Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

barry brewer  
St Augustine, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Roberta Northcutt  
Modesto, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Thomas Hernandez  
Corona, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jennifer Murray  
Cudahy, Wisconsin

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rebecca Zullo  
Milford, Delaware

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jennifer Blaine  
Philadelphia, Pennsylvania

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Vanessa Gonzalez-Green  
Towson, Maryland

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

elsena.huti  
Staten Island, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Robert Nelson  
St. Petersburg, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rocio Maya  
Los Angeles, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Frederick Sapp  
SOUTH GATE, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sebastian Alvarez  
Raleigh, North Carolina

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jane Martin  
East Hampton, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Nancy Wittenberg  
chandler, Arizona

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Katrina Strikis  
Newton, Massachusetts

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Pamela McDermott  
Colorado Springs, Colorado

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Darryl Reichbart  
Delray Beach, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Andrew Gentile  
San Francisco, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Bob Engel  
Graton, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Inez Allan  
Redmond, Washington

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Doris Montagna  
Rye Brook, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Thomas Sandman  
Leominster, Massachusetts

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Nicole Catalina  
Wilmington, Delaware

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

katherine najera  
las vegas, Nevada

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joseph Miller  
Phoenix, Arizona

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Katrina Peters  
Mandeville, Louisiana

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jay Finkelstein  
Grayville, Illinois

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Michelle McDowall  
Eugene, Oregon

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sarah Dzikowicz  
Amsterdam, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Joanne Altman  
Boynton Beach, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Shaydron AllenPorter  
AUGUSTA, Georgia

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Diane M. Calkins

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Linda Tangeman  
Myrtle Beach, South Carolina

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Dana Bryan  
Saugerties, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cody Masek  
Temecula, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

adrienne barringer  
saratoga, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Amy Rhodes  
Louisville, Kentucky

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Suzanne Trueblood  
Wilmington, Delaware

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Laurie Coger, DVM  
Albany, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Roger Corpolongo  
Detroit, Michigan

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Holly Groelle  
Duxbury, Massachusetts

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

John Miller  
Laguna Beach, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Francisco Espinoza  
Rockport, Texas

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Claire Muller  
Mansfield, Texas

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Shawn Gannon  
Cincinnati, Ohio

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Shane O'Bryan  
Louisville, Kentucky

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

brealyn sellers  
New York, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Paula Stice  
Phoenix, Arizona

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

judy orloff

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

jamie neuberg

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Emily Sherman  
Paradise, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Steve Pomar  
Las Vegas, Nevada

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kristin Cole  
Boone, North Carolina

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

maryann sonnett  
wilmington, North Carolina

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Victoria Scott  
1335 Broad Street  
Syracuse, NY 13224

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

doo warambool  
San Diego, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

gwendolyn jones  
captain cook, Hawaii

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jessica goitia  
Sacramento, California
