^White, Black, Asian and Other exclude Latino ethnicity. Latino is Hispanic or Latino of any race.

Note: Percentages may not sum to 100% due to rounding.

Note from Oxiris Barbot, Commissioner, New York City Department of Health and Mental Hygiene

We are pleased to present the 2018 Community Health Profiles, a look into the health of New York City’s (NYC) 59 diverse community districts.

The health of NYC has never been better. Our city’s life expectancy is 81.2 years, 2.5 years higher than the national average.

However, not all residents have the same opportunities to lead a healthy life. A ZIP code should not determine a person’s health, but that’s the reality in so many cities, including our own.

The Community Health Profiles allow us to see how much health can vary by neighborhood. Policies and practices based on a history of racism and discrimination (often referred to as structural racism) have created neighborhoods with high rates of poverty and limited access to resources that promote health. The practice of removing funding or refusing to provide funding to communities of color has caused poor health outcomes to cluster in these communities.

The Community Health Profiles also show how important community resources, and funding to create and sustain these resources, are to health outcomes. For example, supermarkets provide more access to fresh foods than bodegas. However, in some neighborhoods with obesity rates higher than the citywide average, just 5% of food establishments are supermarkets, making it difficult for residents to make healthy choices.

Addressing these inequities may seem like a daunting task, but by working together, we can dismantle the unjust policies and practices that contribute to poor health in our communities. Through Take Care New York 2020 (TCNY 2020), and other New York City Health Department programs, we work with community partners to give every resident the same opportunity for good health. We are making progress, but there is more work to do.

Reducing health inequities requires policymakers, community groups, health professionals, researchers and residents to work together for change at every level. We look forward to working with you to improve the health of our city.

Sincerely,

Oxiris Barbot, MD

---

Take Care New York 2020 (TCNY 2020) is the City’s blueprint for giving everyone the chance to live a healthier life. For more information, visit nyc.gov/health and search for TCNY.
NAVIGATING THIS DOCUMENT

This profile covers all of Bronx’s Community District 2, which includes Hunts Point and Longwood. This is one of 59 community districts in NYC. The community district with the most favorable outcome in NYC for each measure is presented throughout the report. Sometimes this is the highest rate (e.g., physical activity) and sometimes this is the lowest rate (e.g., infant mortality). Some figures include an arrow to help readers understand the direction of the healthier outcome.

This profile uses the following color coding system:
Understanding Health Inequities in New York City

The ability to live a long and healthy life is not equally available to all New Yorkers. A baby born to a family that lives in the Upper East Side will live 11 years longer than a baby born to a family in Brownsville. This inequity is unacceptable.

Resources and opportunities are at the root of good health. These include secure jobs with benefits, well-maintained and affordable housing, safe neighborhoods with clean parks, accessible transportation, healthy and affordable food, and quality education and health care.1 In NYC, access to these resources and opportunities are not equitably distributed. Neighborhoods with residents of color often have fewer resources.

Since the 1600s—when NYC was established by colonization—racist policies and practices have shaped where New Yorkers live and go to school, what jobs they have and what their neighborhoods look like. Over time, these policies and practices have built on each other to create deep inequity.

For example, in the 1930s the federal government developed a policy known as redlining. As part of this policy, neighborhoods were rated based on the race, ethnicity and national origin of their residents. Neighborhoods that were home to people of color, like Central Harlem and Brownsville, were outlined in red on a map. They were labeled as "hazardous" and no home loans or other investments were approved there. The wealthiest and Whitest neighborhoods in NYC received, and continue to receive, more investment and opportunities for health.2

The denial of resources and opportunities that support good health contributes to the differences in life expectancy we see today. Experiencing racism is also a health burden, creating chronic stress that contributes to major causes of death, like diabetes and heart disease.3

To better understand the successes and challenges in each of NYC’s 59 neighborhoods, the Community Health Profiles present data on a range of measures. These data should be interpreted with an understanding that good health is not only determined by personal choices. Many other factors shape differences in health outcomes, including past and current discrimination based on race, ethnicity, national origin, gender, sexual orientation and other identities. We hope the Community Health Profiles support your efforts in making NYC more equitable for all. For more information on the New York City Health Department programs and services that are closing the gap in health outcomes, visit nyc.gov/health.

---

Social and Economic Conditions

Education
Higher education levels are associated with better health outcomes. Missing too many days of school can cause students to fall behind and increases their risk of dropping out. **Hunts Point and Longwood’s** elementary school absenteeism rate is higher than the rate for NYC overall. Three out of five high school students in **Hunts Point and Longwood** graduate in four years, lower than the citywide rate.

