Part 1: Introduction

1.1. Introduction:

Welcome to the PCEPN full scale/functional exercise planning tool. This exercise plan template, devised from the Homeland Security Exercise and Evaluation Program (HSEEP), has been designed to assist exercise planners at community health centers perform live functional and full scale exercises with patient influx or management as recommended by the Joint Commission Emergency Management chapter for ambulatory care centers. This exercise plan has been designed to help planners design an exercise to test their capabilities, plans, and human resources using a scenario that has been repeatedly identified from numerous hazard vulnerability analyses as a hazard to community health centers. Extensive care has been taken to ensure that this exercise includes patient influx or management components to help health centers realize their plans under conditions that would most closely mimic operations during a typical day.

This exercise plan contains a scenario, sample objectives, and health center capabilities based on the HSEEP Target Capabilities List. Health Center exercise planners can use this document to plan for an exercise, understand the logistics needed to perform it, and design an evaluation tool that will best provide the information you need to better design, implement, and train on your plans. This document contains its appendices HSEEP templates including an HSEEP exercise evaluation guide, an evaluator tool, and an HSEEP After Action Report (AAR) template to assist health center planners plan an exercise, perform the exercise and appropriately evaluate the exercise to better extract data needed to improve preparedness.

1.2. How to use this document:

This Exercise Plan (Explan) has been designed to assist planners through every step of the planning process when planning a functional or full scale exercise. Each section in the guide provides the planner with an explanation of the terminology as well as providing the logistics and targets needed to perform the exercise successfully. The HSEEP program has been designed to use a common language approach so that all entities using this model can collaborate by using the same common language.

Exercises, however, must be planned based on the health center’s capabilities and plans. This plan makes no warrants regarding the successful use of this document if not supported by the health center emergency preparedness and management infrastructure. Health Center exercise planners must use their own plans as a foundation and exercise the specific aspects of their health center’s plans and capabilities. For this reason, the sample objectives listed within this template are not yet SMART (see section 5: Planning Guidance for more information on SMART objectives) because they have not yet been tailored to the specific emergency plans of the individual health center. The exercise objectives listed in this template should be selected and adjusted by the exercise planning
team to meet HSEEP guidelines while tailoring the objectives to the needs of the health center.

Health center planners must begin by examining their plans and determining their exercise needs by testing those aspects that would affect the performance of the health center during a crisis. Once exercise planners have examined their own plans, they should use this Explan to design and create their exercise.

1.2.1. Advice for Exercise Planners

1.2.1.1. Using the Hazard Vulnerability Analysis (HVA) to select an exercise scenario

Prior to assembling the Exercise Planning Team for the Planning Conference, the health center’s Emergency Preparedness Committee should review the health center’s Hazard Vulnerability Analysis (HVA). A thorough review of the HVA should identify those hazards that the health center should prepare for and mitigate against. It is these hazards and their respective challenges that the health center can focus on to most efficiently utilize their time and resources. Review of a community health center HVA should occur yearly and can serve as the start of the health center’s annual preparedness cycle. Selection of a hazard to conduct an exercise around begins the exercise planning process and, once the hazard is identified, the Emergency Preparedness Committee can select an Exercise Director and Exercise Planning Team.

The selection of a hazard scenario for an exercise should be considered carefully based upon the findings of the HVA and the time and resources available for an exercise. Often, more serious hazards require more planning energy and it would be best for the health center to balance the needs of the emergency preparedness program with the realities of how much time and resources can be dedicated to exercise planning and execution. It takes much longer to plan an exercise for a catastrophic event such as a tsunami than it does to plan for a power outage, for example.

1.2.1.2. Types of Drill/Exercise

The term exercise is a generic term that describes a wide range of testing activities. These activities can test preparedness and readiness, response, and recovery activities. Exercises are used to evaluate an emergency management plan, its policies, and/or assess the efficacy of training and development programs. There are two types of exercise that can be used. The first, discussion based exercise are low stress, low impact exercises that examine plans using formal or informal discussion based activities without actually acting out a plan or response. The following is a list of discussion based exercises that can be used in preparation for a functional or full scale exercise:

1. Seminar - A seminar is an informal discussion that is used to orient participants to plans, policies, or procedures that are new or updated. Seminars are used to train participants to new plans or changes to the old ones. Seminars are specific and
follow various training techniques including lecturing, open discussions, and media.

