

# East New York Rezoning Proposal

## Chapter 9: Hazardous Materials

---

### A. INTRODUCTION

This chapter assesses the potential for the presence of hazardous materials in soil and/or groundwater at both the projected and potential development sites identified in the reasonable worst-case development scenario (RWCDs) under the proposed East New York Rezoning Proposal (the “Proposed Actions”). The rezoning encompasses an approximately 190-block area of East New York, Cypress Hills and Ocean Hill neighborhoods in Brooklyn. There are a total of 186 development sites, of which 81 are considered projected development sites and 105 are considered potential development sites (refer to Figures 1-6a through 1-6d in Chapter 1, “Project Description”).

As described in the *CEQR Technical Manual*, the goal of a hazardous materials assessment is to determine whether a proposed action would lead to a potential increased exposure of hazardous materials to people or the environment or whether the increased exposure would lead to significant public health impacts or environmental damage. The objective of the hazardous materials assessment is to determine which, if any, of the projected and potential development sites identified as part of the RWCDs may have been adversely affected by current or historical uses at or adjacent to the sites, such that the property would require an (E) designation or other measures comparable to such a designation.

A preliminary screening of potential hazardous materials impacts was performed for all of the 81 projected and 105 potential development sites. This assessment was undertaken to determine whether additional investigations are necessary and whether an (E) designation should be placed on privately-held projected or potential development sites under the Proposed Action to avoid the potential for impacts pertaining to hazardous materials.

### B. PRINCIPAL CONCLUSIONS

The Proposed Actions are not expected to result in significant adverse impacts for hazardous materials. An assessment of potential hazardous materials impacts was performed for all of the 81 projected and 105 potential development sites. The hazardous materials assessment identified that each of the projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations (E-366) for all privately-held projected and potential development sites. For the City-owned parcel located within projected development site 66 (Block 4142, Lot 32), review of a Phase II testing protocol and development of any necessary remediation plan would be required through the Land Disposition Agreement between HPD and a future selected developer with oversight provided through HPD and the New York City Department of Environmental Protection (NYCDEP). With the requirements of the (E) designation or comparable measure on all 186 projected and potential development sites, there would be no impact from the potential presence of contaminated materials. The implementation of the preventative and remedial measures outlined in the (E) designation would reduce or avoid the potential of significant adverse hazardous materials impacts from potential construction in the rezoning area resulting from the Proposed Actions. Following such construction, there would be no potential for significant adverse impacts.

### C. METHODOLOGY

As per Chapter 24 of Title 15 of the Rules of the City of New York, reviews of the regulatory database and/or Sanborn maps and city directories were used to determine past uses of the property and enable an assessment of whether the lot should receive an (E) designation.

Chapter 24 of Title 15 of the Rules of the City of New York specifies the process for determining if an (E) designation should be placed on a specific site. Section 24-04 describes the preliminary screening process, which includes reviewing historical documentation for past or current uses that may have affected or be affecting a projected or potential development site or an adjacent site. Appendix A of the Hazardous Materials Appendix 5 (Chapter 24 of Title 15 of the Rules of the City of New York) provides a list of types of facilities, activities or conditions which would lead to a site receiving an (E) designation.

An (E) designated site is an area designated on a zoning map within which no change of use or development requiring a New York City Department of Buildings permit may be issued without approval of the New York City Mayor’s Office of Environmental Remediation (OER). Redevelopment of these sites requires OER review to ensure protection of human health and the environment from any known or suspected hazardous materials associated with the site. Regardless of the type of planned redevelopment, a hazardous materials (E) designation may be placed on a site based on past use. The OER oversees the (E) designation Environmental Review Program. For properties where existing buildings will be converted with no intrusive soil work, the owner will need to contact the OER and provide them with the development plans. OER will issue a Notice of No Objection if the plans demonstrate that no exposure to hazardous materials would result as part of development, which will enable the New York City Department of Buildings to issue the conversion permit. The (E) designation for the site remains and must be satisfied if any future redevelopment involves excavation and/or soil disturbance.

