Environmental Assessment and Review Division
New York City Department of City Planning

Pursuant to City Environmental Quality Review (CEQR), Mayoral Executive Order No. 91 of 1977, CEQR Rules of Procedure of 1991 and the regulations of Article 8 of the State Environmental Conservation Law, State Environmental Quality Review Act (SEQRA) as found in 6 NYCRR Part 617, a Final Environmental Impact Statement (FEIS) has been prepared for the action described below. Copies of the FEIS are available for public inspection at the office of the undersigned. The proposal involves actions by the City Planning Commission and Council of the City of New York pursuant to Uniform Land Use Review Procedures (ULURP). A public hearing on the Draft EIS was held on July 26, 2017. Written comments on the DEIS were requested and were received by the Lead Agency until August 7, 2017. The FEIS incorporates responses to the public comments received on the DEIS.

A. INTRODUCTION

The Applicant, Harrison Realty LLC, is seeking a zoning map amendment from M3-1 to R7A/C2-4, R7D/C2-4, R7D, and R8A/C2-4 zoning districts and a zoning text amendment to designate a Mandatory Inclusionary Housing Area (MIHA) to facilitate new mixed-use development on two blocks in the South Williamsburg section of Brooklyn Community District 1. The 182,366-square foot (sf) "project area" owned by the Applicant consists of two trapezoidal-shaped blocks, including: (1) the 71,322 sf "Northern Block," bounded on the north by Walton Street, on the east by Harrison Avenue, on the south by Wallabout Street, and on the west by Union Avenue (Block 2249, Lots 23, 37, 41, and 122); and (2) the 111,044-sf "Southern Block" bounded on the north by Wallabout Street, on the east by Harrison Avenue, on the south by Gerry Street, and on the west by Union Avenue (Block 2265, Lot 14). The project area, which is currently undeveloped and is used for temporary activities pursuant to short-term rental agreements, would be rezoned from M3-1 to R7A,

oabinad@planning.nyc.gov

R7D, and R8A; a C2-4 commercial overlay would be mapped on the majority of the rezoning area, except for a 65-foot-wide, 3,900-sf portion of the Northern Block. The Applicant also seeks a zoning text amendment to Zoning Resolution (ZR) Appendix F to establish the project area as a MIHA, which would require a share of residential floor area be reserved for affordable housing pursuant to the Mandatory Inclusionary Housing (MIH) program. The Applicant proposes to map Option 1 and Option 2 of MIH; Option 1 requires that at least 25 percent of the residential floor area be reserved for residents with incomes averaging 60 percent Area Median Income (AMI), with ten percent of units affordable at 40 percent AMI; Option 2 requires 30 percent of residential floor area is provided at 80 percent AMI. In connection with the proposed project, the Applicant will develop two publicly-accessible open spaces totaling 26,000-sf within the project area. The publicly accessible open space is incorporated into a Restrictive Declaration (RD) recorded against the property, as described in further detail below.

The proposed action would facilitate a proposal by the Applicant to construct a 1,340,314-gross square foot (gsf) mixed use development consisting of eight buildings reaching a maximum height of 140 feet (14 stories) and two publicly accessible open space amenities. The development would provide a total of 1,146 DUs, of which 287 DUs would be affordable in accordance with the Mandatory Inclusionary Housing program; 64,807 gsf of local retail space; 404 accessory parking spaces; and 26,000 sf of publicly-accessible open space.

The publicly accessible open space would be provided in midblock corridors on each block measuring 65 feet wide by 200 feet long and aligned on a north-south axis parallel to Harrison Avenue.

The proposed rezoning and text amendments are discretionary actions, subject to environmental review. A Final Environmental Impact Statement (FEIS) has been prepared in accordance with Executive Order 91 of 1977, as amended, and City Environmental Quality Review (CEQR) Rules and Procedures adopted in 1991 (62 Rules of the City of New York, Chapter 5). The 2014 *New York City Environmental Quality Review (CEQR) Technical Manual* was generally used as a guide with respect to environmental analysis methodologies and impact criteria for evaluating the proposed action, unless otherwise stated.

B. PROPOSED ACTIONS AND REQUIRED APPROVALS

The Applicant is requesting two City Planning Commission (CPC) actions:

- ◆ A zoning map amendment to change the rezoning area from M3-1 to R8A/C2-4, R7D/C2-4, R7D and R7A/C2-4.
- ◆ A zoning text amendment to Appendix F of the zoning resolution to establish a Mandatory Inclusionary Housing Area coterminous with the rezoning area.

Both are discretionary actions; the zoning map amendment is subject to the Uniform Land Use Review Procedure (ULURP) and the zoning text amendment is subject to public review with requirements similar to ULURP. Collectively, these actions are referred to as the “proposed action” in this document. These actions are subject to environmental review under the State Environmental Quality Review Act (“SEQRA”) and the City Environmental Quality Review (“CEQR”).

In connection with the approval of the zoning actions, a Restrictive Declaration would be subject to City Planning Commission approval. The RD memorializes the open space Project Component Related to the Environment (PCRE) commitment, the PCRE related to construction noise, and Mitigation Measures related to intermediate schools.

C. DESCRIPTION OF THE PROJECT AREA

The rezoning area comprises approximately 191,217 sf and includes two blocks (the project area- Northern and Southern Blocks) owned by the Applicant and the southern portion of an adjoining City-owned one-block-long formerly mapped street segment, in the southeastern portion of Brooklyn Community District 1. The rezoning area is generally bounded by the demapped segment of Walton Street on the north, Harrison Avenue to the east, Gerry Street to the south, and Union and Marcy Avenues to the west.

The range of addresses associated with the Northern Block include 164-174 Harrison Avenue (even numbers), 30-44 Union Avenue (even numbers), 233-247 Wallabout Street (odd numbers), and 60 Walton Street. The

71,322-sf Northern Block has approximately 200 feet of frontage along Harrison Avenue, approximately 445 feet of frontage along Wallabout Street, approximately 267 feet of frontage along Union Avenue, and approximately 268 feet of frontage along the City-owned demapped Walton Street. The range of addresses associated with the Southern Block includes 1-57 Gerry Street (odd numbers), 176-190 Harrison Avenue (even numbers), 2-28 Union Avenue (even numbers), and 322-356 Wallabout Street (even numbers). The 111,044-sf Southern Block has approximately 200 feet of frontage along Harrison Avenue, approximately 617 feet of frontage along Gerry Street, approximately 235 feet of frontage along Union Avenue, and approximately 493 feet of frontage along Wallabout Street. The 8,851-sf southern half of demapped Walton Street area is 35 feet wide. This City-owned property's northern boundary is approximately 238 feet long and its southern boundary is approximately 268 feet long. Although no longer formally a mapped street it continues to operate as the southern half of a 70-foot wide, one-way eastbound right-of-way open to vehicles and pedestrians with posted City parking regulations.

Both of the blocks are zoned M3-1 and contain no existing buildings. Each block is enclosed by chain-link fencing. The Northern Block includes remnants of a former subway entrance within the property line near the intersection of Union Avenue and Walton Street. Both blocks are currently occupied by temporary activities pursuant to short-term rentals. The Northern Block is covered by grass and vegetation and the Southern Block is entirely paved. The Northern Block is vacant with no active use, although it is currently being used for temporary equipment/vehicle storage. The Southern Block is striped with parking spaces and it is currently being used for temporary equipment/vehicle storage for construction equipment and supplies, including assembled sidewalk sheds/scaffolding equipment (the current occupant is a provider of these materials to the construction industry and uses the block for on a temporary basis and maintains a permanent base elsewhere in Brooklyn). On the Northern Block there is a curb cut on Wallabout Street and in addition, in many locations along the block the curb is in deteriorated condition. On the Southern Block there are curb cuts for driveways with gates on Wallabout Street and Gerry Street.

The streets bounding the project area include Harrison Avenue on the east and Gerry Street on the south, which are both 70 feet wide (mapped width) and operate with two-way traffic, and Union Avenue on the west which is 80 feet wide and also operates with two-way traffic. Wallabout Street, which separates the Northern and Southern Blocks, is 70 feet wide and operates with two-way traffic although Wallabout Street east of Harrison Avenue operates one-way westbound and Wallabout Street west of Marcy Avenue operates one-way eastbound. The public sidewalks adjoining the project area are approximately 15 to 20 feet wide.