**ELEMENTARY SCHOOL ABSENTEEISM**
(percent of public school students in grades K through 5 missing 19 or more school days)

Social and Economic Conditions

Economic stress
Living in high-poverty neighborhoods limits healthy options and makes it difficult to access quality health care and resources that promote health. In **Hunts Point and Longwood**, 29% of residents live in poverty, compared with 20% of NYC residents. Access to affordable housing and employment opportunities with fair wages and benefits are also closely associated with good health. **Hunts Point and Longwood’s** unemployment rate is higher than the citywide average of 9%. Rent burdened households pay more than 30% of their income for housing and may have difficulty affording food, clothing, transportation and health care. Fifty-eight percent of **Hunts Point and Longwood** residents are rent burdened, a higher rate than residents citywide. One way to consider the effect of income on health is by comparing death rates among neighborhoods. “Avertable deaths” are those that could have been avoided if each neighborhood had the same death rate as the five wealthiest neighborhoods. Using this measure, 39% of deaths could have been averted in Hunts Point and Longwood.

Is your neighborhood gentrifying?
Gentrification transforms a low-income area into a high-income area through neighborhood redevelopment. It is often defined as changes in the racial and ethnic makeup, education level and average income of a neighborhood’s residents, as well as changes in housing and commercial businesses. While development may be beneficial, it is often inequitable, and can lead to displacement of long-time residents and businesses.

Gentrification can be measured in many ways. One measure that is used in NYC is to determine if a low-income neighborhood (those with the lowest 40% of average household income in 1990) saw higher than median rent growth over the past 20 years. Based on this definition, 24 neighborhoods were considered low-income in 1990, and **Hunts Point and Longwood** is one of 17 neighborhoods that is gentrifying.

Incarceration

Incarceration takes a toll on individuals, families and communities. Black and Latino New Yorkers experience higher policing compared with non-Latino White New Yorkers. This leads to higher rates of detention, which may include long periods of time spent in jail before trial. People who have been incarcerated are more likely to experience mental and physical health problems. They may also have trouble finding employment and housing and accessing healthy food.

Helpful neighbors

Strong social connections can have a positive impact on the health of community members. Feeling that our neighbors are willing to help each other is one aspect of community connection. In Hunts Point and Longwood, 57% of residents think that their neighbors are willing to help one another. This is lower than the rest of the city.

Housing quality

Every resident has the right to live in housing that is safe and pest-free. Poorly maintained housing is associated with poor health outcomes, including worsened asthma and other respiratory illnesses. In Hunts Point and Longwood, only 24% of renter-occupied homes are adequately maintained by landlords – free from heating breakdowns, cracks, holes, peeling paint and other defects. Forty percent of Hunts Point and Longwood households report seeing cockroaches, which is a potential asthma trigger.

HOMES WITHOUT MAINTENANCE DEFECTS (percent of renter-occupied homes)

HOMES REPORTING COCKROACHES (percent of households)

Note: Maintenance defects include water leaks, cracks and holes, inadequate heating, presence of mice or rats, toilet breakdowns or peeling paint.

Source: NYC DOHMH, Community Air Survey, 2016
**Housing and Neighborhood Conditions**

**Bicycle network coverage**
Twenty-seven percent of roads in Hunts Point and Longwood have bike lanes, which is higher than NYC overall.

**BICYCLE NETWORK COVERAGE**
(percent of streets with bike lanes)

- **Hunts Point and Longwood**: 27%
- **Bronx**: 12%
- **NYC**: 10%
- **Highest**: Crown Heights and Prospect Heights (45%)
- **Lowest**: Greenwich Village and Soho (9%)

Access to bike lanes can make it easier and safer to ride a bike more often.

Source: NYC Department of Transportation, 2017

**Pedestrian injury**
Hunts Point and Longwood residents have a higher pedestrian injury hospitalization rate than NYC overall.

**PEDESTRIAN INJURY HOSPITALIZATIONS**
(per 100,000 people)

- **Hunts Point and Longwood**: 36
- **Bronx**: 28
- **NYC**: 23
- **Lowest**: Greenwich Village and Soho (9)

**Food environment**
Bodegas are less likely to have healthy food options than supermarkets. The lowest ratio among NYC community districts is one supermarket for every three bodegas (healthier); the highest is one supermarket for every 57 bodegas (less healthy). Hunts Point and Longwood is home to one of NYC’s farmers markets, another source of healthy food.

It is easier to make healthy choices when healthy, affordable food is readily available.

