

The East Side Coastal Resiliency (ESCR) project is a coastal protection initiative, jointly funded by the City of New York and the federal government, aimed at reducing flood risk due to coastal storms and sea level rise on Manhattan's East Side. The ESCR project will protect 110,000 New Yorkers from the impacts of climate change by reducing flood risk to communities, properties, businesses, critical infrastructure, and public open spaces. In addition to providing flood protection, the project will strengthen and enhance waterfront spaces by improving accessibility, increasing ecological diversity, and delivering improved recreational amenities to a vibrant and highly diverse community.

The enhanced [East Side Coastal Resiliency website](#) is home to ESCR project material dating to 2015, and is updated weekly to reflect current construction progress. Below is a list of links to help navigate website materials. Click directly on the **blue text** or open [www.nyc.gov/escr](#) and select the headings listed below in black. If you are unable to find a document, please inquire directly to ESCR's Community Construction Liaisons (CCL's) below.
