring live birth, death and fetal death records to the State Archives, the State Registrar shall redact all information identified in the U.S. Standard Certificates of Live Birth, Death, and Report of Fetal Death, or as identified by the State (in regulation) as medical or health use only.”

To promote consistent and comparable vital records practices, standard reporting requirements, and definitions across all the states and territories, a Model State Vital Statistics Act was developed initially in 1907 to serve as a model for states in preparing their own laws. This model has been updated periodically with the most recent version completed in 2011. Input from all jurisdiction vital statistics offices and from other interested stakeholders in both the public and private sectors was sought during the revision process.

This revision reflects an increased emphasis on electronic records, fraud prevention and security, and protection of the records both for individual privacy and for preservation purposes.
NAPHSIS endorsed the 2011 Model State Vital Statistics Act and encourages each state to enact it to update its current vital statistics statutes. Most states adopted the previous 1992 version, and several states are already using the new revision to craft proposed changes to existing statutes. Failure to enact the model law will result in continued opportunities for identity theft and government waste by not fully utilizing electronic vital record systems and post-911 security standards.

If you have any questions or would like additional information about the 2011 Model State Vital Statistics Act, you may contact me directly at swebster@naphsis.org or (301) 563-6004.

Sincerely,

Shawna Webster, CAE
Executive Director

Re: Amendment of Provisions of Article 207 of the New York City Health Code

New York City Department of Health and Mental Hygiene  
Gotham Center  
42-09 28th Street, 3rd Fl., Rm. 3-32  
Long Island City, NY 11101-4132

To Whom It May Concern:

I have binders of men and women. One grandfather came from Kilkenny, the other from Hamburg. They became naturalized, productive citizens, raising families in Brooklyn and Queens. I have been able to track my family history by using the birth, marriage and death records that I have found at the Municipal Archives and one or two cases, at the Department of Health. I have been able in some cases to find helpful information about the causes of death that tend to run in our family.

My grandmother was born in Brooklyn. I have traced our family back through her mom, who was born in Newark, and married a Civil War veteran who had served the Union cause, but through her father, their family seems to stretch back to the time of the American Revolution!

I still have mysteries about where a beloved aunt was born and why a young uncle I never met died at the age of 19 in 1929. A genealogist is never done. It is an addition. History comes alive and we know why we loved the study of history. Goodness gracious! Why was Mom born in the Bronx? How did my grandfather get naturalized in Kings County and then married to my grandmother in Jersey City on the same date? How did they travel? You have to study the transportation of the 1890s! I am a former English teacher, a retiree who wants to continue learning, and provide some insight into the past for the younger people in the family.

I don't know of any identity theft or fraud done by genealogists. The people who commit these crimes are too technically advanced to burrow through the old records that genealogists search.

Please, rather than passing Draconian restrictions requiring 125 years to pass to obtain a record, etc., reconsider the pleas of the many family genealogists, most of us harmless retirees. Our only guilt is that we love history and cherish and respect our families, living and dead. I beg you.

Yours respectfully,

Carol Brandin Kharivala, Member of the German Genealogy Group and the New York Genealogical and Biographical Society
Hello,

I am a descendant of many New York residents and have been researching my family history for years. I have re-connected with lots of lost relatives and changes you are recommending would prevent me from being to do this. Please do not lock up the records.

Thanks,
-David
Please do not take action to restrict death and birth records further. I want to be able to access information about my family. As it is, I have been waiting till 2018 to see my grandfather's birth record, because he was born in 1918. Now I hear you plan to extend this to 125 years. At the very least, you could provide redacted information or an index.

Being a historical researcher and a genealogist, I would like to voice my objection to the proposed changes in accessing NYC Vital Records: the proposal to lock-up Vital Records for 75 and 125 years.

Your NYC records are important to many of us doing professional research for documentation of our own and others' immigrant ancestors--so many came to America through the NYC port, and stayed for a generation or more in NYC. I've been doing research for over 40 years--using your wonderful resources & staff at Chamber Street, and now with on-line requests from Boston.

I see no public-safety or privacy reason to restrict access to public records. Given this age of the internet and various public-information databases, anyone intent on invading another living person's privacy or identity certainly doesn't need VR certificates going back before 1945....and I haven't encountered anyone alive today who is 110+ years old...so I just do not understand the logic to the new proposed years' restrictions.

The need to know the details of one's ancestors is more important today than ever. There is a pride now in one's ethnic roots, which should be celebrated rather than shut-down. And, genetic-counseling for many life-threatening & chronic medical conditions calls for an understanding of the patient's family history, which can be provided in the all-important Death Certificates (of course, after it is determined that the individual is in fact related to the long-ago deceased via Birth Certificates...and usually using Marriage Certificates also).

Thus, I hope that NYC will keep public access to public records of The Dead OPEN: for professional research for medical research and for anyone who is interested in working on their family-history.

It helps our country understand and appreciate the immigration-process of our population and the history of NYC, Besides, it generates an income for your department with the fees for copies of certificates.

Thank you for your consideration of my thoughts,
Sincerely,
Gloria Thompson
I am very much apposed to NYC once again interfering in the lives of New Yorker's. The proposed amendment will hamper much needed information that would allow people to confirm relationships for legal and other venues that would establish connections to ancestors. NO on this bad proposal. CLCJohnert
These records are crucial to me as my family's genealogist, and I know this is the case with many thousands of others. Please do not further restrict access.

Nancy Silverrod
Librarian and Genealogist
Please keep the vital records open as it is very important for genealogical research and very helpful to many people in your local area as well as to others whose ancestors had left the area and migrated elsewhere. The impact of losing access to these very important records would prove devastating to many people! Family history and research has become a very important and growing endeavor. Please don’t limit access as many like to travel to your city after researching online and collaborating with other possible and known cousins. As DNA research helps people discover more about their ancestry, access to the records to make the linkages with cousins becomes vitally important. We all should be able to learn who we are and where we came from! Limiting access to these very important records will thwart the progress of very many people! Please keep them open!!

Respectfully submitted
Donna Christensen- Thomas
Professional Genealogist
Dear Sirs;

Many of my ancestors lived in New York City when they came to Country in the late 1800s. I have been to New York City archives to look up records and I would appreciate if you would keep those records available and not further restrict them.

When I go to the city, which is 90 miles away for me, I spend a bunch of money because I’m only there three or four times a year. My focus is on looking at those records. If you restrict the records more, New York City will not be getting my tourist dollars.

Please do NOT restrict the records further!

Thank you.

Alice Benson,

Re: Amendment of Article 207 of the New York City Health Code
Public access to NYC birth and death records

Dear members of the Board of Health:

I am writing in response to the Notice of Opportunity to Comment on the Amendment of Provisions of Article 207 of the New York City Health Code ("Notice"). The New York City Department of Health and Mental Hygiene ("DOHMH") is proposing that the Board of Health amend Article 207 of the New York City Health Code to establish a schedule for making public NYC birth and death records and transferring those records to the Department of Records and Information Services ("DORIS" or "Municipal Archives"). For the reasons set forth below, I oppose the proposed amendment and encourage the DOHMH to develop more limited rules to address the issues raised by the Notice.

Introduction

By way of background, I am a NYC-based attorney, genealogist and author. I am active in the genealogy community in both New York and New England, where I am from. I am a member of the Association of Professional Genealogists, as well as several national, regional and local genealogical and historical societies, including the New York Genealogical and Biographical Society. I have over 40 years of genealogical research experience, including hands-on experience in researching vital records in several jurisdictions, including New York City. As an attorney, I bring to this issue my 30 years of practice in the area of administrative law, which enables me to offer a legal perspective on the proposed Health Code amendment in addition to my views as a genealogist on the impact of the proposed rule on genealogical research in New York City. The views expressed below are strictly my own, although they are generally in accord with the views expressed by others in the genealogy community.
The Proposed Rule

The purpose of the proposed rule is the creation of an automatic schedule for the transfer of birth certificates, death certificates, and index books from DOHMH to the Municipal Archives. Proposed section 207.21 of the Health Code would set the date for transfer of the records from DOHMH to the Municipal Archives as, for birth records, January 31st of the year following 125 years after the date of birth, and, for death records, January 31st of the year following 75 years after the date of death. Notice, p. 7. The Notice purports to justify the time periods in the proposed rule by noting that the same time periods are set forth in the 2011 revision to the Model State Vital Statistics Act and Regulations ("Model Act"). Notice, p. 6.

Importance of Public Access to Vital Records

Vital records - records of births, marriages and deaths created and preserved by state and local governments - are one of the main pillars of modern American genealogy. Access to vital records is frequently essential to establish a connection to an earlier generation, or to confirm research findings made from other sources. No family pedigree is complete without review and retrieval of an ancestor's birth, marriage, and death records. In many cases, review of the vital records for a collateral relative - a sibling of an ancestor - is critical to answer an unresolved genealogical question. Further, access to vital records is often critical to connect grandparents or great-grandparents to ancestors listed on publicly available U.S. census, which itself is likewise subject to restrictions on public access.1

In addition, advanced genealogical research techniques frequently employed by genealogists to solve particularly difficult "missing links" often require review of the vital records of an ancestor's friends, neighbors and business associates, or, more broadly in especially difficult cases, a review of the records of others of the same surname living in the same locale at the same time. These advanced research techniques are usually only possible where there are no restrictions on public access for the time period of the records that may hold the clue to an unsolved genealogical problem. As a result, genealogists, historians, researchers, and others with a research interest in vital records strongly oppose unnecessary restrictions that are placed on public access to vital records.

Impact of the Proposed Rule on Public Access to Vital Records

The proposed rule would have a significant and negative impact on public access to vital records in New York City. Current DOHMH rules entitle a child or grandchild to access the death certificate of a parent or grandparent, upon the showing of proper

---

1 The most recent Federal census to be made publicly available is the 1940 census. The National Archives releases a new census every ten years, pursuant to the "72-Year Rule" (92 Stat. 915, Public Law 95-416, October 5, 1978). Federal law restricts access to federal decennial census schedules to all but the individual named on the record or their legal heir for 72 years from the date of the census. The 1950 U.S. census will become publicly available in April 2022.
identification and, where necessary, authorization. Nothing in the proposed rule would change this limited access to vital records available to persons with New York City ancestry.

However, as noted above, genealogical research into one's ancestry often entails more advanced research than simply securing the death certificate of one's grandparent. The proposed rule would significantly impact genealogical research at the Municipal Archives by *unreasonably* delaying the transfer of birth and death records from DOHMH to the Municipal Archives.

Today NYC birth records through 1909 and NYC death records through 1948 are available for public inspection at the Municipal Archives for genealogical research. Under the proposed rule, *no new records would be transferred to the Municipal Archives until 2035 for birth records, and until 2024 for death records!* Put another way, several years of records currently in the public domain at the Municipal Archives would not today be available for public inspection had the proposed rule always been in effect. Specifically, birth records from 1891 through 1909 and death records from 1941 through 1948 would still be held at DOHMH were the proposed rule to have been in effect in prior years. The proposed rule will clearly make genealogical research in New York City much more difficult.

The Proposed Rule Does Not Appropriately Balance Competing Public Values

As a genealogist, I recognize that the public interest in protecting personal privacy, including reducing the risk of identity theft, must be balanced against the public interest in using vital records for genealogical and historical research. However, the excessively long confidentiality periods created by the proposed rule cannot be justified on public policy grounds.

By soliciting the views of genealogists on the proposed rule, *see Notice, p. 3,* the DOHMH is implicitly recognizing the legitimate interest of researchers in open access to vital records for genealogical and historical research. That millions of Americans, indeed persons all across the globe, have a passionate interest in determining their ancestral past cannot be questioned. To that end, the City and its agencies should not put in place *unnecessary* roadblocks to those persons seeking to identify and document their ancestors' lives in New York City.

On the other side of the scale, there is a strong public policy interest in protecting personal privacy, including the prevention of identity theft, policy considerations that the

2 “Death Certificates,” NYC.gov <http://www1.nyc.gov/site/doh/services/death-certificates.page>; *see also* NYC Health Code §207.11 (inspection of vital records).

3 NYC Records & Information Services, "Genealogy" <http://www1.nyc.gov/site/records/historical-records/genealogy.page>. Birth, death and marriage records for the five boroughs of New York City (Manhattan, Brooklyn, Bronx, Queens and Staten Island) are available at the Municipal Archives; online indexes to the Archives' collection have been provided by local genealogy organizations.
Notice discusses at length. The issue before the Board is not whether confidentially is warranted; rather, the issue is the appropriate length of the confidentially period.

**Death records:** The proposed rule adopts the Model Act's 75-year confidentially provision. Yet, DOHMH also apparently recognizes that the 75-year period is too long. The Notice explicitly solicits comments from genealogists and privacy groups about adoption of a 50-year confidentiality period. Notice, p. 3. The New York State Department of Health ("State DOH") confidentiality period for non-NYC New York death records is 50 years. At a minimum, DOHMH should follow the State DOH rule and amend the proposed rule to transfer death records to the Municipal Archives after 50 years. Under such a rule, death records from 1949 through 1967 would be immediately transferred to the Municipal Archives.

To address concerns that publicly available death records may contribute to the form of identify theft referred to as "ghosting," DOHMH should consider developing and implementing a research copy of death records, in a format that would provide sufficient information to establish the decedent's genealogical identity, including names of parents, but without providing information that could lead to the theft of the decedent's identity. DOHMH could restrict release of these research copies to relatives of the decedent, as well as certified or accredited genealogists and members in good standing of recognized local genealogical societies. In addition, the DOHMH should release the index to NYC death records after 25 years, providing only the decedent's name, date and place of death, date of birth, and burial/cremation information.

With these restrictions in place, the risk of identity theft resulting from unrestricted access to death records would likely be greatly reduced. This alternative would appropriately balance the public need to minimize the risk of identity theft, the public interest in privacy, as well as the public interest in accessible records for genealogical and historical research.

**Birth records:** The proposed rule adopts the Model Act's 125-year confidentially provision. Like death records, the proposed confidentiality period is excessive. The State DOH rules allow public access to birth records after 75 years if the person to whom the record relates is deceased. DOHMH can implement an identical system of access by requiring an applicant for a birth record that is older than 75 years to provide a copy of the death record for the subject of the birth record.

In the absence of a death record, 105 years is a reasonable upper limit on the period of time a birth certificate should be kept from public disclosure. In support of the 125-year period, the Notice provides evidence that New Yorkers are living longer, citing

---

4 10 NYCRR § 35.5 (c)(3). The State DOH rule can be accessed at [https://regs.health.ny.gov/content/section-355-genealogical-research-method-disclosure-searches](https://regs.health.ny.gov/content/section-355-genealogical-research-method-disclosure-searches)

6 10 NYCRR §35.5 (c)(2).
evidence from the 2010 census that almost a half-million New Yorkers are over the age
of 75, and about 2,000 individuals are 100 or older. Notice, p. 5. But that evidence proves
too little: how many New Yorkers are living past the age of 105? 110? 115? The Notice
is silent on that question.

In addition, the Notice presents evidence that the number of New Yorkers who
died in 2014 between the ages of 100 and 114 rose 38% since 2005, from 585 to 806, and
to 901 in 2015. Notice, p. 6. However, this data proves nothing with respect to justifying
a 125-year confidentiality period for birth records. Of the 901 deaths in that group in
2015, how many were older than 105? 110? 115? 120? The DOHMH has the ability to
tabulate the number of NYC deaths in a given year at a given age. The Notice does not
provide that data, suggesting that the data would not support a 125-year confidentiality
period. At a minimum, DOHMH should provide that data and tailor its rules to what the
data show. The Notice presents no evidence to indicate why a 125-year period should be
preferred over a shorter period; the selection of 125 years appears to be wholly arbitrary.
In that regard, the proposed rule would be arbitrary and capricious and subject to being
set aside on judicial review.7

Further, although preventing the use of birth certificates to steal a person’s identity
is an important policy objective, how likely is it that a scam artist will try to steal the
identity of a 110-year old person? Common sense suggests that the risk is low. A 105-
year confidentiality period is a more reasonable and defensible period of time than 125
years.

Finally, as with death records discussed above, DOHMH should consider
developing and implementing a research copy of birth records, in a format that would
provide sufficient information to establish the subject’s genealogical identity, including
names of parents, but without providing information that could lead to the theft of the
person’s identity.

Thank you for considering my comments.

Sincerely,

Richard C. Fipphen

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the Jean Sampson Scott Greater New York Chapter of the Afro-American Historical and Genealogical Society (AAHGS-New York) strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our national organization was founded in 1977 with a commitment to the preservation of the history, genealogy, and culture of the African ancestor populations of the local, national and international community. Our local chapter was established in 1989 with a specific focus on the African ancestor populations of the New York City metropolitan area. Africans and descendants of Africans have been an integral part of the City’s life and culture from its earliest settlement by the Dutch and continues to be enriched by new arrivals from throughout the African diaspora each year. It is our mission to discover, share, and preserve the stories of these New York families whether recent immigrants or residents of many generations.

Timely access to the original materials affected by this proposal is critical and essential for our work. The proposed restrictions would create an excessive interference for each of us and our fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Timely access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely regards,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Very Truly Yours,

Gary J Parisi

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

David Kendall Martin FASG, FGBS

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today regarding the proposed changes for access to birth and death records. I have done extensive research on my own NY ancestors.

As a genealogist, access to these records is essential to the research for myself and millions of others seeking to trace their families within New York City’s vital records.

My genealogical pursuits involve multiple records from many different repositories. Because vital records are the benchmark of my research, I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Perhaps you would consider developing and implementation of an informational copy of birth and death records, which would provide important details in a format not suitable for proving identity.

Thank you for your attention to this important matter.

Sincerely yours,

Lilian Heselton

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

This letter is to voice my objections to the proposed changes to public access New York City birth and death records.

As someone researching my own ancestors, access to these records is critical. These proposed restrictions would, if put into effect, totally stop my research regarding a number of my ancestors.

And what is the point of your proposed rules-change?  
Do you not want to "waste" valuable staff time finding records for family-history researchers?  
Just charge by the piece to retrieve and mail the info, like many other government departments already do!

Do you not want the public to have the information?  
Much of it is already available to anyone who can take the time (or pay someone else to take the time) to comb through old newspapers in a NYC-area public library. It is those of us who currently live outside Staten Island who will suffer the most.

And beyond the desire of some to do genealogical-research, timely public access to those records is critical for other purposes. For example:
To close out one of my mother's savings accounts (in Oregon) some years ago, I had to get proof of her death from the California county in which she died. That record became available within a few weeks of her death (and is still available 30 years later); without a certified copy of her death record, that account money would be still in the account (or, more likely, turned over to the state of Oregon as "unclaimed property").

Doctors, more and more often, are asking patients (such as myself) how long our ancestors lived and what they died from. Public health departments are the best source of that information (because the department records provide facts recorded at the time they occurred, not just somebody's later memories of what the facts perhaps were).

So, please reconsider your proposal to shut down timely public access to New York city health records.

Sincerely,

Katherine Pyle

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RI#: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Michael Gedlem

Re: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with generically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Sam Kohl

The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to you regarding the proposed changes governing access to birth and death records.

As a genealogist, timely access to these records are essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and others seeking to trace their families within New York City’s vital records.

Like many genealogists, my intention is to discover information about my ancestors and understand their place within a larger social and historical context. Birth and death records are two of the most fundamental records used in my research. Accordingly, I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 100 years.
- Access to death records after 25 years.

In addition, I ask that you consider the development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Further, bear in mind that information related to an individual’s cause of death can be extremely important to those tracing and understanding their ancestors’ medical history. This is especially the case for those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

David Collins
Cross River, NY
Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

My family and I recently learned of important family connections that we never knew about. We learned about the life and death of my fiancé’s great grandfather, about whom the family absolutely nothing. We learned that our family has tremendous significance in American history, including lineage ancestors who were Revolutionary War heroes. We learned about a great, great uncle who was an intimate friend of Franklin Delano Roosevelt. Most importantly, we were able to reach out to family members who are alive and well today, with whom we have new, wonderful relationships. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Ralph B. Abrames

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing to provide my comments regarding the proposed changes to access birth and death records.

The proposed restrictions on the public release of birth and death records would create an unnecessary burden for myself and other genealogists tracing their families using New York City’s vital records. As a genealogist, timely access to these records are critical and essential for my research.

I ask that the commission consider the following guidelines for vital record access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you develop and implement an informational copy of birth and death records, providing important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

In this day and age where identity theft is common, it is important that one be able to have access to records that help prove one's identity. Restrictions like the ones you propose will impede those efforts by making it difficult to obtain the records one needs.

Furthermore, such restrictions will do little to combat identity theft since it is easily done without any records at all, thanks to the ready availability of personal information through other channels and the ease with which public records can be forged. Blocking access to authentic records will make it more difficult to prove the inauthenticity of fake documents.

In this day and age many people are trying to construct family medical histories using information available on death certificates. Blocking access to them will impede these efforts needlessly and potentially prevent someone from learning information critical to their health or that of their family members.

Finally, timely access to these records are critical and essential for my research into my family's history. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for me and millions of others seeking to trace their families within New York City’s vital records. They are unnecessary and ridiculous.

Please stop this effort to block public access to public records.

Sincerely regards,

Margaret Rutledge

Re: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely regards,

[Signature]

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. I myself have a great-grandfather Thomson who once owned the land on which the Empire State Building now sits. His descendants lived on in NYC for many, many years after the farm was sold.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Sincerely,

[Signature]

6080 Danville Loop 2 Road  
Nicholasville, KY 40356
Dear Commission Members,

I, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

The NYG&B was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. The organization's work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for my work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City's vital records.

I ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of burial, and burial/cremation information).

Beyond genealogical research, many of my peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, I ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely,

Paul A. Reese
New York City Department of Health and Mental Hygiene

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

New York City was the port of entry for many of our immigrant ancestors, who arrived from many nations. Researchers across the U.S. and abroad rely on access to NYC’s vital records. As a member of the Irish Family History Forum, I have helped people from Albany, NY; St. Petersburg, FL; Dublin, Ireland; and Mandura, W. Australia with NYC birth and death records.

I can testify to the value that access to NYC’s vital records have been to my own personal research. Between my husband and myself, we have NYC ancestry commencing from Europe in Ireland, Germany and Italy. From collateral relatives, descended from my maternal grandparents, the ties stretch from Germany to Ireland, Russia and Czechoslovakia. Both my maternal grandparents and collateral relatives have death records from NYC.

I therefore strongly urge the Commission Members to consider guidelines proposed by the NYG&B.

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
• Access to death records after 50 years; or after 25 years if the person seeking the record is a registered member of a genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Death records allow a researcher to compile his or her family’s medical history, providing possible clues to genetically inherited diseases.

Would the Commission Members consider creating an informational copy of birth and death records, which would not prove identity for financial and other transactions, but would instead provide the information necessary for researchers?

Respectfully submitted,

Margaret E. DeAcetis

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Rudolph C Bayer

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a family member, I have had untold delays and difficulty obtaining my mother’s medical records and death record to try and establish hereditary disease. I also needed and still need to use numerous other family death records that would be inaccessible under your proposed regulations.

As a genealogist, timely access to these records is critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger medical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases as in my family.

Thank you for your attention to this important matter.

RE: Proposed changes for access to vital records

I understand that New York is considering making birth and death records unavailable to researchers for 125 years. I am writing to object to this change.

I have been struggling to unravel the history of my own family since 1991. It's a slow process, and sometimes costly. But without reasonable access to vital records, it would be impossible. New York vital records have been invaluable to my own family history research.

As a writer and researcher, vital records are also important to me as a source for historic information beyond the boundaries of my own family. For example, I am currently using vital records to search for the owner of copyright to a book published in the 1940s. Census and death records have been the only sources that provide any trail of the work's author and possible heirs.

You might argue that the information will become available later. But already we are losing details of family histories. Publishers and writers want to keep books and other creative works alive, but often fear to do so, because it is difficult to determine who owns the rights. Already much of our recent history is hidden because of secrecy regarding records.

Vital records should not be sealed for a century or more.

Please keep New York Vital Records available to the public for research.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

" Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
" Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
" Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Meghan Lenahan

Re: Access to Public Records

I am writing in response to reports of possible increased restrictions for access to New York City vital records.

As you may be aware, these records are essential for the tracing of family histories and learning the stories of our ancestors. As so many immigrants to our country came through New York City, and so many families settled here for their entire lives, these records are vital beyond words for fulfilling the basic need for establishing family connections.

Also, death records which name the cause of death of family members, can be extremely important in analyzing medical conditions which should be followed by descendants, such as heart problems, diabetes and lung disease. These records are often the only source for learning a family’s medical conditions.

Public records are kept and maintained for the benefit of the public and should, with reason, be available in time of need. There are researchers all over the world depending on you to reconsider any and all moves to further restrict access to your record holdings.

With appreciation for your consideration,

Jean K. Chamberlain

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records is **critical and essential** for my medical research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

My genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social, medical and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
- Implementation of a line on a death certificate to indicate burial place of remains. Not all cremains are buried at location of cremation or buried. Currently, there is no accurate way to ascertain final resting place of cremains when interred in a cemetery not related to cremation site.

Further, I ask that you consider development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, i.e. genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Marie E Ulrich

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records. My roots lie in New York City and date to the mid-19th Century. Accessing these records is vital to me. I already pay a premium (and have) for copies of documents since I do not reside in the USA. To restrict further access is very disheartening news.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City's vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Thank you for your attention to this important matter.

Sincerely,

Pamela Graham Landnam
Aptos, California

Pamela Graham Landnam
Since my father left my family and me at a young age, having these records available to me for my ancestor search has been essential. He had changed his birth name before marrying my mother, which even made it more complicated. So, having Vital Records to order and view has been wonderful! Please keep these records available to people like me.

Since I live in California, it is very helpful to be able to get them online.

Thank you.

Carmela Graham Landram

There are some health issues in my family that I wondered about. Having death records would be helpful to see if they had occurred in the past.
Dear Commission Members,

As a genealogist, access to vital records is critical and essential for my research and for tracing and understanding medical history that can have crucial bearing on living family members. The proposed restrictions access to these records is unnecessary and onerous.

My intention in accessing these records is to discover information about my ancestors and understand their place within a larger social and historical context – as well as to document pertinent health issues. I ask that the commission consider the following guidelines for access:

- Access to birth records after 75 years (if deceased) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. COULD BE VITAL FOR HEALTH REASONS.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

I would also suggest that you developing and provide access to an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Thank you for your attention to this important matter.

Sincerely,

Barbara Coughlin (born in Brooklyn)

Subject: **Proposed Guidelines for Access to Public Vital Records**

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As an historical archivist and volunteer family history researcher, timely access to these records is critical and essential in my work. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist’s key information to identify particular records necessary for research.

Further, I ask that you consider the development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

As a new genealogist your new guidelines would make it virtually impossible to find out about my family lineage and relevant data. The information provided on birth certificates and death certificates e.g. names of parents, cause of death are important for genealogical and historical research.

Please reconsider your extensive proposed limitations.

Sincere regards,

Joan Edelman

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

Claire Grauer Spinelli

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing in my capacity as President of the New York City Chapter, National Society United States Daughters of 1812, to express opposition to the proposed rules changing when birth and death records are made available to the public.

The National Society United States Daughters of 1812 was incorporated by an Act of Congress in 1901. One of the stated purposes of our Society is to record family histories regarding individuals who participated in civil, military, and naval service in this country from 1784 to 1815. To do this, we document the lineage of these individuals from their day down to the present. Birth and death records of the past century are part of the documentation that we gather and preserve as we perform our work.

On behalf of the members of the New York City Chapter, I urge that you not further restrict when birth and death records are made available to the public. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for our members and prospective members who seek to trace their family history within New York City’s vital records.

Our research involves multiple records from numerous repositories, and we seek to discover information about our ancestors and understand their place within a larger social and historical context. Our work helps to preserve their legacy forever. We respectfully request that you take no action which will inhibit our ability to perform this important work.

Thank you for your attention to this important matter.

Sincere regards,

Betsy Bloomer
President, New York City Chapter
National Society United States Daughters of 1812

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context.

I ask that the Commission consider the following guidelines for access:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information are submitted).

Providing this limited access to the information from birth records and the death index would protect the privacy of those living while allow genealogists key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format protecting identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

James D. Steen  
4R40 Connecticut Ave., Apt 807  
Washington, DC 20008
Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

Although I have never lived in New York, as a genealogist, I have close ties to the state. In 1640, my 10th great-grandfather, Peter Hallock, was one of the original settlers of Southold, New York. The Hallock family heritage is one that has been treasured and passed down in my family for years. In contrast, my great-grandfather, Theodore Joseph Brodnicki, and his predecessors have a little-known heritage in my family, due to four generations of back to back adoptions. Theo was born in New York in 1897, which falls within the proposed restriction on birth records. Piecing this heritage together took years to piece together and could not have been done without access to records from a variety of states and countries.

The Brodnicki heritage is just as precious, if not more, to me as the Hallock heritage because it was a lost heritage that was found. If all families could preserve their heritage as well as the Hallock family I would not have any concerns with the proposed restrictions on New York vital records. However, this restriction is insensitive to the realities of many Americans, who are striving to find their New York roots and tie them to the history of America.

As a genealogist, a historian, and as an American, timely access to these records are critical and essential. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. It also serves to disassociate individuals with the social and historical context that their ancestors have fought to preserve. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 25 years.

If this commission is concerned with identity theft, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases. When my brother was diagnosed with cancer at the age of 42, it was my grandparent’s and great grandparent’s death certificates I was able to provide when the doctors requested information from the records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

As a family genealogist and second-generation American, timely access to birth and death records are essential for my research into the lives of my ancestors in the country to which they emigrated and came to called home. Such research allows me to tell the social and historical context of their lives in New York. In addition, the medical information on death records has allowed my family to become aware of possible health issues and take preventive measures.

Concern for violation of privacy and possible fraudulent activities should be of concern to all. May I name just a few violations for 2017 each of which released personal information? Equifax; InterContinental Hotel Group; Arby’s; Verifone; Dun & Bradstreet; Saks Fifth Avenue; UNC Health Care; IRS Date Retrieval Tool; Chipotle; Gmail; Brooks Brothers; Kmart; University of Oklahoma; Bronx Lebanon Hospital; Washington State University; Blue Cross/Blue Shield; Verizon; U.S. Securities and Exchange Commission... and the list goes on.

Rather than denying access to genealogical data, I ask that you consider at the very least developing and implementing an information copy of birth and death records which would provide important details for genealogical and historical research in a format not suitable for proving identity. At a time when records from around the world are being digitized and disseminated world-wide, it seems rather incongruous for the NYC Department of Health and Mental Hygiene to take such a step backwards.

Sincerely,

Carole Holt  
Jacksonville, FL 32205

New York City Department of Health and Mental Hygiene
Gotham Center, 42-09 28th Street, CN 31
Long Island City, NY 11101-4132

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access of birth and death records for research purposes.

As a professional genealogist, timely access to these records is essential for research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for my clients and millions of others seeking to trace their families within New York City’s vital records.

Researchers use these records solely for the purposes of discovering information about ancestors and understanding their place within an historical context. Sometimes, my work takes on added meaning, as I volunteer to help researchers in Europe locate family of Holocaust victims and survivors, working to reunite families and to return valued items in cases of restitution. Without access to birth, marriage and death records in New York City, these pursuits would hit a brick wall.

I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. However, it will be essential to still be able to see the original handwriting, name of informant, and location of cemetery. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your consideration of these suggestions.

Sincerely,

Renée K. Carl
New York City Department of Health and Mental Hygiene  
Gotham Center, 42-09 28th Street, CN 31  
Long Island City, NY 11101-4132

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I, as a member of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City. Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States — and in fact the entire world — as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records. We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified. (Arizona standards)
- Access to death records after 50 years (Arizona standards); or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family — specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincere regards,

Barbara Wich

Prescott, Arizona - with deep maternal roots in New York State
New York City Department of Health and Mental Hygiene

Long Island City, NY 11101-4132

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

**Identity theft is NOT an issue.** The US Dept of Justice lists the most common ways one’s identity can be stolen. ([https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud](https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud)) They are:

1. "Shoulder surfing"— being watched as one enters a phone calling card number or credit card number
2. “Eavesdropping” as one gives credit-card information over the telephone.
3. Discarding "pre-approved" credit cards without shredding the applications
4. Responding to "spam"— unsolicited E-mail.
5. Careless use of social media.

Access to these records is **essential** for genealogical research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for millions seeking to trace their families in New York City’s vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing name, date of death, place of death, date of birth, and burial/cremation information).

Sincerely,

M. B Mannlein

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing name, date of death, place of death, date of birth, and burial/cremation information).

Sincerely,

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

Georgie Brown

Commissioner Dr. Mary Basset  
New York City Department of Health and Mental Hygiene  
Gotham Center  
42-09 28th St., 14th Floor CN31  
Long Island City, N.Y. 1101-4132

Dear Commissioner Basset:

I am deeply concerned about and oppose your department’s proposed 125 and 75 year restrictions on accessing birth and death records respectively. Such action is antithetical to the department’s mission & would cost DOH a revenue stream that shows signs of growth. The general public needs access to these records for a wide variety of professional & personal reasons ranging from adoption to making informed health care decisions.

As someone who has spent a significant amount of money on certificates needed for genealogical and social history research I have gained inestimable insight and information from materials in the DOH record collections over 20 years. Furthermore, as someone who spends a respectable amount of my working hours responding to FOIL & other requests for information, I find it repugnant that your department is trying to deny information to the public by unduly placing lifespan long restrictions on access. Doing so impairs the very mission of your department to safeguard public health. In addition to being a genealogical tool, interested parties use information gleaned from these records to ascertain how heightened their risk for heart disease, cancer, and other causes of death are & make better healthcare decisions based on that knowledge. For example, my great grandmother & grandmother both suffered strokes as a cause of death, and my uncle just suffered his fourth stroke in several years. How can future descendants gauge knowledge of their family’s past health risks & plan properly for their future without access to these records.

I beseech the NYCDOH to rescind these proposed restrictions and leave your historically significant and potentially lifesaving record collections available to the public without these additional burdens. The department can only gain revenue by the increase in interest in family history due to shows like Roots & Who Do You Think You Are?. On a more societal level, Edward Kohn’s Hot Time in the Old Town describing the impact of the infamous August 1896 heat wave on New York City would have been denied critical materials under these new restrictions given the number of
registrar clerks that died of exhaustion or heat stroke, death certificates for the children may not have been created. In that case, birth records would be the primary available civil source.

Combined with the increased use of genetics as a tool to assess & address potential and actual health risks, these restrictions threaten to impair the department's fiscal health and are in direct opposition to its core mission of protecting public health. Per your own statement regarding the Health Care System Preparedness Report released in August 2017, Federal monies are already threatened. "The funding cuts proposed by the Trump administration would reverse 15 years of important progress in preparing our health care systems for emergencies and threaten the health and security of millions of Americans."¹ Why sever a revenue stream that would help replace some of the lost funding? Please do not enact these restrictions. NYC DOH is one of the oldest repositories in the country, it would be a shame if its usefulness was limited by unnecessary red tape.

Thanks for your time & attention to this matter.

Sincerely,

Matt Duffy

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

It has come to my attention that it might help if I provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

I know I am only one voice. Yet I also know that one voice might help to make the difference.

As a genealogist access to these records are critical and essential for my research. And it is important that they can be accessed in a timely fashion. Any proposed restrictions on when birth and death records would become available for public viewing would create a huge problem for me and many others who seek to trace their family histories.

In the past 8 years, I have learned so many important things about the branches of my family. I learned that my grandmother had a brother who was slaughtered in a concentration camp. But I also learned that he had children and one was still alive until last May. She lived in Israel and we were able to Skype. I met one of her daughters, my cousin. I met a woman who is the daughter of my grandmother’s ½ sister who lives in Florida. She is now 86 and I just adore her. I have visited several times and we speak just about every week. All of this and more might not have been available without the vital records in New York and other states.

I ask the commission to consider the following guidelines:

Access to birth records after 75 years (if the individual’s death can be proven) or 100 years if no death date is verified.

Access to death records after 50 years or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
I know you are receiving similar letters, pleading for the same thing. But, please try to understand how important it is for those of us who do research.

I do think it would be extraordinary if you developed and implemented an informational copy of birth and death records which would provide important details for genealogical and historical research in a format not suitable for proving identity. I am 74 years old. I probably won’t be able to see it happen, but happen it should. It would also be so wonderful if cause of death is also provided, since it can be helpful to family members understanding inherited diseases.

Thank you in advance for thinking about this issue and hopefully deciding in the favor of researchers.

Sincerely,

Emilie Epstein

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing in my capacity as President of the New York State Society, National Society United States Daughters of 1812, to express opposition to the proposed rules changing when birth and death records are made available to the public.

