

Are Your Window Guards Installed Safely?

WINDOW GUARDS ARE INSTALLED . . .

... permanently, in the lower half of the outside track of a double-hung window, 4½ inches or less above the window sill

... with 4 one-way screws and 2 “L” brackets (stops).

Stops must be screwed into each side of the upper window track (with one-way screws).

When the lower window is stopped from being raised more than 4½ inches above the top bar of the guard, your child *cannot* fall out.

By law your landlord or management is required to install window guards. If you have a child, or request window guards for any reason, they must be installed properly.
