Jul 24, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Anna Tolwiska

Subject: Opposition Comment: Size of sugary drinks
Date: Friday, June 29, 2012 9:59:37 PM

Dear Dr. Farley,

I strongly oppose Mayor Bloomberg's ban on sugary beverages over 16 ounces. The ability for the Mayor to support some instances of Choice (which I agree with wholeheartedly) while banning private businesses from offering this choice to consumers is hypocritical at best. At worst, it's an extreme violation of my ability to be a free capitalist consumer with the free will to make the choices I deem fit for my body.

My life, my choice. Their businesses, their choice. Shame on Mayor Bloomberg and shame on New York City.

As a New York City resident, I am writing you today to ask that you please reject the proposed ban on the sale of fountain and bottled beverages over 16 ounces.

Restricting the sale of certain beverage sizes in New York City hurts our restaurants, theaters, sports venues, coffee shops, food trucks, street carts, and all those who are dependent on beverage sales for their livelihoods.

Furthermore, I believe it should be up to me, and not my government, to choose my serving sizes for me. The answer to curbing obesity is diet, exercise, and a healthy lifestyle, not restrictions on soft drinks, juice drinks, sports drinks, and teas.

On behalf of New Yorkers like me, please reject the proposed ban on the sale of beverages over 16 ounces in New York City.

Sincerely,

Amanda Malko

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. David Olichwier

While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Nicole Eppstein

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

I'm sure you are well aware of the reasons to support Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. But I want to add my personal story as an example of the importance. A year ago, I eliminated soda from my diet and I have since lost 30 pounds. I'm hoping to set a better example for my daughter whose Body Mass Index is rising rapidly. She craves sugar, fat, salt, and white flour. She sees the sizes of sodas available and becomes angry with me if I tell her she can't have anything larger than a medium. Limiting her to a little bit of junk food once in a while is a major task. I think we would all benefit from limiting the serving sizes of foods and beverages with little or no nutritional value.

I hope the Board will vote in support of the Mayor's proposal to limit serving sizes.

Sincerely,

Ms. Marilyn Derby

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Richard Luke

Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Deborah St Julien

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Katherine Jones

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Ruth Frobe

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dr. Denise Krch

Dear Members of the Board of Health: Board of Health,

Dear Members of the Board of Health :

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. 2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. S Nam

The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Erin Young

Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Brianna Frachtman

Dear Members of the Board of Health: Board of Health,

As a Registered Dietitian and someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

This action won't solve the problem, but it is a step in the right direction -- getting people more aware of correct portion sizes.

Sincerely,

Mrs. Patricia McKnight, MS,RD,LD

Dear Members of the Board of Health: Board of Health,

As you know, obesity has become a public health problem, so I support Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction. I'm hoping it will foster other areas of the nation (like here in Hawaii) to institute similar proposals.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Jana Ochs

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As Executive Director of a non-profit, RootDown LA, that gets kids in South Central Los Angeles reconnected to REAL, fresh foods, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks.

We are facing an epidemic in South Los Angeles, with 1 in 2 children born now likely to develop diabetes in their lifetime. If the community values around healthy food were reinforced by policies that limited the gross promotion of unhealthy foods, such as sweetened beverages, we would stand a fighting chance to keep our kids healthy.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Megan E. Hanson

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Anything that makes people think before they overdo food or drink is a good step to take - and I don't think that makes our government the sugar police. It is just a small way to combat the excess and greed of corporations.

Sincerely,

Mrs. Sandra B Hoover

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks is right on the money. Serving sizes have gotten out of control and our nation's health is suffering as a consequence. Something has to be done, and the Mayor decided to do it. I hope every other mayor in the nation takes notice and follows suit.

The Mayor's proposal won't solve our obesity problem by itself, nor should we expect it to. When we eliminated smoking on airplanes it didn't solve the entire tobacco problem, but it was still a good thing to do. It helped, and so will this.

Sugary drinks are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. We all call it junk food for a reason.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

The debate that has ensued in the wake of Mayor Bloomberg's proposal has been good for public health because it's elevated the problem of sugary drinks. Do the right thing and make New York a national leader on health. New Yorkers' health will benefit, and so will the rest of the country as other jurisdictions follow your lead.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dr. Lori Dorfman

More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. richard collins

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Christina Cherry

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Tuesday, June 26, 2012 1:24:08 PM

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Khadija Fouad

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Doreen Reyes

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Tuesday, June 26, 2012 1:24:10 PM

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Rebekka Lee

Dear Members of the Board of Health: Board of Health,

I'm an engineer living with my family of four in the Rochester, NY, area. We value our health and work to instill good eating habits in our children. But this is sometimes a difficult task when unhealthy food is mostly what's readily available.

