FACE PIECE FITTING STATION

Q-1: What is tested at the Face Piece Fitting station?
A-1: This station tests your ability to wear the breathing mask used to perform some firefighter duties.

Q-2: What are some test results that may require further evaluation?
A-2: Further evaluation will be required if you are unable to wear a face piece with a proper seal due to, for example, facial hair or facial deformity.

Q-3: What happens if I have facial hair?
A-3: Candidates must be able to maintain a proper seal in order to safely use a breathing mask. If the length of your facial hair does not permit a proper seal, you will not “pass” this station.