2. Workshop – Workshops are similar to seminars but it’s done to produce a particular end. Workshops are used by the emergency management committee to draft new plans or develop an exercise schedule.

3. Tabletop Exercise – The most commonly known of the discussion exercises, tabletop exercise are low impact exercises that is used to discuss and actuate verbally an event and the response to that event without actually performing the actual tasks related to the response. Participants discuss issues in depth and use current plans to resolve issues related to a response. Tabletop exercises are excellent to verbalize plans and ensure that the procedures fit what the exercise is trying to accomplish. The tabletop exercise goal is constructive problem solving within the parameter of a scenario.

4. Games – The game is a simulation of operations that uses rules, data, and procedures designed to depict an actual or potential real life situation. Games are used to examine the decision making process based on a response scenario. Participants make and review those decisions and examine the consequences of those decisions as well as how the scenario and list of events impacted those decisions.

The second type of exercise used is the operations based exercise. These exercises require the movement of personnel and materials to achieve the goals of the exercise. The following are the basic operations bases exercise and their definitions:

1. **Drill** – A drill is an exercise that can be used to test personnel training, response time, or any specific area of a plan. The purpose of a drill is to use repetition to instruct on a plan or procedure. Fire drills are a typical example of this where the inhabitants of a building are trained that when an alarm sounds, they evacuate the building. Drills can be used for testing communications, specific procedures, and notification among other areas.

2. **Functional Exercises** – Functional exercises test and evaluate the specific capabilities of an emergency response system within a particular function within the general system. Functional exercise can abbreviate long aspects of time by using controllers to describe the passage of time or the depiction of events that are not related to the primary objectives. Functional exercises may move some personnel and equipment but mostly players can inject while off site and verbalize certain tasks.

3. **Full Scale Exercises (FSE)** – Full Scale Exercises are exercises where equipment and personnel are moved and actuated in response to injects provided by either the scenario and allow for events to evolve based on real time. In full scale
exercises, the players actually do what they do when they are reacting to a particular prompt. There is no verbalization of events and every attempt is made to simulate an event as realistically as possible and evaluate the actual response.

1.3. Joint Commission and Health Resources and Services Administration Regulatory Requirements

The ability to maintain access to utilities is necessary to ensuring the ability of CHCs to perform and provide crucial services to the public and to participate and communicate with the Emergency Support Function 8 as described by the National Incident Management System (NIMS). This capability was ordered by Homeland Security Presidential Directive – 5 (HSPD-5) which states that all federally funded entities will participate in NIMS. To accomplish these objectives, this exercise will test the ability of this health center to respond to outages in utilities such as power and recover from such outages if deemed necessary.

Health Resources and Services Administration (HRSA), overseeing the Community Health Center program, requires community health centers to submit an Annual Emergency Preparedness Report (Form 10). In this report community health centers are asked about the frequency of their planned drills, with an emphasis on an annual drill.

Current Joint Commission regulations require the use of an exercise that tests the health center’s ability to activate part/all of their emergency plan, making a tabletop exercise unacceptable for compliance. This drill template will comply with existing requirements from Joint Commission and from the US Health Resources and Services Administration and will count toward completion of annual compliance requirements including the influx of patients and/or the management of patients within the health center.

---

1 Requirements from HRSA and Joint Commission as of June, 2011.
2. Part 2: General Information

2.1. Introduction to Bomb Threat/Found Device

2.1.1. Bomb Threat/Found Device Scenario Summary

The [_____________________________] Health Center is performing a [_____________________________] exercise that has been developed to examine the preparedness of the center by simulating a bomb threat that develops into a found device upon completion of a search. This exercise plan will test those capabilities that are related to the management of these threats. This exercise is designed to examine the emergency management plans related to this scenario and will be utilized to gain information regarding the functionality of the plans and the required knowledge of staff.

This Exercise Plan is modeled after the Homeland Security Exercise and Evaluation Program’s ExPlan and has been modified to better suit community health centers.

2.2. Purpose

This exercise will focus on key aspects of the emergency management plan with regards to the response of health center staff to the crisis, responder coordination, critical decisions, and the integration of health center assets to perform based on planning practices. This exercise is not an inspection and will be conducted in a no-fault atmosphere. This exercise should do the following with regards to this exercise:

1. Reveal planning weaknesses in the Emergency Management Plan and it standard operating procedures or to test or validate recently changed procedures.