The National Society United States Daughters of 1812 was incorporated by an Act of Congress in 1901. One of the stated purposes of our Society is to record family histories regarding individuals who participated in civil, military, and naval service in this country from 1784 to 1815. To do this, we document the lineage of these individuals from their day down to the present. Birth and death records of the past century are part of the documentation that we gather and preserve as we perform our work.

On behalf of the members of the New York State Society, I urge that you not further restrict when birth and death records are made available to the public. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for our members and prospective members who seek to trace their family history within New York City’s vital records.

Our research involves multiple records from numerous repositories, and we seek to discover information about our ancestors and understand their place within a larger social and historical context. Our work helps to preserve their legacy forever. We respectfully request that you take no action which will inhibit our ability to perform this important work.

Thank you for your attention to this important matter.

Sincerely yours,

Beverly K. Sterling-Affinati
President, State of New York Society

Long Island City, NY 11101-4132

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincerely yours,

Linda Rhodes Jones

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

I live in mid-Michigan and many of my ancestors came from New York as did the ancestors of millions of others seeing to trace their family histories within New York City’s vital records. Thus I would like to add my voice to the growing group of genealogists seeking timely access to those birth and death records.

My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

**Identity theft is NOT an issue.** The US Dept of Justice lists the most common ways one’s identity can be stolen. ([https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud](https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud)) They are:

1. "Shoulder surfing"— being watched as one enters a phone calling card number or credit card number
2. “Eavesdropping” as one gives credit-card information over the telephone.
3. Discarding "pre-approved" credit cards without shredding the applications
4. Responding to "spam"— unsolicited E-mail.
5. Careless use of social media.

Access to these records is **essential** for genealogical research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for millions seeking to trace their families in New York City’s vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing name, date of death, place of death, date of birth, and burial/cremation information).

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely yours,

Cathryn Hulse

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

RE: Access to Public Vital Records

Dear Commission Members,

On behalf of the Board of Directors of the Irish Family History Forum, I would like to express our objections to your recently proposed rules about access to public birth and death records in New York City.

It is believed that 40 million Americans claim to have Irish ancestry. Many of these ancestors emigrated from Ireland at the time of, or in the aftermath of, the Famine of the 1840s, and a huge percentage of them lived at some time in New York City. Their stories are not always easy to unearth, particularly because most Irish census records from the 1800s no longer exist.

For close to three decades, the IFHF has worked to discover and preserve the stories of people with Irish ancestry, particularly New York Irish ancestry. We assist our members in researching their ancestors so that they might discover and preserve their family history for themselves and for their descendants.

Access to vital records is critical to our work, and so the proposed restrictions would create a hardship for our members seeking to trace their families within New York City’s vital records.

We ask the commission to consider the following guidelines for access to public records:

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Member Of
National Genealogical Society Federation of Genealogical Societies Genealogy Federation of Long Island
• Access to death records after 50 years; or after 25 years if the person seeking the record is a registered member of a genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

In addition to their genealogical research, many people require access to vital records in order to compile a family medical history and learn about any genetically inherited diseases.

In light of the preceding, may we ask that you consider creating an informational copy of birth and death records, which would not prove identity for financial and other transactions, but would instead provide the information necessary for researchers?

Thank you.

Sincerely,

Re: Proposed Guidelines for Access to Public Vital Records

Dear Committee Members:

I am a member of the New York Genealogical and Biographical Society, and this is to let you know I strongly object to the proposed rules change regarding access to public birth and death records in New York City.

The work of the NYG&B influences multitudes of individuals and families across the United States, as well as the world, and tells the stories of the millions of immigrants who came and settled in NY.

Access to these original materials is critical and essential to our work. And it would seem all the rule changes would accomplish is to create excessive interference for my research as well as others seeking to trace their families within New York City’s vital records.

I support the NYG&B’s request as follows:

1. Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
2. Access to death records after 50 years; or after 25 years to registered members of a NY Genealogical Society.
3. Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information.)
While I am not privy to the motivations and incentives involved in the proposed rule changes, I suspect the current identity theft problem is part of it; that being said, there are other ways to take care of that problem, and there is an old adage, "if it ain’t broke, don’t fix it."

Thank you for your consideration.

Sincerely,

Virginia S. Stannard

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I urge you to vote against the proposed changes to access birth and death records.

**Identity theft is NOT an issue.** The US Dept of Justice lists the most common ways one’s identity can be stolen. ([https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud](https://www.justice.gov/criminal-fraud/identity-theft/identity-theft-and-identity-fraud)) They are:

1. "Shoulder surfing" – being watched as one enters a phone calling card number or credit card number
2. “Eavesdropping” as one gives credit-card information over the telephone.
3. Discarding "pre-approved" credit cards without shredding the applications
4. Responding to "spam" – unsolicited E-mail.
5. Careless use of social media.

Access to these records is **essential** for genealogical research. The proposed restrictions on public access to birth and death records will create an unnecessary barrier for millions seeking to trace their families in New York City's vital records.

Genealogical research involves multiple records from many repositories. I seek to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access:

Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.

Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.

Access to the index to death records after 25 years (providing name, date of death, place of death, date of birth, and burial/cremation information).

Sincerely,

Re: Proposed Guidelines for Access to Public Vital Records

October 17, 2017

Dear Commission Members:

I am a family genealogist and a member of the New York Genealogical and Biographical Society, the National Genealogical Society, and the Connecticut Society of Genealogists. For the following reasons, I write today to strongly object to the proposed rules regarding further restriction of access to public birth and death records of New York City:

First, the proposal to restrict access to vital records is inconsistent with the time periods specified in the administrative rules and regulations of the New York State Department of Health (10 NYCRR 35.5[c]) that govern access to such vital records filed with the State Department of Health or local registrars outside of New York City. Those rules provide for public access for genealogical purposes after 75 years for the birth records of persons known by the applicant to be deceased, 50 years for deaths, and 50 years for marriages of persons known by the applicant to be deceased. There is no legitimate reason to restrict access to such information for a greater period concerning events in New York City than for events that occurred in other parts of the state. The policy for public access to vital records should be uniform throughout New York.

Second, there is no valid reason to restrict access to the vital records of persons known to be deceased for time periods longer than specified in the regulations of the State Department of Health. The dead are dead. They have no expectation of privacy and cannot be harmed by the disclosure of vital records concerning their lives and deaths. Intrusion into the privacy of living persons who might be compromised by the disclosure of information about the births, marriages, and deaths of their ancestors is adequately safeguarded by the 75- and 50-year periods specified by the State Department of Health.

Third, genealogy and family history are increasing in popularity every year and millions throughout the United States are involved in documenting the lives of their ancestors and collateral family members. This is a form of micro history that
depends for its accuracy upon access to the very records that were designed to contemporaneously record the true facts about birth, marriages, and deaths. It must be remembered that vital records are public records whose disclosure is merely deferred. At some point the public should have access. The purported privacy concerns that have motivated the present proposal to restrict access to New York City birth and death records must be balanced against the legitimate needs of genealogists and family historians for the information they contain. In my view, the 75- and 50-year periods specified by the State Department of Health strike that balance perfectly.

Fourth, the ancestors of many millions of Americans living today entered the country through the port of New York and made their homes in the City of New York. The City’s vital records therefore are not just of local interest but restrictions upon access to them will affect genealogists and family historians throughout the country.

The New York Genealogical and Biographical Society has suggested the following guidelines for access to vital records of births and deaths, namely:

1. Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified;
2. Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
3. Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

I agree with those recommendations, and especially commend to your favorable attention the recommendation to permit wider access to accredited members of recognized New York Genealogical societies that subscribe to a code of ethical conduct. That method is used and works well in Connecticut (see http://csg-inc.org/pdf/Statutes and Codes Affecting Town Clerks.pdf).

Yours truly,

James E. Pelzer
Pamela Rose
Comment:
For many of us New Yorkers who have family that have lived in this area for decades or even hundreds of years...these records are VITAL for us. WHY ARE YOU MAKING IT SO DIFFICULT???? Stop trying to make it the record inaccessible to citizens and genealogists. They are a vital part of research and should be made accessible to the public, NOT restricted like this proposed Amendment.

Adam Turner
Comment:
It doesn't appear that DORIS has any clear empirical evidence that a more open vital records policy actually leads to an increase in identity theft or other abuses of people's private information. Declaring what is good for the public by fiat, without clear data on the likely effects of policy changes, is usually a terrible way for governments to make policy. Additionally, I note that the people who are the subject of death records are...dead. As such, they have no privacy rights to violate. In addition to the ample points others have made about the public's interest in keeping death records widely available, I see no reason to believe that there are a meaningful number of people out there who think that their interests are being served by having their death records kept secret for 5-10 years after their death, let alone 75 years.

Don Rauch
Comment:
As a genealogist I am opposed to this rule proposal. More realistic timing should be considered.

Rochelle Wyatt
Comment:
Please do not change the existing rules for accessing birth and death records. As a genealogist with ancestry in New York, access to these records is important. At a minimum, the death records should be made available after 50 years.

Sylvia Prast
Comment:
I disagree with the proposed records restrictions. They are unnecessary.

Karen Massari
Comment:
I am an adult adoptee with no access to my vital records otherwise knows as an Original Birth Certificate. I have had difficulty renewing my passport and I have been denied my civil rights of knowing my heritage and genetic lineage. I have spent thousands of dollars and have been able to find my birth mother who unfortunately had
passed away before I found her. I know everything that is on my OBC but at the age of 49 still do not have access to it. Other then those in the witness protection system adoptees are the only ones in NYS that have their identity locked away from them causing major issues with the Federal Government especially when it comes to getting our passports renewed. The idea of privacy for the birth mother and/or father is moot with DNA testing. I used the DNA test from Ancestry and found my 1/2 sister and plenty of cousins. So even though my father is not listed on my OBC according to my non-id all of his 2nd and 3rd cousins know I am looking for him. So this idea of privacy is fundamentally flawed. Adoptees really do require access to their OBC.

Teri Hanke
Comment:
I have reviewed many of the previous comments and rather than reiterate all that has been said before, I will say that I agree complete with the comments of Kathleen Naylor. Her eloquent comments regarding how vital these records are to family member, genealogists, etc. are right on target. My family members all came to this country through New York, some stayed and continued raising families there, others moved on to other areas. The NY records are invaluable to those of us without family members left to question and the time limits you are considering to impose will make it much more difficult for those of us trying to find out how we got where we are.

William Kusy
Comment:
My Dad and His Mother have passed away over 10 years ago and Knowing the biological dad of my dad would maybe help explain the health problem that have been experience by myself, brother, granddaughter and neices and nephews. My Dads birth was reissued in 1937 but no knowledge of the Father. Need the original to find out nationality of biological father of my dad. Please do not hinder my search with this new program Thank you William

Elysa Wallingford
Comment:
All my family came from New York back in the mid 1800- mid 1900. It’s very hard to search NY for records of any kind. This new restriction would be very hard to get any kind of family information. Please reconsider this move.

Mary C. Zingerella
Comment:
I object to the changing of the time limits. Pls do not make access to records to genealogists more difficult.
Leslie Corn
Comment:
I am a forensic certified genealogist. I strongly object to the limitation on public access to birth and death records and to the NYC Department of Health’s reasoning for that limitation. The proposed amendment is based on arguments of identity theft and violation of privacy through record access. Yet open record access has not proved this correct. Florida’s Department of Health, for instance, offers unrestricted access to birth and death records. Has their open access led to increased violation of personal identity in their state? No. The Office of the City Clerk of the City of New York only restricts access to marriage records for 50 years. If both parties to the marriage are deceased, a more recent record can be accessed. NYS DOH restricts access to birth records for 75 years and death records for 50 years—a shorter limit than NYC DOH’s proposed 125 years for births and 75 years for deaths. As additional proof of the error of identity theft based on record access, other countries with open access to vital records, such as England and Ireland, have not reported a rise in identity theft. A professional genealogist and associate in Germany wrote the following about open access to vital records there: “In Germany you have access to all civil vital records regardless of date if the person in question is your ancestor (parents, grandparents, great-grandparents)… I have no information about identity theft, never heard about it over here and I do not think that there is any in connection with vital records.” Access to vital records is essential to my work in assisting attorneys, executors, administrators, and distributees in testate and intestate matters. NYC DOH’s proposed restrictions will hamstring distribution of estates and resolution of other legal matters, such as entitlement to real property and dual citizenship. When Jane Smith and John Doe announce their engagement in their local paper, does Jane Smith redact her maiden name for fear of identity theft? No matter what extreme limits the NYC DOH seeks to place on its holdings, the magnificent genealogical horse is out of the barn and running faster every day. Thanks to the work of individuals, genealogical societies, libraries, archives, and corporate and governmental entities, we have more and more vital records and indexes online, via mail-order, and onsite. I recommend that the NYC DOH reconsider their retrogressive proposition and adopt the following in transferring records to DORIS: 1. Transfer birth records on Jan 31 of the year following 100 years after the DOB. 2. Transfer death records on Jan 31 of the year following 50 years or less after the DOD. Thank you.

K. Manning
Comment:
I am a born New Yorker (Brooklyn) and my family’s genealogist. Over the last 10 to 15 years I’ve been fortunate in obtaining many NYC vital records from the NYC Municipal Records Department, for many of my ancestors, all of whom were born, lived and died in New York City. I urge the Board to not adopt this amendment. The proposed new schedules are prohibitively limiting for genealogists, or those wishing to track family health history. Many reasons against instituting the proposed changes have been given by the other commenters, so I will not repeat them here. I simply urge the Board NOT to adopt this amendment. If anything, the current limits should be changed to make the records more accessible.
Sharon Miller  
Comment:  
Please do not do this. For many of us who lost family in WWII, in the Holocaust, having access to records has been a way to reunite families that were torn apart 70+ years ago.

Linda Sanders  
Comment:  
I strongly disagree with the proposed restrictions on access to NYC birth and death records. Birth and death events are a matter of public record and the associated records should not be severely restricted. The argument that the delayed release of personally identifiable information is necessary to prevent identity theft is not valid. Personally identifiable information is widely available on the Internet. Also, many states openly publish birth and death index info with no proven increase in identity theft occurrences. I respectfully request that NYC make information-only copies of birth and death records readily available to the public.

Michael Cassara  
Comment:  
I am a professional genealogist and a small business owner. I have lived in Queens for 15 years, and have owned and operated a Manhattan-based business for the last 12. My ancestors and relatives have lived in all 5 boroughs and surrounding areas for the better part of the last 150 years. At a time when other cities are liberating data and finding ways to celebrate their unique heritage, these proposed rules seem to be poorly thought out - and, in many ways, crippling. 125 years is excessive - it will do far more harm than good. It has been clearly proven that vital records (such as the ones in question) are NOT a factor in identity theft and, if anything, help to combat it. With a city so rich in history, why prevent access to it? As demonstrated by the extremely vocal response to this proposal - please do NOT pass these excessive new rules. Please allow our city's incredible heritage to be discovered by generations to come.

Maria Sabatino  
Comment:  
Please add my name to the many others who oppose the proposed amendment to the General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records. I applaud the government's desire to prevent identity fraud. However, given the state of current technology and availability of all manner of information on the internet, there are better ways to prevent identity theft. As others have suggested, perhaps issuing "genealogical" or "unofficial" copies of NYC birth and death records would not impede the research so many genealogists and amateur family historians so vitally pursue, and yet still preserve the value of an "official" document for legal purposes. These NYC birth and death records were compiled by PUBLIC agencies using PUBLIC taxes and therefore should remain available to the PUBLIC within reasonable time periods. Why should the regulations in NYC differ from those in other municipalities within NYS? Restricting access has not proven to diminish identity
theft. Please do not punish the majority of law-abiding people by the proposed changes to the law. The good that is served by many researchers outweighs the potential harm by a few "bad apples".

Janet Mulshine
Comment:
I am a non-professional genealogist who has extensively used the New York City vital statistics and archives for both my own family and my husband's family research. I urge you to consider the NYG&B proposals for a more reasonable time frame for releasing document information. I have also known other family members and friends who have used these records to fill in any blank spaces in their own pasts. The need for accessibility must be weighed very thoughtfully against privacy. Thank you for seriously considering these needs.

Russ Wilding
Comment:
I respect the concern that Birth and death records contain individually identifiable information, which may be considered private and therefore should be treated with appropriate regard. However I disagree with the time periods being proposed for making these NY records publicly available. US census records are made publicly available 72 years after the census is taken. I realize census records are not birth and death records, but they do provide a benchmark for releasing information about individuals. I do not support changing the time period of when the NY birth and death records should be released to the public as proposed in this Amendment. I suggest both types of records should be made publicly available, digitally, within 30 days of either the birth or the death.

Pat Iurilli
Comment:
I would like to express my opposition to the proposed changes to the NY laws which will limit access to NY vital records. I am very much against any such changes to the laws. I was born in NY, was married in NY, and so were my parents and siblings, as were my extended family, and although I now live in NJ, I am against any tightening of any laws to restrict access to any vital records. I do not feel that by giving access as currently mandated, that constitutes a privacy risk or any other type of risk. I think that the old adage applies here to not try and fix something that is not broken.

sandra fowler
Comment:
As a part-time genealogist and NYC history researcher, I would like to go on record as saying that I am absolutely opposed to the new restrictions that the NYC Department of Health is proposing on vital records access. There are means by which the city can insure the records are not used for nefarious purposes, without impacting the access that historians, librarians, museum archivists, and researchers from around the world currently have.
Barbara Krawiec
Comment:
Thank you for permitting us to share our thoughts and concerns. While, on the surface, the stricter rules seem prudent and respectful in light of identity theft issues, the fact that there are continuing security breaches of government servers and other public and private entity servers makes these proposed rulings NOT foolproof. On the other hand, balancing the right to know with privacy issues, I am living proof that having learned at age 69 that I had a half-brother that I am stymied from finding thanks to NYC’s already too-stringent policies, policies that are NOT (thankfully!) in place in most other states in this union, is frustrating and heartbreaking. Born in NYC, as were the relatives I am agonizingly trying to locate—to no avail/with zero possibility under the revised proposed rules of ever finding—makes me sad/regretful, rather than glad/grateful to have NYC roots. Please reconsider keeping the current timeline in place—or reducing it, not increasing it—so that those of us searching for relatives have a fighting chance before we die of learning the truth about who we are and whose we are. Please do not close the door on us by making available genealogical records at the current (already sufficiently time-delayed) access rates virtually impossible to obtain. Realistically, given the proposed timeline changes, in effect, at least one immediate genealogical generation (and more likely two) will be not outlive the requisite wait time…thus never gaining access to records that make us more fully human—more fully New Yorkers with a rich family and community history. (Watch the tv series “Long Lost Relatives” if you want to see the heartbreak of searching for familial relationship answers. I find it hard to believe you would penalize NYC members once you see how gut-wrenching is the quest for answers. Please don’t close the door to those answers. Thank you!)

Pearl Lipner
Comment:
Besides the obvious health and medical benefits of having the information from family member death certificates, please remember the millions of Jews who are trying to make family connections after the Holocaust. These records can be vital to making families whole. Thank you

Steven Wohlsteteter
Comment:
I strongly object to the proposed changes to Article 207 of the NYC Health Code for Birth and Death records. Though privacy and protection of individuals are paramount, the current law still seems to sufficient.

Diane Ungar
Comment:
I am also a semi-professional genealogist and family historian and archivist. I would have to be DEAD before I could investigate my family's (or others’) lineage to locate missing family members, to find out what relatives died from in order to establish what diseases might run in families, and to pull together for the still-living, often already old, a composite of the family background they seek to know before they themselves pass.
But making it 125 years after birth is ludicrous. And 75 years after death - well, why not just upon death. They are gone. Identity theft may still be something of an issue but clearly not a robust issue and one that bumps up against other equally compelling needs and concerns for family history and historians and archivists. To seek out these records? Well the thieves have far more easy ways of getting maiden names, parental names and so forth. That said, it is not at all fair to penalize families doing family research to prevent us from researching them until WE OURSELVES are ostensibly also DEAD. Unfair, patently unfair, esp in light of other ways that thieves have already long had to get similar information. Keep info confidential till death? Maybe, but it still might get in the way of archivists. No one who submits to the govt expects their records to be confidential, and I would bet that more people WANT information than WANT TO HIDE information. Your new proposed rule is utterly on the wrong track, I cannot urge you enough DO NOT PASS THE NEW PROPOSED RULE(s) - keep our research and access alive. Let us know who we are and where we came from, from whom we came and to whom we are related. Do not relegate this to when people are too old to know and share and gain traction and meaning from the discoveries. PLEASE, I am beseeching you. Thank you very much, Diane E. Ungar, Esq. Attorney at Law Family Historian & Archivist

Mary Colbert
Comment:
I strongly object to the extreme restrictions on the birth and death records. My immigrant ancestors lived in NYC for several generations. They had no land, no will and, the birth and death records are often among the few documents available for them. There is no reason to restrict birth records for 125 years, most places restrict for 75 - 100 years. The Irish records are available at 100 years and if someone older is alive and wants to restrict them they can do so (If you are over 100 years old and you do not wish the image and details of your birth record to be made available on-line, please make a request in writing for the Department to redact the records from www.irishgenealogy.ie.) Death records should be available after 50 years - this is common in many places and has not caused any problems. My father came from a very poor family which kept no records. I was able, using NYC records, to put together a family tree for him. I can see no reason to change the law, if it ain't broke, don't fix it. Thank you.

Eliana White
Comment:
Please do not further restrict access to NY records. It is so challenging already to follow my family in Brooklyn dating back to the 1800's through the mid 1900's. I need marriage, birth, death records at the minimum Further limitations will make it much more difficult.
Patricia Ann Kellner
Comment:
Vital Records brought my extended family back together for the last 3 years at Family Reunions... Because I found vital records for my great grandparents, I became interested in our family history. Those interactions led to me bringing family back together at our Family Reunions. Cousins have come from all over the country back to NYC for those reunions. And the best part of all... our children now feel more grounded as they've connected with their extended family. Please continue to give families access to vital certificates, they are essential in helping all of us, and our children, to know our family history and connect with one another. Any proposed changes should make the job of finding family easier. Solid families and good society depend on it!

Maureen Murphy-...
Comment:
I am in total agreement with "Reclaim The Records" on this issue you are proposing and intend to fight with them by financially supporting them to stop this proposal, Your department is the most rude and condescending employees I have ever had the displeasure of dealing with and I still have no call backs or answers to my inquiries. You have no right to impose this proposal on the public. We who cherish our family histories and past family members and have worked for years on our genealogies will not accept this proposal without a fight. I am also going public on Facebook to make as many others aware of these shenanigans as possible. They may not be in time to meet the dead line today....but you can bet there will be a backlash when we join up with "Reclaim The Records..... and legally fight this.

Anne Merrell
Comment:
I strongly oppose the proposed restriction on public access to public birth and death records for 125 and 75 years, respectively. These proposed limits are unnecessarily strict and eliminate important transparency. These records are vital for the genealogical community and for tracing family medical histories, which can often only be done through vital records. Having to wait 75+ years to access family birth and death certificates, hinders an individual's ability to make important medical decisions. Vital records have great significance in historical research. New York City is of great significance to our country's history as it was the arrival port of millions of immigrants. Some of whom stayed for a few days and others for generations. There is no evidence that limiting access to vital records reduces identity theft or improves public safety and privacy (on the contrary, there is some evidence that open access to public records deters identity theft). Without an evidence-based rationale for imposing restrictions, arbitrarily limits these important activities.
Stephanie Locke
Comment:
You have no right to keep the public from accessing their records. You do NOT own our records or the records of our ancestors...I can think of NO GOOD reason for you doing this, except that you are LAZY and have decided it is not VITAL to YOU! I would hate to think that this is for any other reason, because that would be diabolical. Those of us who are working as Genealogist or tracing the roots of their family will be severely hurt by what you are doing. Who gave you the right to destroy the records you have already destroyed? I have just found out about this and intend to obtain legal advice. I see a class action suit against the State of New York in your future, when the public is made aware of what you have done. I am NOW on record as opposing this proposed RULE.

Bonnie Belza
Comment:
I adamantly oppose the proposed restriction on public access to public birth and death records for unnecessarily long periods of time, 125 and 75 years, respectively. These proposed limits are stricter than those in place in almost any other jurisdiction in America, and are based only on the "2011 Model State Vital Statistics Act," which has not been passed by any legislative body or subject to any public comment. As a former New York resident with many present and past family and friends living in New York, I am dismayed at this proposal. Restricting access to information which is vital for health, genealogical and historical research is a disservice to the tax payers who provide for the preservation of these records. The argument for security is spurious as restricting this access will do little to deter the determined criminal and punish the millions of honest users. DO NOT IMPLEMENT THIS PROPOSAL>

Bill Gladstone
Comment:
As a genealogist I often use the NY birth, marriage and death records. I oppose any extension of the privacy time restrictions before these records become available. Much better to shorten the period until the records become available so as to enhance the public's ability to research our family heritage. If you can't shorten the period, at least don't make it longer!

Denise Duffy
Comment:
I have been very grateful in my genealogy search to have access to birth and death information from my ancestors. I am concerned that this would severally impact my ability to conduct future research. Is there some other way to protect the privacy of these records instead of restriction. Thank you.
Jay Paul
Comment:
I am very concerned about this proposed new rule. While it purports to safeguard against identity theft, there have been no cases that I am aware of where identity theft has occurred based upon access to paper copies of vital records. Instead, those focused on identity theft are carrying out (apparently quite successfully) hacking of major businesses to access personal data (most recently the extraordinary hacking of Equifax). In addition, some people succumb to various email "phishing" efforts, where they may be lured to fake websites and asked for personal information. The very limited potential for identity theft in the case of vital records is based upon the limited return for the effort of requesting a particular birth or death record -- which only gives the potential of the theft of a particular individual. The older a person gets, with limited income, the poorer a choice they would be for identity thieves. In contrast, the loss to those of us conducting genealogical research is tremendous. I was born in Brooklyn, and many of my relatives were born, married or died in New York City. In addition, I have been working hard to link up the specific relationships of persons whom I only know to be distant cousins. My genealogical efforts began when I was in my late teen -- I am now in my early sixties. The potential loss to me of clarifying family linkages and family information by this change in rules is enormous, especially as I learn about further lateral branches of my family tree. Others working in the area of genealogical research would be similarly hampered. The costs to many contrasted with the hypothetical benefits to a few by changing these regulations is simply way out of balance. I beg the governmental authorities reviewing this proposed rule change to veto any such alteration to the current time frames in place, which are stringent enough.

Deborah Dworski
Comment:
It is absurd that I can view online, free of charge, all of my relatives' Austrian & Polish birth records from the early to mid-1900s, yet I cannot access, under any circumstances, my own grandmother's 1910 Manhattan birth certificate. This is beyond privacy-overkill; it's totally irrational. Is there really a problem with identity theft in the 100+ age group? I think not. And as for not wanting to divulge one's real age, I've yet to meet anyone over the age of 90 who isn't thrilled to shout from rooftops that he or she has survived on this planet for nine decades. The proposed change for viewing death certificates is even more surreal. Our societal standard has long been to lift the veil of privacy upon death, and on several occasions, having access to relatives' death certificates has helped save lives of my other family members. When it comes to familial disease patterns, knowledge is power, so I hope you think carefully before withholding potentially life-saving information from public view.

Suzette Stringer
Comment:
I am trying to follow the trail for my family in NYC since their arrival in NYC in 1919 and 1911. Some of the street directories are not available (destroyed in a fire). Making birth and death records inaccessible just puts more frustration in my path!
Ira Leviton  
Comment:  
The statement of basis and purpose to the amendment for article 207 published by the Department of Health states that the proposal balances the need to protect the personal information, especially as it relates to identity theft as well as other privacy issues, with the public’s right to access historically important records, including the specific interests of families, genealogists and other researchers. This is utter nonsense. There is no balance in this proposal - it shuts out the public's right to obtain *public* information in any meaningful way. I hereby remind the Department of Health that birth and death certificates are public documents that happen to contain some private information - and the time limits being proposed are absurd. Identity thieves and other people with bad intentions seek to obtain records that are useful to them in electronic format so they can obtain millions of bits of data in seconds, not old birth and death records one at at time. Furthermore, birth certificates of people who are no longer alive should be available to any other person - the right to 100% privacy and confidentiality of the information on them does not apply beyond the grave. Death certificates are public documents, with the arguable exception of medical information, which can be redacted. This proposal is tremendously unfair to genealogists (whether professional or hobbyists), people interested in the history of New York City, the vast majority of family members, and others who have a right to this information without waiting 125 or 75 years after the fact. The Department of Health is moving in the wrong direction on this - other jurisdictions (entire states, such as Pennsylvania and others) are making it easier to obtain this information by methods such as putting images of death certificates on the Internet for direct viewing, and in the case of death certificates, some states such as Florida allow anybody to obtain a death certificate (except for the cause of death information) with no time delay except for the several weeks it takes for it to arrive in the mail. The 21st century is the information age, not the information suppression age.

Rona Pertz  
Comment:  
I have been researching family genealogy and wish to continue to accords birth and death records. The proposed changes would preclude access to records for ancestors who have been in this country for less than 125 years. This would preclude continuing to research family line. I oppose this change.

B Robertson  
Comment:  
Please do not pull up more barriers than what's already in place. Manners of Vital Statistics are public record and also data to make sure that the medical profession and research and other items should be considered. Also having the ability to verify affiliations of the past based on connections should be honored. It is not necessary to put up more barriers. There are laws in place currently that protect confidentiality. We don't need more please shoot down this additional Amendment.
Anna Stern
Comment:
I oppose the proposed rules for several reasons 1) The argument that this will prevent identity theft is specious. The data on identity theft do NOT show that access to vital records is a contributing factor. http://www.identitytheftjournal.com/common-causes-identity-theft/ https://www.libertypowercorp.com/leading-cause-id-theft/ 2) I was an Associate Commissioner of Information Technology at HRA until 2016. Trying to get records from NYCDMHMH was problematic even when it related to the official business of the City. This is an agency that does not want to make important data available, period, and keeps finding exercises for refusing to do so. 3) I am an amateur genealogist. Like millions of other Americans, my family settled in New York. To prevent us from getting access to birth and death records would prevent us from learning a great deal about our ancestors, all for no reason. 4) I have family members who are adoptees. This will prevent them from learning about, and locating, members of their birth family, which will be very painful to them. In summary, do not allow this regulation to be implemented. NYC has perfectly valid rules covering records, pane DORIS is an able custodian with viable protocols. Please don't let a meaningless bureaucratic response from NYC HDMH overrule that. Thank you,

FREDERICK KOLBRENER
Comment:
I am opposed to the proposed rules change. I am currently 72 and have been working on my family's genealogy since 1982. If these rules are implemented, it will have a detrimental effect on members of my family to piece together family members and write family histories. I have depended on birth records to establish correct dates of birth, prove that unknown (= died early) children were born in the family; establish when and where members were married and to whom (wife's maiden name is key to building a genealogy) and establishing the dates of death and in sole case the cemetery where family members were buried. My family came to this country in 1886 and 1890 and although some children were born overseas, many were born in the NY area. If you implement these rules, it would have been impossible for me to locate the actual marriage dates and maiden names (often in question or lost) for the majority of my family members. Implementation of the proposed rules would mean that I would be able to START on my family’s genealogy in about another 2 years and I would not have accomplished what I've been able to assemble so far..

Victoria Boutilier
Comment:
I am a lifelong resident, a taxpayer, a voter, and (soon) a parent of the City of New York. The proposed rules concerning access to New York City birth and death records are unreasonably extreme. More reasonable rules do not create a risk of "identity theft" because nobody is requesting for the right to obtain certified copies of the records of unrelated "living persons," who have an identity to be stolen in the first place. And there
are ways to release death records that omit, say, Social Security numbers, something that is common practice in other US States. The proposed rules, which are already being practiced, have hindered and will continue to hinder legitimate research. The rules will reduce tax revenue from professionals who rely on research for their income and reduce satisfaction in government by New York voters who have ancestry in New York. I would like to see the laws of the City of New York similar to that of the rest of New York State, for example, 75 years after the birth *if DEATH CAN BE PROVED* and 50 years for deaths. These regulations have hardly proved a disaster for the rest of the state. --Victoria Boutilier, Brooklyn, NY

Nancy Mumford
Comment:
I strongly oppose the proposed Amendment. Genealogists MUST be allowed to access vital records, often the only source to trace family history, find family members or trace medical issues. Many other states offer options to genealogists such as issuing an "informational" copy of a record which is a perfectly reasonable alternative. We are far more at risk from hackers than from genealogists.

John Dorman
Comment:
While I am very sensitive to privacy concerns, I believe that the proposed restrictions are excessive and will unnecessarily handicap genealogists and others with legitimate need of the records. I believe that the current timelines and controls should be maintained.

Alec Ferretti
Comment:
I recently applied for Dual Italian Citizenship. Descendants of Italian immigrants can be legally recognized as citizens if they fit certain criteria. I had to supply the birth, marriage, and death certificates of five generations of my ancestors, many of whom lived in New York City. Under the current law, I am not legally entitled to my grandfather John’s birth certificate. He was born 89 years ago, and has been deceased for 20. If my dad hadn’t been able to sign the form, I would have had to go to court. I could easily prove my relationship to him, we even have the same last name! Yet this didn’t matter. To get a simple birth certificate, I would have had to hire an attorney and go before a judge! It would have been so cost-prohibitive, I couldn’t have become an Italian citizen. But what about the oft-cited fact that the document itself can increase identity theft? Even if the information can be found from other means, doesn’t having the original certificate make it easier to steal someone’s identity? The answer as it turns out is a resounding NO! I went state by state and tabulated the policies for each and every department of health. There is almost no continuity. Some states, like Massachusetts, Connecticut, and California have almost no restrictions on their records. A relative can get any birth or death record they want, be it from the 19th century or last week. Others like Mississippi or West Virginia have some of the strictest restrictions in the country. Incidentally, not one state is as strict as that which New York City proposes. I then analyzed state by state the rates of identity theft published by the FTC and cross
referenced the two data points. Theoretically, if access to vital records increased the likelihood of fraud, states with lax laws would have higher rates. As it turns out, they don’t. At all. I’ve plotted all the data out on this scatter plot: states with open records are on the left, stricter states are on the right. The Y axis represents the level of fraud. This line of best fit represents the level of correlation between the two, or in this case, the lack thereof. The slope of the line is nearly 0, meaning there is virtually no correlation. In fact, it slopes slightly upward, meaning stricter states have a slightly higher level of fraud. This entire proposal is based on an assumption, that in no way shape or form is factual.

Linda Zolinsky
Comment:
Please do not make any changes that would further restrict access to vital statistic records. As a genealogist and family researcher these records are imperative to read and study. As genealogist we know that these records will provide information that we cannot obtain elsewhere. Please understand that anyone wanting basic information to do harm can obtain that information in other places and sometimes online. Those of us that lives outside the state of New York but can trace our family to New York rely on these records. Thank you

Rachel Silverman
Comment:
As a professional genealogist based in NYC who specializes in immigrant populations, and as a tax-paying New Yorker, I strongly oppose the proposed restriction on public access to public birth and death records for 125 and 75 years, respectively. These proposed limits are stricter than those in place in almost any other jurisdiction in America, and are based only on the "2011 Model State Vital Statistics Act," which has not been passed by any legislative body or subject to any public comment. The proposed time restrictions are entirely arbitrary, based on exactly zero evidence. These rules will not only have a detrimental effect on my own livelihood, but on the family history/genealogy communities as a whole. It should go without saying that the City’s income will also suffer as a result of the thousands fewer record copies that will be allowed if these rules are enacted. There is no evidence that limiting access to vital records reduces identity theft or improves public safety and privacy (on the contrary, there is some evidence that open access to public records deters identity theft). Enacting a 50-year embargo on death records and a 100 year embargo on birth records strikes a much better balance between privacy concerns and the need to access and use public records in a reasonable time frame. If changes must be made, I strongly encourage the City to adopt these more reasonable limits. But in truth, there has never before been a need to enact such restrictive policies, and there isn’t a need now.
Veronica Malmberg
Comment:
Please reject this new model rule affecting the release of birth and death records. I am a native of NYC as were my parents and grandparents. I have spent many years tracing my family history but still have many gaps in my research. As other commenters have said there are many many examples of stolen identity data. Criminals do not need to go to the trouble of trying to obtain a birth or death certificate from the City of New York to get this data. Does NYC need to put up this roadblock to family history researchers? You mention amended birth and death certificates as an issue but the numbers appear to be very small compared to the total number of births and deaths. Perhaps more rigorous justification for amendment would work for you. Thank you for listening.

