Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

krysti.gingrass  
phx, Arizona

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Carl Klein  
Wales Center, New York

Of course, it would be even better if NY State taxed soda the way we tax cigarettes. THAT would have a large effect on consumption. Should we be held hostage when Pepsi threatens to move it's HQ out of the state? Governor Cuomo needs to step up just as the Mayor is doing.

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Thomas Sampson  
Lexington, Kentucky

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

P Orley

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

David Nassau  
Rochester, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Carolyn Romberg  
New York, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Steven Fromm  
Philadelphia, Pennsylvania

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rebecca Breon  
Mount Sinai, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Lauren McNichols  
Naperville, Illinois

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kaitara Cullum  
Livermore, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kathleen Valerio  
Alameda, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Caroline Hancock  
Princeton, New Jersey

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

ANTHONY SMRDELI  
SANTA CLARA, California

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kristin Butler  
Albion, New York

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kenneth Trufant  
Gretna, Louisiana

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jean Ferrone  
Evanston, Illinois

---

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cynthia Mac Farland

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

shelly sherwood  
shoreline, Washington

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Andrea Boon  
Indiana, Pennsylvania

---

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Terry Garcia  
San Antonio, Texas

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Robert Thelen

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Bruce Fick  
310 Kinne Street  
East Syracuse, New York, NY 13057

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Cari Catron  
Chester, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Eric McClure  
Brooklyn, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

bradley haller  
klamath falls, Oregon

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

dick gopets  
jackson, Wisconsin

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Karen Noteboom  
Longview, Washington

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Haroun Muhammad  
Orlando, Florida

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Stephanie McCarren  
Lawrenceville, Georgia

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sarah Abouata  
Santa Rosa, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jill Epstein  
leesport, Pennsylvania

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Rebecca Elwork  
New York, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Pradeep Natarajan  
Eudora, Kansas

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Miranda Rand  
Schenectady, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Merry Limbu  
Ridgewood, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Emily Whitehead  
Sharpsburg, Georgia

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

John Kelly  
Bronx, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Dax Weaver  
Neptune Beach, Florida

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kayla Seely

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

John Boeglin  
Fort Worth, Texas

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Beth Chandler

Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Eli Cory  
Hinesburg, Vermont

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Kushal Baid  
Concord, Ohio

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jan Perdun  
Milltown, New Jersey

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Karen Crowe  
Sulphur, Oklahoma

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Nicole Lingley  
Yonkers, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Chris LeBron  
San Diego, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sharon GinandSharonG  
San Diego, California

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Marc E Milliman Sr  
Little Falls, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Laura Gioffre

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Anthony Lipani  
Rochester, New York

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

**Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!**

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jamie Juliano  
Medford, New York

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Jeffrey Lysiak  
Amherst, New York

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Sandra Ashmore

Greetings,

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Dear New York City Board of Health,

I am writing in support of Mayor Michael Bloomberg's proposal to limit the size of sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. This is a strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

The Mayor's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Obesity is an epidemic, contributing to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

You have the opportunity to lead the nation in using policy to improve nutrition and prevent obesity. I do not live in your city, but I have something at stake here, since if NYC takes this step, you set a precedent that other municipalities can follow. Please approve Mayor Bloomberg's proposal.

Sincerely,

Elizabeth Black

If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

Sincerely,

Paul McGrath

---

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve the proposal.

Norms for sugary drink sizes are alarmingly high, as 32 and 64 ounce sodas are commonplace across the city. Even the proposed limit of 16 ounces is still double a standard 8-ounce serving. Mayor Bloomberg's plan is backed by extensive scientific research that shows growing portion sizes for sugary drinks are among the driving forces of the ongoing obesity epidemic. The Institute of Medicine recently recommended that government leaders adopt policies and implement practices to reduce over-consumption of sugary drinks, which are a top source of calories in Americans' diets.

Right now, about one-third of children and two-thirds of adults are overweight or obese. Obesity is an epidemic, and it contributes to growing rates of type 2 diabetes, heart disease, hypertension and even some cancers. If we do not reverse childhood obesity in particular, this generation of kids could be the first in America's history to live sicker and die younger than their parents' generation.

Bold action from leaders like you is needed to reverse the obesity epidemic, and we can't wait!

New York is one of the greatest cities in the world, and you have the opportunity to make it even greater, by continuing to lead the nation in using policy to improve nutrition and prevent obesity. Please approve Mayor Bloomberg's proposal and serve up a healthy change for our great city.

I am writing to support the Sensible Beverage Proposal. I have frequently been in situations, particularly in recent years, where reasonably sized beverages are not even an option for those of us who would like them. In attempting to purchase a Diet Coke at a movie theater a few weeks ago, the smallest size fountain drink available was 32oz. For all intents and purposes, that is a liter of soda. How have we gotten to the point where it is considered reasonable to drink 32oz of soda per person during the hour and a half it takes to watch a movie? Let's also be clear that we aren't talking about taking away an individual's freedom to choose what they drink, we are talking about limiting the ability of large, profit-driven corporations to push ever larger quantities of junk on consumers, many of whom are children who lack the ability to effectively counter the information coming at them from mass-marketing. I wholeheartedly support a ban on obscenely large sugary beverages and believe that this should be considered an act of consumer protection.

I am writing in support of Mayor Michael Bloomberg's sensible proposal to limit the size of soda and similar sugar-sweetened beverages sold in restaurants, movie theaters and food carts to 16 ounces. I applaud the mayor for taking this strong step to tackle obesity rates in New York City, and I urge you to approve this proposal.

Sincerely,

Kerry Labendz
