Summary

MapPLUTO contains extensive land use and geographic data at the tax lot level. MapPLUTO has over seventy data fields containing three basic types of data: tax lot characteristics, building characteristics, and geographic/political/administrative districts. Version 18v2.1 uses the same source files as version 18v2 Beta, correcting an error in the BldgArea field for ~7000 condominium lots. This version is clipped to the shoreline and does not contain lots completely or partially underwater.

Description

This dataset represents a compilation of data from various government agencies throughout the City of New York. The underlying geography is derived from the Tax Lot Polygon feature class that is part of the Department of Finance's Digital Tax Map (DTM). The tax lots have been clipped to the shoreline, as defined by NYCMAP planimetric features. The attribute information is from the Department of City Planning's PLUTO data. The attribute data pertains to tax lot and building characteristics and geographic, political and administrative information for each tax lot in New York City. The Tax Lot Polygon feature class and PLUTO are derived from different sources. As a result, some PLUTO records do not have a corresponding tax lot in the Tax Lot polygon feature class at the time of release. These records are included in a separate non-geographic PLUTO Only table. There are a number of reasons why there can be a tax lot in PLUTO that does not match the DTM; the most common reason is that the various source files are maintained by different departments and divisions with varying update cycles and criteria for adding and removing records. The attribute definitions for the PLUTO Only table are the same as those for MapPLUTO. DCP Mapping Lots includes some features that are not on the tax maps. They have been added by DCP for cartographic purposes. They include street center 'malls', traffic islands and some built streets through parks. These features have very few associated attributes.

The methodology used to create PLUTO has changed with version 18v2 Beta. Most of the processing has been rewritten to run in PostgreSQL and the code is available on [GitHub](#). Every effort has been made to use the same data sources and calculations for PLUTO fields. Any known changes are documented in the PLUTO Readme Document Appendix. To report problems, please open a [GitHub issue](#) or email DCPOpendata@planning.nyc.gov.

Version 18v2.1 uses the same source files as version 18v2 Beta, correcting an error in the BldgArea field for ~7000 condominium lots.

The borough in which the tax lot is located. Two portions of the city, Marble Hill and Rikers Island, are each legally located in one borough but are serviced by different boroughs. The BOROUGH codes associated with these areas are the boroughs they are legally located in. Specifically, Marble Hill is serviced by the Bronx but is legally located in Manhattan and has a Manhattan BOROUGH code. Rikers Island has a Bronx BOROUGH code because it is legally located in the Bronx although it is serviced by Queens.

FIELD DESCRIPTION

The number of the tax lot. This field contains a one to four-digit tax lot number. Each tax lot is unique within a tax block (see BLOCK).

Special Handling for condominiums:

In a condominium complex, each condominium unit is a separate tax lot and has its own lot number. In a residential condominium, the condominium units are generally the individual apartments; in a commercial condominium, the units might be floors in an office building, individual retail shops, or blocks of office space. These unit lot numbers have values between 1001 - 6999.

Each unit tax lot has an associated billing lot number, with values between 7501 - 7599. Lots in a condominium complex on the same block will have the same billing lot

number. To max condominium information more compatible with parcel information, the Department of City Planning aggregates condominium unit tax lot information to the billing lot. For example, if a residential condominium building contains 20 units, the Department of Finance will assign 20 unit lot numbers and each of these lot numbers will have the same billing lot number. PLUTO will contain one record with the billing lot number and RESIDENTIAL UNITS will be set to 20.

If the Department of Finance has not yet assigned a billing lot number to the condominium complex, PLUTO uses the lowest unit lot number within the complex.

Note on MapPLUTO: The Department of Finance Digital Tax Map (DTM) contains the geography of the base lot for condominiums. The base lot is also called the "Formerly Known As" or FKA lot. For most condominium complexes, there is one base lot per billing lot. In using the DTM to create MapPLUTO, DCP replaces the base lot number with the billing lot number. If there is more than one base lot with the same billing lot number, DCP merges the base lots to create a geography for the billing lot.