The topography of the project area is generally flat. Site elevations in the area generally range from approximately +9.5 feet North American Vertical Datum of 1988 (NAVD 88) to approximately +13.5 NAVD 88. The project area is located in the coastal zone boundary and is partly within a designated "shaded X" zone on the Federal Emergency Management Agency (FEMA) 2015 Preliminary Flood Insurance Rate Map (FIRM), indicating an area of moderate to low-risk flood hazard with an annual probability of flooding of 0.2 percent to 1 percent, usually defined as the area between the limits of the 100-year and 500-year floods. The portion of the project area outside the shaded X zone is located above the 500-year floodplain and considered an area of minimum flood hazard.

The rezoning area blocks were previously owned by Pfizer which housed its main plant at 630 Flushing Avenue (Block 1720, Lot 1), two blocks to the south. Pfizer operated pharmaceutical production facilities and related operations on several sites in the area beginning with its founding in a building at the corner of Harrison Avenue and Bartlett Street in 1849. Pfizer ceased its manufacturing operations at the main building in 2008. In the 1950s Pfizer began using portions of the Northern Block, which had been previously occupied by a mix of residential, commercial, industrial, and institutional buildings, for parking and warehousing activities. The block was gradually cleared of buildings in the following decades and by 1991 the entire block was vacant. The Southern Block was partly occupied by Pfizer operations by the late nineteenth century and by the mid-twentieth century the entire block was used by Pfizer. Uses of the site by Pfizer over the years included laboratories and manufacturing facilities. Operations on the block ended in 1989 and the buildings on the site

were demolished by the mid-1990s. Sometime after that the block was paved with asphalt and a parking lot striped.

D. DESCRIPTION OF THE PROPOSED PROJECT

As described in more detail below (Section G. Reasonable Worst Case Development Scenario), the proposed action would facilitate a proposal by the Applicant to construct a 1,340,314-gross square foot (gsf) mixed use development consisting of eight buildings featuring reaching a maximum height of 140 feet (14 stories) and two publicly accessible open space amenities. The development would provide a total of 1,146 DUs, of which 287 DUs would be affordable in accordance with the Mandatory Inclusionary Housing program; 64,807 gsf of local retail space; 404 accessory parking spaces; and 26,000 sf of publicly-accessible open space.

As described in more detail below (Section E. Description of the Proposed Action), the publicly accessible open space would be provided in midblock corridors on each block measuring 65 feet wide by 200 feet long and aligned on a north-south axis parallel to Harrison Avenue.

E. DESCRIPTION OF THE PROPOSED ACTION

Proposed Zoning Map Amendment

The proposed zoning map amendment would change the underlying zoning of the rezoning area from an M3-1 heavy manufacturing district to R7A, R7D, and R8A contextual residence districts with a C2-4 overlay over the majority of the rezoning area. An R7A district would be mapped along the portion of the project area located within 100 feet of Harrison Avenue. An R7D district would be mapped on the portion of the project area located more than 100 feet from Harrison Avenue, including the areas extending up to 335 feet from Harrison Avenue on the Southern Block and up to 200 feet from Harrison Avenue within 140 feet of Wallabout Street and up to 265 feet from Harrison Avenue beyond 140 feet from Wallabout Street on the Northern Block. An R8A district would be mapped on the portion of the project area located more than 335 feet from Harrison Avenue on the Southern Block and more than 200 feet from Harrison Avenue within 140 feet of Wallabout Street and more than 265 feet from Harrison Avenue beyond 140 feet on the Northern Block.

In addition, a C2-4 commercial overlay would be mapped over the underlying districts, covering the majority of the Rezoning Area, except for a 65-foot wide area located 200 feet west of Harrison Avenue, 140 feet north of Wallabout Street, and with its northern boundary coincident with the center line of the former Walton Street (65 feet by 60 feet of this area would be within the project area). With the proposed zoning map amendment, residential (Use Groups 1 and 2) and community facility uses (Use Groups 3 and 4), which are prohibited by the existing zoning, would be permitted. In addition, local retail uses (Use Groups 5-9 and 14), would be permitted by the commercial overlay on the ground floor of buildings, provided they are not on the same floor as or above dwelling units.

R7A, R7D, and R8A are contextual zoning districts that allow for new medium-density residential development and community facilities. The description of these districts is based on the regulations applicable to Mandatory Inclusionary Housing Areas (MIHAs) (described in detail in the next section).

In MIHAs, R7A districts allow for residential development up to 4.6 FAR and community facility uses up to 4.0 FAR. In MIHAs R7A requires a streetwall of 40 to 75 feet, a setback from the streetwall, and allows a maximum building height of 90 feet or 95 feet (with a qualifying, i.e., commercial, ground floor use), and a maximum of 9 stories.

In MIHAs, R7D districts allow for residential development up to 5.60 FAR and community facility uses up to 4.20 FAR. In MIHAs, R7D requires a streetwall of 60 to 95 feet, a setback from the streetwall, and allows a maximum building height of 110 feet or 115 feet (with a qualifying ground floor use) and a maximum of 11 stories.

In MIHAs, R8A districts allow for residential development up to 7.20 FAR and community facility uses up to 6.50 FAR. In MIHAs, R8A requires a streetwall of 60 to 105 feet, a setback from the streetwall, and allows a maximum building height of 140 feet or 145 feet (with a qualifying ground floor use) and a maximum of 14 stories.

New residences in R7A and R7D are required to provide off-street parking spaces for 50 percent of the market rate dwelling units, with no required parking for affordable housing applicable sites within the Transit Zone, as defined by the Zoning Resolution, Appendix I. New residences in R8A are required to provide parking for 40 percent of the market rate dwelling units, with no required parking for affordable housing applicable to sites within the Transit Zone.

C2-4 commercial overlays allow for local retail uses and commercial development up to 2.0 FAR. The C2-4 commercial overlay requires 1 parking space for every 1,000 sf of zoning floor area for general retail uses.

Proposed Zoning Text Amendment

The proposed zoning text amendment would amend ZR Appendix F to establish a Mandatory Inclusionary Housing Areas (MIHA) coterminous with the rezoning area, which would require the provision of affordable housing pursuant to the MIH program.

Under MIH, a share of new housing is required to be permanently affordable when land use actions create significant new housing potential, either as part of a City neighborhood plan or private land use application. MIH consists of two alternatives: 1) 25 percent of residential floor area must be affordable housing units affordable to households with income at a weighted average of 60 percent of area median income (AMI), with 10 percent affordable to households within an income band of 40 percent of AMI; or 2) 30 percent of residential floor area must be affordable housing units affordable to households with income at a weighted average of 80 percent of AMI. In combination with these options, two other options may be utilized. A “Deep Affordability Option” also may be utilized providing 20 percent of residential floor area must be affordable housing units affordable to households with income at a weighted average of 40 percent of AMI. Also, a “Workforce Option” also may be utilized providing 30 percent of residential floor area must be affordable housing units affordable to households with income at a weighted average of 115 percent, with 5 percent of residential floor area must be affordable housing units affordable to households within an income band of 70 percent of AMI and another 5 percent of residential floor area must be affordable housing units affordable to households within an income band of 90 percent of AMI. Other restrictions apply to the Deep Affordability and Workforce Options. The CPC and ultimately the City Council determine requirements applicable to each MIHA. The applicant is proposing that MIH Option 1 be applied to the project area’s MIHA.

Restrictive Declaration (RD)

In connection with the proposed project, two new publicly-accessible open spaces totaling 26,000 sf would be developed on the Northern and Southern Blocks. These open spaces, which would remain privately-owned, will be provided pursuant to a Restrictive Declaration (RD) recorded against the property. The Restrictive Declaration binds the owner(s) of the project area to providing and maintaining the 26,000 sf of privately-owned publicly-accessible open space in the location indicated, as detailed in plans included with the RD. The Restrictive Declaration also includes a requirement that on each of the project area’s blocks completion of the open space would be a condition for issuance of the first certificate of occupancy (C of O) for residential use for that block.

The RD also includes information on other project components related to the environment (PCREs) and mitigation measures. These include requirements for mitigation of intermediate school impacts, and requirement for a 12-foot tall noise barrier along the southern perimeter of the Southern Block during project construction to minimize the effects of action-generated construction noise on a school playground to the south.

(E) Designation

To avoid the potential for significant adverse impacts in the areas of hazardous materials, air quality, and noise, an (E) designation (E-427) will be assigned to Block 2265, Lot 14, and Block 2249, Lots 23, 37, 41, and 122 (the project area tax lots) in conjunction with the proposed discretionary actions.

Build Year

It is anticipated that construction of the development in the project area would commence in 2018 contingent on the approval of the proposed action. An approximately 23-month construction schedule is anticipated, with completion and occupancy in 2019. Accordingly, the analysis will use a 2019 Build year.