Michael Carlson
Comment:
I understand and sympathize with the argument made in the Statement of Basis and Purpose that because a handful of birth and death certificates may be modified, this may cause authenticity “confusion” and therefore require whole series of records to be withheld for a certain length of time. I think this is a minor concern. Probably most of the “pre-modified” certificates in the public space are those received by the individuals who subsequently proposed changes made to the certificates and perhaps close family relatives. Confusion can be mitigated through clear descriptions in catalogs and other finding aids. But I believe that the argument does not justify closing whole series of records for the length of time in the proposed rule.

Benjamin Milder
Comment:
I am a New York City resident and I oppose this amendment. The proposed waiting periods are far too long and would keep public records from law-abiding New Yorkers for no good reason. It is not plausible that providing access to death certificates from the 1950s would create any meaningful risk of identity theft. In fact, access to such records could help the public combat identity theft.

Irene Monley
Comment:
As a genealogist whose family lived in New York City from the 1800’s to the 21st century, the birth and death records that have been available on microfilm and online have been invaluable. For the insight to my family’s history that those records have made possible, many thanks. I think that the proposed 125-year limit on birth records is too onerous. A 100-year rule would be adequate. Maintaining privacy is obviously of utmost importance. However, although you cite continuing improvements in longevity, in fact, those improvements are slipping. Just yesterday, Bloomberg reported that the Society of Actuaries found an increase in U.S. mortality from 2014 to 2015. This is likely not an anomaly, given the rollbacks in access to healthcare coverage and EPA regulations. The proposed 75-year rule for death records is appropriate. Thank you for the opportunity to comment.
Mary Collins
Comment:
I strongly oppose these Proposed Rules. I believe that the time period is excessive and not needed for security. It will be almost impossible to trace families in New York.

Judith Forbes
Comment:
My husband's mother was born in 1916 and was adopted in NYC. We have the adoption papers but not the original birth certificate. She died, her biological parents are dead, her adoptive parents are dead. According to your current and proposed rules we will be dead b4 her information is available. The current and proposed rules are way too restrictive to access information for genealogical purposes.

Lisa McCole
Comment:
Please DO NOT implement this proposed change. It will not make sense to put in such restrictions to the access to birth and death records. I do not agree with this proposed change.

Christine Angel-Wich
Comment:
I am a former New Yorker who is totally opposed to this piece of legislation that NYC is attempting to put to a vote. I have to agree with the other comments that we are a country of immigrants and we should be allowed to have access to records of our ancestors/people to have gone before us for our personal interest as well as for the interest of others. It is a joke already that as an adoptee from NYS, that I have to wait 99 years in order to officially find out who my real parents were. I am 66 years old and it is about time that NYC and NYS move into the 21st century and allow this information to be public. And now you are trying to say that someone like me who would live in NYC would have to be 125 years old to find out info about their birth parents?? What planet are all you people living on?? Get your heads out of the sand and get rid of this ridiculous proposal. I am a novice on looking up ancestral information and by you blocking all this stuff prohibits me from having access to information that could be vital for me. Look around you-- even NJ has gotten their heads out of the sand and have lifted these ancient laws.. And now you want to enact new ones?? Get real !!!!!!! I sure hope that this proposal never becomes law...

Virginia Roarabaugh
Comment:
As a family historian, and generally a believer in freedom of information, I strongly object to limiting the birth and death records. The restrictions are stringent enough as they exist, and this only puts a hardship on those of us trying to do legitimate research. I am sure there are ways to counter any illegal use of birth and death records other than making a limitation that impedes genealogical research.
Matthew Ladd
Comment:
I urge you to reconsider the proposed rule. I travel to New York once or twice a year and always make a point to visit the Municipal Archives to research my family's history with the vital records. The current New York State Department of Health rules for making vital records public are a good balance between privacy concerns and providing access for legitimate purposes. I suggest that the New York City DOHMH adopt a similar protocol for its records. Thank you for your consideration.

Steven Lally
Comment:
Making access to birth and death records more restrictive is unnecessary. I concur with the many points already mentioned in this comment section. I am a researcher who has worked on my own genealogy and that of others, in addition to using the currently available records for historic research. My family has lived in all five boroughs at one time or another over the past 184 years. I have been a resident of Brooklyn for the past 20 years, and I lived in Manhattan before that.

Nancy Bateman
Comment:
Most of my family started out in this country in New York City. I am an amateur genealogist, and I am in agreement with the 125 year schedule for making a birth record public, but I would favor a 50 instead of a 75 year schedule for making a death record public.

Donald G Wilson
Comment:
This records access is more restrictive than the restrictions required by the State. Although I now reside in the State of Washington, my ancestry is extensively in New York City. My research depends on access to NYC vital records information. Should these more restrictive dates be enacted, please at least consider providing index access to these events after the present access dates. For death, the index information would include decedent's name, date of death, place of death, parents names, and disposition (cemetery name), and perhaps certificate number. For birth, name of individual, place of birth, date of birth, and mother's name, and perhaps a certificate number. Access to this information would at least mitigate for genealogists and researchers the overly restrictive time periods proposed.

JAMES BOOTH
Comment:
I am writing to state my opposition to the proposed rules to restrict access to Birth Certificates until they reach 125 years and Death Certificates until they reach 75 years. While I am supportive of plans to begin turning over older records to the NYC Municipal Archives, I find these age limits to be highly restrictive and a hindrance to those of us
who research their family history. We all share the need to ensure that the identity of individuals is secure, I believe there are ways in which we can keep records open and also protect the identity of those who were born and died in the City of New York. I have therefore put together some ideas about how we may be able to do both. My proposal would be as follows: Birth Certificates: Birth Certificates would be kept by NYCDOH for 100 years. Up until 100 years, birth records can only be accessed by the individual on the record, parent of the individual, and the spouse of the individual, if the person on the record is still alive. If the person is deceased, and the death can be proven, the record would be available to anyone with a blood relation to the person on the record. After 100 years, the records are then turned over to the NYC Municipal Archives. To protect the identities of any individuals who may still be alive, the NYC Municipal Archives would not certify any record less than 125 years old and the record would be stamped conspicuously with a stamp stating "For Genealogical Use Only." This would prevent the record from being used in any official capacity that would result in identity theft. A certified copy could be made available to anyone eligible as if the record were less than 100 years old. (Using same standards as above). At 125 years, all records could be certified by the NYC Municipal Archives. Death Certificates: Death Certificates would be kept by the NYCDOH for 60 years. A certified copy would be available to the child of the deceased, parents of the deceased, siblings of the deceased, grandchild of the deceased, or anyone with a legitimate right to the record for estate purposes. After 60 years, the records would be turned over to the NYC Municipal Archives. I do not see a reason beyond 60 years for any additional restrictions. Therefore, NYC Municipal Archives would certify any death record it issues. I would ask that the City of New York consider these proposals as a compromise to allow researchers to continue to have access to most of the records they have access to now, while also counterbalancing the need for greater identity security. Thank you for your time and attention to this matter.

Comment:
I oppose the proposed amendment to the general vital statistics provisions. As a genealogist, I believe the proposed schedules for making these records public and transferring them to DORIS are excessively long.

Cara Berkowitz
Comment:
I am an New York City resident and my family has lived across NYC for decades. Having access to vital records has been instrumental in my family research and are a great resource for the public. I am grateful to have the ability to obtain these records and making them more difficult to access will impede New Yorkers like me that one to learn more about their own family history and track down loved ones. Protecting citizens from fraud is important but given so much personal data exists online, locking up older records seems like an unhelpful and impractical solution that will do more harm than good.
Kim Cotton
Comment:
I strongly oppose the proposed rule restricting vital records. Restricting these records not only makes it difficult for people to trace their family medical history, but also keeps them from appreciating their own connection to New York. As a professional genealogist, access to original records are necessary and critical to my work, which includes helping to connect people to their roots — roots which often pass through New York for days or decades. Please reconsider reducing access to these important records. I stand with the New York Genealogical and Biographical Society in their call to consider a shorter restriction period for the public and to allow access sooner to members of NY genealogical societies, if some additional restriction is truly warranted. Thank you for your consideration in this matter.

Karen Horn-Jansen
Comment:
I am a family historian/genealogist and I am utterly disappointed and concerned that the proposed waiting periods are inappropriately and unnecessarily overly cautious. I am a native New Yorker and so is my husband. His family has roots in the NYC area for the past few generations and so I rely on NYC records to research his family history which is also the family history of our children. I do not believe that any damage results by allowing genealogists and/or others doing family research to have access to these documents.

John de Jong
Comment:
RE: Amendment to Provisions of Article 207 of New York City Health Code Regarding Proposed Transfer Schedule of Birth and Death Records to DORIS I am writing this letter in consultation with our Chief Genealogical Officer, David Rencher, to inform you that FamilySearch International is very concerned about the proposed changes for access to birth and death records as proposed by the New York City Department of Health and Mental Hygiene. Please review the attached for our recommendation. thank you, John de Jong, AG® North America Field Relations Manager FamilySearch International Email: jdejong@familysearch.org

Jean Moore
Comment:
I, too, am strongly against changing the rules for vital records access. Please check with other states that are more genealogically friendly -- like Ohio and California and Nevada. There is no good reason to keep the vital records of NYC private for so long. Family history research is important to so many people and needs to be as accessible as possible. Thank you for your consideration.
Stephanie Ray
Comment:
New York is not just another municipality... it is the prime port of emigration for millions upon millions of future U.S. citizens. While the urge to prevent "ghosting" is certainly admirable, the use of the stamp "For Informational Purposes Only" is sufficient for that purpose, and there are very effective tools available to monitor one's credit. New York is too important to too many people to allow further restrictions of information. What is the point of collecting the information if it is not available to use?

Bruce Schoenberg
Comment:
As a lawyer and amateur genealogist, I rely on access to birth and death certificates to do research. These records are also necessary for legal purposes, including proving heir-ship for inheritance purposes. There is a great deal of personal information regarding individuals already available on line, including dates of birth and social security numbers, and keeping vital records secret will not appreciably reduce the risk of identity theft. These records have been open for years, and I have not heard of an epidemic of identity theft using vital records -- you are much more likely to have your identity stolen due to a credit card data breach. This seems like a solution to a nonexistent problem. If any type of rule is adopted, there is certainly no reason to protect death records, as there is no privacy interest after death. I urge you not to adopt the proposed rule. If any new restrictions on access to public records are imposed, I urge you to include exceptions for the purpose of legal and genealogical research. Respectfully submitted, Bruce Schoenberg

Nicole DeRise
Comment:
I strongly oppose the proposed amendment to limit access to birth and death records. As a historian, this proposal will severely limit my ability to conduct research and add to the historical canon. History and the associated primary sources are essential in helping NYC'ers and Americans identify who they are. These records help us think critically by making us assess and contextualize, and, ultimately, make us more engaged citizens, citizens who know where we come from and how. Additionally, we cannot ignore that vital records have applications and implications across legal and medical landscapes. Limiting access to vital records is not going to solve the problem of identity theft, and it is naive to think so.

Margaret McMahon
Comment:
I strongly oppose these new rules. These proposed rules are unrealistically strong and stricter than almost anywhere else in America. They would be devastating for legitimate researchers.
Richard Getz
Comment:
Please do not pass the unnecessarily strict proposed guidelines. I am an amateur genealogist and agree with other comments that there is value in accessing records for historical reasons and they are becoming increasingly valuable for medical reasons. I believe a better balance between security and historical value would be to match New York State’s existing guidelines of - Birth certificates - if on file for at least 75 years and the person whose name is on the birth certificate is known to be deceased - Death certificates - if on file for at least 50 years - Marriage certificates - if on file for at least 50 years and both spouses are known to be deceased

Jane Barber
Comment:
I strongly oppose the proposed changes to Vital record availability. These proposed changes would impose a real hardship on those of us who are researching our families’ histories.

Tony Mc Carthy
Comment:
I am a genealogist based in Ireland and I believe that the proposed restrictions on the availability of Birth and death certificates is excessive and unnecessary. The proposals are not in keeping with those existing in most western societies.

Bobbie Sue Daitch
Comment:
Regarding: Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records, there is NO reason to make this change. Use your employees to make records available to those of us who are looking for our family history. Stop wasting taxpayer money to write more restrictive rules. WE WANT ACCESS! Thank you!

Ya’akovah (Jami...)
Comment:
PLEASE do not change the rules concerning availability of old birth and death (etc.) records! Genealogy research is challenging enough, without the government making it even worse! If this proposal is carried out, G-d forbid, it would limit the ability of anyone, even perfectly law-abiding genealogists, to gain access to old New York City vital records. These proposed rules are stricter than almost anywhere else in America, and would be devastating to anyone researching New York City ancestors or collateral lines. Imposing these restrictions is like locking up my relatives in a dungeon, only to be seen by far, far removed generations who may not have enough information to know to look for them in the first place! This info. should not only be available, but it should be available ONLINE, like many other cities' records of this sort! I have made the trip by
Caroline Shultz
Comment:
I strongly oppose this provision. I believe personal information is adequately protected by the current regulation. The only result from this provision, if passed, would be to keep historical and medical information locked away from legitimate historians and researchers. The amount of time in the proposal does not make sense, as most of the information can be found publicly already... Dates of birth are listed in other public records. Dates of death and location are released by Social Security after 3 years. DO NOT PASS this proposal to amend Article 207.

Ed Howard
Comment:
Even the Federal Census bureau has a less restrictive view of our family records than the proposed changes. As most people in my family have arrived in NY and chose to live there or across the river in NJ I find that not being able to see their records which will lead to their lineage is excessively restrictive and basically unnecessary. Most identity theft will not occur by searching these records. If I were to search the web I know I will find people who have my SS number and other personal data. As a matter of fact while trying to find a friend of mine I found more personal history than you are trying to "protect". Please leave the rules the same or if anything make them less restrictive. Thank you for having this forum available.

J Adams
Comment:
I oppose your making access to birth and death records more restrictive. The timeframes are way too restrictive. Access to vital records rarely cause identity theft. Look at how other states handle their records. Perhaps you need to do some research in the matter before making unnecessary rules. People need to access their family records for family history research and family medical research. Do not fix what is not broken.

Catherine Negrycz
Comment:
I think the proposed new rules increasing the time periods are excessive and far exceed other state and cities time frames. The living have a right to know about their ancestors, and not only direct ancestors, but those that are related like aunts, uncles, cousins, etc. It is part of a person's own history, something that is important to people today. Even young school children ask questions now. My own generation, I'm 74, did not ask questions, which was considered impolite, but we lost so much knowledge of our backgrounds because of this. We can build our story, our history with access to records...
such as birth, marriage and death. In the cases of fraud, why punish the many because of the few.

Carol Fisher
Comment:
NewYork vital records are essential to those tracing their lineage. Please, Please do not close these records to us. My family lineage is all from New York state, and dates to 1630. My family members will be at a loss to research without the records you retain. We just experienced the addition to our family a cousin and brother (current age 70) who had been adopted at birth in New York, and was registered as adopted in New Jersey. thanks to his efforts, the law regarding adoption records opening in Jan 2018. We never would have known of this wonderful man and family member without this release of records. Please Please do not close us off our family history.

Karla Huebner
Comment:
I request that the proposed time periods limiting access to New York birth and death records be reconsidered. While I appreciate the desire to protect privacy of living persons, this proposal goes much too far. The general public benefits from reasonable access to family history and health data, while identity thieves have shown that they (unlike the general public) are quite capable of hacking into insurance and financial databases to steal massive amounts of personal data. Thank you in advance for your attention to our comments. Karla Huebner

Helen Keating
Comment:
Please keep all historical vital records available to the public...they are valuable resources for those seeking historical records for genealogy purposes.

Mary Ann Mooney
Comment:
I would not have bee able to find my family female deaths from breast cancer if your proposed rules were currently being enforced. I have told my physician about this history and she treats me as being in a high risk category. The persons whose lives are shamefully affected are adoptees searching for their family members. Not only are you denying them the information you have on your family, you are denying them their basic medical history and negatively impacting their basic rights to proper medical treatment. This tightening up of year restrictions is not considered legally required in the rest of New York State. You should strongly consider adopting the New York State restrictions which are working well for millions of out-of-City New York Staters. You may want to add a small stamp on the non-certified certificates, stating "not certified." Please do not use a stamp that obliterates most of the data on the form.
Elisabeth Wellington
Comment:
I live in Iowa but my entire family history traces back to NYC. These are people I have never known. I am a law-abiding citizen of this country and these rules are limiting me to be able to trace "my roots". Family history is important and everyone should know where they come from. The significant rule changes will limit that ability. Don't stop people from being able to learn who they are and where they come from.

Alicia Weiss
Comment:
These rules would have a devastating impact upon genealogists and others who wish to gain reliable information about their families. As someone who lost most of their family in the Holocaust, the ability to trace my existing family through the records of those who came to America and survived is extremely important. Knowledge of one's family is a birthright; please do not restrict those of us with legitimate reasons for accessing these records from doing so within out lifetimes. This is especially important to those of us who are no longer young and cannot wait another 50 years. Thank you.

Steven Wiezbicki
Comment:
Please don't restrict access to these records. Genealogy is the biggest hobby in America. Most immigrants entered the U.S. via New York. A lot of them lived there. How can we find out our ancestry without this resource?

Adam Gelman
Comment:
I am wholeheartedly opposed to the Proposed Amendment to General Vital Statistics Provisions (Article 207). As a historian and genealogist, I find myself searching and utilizing the NYC birth and death record collections almost on a weekly basis. The information found in these records is critical for historical scholarship and genealogical research and can often be found nowhere else. These record collections are already severely restricted in NYC (much more than most U.S. jurisdictions), so any further restrictions sound ludicrous. I understand the fear of identity theft and the transfer of “personal” information to the public, but the claim that these records in some way pose a threat to the identify of living persons is baseless and unfounded. The 50-year confidentiality period for deaths and a 75- or 100-year confidentiality period for births seems more than adequate to me. Again, I vehemently oppose this proposed amendment and sincerely urge the NYC Department of Health and Mental Hygiene to reject it.

Sean DALY
Comment:
I am a native New Yorker who returned to NYC this year after many years abroad. I began researching my father's family, about which I had little information: he passed away with Alzheimer's years ago and himself knew little about his grandparents, as his
parents were deaf-mutes. He had passed two handwritten documents to me, from his mother and an aunt, which had inconsistencies (and errors and omissions, as I have discovered). With the assistance of the NYC Municipal Archives and the National Archives office at Bowling Green, as well as the staffs of Holy Cross and Calvary cemeteries, and of course genealogy services (FamilySearch, Ancestry, & FindMyPast), I have succeeded in identifying nearly all of my family members who emigrated from Ireland to New York in the mid to late 19th century. My research has also located two previously unknown cousins my age, both of whom possess photographs I had never seen of my great-grandfather, grandparents, and my father, aunts and uncles in their youths. One of these cousins had not even known who these relatives in the photo were, and was thrilled to learn their stories. Under the proposed rule, this research (which is of great interest to over two dozen cousins throughout the USA as well as my mother and siblings) would be far more difficult if not impossible. The birth records of my grandparents and great aunts and uncles born in NYC would be sealed. So would the birth records of cousins of my grandparents, for example a WWII Airborne veteran buried in Arlington who died during the Korean War. I realize the rule would not apply to previously released records, however even recent records have been very useful for me. For example, my grandmother and her sister had a great feud in the 1930s which greatly affected my father's family (they were evicted from their home). My research turned up a distant cousin from Ireland who emigrated in 1925, staying at first with my great aunt; she married in NYC in 1927 and from there, I found her daughter's marriage in NYC in 1955, and I am close to finding her son my age somewhere in the West - a person who called my first cousin ten years ago trying to learn about the family. This cousin could help me understand what happened all those years ago. Records of the Catholic churches in NYC are precise and informative, but quite difficult to find, as there is no central index. The federal and state censuses, cross-checked with the NYC municipal vital records, have allowed me to identify the relevant parishes, where I have research requests underway. I fear that the proposed rule will make this already difficult process extremely difficult, and with only marginal benefit. Identity theft is a real problem, but can be better fought with modern data processing. For example, efforts could be made to reconcile death records to birth records, allowing alerts to be raised if the foundational birth record of a dead person is used to obtain other ID.

Sheila Benedict
Comment:
New York City already has some of the most restrictive privacy rules of any other part of the USA. For me, as a professional genealogist, it is difficult to retrieve important documents my clients need and want. I respect the argument for privacy but the proposed rule changes are far and away the most damaging to our profession as well as to people legitimately needing vital records from New York City. Please do not adopt these proposed changes.

Sean DALY

I am a New York State resident and I strongly oppose the proposed restriction on public access to public birth and death records for 125 and 75 years, respectively. These proposed limits are stricter than those in place in almost any other jurisdiction in America.

Antonia Annecch...
Comment:
I strongly oppose “Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records”. This proposed amendment unnecessarily impedes legitimate research without substantiating the underlying premise. The offered evidence for proposing these restrictions on NYC birth and death records is confusing. The offered evidence refers to “New Yorkers” vs. NYC residents. So, which is it? Will this proposed amendment apply to the entire state or only to NYC? Other than the 2010 census, I would be interested in the statistical proof that prompted the “Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records”. This proposed amendment suggests the authors believe the general population will regularly live up to and perhaps beyond 125 years. Where is the actuarial evidence to sufficiently establish this theory? According to the 2010 census, centenarians made up less than one half percent (0.45%) of the NY(C) population. In 2015 the American Community Survey stated that 901 New Yorkers (presumably NYC) died at age 100 or higher. What percentage of total population in 2015 does that number represent? Where is the evidence that supports the premise that persons “protected” by this amendment are or will be targets of identity theft? How did the authors arrive at the 75-year moratorium on death certificates? Again, where is the available information validating the belief that identity theft is the underlying reason for imposing a 75-year waiting period? How many people in the “protected” age brackets were actually victims of identity theft? Given today’s technological advances and data available in the public domain, the proposed amendment does virtually nothing to protect individual confidentiality/privacy concerns. An overhaul of record-keeping protocols might better serve the public and allow
legitimate researchers access to important research data. Let me reiterate, I strongly oppose “Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records”.

Karen Hergenrider
Comment:
This proposal seems to be fear mongering with the addition of the "feel good" because we NYers (even expats, like me) are living longer. My own relatives in NYC never had obituaries, funeral home notices were considered suspect. Someone will know that the house is empty! Just this week, thousands posted a meme on FaceBook that contained their ancestors’ surnames and maiden names for most of the FB world to see. What is the first security question the bank usually asks? Fearless! The federal government (SSDI) and many states (TX, CA, NV, IN, WA, OH, etc. . .) have had current/recent vital records available on-line for years. Both indexes and scanned documents are freely and readily accessible. Has this caused an uptick in identity theft? Probably not. Anyone with internet access, anywhere in the world can search any name. Dozens of databases exist with information on those who do not fly completely under the radar. As someone who has researched local history and genealogy for 20+ years, I beg you to take a look at what a step backward this really is. Thank you.

Harriet Simons
Comment:
I am the senior member of a family with branches that lived in New York for up to 5 generations. I am also the person who does the genealogy research for all branches of the family. The proposed changes to the rules are absolutely unnecessary and obstructive. In fact I believe even the current rules impose a barrier to legitimate and important research. I understand the necessity to protect living persons but I believe that there should be access to records no later than 10 years after death. I would agree that a 10 year rule might be modified to access to only those showing a legitimate reason by way of registration for each person/family to be researched.

James Tanner
Comment:
As a practicing trial attorney for 39 years and a genealogist for more than 35 years, I am deeply concerned about the changes in the General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records. Both the proposed time periods for death and birth records are unnecessarily excessive. The general references in the supporting information to "privacy" concerns and possible instances of identity theft are totally unsupported by either facts or reality. All of the information contained in both birth and death records is easily obtainable from presently available public records online. As an attorney, for a very small fee, I could obtain the information available in both birth and death records from multiple online companies who specialize in supplying such information. For example, most doctor’s offices require much more information than is supplied by either certificate to obtain the services of a doctor. Targeting these two records serves no purposes. Restricting the availability of death
records such as the recent restrictions on the availability of the Social Security Death Index, in fact, opens more opportunities for fraud rather than restricting such actions. Extending the time periods and adding restrictions to these particular records is motivated by the desire of the government agencies to enhance a revenue stream obtained from selling copies of these records to family members who are required to provide these documents for a variety of purposes. I see no reasons for extending the time periods for either of the two types of records.

Ron Schnell
Comment:
We New Yorkers deserve rights to access our records. These changes must not be adopted, as they infringe on our Rights. As someone who is researching my family, I need access to these records.

Jennifer Mendelsohn
Comment:
Dear Commission Members, As a genealogist with deep New York City roots, I strongly object to the proposed rules regarding access to public birth and death records of New York City. Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City's vital records. We ask that the commission consider the following guidelines for access to public records, namely: ● Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified. ● Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. ● Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information). Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers. Thank you for your attention to this important matter. Sincere regards, Jennifer Mendelsohn

Gary Jones
Comment:
Please do not impose the strict new rules that you are considering. I live in New York and have taught genealogy for years and find that NYS is one of the most restrictive states when it comes to vital statistics. Please don't make these records even more so.

Anne Gallagher
Comment:
I feel the 125/75 year restriction is onerous. In Pennsylvania, we use 105/50, which has proven to be hugely beneficial to genealogists, while still protecting privacy. My
ancestors came to NYC from Ireland, and it would be so awesome to find some (any!) records for them! Thanks for your consideration.

Nathan Schachtman
Comment:
The Department claims that its proposed schedules balance the needs of living people with the public's rights of access to information, but the Department provides no support for its hypothetical concerns about identity theft. In particular, the Department has advanced no empirical evidence about identity theft rates in jurisdictions with open as opposed to jurisdictions with closed records. Without actual data, the Department's claimed concerns are actually worse than hypothetical; they are conjecture conjured to defeat legitimate rights of families to their own identity and historical information. The absence of foundational facts and rigorous analysis renders this proposed rule irrational and a violation of the state and federal constitution. In addition to the reasons urged by others in opposition to this regressive proposed rule, I urge the City to reject it.

Carla Garner
Comment:
Hello, I am opposed to the unnecessarily extended length of time for New York birth and death records to be transferred. As others have commented here, "What would be the point of not providing unofficial copies of documents, when so much other personal information is already widely available online without restriction?" There are other more pro-active ways to provide records security besides limiting access. Thank you Carla Garner

Catherine Dente
Comment:
As a citizen, I recognize that criminals are trying everything possible to steal personal information. Though the intent of the 125 year rule being proposed shows your heart is in the right place, the info you are proposing to protect is easily available in all sorts of other ways to criminals. Meantime, you would be overly restricting the right of law-abiding citizens to access public records. Please do NOT approve the amendment to article 207. I am a genealogist, born in NYC, and am really upset by your proposal.

K. Desmond
Comment:
Genealogy is an enormously popular pastime. Millions of Americans are very interested in discovering their New York City roots. The Proposed Rules would impact genealogy researchers very adversely. It is already somewhat burdensome to research and request birth, marriage, and death records from Municipal Archives. Please do not make the process more difficult.
Joe Carpenter  
Comment:  
I oppose the proposed rules. While attempting to thwart crime is seemingly at the root of this rule change, the proposed changes impact law abiding citizens to a far greater degree than potential criminals. There are other ways to prevent criminals from misusing these critical databases. Please do not institute these proposed rules. I would much rather see an analysis of the average wait time for across all municipalities in the US and see NYC consider coming into line with the average / median of that data set, and not just look at the average age of NYC citizens.

Barbara Mathews  
Comment:  
The proposed rule states, in the section on Model State Vital Statistics Act and Regulations (2011 Revision), that, "Now in its sixth revision, the Model Law is a cooperative effort among state governments and the federal National Center for Health Statistics of the Centers for Disease Control and Prevention." This is untrue. This is a misrepresentation. This is a statement that the Department must know to be untrue. The last Model Act that went through a review by all of its stakeholders -- the last Model Act that was approved by the Centers for Disease Control -- was the 1992 Model Act. That model act received review by stakeholders, including not just vital statistics registrars but also personnel from the CDC and genealogists. The 2011 Model Act was never reviewed by the CDC. It was promulgated by the National Association for Public Health Statistics and Information Systems (NAPHSIS) but never reviewed by the CDC. Only NAPHSIS has approved it. To state that it was a cooperative effort that included the CDC is to be disingenuous. In fact, after the CDC refused to consider the 2011 version of the model act, NAPHSIS took time to discuss this prior to making the decision to release the text on its own. Steven Schwartz again, the New York City Registrar, is a member of NAPHSIS and knows that the statement that the 2011 Model Act was accepted by the CDC is untrue. What is missing from the 2011 Model Act is review and input from stakeholders. The value of the records is determined by the stakeholders. The keepers of the records are there to implement the wishes of the taxpayers and stakeholders. This seems to be an idea that so far is foreign to the department. Do not continue this errant policy. The rest of the argument on behalf of longer closure periods for records skates as far from the facts as this item does. Yours, Barbara Mathews

Lindsey Ottman

Edward Creem
Comment:
There must be a reason other than those contained in the proposed rules to extend the time periods for release of birth and death records. Every bit of personal information, the proposed rules claim to be trying to protect, is readily available for most people through a simple google search. As a serious genealogy researcher for more than 20 years, these rules seem draconian compared to other governmental entities. I am of Irish descent and many of my ancestors lived and died in New York City or were born in New York City. These proposed rules would have seriously hampered my past research and if implemented will be a serious detriment to future research. Let me put it this way with regard to death records. If someone dies today in New York City, I can often find virtually all of the information that would be contained in their death record, in a Newspaper Obituary tomorrow. Same for someone who died 10, 20, 30 or more years ago. So why are you proposing to release "official" information on a person's death until 75 years after they are gone when "Unofficial" information of the same nature is readily available in the public domain? And there has to be a better way of protecting the birth records for the handful of City residents who live beyond 100 years, than a 125 year waiting period from the date of birth. For researchers, it often times is the birth records for relatives who died in childhood or early adulthood that are being sought. I could be dead myself before records I need would become available. Sounds like using an atomic bomb to kill an ant, if you ask me. Therefore, I urge you in the strongest terms to scrap this proposed rule which appears to me to be a solution to a problem that does not exist. Thank You.

Mary Lish
Comment:
As a researcher, I completely oppose these new rule changes. Other states have posted their vital statistics on-line almost immediately and have not had "catastrophic" results from people learning their grandparents maiden names. These records are owned by the people, not by City workers. Sunshine produces better results. I would suggest opening the records earlier rather than hiding them away past anyone's lifetime. Stop this ridiculous change. If anything, change it to be open earlier.

Pat Grabowski
Comment:
As a lifelong New Yorker and family researcher, I strongly oppose the proposed rules regarding New York City vital records. Restricting access to these records would cause much difficulty for those researching their family history. As it is, there are many people
who are not listed in census or other records. The only trace of them may be their birth and death records. Having to wait 125 years to get their information means that they may never be found. Most people looking for this information are family members of the deceased. Their motives are honest, not criminal. Our rights to our own family records should be honored, not restricted.

Patrick Deady
Comment:
I use the birth and death records of NYC in the preparation of family trees for my clients and myself. I believe that the proposed rule is not necessary as it is an unnecessarily restrictive rule and will do nothing substantive to protect privacy. None of the birth certificates that appear on the index or are available publicly have social security numbers on them. This is the primary method of identifying people in our society today! Therefore, this proposed rule will not really do what you say it will as far as privacy is concerned! As far as death certificates go, these also could easily be redacted to remove the SSN when they are posted. This is just an incredibly restrictive rule that has not been well thought out and should not be implemented!!

Cindy Burtt
Comment:
I think this is a terrible idea and detriment to those who need this information for their family history research. Please please reconsider these very long time spans and how many of us who will be negatively affected. My whole family immigrated to New York in the early 1900s and without these records my link to my family history will be gone. It's so unfair.

Tamar Weinberg
Comment:
I have been trying for hours, weeks, days, YEARS to learn of my family's history. My family made it to Ellis Island after rough times being persecuted in their home countries. Records there are sparse. Getting NYC records is the only way I can learn of my history, and there is still so much to learn. Relinquishing our access to our great-great grandparents' records would be beyond devastating.

Nan Starjak
Comment:
As a long-time family historian with many ancestors from New York -- including NYC -- I strongly oppose this measure. New York is already a difficult state in which to research. This rule presents no solid facts to justify withholding family records even longer than they currently are.
lauren manera
Comment:
As a private genealogist with deep New England and New York roots, I strenuously object to these vital statistic records being out of reach of researchers. I believe it is in everyone's best interest to allow these records to remain accessible to researchers, professional or amateur. They are important documents, historical and legal, and must remain open to the public.
Laurie Downs
Comment:
I'm against changing to 125 years. I do family history and these records help in proving who what where and when.

Chris Klemmer
Comment:
I oppose the proposed restrictions. Being Brooklyn born as my parents and grandparents before me, New York City has a special place in my heart, something I would like to pass on to my children and future generations. Researching my family history is an integral part of sharing my heritage and family lore. It disturbs me greatly that The City would propose breaking that chain of continuity by restricting access to vital records. Isolating me and my descendants from our heritage in the name of "privacy" is, in my opinion immoral and just plain wrong.

Robert Lazell
Comment:
As a resident of NY I would like to encourage the Department of Health to reject the call to extend the restriction to public access to birth and death records to 125 and 75 years respectively. This is a completely inappropriate reaction to the cited issue of "identity theft" and would do little to combat it as identity theft is based largely on theft of social security numbers, bank information and a myriad of secure records NOT birth and death records. As a genealogist and historian this would greatly hamper my work as well as many others. Given the increasing interest in ancestry and family history over the past decade or so (I cite as evidence popular TV programs such as PBS's Finding Your Roots) I believe this would negativity impact the public you serve and provide little of no added protection against identity theft.

Jane Hatch
Comment:
Please do not change the rule to make it more difficult to obtain family records. I am a cancer patient and would not have been able to find my grandmother's cause of death had the changes been in place. I implore you to not to make the proposed rule change. Thank you.
Michael Carragher
Comment:
Please do not consider making changes that are more restrictive. There would be no gain in fraud prevention and only make Family History research more difficult. Personal privacy would not have substantial benefit from these changes. Sincerely, Michael Carragher

Mary Beth Kooper
Comment:
Although people are living longer there is so much information about individuals available online that this added restriction does not make sense to me. It will hinder thoughtful people in getting the information they need for research purposes, while those seeking similar information about people will be able to do so by doing an easy search of the internet. Please also work towards digitizing all of your records.

John Albertini
Comment:
These are PUBLIC records and having them publicly available enhances personal security, does not weaken it. Make these records available to ALL.

Patricia Foos
Comment:
I vehemently object to the proposed rule change regarding the length of years before records are open to the public. As a family historian and amateur genealogist, this would have a devastating effect on my ability to research. I am a retired teacher who pursues this hobby but I had to wait for retirement to devote my time. Now that I have the time, I do not want to see the records closed to me. Most of my relatives are native New Yorkers and I would have no other recourse. If fraudulent activity is feared, perhaps the records could be altered in some way to prevent that. Please reconsider your proposed rules change. The Majority of people using these records are law abiding folks looking to learn about the present by visiting the past.

MaryBeth Johnson
Comment:
I oppose the proposed regulations. As someone with famiiy who emigrated to NYC, obtaining important family information is already more challenging than it should be. Please keep the records available!

Michael Pisapia
Comment:
I oppose -in the strongest possible terms- the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. The proposed waiting period of 125 years for births and 75 years for deaths is excessive. This onerous waiting
period will be crippling to family researchers and devastating to professional
genealogists who provide a vital service to families and to attorneys and the Courts in
kinship hearings and heirship proceedings. There is no damage created by giving
genealogists and people doing family research access to these documents. Bear in
mind -this information is the property of the public- and the government agencies are
custodians -with a fiduciary duty to maintain and provide this information accurately.
The effort to restrict access to these records is a blunt instrument and does devastating
harm and no discernible good. If the rationale is protection against identity theft -please
consider the current state of technology and the availability of all manner of information
on the internet- not authoritative information of use to genealogists and family
researchers, but detailed information regarding living individuals used by malfeasors for
nefarious purposes. Amorphous and vague ‘privacy concerns’ are not addressed by the
lengthening of the waiting periods and do not out-weigh the right to obtain public
records, which are held for the benefit of the public. There is no rational basis to impose
the types of restrictions under consideration- it only harms the genuine researcher and
will not hinder the hacker. People have a right to know the identities of their biological
ancestors of record, to know their ancestors’ life-circumstances and causes of
death, to be able to discern if family lore is fact or fiction and to back up their research
with authoritative records- of which the government is the custodian- for the benefit of
the public. Authoritative copies of these records (not necessarily certified copies) are a
necessity and a right! The 125 year waiting period is excessive and must be
considerably shorter. The proposed amendment is unnecessary and over-reaching. I
urge you not to adopt the proposed policy and rule changes.