FIELD DESCRIPTION

The community district (CD) or joint interest area (JIA) for the tax lot. The city is divided into 59 community districts and 12 joint interest areas, which are large parks or airports that are not considered part of any community district.

This field consists of three digits, the first of which is the borough code (see BORO CODE). The second and third digits are the community district or joint interest area number, whichever is applicable.

Two portions of the city, Marble Hill and Rikers Island, are legally located in one borough, but serviced by a different borough. The COMMUNITY DISTRICT associated with these areas is the community district by which they are serviced.

Marble Hill is legally located in Manhattan, but is serviced by the Bronx and is divided between community districts 207 and 208. Rikers Island is legally located in the Bronx, but is serviced by Queens and is part of community district 401.

COMMUNITY DISTRICT contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, COMMUNITY DISTRICT is calculated spatially using the tax lot's XY COORDINATES and DCP's Administrative District Base Map files.

FIELD DESCRIPTION

The 2010 US census tract in which the tax lot is located. This field contains a one to four-digit census tract number, sometimes with a decimal point and a two-digit suffix.

2010 census tracts are geographic areas defined by the U.S. Census Bureau for the 2010 Census. Census tracts are comprised of census blocks. If a tax lot is split by a census tract boundary, only one census tract is retained.

Each census tract is unique within a borough (see Borough).

Examples:

Census Tract 203.01

Census Tract 23

CENSUS TRACT contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, CENSUS TRACT is calculated spatially using the tax lot's XY COORDINATES and DCP's Administrative District Base Map files.

FIELD DESCRIPTION

The health area in which the tax lot is located.

Health areas were originally created in the 1920s for the purpose of reporting and statistical analysis of public health data. They were based on census tracts and created to be areas of equal population. Health areas are contained within health center districts.

This field contains a four-digit health area number, which is preceded with leading zeros when the health area is less than four digits. There is an implied decimal point after the first two digits. If a tax lot is split by a health area boundary, only one health area is retained.

HEALTH AREA contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, HEALTH AREA is calculated spatially using the tax lot's XY COORDINATES and DCP's Administrative District Base Map files.

FIELD DESCRIPTION

An address for the tax lot.

Tax lots may be assigned a single house number on a street, a range of house numbers on a street, or addresses on multiple streets. ADDRESS contains the address in RPAD, using the low number when there is a range of house numbers. Some tax lots, such as vacant lots or parks, have only a street name and no house number.

The general format is house number or low house number, if there is a house number range, and a space followed by a street name

A complete list of the addresses assigned to a tax lot is available through Geosupport or by downloading the Property Address Directory (PAD) from Bytes of the Big Apple™.

Most house numbers in Queens contain a hyphen.

FIELD DESCRIPTION

The zoning district classification of the tax lot. Under the Zoning Resolution, the map of

New York City is generally apportioned into three basic zoning district categories: Residence (R), Commercial (C) and Manufacturing (M), which are further divided into a range of individual zoning districts, denoted by different number and letter combinations. In general, the higher the number immediately following the first letter (R, C or M), the higher the density or intensity of land use permitted.

If the tax lot is divided by a zoning boundary line, ZONING DISTRICT 1 represents the zoning district classification occupying the greatest percentage of the tax lot's area. Only zoning districts that cover at least 10% of a tax lot's area are included.

For example: Tax lot 98 is divided by a zoning boundary line into part A and part B. Part A, the largest portion of the lot, is in a commercial zoning district, while part B is in a residential zoning district. ZONING DISTRICT 1 will contain the commercial zoning district associated with part A.

Tax lots that intersect with areas designated in NYC Zoning Districts as PARK, BALL FIELD, PLAYGROUND, and PUBLIC SPACE are assigned a single value of PARK in PLUTO. The NYC Zoning Districts do not constitute a definitive list of parks in the city. Lots designated as PARK should not be used to calculate the amount of open space in an area.