2. Identify current capabilities to respond to a bomb threat and suspicious found device.

3. Improve the coordination between and among various response personnel.

4. Identify deficiencies and/or validate training on the critical elements of emergency response in accordance with the National Incident Management System (NIMS).

5. Increase the general awareness and understanding of the potential hazard.

2.3. Confidentiality

The Bomb is an unclassified exercise. Control of information is based more on public sensitivity regarding the nature of the exercise than on the actual exercise content. Some exercise material is intended for the exclusive use of exercise planners, controllers, and evaluators, but players may view other materials deemed necessary to their performance. This Exercise Plan may be viewed by all exercise participants, but the Controller and Evaluator (C/E) Handbook is a restricted document intended for controllers and evaluators only.
All exercise participants should use appropriate guidelines to ensure the proper control of information within their areas of expertise and protect this material in accordance with current Health Center’s directives.

2.4. Handling Instructions

1. This document should be safeguarded, handled, transmitted, and stored in accordance with health center directives. It should be released to individuals on a strict need to know basis. The contents of this plan may be provided to exercise players, administrative officials, observers, and evaluators.

2. Reproduction of this document, in whole or in part, without the approval of ___________________________ Health Center is strictly prohibited.

3. For information on this exercise, please contact the health center’s point of contact for this exercise:

<table>
<thead>
<tr>
<th>Name of Contact</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Email</td>
<td></td>
</tr>
<tr>
<td>Phone</td>
<td></td>
</tr>
</tbody>
</table>

2.5. Target Capabilities

Choosing which target capabilities to test influences what will be closely monitored and measured during the exercise. Exercise planners are encouraged to choose 2-5 capabilities for this exercise. Each capability can be accompanied by one or more activities, which will be used to specifically measure whether More on target capabilities can be found in Part 5: Planner Guidance.

Target Capabilities for The Bomb can be selected from the following list:

- Capability 1 - Onsite Incident Management
  - Activity 1 - Establish Incident Command Structure (ICS)
  - Activity 2 – Direct Incident Management
  - Activity 3 – Incident Action Plan Development

- Capability 2 – Citizen Protection – Evacuation and Shelter in Place
  - Activity 1 - Activate Evacuation and/or shelter in place
  - Activity 2 - Implement Evacuation Orders
  - Activity 3 - Collect and Evacuate Population
  - Activity 4 - Operate Evacuation Staging
  - Activity 5 - Manage Incoming Evacuees
  - Activity 6 - Implement In Place Protection Procedures

- Activity 7 - Assist Re-entry

- Capability 3 – Emergency Public Information and Warning
  - Activity 1 – Activate Emergency Public Information
  - Activity 2 – Manage Emergency Public Information
  - Activity 3 – Issue Public Information Alerts
  - Activity 4 – Demobilize Emergency Public Information and Warning

- Capability 4 – Emergency Public Safety and Security Response
  - Activity 1 - Activate Public Safety and Security Response
  - Activity 2 - Assess Incident Scene and Secure the Area
  - Activity 3 - Control Traffic, Crowd, and Scene

- Capability 5 – Information Gathering and Recognition of Indicators and Warnings
  - Activity 1 - Gather Information
  - Activity 2 - Identify suspicious circumstances
  - Activity 3 - Screen Information

- Capability 6 – Search and Rescue
  - Activity 1 - Activate Search and Rescue
  - Activity 2 - Provide Material Support
  - Activity 3 - Search

2.6. Exercise Goals and Objectives

The objectives for any exercise must be challenging yet achievable and should support a community health center’s overall mission and preparedness plan. Whether there is a single objective or several, they should be based on the following:

- An agency’s current stage of emergency Preparedness;
- Gaps, weaknesses, or areas of concern affecting the agency’s performance as identified through prior exercises;
- Level of staff knowledge and understanding of emergency preparedness roles and responsibilities;
- Applicability to emerging problems.