F. PROJECT PURPOSE AND NEED

The area surrounding the project area has experienced a significant trend of residential, mixed-use, and neighborhood-oriented institutional development in recent years, including both market-rate and affordable housing residential developments, some with ground floor retail or community facility uses. As this area of Williamsburg and nearby areas of Bedford-Stuyvesant and Bushwick have transformed, traditional industrial uses have declined substantially, as evidenced by their lack of active use of the project area blocks for more than 20 years.

The Applicant believes that the proposed action would improve the condition of the project area and surrounding neighborhood by redeveloping vacant properties with new mixed use buildings that would complement existing uses in the area. Overall, the Applicant believes that the proposed action would be consistent with and would advance the ongoing land use trends and address demand for housing and retail space in this area of the City by facilitating the construction of up to 1,147 residential units (including up to 344 affordable units) where residential uses are currently not permitted.

Under existing zoning regulations, uses permitted on an as-of-right basis within the project area include Use Groups 6-14, and 16-18, which include heavy manufacturing and industrial uses up to 2.0 FAR and certain commercial uses. With the proposed zoning map amendment, residential (Use Groups 1 and 2) and community facility uses (Use Groups 3 and 4), which are prohibited by the existing zoning, would be permitted. In addition, local retail uses (Use Groups 5-9 and 14), would be permitted on the ground floor within the commercial overlay areas.

The proposed zoning map amendment from M3-1 to R7A, R7D, and R8A with C2-4 commercial overlays covering most of the project area, together with the proposed zoning text amendment designating the project area an MIHA and the RD requiring the establishment of the 0.6-acre publicly-accessible open space as a condition for receiving a residential certificate of occupancy, would facilitate the residential, affordable housing, and open space development in the Applicant's proposal.

G. REASONABLE WORST CASE DEVELOPMENT SCENARIO

Pursuant to CEQR Technical Manual guidelines, a Reasonable Worst Case Development Scenario (RWCDS) has been identified in order to assess the potential environmental effects of future development that could occur as a result of the proposed action. This includes the amount, type, and location of development that is expected to occur in both future No-Action and With-Action conditions. The net incremental difference between the future With-Action and No-Action serves as the basis for the environmental impact analyses.

To determine the future With-Action and No-Action conditions, standard methodologies have been used following the *CEQR Technical Manual* guidelines employing reasonable assumptions. These methodologies have been used to identify the amount and location of future development. In projecting the amount and location of new development in the future with and without the proposed action, several factors have been considered in identifying likely development sites in the proposed rezoning area. These include known development proposals and past development trends. The initial step in establishing the development scenario was to identify those sites where new development could reasonably occur. The Applicant's development proposal for the 182,366 sf project area, including both the Northern and Southern Blocks, is considered a known proposal likely to occur if the proposed action is approved. As discussed below, reasonable worst-case development scenario (RWCDS) With-Actions conditions would be nearly identical to the Applicant's proposed development, with only two differences: (1) residential program; and 2) building heights. Since the Applicant's intended development includes 1,146 DUs, instead of 1,147 DUs, the share of affordable housing would be 25 percent instead of 30 percent, and as a result of those changes, the required accessory parking provided for the Applicant's development would be 404 spaces instead of 427. The Applicant's intended development program would have a maximum building height of 140 feet, as compared to 145 feet analyzed. The development program assumed as part of the RWCDS would include qualifying ground floor uses that

allow maximum building heights to be 5 feet taller than otherwise permitted (the Applicant's development would not meet the qualifying ground floor criteria). The retail and publicly-accessible open space programs in the Applicant's development would be the same under the RWCDs.

The Applicant's property, consisting of the Northern and Southern Blocks (the project area), have been identified as development sites in the rezoning area. The zoning district boundaries to be established would extend to the centerline of bounding streets and along the prolongation of the centerline of Walton Street in the demapped area north of the Northern Block, but zoning is not applicable to mapped streets and no development is projected to be located on or use development rights from the demapped area which is City-owned and functions as a street.

The Future Without the Proposed Action (No-Action Condition)

Absent the Proposed Action, the existing M3-1 zoning would remain in place. It is anticipated that the project area would be vacant and would not support any active uses. There are short-term temporary activities present in the project area, specifically vehicle and equipment storage. Although short-term activities such as storage or long-term uses permitted as-of-right under the existing M3-1 zoning could occur under No-Action conditions, it is assumed that these blocks would be unoccupied in the No-Action Condition to provide a conservative framework for analysis.

The Future With the Proposed Action (With-Action Condition)

In the future with the proposed action, the rezoning area would be rezoned from M3-1 to R8A/C2-4, R7D/C2-4, R7D and R7A/C2-4.

With the permitted zoning and assumptions outlined above, the With-Action Condition would include a total of approximately 1,340,314 gsf of total building area (1,095,595 zsf). This development would include approximately 1,147,378 gsf of residential area, consisting of approximately 1,147 DUs (based on 1,000-gsf average unit size); 64,807 gsf of local retail space; approximately 128,128 gsf of parking space, consisting of 427 spaces, as required by zoning, including approximately 68,428 gsf of ground floor space and approximately 59,700 gsf of below-grade space. The development would be subject to MIH, with either 25 or 30 percent of the floor area (excluding ground floor non-residential space) allocated to affordable housing units. For analysis purposes, it is conservatively projected that the CPC and the City Council would apply the 30 percent requirement to this site and therefore approximately 344 of the 1,147 DUs would be affordable housing units. The accessory parking would include approximately 364 residential spaces and approximately 63 retail spaces.

The Northern Block would consist of three buildings totaling 491,050 gsf, comprised of 441 dwelling units (132 of which would be affordable), 26,098 gsf of commercial area, and 165 parking spaces. The Southern Block would consist of five buildings totaling 788,478 gsf, comprised of 706 units (212 of which would be affordable), 38,709 gsf of commercial area, and 262 parking spaces. Each block would have 13,000 sf of publicly accessible open space.

Under the With-Action Condition, the project area would generate approximately 4,072 residents, based on an average of approximately 3.55 residents per household (the average household size for census tracts within a quarter-mile radius of the project area, 2010 Census), approximately 194 retail employees based on an average of 3 retail employees per 1,000 gsf, and approximately 46 residential building employees based on 1 employee for every 25 DUs.

Building volumes would substantially fill the permitted building envelopes (there would be no buildings in the 26,000-sf midblock publicly-accessible open space) allowed by the proposed R7A, R7D, and R8A zoning districts. This would result in building heights up to 75, 115, and 145, in the respective districts.

As noted above, the buildings would meet "qualifying ground floor" requirements in order to be permitted to reach these building heights. Qualifying ground floor criteria include: (1) height of the second floor must be at least 13 feet above the adjoining sidewalk, (2) a cap on the number of stories (8, 10, and 12, for R7A, R7D, and R8A, respectively), (3) limits on the widths of residential lobbies and parking entries/exits, and (4) parking

wrapping and screening requirements.

H. PROBABLE IMPACTS OF THE PROPOSED ACTION

Land Use, Zoning and Public Policy

The proposed action would not result in significant adverse impacts related to land use, zoning or public policy, either in the project area (the primary study area) or within a quarter-mile radius (secondary study area).

The development resulting from the proposed action would not directly displace any land uses so as to adversely affect surrounding land uses, nor would it generate land uses that would be incompatible with land uses, zoning, or public policies in the secondary study area. The proposed action would not result in land uses that conflict with surrounding land uses or public policies applicable to the project area or the secondary study area.

The proposed action would facilitate new residential, local retail, and publicly-accessible open space in the project area, which would otherwise remain zoned M3-1 in which new residential uses would not be permitted.

This new mixed-use development would complement existing residential, retail, and community facility uses and other anticipated land uses as vacant and underutilized properties, many formerly industrial, continue to be redeveloped. The proposed zoning map amendment, replacing M3-1 with R7A, R7D, and R8A underlying districts and a C2-4 commercial overlay covering most of the rezoning area, would allow new development at a scale and density that is compatible with the existing development in the surrounding area. The existing manufacturing zoning is no longer appropriate for the project area, as Pfizer has vacated the project area and other nearby properties and the extent of other industrial uses has declined. As the area, which is well-served by transit, is experiencing a trend toward residential, retail, and community facility development, a rezoning to allow residential development would be consistent with City policies such as OneNYC and Housing New York. The proposed zoning text amendment would expand affordable housing opportunities by ensuring that new residential development would include a share of Mandatory Inclusionary Housing units, also consistent with City policy. The proposed action will not substantially hinder the achievement of any Waterfront Revitalization Program (WRP) policy and the analysis found the project consistent with the WRP policies. The project has been assigned WRP #14-159. Thus, the proposed action would create a zoning designation that is appropriate for the project area's future use. The proposed action would generate a substantial amount of new affordable housing, which is consistent with City policies. The proposed action is also projected to generate new local retail space, which would be supportive of the residential development in the project area and the secondary study area. The 26,000 sf of publicly-accessible open space required as part of the redevelopment of the project area also would be compatible with area's land use characteristics.