See SPLIT BOUNDARY INDICATOR to determine if the tax lot is divided.

FIELD DESCRIPTION

A code describing the major use of structures on the tax lot.

Except as described below, BUILDING CLASS is taken from RPAD without modification.

For condominiums, RPAD contains the building class for each unit lot. When merging this data into a single record for the billing lot, DCP creates several mixed-use building classes (RC, RD, RI, RM, RX, and RZ). These are assigned as follows:

- If all unit lots have the same building class, that building class is used for the billing lot.
- RPAD building class types are grouped as follows:
 - o Commercial - R5, R7, R8, RA, RB, RH, and RK
 - o Residential - R1, R2, R3, R4, R6, and RR
 - o Mixed commercial and residential - R9
 - o Industrial/warehouse - RW
- If the unit lots are a mixture of commercial building types, BUILDING CLASS = RC.
- If the unit lots are a mixture of residential building types, BUILDING CLASS = RD.
- If the unit lots are a mixture of commercial and residential building types, BUILDING CLASS = RM.
- If the unit lots are a mixture of commercial and industrial/warehouse building types, BUILDING CLASS = RI.
- If the unit lots are a mixture of commercial, residential, and industrial/warehouse building types, BUILDING CLASS = RX.
- If the unit lots are a mixture of residential and industrial/warehouse building types, BUILDING CLASS = RZ.

- When unit lots with a building class of RG (Indoor Parking), RP (Outdoor Parking), RS (Non-Business Storage Space), or RT (Terraces/Gardens/Cabanas) have the same billing lot as another building class, their building class is ignored. For example, if the billing lot has unit lots with a building class of R4 (Residential Unit in Elevator Bldg) and RG (Indoor Parking), BUILDING CLASS = R4.

Q0 is assigned by DCP to tax lots with an RPAD building class starting with "V" that are identified in the NYC GIS Zoning Database as PARK, BALL FIELD, PLAYGROUND, or PUBLIC SPACE.

RPAD contains two building classes for some tax lots, with one of the building classes being Z7 (Easement). BUILDING CLASS is only set to Z7 when it is the only RPAD building class for the tax lot.

See Appendix C - Building Class Codes for valid values

FIELD DESCRIPTION

A code indicating type of ownership for the tax lot.

Only one data source is used per tax lot.

The COLP file, which contains more accurate and specific type of city ownership data than RPAD, is used when data is available for that lot. Codes C, M, O, P are derived from COLP.

If the tax lot is not in COLP, RPAD is checked to see if the lot's EXEMPT TOTAL VALUE equals its ASSESSED TOTAL VALUE. If the two values are the same, the lot is given a code of X. Otherwise the tax lot is not given any TYPE OF OWNERSHIP CODE.

OWNER NAME should be referenced to verify type of ownership, particularly when it's important to distinguish between state, federal, and public authority ownership.

FIELD DESCRIPTION

Total area of the tax lot, expressed in square feet rounded to the nearest integer.

LOT AREA contains street beds when the tax lot contains "paper streets" i.e., street

mapped but not built.

If the tax lot is not an irregularly shaped lot (see IRREGULAR LOT CODE) the Department of Finance calculates the LOT AREA by multiplying the LOT FRONTAGE by the LOT DEPTH. If the tax lot is irregularly shaped, DOF calculates the LOT AREA from the Digital Tax Map.

If the LOT AREA is zero, data is not available for the tax lot.

FIELD BldgArea ►

- * ALIAS BldgArea
- * DATA TYPE Integer
- * WIDTH 4
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

The total gross area in square feet, except for condominium measurements which come from the Condo Declaration and are net square footage not gross.