SUSAN SPEERS
Comment:
Please do not adopt this proposed rule. I have used the NYC Vital Stats office in person
to locate marriage records, births, and deaths to confirm my father's family history and
intend to return to do further research in the future. I believe that there is an important
public purpose to birth and death records and the current delay in release is adequate
to protect privacy. Thank you for allowing public comments via your website. Sincerely,
Susan Speers Descendant of German immigrants arriving in 1884; NY-
born African
American farm workers; and freed slaves from Virginia and South Carolina who came to
New York City in the 1870s.

Carole Wiseman
Comment:
I am adamantly opposed to the new rules proposed by the City of New York. I would like
to know what is to be gained by delaying a birth record to 125 years after date of birth
and 75 years after date of death. Family researchers are using this information for
personal use only. I, personally, have been tracing family history and am very interested
in obtaining those records for my family who were born in the 1920's. These records
would not be available until 2048 or later and many of us will be long gone.
Erin Sawaya
Comment:
I would like to post this comment against extending the time period restricting access to vital records. I was born and raised in Brooklyn, and most of my extended family is also from NYC. I have recently started researching my family and have already been able to learn information that has been very enlightening to all of us and which would have been completely impossible if records were restricted this long. I cannot see the value in preventing family members from accessing information about their long-dead relatives, and by extension about themselves. In fact, I am currently unable to view the birth certificate of my great-great aunt, born in 1910, because the archives are not available from that year. After a lot of research, her birth certificate is probably the only place I can get accurate information about her parents, since the country they were from is currently at war. This extension would mean nearly another twenty years of waiting, for basic information about my relative that dates from the Taft administration. Please do not allow the time period of restriction on access to be extended.

Carl Johengen
Comment:
As an adult adoptee in New York State, I am against any change to rules regarding birth records which would limit access. New York State's records access is already the strictest in the country. If anything we should be making access easier, so that family members have an easier, not a harder time locating each other. I strongly oppose these changes to the rules.

Mary Kozak
Comment:
As a family historian with deep roots in New York, I would like to encourage the Department of Health to reject the call to extend the restriction to public access to birth and death records to 125 and 75 years respectively. It is commendable to try and limit identity theft wherever possible, but extending the years of availability of birth and death records will not accomplish that goal. The proposal will have unintended consequences, like preventing families from knowing health history which could improve or change health outcomes. Additionally, birth records are an important tool in piecing together family history and 125 years is clearly excessive. Given the size and scope of NY vast melting pot, this act would have dire consequences on family history throughout the country. Please consider carefully your decision on this matter.

Freddy Villano
Comment:
The 125 year waiting period is very excessive and needs to be much shorter. I can see no damage that will be created by giving genealogists and people doing their own family research access to these documents.
Susan Bowen
Comment:
I live in Manhattan, and I oppose these changes. Vital statistic records should be available for descendants and geneological research on a timely basis. 125 years to release a birth certificate, and 75 years for a death certificate is too long! I understand the need to protect privacy, but there is no need for such long waiting periods - indeed, the strictest in the country. Genealogical research is very important to families and historians who need timely access to birth and death records. And while we’re at it, amending birth certificates in cases of adoption is wrong. It is falsifying a legal document! Original birth certificates should remain as they are, and Certificates of Adoption should be issued when applicable.

Tony LaLuZerne
Comment:
As a genealogist, I am against this proposed amendment. Genealogists support NYC businesses and tourism through research trips, and the Municipal Archives and NYC Dept. of Health through record fees. Restricting NYC DOH records will have a severe impact on those researching their family’s health history, possible predispositions to cancers and inherited illnesses, and for those looking for patterns of illnesses in their families. Genealogical research is one of the fastest growing professions and restricting records would impose huge barriers to business growth - for those researchers in-state as well as those out of state and around the world. Access to vital records imposes no risks to personal security - in fact, having open records is proven to make personal identity more secure as it can be more easily checked.

Veronica Knapp
Comment:
Your proposed new rules are completely unreasonable, unnecessary, and will significantly impede genealogical research. New York State Department of Health rules are more reasonable. They provide uncertified copies of the following types of records for genealogy research purposes: Birth certificates – if on file for at least 75 years and the person whose name is on the birth certificate is known to be deceased. Death certificates – if on file for at least 50 years. Marriage certificates – if on file for at least 50 years and both spouses are known to be deceased.

Judi Wagner
Comment:
I was born in NYC, and am in favor of NO restrictions on birth and death records. These should all be public and available to researchers. I have been able to use these records to further my genealogy studies, and believe the records should be available to all. I am still a part time NYC resident, and want access for myself and others to continue their research. Many other cities and countries permit less restrictive usage and NYC should comply.
Angela Fitzpatrick
Comment:
People have a right to know who their ancestors were, to know about their causes of death, where they are buried to know if what they have been told is true. Copies of New York City birth/death and marriage records are crucial to a genealogist’s research. Without the information in those records, I would not be able to ascertain if "John Smith" is my "John Smith" or another family’s John Smith. There would be no other way to verify my information. Trying to begin genealogical research without City records would be a waste of time. Do not create a policy which stops people from learning about their families.

Maureen Hunt
Comment:
It has been shown that these records are not a factor in identity theft. There is no reason to keep death records secret for 75 years, nor to keep birth records unavailable for 125 years....The Bible notwithstanding, the large majority of people are not going to live anywhere close to that. Other places have much more lenient provisions and do not experience unwanted consequences.

Bonnie Mucia
Comment:
I am strongly opposed to this proposed rule. As a genealogist, I have used the records to help many families find their family roots. So many people have immigrated through NYC and lived in the area before moving other places. This is a non-issue in other places that records are freely accessible. There are other avenues that identity theft is much more a worry than records of long dead people. Please do not limit access to these vital public records. There are a lot of people that trace their family trees for other reason like health history and this would be devastating to these people. Also, think about the history that would be lost of stories of ones grandparents and great-grandparents that one can pass down to the next generation. Our history is not only important but vital and knowing your own personal family tree and history is such a gift to many. Please do not pass this ruling. Do not let history get lost.

Kenneth Dreitlein
Comment:
Limiting access to public records is not acceptable and will severely limit research for those of us whose roots are in New York. Please do not incorporate this limitation of access.

david moore
Comment:
As my family historian I find the 125 year waiting period is very excessive and needs to be much shorter. Being able to research my family has already enabled me to find
relatives I never knew existed. Such a wonderful opportunity.....don't limit that experience for me and many many others looking for extended family.

Lynn Blumenau
Comment:
I strongly urge that the stringent restrictions currently proposed be abandoned. I live in New York State but do not have easy access to NYC. I rely on my current ability to access family material to further my genealogical research. Thank you for your consideration of the needs of NYC genealogical researchers worldwide.

Lori Wall
Comment:
I would like to encourage the Department of Health to reject the call to extend the restriction to public access to birth and death records to 125 and 75 years respectively. A better way to restrict fraud would be for every death certificate to be sent and notations made on the birth record when and where the person died. When children die at a young age, for example a few days, a note should be added to their birth records to prevent scoundrels years later from trying to create fictitious identities. I think there are ways for individuals who may want to protect sensitive facts from public disclosure that do not require denying public access. Thank you.

Kris Gilbert
Comment:
I enjoy doing genealogical research for myself and others and live in New York State. I strongly oppose the move to restrict records access for such unreasonably long time periods. This information is important for people doing genealogical research, including for religious and health purposes, those seeking documentation for dual citizenship and lineage society applications, those who want to pass knowledge of heritage along to descendants, and who do research for personal interest and fulfillment. Knowledge of cause of death of indirect ancestral relatives such as great uncles and cousins can provide very important health information to those living, and their descendants. Death records especially should be made available far earlier, and equally to all researchers, not just members of a particular group. States which have open records do not have more problems with identity theft than states that are more restrictive; identity theft threat comes primarily from the hacking of company databases stored online, not vital records. Sincerely, Kris Gilbert

Christopher Padgett
Comment:
What is most egregious about this rule proposed is the city of New York has been profiting handsomely off the sale of this data to commercial businesses for quite some time. The rule is only being proposed to prevent family historians from freely obtaining records on their ancestors. Many people do not have the money to travel to New York to obtain these records. If this rule is implemented, the real motivation behind it will be
revealed during the discovery phase of future litigation. I can only imagine the contents of the emails of those who schemed and plotted to create this rule. Shame on the bureaucrats who proposed this awful rule.

Helen Moore
Comment:
I have been doing family history research for my family and friends for about 10 years. Unless you've experienced it, it is difficult to describe the absolute joy of discovering details about an someone through a public record, and the frustration of failing to have access to other information for what strike me as artificial barriers to additional information. The proposed changes seem focused on preventing those who are legitimately seek to learn about their history because some tiny number of people may seek to misuse this information. Please don't do this. Thank you.

Jon Levine
Comment:
As a resident of NYC and genealogical enthusiast, I strongly oppose this amendment. The current privacy laws have served the city well for many years and nothing is to be gained by making these changes. Thank you.

Ann Irving
Comment:
I oppose this very severe restriction of access to NYC birth and death records. There is no research to show that these records need to be restricted for such long periods of time in order to prevent identity theft. In doing so, genealogists and family researchers would be seriously hindered in their work. New York City is in a unique position among cities in the U.S. because of the millions of immigrants who arrived there and began their lives and the lives of their children in NYC. My family has deep roots in NYC, and much of the information I have found about them would be inaccessible if this law is passed. I ask you to please consider the negative consequences to passing this unnecessarily restrictive law. Thank you.

Frank Strovel
Comment:
To Whom It May Concern The 125 waiting period for the Birth Records and 75 years for Death Records from New York City needs to be much shorter. I am a genealogist along with many more of my fellow genealogist all over the world. I have many relatives from NYC and need to have access to the records. Not only for correcting information of my ancestors, but for the many people who are not doing genealogy minded. This information is needed for many reasons as other have mentioned in their posts. Let this get done quickly as many of us are older and the need for this information is crucial!
Thomas Byrnes
Comment:
I am a native New Yorker and have been researching my family history for several years. The value of the availability of vital records is critical to that research. I think that 125 years for birth is too long, we would be better served by a shorter period of time, say 105. Death records at 50 years is much more appropriate for researchers that 75.

Walter Bartus
Comment:
This is an unfortunate over reach in response to hacking incidents. I concur with Reclaim the Records that the proposed rule as currently written is too broad. Further, I feel that the proposal below adequately safeguards records, yet allows for research: 1. Access to birth records after 75 years (if the individual's death can be verified) or 105 years if no death date is verified. 2. Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. 3. Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information). This will more than adequately protect privacy and place New York city in congruence with other jurisdictions. Thank you for considering my request.

Amy Feldman
Comment:
This proposed change would be detrimental to my genealogical search since most of my ancestors lived in New York City when they first arrived in this country. Please do not make this change!

Edward Cain
Comment:
As a Family historian these changes would severely hamper my ability to research family members born in the early years of the 1900’s and who have died before 1980 I would suggest changing the birth amendment to 100 years and the death amendment to 35 years.

Kirsten Manton
Comment:
This is response to the proposed resolution to amend Article 207 of the NYC Health Code. Thank you for allowing me to express my concerns. I understand your need to control the transfer and availability of vital records documents. The time limits you propose, though, are some of the most restrictive that I have ever seen and I would urge you to set the limits for birth records to match the federal government in terms of privacy – 72 years. As a professional genealogist, I utilize vital records documents from all over the world. As NYC was an important gateway to many seeking refuge, vital records from NYC are often the only link I have between an immigrant and his new life.
in America. I also have a personal interest in NYC records as many members of my family have lived there.

Dan Hoffman
Comment:
While it is true that birth and death records contain vital information that should be protected from possible misuse for a reasonable period of time, the proposed rules exaggerate this period unduly. Other major states such as Texas and Pennsylvania have chosen to post their death certificates going back to the 1960s. As a family historian, I depend heavily on the information in these documents and hope that this proposed rule will be defeated and will be replaced by a less draconian option. My question is if there are any stats that indicate the extent of fraudulent use of these records? And, even if there is fraudulent use, for the most part wouldn't the same information be available from some other sources, though in fragmented pieces, in any case? Thank you for reading and considering this comment.

Patricia Farrell
Comment:
It is vital that I have access to this material in order to continue researching my family's history back to the 1890s.

Holly Kilpatrick
Comment:
I strongly oppose this unreasonable and ineffective restriction on citizens' records. This is so typical of one of the most regulatory states in the United States. Not government for the people, but government against the people. Americans all over the country have ancestors who lived in New York, and these restrictions create further obstacles to their finding out about their roots. The Department should review the policies of other states, and model New York after the states who support freedom and transparency, not authoritarianism and backwardness.

Linda Mallalieu
Comment:
As a family historian and amateur genealogist, I strongly oppose changing the accessibility rules for our family information. The NYC Municipal Archives holds a treasure trove of valuable information that belongs to us as itizens, part of our cultural heritage that we have a right to view. I fail to see any sound reasoning behind making our family information less, rather than more, accessible. The current rules provide ample protection of privacy, and the proposed extended periods are excessive. I am a resident of Long Island and frequently come to the city to do research at the archives. This is our history, and we have a right to learn about our ancestors and our stories. More bureaucracy and restrictions are an overreach and unnecessary.
Susan Johnston
Comment:
These rules are unnecessarily broad and would severely hinder the ability of genealogists and those wishing to join lineage societies access to records they require. While some may assume that lineage societies are comprised of teetering old folks, in fact, these societies are in large part service organizations. For example, the National Society Daughters of the American Revolution is the largest women's service organization in the world and members donate millions of hours of their time to community service each year. To join, however, one must prove lineage to a person who assisted in the cause of freedom during the American Revolution. They must provide birth and/or death certificates for themselves, their parents and grandparents. Your proposed rule would prevent anyone whose ancestors happened to reside in New York City from being able to join DAR or other lineage/service societies as as most of the rules for admission have similar requirements. By the time your 75 or 125-year rule was complete, most of the people who wished to join these organizations in service to our nation, would be dead themselves.

Sarina Amiel-Gross
Comment:
In today's day and age of computers that have the ability to cross check, using a dead person's information already carries with it a felony punishment. To withhold this information, which for the most part is exclusively used by genealogists and/or family historians is simply unwarranted. Laws already exist to protect the use of this information, why does the City feel the need to create another barrier that will serve no purpose. Kindly re-think this proposed rule. It will makes little sense and it will cost the City more when those same genealogists and/or family historians sue the City under the FOIA, and win to have the information released anyway.

Shirley Fields
Comment:
Birth and death records are PUBLIC records and should not be withheld from their owners -- THE PUBLIC -- in any way for any length of time! New York should set the standard and allow such records to be available to the public. Open access to such records would facilitate determining the true identity a person is claiming and could help stop identity theft! The rules being considered to hide such records will allow identity theft to flourish! Shame on you if you aid such illegal acts to continue.

Tammy Poole
Comment:
I will keep this short. I strongly oppose restricting these vital records for 125 years. Although I currently reside in Texas, and you may not care about my opinion since I am not a constituent, but my ancestors and their records reside on your soil. Please reconsider. Thank you.
Amos ZEZMER
Comment:
I am appalled by these proposed new rules. They are simply meant to make vital records inaccessible to the general public, genealogists and family historians like me. Why not crank up the time limits to 250 years for births and 150 years for deaths? This will certainly bring all our genealogical and research projects to a screeching halt and appreciably reduce the work load of civil servants who fulfill requests for copies of vital records. The proposed new rules simply deny access to information on our ancestors, for we will also have passed away or perhaps become senile by the time these finally-accessible records have any meaning for us. The public has the right to know. The living public has the right to know. The proposed rules disrespect the Freedom of Information Act. Shame on you!

Lauren Apicella
Comment:
I strongly oppose this amendment. Both sides of my family came through and lived in New York for generations. Restricting access to these records would very much impede my work as a family historian as well as many others work and research into their own families. These limits are too long and would not prevent fraud.

Gail Schulte
Comment:
I very strongly oppose this change, especially the change in death record availability. Please reconsider and come up with a well thought out, quantified, and justified argument which proves this extremely restrictive change is necessary. Such restrictions should be similar to those imposed by other cities and states.

Michael Savoca
Comment:
While I can understand seeking to protect the privacy of New Yorkers, this proposal to amend the release schedule of vital records is simply a knee jerk reaction to a problem which can be fixed in a multitude of ways. NYC already has some of the most strict laws regarding vital records, often to the detriment of the public. As of now, we can not access a death certificate for an uncle, he died unmarried, without children, and has no living siblings or parents. Issues like this are the result of reactionary legislation, and it is a shame. If you want to protect identities but provide reasonable record access, perhaps the dept of health needs to offer non-certified copies. In this way we can have access to vital records, provide the city with a solid revenue stream, and the certificate will be null for anything but informational purposes. I'm the fourth generation of my family born in NYC and this unnecessary action by the health department serves no purpose but to restrict access without any consideration for other options and other sides. I urge the board to consider informational copies, and admonish them for not overseeing proper record transfer to the municipal archive of records for years now. Reconsider this proposal, we can be protected while maintaining our access to these records. Thank you for considering my opinion, and hoping for a positive outcome.
Anne Evola
Comment:
I ask that the new rules proposed for the viewing of birth and death records not pass. Please the the current policy in effect to enable those who wish to trace family lines. The Irish diaspora of the nineteenth and twentieth centuries was devastating to family ties. Because I was able to view NYC records I would no longer be able to view under the new rules, I have reestablished ties with family here in America as well as in Ireland on both sides of my family. Visiting the site of my third great-grandparents in Kilkenny, Ireland on land still held by my cousins has been the highlight of my genealogical research. I still have many sites to visit and am fortunate to have the info to do so. Please allow those descendants of nineteenth and twentieth centuries to have as much of a chance as I have had to trace their lines. Surely there must be other ways to head off problems while leaving the records open to the public.

Eileen Naglieri
Comment:
Balancing privacy and security with access to records is a delicate balance. I encourage NYC to consider the detrimental ramifications of this proposed rule to those families engaged in Family history research. I was born and raised in NYC as were several generations before me. NYC records have been invaluable to me to learn how my ancestors lived and died. In some cases I have learned who these people are. I have learned not just names and dates. The research starts with vital records. I have also learned health history from cause of death. This is not just valuable as history but helps the family to take proactive steps in today’s world. If the proposed rule was in effect when I gathered my current research, so much information would have remained unknown. History would have been lost. Valuable, useful information would have been lost. Access to records is vital!

Pamela Morrison
Comment:
Please help us Genealogist have access to birth and death records for our ancestors

Elizabeth Snead
Comment:
I am a family genealogist I oppose Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records. I feel that I have a right to learn about my ancestors and that you would be impeding my ability to do so.

Chiara Osborne
Comment:
As a family historian and aspiring professional genealogist, I find these rules to be extreme and needless. I find the thought process as to curb identity theft to be far-fetched as these records are not being used for this purpose. I find the city to be putting
needless restrictions on the birth and death records. New York City is already one of the hardest places to find your roots and research in. I strongly urge the City of New York not to follow through with this proposed rule change. The current standards are rigorous enough.

Judith Lipmanson
Comment:
These proposed restrictions are similar to swatting a fly with a sledgehammer: well-intended but damaging. There are more valid methods of protecting data against illegal use than withdrawing them from serious historical and genealogy researchers. You already have the start of a database to enroll interested parties into a program for those with a genuine and/or legal basis for examining these records. To this you could also put some restrictions on how the information can be used and published without safeguards. Your proposed approach should be reconsidered and amended. Yours truly, J. Lipmanson, Ph.D.

Christine Clark
Comment:
I am writing to express my opposition of Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records. I’d like to start out by pointing out that I am a CURRENT, Brooklyn born resident of the City of New York and am employee of this great city. This record set includes my family including the birth, marriages and deaths of my children, my parents, my grandparents and many more direct ancestors who were born in the 19th century. However, I am also a genealogist and extending the time would be detrimental to much of the research on which many of us rely - particularly for those like me who are tracing common surnames such as Clark and Johnson. I fully understand the need to protect privacy but this is taking it to the extreme. I feel that waiting 50 years after a death and 100 years after a birth is sufficient. I belong to many genealogical organizations and I repeatedly help to direct other like minded individuals who no longer live here plan their trip to NYC to trace their ancestors steps. They visit the graves in our cemeteries, they go to the houses or tenements where their ancestors lived, they visit the Statue of Liberty and Ellis Island, visit our museums such as the Tenement Museum and the Museum of the History of New York. They spend money on visiting our ethnic restaurants such as Katz Deli or dining in Little Italy or pull a pint in McSorley's Ale House. They come to our great city and spend time and money - without some of these records, they might not be able to further their research or figure out where the address in which grandma was born. Thank you for taking the time to read my comments.
Christine Clark Brooklyn, Kings County, New York City, New York

lisa doscher
Comment:
I understand with these new rules you are trying to protect privacy. Please consider less strict guidelines, such as reducing the amount of time before records can be obtained.
The vast majority of us are only trying to research our family history, and I am concerned the time frame proposed would hinder that greatly Thank you

Adam Stein
Comment:
I am strongly opposed to the proposed rules. There is no reason to increase the length of time these documents are available. If anything, it hurts those looking for information about their family (historians, genealogists) rather than helping reduce fraud.

suzy mccormick
Comment:
I was never told how my Grandparents passed. When I was diagnosed with Transverse Myelitis in my brain cord, I was continuously asked about my family history. I was able to obtain death certificates for many relatives, looking for clues. I also started to become extremely interested in my N.Y.C. Family History, where I, and all great grandparents, was born and raised. To be able to find my families birth, death, and most importantly medical history, has helped myself and my family tremendously. I strongly oppose the new proposed rules, as everyone is entitled to know their origins. Why cant there be" informational " copies available as California provides? IAs a true New Yorker who loves their city, and never left, and where my family was born and died, I am hoping The DOH will realize these records hold much more than times and places, they hold the truth.

Denise Ramo
Comment:
The proposed changes are ridiculous. As it stands, the rules are efficient - though quite excessive - for the protection of the person named on a document. Identity theft should be of no concern as anyone with a credit card in today’s times is almost guaranteed, thanks to Target, Equifax, & others. No one oaying & waiting for these records is putting in that time & expense for fraudulent means. We are simply trying to find our families.

Ken Hughes
Comment:
These proposed rules are stricter than almost anywhere else in AMERICA, and would be devastating to anyone researching New York City ancestors or collateral lines. As the largest city, everyone has an ancestor who lived, died or got married in New York City, so I ask why would you make it so difficult to learn of your past.

Mimosa Mack
Comment:
Please do not change the rules to make birth records unavailable for 125 years. Our family has been in NYC since before the revolution. Vital records are vital to my research! Thank you, Mimosa
Anita Grossman
Comment:
As someone who is currently doing genealogical research on my family, I strongly oppose any further restriction on access to NYC vital records. The regulations are too restrictive as it is.

remo pe
Comment:
The 125 year waiting period is very excessive and needs to be much shorter. I can see no damage that will be created by giving genealogists and people doing their own family research access to these documents. In Italy it is 70 years long

Kenneth Kennedy
Comment:
As a lifelong New Yorker, and someone whose family has been living in, and a part of New York City history, for several hundred years, I find this proposal to be ridiculous and not supported by the data that has been offered as the rationale for this proposed change. My family values its historical ties to NYC—in part because of its history of inclusion and openness, which has always been reinforced by a civil bureaucracy that reflects those same values. This proposal ignores that centuries-old symbiotic relationship for reasons that they can't even explain in logical terms in this proposal. In addition, as someone who has been a genealogist for more than 40 years, I find this proposed change to be appalling and one that would have no measurable effect on the protection of the privacy of individuals, as the proposal claims it will. I see no indication nor proof that adding 25 years on to the availability period would stop identity theft (for instance)—this is simply a decision made using anecdotal "evidence" that a longer waiting period "must" lead to lower levels of identity theft. All around the world, other jurisdictions are opening their archives and posting full records (not just indexes) online—for example in Sweden and Missouri—and in New York City, a place that prides itself on freedom and openness, we are heading in the opposite direction, due to the misguided and unsupported proposal of several bureaucrats? What a sad state of affairs and commentary on where we are. Please stop this proposal!
joe glass
Comment:
I agree with all of those who are opposed to the proposed rule changes. These changes do not serve the best interests of today's public or the future public. There are better ways to protect against abuse of public records like these than by locking them up for so long that they can no longer serve any useful function at all, let alone historical research, family research or even probate research, among other rightful activity. I was born in New York and my family has deep roots in the City and the State of New York. This is a case actually, of identity theft, of a different kind, and one proposed by non elected public servants. Again, I am opposed to these changes.

Elizabeth Cook
Comment:
The proposed rule is inadvisable for several reasons. 1. Mis-use of birth and death records to establish false ID's is minor compared to the theft of personal information by other means; 2. the proposed rule will hinder legitimate research; 3. information critical to legitimate studies of causes of mortality will be delayed to the point of uselessness. I urge you not to adopt the proposed rule. It will not solve any problems. Thank you for the chance to comment. Elizabeth Cook, Genealogist and Historian

Steven Smyrl
Comment:
At the outset, a sweeping statement claims that the information in vital records is considered private! Every civil (vital) record in both the UK and Ireland is a Public Record that all citizens can access and yet the issues of fraud outlined by the NY authorities rarely arise. The existing regulations in NY are draconian enough without these additional burdens. And in fact access to vital records allows verification of the bona fides of others and thus actually reduces fraud. Instances of fraud occur much more easily where the perpetrator knows that the victim cannot access information that will expose their crime. These regulations should not be passed.

Terry Koch-Bostic
Comment:
I oppose the DOH's proposed new rules for access to Birth and Death records for NYC. There are a number of issues that the DOH has not taken into account, maybe one of the most important is access to death records to build a family health history. In my own family, building a family tree revealed a virulent strain of cancer that took the lives of multiple women in three generations from 1929 through 2004. This important knowledge was used to guide testing and treatment for cancer occurrences in my family in the past decade -- and this knowledge was gained from death records that spanned the 1930s, 40's and 50's. Under the proposed new death record rule, this information would be denied to my family. Genetic cancers tend to show up earlier in each successive generation, so it is important that death records not be given more limited access with a new rule, rather they should be given broader access as they actually also help to prevent theft of identity from the deceased.
Charles Steinman
Comment:
I understand and appreciate the privacy concerns that may have motivated this effort. As a person who is concerned about the over-use of private information, I definitely sympathize. However, this rule goes way too far. It is a reach well beyond any reasonable requirement for privacy. If these records had no value outside of providing identification for the living citizens, this rule, or even a rule burning the documents would never matter. But that is not the case. Presently, Genealogy is the 2nd largest hobby in the United States. As a person with over 40 years experience doing genealogy, I can tell you that having recent records can make all the difference in the work. First of all, many people have utterly lost track of even close relatives. I have personally done research where people, quite a few people, did not know who their grandparents were! This is amazing but it is not as uncommon as one would hope or expect. Recent records can clear that up and help get genealogical research started as well as helping bring families together. In addition, babies who have died in childhood particularly get forgotten. It breaks my heart to find these children become lost and in the family histories that are written, they do not appear. But recent records helps with more than that. Getting the detailed information from my great grandfather's vital records helped my other living ancestors remember details of his life and stories about him. It was a jog of the memory and as a result, I was able to flesh out my family history and make the individual not just a name and numbers on paper but also a flesh and blood person with things he did and said. This was motivated by having recent records. Without those records, some of this would not have happened. And once those memories are gone with the ancestors, they can never come back. Please consider a different rule that would help maintain required privacy but also benefit family history research. 1) A birth record becomes public information on the 1st of January following 82 years after birth. (This would match the time frame when US Census records become public: 72 years after the census was taken. Children up to 10 years of age would appear in that census for the first time, so a similar period for birth records would be 82 years.) A death record becomes public information the first day of January in the year following the death of the individual EXCEPT upon notification by the living parent(s) of the deceased, the release may be delayed up to a maximum of 75 years. (A person who is dead has little or no special need for privacy but living parents might object to the birth record being released to protect their privacy) Thank you for protecting privacy, but please, also, try not to put a block in the way of people legitimately working to create vivid and accurate family histories and to find their roots. Thank you.

Barbara Hershey
Comment:
As a genealogist, and someone born in NYC as were a couple of generations before me, I request that information that would help identify family members be retained within the current, not proposed, boundaries. It's been said that genealogists have not been the source of inappropriate action based on records like identity theft, etc. It is critical for historians to have access to information in order to develop our histories and the history of the city and state. This informs our future generations. Please do not pass the new public records privacy regulations.
Jeanne Gold
Comment:
I agree, a balance is needed. However, the concept of erring on the side of caution can be taken too far -- as in the case of this proposal. Clearly, the framers of this bill/proposal have no real concept of how the electronic world works and the only people who will be held to toe the line are those who are honest in the utmost. To begin with, anyone wanting information about potentially living individuals need only subscribe to one of the many people finder services -- which will yield a wealth of information used to create false identities without all the work and cost. Because, frankly, it's far less expensive to pay for a one time search at about $10 on one of the aforementioned services than it is to pay for documents, one at a time, which can easily run $25 each and may require 4 or more documents to get the exact same information. The fact is the problem is easily solved by having two options in place. Documents which are for research purposes are altered to show that purpose and don't include any seals. Moreover, it will cost the agency less money to produce research only documents which savings can be passed on to the researchers. Those folks who want original legal documents are then required to prove their legal eligibility. Hence problem solved. The point that needs to be taken into account, which seems to have been neglected here, is that the real threat to protecting our identity aren't from the people purchasing the documents -- along with ID -- but the hackers. If you really want to protect identities, then invest time and money into better record keeping behind better security walls. Start with not allowing attachments not be sent in emails! Files can be shared by other means such as on secure servers which have no connection to the rest of the network. Get yourself some IT people who know what they are about and get rid of lazy solutions to problems not even addressed correctly, let alone understood in context of our current electronic world.

Renee Steinig
Comment:
I am dismayed at the proposed limiting access to New York City birth and death records. Such regulations would deliver a disastrous blow to family historians. I have been doing genealogical research for 40 years and have worked to discover, preserve, and share the stories of countless New York families -- my own and those of friends and clients. Our ancestors immigrated to the United States through Ellis Island and lived on the Lower East Side before moving to other neighborhoods in Manhattan, the Bronx, Brooklyn and Queens. The stories of their lives in America are contained in New York City vital records, and access to these materials is critical to my work. Like many of my colleagues, I have also used New York City vital records to help others -- adoptees, Holocaust survivors, and others searching for lost families or for the graves of loved ones. The proposed restrictions would drastically reduce my ability to do this pro bono work. The plan to lock up birth records for 125 years and death records for 75 years is extreme and based in part on faulty assumptions about the causes of identity theft. I understand that a number of organizations have suggested the following guidelines for access to public records. I support those recommendations, which are far more reasonable than those currently proposed: - Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified. - Access to death records after 50 years, or after 25 years to registered members of a New York
genealogical society. - Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
- Access to informational copies of birth and death records, which could not prove identity for financial and other transactions but would provide the information necessary for researchers. Thank you very much for your attention. Sincerely, Renee Steinig

Kevin Fagan
Comment:
Dear Commission Members, I am writing to register my strong disapproval of any attempt to further restrict access to birth and death records in the City of New York. I am a NYC taxpayer and also an amateur genealogist and I do not believe that further restrictions on these records would be in the public interest. The public records should be just that -- a public record. Further restrictions would greatly hinder the ability of myself and millions of other New Yorkers and people all over the world who have family history that can be traced back through the City to effectively trace our family origins. I ask that the commission consider the following common-sense restrictions which provide protection for the privacy of individuals while also allowing access to genealogically significant records in a timely manner:
- Allow access to birth records after 75 years when the individual's death can be verified (and 105 years if no death is verified)
- Allow access to death records 25 years after the individual's death

As the connected world evolves, there is clearly a need for the protection of individual privacy. There is ALSO a need, however, to make available records which belong to the public as soon as they are no longer a privacy risk for the individual involved. Please consider my above comments carefully. We all deserve to know from where we've come and these further restrictions would hamper exploration of many peoples' family history without providing an actual increase in personal privacy. Many thanks,
Kevin Fagan

Elizabeth Warren
Comment:
I urge the Department to reject the Proposed Amendment regarding birth and death records. Extending the wait time for public release of these vital records will not prevent fraud or identity theft. Identity theft is a sophisticated criminal activity and I believe that requires a sophisticated prevention method. New York City has the expertise to develop a more effective method to thwart the criminals. Thank you for allowing us to provide our comments for your consideration.

Eileen Keefe
Comment:
As a long-time family historian with deep roots in New York City and as a native New Yorker I oppose extending the timelines for release of vital records. This will seriously affect my research and the research of thousands of other genealogists. Just affording copies is expensive for most of us without making us wait until we are 100 years old! I'm sure that many of the identity theft problems are not caused by anyone sending for one copy of a document that can take weeks to receive.
Lynn Squire
Comment:
These proposed rules are not the norm in most States. They are far more strict. The underlying rationale is unconvincing. As a serious family historian with family roots in New York, I urge the City not to adopt these proposed rules.

Judy Schuster
Comment:
As a New York State person by birth, I am very frustrated by my inability to find death records for an ancestor, who died in 1890, or so...if you are concerned with privacy records for living people, then limit access to them (like limitations to US Federal Censuses), but allow access to records of people long-gone, where privacy is not an issue. thank you, Judy Gantert Schuster

Marge Vallazza
Comment:
I am a genealogical researcher. It is vital that records and their genealogical data be available to researchers and family historians to continue the important task at hand. We do not use this information to create false identities and documents. We use them to find our families and flesh out the information we have on them, to discover them, to try to know them. Why not shorten the time to 50 years if you must cut access?

Rebecca Krupp
Comment:
The NYC Vital Records are an invaluable resource for thousands of researchers whose immigrant ancestors lived in New York. Death and marriage records can help us learn the names of the towns that these immigrants came from, and can tell us the names of their parents. In many cases this is information that cannot be found elsewhere. The ability to research one additional generation further back in a family tree may allow us to connect that information with records from other countries. I have personally worked very hard to uncover recorded details about my family's past, researching over the course of several years, relying in particular on the NYC Vital Records archives. We need to be able to access these records in order to uncover our histories.

Michael Carlson
Comment:
I am adamantly opposed to the proposed rule change. Extending the number of years before birth and death records are made public does not increase the security of personal privacy information. Rather, in the case of death records, the proposed rule would actually make the effort to prevent identity theft more difficult by keeping closed the very records that may prove an assumed identity is fraudulent. Criminals use bogus emails, hack websites and databases, and launch phishing attacks in order to acquire PII. They do not mine decades old birth and death records. Moreover, this rule does a great disservice to individuals seeking answers to questions of parentage, inherited medical conditions, or simply learning about their family heritage. Taxpayers funded the
programs reflected in the records; they deserve reasonable access to them. Please reject the proposed rule.

Andrew Sverdlove
Comment:
FOI. When a government hides information it always harms the innocent. American values have mostly been to open and not close the doors of information. This is a terrible rule. As someone already said “I am adamantly opposed to the proposed rule. The effort to restrict access to these records is a solution in search of a problem. Of all the ways in which one might want to obtain personally identifiable information, given the state of current technology and the availability of all manner of information on the internet, it makes virtually no sense to impose the types of restrictions under consideration.” “It is an unnecessary, ill-advised, and rather primitive attempt to protect privacy in a way that goes far beyond what is either appropriate or customary in Western societies. I urge you not to adopt the proposed rule. It is, at its root, a feel-good effort to solve a problem that is illusory. Thank you for NOT IMPLEMENTING.

Janice Zoradi
Comment:
I strongly oppose these restrictive new rules for vital records. They will be devastating for family history researchers, in addition to depriving taxpayers of their right to view and use records that are paid for out of public monies. In a paraphrase of the memorable Ronald Reagan moment from the 1980 Presidential debate, "We are paying for these records!" I support access to vital records...everywhere.

Neil Buchwalter
Comment:
I am a family historian/amateur genealogist and I believe that the proposed waiting periods are ridiculously excessive. As a New Yorker by birth (Brooklyn Strong!), I rely on NYC records to help fill-in the gaps in my family history. I do not believe that any damage results by allowing genealogists and/or others doing family research to have access to these documents.

Randi Eckstein
Comment:
I appreciate the attention on security. However, having timely access to one's ancestor's history is critical for tracking genetic medical problems. I know of at least one country that has allowed researchers to get vital record information otherwise held private, for that purpose. Additionally, this would seriously hamper anyone doing genealogy work (for fun or profit), given the number of people who have lived in the New York in the past (like virtually my whole family). Hence, I strongly urge that this proposed rule be rejected.
Jeremiah Wilton
Comment:
Millions of immigrants passed through New York City as our nation grew through the 20th century. Some stayed for a lifetime, others for a shorter time. Either way, our nation is composed of one time New Yorkers. For those trying to find their origins, slamming the door on vital records of long deceased people will create a barrier catastrophic to the effort. New York must remain the foundation of our country’s immigrant population by keeping access to records as open as possible. Be the guiding light not only for new immigrants but also for the millions who came before.