The proposed action, with these beneficial elements, would not result in any significant adverse impacts to land use, zoning, or public policy.

Socioeconomic Conditions

The proposed action would not result in significant adverse socioeconomic impacts, including direct and indirect residential displacement, direct and indirect business displacement, or adverse impacts to specific industries. The following summarizes the conclusions for each of the five CEQR areas of socioeconomic concern.

Direct Residential Displacement

The project area is currently zoned M3-1 and does not contain any existing residential units. Accordingly, per the *CEQR Technical Manual*, the proposed action would not exceed the preliminary screening threshold for direct residential displacement. Therefore, there would be no significant adverse impacts from the proposed action due to direct residential displacement.

Indirect Residential Displacement

According to the *CEQR Technical Manual*, indirect displacement of a residential population most often occurs when an action increases property values, and thus rents, making it difficult for some of the existing residents to continue to afford to live in the area. A preliminary screening assessment found that the proposed action and associated With-Action Condition would warrant further analysis. The proposed action and With-Action Condition would introduce a residential population whose average incomes would be higher than the overall income in the ½-mile study area. The results of the preliminary assessment found that the proposed action and associated With-Action Condition would not result in significant adverse impacts due to indirect residential displacement.

Although the proposed action would add a sizeable amount of residential development to the two-block project area, this would be in keeping with existing trends in the surrounding areas of Williamsburg and Bedford Stuyvesant. The neighborhoods of Williamsburg and Bedford Stuyvesant, which are included in the study area, have been transitioning from underutilized industrial uses to more residential and mixed-use areas. The construction of new residential buildings in Brooklyn has accelerated noticeably in recent years, and there is a substantial amount of new housing planned for the study area by the proposed action's build year, 2019, which will add an estimated 1,659 dwelling units.

According to the *CEQR Technical Manual*, a population increase of less than 5 percent of the total study area population would generally not be expected to change real estate market conditions in a study area. The With-Action Condition would result in a maximum increase of approximately 1,147 residential units, of which 344 housing units would be affordable units, compared to the No-Action condition. Assuming that the units would be fully occupied and would have the same average household size as the census tracts within a ¼-mile radius of the project area (3.55 persons per household, according to the 2010 Census), this is expected to increase the residential population by approximately 4,072 people. This equates to an approximately 5.4 percent increase as compared to No-Action conditions in the ½-mile study area. Therefore, the proposed action and With-Action Condition would introduce a substantial new population that could potentially affect residential real estate market conditions in the study area.

While the proposed action could result in some upward pressure on rents within the study area, the analysis concluded that it is not expected to result in significant indirect residential displacement of the study area's potentially vulnerable population. A large portion of the existing housing inventory consists of publicly assisted housing whose low-and moderate-income tenants are protected and would not be in danger of potential secondary displacement. Furthermore, by adding new housing units, the proposed project would increase the supply of affordable and market rate housing in the area. As stated in the FEIS, there is already a trend in the study area toward more costly housing and an influx of a more affluent population that is anticipated to continue in the future without the proposed action, as demonstrated by a decline in the persons below the poverty level, increase in households earning more than \$100,000 and rising rental rates and home values. Therefore, the proposed action would not introduce a new trend or accelerate an existing trend of changing socioeconomic conditions in a manner that would have the potential to substantially change the socioeconomic character of the neighborhood. In addition, the proposed action would add up to 344 affordable housing units to the study area pursuant to the Mandatory Inclusionary Housing program, which would help ensure housing opportunities for area range of income levels.

Direct Business and Institutional Displacement

The proposed action would not directly displace any businesses, as the project area is not occupied by any permanent uses. The two blocks are used on a temporary basis for equipment/vehicle storage and would be expected to remain vacant under No-Action conditions. The activities currently utilizing the project area are subject to short-term rental agreements consistent with the applicant's intent to redevelop the project area pursuant to the proposed action. Therefore, no significant adverse impacts from the proposed action would result due to direct business displacement.

Indirect Business and Institutional Displacement

The proposed action would not result in significant adverse impacts due to indirect business and institutional displacement. In most cases, the issue for indirect business and institutional displacement is whether an action would increase property values and thus rents throughout the area, making it difficult for some categories of businesses to remain. According to the *CEQR Technical Manual*, commercial development of less than 200,000 square feet (sf) would typically not result in significant socioeconomic impacts. For projects exceeding this threshold, an assessment of indirect business displacement is appropriate.

The proposed action would not introduce commercial development exceeding this CEQR Technical Manual threshold. Commercial uses are common in the study area and are largely concentrated along portions of Broadway and Flushing Avenue. According to 2016 PLUTO data, the ½-mile study area includes approximately 1.58 million gross square feet of retail space and within a more immediate ¼-mile area surrounding the project area is approximately 266,971 gsf of retail. The RWCDs would introduce approximately 64,807 gsf of local ground floor retail along two street frontages of the project area, which equates to about a 4.1 percent increase in retail space within the ½-mile study area and about a 24.3 percent increase in the ¼-mile radius. The proposed retail is expected to support the existing and project-generated populations, as well as the consumer demand that would be added to the study area in the future without the proposed action and as a result of the proposed action. Therefore, there would be no significant adverse impacts from the proposed action due to indirect business displacement.

Adverse Effects on Specific Industries

The proposed action would not have the potential to have a significant adverse impact on specific industries or any category of business in the study area. The proposed action would not directly displace any existing business, nor would it have significant adverse indirect effects on businesses in the study area. Therefore, there would be no significant adverse impacts on specific industries with the proposed action.

Community Facilities and Services

The proposed action would not result in significant adverse community facilities impacts to elementary schools, high schools, child care centers, libraries, or health, fire and police facilities. The proposed action would result in significant adverse community facilities impacts to intermediate schools. Mitigation measures are discussed in the Mitigation section below.

The proposed action was assessed for its potential effects on community facilities and services. A screening analysis found that the proposed action would exceed screening thresholds related to elementary and intermediate schools, high schools, libraries, and publicly-funded child care centers, thereby requiring a detailed analysis for each of those types of facilities. The proposed action would not exceed the thresholds for detailed analyses of hospitals and health facilities, fire protection services, or police protection services.

Based on a detailed analysis of public elementary schools, in the future With-Action condition, it was found that the proposed action would result in the introduction of approximately 333 additional elementary school students and the study area utilization rate would be approximately 12.0 percentage points higher compared to the No-Action condition, increasing from 87.3 percent to 99.2 percent. Therefore, pursuant to CEQR guidance, the proposed action would not result in a significant adverse impact to study area public elementary schools, as the With-Action utilization rate would remain below 100 percent.

Based on a detailed analysis of public intermediate schools, the proposed action would result in the introduction of approximately 138 additional intermediate school students. In the With-Action Condition, the study area utilization would exceed the 100 percent utilization threshold, increasing from 135.9 percent to 142.0 percent, and the utilization rate would be approximately 6.2 percentage points higher compared to the No-Action condition. Therefore, pursuant to CEQR guidance, the proposed action would result in a significant adverse impact to study area public intermediate schools requiring consideration of mitigation, as discussed below.

Since the action is estimated to add 161 high school students, which exceeds the CEQR threshold for detailed analysis (i.e. 150 students), a detailed analysis was conducted. According to the CEQR Technical Manual, the

determination of impact significance for high schools is conducted at the borough level. In the future With-Action Condition, the Brooklyn high school utilization rate is expected to increase by 0.2 percentage points over the No-Action Condition, for a With-Action utilization rate of 99.4 percent. As enrollment would not exceed capacity, no significant adverse impacts to Brooklyn high schools are anticipated.

The analysis of publicly-funded child care facilities found that under With-Action Conditions the child care study area would experience a utilization rate of 103.7 percent, with the utilization rate increasing 2.7 percentage points over No-Action Conditions. As such, the proposed action would not exceed the impact threshold, which is an action that results in both a utilization rate over 100 percent and a 5 percentage point or greater increase in the utilization rate over No-Action Conditions. As such, the proposed action would not result in a significant adverse impact on child care.