**SUPERMARKET TO BODEGA RATIO**
For every one supermarket in Hunts Point and Longwood, there are 20 bodegas.

Source: New York State Department of Health, Statewide Planning and Research Cooperative System, 2012-2014
Maternal and Child Health

Pregnancy outcomes
In Hunts Point and Longwood, the rate of expectant mothers receiving late or no prenatal care is higher than the citywide rate. One in 10 births to Hunts Point and Longwood residents is preterm (three or more weeks before the due date), higher than the citywide rate.

LATE OR NO PREGNATAL CARE
(percent of live births)

- 1.3% Lowest: Financial District
- 6.7% NYC
- 10.9% Bronx

- 8.7% NYC
- 10.1% Hunts Point and Longwood
- 9.7% Bronx

Teen pregnancy
Teen pregnancy has declined across NYC; Hunts Point and Longwood’s teen birth rate is 36.2 per 1,000 teen girls.

TEEN BIRTHS
(per 1,000 females ages 15 to 19)

- 36.2 Hunts Point and Longwood
- 28.4 Bronx
- 19.3 NYC
- 1.0* Lowest: Greenwich Village and Soho

*Interpret estimate with caution due to small number of events.

Access to quality health care is critical to a mother’s health before, during and after pregnancy, and to the health of our littlest New Yorkers.
Childhood obesity
A quarter of Hunts Point and Longwood children in grades K through 8 have obesity. This is higher than the citywide rate of one in five.

Children’s hospitalizations and emergency department visits
“Avoidable hospitalizations” are those that could be prevented with timely access to quality outpatient care. The rate of avoidable pediatric hospitalizations among children ages 4 and younger in Hunts Point and Longwood is higher than the citywide rate.

Many childhood asthma emergency department visits could be prevented by reducing the presence of pests, mold, secondhand smoke and other asthma triggers, and by taking daily medication. The asthma emergency department visit rate among children ages 5 to 17 in Hunts Point and Longwood is nearly double the citywide rate. The TCNY 2020 goal is to have fewer than 210 asthma emergency department visits per 10,000 children across the entire city.

Take Care New York 2020 (TCNY 2020) is the City’s blueprint for giving everyone the chance to live a healthier life. For more information, visit nyc.gov/health and search for TCNY.
Healthy Living

Self-reported health
How residents feel about their own health can be a good measure of overall mental and physical health. Seventy-two percent of Hunts Point and Longwood residents rank their health as “excellent,” “very good” or “good,” similar to the rest of NYC. The TCNY 2020 goal for the city is at least 82%.

ADULTS REPORTING THEIR OWN HEALTH AS “EXCELLENT,” “VERY GOOD” OR “GOOD” (percent of adults)

Physical activity, diet and smoking
Sixty-five percent of Hunts Point and Longwood adults report getting any physical activity in the past 30 days, lower than New Yorkers overall. The percentage of Hunts Point and Longwood adults who report eating at least one serving of fruits or vegetables in the past day is similar to the citywide average of 87%.

Sugary drink consumption can increase the risk of type 2 diabetes, heart disease, cavities, weight gain and obesity. Industry marketing can affect behavior and sugary drinks are heavily marketed to youth and communities of color. While sugary drink consumption has decreased to 23% in NYC, the TCNY 2020 goal is to reduce sugary drink consumption to less than 19% citywide.

More than a quarter of Hunts Point and Longwood adults drink at least one sugary drink a day.

The adult smoking rate in Hunts Point and Longwood is similar to the rest of the borough and other parts of NYC. The City is committed to reducing the citywide adult smoking rate to 12% by 2020.

**Health Care**

**Access to health care**
Citywide, the percentage of uninsured New Yorkers decreased in the last five years from 20% to 12%. In **Hunts Point and Longwood**, 14% of adults are uninsured and 10% report going without needed medical care in the past 12 months, similar to the rest of NYC. The TCNY 2020 goal is to have less than 9% of New Yorkers going without needed medical care.

Health Outcomes

Obesity, diabetes and hypertension

Hunts Point and Longwood’s adult obesity rate is 42%, which is higher than the rest of NYC. The TCNY 2020 goal is to reduce the obesity rate to less than 23% citywide. More than 700,000 adult New Yorkers have been told they have diabetes. An additional 164,000 are estimated to have diabetes but not be aware. Twenty percent of Hunts Point and Longwood adults have been diagnosed with diabetes and 38% of adults have been told they have hypertension. Rates for both are higher than the rest of NYC.

### OBESITY, DIABETES AND HYPERTENSION (percent of adults)

Obesity can lead to diabetes, high blood pressure and other health conditions.

Hypertension, also known as high blood pressure, is a leading risk factor for heart disease and stroke.