2.7. Selecting Exercise Goals and Objectives

The objective of this exercise is to test and examine the ability of this health center to respond to a Bomb Threat/Found Device that threatens the ability of the health center to operate and threatens the safety of patients and personnel. The threat may require the evacuation of the health center. Keep in mind that useful objectives are simple, measurable, actionable, realistic, and time-oriented (SMART). The list below contains sample objectives that can be tailored to fit the specifics of a community health
center’s emergency preparedness plan. More about writing SMART objectives can be found in Part 5: Planner Guidance. The following are objectives that can be readily selected and adapted for this exercise:

a. **Objective:** Activate the emergency management plan and Bomb Threat Protocol within X minutes;
   - **Evaluation Question:** Does the health center activate the emergency management plan appropriately?
   - **Evaluation Question:** Is the bomb threat protocol followed?

b. **Objective:** Communicate internally and externally during the threat and when a device is found;
   - **Evaluation Question:** Did the health center communicate appropriately with staff and police during the event?
   - **Evaluation Question:** Did the Public Information Officer effectively deal with the information and how it was relayed to the public?

c. **Objective:** Establish the Incident Command System (ICS) within X minutes;
   - **Evaluation Question:** Was ICS established?
   - **Evaluation Question:** Was ICS command transferred appropriately?

d. **Objective:** Use ICS to direct and manage an incident;
   - **Evaluation Question:** Was the Bomb threat protocol/found device protocol followed?
   - **Evaluation Question:** Was there a systematic search for devices?
   - **Evaluation Question:** Did the incident commander receive intelligence from search teams?
   - **Evaluation Question:** Were the incident commander’s orders followed appropriately by teams?

e. **Objective:** Order and perform an evacuation to an alternate facility or.;
   - **Evaluation Question:** Was the evacuation performed in a timely manner (< 10 minutes)?
   - **Evaluation Question:** Was the evacuation order timely (< 10 minutes)?

f. **Objective:** Order a shelter in place;
   - **Evaluation Question:** Was the shelter in place order appropriate?

g. **Objective:** Identify the device and guide police resources to that area;
   - **Evaluation Question:** Did the team remain to guide the police to the device?

h. **Objective:** Coordinate with outside organizations to manage the event.
   - **Evaluation Question:** Did the incident commander work with law enforcement in an orderly and timely manner to make critical decisions regarding the center and the surrounding area?
### 3. Part 3: Exercise Summary

#### 3.1. Exercise Details

**Exercise Name:** The Bomb

**Exercise Date:** mm/dd/yyyy

**Exercise Begin Time:** hh:mm – hh:mm

**Duration of Exercise:** X hours, Y minutes

**Location of Exercise:** SITE LOCATION

**Sponsor of Exercise:** [Insert site leadership name here]

#### 3.2. Scope of Play

##### 3.2.1. Exercise Timeline

<th>Exercise Planning Team</th>
<th>Draft After Action Report/Improvement Plan (AAR/IP)</th>
<th>After Action Conference</th>
</tr>
</thead>
</table>

**Planners note:** Prior to exercise commencement, a controller will need to surreptitiously place a duffle bag, backpack, box, or satchel somewhere in a common area in the health center to simulate a suspicious package. Because of the nature of this drill, it is important that this bag not be recognizable by any health center personnel so it isn’t disregarded as harmless during any upcoming searches.

On a typical weekday at [HH:MM], a call comes into the reception area of the health center. A man on the phone calls with an angry tone and states that he placed a bomb in the health center.

**Planners note:** This phone call will need to be made from SimCell (see Section 5: Planner Guidance for more information on SimCell). It is important that this simulated bomb threat begins with an announcement that this is an exercise.

Depending on the individual site’s bomb threat protocol, the recipient of the bomb threat should notify his/her supervisor immediately upon termination of the call or (if possible) during the call.

**Planners note:** Evaluators should note how long it takes to notify health center leadership of the incident.

Upon learning of the incident, health center leadership should activate the site’s emergency management plan and Incident Command Structure and orders someone to call the police to notify them of the situation.

**Planners note:** Evaluators should note how long it takes to activate ICS.

How long does it take to call the police?

**Important:** Unless the police are participating in the exercise or have otherwise been notified, make sure to simulate the call to the police.
If a search takes place, health center staff may find a package that is unidentifiable. Searchers may or may not recognize it as suspicious.

An actor portraying the police arrives and asks for the incident commander. After hearing a briefing, the actor determines that the bundle is suspicious and calls for an evacuation of the health center.

How long does a total evacuation of the health center take?

Is the Command Center relocated effectively and without confusion? Are staff members notified of where the relocated Command Center is?

Is the new Command Center appropriate to manage the incident? (Is the Incident Commander able to communicate with his staff, etc?)

Does management of the incident continue during the transition?

The bomb squad is called who take control of the incident and recover the device.