TOTAL BUILDING FLOOR AREA is populated in the following order of preference:

1. Gross floor area from RPAD
2. Gross floor area from CAMA
3. Calculated from the RPAD building dimensions and number of stories for the primary building on the lot. TOTAL BUILDING FLOOR AREA calculated by this method will not include floor area for any other buildings on the lot.
4. TOTAL BUILDING FLOOR AREA is set to zero if the building class starts with "V" and the number of buildings is zero.

See TOTAL BUILDING FLOOR AREA SOURCE CODE to determine which method was used.

If TOTAL BUILDING FLOOR AREA SOURCE CODE has a value of 2 (RPAD) or 7 (CAMA), the TOTAL BUILDING FLOOR AREA is based on gross building area, also known as total gross square feet. For these data sources, the TOTAL BUILDING FLOOR AREA is for all of the structures on the tax lot, including stairwells, halls, elevator shafts, attics and extensions such as attached garages. Measurements are based on exterior dimensions and take into account setbacks.

If the TOTAL BUILDING FLOOR AREA SOURCE CODE field has a value of 5, the floor area was calculated from the DOF RPAD Master File using the building dimensions and number of stories for ONLY the largest structure on the tax lot.

In all cases, this is a rough estimate of the gross building floor area and does not necessarily take into account all the criteria for calculating floor area as defined in section 12-10 of the Zoning Resolution.

Roof areas used for parking/garden/playground are not included in the floor area.

If TOTAL BUILDING FLOOR AREA SOURCE CODE is 2, TOTAL BUILDING FLOOR AREA contains the common area for condominiums.

If FLOOR AREA, TOTAL BUILDING SOURCE CODE is 7, TOTAL BUILDING FLOOR AREA does not include below grade finished basements.

If the basement in a one, two or three family structure is above grade and finished, its square footage is included in TOTAL BUILDING FLOOR AREA.

A TOTAL BUILDING FLOOR AREA of zero can mean it is either not available or not applicable. If NUMBER OF BUILDINGS is greater than zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not available. If NUMBER OF BUILDINGS is zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not applicable.

FIELD DESCRIPTION

An estimate of the exterior dimensions of the portion of the structure(s) allocated for commercial use.

Originally square footage in CAMA came from sketches, but, for both new construction and alterations, it now comes from site visits.

Basement square footage may be included in COMMERCIAL FLOOR AREA if the commercial buildings meets two of the three following criteria:

- Finished
- Active
- Publicly accessible

For condominiums, COMMERCIAL FLOOR AREA is the sum of the commercial floor area for condominium lots with the same billing lot. COMMERCIAL FLOOR AREA does not contain the condominium's common area.

A COMMERCIAL FLOOR AREA of zero can mean it is either not available or not applicable.

An update to the floor area is triggered by the issuance of a Department of Buildings permit, feedback from the public, or site visits by Department of Finance assessors.

The sum of the various floor area fields does not always equal TOTAL BUILDING FLOOR AREA.

FIELD DESCRIPTION

A code indicating the location of the tax lot in relationship to another tax lot and/or the water.

CAMA may contain multiple lot types for a tax lot. For instance, a lot may be both a corner lot and waterfront lot. DCP assigns LOT TYPE by taking the lowest CAMA lot type for the tax lot, with the exception of LOT TYPE 5, which is only assigned if the lot has no other lot types in CAMA.

DESCRIPTION SOURCE

VALUE 1

DESCRIPTION Block Assemblage - A tax lot which encompasses an entire block.

VALUE 2

DESCRIPTION Waterfront - A tax lot bordering on a body of water. Waterfront lots may contain a small amount of submerged land.

VALUE 3

DESCRIPTION Corner - A tax lot bordering on two intersecting streets

VALUE 4

DESCRIPTION Through - A tax lot which connects two streets, with frontage on both streets. Note that a lot with two frontages is not necessarily a through lot. For example, an L-shaped lot with two frontages would be coded as an Inside Lot (5).

VALUE 5

DESCRIPTION Inside - A tax lot with frontage on only one street. This value comes from CAMA, but is only assigned in PLUTO if CAMA has no other lot types for the tax lot.