New HIV diagnoses

Getting an HIV test is the first step to accessing treatment if you are positive or developing an HIV prevention strategy if you are negative.

### NEW HIV DIAGNOSES (per 100,000 people)

Data from the NYC DOHMH, HIV/AIDS Surveillance Registry, 2016

Take Care New York 2020 (TCNY 2020) is the City’s blueprint for giving everyone the chance to live a healthier life. For more information, visit nyc.gov/health and search for TCNY.
Health Outcomes

New hepatitis C reports
Hepatitis C is a virus that damages the liver. New Yorkers born between 1945 and 1965 and people who have ever injected drugs should be tested because hepatitis C can be cured.

NEW HEPATITIS C REPORTS (per 100,000 people)

Binge drinking
Binge drinking is linked to high-risk behaviors and chronic health problems. The binge drinking rate in Hunts Point and Longwood is similar to the rest of NYC. The TCNY 2020 goal is to reduce binge drinking to less than 17% citywide.

BINGE DRINKING (percent of adults)

Psychiatric hospitalizations
The rate of adult psychiatric hospitalization in Hunts Point and Longwood is higher than the citywide rate.

PSYCHIATRIC HOSPITALIZATIONS (per 100,000 adults)

High psychiatric hospitalization rates likely reflect the challenges residents in underresourced neighborhoods face, including difficulty accessing preventive services and early care, greater exposure to stressors and interruptions in health insurance coverage.

Source: New York State Department of Health, Statewide Planning and Research Cooperative System, 2015

Note: Binge drinking is defined as five or more drinks for men and four or more drinks for women on one occasion during the past 30 days.
Source: NYC DOHMH, Community Health Survey, 2015-2016

Take Care New York 2020 (TCNY 2020) is the City’s blueprint for giving everyone the chance to live a healthier life. For more information, visit nyc.gov/health and search for TCNY.
Health Outcomes

**Infant mortality**
NYC’s infant mortality rate has declined in recent years. In Hunts Point and Longwood the infant mortality rate is similar to the citywide rate. The TCNY 2020 goal is a citywide rate of less than 4.4 per 1,000 live births.*

### Infant Mortality (per 1,000 live births)

**Premature death**
Cancer and heart disease are the leading causes of premature death (death before the age of 65) in Hunts Point and Longwood, similar to the rest of NYC. However, Hunts Point and Longwood residents die prematurely at a higher rate. Lung cancer, liver cancer and colorectal cancer are the three leading causes of cancer-related premature death in Hunts Point and Longwood.

NYC’s premature mortality rate (death before age 65) decreased 19% from 2006 to 2015. However, longstanding disparities persist. People living in high-poverty neighborhoods and Black New Yorkers are dying before age 65 at higher rates.

Note: Top causes of premature cancer deaths are based on a small number of events and may fluctuate from year to year. NYC rate includes premature deaths among NYC residents only and will differ from other published sources.

Take Care New York 2020 (TCNY 2020) is the City’s blueprint for giving everyone the chance to live a healthier life.
For more information, visit nyc.gov/health and search for TCNY.
Notes

**Neighborhood Definitions**
The 59 Community Districts (CDs) were established citywide by local law in 1975. For a complete listing of all CDs and their boundaries, visit communityprofiles.planning.nyc.gov. The CDs correspond to NYC Community Boards, which are local representative bodies. The names of neighborhoods within CDs are not officially designated. The names used in this document are not an exhaustive list of all known neighborhood names within this area.

**Analyses**
For most data, 95% confidence intervals were calculated for CD, borough and NYC estimates. If the confidence intervals did not overlap, a significant difference was inferred. This is a conservative measure of statistical difference. For most population-level data, if a CD rate was within 5% of the NYC estimate, the CD was considered similar to NYC, otherwise the CD rate was considered higher or lower than the NYC estimate. For Community Health Survey data, a t-test comparing the CD with the rest of NYC and the rest of the borough was conducted where p-values ≤ 0.05 were considered an indication of statistical significance. Report text highlights significant findings but does not include all significant results. The public use dataset contains additional data.

Most estimates were evaluated for statistical stability. Estimates with a relative standard error (RSE) > 30% or with a small sample size or small numbers of events (≤ 10) are flagged as follows: “Interpret estimate with caution due to small number of events or small sample size.”

**Acknowledgements**

For a complete dataset including numbers, rates and confidence intervals, as well as more technical notes on neighborhood definitions, analyses and data sources with complete citations, visit nyc.gov/health and search for Community Health Profiles or visit on.nyc.gov/chp.
Hunts Point and Longwood’s average life expectancy is **2.3 years shorter** than NYC overall.

78.9