The analysis of libraries found that the proposed action would increase the study area population by approximately 2.9 percent and would reduce the ratio of holdings to residents at study area libraries from 0.85 holdings per resident to 0.83 holdings per resident. The percentage change in study area population is well below the CEQR threshold of 5 percent for impact significance. Accordingly, the proposed action is not expected to have any adverse impacts on library services within the study area.

Open Space

The proposed action would not result in a significant adverse open space impact. According to the CEQR Technical Manual, a proposed action may result in a significant adverse impact on open space resources if (a) there would be direct displacement/alteration of existing open space within the study area that has a significant adverse effect on existing users; or (b) it would reduce the open space ratio and consequently overburden existing facilities or further exacerbate deficiency in open space. The CEQR Technical Manual also states that “if the area exhibits a low open space ratio indicating a shortfall of open space, even a small decrease in the ratio as a result of the action may cause an adverse effect.” A 5 percent or greater decrease in the open space ratio is considered to be “substantial”, and a decrease of less than 1 percent is generally considered to be insignificant unless open space resources are extremely limited.

The majority of the open space study area is not located in either an underserved or a well-served area as defined in the CEQR Technical Manual Appendix: Open Space Maps, although four blocks in the southeastern portion of the study area are located within an underserved area that extends further east into the Bushwick neighborhood.

The publicly-accessible open space (as described above in Section E. Description of the Proposed Action) will be provided as a project component related to the environment (PCRE), pursuant to the Restrictive Declaration (RD) referenced previously in this document. Although the study area’s No-Action open space ratio is 0.443, which is considered to be relatively low, the introduction of a new 26,000 sf, 0.60-acre publicly accessible open space as part of the proposed action would avoid significant adverse impacts related to open space. In terms of indirect effects, with the publicly accessible open space PCRE in place, the proposed action would result in a 3.4-percent decrease in the study area’s open space ratio, which is less than the 5.0-percent impact threshold. The publicly accessible open space will be constructed in accordance with the Publicly Accessible Open Space Plan included with the RD. In accordance with the RD, the proposed publicly-accessible open space would be operated and maintained by the property owner(s) in clean and good working order; it would generally remain accessible twenty-four hours a day, seven days per week. With the provision of the publicly-accessible open space, the proposed action would not result in a significant adverse open space impact. The proposed rezoning would not result in any direct displacement or alteration of existing public spaces in the study area.

Shadows

The proposed action would not result in significant adverse shadows impacts. The screening and detailed shadows assessment found that the proposed action would not result in significant adverse shadow impacts to the open space resources that would be affected by action-generated incremental shadows. Project-generated incremental shadows on De Hostos Playground would be limited to small areas for a 3-hour and 40-minute period on December 21; there would be no incremental shading at other times. In the case of Union/Marcy

Avenue Greenstreet, which is a 0.02-acre landscaped area with two benches, action-generated shadows would be cast on it during each of the four analysis dates in the mornings, ranging in duration from 33 minutes on December 21 to 2 hours, 47 minutes on June 21. At other times most portions of this resource would not be in shadow. The action-generated shadows would occur in the early morning, when use of greenstreet benches is typically low, and the landscaped elements would continue to receive significant sunlight exposure each day. Overall, there would be no noticeable reduction in the usability of any open space resources as a result of the proposed action. Accordingly, no significant adverse shadow impacts are anticipated as a result of the proposed action.

Historic and Cultural Resources

The Proposed Action would not result in any significant adverse impacts to historic and cultural resources, including archaeological and architectural resources.

The CEQR Technical Manual identifies historic resources as districts, buildings, structures, sites, and objects of historical, aesthetic, cultural, and archaeological importance. This includes designated New York City Landmarks (NYCL); properties calendared for consideration as landmarks by the New York City Landmarks Preservation Commission (LPC); properties listed in the State/National Registers of Historic Places (S/NR) or contained within a district listed in or formally determined eligible for S/NR listing; properties recommended by the New York State Board for listing on the S/NR; National Historic Landmarks; and properties not identified by one of the programs listed above, but that meet their eligibility requirements. An assessment of historic/archaeological resources is usually needed for projects that involve or are located adjacent to historic or landmark structures or within historic districts, or projects that require in-ground disturbance, unless such disturbance occurs in an area that has already been excavated. In accordance with CEQR guidelines, archaeological resources are assessed only in areas where excavation is likely and would result in new in-ground disturbance.

According to CEQR Technical Manual guidelines, impacts on historic resources are considered on those sites impacted by a proposed action and in the area surrounding the project site. The historic resources study area is therefore defined as the project site plus an approximate 400-foot radius around the site, which is typically adequate for the assessment of historic resources in terms of physical, visual, and historical relationships.

The NYC Landmarks Preservation Commission reviewed the project area and surrounding study area and determined that there are no architectural or archaeological resources on the project area and no resources of concern in the study area. Accordingly, the proposed action does not have the potential to affect any historic architectural or archaeological resources.

Urban Design and Visual Resources

The proposed action would not result in any significant adverse urban design and visual resources impacts. The proposed action would result in development that is generally compatible with the existing built environment in the surrounding study area and the proposed action would not affect views of any visual resources from publicly-accessible locations.

Hazardous Materials

The proposed action would not result in significant adverse impacts related to hazardous materials. The project area would be developed pursuant to the requirements of an (E) designation (E-427) that would be recorded as part of the proposed action (for the Northern and Southern Blocks) and the VCP (for the Southern Block). With the required remedial actions that will be carried out with the Office of Environmental Remediation (OER) and the New York State Department of Environmental Conservation (DEC) oversight as a pre-condition that must be satisfied before the project area can be redeveloped and occupied, the proposed action would not have the potential to result in significant adverse hazardous materials impacts.

Water and Sewer Infrastructure

The proposed action would not result in a significant adverse impact on water and sewer infrastructure, including water supply or wastewater and stormwater conveyance and treatment infrastructure.

Water Supply

The anticipated water usage of the proposed action is expected to total 433,771 gallons per day (gpd), which would represent less than 0.05 percent of the approximately one billion gallons of water supplied daily to New York City by DEP. Given this relatively minor incremental increase in water consumption as compared to citywide demand and that the project area is not in an area that experiences low water pressure, the proposed action is not expected to adversely affect the City's water supply or system water pressure.

Sanitary (Dry Weather) Flows

The estimated amount of sanitary sewage generated by the proposed action would be 422,754 gpd. This amount would represent approximately 0.2 percent of the average daily flow of 218 million gallons per day (mgd) at the Newtown Creek Wastewater Treatment Plant (WWTP) and would not result in an exceedance of the plant's permitted capacity of 310 mgd. Because the City's sewers are sized and designed based on the designated zoning of an area, and related population density and surface coverage characteristics, the proposed rezoning may result in development that is inconsistent with the design of the existing built sewer system. To be issued a permit to connect to the City sewer, a site-specific hydraulic analysis may be required to determine whether the existing sewer system is capable of supporting higher density development and related increases in sanitary flows. Sewer improvements and/or a new drainage plan, may also be required of the future site developer at the time of the house or site connection proposal. Therefore, the proposed action would not create a significant adverse impact on the City's sanitary sewage treatment system. In addition, per the New York City Plumbing Code (Local Law 33 of 2007), low-flow fixtures would be required to be implemented and would help to reduce sanitary flows from the proposed action.

Stormwater (Wet Weather) Flows

Compared to existing conditions, in the future with the proposed action, the combined wet weather flows from the project area would increase by 0.07 million gallons (mg) to 0.43 mg, depending on rainfall duration and intensity, over existing conditions. As a New York State Department of Environmental Conservation (NYSDEC) State Pollution Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity (GP-0-10-001) is required for any development that would involve soil disturbance of one or more acres, a Stormwater Pollution Prevention Plan (SWPPP), consisting of both temporary erosion and sediment controls and post-construction stormwater best management practices (BMPs), would be required of the future development on the project area blocks. Sewer improvements and/or a new drainage plan, may also be required to be completed at the time of the house or site connection proposal.

Accordingly, the proposed action would not result in any significant adverse water and sewer infrastructure impacts.

Energy

The proposed action would not result in a significant adverse impact on energy systems. Development facilitated by the proposed action is expected to create an increased demand on energy systems, including electricity and gas. It is estimated that With-Action development in the project area would result in an increase of approximately 159.4 million MBTUs in its annual energy use as compared to No-Action conditions. As the project area would be vacant under RWCDS No-Action conditions, this would represent the action-generated incremental increase in annual energy consumption attributable to the proposed action. This increase in annual demand would represent approximately 0.02 percent of New York City's annual energy consumption of 1 trillion MBTUs and is not expected to result in a significant adverse impact on energy systems. Moreover, any new developments resulting from the proposed action would be required to comply with the NYCECC, which governs performance requirements of heating, ventilation, and air conditioning systems, as well as the exterior building envelope of new buildings. In compliance with this code, new developments must meet standards for energy conservation, which include requirements relating to energy efficiency and combined thermal transmittance.