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

I really support Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. His ideas and leadership on the soda thing gives a good model for other jurisdictions to follow. Obesity has become commonplace throughout America, mirroring the growth of soda serving sizes for five decades.

Scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to obesity. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

I strongly support the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Alexander Green

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. dorothy cincotta

One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Len Bilous

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

I recently wrote about the Mayor's drink proposal (<http://quipstravailsandbraisedoxtails.blogspot.com/2012/06/policy-point-wednesday-word-about-soda.html>)

In short, I believe this proposal is under fire not because it is a bad proposal, but because of the way it was presented.

Soft drink marketers have been steadily increasing the serving size of their drinks over time, knowing full well that they are backed by science: studies support the assertion that people will eat or drink as much as they are served; if larger servings are offered, people will consume more than they would of a smaller serving - even if they don't finish.

Individuals do not have the benefit of billions of dollars of marketing studies to see that soft drink companies are manipulating them. By simply presenting the idea that 44 ounces is a single serving instead of 8, they are ensuring an exponential increase in consumption of their products. Never mind that this serving contains about 2/3 of a cup of sugar, and in no way supports the "all things in moderation" platitude presented by soda marketers.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response. Furthermore, I would suggest that you present your response to the proposal as a limit on MARKETING, on taking advantage of the credulity of individuals who don't have billions of dollars to spend educating themselves on behavioral science, and not on consumers. Science is behind you.

Sincerely,

Mrs. Michele Hays

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Kenneth March

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Aimee Wyatt

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, June 27, 2012 12:03:51 PM

Jun 27, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Hugh Talman

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. cheryl whittaker

Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Carolyn Price

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

Dear Members of the Board of Health: Board of Health,

I do not support Mayor Bloomberg's Sugary Drink Proposal. There are far greater and much more alarming problems plaguing NYC and it's residents than the 'soft drink' dilemma. This is pure political pandering.

Sincerely,

Mrs. Kaye Surman

Dear Members of the Board of Health: Board of Health,

As a nutritionist and wellness educator I am very concerned about the obesity epidemic and health care costs in this country. I support of Mayor Bloomberg's proposal to limit restaurant serving sizes of soda and other sugary drinks.

More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction because it will help people pay more attention to the amount of sugar drinks they are consuming.

Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars.

Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dr. MF Kite

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Janice Feinglass

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, June 27, 2012 3:34:18 PM

Jun 27, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Michele Nihipali

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Sara Cyr

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Andrea Dierna

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. D Blood

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, June 27, 2012 7:03:56 PM

Jun 27, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Michelle Ulrich

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, June 27, 2012 7:34:29 PM

Jun 27, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. V. Alexander

Dear Members of the Board of Health: Board of Health,

I'll keep this short, as I'm sure you are very busy.

As a Dietitian in today's unhealthy environment, I have been exposed to more sad stories than you can believe. Children and adults across our country are suffering in an obesogenic society. We unfortunately have people growing up without much knowledge about nutrition and being surrounded with endless factors playing against their health. Parents today don't realize the new unhealthy factors which degrade the health of their children and advertisers are promoting all the wrong messages regarding food to their consumers.

Just the other day I spoke with a young teen girl who is already morbidly obese at 17 and has diabetes with complications. Neither her nor her other family members (all of which are also diabetic) have money for treatments and she knows little to no information regarding what to do about her situation.

I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks because I feel there is a shortage of healthy strategies for the public. Obesity, Diabetes and Cardiovascular disease will destroy our country. There is no doubt that sugary drinks play a large role in these problems. Once we emphasize this, educate the public and initiate changes like that of mayor Bloomberg's we can begin to make promising investments in our future society's health.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Dylan Jones

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Lynn Krupa

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, June 27, 2012 11:04:25 PM

Jun 27, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar (poison)! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar(poison)!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Michael Granger

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Thursday, June 28, 2012 1:34:33 AM

Jun 28, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Jun 28, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. jonathan iovino

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. Recently, I attended the Experimental Biology conference and found that the major caloric component in many young children's diets is soda and similar beverages. This contributes to health problems later in life and also is low in any actual nutritional value, important for development. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Thursday, June 28, 2012 11:06:06 AM

Jun 28, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Julie Hoest Abramoff RN,BSN

Dear Members of the Board of Health: Board of Health,

I'm depressed - - and somewhat angered - - by the hordes of overweight people I see lumbering around everywhere throughout the country.

