

CHAPTER 4.H

HAZARDOUS MATERIALS

For the proposed *Mosquito Population Control Program in the Rockaways*, all adulticides would be transported, stored, and disposed of; and any spills of such materials would be cleaned up, following the procedures described in Chapter 3.H, “Hazardous Materials.” Handling of adulticides in accordance with these procedures will minimize the potential for any accidental release. If any spills occur, NYCDEP and NYCDOH would monitor the cleanup to confirm that the specified procedures are followed to protect workers and to prevent any impacts to nearby residents. Post-cleanup sampling would be performed to ensure that affected surfaces have been properly cleaned and that any contaminated soil has been removed.