During the incident, a local TV station arrives and begins to ask questions of staff.

Weather the staff does or does not speak to the reporter (and what they say) should be recorded.

Does staff notify the Incident Commander of the reporter’s presence?

Does the Incident Commander direct the reporter to a Public Information Officer (PIO)?

Once the police determine that the package is benign, the police actor notifies the Incident Commander and the order can be given to re-occupy the building. Once the building is reoccupied, the exercise can be terminated and the hotwash can begin.

Does the re-occupation of the building happen in an organized and safe manner?

Is everyone aware that Incident Command is still in effect until a formal declaration of resumption of normal operations has occurred?

3.4. Scenario Timeline

For the purposes of this drill template, the drill will be assumed to begin at 4:00 PM. Times can and should be adjusted by the exercise planning team to suit health center needs.
<table>

4. Part 4: Player Guidelines

4.1. Participant Descriptions

4.1.1. Players

Players are agency personnel who have an active role in responding to the simulated emergency and perform their regular roles and responsibilities during the exercise. Players initiate actions that will respond to and mitigate the simulated emergency.

4.1.2. Actors

Actors are exercise participants who act or simulate specific roles during exercise play. They are typically volunteers who have been recruited to play the role of victims or other bystanders. In functional exercises (FEs), actors are generally limited to simulating the media since there is no field play associated with a FE. The simulated media role may also be filled by controllers and, if so, there will be no need for actors.

4.1.3. Exercise Director

The exercise director oversees all exercise functions during exercise conduct; oversees and remains in contact with controllers and evaluators; debriefs controllers and evaluators following the exercise; and oversees setup and cleanup of exercise and positioning of controllers and evaluators.

4.1.4. Senior Controller

The senior controller is responsible for the overall organization of the exercise. The senior controller monitors exercise progress and coordinates decisions regarding deviations or significant changes to the scenario caused by unexpected developments during play. The senior controller monitors actions by individual controllers and ensures they implement all designated and modified actions at the appropriate time. The senior controller debriefs controllers and evaluators after the exercise and oversees the setup and takedown of the exercise.

4.1.5. Controllers

Controllers set up and operate the exercise site and plan and manage exercise play. Controllers direct the pace of exercise play and routinely include members from the exercise planning team controllers also work with the Simulation Cell (SimCell) to control the flow of the exercise and explain or clarify issues arising during the exercise.

Controllers have limited decision-making authority in their respective areas. Any changes that impact the scenario or affect other areas of play must be coordinated through the Senior Controller. Controllers record events and ensure documentation is submitted for review and inclusion in the After-Action Report (AAR). All controllers are accountable to the Senior Controller.
4.1.6. Simulators

Simulators are control staff personnel who role-play as nonparticipating organizations or individuals. They most often operate out of the SimCell, but may occasionally have face-to-face contact with players. Simulators function semi-independently under the supervision of SimCell controllers, enacting roles (e.g., as media reporters or next of kin) in accordance with instructions. All simulators are ultimately accountable to the Exercise Director and Senior Controller.

4.1.7. Observers/Evaluators

Evaluators are chosen to evaluate and provide feedback on a designated functional area of the exercise. They are chosen based on their expertise in the functional area(s) they have been assigned to review during the exercise and their familiarity with local emergency response procedures. Evaluators assess and document participants’ performance against established emergency plans and exercise evaluation criteria, in accordance with HSEEP standards. They are typically chosen from amongst planning committee members or the agencies/organizations that are participating in the exercise.

Observers visit or view selected segments of the exercise. Observers do not play in the exercise, and do not perform any control or evaluation functions. Observers will view the exercise from a designated observation area and will be asked to remain within the observation area during the exercise. VIPs are a type of observer, but are frequently grouped separately. A dedicated group of exercise controllers should be assigned to manage these groups. Due to the space limitations posed by many EOCs, observers may be strictly limited or not permitted to view the exercise so they do not interfere with EOC operations and functions.

4.2. Participant Instructions

4.2.1. Before the Exercise

- Review the appropriate emergency plans, procedures, and exercise support documents.
- Be at the appropriate site at least 30 minutes before the start of the exercise. Wear appropriate uniform/identification badge.
- If you gain knowledge of the scenario before the exercise, notify a controller so that appropriate actions can be taken to ensure a valid evaluation.
- Sign in.

