Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Mindy Holmes  
Philadelphia, Pennsylvania

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kayla Ertl  
Griswold, Connecticut

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Erich, Joan, and Paul Ruger  
Malta, New York

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Hallie Zwibel

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Julius Perry  
White Plains, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Chris Green  
Sarasota, Florida

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sara Dash  
Newton, Massachusetts

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Oriana Valdes  
Las Vegas, New Mexico

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kirk Ludden  
Seattle, Washington

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Paul Peana  
Hollywood, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Deb holt  
Stacy, Minnesota

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Polly Collins  
Reno, Nevada

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Deisy Villegas  
Ripon, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Eden Kawthar  
Irving, Texas

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Deborah Kelly  
Findlay, Ohio

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Mike Merlesena

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

erik Donner  
manhattan, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

LISA Bailes  
timonium, Maryland

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Amy Zink  
Oakland, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Mari Jackson  
Jacksonville, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Robin Sowell  
Lawrenceville, Georgia

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Martha Teklu  
Inglewood, CA 90305, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Laura Eklund  
Puyallup, Washington

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sherry Fosland  
Savage, Minnesota

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

William Alvarado  
Toa Baja, Puerto Rico

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Regina Enos  
Brockton, Massachusetts

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Barbara Feldman  
9805851, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

CHRIS LANGFORD  
KERNERSVILLE, North Carolina

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

melissa doyle  
New York, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Soohyen Park  
Brooklyn, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

judith tanner  
westfield, North Carolina

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Marta Johnson  
Chicago, Illinois

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Erin Koepf

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Melissa Canaday  
New York, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Amber Vance  
Raleigh, North Carolina

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kathy Burke  
Arden, North Carolina

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kimberly Hart  
Advance, North Carolina

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

H Davidson  
Westbury, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kenneth Beamer  
Ames, Iowa

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Melissa Layson  
San Francisco, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

candy patterson  
Rockford, Illinois

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kate Ravenstein  
Sahuarita, Arizona

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Ronald Gehrman  
Astoria, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jean Bauer  
tacoma, Washington

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Laurie Volkmann  
San Anselmo, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Barbra Davidson  
Sterling Heights, Michigan

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Christina Whiting  
Los Angeles, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Linda Taylor  
Saginaw, Michigan

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Larry Snider  
Cheektowaga, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Todd Loveless  
Middletown, Maryland

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

pamela banks  
bronx, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Ruth Thompson  
Columbus, Ohio

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Marcie Wahba  
Toledo, Ohio

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

leslie earle  
roslindale, Massachusetts

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

evelyne aflalo  
stevenson ranch, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Natalie Davidson  
black hawk, Colorado

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Mary Underwood  
Steubenville, Ohio

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Franchell Gordon