Transportation

The proposed actions would result in significant adverse transportation impacts related to traffic, but would not

result in significant adverse transportation impacts related to parking, transit or pedestrians.

Based on Level 1 and Level 2 screening analyses specified in the CEQR Technical Manual, detailed traffic, subway station, and pedestrian analyses are required for typical traffic peak hours, which include one hour during the weekday AM, weekday midday, weekday PM, and Saturday midday peak periods. The results of these analyses are summarized as follows:

Traffic

Traffic operations were analyzed at ten intersections (seven signalized and three unsignalized, two of which would become signalized in the No-Action condition) in the vicinity of the project area where action-generated demand would exceed 50 vehicle trips per hour in any peak hour. The traffic analysis indicates that four, three, eight, and one lane groups at four, two, six, and one intersection(s) would experience significant adverse impacts during the weekday AM, weekday midday, weekday PM, and Saturday midday peak hours, respectively. A discussion of mitigation measures for these impacts is included below (Section I. Mitigation).

Parking

The off-street accessory parking capacity required for the project area under the proposed action would be sufficient to accommodate all action-generated parking demand, and therefore significant demand for on-street and public off-street parking is not anticipated. Consequently, no significant adverse impacts to on-street or public off-street parking would be expected to result from the proposed action as per CEQR Technical Manual criteria.

Transit

The proposed action is expected to generate travel demand at two subway stations; the Lorimer Street subway station on the BMT Jamaica Line served by the J and M trains and the Flushing Avenue subway station on the IND Crosstown Line served by the G train. The Flushing Avenue station would process less than 200 action-generated trips in all peak hours and therefore the proposed action would not have the potential result in any significant adverse subway impacts at that station. The proposed action would add approximately 308 and 355 subway trips per hour (in and out combined) to the Lorimer Street subway station during the weekday AM and PM peak hours, respectively. Approximately 207 and 143 passengers would use the Manhattan-bound platform during the weekday AM and PM peak hours, respectively, and 101 and 212 passengers would use the Queens-bound platform during the weekday AM and PM peak hours, respectively. These trips would all use stairways located at the corner of Wallabout Street and Broadway at the east end of the station. No significant adverse impacts would be expected to result from the proposed action as per CEQR Technical Manual criteria.

A total of five bus routes operate in the vicinity of the project area (the B43, B44, B46, B48, and B57). Total peak hour project generated bus demand is not expected to exceed the 50 bus trips per hour per direction threshold on any route as per CEQR Technical Manual criteria. Therefore, significant adverse impacts to bus routes would not be expected to result from the proposed action.

Pedestrians

Detailed pedestrian analyses were conducted at a total of eight sidewalks, five crosswalks, and 14 corner areas where action-generated pedestrian demand, including both walk-only and transit trips, is expected to exceed the 200 pedestrian trips per hour threshold during the weekday AM, weekday midday, weekday PM, and Saturday midday peak hours. All analyzed pedestrian elements would operate at an uncongested LOS B or better in all peak hours, with the exception of the south crosswalk at Wallabout Street and Harrison Avenue, which would operate at an acceptable LOS C in the With-Action condition, and therefore no significant adverse pedestrian impacts would result from the proposed action.

Air Quality

The proposed action would not result in any significant adverse air quality impacts on sensitive uses in the surrounding community, and would not be adversely affected by existing sources of air emissions in the project area and surrounding vicinity.

The stationary source analyses determined that there would be no potential significant adverse air quality impacts from fossil fuel-fired heat and hot water systems at the projected and potential development sites. An (E) designation (E-427) would be mapped on the project area tax lots as part of the zoning proposal to ensure the developments would not result in any significant air quality impacts from fossil fuel-fired heat and hot water systems emissions due to individual or groups of development sites. These would include fuel type restrictions for all buildings, requiring the use of natural gas-fired boilers, and stack location restrictions for some buildings.

As the proposed action would not exceed the analysis screening thresholds for mobile sources and industrial sources, detailed analysis is not required and the proposed action would not result in significant adverse impacts related to those concerns.

The parking facilities assumed to be developed as a result of the proposed action would not result in any significant adverse air quality impacts.

Greenhouse Gas Emissions

The proposed action would not result in significant adverse impacts related to greenhouse gas emissions.

It is estimated that the proposed action would generate approximately 11,842 total metric tons of carbon dioxide equivalent (CO₂e) emissions annually, including approximately 8,478 metric tons of CO₂e emissions from building operations and 3,364 metric tons of CO₂e emissions from mobile sources. This represents less than 0.03 percent of the City's overall 2014 GHG emissions of approximately 49.09 million metric tons. It should also be noted that the estimated GHG emissions conservatively do not account for any energy efficiency measures that may be implemented beyond what is required by City's Energy Code. Accordingly, the proposed action would not result in significant adverse GHG emissions impacts.

Noise

The proposed actions would not result in significant adverse noise impacts.

Noise from the increased traffic volumes generated by the proposed action would not cause significant adverse noise impacts as the relative increases in noise levels would fall below the applicable CEQR Technical Manual significant adverse impact threshold (3.0 dBA).

To ensure acceptable interior noise levels for the proposed project, noise attenuation specifications would be mandated through the assignment of an (E) designation (E-427) assigned to the tax lots that make up the project area. The text for the (E) designation E-427 is as follows:

Block: 2249, Lots: 23, 37, 41 and 122

To ensure an acceptable interior noise environment, future Residential/Commercial uses must provide a closed window condition with a minimum of 28 dBA window/wall attenuation on any eastern-facing façade located within 100 feet of Harrison Avenue to maintain an interior noise level of 45 dBA. To maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

Block: 2265, Lot: 14

To ensure an acceptable interior noise environment, future Residential/Commercial uses must provide a closed window condition with a minimum of 31 dBA window/wall attenuation on any western-facing façade along Union Avenue, and located within 118 feet of Flushing Avenue; and on any southern-facing façade along Gerry Street, and located within 155 feet of Flushing Avenue. A 28 dBA window/wall attenuation is required on all southern and eastern facades. A 28 dBA window/wall attenuation is required on northern façades located within 100 feet of Harrison Avenue. To maintain a closed window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

With implementation of the attenuation levels required pursuant to the (E) designation, the proposed project would provide sufficient attenuation to achieve the CEQR Technical Manual interior noise level guidelines of 45 dBA or lower for residential and community facility uses and 50 dBA or lower for commercial uses. Therefore, the proposed action would not result in any significant adverse noise impacts.

Public Health

The proposed action would not result in significant adverse public health impacts.

The proposed action, which would include the implementation of an (E) designation (E-427) related to hazardous materials, air quality, noise and which would be subject to the existing Voluntary Cleanup Agreement (VCA) controls on the project area's Southern Block (Block 2269) under the Voluntary Cleanup Program (VCP), is not expected to result in significant adverse impacts in the following technical areas that contribute to public health: air quality, operational noise, water quality, hazardous materials, or construction.

Neighborhood Character

The proposed action would not result in significant adverse effects related to neighborhood character.

A preliminary assessment of the effects of the proposed action, identified that the neighborhood character study area is defined by a few key components, including its mix of land uses, building types, and socioeconomic trends; varying street patterns; and its location in an urbanized area with subway stations. As described in the EIS, the With-Action Condition would not result in significant adverse impacts in the areas of land use, zoning, and public policy; socioeconomic conditions; open space; historic and cultural resources; shadows; urban design and visual resources; or noise. The action-generated significant adverse transportation impacts would not affect any defining feature of neighborhood character. A combination of moderate effects of the proposed action would not create a significant adverse neighborhood character impact.

The proposed action would facilitate the development of apartment buildings with ground floor retail uses and upper floor residences with midblock publicly accessible open space on two blocks that currently do not contain any permanent structures and are vacant apart from temporary vehicle and equipment storage uses. For analysis purposes, it was assumed the project area would remain vacant absent the proposed action. As described in the EIS, the action-generated development would complement the area's trend of predominantly residential development and neighborhood commercial and community facilities replacing vacant and underutilized industrial properties that has occurred in recent years and is projected to continue under No-Action conditions. Unlike large-scale mid-twentieth century tower-in-a-park developments found in parts of the study area, more recent developments in the study area have generally been high lot coverage streetwall buildings reintroducing development more contextual with earlier development history. The With-Action Condition's market rate housing would introduce a residential population whose average income would be higher than the overall average income in the socioeconomic conditions study area, but similar to the average income of the new population expected to reside in the area's market rate housing in the future without the proposed action. The affordable housing units added by the With-Action Condition would maintain a diverse demographic composition within the study area and would generally complement existing rent-protected units and affordable housing that is expected to be constructed at other sites under No-Action conditions. The proposed action would also provide a publicly-accessible open space in an area where there has not been a commensurate growth in such resources comparable to the new residential development.