4.2.2. During the Exercise

- Respond to the exercise events and information as if the emergency were real, unless otherwise directed by an exercise controller.
• Controllers will only give you information they are specifically directed to disseminate. You are expected to obtain other necessary information through existing emergency information channels.

• Do not engage in personal conversations with controllers, evaluators, observers, or media personnel while the exercise is in progress. If you are asked an exercise-related question, give a short, concise answer. If you are busy and cannot immediately respond, indicate so, but report back with an answer at the earliest time possible.

• If you do not understand the scope of the exercise or if you are uncertain about an organization’s or agency’s participation in an exercise, ask a controller.

• Parts of the scenario may seem implausible. Recognize that the exercise has objectives to satisfy and may require the incorporation of unrealistic aspects. Note that every effort has been made by the trusted agents to balance realism with the creation of an effective learning and evaluation environment.

• All exercise communication will begin and end with the phrase “This is an exercise.” This is a precaution taken so anyone overhearing the conversation will not mistake the exercise play for a real-world emergency.

• When communicating with the SimCell, identify the organization, agency, office, and/or individual with which you want to speak.

• Maintain a log of your activities. Many times, this log may include documentation of activities missed by a controller or evaluator.

**4.2.3. Following the Exercise**

• At the end of the exercise, please participate in the Hotwash with the controllers and evaluators.

• Complete the Participant Feedback Form. This form allows you to comment candidly on emergency response activities and effectiveness of the exercise. Please provide the completed form to a controller or evaluator.

• Provide any notes or materials generated from the exercise to your controller or evaluator for review and inclusion in the AAR.

**4.3. Assumptions and Constraints**

The following general assumptions apply to the health center’s exercise:

• Exercise players will operate in accordance with existing plans, procedures, and practices.

• The exercise design objectives will be consistent with functional area operations and technical plans and procedures whenever possible, as long as safety, cost effectiveness, and discretion are not compromised.
• Surrogates may be playing in place of some key decision makers. Surrogates, in most instances, will be junior to the principles they represent. Thus the surrogates’ action during exercise play may not depict the same actions that might be taken by their respective principles.

• The health center’s exercise will be played in real time. Some events, however, may require time jumps or acceleration to meet exercise design objectives.

• Participants may need to balance exercise play with real world emergencies. It is understood that real world emergencies will take priority.

4.4. Implementation and Rules

• The Exercise Director will initiate exercise play by transmitting the START message via the Controller Communications Network.

• The decision to conclude the exercise will be determined by the Exercise Director and the Senior Controller based upon the completion of operations and attainment of the exercise objectives.

• Real-world emergency actions take priority over exercise actions.

• Exercise participants will comply with real-world response procedures, unless otherwise directed by control staff.

• All communications (written, radio, telephone, etc.) made during the exercise will begin and end with the phrase, “This is an exercise.”

• “Real Emergency” will be the designated phrase that indicates there is an emergency requiring immediate attention that may or may not stop exercise play.

• “Timeout” will be the designated phrase used by controllers to temporarily stop exercise play.

• Exercise players will comply with real-world response procedures unless otherwise directed by controllers. Player rules of conduct are outlined in the Explan.

• Exercise players placing telephone calls or initiating radio communication with the SimCell must identify the organization, agency, office, or individual with whom they wish to speak.

4.5. Exercise Identification

Identification hats and badges should be issued to exercise staff. All exercise personnel and observers will be identified by agency uniforms or identification hats/badges distributed by the exercise staff. The chart below describes identification items.

4.6. Safety Requirements
4.7. Communications

4.7.1. Exercise Start, Suspension, and Termination

The Bomb will be conducted on [Date], beginning at [Time]. Exercise play is scheduled for [Exercise Duration] or until the Exercise Director and Senior Controller determine that the exercise objectives have been met. The Exercise Director will announce the start of the exercise. The Exercise Director will announce any exercise suspension or termination and will instruct participants to stop in place safely.

If an actual emergency occurs, the exercise may be suspended or terminated at the discretion of the Exercise Director, depending on the nature of the incident. The designated emergency phrase in case of a medical emergency is “Real Emergency.” The Exercise Director will announce restart of the exercise.