The specific methodology for evaluating the potential for environmental impacts at the projected and potential development sites is described below. The methodology consisted of a review of several environmental sources including regulatory agency databases, historical Sanborn maps and city directories. Additionally, a visual inspection of the exterior of each projected and potential development site identified the current use of the site, evidence of storage tanks and contamination/remediation.

Specific information sources used in the assessment are described as follows.

## Regulatory Databases

For each of the projected and potential development sites, published federal and state environmental databases were reviewed to identify use, generation, storage, treatment, disposal, and/or release of hazardous substances and/or petroleum products, which may have impacted the properties. Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, conducted the search of the regulatory database records and provided the records in the form of regulatory agency database reports. The regulatory databases were reviewed separately for each site and the 400-foot buffer zone around each site. Where sites were adjacent to each other on the same block, the buffer zone was measured from the center of the clustered sites.

The following table outlines the ASTM standard Federal and State databases reviewed.

<b>Federal and State Regulatory Agency Databases Reviewed</b>
Federal National Priorities List (NPL)
Federal Delisted NPL Site List
NPL LIENS Federal Superfund Liens
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List
Federal CERCLIS No Further Remedial Action Planned (NFRAP) List
Federal Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
Federal RCRA non-CORRACTS Treatment, Storage or Disposal (TSD) Facilities List
Federal RCRA Generators Lists (Large, Small, NonGen and Conditionally Exempt)
Federal Institutional Control/Engineering Control Registries
Federal Emergency Response Notification System (ERNS)
VAPOR REOPENED Vapor Intrusion Legacy Site List

<b>Federal and State Regulatory Agency Databases Reviewed</b>
New York State Spills (NY Spills)
Inactive Hazardous Waste Disposal Sites in New York State (SHWS)
Hazardous Substance Waste Disposal Site Inventory (HSWDS)
Solid Waste Facility/Landfill (SWF/LF)
Leaking Storage Tanks Incidents Report (LTANKS)
Registered Aboveground/Underground Storage Tanks (ASTs/USTs)
CBS UST Chemical Bulk Storage Database
MOSF UST Major Oil Storage Facilities Database
CBS AST Chemical Bulk Storage Database
Institutional and Engineering Controls (INST CNTRL/ENG CNTRL)
Manufactured Gas Plant Sites (Coal Gas)
Drycleaners Database
Voluntary Cleanup Program (VCP)
Brownfields Cleanup Program

## Historic Sanborn Fire Insurance Maps

Historic Sanborn maps were obtained from EDR. The Sanborn map review for the projected and potential development sites included an examination of maps for each available decade from 1928 through 2007.

## City Directories

City directories for the project area for the years 1928 through 2013 were obtained from EDR and reviewed to determine potential site tenants/uses which may have resulted in environmental impacts to the sites.

## Site Inspections

Exterior site inspections were performed for each projected and potential development site to identify any visible monitoring wells, vent pipes, fill ports and/or manufacturing, commercial and industrial uses which could indicate environmental impacts.

## Limitations

While the Sanborn map and city directory reviews were conducted in accordance with the protocols outlined in the ASTM-E-1527-13 standard, it should be emphasized that, as all of the projected and potential development sites are privately-owned, with the exception of a portion of Site 66 which is city-owned, the scope of this project was limited to collecting and analyzing limited information sufficient to make a determination relevant to a hazardous materials (E) designation. Sanborn and city directory review was limited to the properties and adjacent properties within the boundaries of the rezoning area. The regulatory database review was also conducted in accordance with the protocols outlined in the ASTM-E-1527-13 standard and encompassed the site and a 400-foot buffer zone around each site or cluster of sites. Other elements of a Phase I Environmental Site Assessment (ESA) and the protocols outlined in the *CEQR Technical Manual* (e.g., reviews of building department and fire department records, a title deed search, and interviews with current and former employees and owners) were not included as part of the assessment.