Construction

The proposed action would not result in significant adverse construction impacts, including transportation, air quality and noise impacts. The proposed action would result in temporary disruptions including construction related traffic, dust, noise, or mobile source emissions. These effects would be temporary, as the duration of construction activities for the proposed development are not expected to exceed 24 months and construction activity generally would be limited to the hours of 7 AM to 6 PM on weekdays consistent with New York City construction regulations. The preliminary assessment provides a quarterly projection of average construction workers, construction worker vehicles, and construction trucks and provides preliminary assessments of the effects of project construction on transportation, air quality, noise, historic and cultural resources, hazardous

materials and natural resources. As the duration of action-generated construction would not exceed 24 months, no significant adverse construction impacts would occur.

As memorialized in the Restrictive Declaration, the proposed action includes a PCRE related to construction noise. To minimize noise disruption on the Beginning With Children Charter School playground, the Southern Block will have a minimum 12-foot barrier at the southern perimeter of the block facing the playground. Where logistics allow, construction equipment and trucks would be located away from the playground to the extent practicable.

I. MITIGATION

The proposed action would result in significant adverse community facilities impacts related to intermediate schools, and transportation impacts related to traffic. Mitigation measures are identified below.

Community Facilities and Services

Intermediate Schools

The proposed action would result in the introduction of approximately 138 additional intermediate school students. The study area utilization would exceed the 100 percent utilization threshold, increasing from 135.9 percent in the No-Action Condition to 142.0 percent in the With-Action Condition. The utilization rate would be approximately 6.2 percentage points higher compared to the No-Action condition. This constitutes a significant adverse impact on intermediate schools in sub-district 1 of community school district (CSD) 14.

The 138 students generated by the proposed action would increase the shortfall of available seats from 804 to 942. The difference between the CEQR threshold for significance and the With-Action Condition results in a maximum shortfall of 28 seats.

The analysis identified that the significant adverse impact to intermediate schools would occur upon occupancy of 921 new DUs, i.e., the number of units introduced into the study area that are projected to increase the collective utilization rate of the public intermediate schools in the study area in excess of 5 percent between the No-Action and With-Action conditions (from 135.9 percent to 142.0 percent); in order to fully mitigate the impact, intermediate school capacity in the study area would need to increase by 28 seats, i.e., the number of seats necessary to reduce the collective utilization rate of public intermediate schools in the study area to no greater than a 5 percent increase over the No-Action condition.

As detailed in the Restrictive Declaration, in order to fully mitigate this impact, the Declarant, i.e., the applicant or its successor(s) to fee title in the project area, would be required to either provide funding to the DOE/SCA or perform work to increase the intermediate school capacity by 28 seats at school(s) in the school study area where such capacity increase is warranted (as determined by DOE/SCA). Before building permits resulting cumulatively in the construction of 921 or more DUs in the project may be applied for by the applicant or issued by DOB, either funding from the applicant must be accepted by DOE/SCA or an agreement among these parties regarding the performance of work to increase capacity be executed. Furthermore, before the applicant can apply for or DOB can issue a temporary certificate of occupancy for development resulting cumulatively in 921 or more DUs, either funding from the applicant must be accepted by DOE/SCA or work to increase capacity completed to the satisfaction of DOE/SCA. The RD also specifies that the offer of school mitigation by the applicant must be accepted within a prescribed timeframe and process or the applicant would have no further school mitigation obligation.

Transportation

Traffic

The proposed action would result in significant adverse transportation impacts related to traffic. The mitigation measures described below would fully mitigate the transportation impact.

The proposed action would result in significant adverse impacts at seven study area intersections during one or more analyzed peak hours; specifically, four lane groups at four intersections during the weekday AM peak hour; three lane groups at two intersections during the weekday midday peak hour; eight lane groups at six intersections during the weekday PM peak hour; and one lane group at one intersection during the Saturday midday peak hour. Implementation of traffic engineering improvements, such as signal timing changes or modifications to curbside parking regulations, would provide mitigation for the anticipated traffic impacts. Implementation of the recommended traffic engineering improvements is subject to review and approval by the New York City Department of Transportation (DOT) prior to implementation. If, prior to implementation, DOT determines that an identified mitigation measure is infeasible, an alternative and equivalent mitigation measure will be identified, if possible. Table 4 shows that significant adverse impacts would be fully mitigated at all analyzed lane groups and intersections during all analyzed peak hours.

Table 4, Summary of Lane Groups/Intersections with Significant Adverse Traffic Impacts

| Peak Hour | Lane Groups/ Intersections Analyzed | Lane Groups/ Intersections With No Significant Impacts | Lane Groups/ Intersections With Significant Impacts | Mitigated Lane Groups/ Intersections | Unmitigated Lane Groups/ Intersections |
|-----------------|-------------------------------------|--|---|--------------------------------------|--|
| Weekday AM | 31/10 | 27/6 | 4/4 | 4/4 | 0/0 |
| Weekday Midday | 29/10 | 26/8 | 3/2 | 3/2 | 0/0 |
| Weekday PM | 31/10 | 23/4 | 8/6 | 8/6 | 0/0 |
| Saturday Midday | 30/10 | 29/9 | 1/1 | 1/1 | 0/0 |

H. ALTERNATIVES

As described in the *CEQR Technical Manual*, alternatives selected for consideration in an environmental impact statement are generally those that are feasible and have the potential to reduce, eliminate, or avoid adverse impacts of a proposed project while meeting some or all of the goals and objectives of the project.

The EIS considered the following alternatives to the proposed action:

- A No-Action Alternative, which is mandated by CEQR and the State Environmental Quality Review Act (SEQRA) and is intended to provide the lead and involved agencies with an assessment of the expected environmental impacts of no action on their part.
- A Lesser Density Alternative, which would reduce the development density permitted in the project area, by rezoning the project area to R7A with a C2-4 commercial overlay covering the entirety of both blocks. As with the proposed action and consistent with City policy, a zoning text amendment would designate the project area as a Mandatory Inclusionary Housing Area (MIHA).
- A No Significant Adverse Schools Impacts Alternative, which would eliminate the significant adverse schools impacts by reducing the number of residential units.

No-Action Alternative

The No-Action Alternative examined future project site conditions, but assumed the absence of the proposed action (i.e., none of the discretionary approvals proposed as part of the proposed action would be adopted). Under the No-Action Alternative, the project area’s existing M3-1 zoning would remain and it was assumed

that the project area would be unoccupied and there would continue to be no buildings in the area. The technical chapters of the EIS have also described the No-Action Alternative as “the Future Without the Proposed Action.”

The significant adverse impacts anticipated for the proposed action would not occur under the No-Action Alternative. However, the No-Action Alternative would not meet the goals of the proposed action as stated by the applicant. The benefits expected to result from the proposed action—including facilitating a mixed-use, mixed-income development which would include a publicly-accessible open space on a two-block area currently only used for temporary short-term activities—would not be realized under this alternative. The No-Action Alternative would fall short of the objectives of the proposed action and, unlike the proposed action, would not contribute to the City’s goal of increasing the supply of affordable housing.

Lesser Density Alternative

A Lesser Density Alternative to the proposed action was developed to determine whether development of the project area with a lower density would eliminate or reduce any of the significant adverse impacts identified under the proposed action. Under the Lesser Density Alternative, the project area would be rezoned R7A, with a C2-4 commercial overlay mapped across the entire area and, as with the proposed action, the rezoning area would be designated as a MIHA. With this zoning designation, it is projected that the project area would be redeveloped with 1,036,552 gsf, consisting of residential, retail, and accessory parking space, the same mix of buildings uses anticipated under the proposed action. The development program would include 862 DUs, of which 259 DUs would be affordable housing units, 64,807 gsf of local retail, and 365 required accessory parking spaces. The development would be built to the maximum permitted floor area ratio (FAR) of 4.6 and building heights would reach the maximum permitted height of 95 feet. Compared to the proposed action, the Lesser Density Alternative would have 25 percent fewer residential units, with 85 fewer affordable housing DUs and 285 fewer DUs overall, and 15 percent fewer required accessory parking spaces, with 62 fewer spaces. The amount of retail space under the Lesser Density Alternative is projected to be the same as the proposed action. However, unlike the proposed action, under the Lesser Density Alternative the development would not include a 26,000-sf midblock publicly-accessible open space.