These folks are either unaware or incapable of the discipline required to stay healthy, so it's becoming more apparent that some form of outside control should be applied that will help them lose weight. Short of dictatorial edicts which compel people to follow prescribed diets, I believe that Mayor Bloomberg's proposal is a sensible alternative. Not only will it help those overweight people themselves, but it will benefit society overall by reducing the healthcare costs which we all ultimately share.

Sincerely,
Joel Carp

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Miss Carla Marie Formisano

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Andrew Lynch

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Linda Pagnano

Jun 28, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Tracy Stone

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Friday, June 29, 2012 12:07:58 PM

Jun 29, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

I totally support Mayor Bloomberg's COURAGE to address this issue. Portion sizes of sugary beverages have multiplied continually since I became a registered dietitian over 35 years ago. When i show my students a "juice" glass from my grandmother's closet, they think it's a "shot glass!!!" They do NOT recognize this as a "serving"

I have witnessed the exploding growth of obesity with childhood obesity the most worrisome public health problem our country has ever faced. My husband is a pediatrician and he witnesses the lack of awareness for appropriate portions and the excessive marketing of soda, sports drinks, energy drinks and fruit drinks to our young adults who will be plagued with health problems for years to come if we don't do something to combat market forces.

The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades and is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As a Registered Dietitian, I recognize that sugary beverages are directly linked to obesity. They are ubiquitously available and cheap, which only promotes their consumption. I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Can we really afford to NOT put a cap on sugary beverages? Of course, the best solution is to stop subsidizing cheap sugar sources that make sweetened beverages highly available. But until this happens, restricting soda is an easy solution.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Thank you.

Sincerely,

Mrs. Frances Arnold

The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dr. L. Edward Clemens

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. JoAnn Cooper

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Jun 30, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the rising cost of health care, much of which can be attributed to the current obesity epidemic, I support Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks.

Overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. And all Americans are paying the price. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines.

Of course, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, we must do something.

Therefore, I urge the Board of Health to vote in support of the Mayor's proposal to limit serving sizes.

Thank you.

Sincerely,

Mr. Wallace Elton

Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Elizabeth Vaughan

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Saturday, June 30, 2012 11:41:26 PM

Jun 30, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. HANNAH FREED

Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Stephen Miller

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Sunday, July 01, 2012 4:43:00 PM

Jul 1, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Lisandra Piña

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Heather Fiore, MS Ed, RD, CDE, CDN

Dear Members of the Board of Health: Board of Health,

I am writing in support of Mayor Bloomberg's limit on soda sizes.

I'm an American who was overweight my entire childhood. I drank two bottles of Mountain Dew nearly every day and, try as I might, I couldn't shake the habit.

When I was 25, I moved to Denmark to study. Almost immediately, I started losing weight. My genetics and my willpower didn't magically change overnight. What changed was my environment.

In Denmark, the largest size soda available was 20 ounces, and it cost \$4. Additionally, I started biking to university every day, since I didn't have a car and the city where I was living had generous bike lanes.

Over four years, I lost nearly 30% of my body weight and have kept it off ever since.

Beyond my personal experience, studies have shown that the only effective interventions in obesity are environmental. the NY Board of Health's plan to limit soda sizes affects the food environment in a way that does not limit freedom, but simply incentivizes the healthy choice. I sincerely hope the idea spreads to the rest of the United States.

Sincerely,

Mr. Mike Baab

More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Donna Weidler

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dr. Shilpa Bhupathiraju

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Tuesday, July 03, 2012 3:51:50 PM

Jul 3, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. John Gallo

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Julia Stevenson

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Nour Hussein

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Sunday, July 08, 2012 7:32:31 PM

Jul 8, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Karen Kemby

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Wednesday, July 11, 2012 11:48:35 PM

Jul 11, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Miss Alice Fasnacht

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As a former New Yorker and someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction. New York City has been a leader in promoting responsible health in areas of calorie knowledge and trans-fats and the actions taken in the city have had impact throughout the US. I have seen the decisions taken in New York City have an impact in my own community. This is the reason I feel compelled to try and impact the decisions made in a city I no longer live, although I do visit.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to many Americans diets, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in

all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Melissa Schwandt

The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mr. Eddie Espinla

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Monday, July 16, 2012 12:28:36 PM

Jul 16, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Claire Guggenheim

Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. jill schisano

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. carla caccia

Date: Tuesday, June 26, 2012 1:53:03 PM

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Courtney Braccio

The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Kelsey Cooper

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's progressive and forward-thinking proposal to limit serving sizes and I look forward to your response.