FIELD YearAlter2 ►

- * ALIAS YearAlter2
- * DATA TYPE SmallInteger
- * WIDTH 2
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

If a building has only been altered once, this field is blank.

If a building has been altered more than once, YEAR ALTERED 2 is the year that the most recent alteration began.

The Department of Finance defines alterations as modifications to the structure that, according to the assessor, change the value of the real property.

The date comes from Department of Buildings permits and may either be the actual date or an estimate.

FIELD DESCRIPTION

The BUILT FLOOR AREA RATIO is the total building floor area divided by the area of the tax lot.

This is an estimate by City Planning based on rough building area and lot area measurements provided by the Department of Finance. BUILT FLOOR AREA RATIO is calculated using the TOTAL BUILDING FLOOR AREA and the LOT AREA.

FIELD DESCRIPTION

The maximum allowable residential floor area ratio.

The maximum allowable residential floor area ratios are exclusive of bonuses for plazas, plaza-connected open areas, arcades, or other amenities.

For properties zoned R6, R7, R7-1, R8 or R9 the maximum allowable floor area reflects the maximum achievable floor area under ideal conditions.

The maximum allowable floor area does not reflect Voluntary Inclusionary Housing or Mandatory Inclusionary Housing Program floor area. See Appendix F and Section 23-154, paragraphs (b) and (d) of the Zoning Resolution.

For properties in special mixed use districts, PLUTO uses the wide street maximum allowable floor area ratio. Since the maximum allowable floor area ratio in mixed use special districts is actually determined by whether the property is located on a wide street or a narrow

FIELD [BBL ▶](#)

- * ALIAS BBL
- * DATA TYPE Double
- * WIDTH 8
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

A concatenation of the borough code, tax block and tax lot.

This field consists of the borough code followed by the tax block followed by the tax lot. The borough code is one numeric digit. The tax block is one to five numeric digits, preceded with leading zeros when the block is less than five digits. The tax lot is one to four digits and is preceded with leading zeros when the lot is less than four digits.

For condominiums, the BBL is for the billing lot. See TAX LOT for more information on how condominiums are handled.

Examples:

Manhattan Borough Code 1, Tax Block 16, Tax Lot 100 would be stored as 1000160100.
Brooklyn Borough Code 3, Tax Block 15828, Tax Lot 7501 would be stored as 3158287501.

FIELD DESCRIPTION

This field contains a one to four-digit census tract number and a two-digit suffix. There is an implied decimal point between the census tract number and the suffix. The census tract number is preceded with leading zeros when the tract is less than four digits. If the tract has no suffix, CENSUS TRACT 2 contains 4 characters.

2010 census tracts are geographic areas defined by the U.S. Census Bureau for the 2010 Census.

Examples:

Census Tract 203.01 would be stored as 020301
Census Tract 23 would be stored as 0023

FIELD **PLUTOMapID** ►

- * ALIAS PLUTOMapID
- * DATA TYPE String
- * WIDTH 1
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

A code indicating whether the tax lot is in the PLUTO file, the MapPLUTO file with water areas included, and/or the MapPLUTO file that is clipped to the shoreline.

Because the Digital Tax Map (DTM) and the RPAD Master File are not updated at the same time, they are slightly out-of-sync. There will be lots in RPAD that are not in the DTM and vice versa. In addition, some lots are wholly underwater and are not included in the version of MapPLUTO that is clipped to the shoreline.

The lot geographies in MapPLUTO (with water areas included) are created from the DTM. City Planning modifies the DTM for condominium lots to show the billing tax lot in MapPLUTO, rather than the base tax lot. If there is more than one base tax lot with the same billing lot, the base tax lots are merged into a single feature and assigned to the billing lot. See LOT for more information on condominium lots.

MapPLUTO (clipped to shoreline) is created by clipping the full MapPLUTO using DOF's Shoreline File.