Marilyn Robinson
Comment:
I am a former New Yorker with ancestral roots deeply planted in NYC. I am against the proposed restrictions being implemented regarding access to Birth & Death Vital Records. Regards, Marilyn Robinson

Kathleen Naylor
Comment:
I strongly oppose the proposed restriction on public access to public birth and death records for 125 and 75 years, respectively. These proposed limits are stricter than those in place in almost any other jurisdiction in America, and are based only on the "2011 Model State Vital Statistics Act," which has not been passed by any legislative body or subject to any public comment. While the genealogical community favors open records access, it is vital to note that these public records are not just important for hobbyists, but for crucial, real-world applications. Tracing family medical histories can’t be accomplished without vital records, access to which can have life or death consequences for people trying to make medical decisions today. Needing to wait 75+ years to access their family's birth and death certificates leaves people trying to make decisions about when, whether, and how to undergo testing, initiate lifestyle changes, or expand their families to do so without the full picture of how inherited conditions or genetic propensities should influence their choices. Vital records access enables historical scholarship; in New York City, where huge numbers of immigrants first entered this country over the past several hundred years, restricting this access leaves an enormous black hole in our understanding of ourselves as a country and as a people. Vital records access is crucial to the legal and governmental applications of genealogical research techniques, which can be used to find heirs; discover who holds rights to land or other property; or even return the remains of missing members of the United States Armed Forces to their family members, often years after the family last heard from their loved one. There is no evidence that limiting access to vital records reduces identity theft or improves public safety and privacy (on the contrary, there is some evidence that open access to public records deters identity theft). Without an evidence-based rationale for imposing restrictions, arbitrarily limits these important activities. Enacting a 50-year embargo on death records and a 75-100 year embargo on birth records strikes a better balance between public privacy concerns and the need to access and use public records in a reasonable time frame.
Michael Sirota
Comment:
I was born in Brooklyn in 1949 and was raised in New York State. All of my ancestors lived in NYC after coming to the US. My job led me to the Chicago area. I am a serious amateur genealogist and have a tree of 4000 people, most of whom are from NYC. I have also helped many friends, acquaintances and family in researching their NYC roots. The proposed rules would make NYC the most anti-genealogy city in the US. Births and deaths are public events and the records have always been public. Privacy is a red herring. The most serious risk is electronic/internet-related privacy breaches, not killing the hobby of millions of people who lives began or ended in NYC. Your proposed rules are especially harmful to immigrants, whose descendants have tried to trace their roots to NYC, where most Jewish, Italian, Irish immigrants entered the US. If a person affirms that they need access to NYC birth or death records for genealogical purposes, that should be sufficient. Identity thieves have much more efficient means of stealing identities than looking at old birth and death records. I implore you to not implement these anti-genealogy, anti-immigrant rules, that will have not real world effect in protecting privacy. Best regards, Michael Sirota

Marcia Katzel-D...
Comment:
I strongly oppose the proposed amendment to the birth and death law. This proposed law would severely limit my ability to obtain records of my and my clients' family histories. NYC should keep the law as it currently is without any changes.

Joan Carol Lieberman
Comment:
As genome medicine becomes increasingly important, it is critical that citizens from all states have access to vital records so they can effectively assemble a medical history chart of their ancestors. Causes of death and age of death can assist researchers and medical doctors in providing the best treatments for many patients. There is no reason to withhold such records.

Aaron Goodwin
Comment:
As a professional genealogist and resident of New York City resident, I oppose this proposal. I do however, recognize the importance of balancing access to public records with the protection of privacy. Accordingly, I recommend that the City adopt the legal restrictions established for the rest of the State of New York.

Jeremiah Wilton
Comment:

John Schroeter
Comment:
I believe that Public Records should be truly public and accessible to all. There is no good reason to keep birth and death records locked up for 75 or 125 years. These records always were and should always be public. As a New York City native, 7th generation Brooklynite, a descendant of New Amsterdam, and a genealogist I strongly protest these prospective new rules.

Madeleine Sann
Comment:
I have been researching my and my husband’s family for over 20 years. My grandparents and several of my great-grandparents emigrated to New York City and settled there. My extended family has lived in NYC for over 125 years; my husband’s, for well over 150. The proposed rules are more restrictive than rules I’ve had to work around in eastern Europe in an attempt to reconstruct our family story. There are no US jurisdictions with such restrictive rules as proposed. NYC was the port of entry for millions of immigrants. Even if they moved elsewhere, many spent decades in the NY area. The proposed rules will make it impossible for even the grandchildren of immigrants to obtain crucial records. Families will not be able to pass on key information to their own descendants and that truly is a tragedy.

Mary Scafo
Comment:
Dear Sirs; In regards to the Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records, please do not pass this, it unfairly hinders legitimate researchers gaining access to their families histories. Many people have traced their families back generations with the aid of NYC vital records. People have regained family relationships that were lost within time, found new relationships with their ancestors they never could have if NYC had not made them available. I know what is being proposed in not the answer. This is not a viable option, you need to find another way with either a stricter vetting process or do not fix what is not broken. Can you assure us that your technology which houses our NYC vital records is impenetrable to hackers, system failure, etc., etc.? Also, regarding Identity Theft, for those of us born in NY, what recourse do we have regarding our own birth certificates, and other vital records if someone penetrates your system? Nothing is perfect, but what you have already works, just do what you need to do to make it safer and not impede us in our quest to connect with our past. Please do the right thing, thank you.

Laurie Savin
Comment:
Who arbitrarily decided these number of years? I am very opposed. I would never have been able to piece together my family’s beautiful history with this kind of policy being enforced. Others should have the same benefits and rights. In this day and age there are no locks for thieves so why should the good guys always get crushed? 125 years is very unfair.

Donald Hoff
Comment:
I am writing to you in opposition to the proposed changes which will limit my access to my immediate family, my ancestral family, unknown persons but related to me. My interest is in securing information which help me on health issues, and discovering issues important to my welfare, and background. It can be very difficult, labor intensive and expenses I was born and raised in Brooklyn. My family has lived there since 1845. It is important to have very broad, and reasonable access to many kinds of records. This affects my family, my wife’s family. I believe the proposed restrictions will prove to be harsh, very limiting, unfair and misguided. The intent of more stringent limits may appear to safeguard the identity of many persons, but there many avenues where persons can carry out their illegal activities. I implore you to limit your proposed restrictionists

Donna Siegel
Comment:
As a family genealogist for over 30 years I am opposed to the Proposed Amendment to General Vital Statistics Provisions regarding Birth and Death Records. 125 years for birth records, 75 years for death records to be released will severely hinder research of New York City records. These time frames are excessive and I believe would be one of the strictest rules in the nation. There are circumstances in which the extended time frames would benefit, but I feel there are far better ways to accommodate some of the scenarios sited in the proposal. Linking birth and death records of individuals, separating and classifying certificates that have had to be amended. And as for adoptions, those too could be sealed and classified with an appropriate time frame for those records to be released. Such drastic, across the board, limits would put New York City records out of reach for families and genealogists who are trying to piece together the puzzle of family history.

Laurie Savin
Comment:
As a New Yorker with deep NY roots who has recently gotten very interested in my family’s history, I am bothered by this new proposal. The number of years you are proposing is and overreaction and too much. I do not appreciate this proposal for a litany of reasons. We are Americans living in a “free” society yet you would hold these vital records hostage so no family members can gain access without incredible hardship? This is NOT ok.
anne leyden
Comment:
Withholding public records for 125 years is unnecessary and excessive. The federal government releases census data after 72 years. Census records, too, have much personal information. There is no reason for NYC to exceed a 72-year time frame for the release the City's vital records data.

Tina Wood
Comment:
These proposed rules are excessively harsh to the point of being punitive. If someone wanted to steal someone else's identity, they would not go to the trouble of requesting genealogical records (where the request would leave an easy to follow paper trail.) The main people who would be adversely impacted by these rules are genealogy researchers and family members trying to find out what happened to their loved ones. As a volunteer "search angel," I helped a woman whose brother disappeared from his family and later died in New York City. These rules likely would have prevented his loved ones from finding out what happened to him. And there are millions of other stories of people whose answers and history can only be found in these records. Locking the records up punishes these innocent people while doing nothing to stop identity theft. Please do not adopt these rules.

MARC RODDIN
Comment:
There is no reason to not allow death records to be viewed by the general public. Once somebody is dead, the word gets around and it would be impossible to impersonate that individual. Almost everyone has a social security number, and the social security death index records all dead numbers very quickly. After my parents died (earlier this year) within a week or two I got condolence letters from all of the people who paid them pensions, from their insurance companies, etc. Since death information is shared with those organizations, it should be freely available and shared with everybody. I've learned a lot from death records of my ancestors (all of whom are from New York) and it would be horrible if that information were no longer available to each person's descendants and other relatives.

Faith Skizewski
Comment:
Please do not pass these proposed regulations, as a family historian I need this information and do not believe what is being proposed will be of benefit to fellow genealogists. Thank you for your time
Kathleen Lee
Comment:
I am adamantly opposed to the proposed extension of restrictions on public access to birth and death records. If passed, the restrictions would prevent legitimate historians and researchers from accessing historical information. Punishing those who follow the rules does not prevent those who break them from continuing to do so. If a change must be made, please look to pursuing the law breakers. As we have learned from data breaches, such as Equifax, computer hacking is a far larger risk to the personal information of millions of people than identity theft due to birth or death records from an archive.

Susan Davis
Comment:
New York City, the melting pot for those coming to America seeking new lives, should NOT alter or enact rules making it more difficult for descendants to find important genealogical information about their ancestors. Finding accurate information is difficult enough. What you are doing is denying multiple generations the ability to find out information about those who preceded them in making a new life in America. This has nothing to do with identify theft. It is a selfish move on your part to deny family members legitimate information about their relatives. Thank you. Susan Schapiro Davis

NICHOLAS BOTTICELLI
Comment:
To put such restrictions on Family Genealogy Research is completely beyond me. The purpose of these records is to build lost family connections. Generations of families are built and past on to future generations. I personally have connected my past NYC families back 5 generations, all of these records I can now leave for future family generations to embrace and continue research. Time for NYC to wake up and embrace Genealogy !!!!!!!!!!!!!!!!!!!!!

Marie Goewert
Comment:
Please do not pass this very restrictive bill. I understand the growing problem of Identity theft. It's bad. But for the many many honest genealogist, this these vital records..are vital. Restricting the years to 125 after birth is going overboard and would be devastating to us genealogist looking for one of he key documents in genealogy. The 75 years after death is also too restrictive. Why not 25 or 50? I am a genealogist simply looking to Identity who my father was using DNA and other clues. He was born approximately in 1890. The best I'll ever know for him is a name...mom died in 1971. But so far I can tell from DNA matches that my grandparents and possibly my father lived in New York City between 1850-1930. With your proposed date restrictions, I'll be dead before some of these records are publicly available.
Comment:
I was born in Manhattan, NYC, and my first ancestor came to New York City in 1855. My parents and grandparents were born in NYC. I am the genealogist for my family and strongly object to any barriers to my family research. I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I applaud the concept of a statute that permits for automatic transfers of birth and death records to the municipal archives, but I feel strongly that the proposed waiting period of 125 years for births and 75 years for deaths is much too long. I understand the need for privacy and fraud prevention. The United States Census is released after 72 years of that Census, with far more information than a birth or death certificate. There really is no logical or legal reason for NYC to require a longer waiting time.

Ancestry.com appears to provide all the information for a price. I support unrestricted access to the records for researchers. Surely with registration and other security measures, NYC can protect against fraud.

Cody M
Comment:
Hello. I am strongly against the proposed rule. It is unreasonably restrictive. I am an amateur genealogist with a *lot* of family who lived in NYC. I see no reason for these rules to go into effect - is there any proof to identity theft as a result of this? If these rules were put into place - I would not be able to request my grandfathers birth certificate (Born 1907) until 2032 - and he has been dead since 1968. This makes no sense at all and just seems like a way for the city to LOSE money from genealogists and family historians! These records being available will do no harm - Censuses are available from 72 years ago, which the majority of these people over 75 would be listed in - and when you go earlier than that, you are probably going to find their mother's maiden name, which is the only real piece of personally identifiable information you can find on a birth certificate. In addition, virtually everything in today's world requires a social security number for verification. SSNs weren't required at birth until the late 1980s, so that is not a factor for decades. People have the right to know about their ancestors.

Jo Ann Fitzgerald
Comment:
As a family historian and genealogist I strongly oppose restricting information for 125 years. Please consider the ramifications on how this will limit needed information doing family research. I would like to encourage the Department of Health to REJECT the call to extend the restriction to public access to birth and death records to 125 and 75 years respectively. I have many relatives which this would restrict access to. In fact, currently New York State is one of the hardest states to work with and get information from. There are better ways to ensure sensitive facts for individuals and to protect sensitive facts from public disclosure that do not require denying public access. Current technology and availability of all manner of information on the Internet, makes no sense to impose these types of restrictions under consideration like the census.
Margaret Daly
Comment:
I think the time provision is too long on the new proposals. This will be a handicap for genealogists. We have all our personal information being sold now by companies collecting data. Holding onto a birth certificate for 125 years seems quite silly.

Nancy Adelson
Comment:
Please do NOT approve this new ruling! It would harm more than help families. For example, all of my dad's side of my family lived in New York City (5 Boroughs). I would not be able to prove my family relationships and cannot protect myself from identity theft.

Gail Jorgensen
Comment:
I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I applaud the concept of a statute that permits for automatic transfers of birth and death records to the municipal archives, but I feel strongly that the proposed waiting period of 125 years for births and 75 years for deaths is too long. Although I support unrestricted access to the records for researchers, if there are going to be restrictions, a more appropriate period would be 85 years for births and 50 years for deaths. Thank you.

Ellen Weiss
Comment:
I vigorously oppose the rule change restricting access to birth records for 125 years and death records for 75 years. Being able to access New York death records for my maternal great-grandmother led to the discovery of family I did not know about, and who happen to be New York City residents. I am using New York City birth and death records to try to learn about my husband's grandfathers, and other missing family members. The details on these documents are the only clues to finding out about the people who made us who we are. Getting this information is effortful and costly, but if the rules change it will be impossible. A city rich with cultural diversity and history should be a leader in helping people discover their heritage. Please celebrate diversity by defending our freedom to explore it.

Suzanne Malek
Comment:
As a teacher and researcher, I am opposed to the New York City Department of Health’s strict new rules that would severely limit the ability of anyone, even perfectly law-abiding genealogists, to gain access to old New York City vital records. These proposed rules are stricter than almost anywhere else in America, and would be devastating to anyone researching New York City ancestors or collateral lines. Families
all over America depend upon honest use of vital records for genealogical research. Thank you.

Howard Weitzman
Comment:
The good that is served by many of us trying to figure out our roots outweighs the potential harm of keeping the data free and public. Bad people will find a way to commit crimes with or without this days. Please do not throw the baby out with the bath water! Leave this data available for all good people to access, as it stands now!

Cynthia Klein
Comment:
I am against increasing the time limits before records can be publicly released. These strict new rules will severely limit the ability of anyone, even perfectly law-abiding genealogists, to gain access to old New York City vital records. A huge number of persons lived in New York City on the way to other places in America and are important proof of residency, relationships and more to genealogists and persons interested in their family's history. These proposed rules are stricter than almost anywhere else in America, and would be devastating to anyone researching New York City ancestors or collateral lines. I urge everyone involved to leave the laws as they are or create less restrictive, rather than more restrictive access to vital records. Cynthia Klein

pete franklin
Comment:
As an adopted person who has been in contact with hundreds of adoptees in the military I can attest that access to vital records can save lives. Since NY still practices secret adoption when birth parents or adoptees develop inherited diseases it is nearly impossible to communicate this to biological family members. Allowing immediate access or transparency to these records will also deter human trafficking as predators are well aware that some states actually inadvertently aid misconduct by sealing records.

Shaun Harry
Comment:
I have been collecting and researching my family's historical information for several years. I just recently found records of my Grandparents in the NY archives. With this information, I have been able to learn new things about my Grandmother that I otherwise would never have known and have been able to share this with her own children. If these records were locked for a longer period of time, her children may never have known this very valuable information about their own mother. Please reconsider extending the time period before these types of records are released.
Kieran McKernan
Comment:
As a user of the records they have help me trace my Irish ancestry to America. Up until now it has not been possible for me to trace my relatives records so no unsealing these records would stop me from moving any further with my research as I am based in Ireland. Lots of Irish relatives have found it very difficult to find their families as they left Ireland and never returned. I really hope the records are unlocked so I can go deeper with my research.

Michael Morrissey
Comment:
New York is a very difficult state to obtain family information. Your proposed rule change is excessive. 75 years after a death. Wow!

Jennifer Silk
Comment:
As a genealogist whose family resided in New York City for many years, I have experienced the many difficulties the city already introduces into the process of obtaining family records. Unlike other cities and states, these records have not been made readily available. The proposed rule introduces the potential to make such records less available than they already are, and actually prevent family historians from documenting their history. This is being done in the name of preventing identity theft, and yet such records have not been shown to be used for that purpose in any significant way. I strongly object to the proposal. The city should be looking for ways to facilitate record access, not constrict

Lina Goldberg
Comment:
I oppose the proposed Amendment of Provision of Article 207. Although I applaud your efforts to try and prevent identity theft, this is a hamfisted way to address the issue. No actual statistics are given in your proposal about birth and death records more than 50 years old being used for this purpose; do you have any reason to believe they have been? How often does it happen? If you're concerned about birth records being used to obtain other forms of identification, wouldn't a simple stamp on the birth certificate saying "deceased" serve the same purpose? Or releasing records stamped "for genealogical purposes only-cannot be used for ID"? It appears that NYC is using identity theft as an excuse to deprive citizens of the access to information that they are legally entitled to. My family lived in NYC a hundred years ago. Through genealogical research—which included many, many paid records requests—I have been able to get in touch with my New York roots. As part of that research I'm flying to New York this week to visit the places that my family lived, the cemeteries they are buried at, and generally to explore the city. In addition to the hundreds of dollars I have paid directly to the city for these records requests, I'm also contributing to the NYC economy while I continue my research—research that wouldn't have been possible without the birth and death records that you now seek to restrict.
Vanessa Duncan  
Comment:  
My great-aunt Agnes was born in 1912, and I would like to obtain her birth certificate for information about her parents, my great-grandparents. Agnes was never married and had no children, and presumably her parents are long dead. This amendment would make those records unobtainable by anyone for another 20 years from today. There is no other source of this information. Her brother, my grandfather, was much younger, and I suspect some historical details changed in the time between when they were born. Please do not extend the time period to 125 years after birth, information such as this will be lost forever in the additional generation gap. Thank you.

Seth Bookey  
Comment:  
Everyone else has covered the general reasons why extending the period of time for this record is bad for research, but another thing you should consider: lost income for NYC! You guys make a LOT of money on the money you charge for these records. It's $11 at the Municipal Archives, and $15 or more for marriage and death records. It has been shown that access to these records does not really factor into ID theft and other problems. If the U.S. Census is good enough to have a 72-year waiting period, why must NYC have something in excess of that? It seems like overkill AND a great way to reduce income from the many people who need these records for legitimate genealogy research and health-related research. If someone is committing ID theft, there many easier ways to do that on the Internet. I mean, an ID thief it not going to go to 31 Chambers Street or the DOTHto spend money and TIME looking at microfilm to steal somone's identity. So many public records allow that online right now.

Carolyn Thompson  
Comment:  
As a family historian, the proposed exclusion of access makes it impossible to search for ancestors. Many other states provide many more opportunities for success. Please reconsider. Myentire family began their lives or their road to citizenship in the 5 boroughs.

Michael Miller  
Comment:  
It is beyond comprehension why the NYC Birth Index should be shrouded in secrecy. It was because of that index that I, after many, many months of searching, was able to finally find out who my mother's birth parents were and what my mother's name was at birth. Why should anyone be denied knowing the identities of the people they come from? What gives the city of NY the right to block families from finding each other? Needless to say, I hope the NYC Birth records will be made public!
Liana Mayer  
Comment:  
It is already restrictive to get genealogically useful records from the NYC boroughs. The time limits do not need to become draconian when access to these records is not an identity-theft risk. Don't keep information on our families from us, the children, grandchildren, and great-grandchildren who would care.

Ruth Marin  
Comment:  
Please do not take away my ability to get information about my family history.

Debbie Hadley  
Comment:  
This proposed rule change would be devastating to those of us researching our family history. Without access to vital records for our recent ancestors, we cannot make the connections that take us back generations. Please don't take our ancestors from us by imposing such an extraordinarily excessive rule.

Rhoda Miller  
Comment:  
I strongly urge that you do not accept the proposed resolution! My doctoral dissertation study, The Association of Family History Knowledge and Cultural Change with Persistence Among Undergraduate Low-Income, First Generation College Students, demonstrated the outcome that family history knowledge is associated with resiliency. Restricting access to historical records that students need to research their family history is a destructive element in the educational process. Please do not cause destruction that is vital to a demographic of students who desperately need every strategy possible to develop the resiliency needed to succeed in life as well as to develop research skills involving primary source material. Thank you!

Steven Schwartz  
Comment:  
Response to Introduction - NYC Health Code Section 3.25 states, “records ... shall be confidential and used only by authorized personnel of the Department or its authorized agents.” The Department and their staff should treat records with the “utmost confidentiality.” However, this does not imply unreasonable restrictions should be adopted to access the records. Response to Background and New Requirements Birth and death records - All agree birth and death records are important historical documents containing personal identifying information. The proposed rule change is overly restrictive and not based on sound reasoning. Fraudulent use - No evidence is given of even one case where the current rules governing vitals records from NYC has lead to identity theft or fraud. Rather, my experience is the lack of open records allows false claims and fraud to continue without being checked or corrected. Amendment and correction – Given the large number of records issued and the relatively few that were
amended, it seems more “unlikely” that records will be amended after a reasonable period of time. Privacy concerns – we live in a free and open society. Federal census records are made public after 72 years. Other states are moving to make vital records public sooner rather than later. Model State Vital Statistics Act and Regulations (2011 Revision) - this is not approved by any official body of government. It is a recommendation by an advisory group (the the National Association for Public Health Statistics and Information Systems) and was adopted without public comment. Recommendation Do not accept this proposed Amendment. It recreates unreasonable restrictions. For example the New York State Department of Health (DOH) provides uncertified copies of 1) Birth certificates if on file for at least 75 years and the person is known to be deceased and 2) Death certificates if on file for at least 50 years. Thank you for the opportunity to comment.

Nicholas Rossi
Comment:
In reference to the Proposed Amendment to General Vital Statistics Provisions (Article 207 of the NYC Health Code) regarding Birth and Death Records, I would like to offer a vote AGAINST the amendments as proposed, in that the lengths of time are excessive and unreasonable. 100-105 years for Birth Records and 50 years for Death Records are more than plenty to reasonably achieve the safeguarding of PII, and still allow for access to the many decent people who are searching for their ancestors, however close or far. These "old" records are not only most valuable for family historians and genealogists, but are necessary for piecing together histories of New York City and its people, as well as being tools for such situations as estate settlements whereby a common ancestor must be determined. It it my hope that the cooler and more rational minds will prevail. Thank you for your time and consideration. This means a lot to many people!

paul guarino
Comment:
Changing the time frame for birth and death records almost shields out the ability to do any genealogical research at all. My family was a big part of New York from 1890 -1940 and with the new changes, I would be blocked from finding out lots of impotant information.. The Department of Municipal Records does an outstnding job of processing requests. Please dont change it

Sharon Pike
Comment:
I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I applaud the concept of a statute that permits for automatic transfers of birth and death records to the municipal archives, but I feel strongly that the proposed waiting period of 125 years for births and 75 years for deaths is too long. Although I support unrestricted access to the records for researchers, if there are going to be restrictions, a more appropriate period would be 100 years for births and 50 years for deaths.
Christopher C. Lee
Comment:
I oppose the proposed rule restricting access to NYC birth and death records. Access to and research in these records serve a necessary function in New York Administration Law by contractors such as myself working to ensure the due diligence of attorneys. By severely restricting the records as proposed, the City stands to obstruct the administration and disbursement of estates to the proper beneficiaries, heirs, and other recipients. Beside this, contractors such as myself similarly access records that would be inaccessible under the proposed rule for New York residents and others seeking relatives and kin for their own planned gifts and disbursements of real estate and other property. If the proposed rule responds to a want to provide or increase privacy for individuals who were born or died in the coverage period, it is unnecessarily and unreasonably restrictive. Privately held personal records databases provide information enough to nullify entirely the effect of the proposed rule while limiting the ability of contractors and researchers to carry out the functions, including those with application in New York Administration Law outlined above.

Jerry Schneider
Comment:
My name is Jerry Schneider. I am 73 years old tomorrow and I am disabled and housebound. About 20 years ago, my family visited Ellis Island and were introduced to the Ship Manifests for my father & paternal grandparents and those of my maternal grandparents. It was as though I was smitten by a bolt of lightning From that point forward, my life was dedicated to genealogy: first my own and then those of friends and relatives. I grew up being told that I did not have any family; in hushed tones, I was told that ALL OF THEM, except my grandparents; had been murdered in the Holocaust. As a Russian Jew, I was told that any vital records were destroyed in WWII. I then discovered JewishGen online and began to message with Russian genealogists. From their records, I quickly discovered that I was not Russian but Polish and that I may find some vital records in Jewish Records Indexing - POLAND. After much research, I was able to find my paternal family in records from Izbitsa and my maternal family in records from Zolkiewka. And, from the Ship Manifests found earlier, I learned that ALL of them had emigrated to New York, specifically the Bronx, and Brooklyn. At that point, I was introduced to the vital records of NYC. For a solid 2 years, I researched vital records of family members. These usually provided me with the name of parents and other info. The marriage records maintained by the city clerk offices provided even more pathways into the past and present. Quite frankly, without the present public access rule, I would have NEVER been able to identify other relatives who had survived the holocaust, or helped others find theirs. The new rules are like a second Holocaust, taking away the identity and history of several additional generations of ancestors and family. Please, I beg you, on behalf of the hundreds of family and relatives that were killed in the holocaust; and the thousands that live in the NYC vital records (those that will be subject to additional restrictions under the new policy), do not place additional restrictions or time constraints on the NYC Vital Records. Thank you for your consideration of my remarks. Jerry Schneider Burke, VA, USA 703-764-0272
Frances Stein  
Comment:  
I am opposed to the proposed resolution to Amend Article 207 as written. It is much too restrictive. As a family historian/amateur genealogist, further restrictions to our access to birth and death records seems unnecessary. I appreciate your concern for safeguarding privacy and identity; however, your proposal seems to overreach. Many states have birth and death record images online already that are much more recent - I have seen some from the 1990s! I am not suggesting that NY City do the same, just to be more reasonable. And, also, the Dept. of Health should transfer microfilm of birth records to the Municipal Archives after 1909-at least those through 1916. Also, by allowing access to the vital records will ensure a continued revenue stream for the city. I have spent several hundred dollars at the Municipal Archives in the past 2-3 years, having ordered documents by mail and in person. I support the guidelines proposed by the NY G&B Society and have already added my name to the "petition". Thank you.

Joan Sohn  
Comment:  
My family came to the US and settled both in NYC and Philadelphia. The Pennsylvania birth and death records have been invaluable to my research into my family history. I would hate to lose access to the NYC records.

Rebecca Vaughn  
Comment:  
As a professional archivist and genealogist, I completely oppose the proposed amendment to the general vital statistics. It has been shown that open record policies actually reduce the amount of fraudulent activity. Death dates, full names, and social security numbers are available online from the federal government. This has reduced identity theft as it has been made easier to prove that someone is deceased and that person's identity has been stolen. The 125 and 75 year restrictions are excessive, and hinder both genealogists researching their family histories as well as historians researching modern history topics. Not only does this amendment negatively affect the field of genealogy, one of the fastest growing professional fields, but it will negatively affect tourism. The number of genealogists who visit New York City, spending money in hotels, restaurants, and other attractions, will decline. Clients who might want to visit the places where their families lived or were buried will not be encouraged to travel to the city. Also, people alive today have the right to track diseases and health issues that they might be prone to suffer from due to their genetic history. Descendants have a right to these records and the medical history contained within. The year restrictions will only be to the detriment of the people of New York and others with family from New York. Your reasoning for these restrictions do not hold up in any way, so I strongly urge you to not pass this amendment.
Robin Meltzer
Comment:
The proposed rule change does not enhance protections against identity theft. It only hinders attorneys, or those trying to document a legal right or entitlement, from accessing vital information that is and has long been public record with no demonstrable harm. California has already conquered the identity theft issue by using a simple notation on copies of vital records issued for informational purposes: "INFORMATIONAL, NOT A VALID DOCUMENT TO ESTABLISH IDENTITY" is prominently imprinted across the face of the document. Please reconsider this unnecessarily restrictive rules change, and instead consider adopting California's quite sensible and effective method.

Tommy Michaels
Comment:
I recently discovered that my father's family lived in New York City and other areas of New York from 1880 to at least the 1970s. I am opposed to the proposed time limits that restrict access to birth and death records and am in support of the proposed time restrictions suggested by the New York Genealogical and Biographical Association. I am interested not only in my family history from a historical perspective but also from a medical perspective. Please do not implement the proposed rules that contain unreasonably long periods before release of birth and death information. Tommy Michaels Williamsburg, Virginia

Tom Wilcox
Comment:
My family history in New York City encompasses 3 family lines dating from 1872 to 1987. This new rule would be a tremendous hardship for family genealogists to learn their family history. I do hope that you will reconsider this drastic move which restricts information for too long a time.

Tristan Tolman
Comment:
Please do not change the access to birth records to 125 years and death records to 75 years. As a genealogist, I use NYC vital records all the time and depend on them to help me identify and reconstruct families. So many people have family from NYC, and vital records are key to tracing our ancestors further. Allowing so many of us to connect with our ancestors and heritage is priceless - please do not take this away from us due to the poor choices of a few.

Julie Stoddard
Comment:
I strongly oppose this change. I agree with Diana Frederick's comment that "putting such an extreme limit on when a birth or death record becomes public is overkill." Her
suggestions provide several solutions to better regulations. There are other great comments with reasonable suggestions to the problem.

Peggy Vander Yacht
Comment:
As a family historian/genealogist, I am alarmed by this proposed change in birth and death records. It is absurd to have such a lengthy time when these historically valuable pieces of information would be unavailable to researchers. I could understand a shorter period to protect privacy, but 125 years for a birth certificate -- ridiculous!

Lee Martin
Comment:
The new rule is way too restrictive, especially if some people do genealogy. Most people don't know where to start looking for information on their ancestors and the vital records department is the most visible government entity people think of to know where to start. If that is inaccessible, there's no way can get proof unless they think outside the box and look for substitute records that may help in the search.

Christine Douglas
Comment:
I believe the proposed rules governing birth and death records will adversely affect family historians and genealogists researching families having lived (born or died) in New York City. I know, for one, that it could affect my research. I believe the current safeguards are sufficient and should not be changed. 125 years is too restrictive and a harsh knee-jerk proposal for a perceived issue of access. I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I do support a statute that permits for automatic transfers of birth and death records to the municipal archives, but am opposed to a proposed waiting period of 125 years for births and 75 years for deaths as too long. Christine Douglas, Goodyear, AZ

Elizabeth Bentley
Comment:
Please don't restrict the records any further. Family historians need to access the information for perfectly legitimate purposes. The death records are particularly useful. In my opinion, privacy restrictions should be based on the date of birth, not death.

Donna Brock
Comment:
As the genealogist and historian for my family, with roots that are deep in both New York and New Jersey, I strongly oppose restricting information for 125 years. Information will be lost for generations if you continue down this path. Please consider the ramifications of your pending decision and it will severely curtail the ability to access critical information necessary for family research.
Aubrey Hemingway
Comment:
Timely access to vital records is critical and essential to genealogical research. The proposed restrictions would be an unnecessary hindrance for myself and millions of others seeking to trace their family history in New York City's vital records. The proposed rule changes are too stringent. I ask that you develop and implement an informational copy of birth and death records, which would be available within weeks of the vital event (birth, marriage and death). The form should provide important details for genealogical and historical research in a format NOT suitable for proving identity.

Barry B Miller
Comment:
Dear Sir/Madam, I would like to comment to the NYC Department of Health and Mental Hygiene regarding the proposed rule changes which would further restrict access to New York City birth and death records. I am opposed to further restricting how long the public has to wait to access these public records. In fact, I would like to see the restricted period eliminated altogether. Instead, I encourage you to develop and implement means to allow for informational copies of birth and death records to be made publicly available in a way that would prevent their use for identification purposes, as other jurisdictions have done. But my primary comment at this time is express that I am NOT in favor of further restricting the New York City birth and death records. As a family history researcher, access to public records is critical. Thank you. Barry B. Miller

Jonathan Schwartz
Comment:
I believe NYC vital records should not be restricted beyond what NY state allows. The public has legitimate reasons for accessing these records.

Debby Holland
Comment:
I am writing to urge rejection of the proposed rule by the New York City Department of Health and Mental Hygiene to extend the period in which birth and death records would be unavailable to the public. Acknowledging that average life spans have been increasing until recently, the new rule unnecessarily restricts public access beyond the reasonable privacy protections. The remedies proposed by the New York Genealogical and Biographical Society would sufficiently ensure the protection of individuals’ vital statistics while allowing interested parties, including genealogists, access to this treasure trove of data that would enable family researchers, genealogists and historians to create a more accurate and comprehensive account of the past. Thank you for your consideration of my remarks.

Sarah Brown
Comment:
As a amateur genealogist, researching my paternal ancestors in New York City and Orange County NY, it is challenging doing long distance research. The new rules would make that reach even more so. For example, my father's records, born in NYC in 1908 and gone now over 10 years, would still be closed. This seems excessive to me. As a victim of identity theft myself, if some of the reasoning behind the change is thought to address identity theft, this is a spurious deduction. My identity theft was a result of credit card scamming not as a result of hacking my ancestry.com account. I encourage you to not implement this additional time frame for accessing records.

Danelle Knapp
Comment:
Please do not extend the restriction on accessing birth and death records. Genealogy is my hobby and a great number of my family lived, died or got married in NYC. It's difficult right now to find information and almost impossible to find records relating to Staten Island or Brooklyn or pre-1900. Further restrictions would have the same effect as destroying the records. Given the vast number of Americans who have been touched by New York, further restrictions would crater a lot of genealogy research. If your aim is fraud prevention, surely you can do this by making the records electronically available and only dispensing the actual certificates to people with proven legitimate reasons. Restriction by years seems the most clumsy and least effective way to prevent fraud.

Charliece Hillery
Comment:
Access to the vital records of the City of New York is essential to my efforts as a family history researcher. The current restrictions are already sufficient to make my work difficult. Locking up birth records for 125 years and death records for 75 years will make connecting people to their own past more burdensome than is necessary to protect the public. Please find a way, as other jurisdictions have done, to protect records from misuse while still making the information contained in them accessible.

Darrell McGraw
Comment:
Hi: Please allow genealogists access to all vital records. I have been tracing my family tree for over 40 years and we need access to fairly-priced records to verify the lives of our ancestors; births, marriages, and deaths especially. Once an individual dies, there is no expectation of privacy for that person, in my opinion. The chance of an identity theft is very slight once a person dies. If the data is verified by the end-user, they will soon realize the person is using fraudulent information.

Mary Fobian
Comment:
I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I am in favor of a statute that permits automatic transfers of birth and death records to the municipal archives, but in my opinion the proposed waiting period of 125 years for births and 75 years for deaths is far too long.
Shannon Green
Comment:
As a genealogist, access to this type of information is critical for people trying to trace their family history. It would be such a shame to prevent this and future generations from learning about their roots.

Anton W Bruchhauser
Comment:
Hello, I started out in genealogy about five years ago after coming across an article about a relative who I had no idea existed until that day. I knew very little about my grandparents and nothing about anyone preceding them. I have since been able to trace many parts of my and my wife's families back to the 1800s and earlier. All of this became possible through the accessing of early records from the municipal archives as almost all of our ancestors lived in New York City at some point. We now have a much clearer picture of who these people were, how they lived, and just where we came from. Three years ago I was able to visit the town of my great-grandfather's birth for a hundredth anniversary celebration of he and his brother donating a large stained glass window to the church there. My wife has learned about an aunt that she never knew existed and about how her family came to live in the United States. These are a few of many discoveries that we have made. None of this would have been possible without those first documents obtained from the municipal archives and they would not have been available to us if the proposed rules had been in place. I completely understand the need to protect privacy as I have been affected by identity theft twice. I do know, however, that neither of these instances had anything to do with records from a municipality. One instance was from a card skimmer and the other from a website breach. I believe that the proposed rules, while well-intentioned are far too severe and do nothing to address the actual ways that our private information is exposed. I have also found that of all the places I have undertaken research, New York is already one of the most restrictive places for obtaining records. I appreciate the chance to voice my opinion and am truly hopeful that this rule change is rejected.