They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Lori Hinnenkamp

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Tuesday, June 26, 2012 1:53:06 PM

Jun 26, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Dear Members of the Board of Health: Board of Health,

I don't think many AMericans are lucky enough to have role models that teach them nutrition. While many say this takes away personal freedom, it does not. This will help model normal sizes in restaurants, as children grow up. Right now, they think normal is 32 ounces. ANYone wanting persona freedom is free to order more or go buy a two-liter at a store. I think this movement is like thinking about advertising for cigarettes. Public policy needs to do the right thing for childen.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Lisa Jones

Dear Members of the Board of Health: Board of Health,

Dear Mayor Bloomberg,
Please cease your ridiculous over-reaching ban on sugary drinks and let citizens and business owners decide what to buy and sell. There are far more pressing issues in our nation and this is silly, ludicrous, and waste of taxpayers money.

Thank you,
Colleen Linn

Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

Finally, the huge sizes are just a way for a fast food or convenience store to make a quick buck. When I buy an unsweet tea, the smallest size I can buy is almost \$2.00. There is no "small" drink,

which may add 30 percent to the cost of a meal.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Ms. Cherie Dennis

Dear Members of the Board of Health: Board of Health,

I live in Charlotte, North Carolina and would not feel any effect by this proposal passing. However, I believe that New York is a leader in the US. The people of the United States need help in starting this revolution to be obesity. If New York can pass this bill, any state can. Please please read below and take a moment to consider what is at stake here. Jamie Oliver's food revolution is so important to the future of our planet and species.

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. Jul 24, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Amy Nielsen

Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.

Numerous scientific studies have demonstrated that sugary drinks, both carbonated and non-carbonated, are a major contributor to the obesity epidemic. Sugary drinks are the only food or beverage source that has been directly linked to obesity. They are the single largest contributor of calories to the American diet, as well as a leading source of added sugars. One study found that each extra soft drink consumed per day was associated with a 60-percent increased risk of overweight in children. Countless studies document that excess weight is a prime risk factor for type-2 diabetes, heart attacks, strokes, cancer, sleep apnea, and many other problems. Frequent consumption of soft drinks also contributes to osteoporosis, tooth decay, and dental erosion.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

I support all of Mayor Bloomberg's efforts to have a healthier city. This will save us all health dollars. In the meantime, I would like to see more sugar-free lemonade in soda dispensers. Some places have it. Others don't. And I would like to see a ban on plastic bags, too.

Sincerely,

Ms. Marilyn Machlowitz

Dear Members of the Board of Health: Board of Health,

I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. It is a step in the right direction.

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Obesity and diabetes are directly linked, and the cost of care for diabetics is enormous.

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes.

Sincerely,

Mrs. Laura Ricci

Once consumed in relatively small quantities, usually as a treat, sugary drinks now come in gargantuan proportions, available almost everywhere. Container sizes have grossly expanded over the past 50 years, and today's new standard, the 20-ounce bottle of Coke, contains 16 teaspoons of sugar! The 7-Eleven chain of convenience stores even offers a 64-ounce Double Gulp - which contains more than 50 teaspoons of sugar!

Restoring an understanding among consumers of more reasonable serving sizes - even a 16-ounce maximum as the Mayor has proposed is very generous by historical standards - will help cut down on some soda consumption and slow the expansion of New Yorkers' waistlines. Unfortunately, no measure would be perfect or fully effective, and consumers will still be able to buy as much soda as they want. But, in all likelihood, many of them will be as satisfied with smaller amounts instead of the huge tubs of sugary beverages they consume today.

I strongly encourage the Board of Health to vote in support of the Mayor's proposal to limit serving sizes and I look forward to your response.

Sincerely,

Mrs. Loretta Paulson

Subject: Support Mayor Bloomberg's Sugary Drink Proposal
Date: Tuesday, July 24, 2012 1:17:18 PM

Jul 24, 2012

New York City Department of Health and Mental Hygiene Board of Health
2 Gotham Center, 14 th Floor, Room 14-15, Box 31
Long Island City, NY 11101-4132

Dear Members of the Board of Health: Board of Health,

As someone very concerned about the obesity epidemic and health care costs in this country, I am writing in support of Mayor Bloomberg's proposal to limit serving sizes of soda and other sugary drinks. The Mayor's leadership on the soda issue provides a good model for other jurisdictions to follow, because overweight and obesity have become commonplace throughout America, mirroring the growth of soda serving sizes over the past five decades. More than two-thirds of adults and one in three children are overweight or obese in this country. While Mayor Bloomberg's proposal may not alone solve our obesity problem, it is a step in the right direction.