## **D. EXISTING CONDITIONS**

The rezoning area has been mainly occupied by residential, industrial and commercial uses for over 85 years. The general use of the area hasn't changed in any substantial matter during this period as indicated by Sanborn maps dating from 1928 through 2007 and city directories for the years 1928 through 2013. Around and after the 1950s, commercial uses including auto repair shops, metal and ironworks shops, filling stations and manufacturing facilities appear in the area as indicated by Sanborn maps and city directories.

The regulatory database research identified numerous sites of environmental significance within the boundaries of the rezoning area in the federal, state, and local regulatory agency databases. A review of the databases has revealed that there are 75 Resource Conservation and Recovery Act hazardous waste generator sites, 4 Emergency Response Notification System reports, 10 solid waste facilities/landfills, and 22 drycleaners within the rezoning area. Furthermore, the review identified 283 registered NYSDEC petroleum bulk storage sites and 4 chemical bulk storage sites. There have been several reported cases of contaminant releases within the proposed rezoning area including 136 leaking underground storage tanks and 396 spills cases.

## **E. THE FUTURE WITHOUT THE PROPOSED ACTIONS (NO-ACTION CONDITION)**

In the future without the Proposed Actions, there are 81 projected and 105 potential development sites that are assumed to either remain unchanged from existing conditions, or be redeveloped with uses that are as of-right under existing zoning. As discussed in Chapter 2, "Land Use, Zoning, and Public Policy," in the future without the proposed actions 53 of the 81 projected development sites would remain as in the existing condition, while 28 of the 81 projected development sites are expected to be redeveloped, or undergo conversion. In addition, 96 of the 105 potential development sites would remain as in the existing condition, while nine of the 105 potential development sites are expected to be redeveloped or undergo conversion.

However, any construction involving soil disturbance could potentially create or increase pathways for human exposure to any subsurface hazardous materials present. Since no (E) designations (which require the owner of a property to assess potential hazardous material impacts prior to construction) currently exist on any of the projected or potential development sites, such soil disturbance would not necessarily be conducted in accordance with the procedures (e.g., for conducting testing before commencing excavation and implementation of health and safety plans during construction) described in the following section. However, the New York State Department of Environmental Conservation (NYSDEC) regulatory requirements pertaining to any identified petroleum tanks and/or spills, requirements for disturbance and handling of suspect lead-based paint and asbestos-containing materials, and requirements for off-site disposal of soil/fill, would need to be followed. As such, without the Proposed Actions, the amount of soil disturbance would be less, but potentially the controls on its performance would not be as stringent as under the Proposed Actions, as described below.

## **F. THE FUTURE WITH THE PROPOSED ACTIONS (WITH-ACTION CONDITION)**

In the future with the Proposed Actions, there are 81 projected development sites considered more likely to be developed by the 2030 analysis year, and 105 potential development sites that are considered less likely to be developed over the same period. The analysis below examines projected and potential sites where it could be expected that development in the future with the Proposed Actions would have the potential to increase the exposure of people or the environment to hazardous materials. These could include the potential for increased exposure detrimental to the health and safety of workers during construction, the potential for the transport of contaminated soil, or the potential for increased exposure for future residents or employees of individual buildings on these sites.

The hazardous materials assessment presented herein has identified that each of the projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed

zoning map actions include (E) designations (or other measures comparable to such a designation) for all projected and potential development sites, as discussed below.

Appendix A of the Hazardous Materials Appendix 5 (Chapter 24 of Title 15 of the Rules of the City of New York) provides a list of facilities, activities or conditions requiring consideration of an (E) designation. If the projected or potential development sites or adjacent properties had indications of uses listed in Appendix A, placement of an (E) designation is recommended. Additionally, if properties within the 400-foot buffer zone surrounding each residential site or cluster of residential sites had indications in the regulatory database of uses listed in Appendix A, placement of an (E) designation is also recommended. The (E) designation recommendations are shown in Table 9-1 and a matrix summarizing the details of the findings of the assessment for the potential and projected development sites is provided in Tables 9-2 and 9-3, respectively (tables included at the end of this chapter). On the matrix, the results for the development sites are reported separately from findings for the sites included within the 400-foot buffer-zone.