4.7.2. Player Communications

Players will use [means of communication, i.e. radio (channels), telephone] for responding to all injects. All communications must begin and terminate with the SimCell. No player communications are to be sent to agencies outside of the EOC or SimCell. The only exception will be to obtain technical information and guidance in response to an inject that has been received. A controller must directly oversee any communications of this type to ensure the player clearly explains to the agency/individual they are contacting that this request is for exercise use only and is not an actual incident. *In no instance will exercise communication interfere with real-world communications.*

4.7.3. Controller Communications

The principal method of communications for controllers during the exercise will be [means of communication, i.e. radio (channels), telephone]. A list of key telephone numbers is available below and will be available as a Communication Directory before the start of the exercise. Controller communications will link control personnel and will remain separate from the player communications.

**Section 4: Conclusion**  

23  

[Protective Marking]  

[ Jurisdiction ]
5. Part 5: Planner Guidance

5.1. Planning Considerations

Exercises should focus on key aspects of the emergency management plan with regards to the response of health center staff to the crisis, responder coordination, critical decisions, and the integration of health center assets to perform based on planning practices. An exercise is not an inspection and should be conducted in a no-fault atmosphere. This exercise should do the following with regards to this exercise:

- Reveal planning/training weaknesses in the Emergency Management Plan and standard operating procedures or to test or validate recently changed procedures.
- Identify current capabilities to respond to a bomb threat/suspicious package scenario.
- Improve the coordination between and among various response personnel.
- Validate training on the critical elements of emergency response in accordance with the National Incident Management System (NIMS).
- Increase the general awareness and understanding of the potential hazard.

5.2. Prior to the Planning Conference: Select a hazard and build an Exercise Planning Team

Prior to assembling the Exercise Planning Team for the Planning Conference, the health center’s Emergency Preparedness Committee should review the health center’s Hazard Vulnerability Analysis (HVA). A thorough review of the HVA should identify those hazards that the health center should prepare for and mitigate against. It is these hazards and their respective challenges that the health center can focus on to most efficiently utilize their time and resources. Review of a community health center HVA should occur yearly and can serve as the start of the health center’s annual preparedness cycle. Selection of a hazard to conduct an exercise around begins the exercise planning process and, once the hazard is identified, the Emergency Preparedness Committee can select an Exercise Director and Exercise Planning Team.

The selection of a hazard scenario for an exercise should be considered carefully based upon the findings of the HVA and the time and resources available for an exercise. Often, more serious hazards require more planning energy and it would be best for the health center to balance the needs of the emergency preparedness program with the realities of how much time and resources can be dedicated to exercise planning and execution. It takes much longer to plan an exercise for a catastrophic event such as a tsunami than it does to plan for a power outage, for example.
This template drill exercise plan is designed to assist a health center in their preparation for a bomb threat/suspicious package scenario and some of the challenges that come along with such a situation. For sites that don’t identify this hazard as a top planning priority, this ExPlan template can be altered to coincide with another hazard that would require the testing of similar target capabilities and objectives such as: communicating sensitive information internally; effectively communicating with the media; evacuation; sheltering in place; incident management; or search.

5.3. Planning Conference

The Planning Conference, taking place well before the date of the drill, can be thought of as the official beginning of drill activities. At this meeting the Exercise Director, together with the Exercise Planning Team, will review the hazard selected by the Emergency Preparedness Committee for an exercise and will select the target capabilities and objectives that the exercise will seek to test. A manageable exercise conducted by a community health center can have a modest number of objectives, each accompanied by 2-5 activities that-when completed-demonstrate the ability to carry out a target capability.

5.4. Target Capabilities and the Target Capability List (TCL)

The National Planning Scenarios (NPS) and the establishment of the National Preparedness Priorities have steered the focus of homeland security toward a capabilities-based planning approach. Capabilities-based planning focuses on planning under uncertainty, since the next danger or disaster can never be forecast with complete accuracy. Therefore, capabilities-based planning takes an all-hazards approach to planning and preparation which builds capabilities that can be applied to a wide variety of incidents. States and Urban Areas use capabilities-based planning to identify a baseline assessment of their homeland security efforts by comparing their current capabilities against the Target Capabilities List (TCL) and the critical tasks of the Universal Task List (UTL). This approach identifies gaps in current capabilities and focuses efforts on identifying and developing priority capabilities and tasks for the jurisdiction.

To put it simply, target capabilities are those things that an organization would like to show that it is capable of accomplishing in an emergency. Target capabilities are broad in definition and scope, e.g. “communication”, or “onsite incident management”. To review target capabilities identified by the Department of Homeland Security, reference the TCL on the Responder Knowledge Base at https://www.rkb.us/hspd8.cfm.