Betsey Kirkemo
Comment:
I reside in Colorado, and it's tough enough to research my family in New York over the miles. I plan on making a trip or two in the near future to break through some walls that I have for my NY family who migrated to Wisconsin. I have several big issues to resolve for my ancestors who fought in the revolutionary war. If you adopt these rules, you are going to make it beyond difficult for anyone to research genealogical statistics. It's super important to have the help of those who are still alive while we can. Please don't do this to us. It's bad enough that census information is limited to the 1940 census. I vote NO! Betsey Kirkemo
Vince Patton
Comment:
I am writing to you in strong opposition to your proposed restrictions on birth & death records. You are about to lock up my family history, and the history of millions of people, for nearly six generations. Locking up birth records for 125 years and death records for 75 years not reasonable. This is an overreaction with dire, unnecessary consequences. I am a genealogist with deep ties to the original American colonies, particularly New York. Your rule shuts off research into our ancestors for far longer than any state has ever imposed before. The single most important records in our research are proof of birth and proof of death. Without those confirmations, a family tree is not considered valid. Is it really reasonable to say no one is allowed to research their ancestors until they’ve been gone for 125 years? Impossible. This means we cannot do the research at all. We won’t live long enough. Even our children and even grandchildren would likely be locked out of their own family histories. This Proposed Resolution to amend Article 207 is a gross overreaction. I urge you to reject it. Vince Patton Oregon

JoAnne Thornton
Comment:
As a genealogist vital records are an essential tool to finding out the key to our past, the legacy that our ancestors left behind. As a woman with many medical issues these records are the key to unlocking many doors to what nests inside me. I've been able to find, through these records, as far back as the early 1800’s cases of hyperthyroidism, breast cancer, heart disease and more that my family were stricken with. All illnesses that were carried down through generations and have been extremely valuable tools for my physicians to know about . Without these records at hand we would have been at a loss. PLEASE DON'T TAKE THEM AWAY FROM US! We need them. The past is telling it's story. And that story NEEDS to be told.

Susan Greenberg
Comment:
This would make it impossible to conduct genealogical research on ones parents. You would have to be 75 years old prior to being able to access this information. This should not go forward into law! Please!!

Bruce Reisch
Comment:
No evidence is presented that necessitate the proposed changes, therefore I strongly oppose this proposal. There are no known instances open records access has led to more identity theft than where long embargo dates are used. Documents can be issued that are clearly marked "for information purposed only; not to be used for identification". This type of marking is used successfully elsewhere. Please reconsider the need for this rule change.
Sheri Smith
Comment:
As a family historian, genealogist I too strongly oppose restricting information for 125 years. Please consider the ramifications on how this will limit needed information doing family research. I am speaking with one voice here for many!

Kevin Cassidy
Comment:
I would like to encourage the Department of Health to reject the call to extend the restriction to public access to birth and death records to 125 and 75 years respectively. My paternal grandfather died in 1948 and that would restrict his record until 2024. I am glad I had access to it back in 1996. I did not commit any crimes with the information. That seems to be a very severe restriction. A better way to restrict fraud would be for every death certificate to be sent and notations made on the birth record when and where the person died. Both sets of my grandparents lost infant daughters in 1930 and 1932. These girls lived 20 and 9 days respectively. A note should have been added to their birth records to prevent scoundrels years later from trying to create fictitious identities. I think there are ways for individuals who may want to protect sensitive facts from public disclosure that do not require denying public access. Thank you.

Stew Cogan
Comment:
To Whom It May Concern: I am adamantly opposed to the proposed rule. The effort to restrict access to these records is a solution in search of a problem. Of all the ways in which one might want to obtain personally identifiable information, given the state of current technology and the availability of all manner of information on the internet, it makes virtually no sense to impose the types of restrictions under consideration. My strong suspicion is that you will have fervent and widespread opposition to the proposed rule and few in favor of it. It is an unnecessary, ill-advised, and rather primitive attempt to protect privacy in a way that goes far beyond what is either appropriate or customary in Western societies. I urge you not to adopt the proposed rule. It is, at its root, a feel-good effort to solve a problem that is illusory. Thank you for considering my comments.

Stew Cogan Seattle, Washington

Allan Bloomberg
Comment:
The 125 year waiting period is very excessive and needs to be much shorter. I can see no damage that will be created by giving genealogists and people doing their own family research access to these documents.

Barry Spinner
Comment:
I believe the time periods being proposed are far far too long durations. Particularly the period for death certificates. If this rule had been in place presently, my family would not
have able to verify a death of a child - which death caused great psychological harm for generations within that Manhattan family.

Ronald Wencer
Comment:
I enjoy family research as a hobby, but it is more than that. People have a right to know who their biological/legal ancestors were, to know about their ancestors' health and causes of death, to know if what they have been told is rumor or fact. Others’ privacy concerns do not override these rights. Accurate family research takes years. One starts with parents, works back to grandparents, and then to earlier generations. Authoritative copies of records (not necessarily official, certified copies) are a necessity. The proposed revisions to Health’s policies would have crippled my start in 1996 – I could not have begun in earnest until 2020, when I'll turn 74! An example: My grandmother's name is illegible on my late father’s birth record. The best alternative source is a birth record for one of his siblings, born 1896-1912. Under the new policy, in 1996 I could not have seen such a birth record, or even my own grandparent's death record. Government birth/death records are absolutely necessary. In comparison… which of NYC’s churches am I to contact for a record of my grandparents’ marriage in the 1890s? In which church was my aunt baptized in 1912? To try to begin my research without City records would have been fruitless. Please note from the above that, in order to learn who my grandmother was, and who her parents were, I had to see records which pertain to other families (e.g., my cousins'). To learn about my great-grandparents, I needed information about yet more distant cousins. Aggressive privacy policies are likely to thwart spreading research such as this. To have approached Health in 1996 (i.e., for information still held as private) would have been a difficult, or even impossible. How could I have demonstrated a family connection to, say, my long-dead uncle who was born in 1910? He died unmarried and childless; there were no direct descendants to authorize anything. All his siblings were dead by 1996, except for one sister, who lived in a nursing home because she suffered from Alzheimer’s. On what meaningful basis could I have sought authorization from Health to see such a man’s birth certificate? In considering the proposed rules, NYC must look at the reality which it will face if they come to pass. Does it want to tell tens of millions of world-wide descendants of former residents that it refuses to provide records about dead people, people about whom so much is available online? Note that past U.S. Censuses are online, and report rent or home value, income, length of marriage, number of children born to a woman, periods of unemployment, incarceration in mental institutions and prisons, etc. What would be the point of not providing unofficial copies of documents, when so much other personal information is already widely available online without restriction? Please do not create a policy which impedes people from learning about their families’ pasts, and is likely to serve no good purpose.

Alexander Calzareth
Comment:
I oppose the proposed Amendment of Provision of Article 207 of the New York City Health Code as currently written. I applaud the concept of a statute that permits for automatic transfers of birth and death records to the municipal archives, but I feel
strongly that the proposed waiting period of 125 years for births and 75 years for deaths is too long. Although I support unrestricted access to the records for researchers, if there are going to be restrictions, a more appropriate period would be 100 years for births and 50 years for deaths. Please see the attached PDF for my full comments. Thank you.

Harriet Mayer
Comment:
It has been shown that these records are not a factor in identity theft. There is no reason to keep death records secret for 75 years, nor to keep birth records unavailable for 125 years....The Bible notwithstanding, the large majority of people are not going to live anywhere close to that. Other places have much more lenient provisions and do not experience unwanted consequences.

Joel Novis
Comment:
I am strongly opposed to the revised rules, as it unnecessarily hinders legitimate research. The current birth and death record confidentiality periods are adequate; increasing the confidentiality period for birth records to 125 years, for example, appears to be based on an arbitrary number, not justified by any type of fact-checking. At the most generous, it anticipates that longevity will continue to increase well beyond the limits that a tiny handful of individuals world-wide have achieved to date. There is no evidence presented that the community of living people in the age brackets that would be covered by this new confidentiality rule have been or would become targets of identity theft. Once again, the number of individuals in this community is small, and the underlying issue -- that of multiple versions of certificates available in the public domain -- is not changed by this update. Record-keeping entities need a full re-examination of how they maintain versions of vital records. The proposed change to the Code is, at best, a band-aid that does not address the root cause. Thank you.

Meli Alexander
Comment:
As someone who lived in The Bronx (and has deep NYC roots), this amendment would be absolutely devastating. So many people are becoming more interested in tracing their genealogies; having access to Vital Records is very essential. Certain populations (especially Ashkenazi Jews) need any type of verifiable record in order to help put the pieces of the puzzle together. Since I joined a certain DNA website, I continue to see cousins added on a regular basis who look for answers. In my case, I can only find one branch of my family tree that can be traced to the 1700s in Lithuania. But for a lot of people, having Vital Records inaccessible could be very frustrating & devastating.
Virginia Pratt
Comment:
I am in agreement with the other posts against the proposed restrictions on vital records access. As a family historian who accesses vital records worldwide, the current restrictions are well established and do not need amending. It is critical for genealogists and family historians to have access to these records; not only for the historical value but for the medical genealogy as well. Thank you for reading my email and listening to my opinion. Virginia Pratt

Laura DeGrazia
Comment:
Genealogists do more than just create family trees. We study history as it pertained to families from all walks of life. We track families as they immigrate, and as they journey between states, counties, towns, and villages. We publish our documented findings in peer-reviewed journals. Our scholarly research benefits those who know that studying the past can help make sense of the present; history has always been an important subject for study. Some genealogists work with the court system to identify legal heirs. Others work with the federal government to identify family members of unaccounted-for soldiers who died in military service during the twentieth. We are more than curious hobbyists. New York City’s current proposal to increase the waiting time before a vital record is available to the public will impact the work of all researchers who are interested in people who lived and died in New York City—genealogical scholars, forensic genealogists, authors, historians, and private citizens who seek to know more about their own families. The city’s proposal is out of step with that of the state. Where New York City proposes to restrict access to birth records for 125 years, the state allows access after 75 years for the birth of a person who is shown to be deceased and 105 years if the death cannot be verified. And where New York City proposes to share death records only after 75 years have passed since the death, the state allows access to death records after 50 years. Privacy is an important issue, especially in today’s world. Government officials must find a reasonable balance that will both protect the rights of all citizens and allow genealogical scholars and researchers to conduct their important work. I sincerely hope that those in power will reconsider the current proposal and follow the state’s lead with respect to access.

Debbie Gurtler
Comment:
I strongly oppose the changing of these regulations. It will greatly hamper the ability of those seeking information about their ancestors to obtain their records and continue building their family tree.

Paul Rehac
Comment:
I strongly oppose this provision. I believe personal information is adequately protected by the current regulation. The only result from this provision, if passed, would be to keep historical information locked away from legitimate historians and researchers.
Jacqueline McGuire
Comment:
I am opposed to the measure because it will hamper those who do family history research here in New York. Thank you.

Janet Blake
Comment:
I strongly oppose this change. It sounds like a knee-jerk reaction to rumors. As adoptees' records are opening all over the nation, why would we be closing other records? The argument can no longer be "identity theft." Equifax (most recently) has taught us that the bigger threat is from within. NYC already has some of the most restrictive rules in the country. Do more open states have more identity theft? Of course not. Please consider coming up with a *quantified* and *justified* argument which proves the need for the change.

Erin Ceddia
Comment:
Like many Americans, my ancestors first arrived in NYC, and began their lives there (meaning births, marriages, and deaths). Adding more stringent rules would negatively impact my ability to do genealogy research. I'm strongly opposed to this change.

Cheyl Lieberman
Comment:
I am a native New Yorker and have been very grateful to have access to birth and death records to assist in family research. While I understand the desire to protect the privacy of those whose records the city maintains, the proposed changes go too far. People may be living longer, but the requirement for birth certificates to be held confidential for 125 years makes no sense. Likewise, 75 years for all death records goes too far. Perhaps a compromise for these records would be where the age at death plus a given number of years add up to a certain age, maybe 100 and birth records for 100 years. Increasing longevity for some members of the population should not drive rules for everyone else, especially considering that the average ages are still not nearly as high as these rules seem to anticipate.
The 125 year waiting period is very excessive and needs to be much shorter. I can see no damage that will be created by giving genealogists and people doing their own family research access to these documents. Please, please, please reconsider this excessive amount of time.

Karen Dwyer
Please allow us to see our birth records. I am a mature, intelligent women with grown children of my own. However, I DON’T KNOW WHO I AM. All I ask is that I am able to know my heritage to pass on to my children. To know if I am carrying or susceptible to diseases or negative genetic traits that I may have passed on to my children.

Please help me..

Your rules have gotten so ridiculous I couldn't even get a copy of my OWN father's birth certificate. I think there should be more availability of access to records, NOT less. I submitted everything asked for and was denied my father's birth certificate because it was not my name. What? I couldn't believe your department did that to me. I re-submitted the whole package with detailed explanations and still have not received any response back.

Please don't change the rules to make this more restrictive. Allow relatives to get birth certificates, marriage certificates and/or death certificates of our family.

Bill
IN GOD WE TRUST

I am against the removal of records from the Public. As a Genealogist & Family Historian it is important that I retain the ability to access my Families records. This is important to the History of New York State Citizens. Please do not tie our hands for 125 years.

We live as long as we are remembered.

Carol Heap
Dear Sir or Madam:

This is response to the proposed resolution to amend Article 207 of the NYC Health Code.

I understand your need to control the transfer and availability of vital records documents. The time limits you propose, though, are some of the most restrictive that I have ever seen and I would urge you to set the limits for birth records to match the federal government in terms of privacy – 72 years. As a professional genealogist, I utilize vital records documents from all over the world. As NYC was an important gateway to many seeking refuge, vital records from NYC are often the only link I have between an immigrant and his new life in America.

I also have a personal interest in NYC records. My parents were married in NYC and several of my siblings were born there. I still have family in the city and surrounding areas.

Thank you for allowing me to express my concerns about this proposed resolution.

Best, Kirsten Manton  Boxford MA
Thank you for the opportunity to comment on the proposed amendment. Access to the NYC vital records has been instrumental to me in being able to reconstruct my family's history and being able to pass down those stories to future generations. I understand the importance of privacy in the records, but I feel that it is worthwhile to trade off those privacy concerns against the real benefits (including medical historical information) of keeping the records accessible. I believe that the current regulations appropriately balance those concerns.

Thank you,
Lawrence Fagan, MD, PhD
Stanford University (Retired)
Please keep the vital records accessible to the public. Thank you, Ellen Easton

I urge you to avoid further limiting access to VR in NYC. I’m a genealogist and also a descendant of grandparents who lived in NYC – and their records are part of my personal history.

I see no benefit to the state or city by this action, other than to prevent (if possible), via a knee-jerk reaction, identity theft. This is a detrimental step.

Protection people from identity theft is not aided by blocking VR access because the information in the VR is mostly already public in many other on-line sources. I can find more online about living people than then dead. The challenge for genealogists – both amateur and professional – is to be able to confirm already known information about the deceased – and hopefully glean a clue for their long dead ancestors.

To whom it may concern:

As the daughter of a proud New Yorker, I sincerely hope that you will not implement the proposed new guidelines that would greatly restrict access to New York City vital records. These guidelines would be drastic, severely curtailing genealogical research. I believe that you can impose guidelines that would help to protect the privacy of the people of New York City, while also maintaining access with less severe waiting periods for family historians and other researchers. Something along the lines of New York State’s current guidelines would be reasonable.

Thank you for your attention,
Patricia M. Genadio

P.O. Box 335

To whom it may concern -  
I am not sure who came up with the idea of locking up birth records for 125 years and death records for 75 years. I would hope that whomever decided this was a good idea, try to find their ancestors information. I highly doubt that waiting 75-125 years for these records is possible. Matter of fact, it is IMPOSSIBLE!

Unless you have a way for anyone trying to research their lineage to access these records with out costing an arm, leg or first born, I highly suggest that you keep these historical records accessible to anyone and everyone.

Thank you for taking another look at this an use common sense. 
If you aren’t interested in your lineage, it doesn’t mean others aren’t. Support those who are, and who knows, you may be interested down the road yourself, don’t lock yourself out, or others.

Have a good evening….  
I’ll be crossing my fingers and holding my breath.  
Megan Heyl

I am a person who loves and values family history. To know who we are and the stories of the lives of our ancestors is very important. We are who we are today because of them. I feel that if I cannot complete the story of their lives, my life is missing something precious and very valuable. I join with many others in requesting that access to vital records such as birth and death records not be further restricted. Please continue to allow access as you have in the past. This past year one of our family history mysteries was solved by requesting a death record from New York City! It was very exciting and much appreciated to have the parents of my husband's ancestor confirmed when we received a copy of her death certificate.

Sincerely,

Melisa Weaver

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to comment on the New York City Department of Health and Mental Hygiene proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. I am very concerned about the proposed restrictions on when birth and death records would become available for public access. It would create a big hindrance for myself and others seeking to trace their families within New York City’s vital records because they would essentially be unavailable in my lifetime. That makes me so sad.

Like many, my genealogical pursuits involve multiple records from numerous repositories. I am just an average person, I do not do this professionally but as a hobby. I love learning about my family and use the information to teach my children about their great heritage of strength and perseverance. I have been so excited to find members of the family who were lost, to find health information which helps us to better control our own health, to find burial information so we as a family could visit gravesites, to connect with distant relatives to learn more about our family, or just to visit. I became fascinated with this from my own grandmother who had been able to trace her ancestors back to the Mayflower. But there are so many more branches of the family. I desire to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission reconsider limiting this access this drastically. Even making it available to paid members of a genealogical association would be better than cutting off access. Please help insure this linking of generations. How can we move forward without understanding our past?

I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases. Keep the information accessible.

Thank you for your attention to this important matter.

Sincerely regards,

Emily Yungfleisch
Gilbert, AZ
To Whom It May Concern:

I am a genealogist (not yet fully accredited), and am a paid member of many organizations such as:

- The National Genealogical Society
- The New York Genealogical and Biographical Society
- The Dutchess County Genealogical Society
- Wappingers Historical Society
- Genealogical Society of New Jersey
- Monmouth County Genealogy Society

and many more.

Vital records are a crucial tool in my research, and I implore you to make them even more accessible than they are now, rather than less accessible.

I am unable to attend the hearing at 10am on Tuesday October 24th to personally make my voice heard, but feel free to contact me at my home if you need to confirm the veracity of this email.

Thank you very much,
- Patricia DeMar Hauver
email: patricia.demar.hauver@earthlink.net
home land line phone: 845-225-5153
I agree that these records are very private and identity theft has become a real issue. But for genealogists like myself, the dates are too extensive. I think 100 years for birth and 25 or 50 years for death are more realistic. This report states there were fewer than 1,000 people who lived past the age of 100. What would be the purpose of withholding a death certificate for 75 years? Please consider the work of family historians and genealogists before passing such a stringent provision to the NY Health Code.

thank you
C Turner

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members:

I am writing to express my dismay at the rules you propose limiting access to New York City birth and death records.

I have been doing genealogical research for 40 years and have worked to discover, preserve, and share the stories of countless New York families -- my own and those of friends and clients. Our ancestors immigrated to the United States through Ellis Island and lived on the Lower East Side before moving to other neighborhoods in Manhattan, the Bronx, Brooklyn and Queens. The stories of their lives in America are contained in New York City vital records, and access to these materials is critical to my work.

Like many of my colleagues, I have also used New York City vital records to help others -- adoptees, Holocaust survivors, and others searching for lost families or for the graves of loved ones.

The proposed restrictions would drastically reduce my ability to trace New York families. I understand that a number of organizations have suggested the following guidelines for access to public records. I support those recommendations, which are far more reasonable than those currently proposed:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years, or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
- Access to informational copies of birth and death records, which could not prove identity for financial and other transactions but would provide the information necessary for researchers.

Thank you very much for your attention.

Sincerely,

Renee Steinig

I oppose DOHMH amending Article 207. Having had nightmare encounters getting family documents and still going through that. This is simply a ploy to kick the can down the road. Your agency has not been following the law and providing access to the public by New York State law. You can’t keep up transferring records that are supposed to be available so your solution is to change the number of years and say you are doing it for identity reasons. What a crock! It has nothing to do about identity. And you should not have the right to own and decide what happens to these records. Last I knew this was a democracy not a dictatorship.

Regards,
Renée Kraft

Sent from my iPhone
It was with dismay that I read about the proposal to restrict birth and death records for New York City. Almost invariably, the cause cited for these type of proposals is to protect against identity theft. This is ludicrous. Identity theft is not pursued at this level; it is pursed at the large data bank level which seems to occur with increasing frequency as hackers continue to find ways to secure millions of individual records at a time. Individual vital records are sought by genealogists and those wishing to investigate medical history. This proposal perpetuates a myth that has been repeatedly debunked. One hundred twenty five years restriction on birth records is unreasonable and unnecessary. I strongly urge you to reconsider. Locking up history behind closed doors is not one of the principles of democracy on which this country was founded.

Respectfully,

William H. Carr
Mason, MI
The proposed restriction on vital records access is wrong on so many levels.

But it boils down to this. It is not the government's job to prove how powerful and arrogant it can be. The government's job is to do the peoples' work - period.

Israel Pickholtz
Genetic Genealogist
Jerusalem
allmyforeparents.blogspot.com
I strongly urge that you do not accept the proposed resolution!

My doctoral dissertation study, *The Association of Family History Knowledge and Cultural Change with Persistence Among Undergraduate Low-Income, First Generation College Students*, demonstrated the outcome that family history knowledge is associated with resiliency.

Restricting access to historical records that students need to research their family history is a destructive element in the educational process. Please do not cause destruction that is vital to a demographic of students who desperately need every element possible to develop the resiliency needed to succeed in life as well as to develop research skills involving primary source material.

Rhoda Miller, Ed.D., CG
Babylon, NY
Dear Commission Members,
I stand with the New York Genealogical and Historical Society in requesting that you not restrict access to New York vital records, and that you follow the guidelines allowing access to birth records after 75 years if death can be verified or 105 if not; access to death records after 50 years; and access to the index to death records after 25 years.

While I myself reside outside of New York, many of my family members lived there in the past. The proposed restrictions would make it nearly impossible to research my family history. Family history research is important in order not to forget the past. We must know where we came from in order to sensibly plan where we are going.

Sincerely,
Merrily Beth Galleto
Washington D.C.
This is a ridiculous law. We should have access to our records. What are you trying to hide.

Sent from my Verizon, Samsung Galaxy smartphone
The proposed restriction on access to birth and death records will make research impossible for genealogists. Please do not restrict access. Many of us will not be able to discover who are ancestors were.

Sincerely,

Ruth Sackheim
I am writing to protest plans to restrict access to birth and death records for a long period of time. I feel it is vital for genealogists to have access to these records. In my own case, access to death records of my grandparents and great-uncles has been vital to understanding where in Poland family emigrated from and in locating records of relatives who died in the Holocaust as well as living relatives who could not be traced otherwise. There is very little risk of identify theft with such uses and there is tremendous downside. Please do not act to restrict or impound New York’s health records.

Sharon Silber
690 Fort Washington Ave 4G
NY NY 10040
Ease do not lengthen the waiting period for access to vital records. Those of us who want to find our relatives and ancestors need access to these records. Those who lost families in the Holocaust or even those who cannot access lost records from Europe need access to NY records to help fill in some of the gaps and even find lost relations.
Thank you. J. Sacks
Sent from my iPhone
I urge New York City to make birth and death records public and transfer them, on a
fixed schedule, from The Department of Health and Mental Hygiene to DORIS (i.e., the
Municipal Archives). I also urge New York City to not adopt further restrictions on
when vital records will become publicly available. With regard to potential identity
theft, this proposed rule is applying a sledge hammer to facilitate installation of a
thumb tack.

For death records, I urge you to adopt a 10-year rule without restriction or, even better,
adopt an open records option (similar to some other states). The federal Privacy Act
does not apply to dead people. Probate law requires public access to probate records so
that potential heirs may be fully informed. As a result, for many people, their death
information is known. The vast majority of stolen identities are from living people
made vulnerable via their use of social media, use of credit cards or response to email
spam. Identity theft using names of the dead is an extraordinarily small percentage of
identity theft cases. I believe open records, rather than restricted ones, are more likely to
be helpful with regard to the dead. For example, if companies had accessible death
databases and records, they would be less likely to accept credit applications using
names of dead people.

While the example provided in the NYC proposed rule of protecting a living mother’s
dead child’s record (remember we are talking here about a mother who would likely be
several years past 90 years old), may tug at the heart strings, I urge you to also think
about equally compelling and much more common situations. There are many more
people who die without issue. Under current NYC restrictions imposed by the
Department of Health and Mental Hygiene, no relatives but parents, grandparents,
direct descendants or siblings may acquire death records even if those records are more
than 50 years old. It is impossible for anyone, including caring relatives, to acquire the
records necessary to allow adequate remembrance of their dearly loved aunts, uncles
and cousins. This is not only ridiculous, but also unconscionable. Certainly, there are
many more death records for people in this category than for the child and mother in
the first hypothetical instance.

The hypothetical situation presented, highlights an important issue regarding
background research for any proposed restrictions of records access in New York City.
While there are few states that are currently more restrictive than New York City
regarding vital records, there are some states that are less restrictive. Research on their successes and failures in this regard are relevant. Ohio and North Carolina provide non-certified copies of birth and death records to all. New York City is currently one of the most restrictive states. Yet, all three states are about equal, statistically in identity theft. In “Facts + Statistics: Identity Theft and Cybercrime,” a 2017 article online at the Insurance Information Institute (https://www.iii.org/fact-statistic/facts-statistics-identity-theft-and-cybercrime), they note that New York ranks 22nd (102.3 complaints/100,000 people), North Carolina 26th (96.1/100,000) and Ohio 27th (94.8/100,000) among states. Clearly, open records are not correlated with increased identity theft.

With regard to the proposal to increase birth record restrictions, it is important to note that nearly all of the PII on birth records is readily available for everyone to find via the Internet. Birth records, themselves, are not the reason this information is available online. This information is available because it has been required by many government and private organizations for credit and land transactions and is available publicly. Or, the information may have been stolen during any one of many recent company and government agency data breaches. The PII DOH is proposing to protect via vital record access restrictions is already publicly available. Restricting birth records beyond 100 years in New York City will not change this situation in any way.

It is also important to note that, by the statistics provided in the proposed rule regarding birth records, those over 100 years old make up but 0.4 % of the New York City population. This same NYC-led sledge hammer-like approach to a miniscule issue is stunning. It, like the proposal for death records, belies a callous disregard for public access and government accountability.

Many jurisdictions throughout the United States have open records laws, much more liberal that New York City. New York City has been more restrictive than New York State for some time with little or no explanation to the public for this difference and with no discernable advantage for PII protection. Unlike New York City, New York State and many other jurisdictions do not seem to view further restriction on public access in the public interest.

I would hope that actions with regard to further public record restrictions would be weighed seriously and considered with regard to whether the solutions proposed will have any impact on the problems identified. I suggest the solutions are draconian and unwarranted and, most importantly, will have no effect on the identified issue of privacy.
In closing, I would like to suggest an option that seems not to have been considered: making non-certified copies of birth and death records accessible to all with few years of restriction (perhaps 75 for birth and 10 for death), but making certified copies accessible only to direct descendants and those with tangible interest. Since most of the information on birth and death records are already available via the Internet, this would ensure that legally certified birth records would be used and reserved for the most important purposes.

New York City, the melting pot for those coming to America seeking new lives, should NOT alter or enact rules making it more difficult for descendants to find important genealogical information about their ancestors. Finding accurate information is difficult enough. What you are doing is denying multiple generations the ability to find out information about those who preceded them in making a new life in America.

This has nothing to do with identity theft. It is a selfish move on your part to deny family members legitimate information about their relatives.

Thank you.

Susan Schapiro Davis
PLEASE do not change the rules regarding accessibility of New York City vital records. PLEASE leave things as they are. I would not have been able to find the pertinent information I did had the new rules been in place, and there is important genealogical work for many to do. My family lines are all from New York City. I am almost 80 years old, and would most likely be dead and gone before the new rules would allow me access to family records, i.e. my parents’ and that of my sibling who died 76 years ago and whose resting place I would not have found had the new rules been in place.

Thank you for your kind consideration.

Sincerely,

Mrs. Joyce Roberson
West Hills, California
If this schedule is passed it will hinder family genealogical research, please do not pass.

My name is Avrum Geller, born December 30, 1943 in Newark, New Jersey, son of Marvin William Geller and Miriam Naomi Ellis. I live at 2 Charlton St, Apt 5DE, New York, New York 10014. My telephone is 917-558-5002 (cell) and 212-924-4148. I would like the opportunity to speak at the hearing of the Department of Health and Mental Hygiene on the proposals for restricting access to New York City birth and death certificates.

It is evident that better means of securing identity than genealogical information should be in general use for the protection of individuals and the protection of society. These have included physical recognition tests such as fingerprints and footprints, photographs, and signatures. Now science has added more sophisticated and reliable techniques including improved electronic fingerprint recognition, iris scans, facial recognition, and DNA analysis. In addition, the uses of closely guarded passwords provide some measure of protection.

On the other hand, widely disseminated information such as genealogical and biographical information and social security numbers provide insecure means of securing identity and the widespread use of such information therefore creates a security risk for everyone. Identity theft is a national problem that is largely the result of reliance on these insecure tests for identity.

Historically, genealogical information on birth, marriage, and death has been a matter of public record. Births were announced, marriage banns were posted, and deaths were published as official policy. These practices continue in a majority of geographic jurisdictions not only as public policy, but also informally in birth, marriage, and death announcements in published media and now social media.

In seeking to restrict and suppress accurate information on births and deaths, New York City is an outlier. In the New York City government structure, the Bureau of Vital Statistics is a semi-autonomous unit within the Department of Health and Mental Hygiene. The primary mission of the Department of Health is to promote public health. Suppressing cause of death information prevents individuals and their extended families from knowledge of health risks that emerge in studies of extended families conducted by genealogists. I have personally alerted client families to health risks such as colon and breast cancers that have emerged from cause of death data collected in the course of genealogical work, and this has saved lives. The problem of familial health risk is greatest in endogamous populations such as the Ashkenazi Jewish family histories in which I primarily work. Family members are helpful in obtaining information; however, I also encounter unmarried persons, sometimes an only child, who have died without issue. Here, New York City creates a barrier to providing information perhaps critical to family health. Similarly, restrictive New York State law on adoptions prevents adopted individuals from understanding their own health histories, but that is a problem that needs to be addressed separately, not here. Suppression of death certificates makes it difficult to determine place of burial, important to some religious and ethnic groups who practice honoring family members with cemetery visits and prayer.

The practice of restricting access to birth and death records works against the welfare of individuals, families, and the public at large. Use of vital records for identity purposes is an
unstable foundation.

Sincerely,

Avrum Geller

Genealogy is the fastest growing interest or hobby across our country.

NYC is the greatest resource for than 40% of all of us. The new rules will make it impossible for anyone to research their families.

The proposed changes should not be imposed.

Very truly yours

Stephen A Cohen
East Meadow NY
The proposed schedule for release of vital records does not contribute to protection from identity theft or improve a person's privacy. The records should be left with reasonable restrictions as proposed by the NYB&G, not only for family historians, but for all historians.

Best regards, Peggy

Peggy W. Norris

Elmwood Park, NJ 07407
I am a descendant of people who immigrated first to NYC before dispersing elsewhere. I am also do genealogy research for others, but I do not accept payment. Having access to birth, marriage, and death records is often the only way that I have been able to locate information about siblings, spouses, or parents of a particular ancestor. This is particularly critical when families have split up due to divorce or death of a breadwinner, for example.

I understand the concerns about increasing identity theft issues. However, I am not aware of any research that shows that the type of records being gathered en mass are coming from databases like the ones you propose to limit access to. Does the Social Security Administration see this type of problem expanding? What about credit bureaus?

In general, these records seem to be a less efficient way to steal identities than, say, the newspaper obituary sections many of which list the same types of information!

Please do not change the length of time these records are out of reach for research. Thank you for the opportunity to comment.

Sincerely, E. Linda Rafats

Sent from my iPad
My family & I were born, worked, raised & died in NYC as far back as 1752. Through Health Department records, I have connected with long lost cousins, resurrected, repaired and replaced numerous gravesites, and contributed materials to several city historical society’s.

None of this could have been accomplished without these records, and I STRONGLY OPPOSE any effort to restrict their access.

Sincerely,

Mitchell B. Thompson
mbt4728@gmail.com
Just about all of my ancestors who emigrated to The United States settled in NYC. I want to know my story. I'm concerned about any rule that would make my research more difficult and/or expensive. It is especially ironic that many corporations and government on all levels invade my privacy with impunity on a daily basis and yet some would restrict a sincere researcher's access to historical records concerning his/her own family. Please don't.

Sent from my iPhonei
My family members were raised in Brooklyn, Bronx & Manhattan, so access to records in-person or on-line is imperative to both family medical history for inherited mutations & genealogy. Open access is also important to New York tourism—people come to search records, visit museums & spend turnover dollars that help the economy. Follow standard guidelines & privacy/identity theft won’t be a problem.

Respectfully yours,
Warren Weiner
105 Snowdrop Road
Egg Harbor Township, NJ
Please keep death records open and available for research and for seeking health information about ancestors. Having access to this information can be critical for doctors diagnosing newborn’s conditions to determine familial history. This was a case with my son’s heart condition.

Thank you for considering this extremely urgent matter.

Steven Schaffer

Sent from my iPhone
Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I am writing today to comment about the New York City Department of Health and Mental Hygiene’s proposed changes to access birth and death records.  

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.  

My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:  

• Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
• Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.  

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.  

Thank you for your attention to this important matter.  

Sincere regards,  
Linda Cantor  
New York, NY
To Whom it May Concern:

I have been trying to post a comment online, but my registration hasn’t gone through, so I’ll email instead.

I cannot state vehemently enough how much I opposed this proposed rule to further limit record access. As a family historian and professional genealogist-in-training, such a restriction would be devastating by excessively hampering my ability (and that of other genealogists) to do my job properly.

While I certainly respect the need for maintaining privacy, this is not the way to do so. In an age of ever-increasing data breaches like the ones at Equifax and Target, never mind the cyber assault on our electoral process, “privacy” is rapidly becoming a mythical and illusory beast. Punishing professionals who go out of their way to maintain the privacy of their clients by restricting archival record access will not create more secure privacy, it will only damage the rapidly-growing field of family history and genealogy.

I believe that resources and energy would be much more productively spent in trying to shore up broader data systems to prevent hackers from assaulting them, rather than in further restricting vital records access for those already deceased. Doing so in the name of privacy is a weak excuse at best, and a catastrophic injustice at worst.

I beg you to reconsider this ill-advised course and NOT to pass the new rule changing access of birth records to 125 years and death records to 75. This will only encourage other institutions to follow suit and will irreparably damage the genealogy industry.

Regards,

Mary Stuart
To Commission Members,

I am a professional genealogist with many personal roots in New York. I believe that the proposed rules governing access to birth and death records of New York City do not serve the public nor do they add any reasonable level of privacy. In fact, they may pose a medical and safety risk by preventing access to valuable information to family members, AND allow fraudulent activity. There are too many stories of people receiving governmental benefits up to age 130 years. People may be living longer but not that long.

In addition, these records are essential for our work as genealogists, whether professional or personal.

I would like to suggest these guidelines:

- Access to birth records after 75 years (if death is verified) or 105 years if death date is not verified.
- Access to death records after 50 years
- Access to the index to death records after 25 years that will provide name, date and place of death, date and place of birth, and burial/cremation information.

Thank you for considering these options.

Sincerely,

Deborah Holden
Professional Genealogist

1212 Brook Acres Trl
Clemmons, NC 27012
Please, please, please do not further restrict vital records.

Thank you.

Leigh Hamilton
Native New Yorker
Good afternoon.