The screening for all sites was conducted by reviewing historical documentation for past or current uses that may have affected or be affecting a projected or potential development site or an adjacent site. The past uses were compared to the list of types of facilities, activities or conditions which would lead to a site receiving an (E) designation given in Appendix A of the Hazardous Materials Appendix 5. Based on this screening, the 81 projected and 105 potential development sites within the rezoning area meet the criteria for placement of an (E) designation.

By placing (E) designations (E-366), or other measures comparable to such a designation, on sites where there is a known or suspect environmental concern, the potential for an adverse impact to human health and the environment resulting from the Proposed Actions would be reduced or avoided. The (E) designation provides the impetus to identify and address environmental conditions so that significant adverse impacts during site development would be reduced. The New York City OER would provide the regulatory oversight of the environmental investigation and remediation during this process. Building permits are not issued by the Department of Buildings without prior OER approval of the investigation and/or remediation pursuant to the provisions of Section 11-15 of the NYC Zoning Resolution (Environmental Requirements).

The (E) designation would require that the fee owner of such a site conduct a testing and sampling protocol and have an approved remediation plan where appropriate, to the satisfaction of the OER. The NYC Department of Buildings will typically issue the foundation permits when OER approves the remedial action work plan – the actual remediation is usually done concurrently with the construction. The remediation plan provided to OER to satisfy the (E) designation must also include a mandatory construction-related health and safety plan, which must also be approved by OER.

The (E) designation requirements related to hazardous materials would apply to the following development sites:

The (E) designation text related to hazardous materials is as follows:

**Task 1**

The applicant submits to OER, for review and approval, a Phase 1 of the site along with a soil and groundwater testing protocol, including a description of methods and a site map with all sampling locations clearly and precisely represented.

If site sampling is necessary, no sampling should begin until written approval of a protocol is received from OER. The number and location of sample sites should be selected to adequately characterize the site, the specific source of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination), and the remainder of the site’s condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples are provided by OER upon request.

**Task 2**

A written report with findings and a summary of the data must be submitted to OER after completion of the testing phase and laboratory analysis for review and approval. After receiving such results, a determination is made by OER if the results indicate that remediation is necessary. If OER determines that no remediation is necessary, written notice shall be given by OER.

**If remediation is indicated from the test results, a proposed remediation plan must be submitted to OER for review and approval. The applicant must complete such remediation as determined necessary by OER. The applicant should then provide proper documentation that the work has been satisfactorily completed.**

**An OER-approved construction-related health and safety plan would be implemented during evacuation and construction and activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This plan would be submitted to OER for review and approval prior to implementation.**

**All demolition or rehabilitation would be conducted in accordance with applicable requirements for disturbance, handling and disposal of suspect lead-paint and asbestos-containing materials. For all projected and potential development sites where no E-designation is recommended, in addition to the requirements for lead-based paint and asbestos, requirements (including those of NYSDEC) should petroleum tanks and/or spills be identified and for off-site disposal of soil/fill would need to be followed.**

As noted above, the Proposed Actions will include (E) designations for all privately-held projected and potential development sites. For the City-owned parcel located within projected development site 66 (Block 4142, Lot 32), review of a Phase II testing protocol and development of any necessary remediation plan will be required through the Land Disposition Agreement (LDA) between HPD and a future selected developer with oversight provided by HPD and NYCDEP. The privately-owned parcel within projected development site 66 (Block 4142, Lot 32) would receive an (E) designation, as shown in the table above.

With the requirements of the (E) designation or comparable measure on all 186 projected and potential development sites, there would be no impact from the potential presence of contaminated materials. The implementation of the preventative and remedial measures outlined in the (E) designation would reduce or avoid the potential of significant adverse hazardous materials impacts from potential construction in the rezoning area resulting from the Proposed Actions. Following such construction, there would be no potential for significant adverse impacts.