5.5. SMART Objectives

Where target capabilities are broad and vague, objectives are more narrowly focused. The completion of objectives by measureable outcomes is what demonstrates an organization’s capabilities. Identifying 3-5 SMART objectives can go a long way in ensuring that the time spent by the community health center on emergency preparedness exercises is not wasted. Good objectives should be:
Bad objectives can lead to confusion over whether the objective was met, which distorts the results of the exercise. “Communicate the existence of a bomb threat” may seem like a good objective at first glance, but to whom are we communicating the existence bomb threat? The police? The insurance company? A more (M)easurable and (T)ime-oriented objective might read as follows: “Communicate the existence of a bomb threat to building security within 2 minutes of receipt and to the police within 5 minutes.” This is something that can be measured and leaves little room for interpretation on whether or not it was achieved.

5.6. Tasks and Activities

Actions and tasks, when added together, accomplish what is required to meet the objectives identified in the ExPlan. While objectives are more narrowly focused than target capabilities, tasks and activities are even more specific. For the objective mentioned above, two associated tasks could be, “use the phrase ‘code orange, extension 227’ over the PA system”, and “report the bomb threat to the police by dialing 911.” The first of these activities would notify building security that there has been a bomb threat and that they can call extension 227 to speak with someone who can provide more details. The second would notify the police.

Together, if carried out on time, these two activities would accomplish the objective, “Communicate the existence of a bomb threat to building security within 2 minutes of receipt and to the police within 5 minutes.” If this happens successfully, then we can say that we have demonstrated the ability to carry out a communications target capability. If instead, the receptionist who answers the phone goes looking for the emergency management manual to find out what to do; we have found an opportunity for training.

5.7. Using SimCell for Injects

Simulation Cell, or SimCell, is a place where exercise controllers generate, coordinate, and deliver injects to the players of an exercise. These controllers also receive player responses to non-participating organizations or individuals. Controllers in SimCell are not actively playing in the exercise, but their participation can help move the action along in the exercise scenario and the responses they receive can be used to evaluate objective completion by the players.

If using a SimCell for an exercise, planners should make sure that controllers are fully briefed on how to play their part in the exercise.

5.8. Exercise Briefing
Taking place shortly—often a day or so—before an exercise, the exercise briefing is the exercise planning team’s last chance to review exercise specifics or safety instructions. It is ALWAYS a good idea to remind exercise participants of any necessary safety precautions prior to an exercise.

5.9. Hotwash

Immediately following the completion of exercise play, the Senior Controller will facilitate a hotwash with players in the EOC. This meeting is primarily geared toward participants and their supervisors. The hotwash is an opportunity for players to voice their opinions on the exercise and their own performance while the events are still fresh in their minds. At this time, evaluators can also seek clarification on certain actions and what prompted players to take them. All participants may attend, however observers are not encouraged to attend this meeting. The hotwash should not last more that 30 minutes. Evaluators should take notes during the hotwash and include these observations in their analysis.

5.10. Exercise Debrief

This is a forum for planners, facilitators, controllers, and evaluators to review and provide feedback after the exercise is held. It should be a facilitated discussion that allows each person an opportunity to provide an overview of the functional area they observed and document both strengths and areas for improvement. Debriefs should be facilitated by the exercise planning team leader or the exercise program manager; results should be captured for inclusion in the After Action Report/Improvement Plan (AAR/IP).

The Exercise Debrief is a great time to establish which objectives was met and which were not (and for what reasons). Identifying strengths and weaknesses at the Exercise Debrief will directly inform the AAR/IP and will make the drafting of that document easier.

5.11. Drafting the After Action Report/Improvement Plan

It is no exaggeration to say that the AAR/IP is sought-after product of an emergency exercise. The AAR/IP has two components: an AAR, which captures observations of an exercise and makes recommendations for post-exercise improvements; and an IP, which identifies specific corrective actions, assigns them to responsible parties, and establishes targets for their completion.

5.12. After Action Conference

As soon as possible after completion of the draft (AAR), the exercise director and other members of the exercise planning team should conduct an After Action Conference to present, discuss, and refine the draft AAR, and to develop an Improvement Plan (IP).
This conference is a chance to present the AAR to participating organizations in order to hear suggestions and make changes. The final AAR/IP is an outcome of the After Action Conference and should be disseminated to participants within 60 days of exercise completion.