It was most disappointing to learn that the New York City Department of Health is considering amendments to its rules to cut off access to so fundamental a resource as birth and death certificates. In the field of genealogy these records are a vital resource – often the only source available for key information. While one might reasonably argue that protecting birth certificates for 125 years after birth will help ensure that the individual has passed and, therefore, their privacy during their lifetime, once a person has died, they have, as a matter of law, no right to privacy. Thus, there is no basis for denying access to death certificate records even one day after death. Please consider, the Social Security Administration releases social security numbers of individuals after they have passed and that information also includes the date and location of death. They also provide, for decedents, original registration records. Thus, much of the information that you purport to want to keep confidential/private is available for some portions of the population – but only if they had registered with the Social Security Administration. That excludes almost everyone who died before 1962. Somehow it seems absurd to not disclose the death certificate of someone who passed before 1962 because they have not yet been dead for 75 years. You will, in effect, cut off access to key records to the twenty year gap between 1943 (75 years ago) and 1962 and it will take twenty years for that gap to close.

Let me share one brief story regarding access to death certificates: Someone close to me learned through the “grape vine” a rumor that her father, from whom she was estranged, had died. Not able to obtain information from anyone who might have had certain knowledge of the truth, I was able to order a copy of his death certificate. While the information was, sadly, true, at least she could know for certain. Having to instead wait seventy-five years – when she would have been a little over 100 years old – would have been an absurd obstacle to providing that bit of comfort.

I urge that you carefully reconsider the impact your proposed rule will have, particularly with respect to what are truly non-confidential death certificates.

Respectfully

Brian E. Foont

Greetings,

As an individual with New York City roots I strongly object to the proposed changes that extend the length of time vital records are restricted; this change unreasonably limits access to records needed for historical and medical history information. I would like to suggest New York City create informational copies of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers. Thank you.

Sincerely,
Scott Meléndez-Stewart

I am writing to state my opposition to the proposed rules to restrict access to Birth Certificates until they reach 125 years and Death Certificates until they reach 75 years.

While I am supportive of plans to begin turning over older records to the NYC Municipal Archives, I find these age limits to be highly restrictive and a hindrance to those of us who research their family history.

We all share the need to ensure that the identity of individuals is secure, I believe there are ways in which we can keep records open and also protect the identity of those who were born and died in the City of New York.

I have therefore put together some ideas about how we may be able to do both.

My proposal would be as follows:

Birth Certificates:

Birth Certificates would be kept by NYCDOH for 100 years. Up until 100 years, birth records can only be accessed by the individual on the record, parent of the individual, and the spouse of the individual, if the person on the record is still alive. If the person is deceased, and the death can be proven, the record would be available to anyone with a blood relation to the person on the record. After 100 years, the records are then turned over to the NYC Municipal Archives. To protect the identities of any individuals who may still be alive, the NYC Municipal Archives would not certify any record less than 125 years old and the record would be stamped conspicuously with a stamp stating “For
Genealogical Use Only.” This would prevent the record from being used in any official capacity that would result in identity theft. A certified copy could be made available to anyone eligible as if the record were less than 100 years old. (Using same standards as above). At 125 years, all records could be certified by the NYC Municipal Archives.

Death Certificates:

Death Certificates would be kept by the NYCDOH for 60 years. A certified copy would be available to the child of the deceased, parents of the deceased, siblings of the deceased, grandchild of the deceased, or anyone with a legitimate right to the record for estate purposes. After 60 years, the records would be turned over to the NYC Municipal Archives. I do not see a reason beyond 60 years for any additional restrictions. Therefore, NYC Municipal Archives would certify any death record it issues.

I would ask that the City of New York consider these proposals as a compromise to allow researchers to continue to have access to most of the records they have access to now, while also counterbalancing the need for greater identity security.

Thank you for your time and attention to this matter.

James Booth

Westtown, Orange County, New York

jbooth75@optonline.net

845.492.6255
I am concerned that the proposal to amend article 207 of the health code to limit access to birth and death records for 125 and 75 years respectively will be detrimental in several ways.

I understand the desire to protect personally identifying information but many people give the data freely (like posting their birthdate on social media sites) or giving comparable information to get a doctor’s appointment or to open a bank account. I’ve lost count of the number of instances where the last 4 digits of my social security number are required as an identifier, these being the hardest to reconstruct. Do we really think that makes them protect this data from the unscrupulous—identity thieves, hackers, trolls. Equifax is a prime example of failure to protect.

As the CEO of a non-profit, making records secret will make it impossible to determine whether my organization is hiring or my clients are being scammed by a dead person. The proposed change simply opens up more opportunities for organizations and individuals to be victimized with little recourse to the information needed for remediation.

Having access to the cause of death of a relative from the death certificate could save lives and reduce medical costs. Restricting NYC DOH records will have a severe impact on those researching their family’s health history, possible predispositions to cancers and inherited illnesses, and for those looking for patterns of illnesses in their families.

Access to vital records imposes little risk to personal security—in fact, open records is proven to make personal identity more secure as it can be more easily checked.

Denying access to vital records could have an impact of tourism and NYC businesses. Genealogists support NYC businesses and tourism through research trips and the Municipal Archives and NYC DOH through record fees.

I encourage you to reconsider restricting NYC vital records for such an extended period of time. Yes, New Yorkers are living longer. Every now and then officials could check the Social Security rolls and might find people over 130 years old still collecting. How much rarer this would be if we the people could conveniently check births against deaths?

Susan O’Connor

As a genealogist and former New York resident, I’m writing to express my dismay at the proposed amendment to the General Vital Statistics Provisions (Article 207 of the NYC Health Code regarding birth and death records). These records are vital to proving relationships in inheritance cases; establishing proof of relationship for lineal organizations such as the Daughters of the American Revolution; and identifying or ruling out ancestors for those researching their family history. The information can also be critical in establishing a family medical history, and may identify a previously unsuspected need to test living individuals for medical conditions or genetic markers (e.g., a family history of breast cancer might prompt a test for the BRCA1 and BRCA2 genes).

The proposed restriction of 125 years to release a birth record far exceeds the life span of most individuals. If implemented today, this restriction would prevent the release of any birth records after 1892. It is highly unlikely that births which occurred long before the implementation of Social Security could be used for identity theft, and even less likely that a potential identify thief would take the time to locate, order, and pay for a birth record from that time period. However, the restriction would prevent millions of Americans from pursuing their family lineal and health history. Similarly, the restriction of 75 years to obtain a death record would prevent many living individuals from researching even their own grandparents.

New York has served as a critical gateway for the ancestors of generations of Americans, many of whom have been interested in their family’s history. Interest in genealogy has significantly expanded as online records and DNA have become available, and growth is projected to continue. I’ve personally traveled to New York several times in the past ten years to conduct genealogy research. The new proposed restrictions could significantly curtail genealogy-related travel, and the related revenue to New York.

I support the date limitations proposed by the New York Genealogical and Biographical Society:
- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information)

These limitations seem to strike a balance between the needs of those researching their ancestry and the need to protect personal information, particularly since requestors need to provide personal identifying information to obtain records. I respectfully request that the Commission reconsider the proposed restrictions. Thank you for your consideration.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a New York resident, born in Brooklyn, who is a professional genealogist and a trained librarian and archivist, I am terribly disturbed by this proposal to restrict access on birth and death records, as well as the restrictions the department has currently been instituting.

Timely access to these records are critical and essential not only for my research, but also for the millions of others seeking to trace their families within New York City's vital records.

Since many of my relatives lived in New York City, to where they immigrated in the late 19th and early 20th centuries, I rely heavily on vital records for my family research. Genealogists are aware that sometimes valuable information, such as places of birth, cemetery locations, and names of parents, is available not on the records of direct-line ancestors, such as grandparents or parents, but on the records of great-aunts or great-uncle, aunts, uncles and cousins. Fortunately, several years ago, before the department became more restrictive, I was able to legally acquire death records of my father's single brother and uncles and aunts and cousins, to find out where they were buried and, in one instance, connect with a long lost second cousin, who was the informant on her mother's death certificate.

Many states in the US have been providing death records online and some states provide informational, non-certified copies of vital records to researchers. (I have obtained informational copies or found online death certificates from California, Pennsylvania, Arizona, Illinois, and Indiana, for example, from the 1950s through the 1980s.) I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

I encourage the Department to transfer birth and death records to the
Municipal Archives on a fixed schedule and not adopt further and unnecessary restrictions. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Thank you for your attention to this important matter.

Sincere regards,

I am very much opposed to anything that would restrict access to birth records for 125 years or death records for 75 years.

In advocating that New York pass its first birth, marriage, and death registration law (what would be L. 1847, ch. 152 and which NYC would amend by L. 1853, ch. 75), NYS Senator Dr. Frederick Fanning Backus wrote in part:

“Almost every European government has established minute regulations for registrations of this character, and they have been found to be useful in a high degree to all classes of citizens, to the political economist, the legislator, the jurist and the physician; and the public generally would be highly interested and benefitted in various ways. […]
“it is due to the State to afford this information, to herself, her sister States and the world. For she has never been backward in promoting science and the arts and a minute knowledge of her Natural History.”

The primary purpose of the Public Health Law, of Vital Statistics, is not private health or trivial statistics. Yes, privacy deserves a certain amount of concern - though the extent to which the information is private (quite a different thing than *secret*) seems to be overstated.

A first and last name of a person whose birth is being registered are hardly secret things. A date of birth and a mother’s maiden name frequently appear in newspaper birth announcements, more readily searchable now than they ever have been in the past. The same is true of “first and last name of parents, surviving spouse, and individual reporting the death.” One can often find that information about people who are alive today through databases on Ancestry.com or Intelius.com and others.

New York State and New York City do not seem to have made as extensive use of birth, marriage, and death records as had been intended by the legislation that required it, nor to have permitted others to make as extensive use of the information as intended to serve “the interests of health and life among the people of the State.” What should be under discussion is making *more records* publicly accessible in *less time*, not the opposite.

On the whole I agree with the points raised by the New York Genealogical and Biographical Society https://www.newyorkfamilyhistory.org/blog/save-vital-records-access-why-we-all-should-act with the expection of believing records should be available within a smaller frame of time than even they advocate.

Sincerely,

Christopher K. Philippo

I am a genealogist and I'm requesting you DO NOT CHANGE THE RULES FOR NYC VITAL RECORDS!

– Genealogists support NYC businesses and tourism through research trips and the Municipal Archives and NYC DOH through record fees

– Restricting NYC DOH records will have a severe impact on those researching their family's health history, possible predispositions to cancers and inherited illnesses, and for those looking for patterns of illnesses in their families

– Genealogical research is one of the fastest growing professions and restricting records would impose huge barriers to business growth—for those researchers in-state as well as those out of state and around the world

– Access to vital records imposes no risks to personal security—in fact, open records is proven to make personal identity more secure as it can be more easily checked

Thank you for your consideration in this matter.

Sincerely,
Carolyn Wilson-Elliott
To Whom it May Concern:

My name is Lorraine Bell and I live in NYC. I am a professional genealogist, a director of the New York Genealogical & Biographical Society and the Regent of the Knickerbocker Chapter Daughters of the American Revolution which is a well-established lineage society.

The DAR is also an important organization that has helped to preserve historic documents, buildings, and monuments as well as being major supporters of education through our scholarship programs and actual DAR Schools as well as upholding patriotic endeavors that support Veterans and current serving military. Members of our organization provide millions of hours of volunteer service that support the communities we live in. For example, in the past year our National Society wrote a check to the National Park Foundation for $380,000, made a donation to the new American Museum of the American Revolution of $500,000 to honor American Patriots as well as given hundreds of thousands a of dollars for historical preservation, for education, and to patriotic causes. We have more than 188,000 members across the country and the globe, almost 7,000 members in NYS and almost 1000 members in New York City. Our goal as an organization is to grow to 250,000 members by the year 2026 to honor the 250th anniversary of the American Revolution and we cannot do that if access to vital records in NYC is restricted as is currently proposed.

I am here to state that our society relies on direct access to vital records - we need to provide birth, marriage and death certificates for any prospective member from her through three generations back and then through the many-layered generations to an American Patriot to our National Society in order to verify lineage. We help women of all races, religions and backgrounds connect to their past and this is truly a meaningful service to our members. For example, this past August at the Battle of Brooklyn in Greenwood Cemetery, our flag bearer was the ancestor of a slave - and it was incredibly important to her for us to prove her ancestral genealogy and extraordinarily important to our organization as we strive to increase diversity. Genealogy is also the fastest growing hobby in our country - and as a hobby it is the second largest hobby after gardening. This increased interest in genealogy is forging deeper connections for living people to their American patriots and is therefore increasing interest to our organization and other lineage societies akin to ourselves.

Our DAR Chapter, as well as others, I am sure, would be opposed to any increased restrictions to access to vital records. As a genealogical-based society, we believe in increased transparency not less. Our organization must have access to vital records in NYC otherwise your suggested changes will impede our ability to grow our membership in our Society. I am in agreement with those that have spoken here publicly before me today. I personally believe in complete access to public records. Your proposed amendments will not prevent identity theft which is a specious argument to advance these changes. I implore you not to institute the proposed amendment to Article 207 of the Health Code. It will be impossible for our organization to add new members
which is vital to the future success of the DAR and the health of the communities that we so
proudly serve. So many of our future members’ ancestors have come to this country through NYC
and we stand in opposition to the new restrictions you are recommending.

Thank you for the opportunity to speak today.

To Everyone This Concerns,

My name is Deborah Caponera. I am a resident on NYC and I ask that you do not restrict access to NYC vital records. As a history buff with great interest in genealogy, and a member of the DAR, as well as researching my family's records from the founding families of NYC along with other members' arrival in NYC from Italy through Ellis Island in the early 1900's, I implore you to keep vital record access open to the public as these are our families. These are our histories. These are our lives. We deserve the right to have access to them.

Thank you for your consideration.
Sincerely,
Deb Caponera

dub_art@dubpies.com
I understand that new regulations proposed by the New York City Department of Health would deliver a disastrous blow to vital records access for genealogists. The proposal would dramatically increase the time for which NYC birth and death records are inaccessible to researchers. Birth records would be locked up for 125 years, death records for 75 years! Although I live in CT now, all of my ancestors either came through or lived/died in NYC. Having access to these records is very important to me and millions of other doing their family’s genealogy.

In addition, please keep in mind that genealogists support NYC businesses and tourism through research trips and the Municipal Archives and NYC DOH through record fees. Restricting NYC DOH records will have a severe impact on those researching their family’s health history, possible predispositions to cancers and inherited illnesses, and for those looking for patterns of illnesses in their families. Access to vital records imposes NO risks to personal identity security. In fact, open records make personal identity more secure.

Therefore, I respectfully request that these regulations not be put into place and that you continue to allow citizens such as myself access to our ancestors records. Thank you.

Debbie
deb.krauthiem@gmail.com
Dear Sirs:

I am a member of the Knickerbocker Chapter Daughters of the American Revolution, a well-established lineage society, and a volunteer genealogist. Vital records are essential tools for genealogists as well as historians and other researchers.

The DAR is also an important organization that has helped to preserve historic documents, buildings, and monuments as well as being major supporters of education through our scholarship programs and actual DAR Schools as well as upholding patriotic endeavors that support Veterans and current serving military. Members of our organization provide millions of hours of volunteer service that support the communities we live in. Brooklyn, NY
The proposal to amend Article 207 of the Health Code to further delay transfer of birth and death records to the DORIS seems to me to be a solution in search of a problem.

There is no question that identity theft remains a problem. This is a personal concern I have as one who was affected by breaches involving Target, Anthem and, most recently, Experian. However, in this digital age, it seems that people intent on committing a crime of identity theft will are unlikely to spend the time and effort to travel and look up birth and death certificates at the NYC Archive.

The kind of information that is required to steal an identity of someone is more easily accessed and disseminated by computer hackers. Not only can relevant information be obtained through the hacking network, but newspaper obituaries and paid notices contain a wealth of information for a potential criminal.

I have personally found the records at DORIS helpful in my genealogical research, not only discovering facts about deceased relatives but also in finding living relatives. As an example of the former, I and other relatives had long assumed that my maternal grandmother, Julia Sklar (nee Kramer), was one of six siblings, only the youngest of whom, Anne Kramer (b. 1908), was born in the United States. Having found Anne’s birth certificate a couple months ago, it seems that she and my grandmother were two of ten children, of which six (including Anne) were living at the time of her birth. The four previously unknown children of my great-grandmother likely died prior to her immigrating to the States in 1905. But, that was something that nobody ever mentioned, even when my grandmother and her siblings were alive.

A person with criminal intent is far more likely to sit behind a computer screen searching various genealogical related, newspaper, real estate and other web sites to get most, all or even more information than one might obtain by expending far more effort by looking up a birth or death certificate.

I am sure others have said it better than I have but please please please do not restrict the records so severely, the current rules are fine.

As a genealogist, I have been thrilled to find my grandparents marriage certificate and the birth records of all their children (none still living) - all from the period 1900-1920. My cousins are thrilled to have these records too

Please do not change the dates birth and marriage records are released.

Why don't you hire college students to digitize all of the information then charge more for the records.

Many people are searching their history for New York City to restrict this historical research is very sad.

Please do not

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City. Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home. Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records. We ask that the commission consider the following guidelines for access to public records, namely:  
Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information). Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers. Thank you for your attention to this important matter.  

Sincere regards,  

Paul Capobianco, Brooklyn, NY

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City. Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home. Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records. We ask that the commission consider the following guidelines for access to public records, namely: Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified. Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society. Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information). Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers. Thank you for your attention to this important matter.

Sincere regards,

Victoria Capobianco  
Brooklyn, NY
My name is Lynn Mastrangelo, I live in Staten Island NY. I am a veterinarian and a genealogist for the Daughters of the American Revolution. I am also the registrar for the Richmond County DAR. I am involved with the Tottenville Historical Society and have been involved with genealogy for over 20 years.

The DAR is an important organization that helps to preserve historic documents, buildings, and monuments. We provide scholarship programs for schools and uphold patriotic endeavors that support Veterans and current serving military.

Members of our organization provide millions of hours of volunteer service that support the communities we live in. For example, in the past year our National Society wrote a check to the National Park Foundation for $380,000, made a donation to the new American Museum of the American Revolution of $500,000 to honor American Patriots as well as given hundreds of thousands a of dollars for historical preservation, for education, and to patriotic causes.

We have more than 188,000 members across the country and the globe, almost 7,000 members in NYS and almost 1000 members in New York City. Our goal as an organization is to grow to 250,000 members by the year 2026 to honor the 250th anniversary of the American Revolution and we cannot do that if access to vital records in NYC is restricted as is currently proposed.

Our society and genealogists around the country rely on direct access to vital records - for the DAR we need to provide birth, marriage and death certificates for any prospective member from her through three generations back and then through the many-layered generations to an American Patriot to our National Society in order to verify lineage.

We help women of all races, religions and backgrounds connect to their past and this is truly a meaningful service to our members.

Genealogy is also the fastest growing hobby in our country - and as a hobby it is the second largest hobby after gardening. This increased interest in genealogy is forging deeper connections for living people to their American patriots and is therefore increasing interest to our organization and other lineage societies akin to ourselves.

My DAR Chapter, as well as others, are opposed to any increased restrictions to access to vital records. As a genealogical-based society, we believe in increased transparency not less. Our organization must have access to vital records in NYC otherwise your suggested changes will impede our ability to grow our membership in our Society.

Your proposed amendments will not prevent identity theft which is a spurious argument to advance these changes.

I implore you not to institute the proposed amendment to Article 207 of the Health Code. It will be impossible for our organization to add new members which is vital to the future success of the DAR and the health of the communities that we so proudly serve. So many of our future members' ancestors have come to this country through NYC and we stand in opposition to the new restrictions you are recommending.

Thank you for your consideration

Lynn Mastrangelo
Besides the obvious health and medical reasons for having death certificate information of our family members, please remember that there are millions of Jews who are trying to put our families back together after the Holocaust. These records are invaluable for making some families whole. Thank you.
My name is Dr. Joan Graham Nathan and I live in New York. I am the Regent of the Colonel Josiah Smith Chapter Daughters of the American Revolution which is a well-established lineage society. I am also Senior President of the Children of the American Revolution (C.A.R.) Captain Austin Roe Society. I do have family who settled in New York City in the late 1800’s and early to mid 1900’s.

The DAR is also an important organization that has helped to preserve historic documents, buildings, and monuments as well as being major supporters of education through our scholarship programs and actual DAR Schools as well as upholding patriotic endeavors that support Veterans and current serving military. Our State Regent Nancy Zwetch has raised a respectable amount of funding to preserve New York City records.

Members of our organization provide millions of hours of volunteer service that support the communities we live in now. For example, in the past year our National Society wrote a check to the National Park Foundation for $380,000, made a donation to the new American Museum of the American Revolution of $500,000 to honor American Patriots as well as given hundreds of thousands a of dollars for historical preservation, for education, and to patriotic causes. We have more than 188,000 members across the country and the globe, almost 7,000 members in NYS and almost 1000 members in New York City.

Our goal as an organization is to grow to 250,000 members by the year 2026 to honor the 250th anniversary of the American Revolution and we cannot do that if access to vital records in NYC is restricted as is currently proposed.

I am here to state that our society relies on direct access to vital records - we need to provide birth, marriage and death certificates for any prospective member from her through three generations back and then through the many-layered generations to an American Patriot to our National Society in order to verify lineage. We help women of all races, religions and backgrounds connect to their past and this is truly a meaningful service to our members.

For example, this past August at the Battle of Brooklyn in Greenwood Cemetery, our flag bearer was the ancestor of a slave - and it was incredibly important to her for us to prove her ancestral genealogy and extraordinarily important to our organization as we strive to increase diversity.

In addition, Genealogy is the fastest growing hobby in our country. It is important to our families to continue past family connections.

Our DAR Chapter Colonel Josiah Smith is opposed to new restrictions to access to vital records. As a genealogical-based society, we believe in increased transparency not less. Please, our organization must have access to vital records in NYC otherwise your suggested changes will impede our ability to grow our membership in our Society. I am in agreement with those that have spoken here publicly before me today. I personally believe in complete access to public records. Your proposed amendments will not prevent identity theft which is a specious argument to advance these changes. I implore you not to institute the proposed amendment to Article 207 of the Health Code. It will be impossible for our organization to add new members which is vital to the future success of the DAR and the health of the communities that we so proudly serve. So many of our future members' ancestors have come to this country through NYC and we stand in opposition to the new restrictions you are recommending.

Thank you for the opportunity to speak today. Please respectfully consider our concerns.

Sincerely,
Dear Sir/Madam,

I am hereby expressing my objection to the proposal to limit access to NYC death records. These are important documents to which the public should have access.

Thank you,

Adam Paige Hess
aphess246@gmail.com
Hello,

“...birth and death records are also important historical documents that at some point should be available to historians and families researching their ancestries. For this reason, Administrative Code section 17-170(b) charges the Board with deciding when the original records of births and deaths filed with the Department, and the indexes to such records, should become public records and transferred to the Department of Records and Information Services (“DORIS”).”

Thank you for considering that the records are so very important. They truly are.

“...balance the need to protect the personal information of people who may be alive, especially as it relates to the problem of identity theft as well as other privacy issues, with the public’s right to access historically important records, including the specific interests of families, genealogists and other researchers.”

This is understandable to a point. But identity theft comes from so many things more than death records and birth records. Theft comes from all things on internet, credit cards, thrown away trash, our social security numbers, and on and on. You cannot control it all. Don’t control the use of birth and death records so tightly. 125 years? To me, your reasons are respectable but not logical. How often have you been aware of someone borrowing the identity of a 110 year old.

Please reconsider this proposal.

Barb
Dear Ms. Burdeynik,

I was at the public hearing today but didn't have a chance to comment as I had to return to work. Many of the points made are valid points. One point I'd like to reiterate is that made by a woman doing her own family genealogy who mentioned her daughter-in-law qualifies for the Mayflower Society. I am a (youngish, under 40 yrs. old) member of the Daughters of the American Revolution and will soon be a member of the Mayflower Society as well as the Association of Descendants of Early American Witches. Each of these societies require lineage documents to prove a connection from child to parents. Luckily, the Mayflower branch of my family (it's the same line as my DAR Patriot and my witch who was accused but survived the trials at Salem) lived in Pennsylvania for several generations. I recently retrieved my Great-Great Grandfather's death certificate from 1920 on Ancestry because Pennsylvania had released it. This was an invaluable resource. It listed the names of his parents which has really solidified my application for the Mayflower Society. Without it, my application may have been questioned because the only other document I can provide is an 1880 Census record which lists them in the same household but doesn't list a relationship between the generations. Unless the document clearly states the relationship it could be rejected by any "blood line" organization.

I am also the Registrar of the Queens chapter, Increase Carpenter Chapter, National Society Daughters of the American Revolution. This means that I help prospective members through the daunting application process. Recently, I was working with a young woman in her 30s who has a grandmother that was born in the Bronx and is still living alone in her own house at the age of 93. In order for the applicant to request a copy of her grandmother's birth certificate, the applicant's mother hand delivered a form to Florida for the grandmother to sign and then had to submit it to the health department. This birth certificate delayed the application for DAR membership by about 4 months. There is a backlog of applications at DAR by about 2 months so the delay in retrieving the birth certificate was not helpful.

In another instance, I helped a prospective member who had family living in Newtown, Queens prior to it being named Elmhurst. Her Great-Grandfather and Great-Grandmother died in 1964 & 1950 respectively. This is considered "modern times" so the Daughters of the American Revolution require proof of at least the year of death. I learned this the hard way because I submitted this application without documents proving their death and got a long letter from the genealogist in Washington, DC explaining they needed a document proving these dates. Unfortunately, the DAR does not accept death indices as proof because they don't list any other information about the person. It's hard to prove the John Doe on a list without any other identifying information that clearly identifies this as your John Doe. My work around for this was I found a newspaper obituary from the 1950 Long Island Star Journal on a website of old NYS scanned newspapers for the Great-Grandmother. It listed her burial in Mt. Olivet Cemetery in Queens. I contacted the cemetery and they were able to provide me with the section location of the gravestone. One Saturday, I took a 45min ride on the bus to the cemetery in order to take a picture of the stone. Fortunately, the stone was of a material that the dates could still be read and there were two generations of the family on the stone. If I could have accessed their death certificates then this frustration could have been avoided. In more recent history many people are choosing cremation over burial. Therefore, they would not have a gravestone and have no other document to prove their death except a death certificate.

If you are unfamiliar with the DAR then I urge you to go to our website and see the good work we do for Veteran's as well as preservation to keep our history alive for the next generations. Our chapter as well as many other chapters have adopted platoons and send care packages to them overseas. I have made many friends from across the US that I can tell will be life-long friendships.

I can understand your concerns for privacy. I have an MS in Genetics and Microbiology which I use working in a Laboratory at a Manhattan Hospital. My work requires me to access patient records so I'm bound by my obligation to keep these private through the HIPAA law. Please review the policies of other states and cities and reconsider this proposed amendment. It would do so many people a disservice if this were enacted as law.

Leslie Wickham
Thank you for the opportunity to speak this morning. I did not plan on making a public comment as I did, intending to write this into a longer, more accurate letter.

I appreciate the opportunity to do both.

——

The proposed rule changes will affect my life in many ways: as a transitional genealogist with eleven years of experience; as a trustee; as a business owner who works with financial services and non-profits, and often calls my skills as a researcher for my work; and as a healthy human being.

My earliest New York ancestor arrived here before this place was known as New York—to him it was New Netherland when he arrived in 1628. Since his arrival, and of those waves of ancestors who came through New York harbor, my family has bounced around counties, but no more than 30 miles from where that first immigrant ancestor set foot on the island of Manhatta.

I have been a resident of Manhattan for about 30 years and owner of a design and branding firm, working with financial services and non-profits, for 20 years. The primary focus of my business is assisting those in FinServices and banking—and the issues of identity theft, and the industry’s lack of action, continues to put us all at risk. In my non-profit work, I assist Colleges and Historical and Genealogical Societies to invite people to discover their New York stories, and help promote research tourism to New York City.

But this comment is not about lineage or how access to information affects my livelihood.

——

In 1948, my mother was seven years old. She and her family was at their property on Greenwood Lake where they were readying the dock and cabin for the coming winter.

Her father, a police captain, was repairing the dock when he accidentally ran a nail through his hand. He was admitted to a local hospital but his conditioned worsened and he was transferred to Mount Sinai in Manhattan—quite a distance and a testament to the seriousness of his condition.

He remained in the hospital for some days and during a visit, my mother, itchy not to sit any more in a scary hospital room, went across the street to play. (The playground is still there today.) When she returned, she found her mother inconsolable as her father had suffered a sudden turn and died. He was 47 years old and, as a member of the police force, had shown no signs of illness.
The exact cause of death was a mystery to her as she grew up—until I received the death record from the City. He died of a suspected congenital heart defect aggravated by the effects and stress of his accident at the dock.

With this information, I focused my research on my grandfather’s sibling—a sister which we had no record of and very few ever spoke about. Searching the death index, I found someone who may have been her, and ordered the records.

From her death record, I was able to find her birth record and confirm that this was, indeed, my grandfather’s long-lost sister. She also died of a congenital heart defect. Her family rarely ever spoke about her and she was just short of her fifth birthday.

In 1968 I was born in a hospital less than 20 miles from where my ancestor landed in 1628. I was born with a heart murmur which, thankfully, disappeared after some time in the hospital. My condition was not severe enough to warrant surgery, which would have been much riskier than today.

But since my family history discoveries, I have regained a part of myself and can now make better decisions about my own health.

Discovering the risks of my maternal family’s history of heart defects—through access to their death records—has bought new insight to my health. By knowing the history of my family’s heart conditions, I have been able to make life changes and discover which medicines to take (and equally important not to take).

But when I run myself down, or end up in the hospital, I now have the most important health tonic—information.

When in an ER, and the doctor asks about my family’s medical history, I can now say that, yes, there is a history of heart troubles as near as my grandfather and his younger sister. DNA tests can only give you clues to what may lie ahead, but family history is a game-changer.

—

My grandfather died when he was 47. I am 48.

If the proposed rules were in place today, I would still have to wait five additional years to have access to the information on my grandfather’s heart condition.

If access to death indexes are curtailed, I never would have discovered my grandfather’s sister. And, without access to birth records, I would have never known that my grandfather’s sister ever existed.

All of which allowed greater insight into my own health and well-being.

—

As a researcher, I spend a lot of money on fees to agencies to access records—it’s probably the only reason I still have a checkbook. (And, I have not met a State employee yet who has told me that the State doesn't need my money.)
The ability to access records may seem like a small concern, but for me access is priceless.

I urge the New York City Department of Health or act in the best interest of the health of its denizens.

Sealing access to the health records of those generations closest to you harms health and health-making decisions.

There are many options for combating identity theft, allowing controlled access to records, or providing non-certified copies for research purposes.

Was was left un-stressed at the meeting today is that organizations such as the New York Genealogical and Biographical Society (NYG&B) are willing and interested to help NYC DOH craft policy that does all the above. NYG&B’s Trustees and Membership include State Archivists, information technology experts, records access experts, those with financial service experience, and, yes, some member passionate about discovering their New York roots.

We would love to help the NYC DOH through this process.

Thank you.

Respectfully,

— Michelle D. Novak

I am devastated that it’s even considered to deny public records. I wonder what the facts are regarding identity theft opposed to giving access to living, honest people researching their history, embracing a culture and learning tolerance as they learn about families and, on a broader scale, mankind. I implore the powers that be to make recent records available and encourage the essence of history and culture. I wish I had more time to make a case and hope that history overrides closing of doors to learning who we are and what made us into what we are.

Sent from my iPad
My name is Patricia Governara and I live in Staten Island, NY. I am a hobby genealogist, and the Regent of the Richmond County Chapter Daughters of the American Revolution which is a well-established lineage society.

Both myself and others depend on access to the NY archives for research into our ancestry. We need access to these records to prove our heritage so that we may join these distinguished societies such as the DAR, SAR and The Mayflower Society are just a few.

The DAR / SAR and many other patriotic societies relies on access to our vital records - we need to provide birth, marriage and death certificates for any prospective member from her / him through three generations back and then through the many-layered generations to an American Patriot to our National Society in order to verify lineage.

I implore you not to institute the proposed amendment to Article 207 of the Health Code. It will be impossible for many organization to add new members to their rosters. Without access to these records our societies will diminish and eventually become non-existent.

Please help us and not institute the proposed amendment.

Sincerely,
Patricia Governara, Regent
Richmond County Chapter
Daughters of the American Revolution
Dear NYC,

I am against the amendment to restrict access to birth and death records. I am in my 20s and this motion would effectively prevent me from ever learning anything about my family in my lifetime. The internet and the multiple companies that handle my student loans put my identify at more of a risk then vital records.

Sincerely,

Gillian Gail

RE: Concerned About Proposal to Amend Article 207 Hearing October 24, 2018

To NYC Dept. of Health and Board of Health:

The Federation of Genealogical Societies (FGS) supports the proposal to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services (DORIS). However, we do not support longer embargo dates for these records in New York City.

FGS was founded in 1976 and empowers the genealogical and family history community, especially its societies and organizations, by advocating for the preservation and access of records and providing resources that enable genealogical organizations to succeed in pursuing their missions.

We represent hundreds of societies – more than a dozen in New York – and thousands of individual genealogists whose family history traces through the ports of New York City. Ellis Island estimates 40% of US citizens today can trace their immigrant ancestor through that station. Including Castle Garden, it is no stretch to suggest over 50% of US Citizens can trace their lineage through the ports of New York City. Vital records are an essential tool to connect families through the generations to their immigrant ancestor.

As a group, genealogists and family historians are just as concerned with privacy and identity theft as our vital records counterparts. That being said, we believe the embargo period currently under consideration will do little to address either concern while doing significant
harm to the individual seeking their family or medical history. We assert that access to vital records such as birth and death certificates actually assists in preventing individual identity theft.

Therefore, we support the proposal of the New York Genealogical and Biographical Society to provide:

1. Access to birth records after 75 years if the individual’s death can be verified or 105 years if no death date is verified;
2. Access to death records after 50 years; or after 25 years to active members of a New York Genealogical Society or any other genealogical society affiliated with the organizations listed in the descriptive paragraph of RPAC members below; and
3. Access to the index of death records after 25 years, which includes the name, date of death, place of death, date of birth, and burial or cremation information.

Thank you for the opportunity to comment on this important proposal. The Federation welcomes your comments our concerns.

Rorey Cathcart
President, Federation of Genealogical Societies, www.fgs.org
To New York City Department of Health and Mental Hygiene;

I am strongly against the Amendment of Provisions of Article 207 of the New York City Health Code. It is a clumsy and extreme measure that only serves to undermine the public’s trust in the govt. Keeping vital records from the public in an attempt to prevent identify theft is akin to closing the barn door after the horse has left. Are you also stuffing tax payers’ money into mattresses to save it from being stolen from a bank? How is it possible there is no other way to protect this data? Does the govt believe no other possible solutions to protect these vital records will become available for the next 75 - 125 years?!

Thank you for the opportunity to comment.

Bernadette Ott
Brooklyn, NY
I realize that I don’t live in New York; but in doing my research over the past twenty years, I have either accessed on line or ordered many records from various offices in New York State. Many of our ancestors either entered the country through Ellis Island or other locations. If the new laws are implemented, I believe it would unfairly penalize those of us who need access to those records to do our research.

Thanks for your consideration. . . . . Delbert Ritchhart, CAPT (USN—retired)
Records should stay public to ensure availability of information to families searching for family members. Carol Louise Naessen Bender
I understand that the City of New York is considering new limitations on access to vital records. I am writing to ask that you carefully consider the ramifications of this measure.

I offer one particular point of view for your consideration. More than 40 years ago, my school teachers and my grandmothers introduced me to the hobby of genealogy. Through the intervening years, I have delved deeply into my family history and enjoyed the personal connection insight into various periods in history. I have learned about people from all walks of life, may who suffered and carried on following challenging and disappointing experiences. I attribute much of my inner strength to the lessons I learned from the narratives I discovered researching my family's history helped me through trying times.
As a mother, a scout leader, a teacher I have had opportunities to help others discover similar strengths in their family stories.

Municipal vital records are a key element in being able to discover these stories.

Please do not separate individuals from their ability to trace their ancestry by closing off vital records for such a duration proposed.

Like the statement that says those who do not understand history are doomed to repeat it, I believe that that we need access to the stories of our ancestors that teach us to overcome adversity and recover.

Respectfully,

--

Deb Keesler
Dear Commissioners,

I am writing this comment letter as an individual citizen of New York State, but wish to disclose I am a staff member of the New York Genealogical and Biographical Society, which is submitting a separate comment.

While I am a resident of Nassau County, my father and his parents were all born in New York City. The issues created in the proposed “Amendment of Provisions of Article 207 of the New York City Health Code” negatively impact my ability to conduct family history research (for myself or for friends). In addition, it negatively impacts many individuals who wish to research their families but who are intimidated by the prevailing attitude of the New York City Department of Health and Mental Hygiene. In the genealogical community, New York City especially is considered to be a difficult jurisdiction to work with. If specific examples are needed, I can provide them later.

