Data Notes

1. Specimens were analyzed per wet-weight (ww). Skin was left on, and whole filets cut from whole fish include the belly flap.
2. For detailed data collection and laboratory methods, refer to scientific publication:  
McKelvey W, Chang M, Arnason J, Jeffery N, Kricheff J, Kass D, 2010. Mercury and Polychlorinated Biphenyls in Asian Market Fish: A Response to Results from Mercury Biomonitoring in New York City. Environ. Res.
3. Limits of detection (LOD): Total Hg: 0.004 µg/g; see published manuscript for practical quantitation limits (PQL) for individual PCB congeners.
4. Scientific Names are given whenever a whole specimen was available for observation. Eel specimens are likely to be *Anguilla japonica*; dace is likely to be *Cirrhinus molitorella*
5. Crab composites were formed from three individual specimens.

Note: If you wish to obtain this data in another format, please call (646 ) 632-6404