Conditions with the Lesser Density Alternative, as compared to the probable impacts of the proposed action, are summarized below. As under the proposed action, the Lesser Density Alternative would not result in significant adverse impacts in the areas of land use, zoning, and public policy; socioeconomic conditions; community facilities and services (high schools, health care, publicly-funded day care, libraries, and fire and police protection services); open space; shadows; urban design and visual resources; natural resources; hazardous materials; water and sewer infrastructure; energy; transportation (parking, transit, and pedestrians); air quality; greenhouse gas emissions and climate change; noise; public health; neighborhood character; and construction. Also as under the proposed action, the Lesser Density Alternative would result in significant adverse impacts related transportation (traffic). As under the proposed action, all of the significant adverse impacts under the Lesser Density Alternative would be mitigatable. Unlike the proposed action, the Lesser Density Alternative would not result in a significant adverse intermediate school impact. In the Applicant’s opinion, the Lesser Density Alternative would be less successful at accomplishing the proposed action’s goals of providing new housing, would not include a publicly-accessible open space, and would not create as much as affordable housing that would advance the City’s Housing New York plan.

No Significant Adverse Schools Impacts Alternative

Under the proposed action, intermediate schools in the study area would operate at 142.0 percent of capacity, approximately 6.2 percentage points higher than under No-Action. As such, the proposed action would result in an over utilization of intermediate school facilities and a 5 percentage point or greater increase in the utilization rate over No-Action conditions. The proposed action would not result in significant adverse impacts on elementary and high schools or other type of community facilities and services considered under CEQR.

The purpose of the No Significant Adverse Schools Impacts Alternative is to determine if there is a practicable alternative to the proposed action that could eliminate the intermediate schools impacts by reducing the number of residential units developed in the project area.

To eliminate the intermediate school impact, the number of residential units would have to be reduced by approximately 19.8 percent from 1,147 DUs to 920 DUs. A development of this size would generate 110 intermediate school students, based on rates provided for Brooklyn in the *CEQR Technical Manual*, as compared to 138 intermediate school students generated by the proposed action. With this reduction, intermediate schools in the study area would operate at 140.8 percent of capacity, approximately 4.9 percentage points higher than under No-Action. As such, under this alternative the increase in school utilization of intermediate schools would be below the 5-percent increase impact threshold and therefore the proposed action's significant adverse schools impact would be eliminated.

The reduction in density required for this alternative would be similar, but of a slightly lesser magnitude than that of the Lesser Density Alternative described above, which would include 862 DUs. If, like the proposed action and the Lesser Density Alternative, the No Significant Adverse Schools Impacts would also include 64,807 gsf of local retail, then it would have a built FAR of approximately 4.88, which is 6 percent higher than the 4.6 FAR permitted for R7A (MIHA) districts considered in the Lesser Density Alternative and 19 percent lower than the weighted average 6.0 FAR permitted for the proposed action. As with the Lesser Density Alternative, the No Significant Adverse Schools Impacts Alternative would not include the 26,000-sf publicly-accessible open space that would be part of the proposed action. This alternative may be feasible, however, similar to the Lesser Density Alternative, in the Applicant's opinion, it would not provide the same level of benefits as the proposed project as it would result in fewer affordable housing units and would not provide a 26,000-sf publicly-accessible open space in a growing residential area with relatively low open space ratios.

With 920 DUs, the No Significant Adverse Schools Impacts Alternative would generate a residential population of 3,266 residents, slightly higher than the 3,060 residents generated by the 862-DU Lesser Density Alternative but lower than the 4,072 residents generated by the 1,147-DU proposed action. Given its size relative to the Lesser Density Alternative, the environmental effects of the No Significant Adverse Schools Impacts Alternative would be generally similar to the Lesser Density Alternative, outlined above, with significant adverse impacts anticipated for traffic and no significant adverse impacts anticipated for other technical areas.

I. UNAVOIDABLE ADVERSE IMPACTS

The proposed action is anticipated to result in a significant adverse impact on intermediate schools in Sub-district 1 of Community School District 14. The proposed action would result in the introduction of approximately 138 additional intermediate school students and the utilization rate would be approximately 6.2 percentage points higher compared to the No-Action condition, increasing from 135.9 percent to 142.0 percent. Therefore, pursuant to CEQR guidance, the proposed action would result in a significant adverse impact to study area public intermediate schools requiring consideration of mitigation.

Measures to fully mitigate this impact, which are binding pursuant to a Restrictive Declaration (RD) recorded against the project area, have been identified and would be the responsibility of the applicant or its successor(s) in fee title to the project area.

The traffic analysis indicates that four, three, eight, and one lane groups at four, two, six, and one intersection(s) would experience significant adverse impacts during the weekday AM, weekday midday, weekday PM, and Saturday midday peak hours, respectively. Implementation of traffic engineering improvements, such as signal timing changes or modifications to curbside parking regulations, would fully mitigate the anticipated traffic impacts. Implementation of the recommended traffic engineering improvements is subject to review and approval by the New York City Department of Transportation (DOT) prior to implementation. If, prior to implementation, DOT determines that an identified mitigation measure is

infeasible, an alternative and equivalent mitigation measure will be identified, if possible. However, if measures to fully mitigate any or all of the impacts are not found to be practicable and feasible, then such traffic impacts would be considered an unavoidable adverse impact of the proposed action.

J. GROWTH-INDUCING ASPECTS OF THE PROPOSED ACTION

The term “growth-inducing aspects” generally refers to “secondary” impacts of a proposed action that trigger further development outside the directly affected area. The *CEQR Technical Manual* indicates that an analysis of the growth-inducing aspects of a proposed action is appropriate when the project: (1) adds substantial new land use, residents, or employment that could induce additional development of a similar kind or of supported uses, such as retail establishments to serve new residential uses; and/or (2) introduces or greatly expands infrastructure capacity (e.g., sewers, central water supply).

The projected increase in residential population is likely to increase the demand for neighborhood services, ranging from community facilities to local retail and services. It is anticipated that the consumer needs of the new residential and worker populations would largely be satisfied by a combination of the new retail uses provided by the With-Action condition and the existing and planned retail and community facility uses in the surrounding area. The With-Action condition could also lead to additional growth in the City and State economies, primarily due to employment and fiscal effects during construction on the project site and operation of the action-generated buildings after their completion. However, this secondary growth is not expected to result in any significant impacts in any particular area or at any particular site.

The proposed action would result in more intensive land uses in the project area, which is currently vacant apart from temporary uses such as temporary equipment/vehicle storage. However, it is not anticipated that the proposed action would generate significant secondary impacts that would result in substantial new development in nearby areas.

Overall, the proposed action would not induce significant additional growth beyond that identified and analyzed in the EIS.

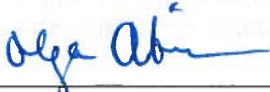

K. IRREVERSIBLE AND IRRETRIEVABLE COMMITMENTS OF RESOURCES

Resources, both natural and man-made, would be expended in the construction and operation of the With-Action scenario buildings. These resources include the building materials used in construction; energy in the form of gas and electricity consumed during construction and operation by various mechanical and processing systems; and the human effort (time and labor) required to develop, construct, and operate various components. These are considered irretrievably committed because their reuse for some other purpose would be highly unlikely.

The With-Action scenario also constitutes a long-term commitment of land resources, thereby rendering land use for other purposes highly unlikely in the foreseeable future. However, the land use change that would occur as a result of the proposed action would be compatible with existing conditions and trends in the area as a whole and would be accessible to the project area’s existing infrastructure, public facilities, and residential amenities. The project area does not possess any natural resource values and has been previously developed.

In addition, the public services provided in connection with the With-Action scenario (e.g., police and fire protection, public education, open space, and other City resources) constitute resource commitments that might otherwise be used for other programs or projects. The With-Action scenario would reintegrate the project area into the neighborhood fabric, enliven the area, produce economic growth, and increase fiscal revenues.

The commitments of resources and materials are weighed against the benefits of the With-Action scenario. The proposed action would result in a mixed-use development project on two large blocks that are currently not in active use, apart from short-term temporary activities. Additionally, the proposed action would facilitate a mixed-use development with a significant amount of affordable residential units, as well as local retail uses and publicly-accessible open space.*