Please consider shorter time frames for the release of records to the NYC Municipal Archives as described below.

The language in the proposal “establish a schedule for making birth and death records public” implies that records will be inaccessible until transferred to the DORIS/NYC Municipal Archives. The changes to period where records are closed is unacceptably long time.

Death records should be open after 10 years. The deceased person does not have privacy rights. The informant if they are still living at the same address, would be recognizable through other public records like tax records, public telephone directories, and other public access records.

By closing death records due to cause of death, the Department of Health and Mental Hygiene is perpetuating the acceptability of stigma regarding cause of death. Please do not contribute to prejudice against cancer, AIDS or other sexually transmitted disease, mental health issues, or whatever the next stigmatized cause of death might be.

Death indexes should be open after one year to help prevent identity theft. Opening them earlier might impose an undue burden on administration.
Birth records should be open after 75 years with proof of death, or after 100 years. I don’t believe 100-year-olds are at great risk of identity theft from unknown thieves, but are more likely to be victims of theft from immediate family, close relatives or friends, or caregivers (all of whom could probably access needed information to take advantage without resorting to the Department of Health certificate).

Therefore, I strongly encourage the Department of Health to shorten the time to transfer birth and death records to the NYC Municipal Archives.

Also, two alternatives exist -- the creation of informational certificates and earlier release of records to members of genealogical societies and the Association of Professional Genealogists. If the Department of Health would consider early release of records to genealogists, time would be needed to determine the parameters and develop processes.

Please let me know if you have any questions on my comments. I attended the hearing today and thank you for your time.

Very sincerely,

Susan R. Miller
Genealogy researcher for more than 28 years
Member of the NYG&B for 25 years
Member of Association of Professional Genealogists for 4 years
Thank you for the opportunity to address you this morning on what for all of us here, and tens of thousands—at the very least—of people throughout the world is a very important subject. I trust my comments and those of others will reach the number of other persons who were involved in discussing and drafting your proposal.

By way of brief introduction and background, I have been active as a full-time professional genealogist closing in on forty years. I became a Certified Genealogist (CG) in 1981 and was elected a Fellow of the American Society of Genealogists (ASG) the following year. I have been active in professional and scholarly pursuits of the field.

More importantly, I am not a stranger to a hearing such as this one, having been involved, beginning in the late 1970s, with issues of preservation and access of vital records and other sources used in family history and other genealogically related areas, such as estate settlements, title to real property, dual-citizenship and other lineage-based situations, all of which require, among other documentation, certified copies of birth, marriage, and death certificates. My direct experience began with hearings held in Boston concerning preservation and access of the Commonwealth of Massachusetts’s copies of birth, marriage, and death records, and the setting up of archiving the older records and defining access and preservation of those records that remained in the Department of Health in Boston.

Beginning in the 1980s, I became involved with a national committee that concerned itself with preservation and access of all sorts of records throughout the United States, including vital records. More recently, I was on
the successor to this committee, for some years known as the Records Preservation and Access Committee, or RPAC, serving as the representative from the ASG. RPAC has been instrumental in not only monitoring access and preservation of important records through this country and keeping the public informed, but also in helping educate those responsible for preservation and access and in developing policies.

A few years ago, I served with other genealogists, attorneys, and others in meeting with staff of the New York City Department of Health and Mental Hygiene, chaired by former Health Commissioner Beth Begier, to discuss issues of access to city vital records required for legal proceedings.

The New York City Department of Health and Mental Hygiene is holding this public hearing today for comment on proposed health code amendments that would set up a schedule for archiving to the New York City Municipal Archives birth and death certificates currently under the Department’s care. This is the one item on which the Department is seeking comment today: a transfer plan, for which I commend the Department. To my knowledge, no plan has been in place or, back when there seems to have been one, followed, for over thirty years, when birth and death records (with some minor exceptions) were last transferred the City Archives.

My principal comment is: Yes to a transfer plan, but No to the proposed specifics of such a plan, which are not acceptable on many levels, for many reasons, several of which have been voiced at the hearing today and also through submitted comments posted online. There is not sufficient time for
me to make and explain all the concerns, but I do want to touch on a couple of points and leave time for others who want to voice their comments.

First and foremost, this plan was conceived without input from those who have an interest and need for access to those records. My strongest suggestion is to put aside your proposed plan and set up a committee—a small one—for Department personnel to work with others to develop a plan that truly meets the needs of the public and also to address the concerns with regard to birth and death certificates, including fraudulent use and privacy.

Only in this way can you justly and rightly conceive an equitable plan. And while this is, in my opinion, the only path to take, it is not without precedent. Successful and agreeable planning, with some variations, has already been made in such states such as Maine, Connecticut, and Oklahoma, and in the commonwealths of Pennsylvania and Virginia. We should all look to the solutions made with these departments of health in drafting a good plan for New York City.

Another point I wish to make concerns the embargo years in your transfer plan proposal.

The Department’s choice to use the Model State Vital Statistics Act and Regulations (the “Model Law”) in recommending the restricting of access to birth certificates for 125 years and death certificates to 75 years is an inappropriate one.
The Model Law recommendations are just that—recommendations. Those who have drafted the recommendations—and these go back to the 1990s—have attempted to get all the states “in line” with all the same restrictions for access, with threats from the federal government to those states who do not conform. For example, the federal government would not honor a birth certificate for applying for a passport if is from a state that did not institute the federal-recommended restrictions.

Besides the attempted pressure in the Model Law drafts, the federal government has offered no funding for the huge cost to the states that would be required to “get in line” with its recommendations, which is one of the reasons the act has not been adopted.

The point here is that the Model Law cannot be cited as an accept mandate for imposing certain restrictions to access to birth and death records. The federal recommendations, be they guidelines or attempts at a forced mandate, are clearly a narrow look at the bigger picture, without better study and a clear understanding of how vital records are needed and used in our lives.

The bottom line is: Follow other states in developing a cooperative effort for a workable plan of access and preservation. In this way, everyone wins. And while the door may need to be closed in some instances, it should not be locked with the idea that protection is offered to a few at the loss to the majority.

Thank you for your time and consideration.

RE: Concerned About Proposal to Amend Article 207  
Hearing October 24, 2018

To NYC Department of Health and Mental Hygiene,

Although I support the proposal to establish a schedule for making birth and death records public and transferring them to the Department of Records and Information Services (DORIS), I do not support longer embargo dates for birth or death records in New York City.

I serve as the legal advisor to the Federation of Genealogical Societies and as a member of the Records Preservation and Access Committee (RPAC), a joint committee of FGS, the National Genealogical Society (NGS), and the International Association of Jewish Genealogical Societies (IAJGS). Although I intend to be supportive of the positions taken by RPAC and its sponsoring organizations, this statement is offered entirely in my individual capacity...

Family historians share the same vulnerabilities to identity theft and concerns about privacy as any other citizen. Be assured that the genealogical community is prepared to be supportive of measures which actually protect us from identity theft. I fervently wish that various proposals at the state and federal level limiting access to death records would have the effect of identity theft prevention. Our analysis has suggested that they limit records access for legitimate users without providing the desired benefit of identity theft reduction.

In particular, we have been compelled to challenge the appropriateness of the 75-year embargo of death certificates and indexes found in the 2011 Version of the Model State Vital Statistics Act whenever it has been proposed for adoption in a number of jurisdictions. The inclusion of this and other extended embargo periods in legislation proposed for adoption in a number of jurisdictions has placed the vital records and genealogical communities in essentially adversarial positions and has become a barrier to the adoption of other much needed vital records reforms.

http://www.fgs.org/rpac/2013/07/14/2013-state-legislative-accomplishments/
Even the Chairman of the House Health Care Committee in Oregon in 2013 remained skeptical of the justification for extended embargo periods. See audio of his remarks at 6:20 of the snippet at http://www.fgs.org/rpac/2013/05/14/oregon-update-house-senate-action-on-hb2093/.

Our two communities share many interests. Vital records officers are custodians of records of life and death of value to the public and to genealogists. I do not accept that an essentially adversarial relationship between genealogists and vital statistics registrars is desirable or necessary. How can we best bridge the existing gap in our respective postures?

I endorse the theme of the presentation made by Patricia W. Potrzebowski, then Executive Director of NAPHSIS, at the 2014 Annual Conference of the National Genealogical Society, that we begin by encouraging a substantive dialogue between our two communities. Her title: “Vital Records Registrars, Genealogists: We need to talk!” That discussion has begun.

If that dialogue can lead to a coordinated position that both communities can support, then genealogists can begin to function as allies to vital records officers not only on access to death records but be supportive of broader vital records interests as well. That has been the objective of a vigorous effort in which RPAC has been urging the leadership of state and local genealogical communities to reach out to their corresponding vital records registrars to start this dialogue in a meaningful way.

I have recently been informed that NAPHSIS is likely to revisit several areas covered by the 2011 version of the Model Act in the coming year. The scope of that review is still being defined. I intend to suggest that embargo periods be included in this review.

Before adopting any extended embargo periods suggested by the 2011 Version, may I urge you to participate in the NAPHSIS review process and incorporate their results in your future deliberations. Should you choose to act more immediately, The Federation has joined in the Records Preservation and Access Committee statement supporting the proposal of the New York Genealogical and Biographical Society reflected therein.

I want to commend the City of New York for your participation in the NAPHSIS Electronic Verification of Vital Events (EVVE) Fact of Death (FOD) project. If fully and properly implemented, I believe that this resource has the potential of becoming the long-promised alternative to the Social Security Administration’s Death Master File and addressing many of the DMF’s shortcomings. With regard to death records, I urge that NYC recognize the broadest categories of authorized users (to include the general public). I have yet to hear any principled rationale for keeping the mere fact that an identifiable individual has died a secret.

For more information see http://www.fgs.org/rpac. I may be reached at access@fgs.org.

Cordially,

Frederick E. Moss
RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

I have been working to discover my family’s American history for over 17 years. In that time I have been able to discover hundreds of ancestors my family knew nothing about, uncover several new branches of the tree, make connections to previously unknown 3rd and 4th cousins (who have become close members of the family now!), and learned secrets even about my own grandparents. Much of these successes have come from access to birth, marriage and death records at the Municipal Archives on Chambers Street in lower Manhattan. However, I have often been thwarted and frustrated by the fact that viewable birth records have been frozen at 1909. The new proposed changes would put some needed records out of reach for me for an extra 20+ years. Will I live long enough to one day view them? THIS PROPOSED ACTION DOES NOT MAKE SENSE!

**A REAL EXAMPLE:** A few years ago I was able to see my grandfather’s birth certificate (from 1913). According to it, there was a first child born before him that no one living today had ever heard of. This baby was born between 1913 and 1910 (when his parent married). The proposed changes would completely block me from ever discovering this missing relative whom I share 13% of my genes. WHO LIVING TODAY IS PROTECTED BY THE PROPOSED CHANGES? There are zero individuals living today that were born in NYC in 1910, 1911, or 1912.

As a genealogist, timely access to these records are **critical and essential** for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to continue to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).
Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. For example, having access to where someone was buried. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely regards,

[Signature]

FOR IMMEDIATE DISTRIBUTION:
RECLAIM THE RECORDS
Public Comment on New York City's Proposed Rule Changes Restricting Vital Records Access
October 24, 2017

Good morning. My name is Brooke Schreier Ganz, and I am the president and founder of Reclaim The Records. Reclaim The Records is a 501(c)(3) non-profit activist group of genealogists, historians, researchers, and journalists advocating for open public access to archival records held by government agencies and libraries. We are the largest archival records activist group in America, measured both by membership and by impact. We have approximately 4,800 subscribers to our newsletter, and of them, about 820 people signed up from an IP address geo-located to within 50 miles of Times Square. That is almost a fifth of our membership in the New York metro area.

In the past three years, Reclaim The Records has successfully sued two different New York City agencies under the New York State Freedom of Information Law, also known as FOIL. We filed against DORIS, the Department of Records and Information Services, in 2015 and we filed against the New York City Clerk's Office in 2016. We won settlements and the records we sought both times, and even won our attorneys fees from the city once. Those millions of records are now online, and free.

In the past six months, Reclaim The Records has expanded beyond the city and successfully used FOIL to fight the New York State Department of Health for seventeen months to win the first-ever public copy of the entire New York State death index from 1880 through 1956. We also recently used New Jersey's open records law OPRA to fight the New Jersey Department of Health to win and publish for the first time ever the entire New Jersey marriage index, from 1901 through 2016. Those millions of records are also now online, and free, too.

And now we're here talking to you, the New York City Department of Health.

And I'm here this morning to talk about why we in the genealogical community and in the open records community don't like you and don't trust you.

When researchers and genealogists come to our organization, through e-mail and social media and by phone, and report terrible problems accessing birth certificates and death certificates to which they know they are legally entitled, and they ask us for records access help, or they simply want to vent about their frustrations, one government agency's name comes up the most. You are known in our community as the worst Department of Health to deal with in the entire country, the most unhelpful. The fact that you are right now threatening to restrict records access even more seems like a bad joke.

We don't trust your motivations in putting forward these proposed rule changes because we have witnessed and documented a pattern of behavior by the New York City Department of Health over many years where you have greatly restricted records access in ways that are jaw-dropping, or flatly
breaking the law. We don't believe you when you say these rules are being changed to protect the public. We have too much evidence that shows that you are just protecting yourself.

For example, up until a few months ago, the New York Public Library on 42nd Street held many rolls of microfilm and hundreds of bound books containing the index to New York city births and deaths, from the early twentieth century up through about 1982. This same index data was made available to the public through about 2008 onsite at your Department's offices. Then one day, a few months ago, in a horrendous break of the New York State Freedom of Information Law, your office apparently decided that these public records should not be public anymore. So your Department bullied the New York Public Library, and your people came in the night and took the books off the shelf of the public library, and the microfilm reels too, thereby “retroactively classifying” those public records, which had been available to the public for decades.

When we at Reclaim The Records heard about this situation, we were appalled. We have already held two different phone conferences with the executive director of the New York State Committee on Open Government in Albany to discuss this situation. The Committee has been funded by the New York State Legislature for decades, specifically set up to deal with issues of public records access. They issue numerous Advisory Opinions to requestors and agencies across the state to keep both groups in compliance with the law.

And in our two conferences with them, and with our attorney, the Committee was outraged by the reports of your Department's behavior. It is their view that your attempt at “retroactive classification” of those public documents – bullying the New York Public Library, literally going in and taking books off the shelves in the middle of the night! – is a gross violation of the New York State Freedom of Information Law. And I can guarantee you right now that this data will be the subject of a new Freedom of Information request by Reclaim The Records in the new year, which I am sure will quickly be filed by an Appeal, followed by an Article 78 petition and lawsuit in the Supreme Court of the state of New York. Guaranteed. In this country, and especially in this political climate, we do not want to go down a road where government agencies feel empowered to physically take away crucial records from the public libraries when they disagree with their existence, and yet that is exactly what your Department has done.

In fact, one of the primary reasons our organization transitioned to a 501(c)(3) non-profit structure this past February is to raise the six-figure war-chest that we need to fund the legal case against your Department for the return of this index data to the public. Luckily, I'm sure you're all aware that the New York State Legislature just passed a new law in their last session mandating that all government agencies who are found to have wrongly withheld public records from requestors in FOIL lawsuits will now be required to award attorneys fees and court costs, rather than it being left to the discretion of the judge in the case. And that is one new law that we will be very eager to try out.

But you guys didn't even limit yourselves to interfering with New York's Freedom of
Information Law; your Department went and inserted yourself into other states' laws and their public records fights, too. For example, Reclaim The Records currently has an active Missouri Sunshine Law case pending against the Missouri Department of Health and Senior Services. We are asking them for a copy of their basic post-1910 birth index and post-1965 death index, a very simple public records request to which they first agreed and then later attempted to deny. This was especially egregious because in the course of our lawsuit, we found out that Missouri's Department has been quietly selling this same data, making money off public records which they then don't want to provide to the public.

Missouri's bad behavior in this case won them a 2017 annual “Foilies Award” from the EFF, ranking them alongside other such open records luminaries as Trump and Sheriff Clarke. A few months later, the Investigative Reporters and Editors group (IRE) also awarded the case, by naming the Missouri Department of Health one of five finalists for their annual “Golden Padlock Award,” for government agencies that didn't merely deny records requests but who were especially “devious” in how they tried to avoid public scrutiny. This same Missouri case was also profiled by NPR. I am bringing all this up not to brag, but to emphasize to you how shocking Missouri's behavior was, and how widely reviled by the press, as one of the worst examples of government records denial in the country in the past year.

Well, funny story. In the course of our Sunshine Law suit, Reclaim The Records won copies of the Missouri Department of Health's internal e-mails and meeting notices in discovery, and guess whose names we found in there? That's right, it was the New York City Department of Health. Specifically, it was your registrar of vital statistics Steven Schwartz and your assistant commissioner Gretchen Van Wye whose e-mails and phone meeting logs showed up in the internal Missouri documents. On behalf of the city of New York and your Department, Schwartz and Van Wye consulted by e-mail and over the phone with Missouri's bureaucrats on strategy about that very case, how to deny public records access to Missouri researchers. And when Missouri later wrongfully denied our public records request, Mr. Schwartz actually e-mailed them back to tell their registrar, quote,“That's good news!”

We've helpfully posted copies of Mr. Schwartz's and Ms. Van Wye's e-mails to our public Twitter feed so that you all can read them for yourself. I hope you do, and I hope the journalists in attendance here today will take the time to ask them about that case on the record.

But there's more. Your Department's proposed rule changes of 75 years and 125 years are taken directly from a suggested template known as the Model Vital Statistics Act and Regulations, specifically the version that was drafted in 2011. You mention that clearly in your proposal, as if it were the most logical and normal thing to conform New York City's outdated policies to this fancy new Act. But what you neglected to mention in your proposal is that this Act's implementation was placed on hold by the Department of Health and Human Services (HHS) in April 2012. The federal government didn't want to implement it. And you also fail to mention that this Act is not in place almost anywhere
else in the United States, thankfully. We say “thankfully” because this model Act was drafted in 2011
with absolutely no input solicited or received by the researcher community, genealogist community, or
public records experts. It is a highly restrictive framework that would gut public access to vital records
across the country, built in secret by a committee. That's why it hasn't been gaining traction with the
states.

But guess whose name shows up as one of the only members of that small working group who
drafted this flawed and restrictive Act? Yup, it's Steven Schwartz again, the New York City Registrar.
And joining him in that working group, as the only person in the whole country who was meant to be
representing the concerns of the law within that working group, was Wilfredo Lopez, the Former
General Counsel for who else, the New York City Department of Health.

Taken all together, your Department shows a clear pattern of behavior that is in direct
opposition to our right to transparency and the public's right to know about our government. So yeah,
we're all very skeptical about your Department's stated motivations for this proposed rule change,
which would only further deny records access to the public.

So instead of these unnecessary and overbroad rule changes, Reclaim The Records has put
together a simple proposal for the Board, with rules we think would be far more appropriate. These
rules balance the public's right to know with protections against actual identity theft. They are:

1. “Informational Only” Records. New York City should follow the lead of other vital records
jurisdictions such as California and create what are known as “informational only” non-certified copies
of vital records. These informational records would display all the same data as original records in a
photocopy image, but would have the addition of large red text printed right on the page stating they
are “For Informational Purposes Only – Not To Be Used as Proof Of Identity.” They would also lack
the printed or raised seal of the city. If this Department is really as concerned with identity theft as you
publicly claim to be, then you should have no problem following the lead of other states in making
available these sorts of non-certified documents. It would allow researchers immediate access to the
crucial information we seek without having any risk that the information contained in them could be
used as false documentation.

2. No Waiting Periods. New York City should make these non-certified informational-only
copies of birth certificates and death certificates available to the public without any waiting period.
None. Zero. This is what is done in California, Massachusetts, and several other states, in some cases
dating back to the time when the states were still colonies, without any proven ill effects. This
bickering over the propriety of 50 years versus 75 years is ridiculous, because both timeframes are
completely non-existent in numerous other states, from North Carolina to Iowa to Minnesota, all states
with no waiting period, not even for birth certificates, because these states offer non-certified
informational-only copies. Our right to access public records – our records, our families’ records – is
not up for negotiation by government agencies seeking to shirk their duties to civic transparency and
accountability. We are not going to sit here with you and horse-trade our rights.

3. Open Up the Index Data. New York City should immediately release the city's basic birth index and death index to the public as open data, in actual database format (such as SQL or CSV), with updates on an annual basis. The majority of other vital records jurisdictions in the United States publish this information every year without any fuss whatsoever, and yet New York City seems determined to hide it. This indices are not actual certificates of any kind, they are merely the finding aid, basically just a big spreadsheet with basic information such as surname, given name, sex, date of birth or death, borough or other locality of birth or death, and the certificate number. The New York Genealogical and Biographical Society has recommended in their petition to the Department that you should also add a new column of information on burial locations to this index, and we agree with them that this would be very helpful information.

Furthermore, New York City agencies are already required to release their internal data sets to the public under Local Law 11 of 2012, also known as the Open Data Law. The New York City Council voted on and passed this legislation on February 29, 2012, and it was signed into law on March 7, 2012. And a formal request was made to this Department through the city's official Socrata open data portal on May 1, 2013 asking for these indices.

It has now been over five and a half years since that citywide law was put in place, and four and a half years since that data request was filed with your Department, and still the New York City Department of Health still has not released any of that birth and death index information to the public. Instead, your meager open data offerings on the city portal include things like the list of local farmer's markets, and results of the latest youth surveys. Meanwhile, one of your Department's most consistent sources of revenue is the sale of copies of vital records to families and researchers, but you won't even give us the basic index to what you hold.

Finally, to close on a personal note, I am a proud fifth-generation New Yorker, although I presently live in exile in California. All eight of my great-grandparents are New Yorkers; five of them were born in the city and the other three immigrated through Ellis Island and settled here. About 95% of my research is concentrated here in the city, and all the records I need to use in my research are here. And it is thanks to decades of experience with the stubborn intransigence of New York City government agencies like this Department that I even founded Reclaim The Records in 2015 in the first place. Had New York City not been such a thoroughly miserable place for genealogists to deal with, I might never have sued the city multiple times and released over twenty million records.

I hope you will take seriously what is being said to you here today. I assure you that we are all taking it extremely seriously and will be following your actions closely. Thank you for your time.
Members of the Commission, Thank you for allowing public comments on this important issue. My name is Joshua Taylor and I am the President of the New York Genealogical and Biographical Society. As the oldest – and largest – genealogical organization in the state of New York, we strive to discover, share, and preserve the stories of all New York families. We represent thousands of members and constituents across the United States and serve millions of individuals who have a connection to New York City in their ancestral past.

We applaud the Commission’s desire to hear from genealogical organizations and those impacted by the proposed access limitations to New York City's birth and death records.

Simply stated, genealogical research and discovering family history requires access to public records. Birth and death records are core materials used by genealogists for research. They are often the only records that provide precise information relating to parentage, places and dates of birth and death, cause of death, and information critical to establishing evidence to advance our research. In essence, these records show crucial links for our work.

The proposed limitations would greatly impede open access to these public materials for millions of individuals searching for their connection to New York City. We believe that the Proposed Regulations Are Not Aligned with Current Practices.
The 2011 Revision of the Model Vital Statistics Act, on which the proposed restrictions are based, has not found mainstream support. To date, only one state (Oklahoma) has put the proposed restrictions in place. Multiple states have allowed greater levels of access to vital records:

- The Commonwealth of Virginia opens death records after 25 years.
- In Pennsylvania death records are open in 50 years.
- Michigan offers free digitized death records through the Michigan State Archives through 1952.

The U.S. Department of Health and Human Services released final regulations on protected health information and privacy in September 2013. These processes permit the release of information about a deceased individual in 50 years.

We also believe that the leaders of the National Association for Public Health Statistics and Information Systems (NAPHSIS) are considering revising the proposed periods for the Model State Vital Statistics Act and encourage members of the Commission to open a dialogue with NAPHSIS in the course of making this decision.

Further, access to Birth and Death Records for genealogical research is NOT A Leading Cause of Identity Theft.

Genealogists themselves share the same fears of identity theft and privacy concerns. We have been victims of major data breaches from Yahoo, Target, Home Depot, Anthem, and most recently Equifax.
In recent years, news outlets have reported the theft of millions of identities, which makes access to verified information – particularly in the course of deaths – even more vital. Proper implementation of death indexes would prevent identity theft.

There is no evidence that states who adopted more moderate open records policies have experienced higher levels of identity theft. Instead, identity theft has centered on commercial companies, such as Equifax, not through genealogical research.

The record restrictions would directly impede those seeking of trace immigrants to New York City during the 20th and 21st century. They are members of New York City's diverse communities – including those of Puerto Rican, Vietnamese, Chinese, Korean, and other backgrounds - who not have these essential resources to trace and document their families. In addition, those who celebrate and recognize their ancestors through lineage organizations (including those who recognize settlers from the Dutch period, the American Revolution, and other entities) would be unable to gather the documentation needed to complete applications. These barriers to understanding and preserving New York City's past – across its diverse and long history – would be devastating.

We request that the Commission consider the following alternative to provide access to these necessary genealogical materials:

- Access to Birth Records after 105 years or with proof of death. Only a small percentage of the population are expected to live beyond this period.

- Access to Death Records after 50 years.
• Access to Death Indexes after 25 years.

To identify theft, we also propose that the Commission considering providing early access to death records to known members of the genealogical community (perhaps, even those who are identified members of a New York-based genealogical, lineage, or historical organization). These materials could include:

• Access to New York City Death Records after 25 years.

• Access to informational certificates

The creation of an "informational certificate" that would provide a non-certified copy of information from a record, without the record itself being able to be used to substantiate identity.

The use of these records goes beyond genealogical research. Information relating to causes of death and patterns of genetic diseases is crucial to understanding one's family health history. There are numerous cases in which understanding a family's extended health history can be essential to treatment and prevent of genetically inherited diseases.

Finally, we believe that further limitations in the transfers of records to the NYC Municipal Archives threatens the preservation of these important records.

As an organization, we exist to discover, share, and preserve the stories of New York's families. Without open access to public records, and the proper conservation and preservation of these materials, the potential to lose these documents remains high.
We strongly encourage the Department of Health to work in close conjunction with the New York City Municipal Archives to ensure safe and timely transfers of New York City's birth and death records.

Modern technology offers resources to ensure proper preservation, organization, and dissemination of vital records for New York City. We strongly encourage the commission to consider the safety and protection of these public records in the course of their decision-making. In short, these are, by law, public records, and therefore should be preserved and accessible to the public.

Thank you for the opportunity to provide a comment on this important matter.

RE: Proposed Guidelines for Access to Public Vital Records

Dear Commission Members,

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records.

Like many, my genealogical pursuits involve multiple records from numerous repositories. My intention is to discover information about my ancestors and understand their place within a larger social and historical context. I ask that the commission consider the following guidelines for access, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited
information from the death index would allow a genealogist key information to identify particular records necessary for research.

Further, I ask that you consider developing and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual's cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincere regards,

<YOUR NAME AND SIGNATURE>
<YOUR CITY AND STATE>

RE: Proposed Guidelines for Access to Public Vital Records  

Dear Commission Members,  

I am writing today to provide my comments to the New York City Department of Health and Mental Hygiene regarding the proposed changes to access birth and death records.  

While I currently live in Maryland, I was born and grew up in New York. My ancestors and relatives lived in New York. I have been researching my family history for approximately fifteen years and frequently request and pay for records from New York City, including from the Department of Health and Mental Hygiene. I have also supported the work of Reclaim the Records, whose efforts have successfully released thousands of important vital records in New York, New Jersey and elsewhere.  

As a genealogist, timely access to these records are critical and essential for my research. The proposed restrictions on when birth and death records would become available for public access would create an unnecessary hindrance for myself and millions of others seeking to trace their families within New York City’s vital records. As a senior citizen, I would not live long enough to receive most vital records under your proposed restrictions.  

As a potential victim of identity theft through several recent data breaches, I understand privacy concerns. But it appears that most identity theft occurs with living persons (such as myself). Taking such drastic action to cut off access to records as you propose does little to reduce identity theft while hurting innocent people such as myself who want and need to learn more about their ancestors and family.  

I ask that the commission consider the following guidelines for access, namely:  

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.  
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.  
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).  

Providing paying members of a state-based genealogical organization has seen a tremendous success in states like Connecticut, and access to the limited information from the death index would allow a genealogist key information to identify particular records necessary for research.
I also ask that you consider the development and implementation of an informational copy of birth and death records, which would provide important details for genealogical and historical research in a format not suitable for proving identity. Also, items related to an individual’s cause of death can be extremely important to those tracing and understanding their medical history, relating to those with genetically inherited diseases.

Thank you for your attention to this important matter.

Sincerely,

RE: Amendment to Provisions of Article 207 of New York City Health Code Regarding Proposed Transfer Schedule of Birth and Death Records to DORIS

I am writing this letter in consultation with our Chief Genealogical Officer, David Rencher, to inform you that FamilySearch International is very concerned about the proposed changes for access to birth and death records as proposed by the New York City Department of Health and Mental Hygiene. Ellis Island estimates over 40% of current US citizens can trace their ancestry to someone who came into this country through the ports in New York City. Therefore, many of our patrons rely on your data to understand who their ancestors were.

Potential identity thieves do not gather PII information by gathering copies of birth and death records from local courthouses, but rather by stealing access to large electronic databases as we have seen in recent hacks of data from Target, Lowes, Equifax, and the Federal Government.

In fact, some PII fraud could be eliminated by providing broader access to death records. For example, it would be very difficult to impersonate a deceased person if all of their information was available and easily accessible to ensure no one was trying to use the information illegally.

Genealogy is more than just a hobby, it is also a vital tool for many to understand their personal health risks as they understand the genetic factors in their family history for specific diseases. Several types of cancer, heart disorders, and Tay-Sachs disease (to which I recently lost a nephew) run in families, and knowledge of which can be helpful in determining a person’s lifestyle choices. Since 2004, the Surgeon General and the U.S. Department of Health and Human Services have publicized the importance of knowing a family’s health history extending to third degree relatives. Genealogists need access to the full death record, including cause of death, for grand aunts and uncles and great-grand aunts and uncles, to determine which branch of a family carries a genetic disease.

New York City can create informational copies of birth or death records, which cannot be used for any other purposes than family history research. Reasonable timelines for access can be created which still enables access to the records. We support guidelines which have been recommended by the New York Genealogical and Biographical Society and supported by other organizations such as the Records Preservation and Access Committee of the Federation of Genealogical Societies, the National Genealogy Society, and the International Association of Jewish Genealogical Societies as follows, as noted:

- Birth records accessible after 75 years if death can be verified, and after 105 years if no death date is known.
• Death records access after 50 years, or after 25 years to registered members of a genealogy society, or professionally credentialed genealogists.
• Access to the death records index after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Please keep access to these records available within the timelines noted above.

Thank you,

John de Jong, AG®

Long Island City, NY 11101-4132

Dear Commission Members,

I am writing to inform the New York City Department of Health and Mental of a presumably unconsidered, detrimental side effect of the proposed changes to New York City vital records access; specifically, the hampering of efforts to identify American servicemen still unaccounted for from past conflicts (primarily WWII and the Korean War, but also WWI and Southeast Asia).

I’m a professional genealogist who assists the U.S. Army with its repatriation initiative, an important component of our country’s “no man left behind” commitment. It is our obligation and privilege to honor the sacrifice of each soldier and to do our best to bring some manner of peace to his family.

To date, I have researched 1,274 soldiers for the Army. I offer this figure to reassure you that I’m qualified to speak on this matter, but at the same time, wish to emphasize that every single soldier is critical.

Each soldier has loved ones – some combination of a widow, children, siblings, nieces, nephews, and cousins – who have been waiting decades to learn what has become of him (because of the historical nature, all but one of my cases have been male, and with the rare exception of soldiers who served in Vietnam, all parents are deceased).

For each serviceman, I must find his primary and secondary next of kin, three relatives who share his mitochondrial DNA, and one his Y-DNA. In short, it is necessary to research at least his immediate family, and often his extended one.

The term “vital records” is fitting as New York City records have been vital to this undertaking, particularly because the U.S. Army and New York City share something in common: the strong presence of immigrants. Due to this mutual heritage, it’s possible – even probable – that every individual involved in this decision has memories of at least one foreign-born parent, grandparent, or great-grandparent, as well as relatives who served in our nation’s military.

For this same reason, though I handle cases for soldiers across the country, New York City records have always played an outsized role in their resolution. Many concern soldiers born and raised in the five boroughs, but even when that’s not so, I often find myself consulting NYC records to learn more of their parents and extended family.

Whether a soldier hails from or was born to immigrants from Ireland, Sweden, Jamaica, Ukraine, Italy, the Philippines, and numerous other countries or even American territories, I can safely assume I will be turning to New York City records. For example, I cannot recall a single case for a Puerto Rican soldier that did not entail the use of NYC vital records.
Other localities and agencies have made more recent records conveniently available with no unfortunate repercussions. Cook County, Illinois (Chicago), for instance, has for a number of years provided online access (http://www.cookcountygenealogy.com/) to birth certificates of 75+ years, marriage certificates of 50+ years, and death certificates of 20+ years. Moreover, in doing so, it has generated a low-maintenance income source for the county.

As to assertions that the availability of records facilitates fraud, it should be noted that easy access to death records does the opposite. If government agencies, credit bureaus, and other entities can readily confirm a death, they can avoid the trap of doing business with those attempting to claim the identity of deceased individuals. Perhaps this is a factor in why Chicago has only a 20-year restriction on such records.

Regarding the proposed 125-year restriction for birth certificates, the very fact that I find no parents alive for any WWII and Korean War soldiers (mostly born in the 1920s and 1930s) makes it dear that those whose privacy would be protected by such a prolonged period are long deceased.

In closing, I am writing to implore those who will be making this decision to consider this unintentional but very real consequence of the proposed restrictions. These soldiers made the ultimate sacrifice for the United States, and many of them were New York City natives and/or had New York City roots. Please do not hinder efforts to identify and honor them.

Respectfully,

Megan Smolenyak

RE: Access to Public Vital Records

Dear Commission Members,

On behalf of the Board of Directors of the Irish Family History Forum, I would like to express our objections to your recently proposed rules about access to public birth and death records in New York City.

It is believed that 40 million Americans claim to have Irish ancestry. Many of these ancestors emigrated from Ireland at the time of, or in the aftermath of, the Famine of the 1840s, and a huge percentage of them lived at some time in New York City. Their stories are not always easy to unearth, particularly because most Irish census records from the 1800s no longer exist.

For close to three decades, the IFHF has worked to discover and preserve the stories of people with Irish ancestry, particularly New York Irish ancestry. We assist our members in researching their ancestors so that they might discover and preserve their family history for themselves and for their descendants.

Access to vital records is critical to our work, and so the proposed restrictions would create a hardship for our members seeking to trace their families within New York City’s vital records.

We ask the commission to consider the following guidelines for access to public records:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
• Access to death records after 50 years; or after 25 years if the person seeking the record is a registered member of a genealogical society.
• Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

In addition to their genealogical research, many people require access to vital records in order to compile a family medical history and learn about any genetically inherited diseases.

In light of the preceding, may we ask that you consider creating an informational copy of birth and death records, which would not prove identity for financial and other transactions, but would instead provide the information necessary for researchers?

Thank you.

Sincerely,

Michael Cartagher
President
Irish Family History Forum, Inc.
Dear Commission Members,

We, as members of the New York Genealogical and Biographical Society community, strongly object to the proposed rules regarding access to public birth and death records of New York City.

Our organization was founded in 1869, and since that time has worked to discover, share, and preserve the stories of New York families. Our work stretches across the United States—and in fact the entire world—as we tell the stories of millions of immigrants who passed through New York as well as the families who have made New York their permanent home.

Access to these original materials are critical and essential for our work. The proposed restrictions would create an excessive interference for myself and my fellow members seeking to trace their families within New York City’s vital records.

We ask that the commission consider the following guidelines for access to public records, namely:

- Access to birth records after 75 years (if the individual’s death can be verified) or 105 years if no death date is verified.
- Access to death records after 50 years; or after 25 years to registered members of a New York genealogical society.
- Access to the index to death records after 25 years (providing the name, date of death, place of death, date of birth, and burial/cremation information).

Beyond genealogical research, many of our peers and colleagues require access to these records when tracing medical histories within their family—specifically those related to genetically inherited diseases. Access to these records is essential for those seeking to understand and treat medical conditions. Therefore, we ask that you consider creating an informational copy of birth and death records, which could not prove identity for financial and other transactions, but would instead provide the information necessary for researchers.

Thank you for your attention to this important matter.

Sincere regards,

Marcia Case, RN of Tarrytown, New York (email: marciacase@me.com)
