MapPLUTO 22v2 - Shoreline Clipped

File Geodatabase Feature Class

Summary

MapPLUTO contains extensive land use and geographic data at the tax lot level. MapPLUTO has over seventy data fields containing three basic types of data: tax lot characteristics, building characteristics, and geographic/political/administrative districts. This version is clipped to the shoreline and does not contain lots completely or partially underwater.

Description

This dataset represents a compilation of data from various government agencies throughout the City of New York. The underlying geography is derived from the Tax Lot Polygon feature class that is part of the Department of Finance's Digital Tax Map (DTM). The tax lots have been clipped to the shoreline, as defined by NYCMap planimetric features. The attribute information is from the Department of City Planning's PLUTO data. The attribute data pertains to tax lot and building characteristics and geographic, political and administrative information for each tax lot in New York City. The Tax Lot Polygon feature class and PLUTO are derived from different sources. As a result, some PLUTO records do not have a corresponding tax lot in the Tax Lot polygon feature class at the time of release. These records are included in a separate non-geographic PLUTO Only table. There are a number of reasons why there can be a tax lot in PLUTO that does not match the DTM; the most common reason is that the various source files are maintained by different departments and divisions with varying update cycles and criteria for adding and removing records. The attribute definitions for the PLUTO Only table are the same as those for MapPLUTO. DCP Mapping Lots includes some features that are not on the tax maps. They have been added by DCP for cartographic purposes. They include street center ‘malls’, traffic islands and some built streets through parks. These features have very few associated attributes. To report problems, please open a GitHub issue or email DCPOpendata@planning.nyc.gov.

The borough in which the tax lot is located. Two portions of the city, Marble Hill and Rikers Island, are each legally located in one borough but are serviced by different boroughs. The BOROUGH codes associated with these areas are the boroughs they are legally located in. Specifically, Marble Hill is serviced by the Bronx but is legally located in Manhattan and has a Manhattan BOROUGH code. Rikers Island has a Bronx BOROUGH code because it is legally located in the Bronx although it is serviced by Queens.

**FIELD DESCRIPTION**

The number of the tax lot. This field contains a one to four-digit tax lot number. Each tax lot is unique within a tax block (see BLOCK).

Special Handling for condominiums:

In a condominium complex, each condominium unit is a separate tax lot and has its own lot number. In a residential condominium, the condominium units are generally the individual apartments; in a commercial condominium, the units might be floors in an office building, individual retail shops, or blocks of office space. These unit lot numbers have values between 1001 - 6999.

Each unit tax lot has an associated billing lot number, with values between 7501 - 7599. Lots in a condominium complex on the same block will have the same billing lot number. To make condominium information more compatible with parcel information, the Department of City Planning aggregates condominium unit tax lot information to the billing lot. For example, if a residential condominium building contains 20 units, the Department of Finance will assign 20 unit lot numbers and each of these lot numbers will have the same billing lot number. PLUTO will contain one record with the billing lot number and RESIDENTIAL UNITS will be set to 20.

If the Department of Finance has not yet assigned a billing lot number to the condominium complex, PLUTO uses the lowest unit lot number within the complex.

Note on MapPLUTO: The Department of Finance Digital Tax Map (DTM) contains the geography of the base lot for condominiums. The base lot is also called the “Formerly Known As” or FKA lot. For most condominium complexes, there is one base lot per billing lot. In using the DTM to create MapPLUTO, DCP replaces the base lot number with the billing lot number. If there is more than one base lot with the same billing lot number, DCP merges the base lots to create a geography for the billing lot.

The community district (CD) or joint interest area (JIA) for the tax lot. The city is divided into 59 community districts and 12 joint interest areas, which are large parks or airports that are not considered part of any community district.  

This field consists of three digits, the first of which is the borough code (see BORO CODE). The second and third digits are the community district or joint interest area number, whichever is applicable.  

Two portions of the city, Marble Hill and Rikers Island, are legally located in one borough, but serviced by a different borough. The COMMUNITY DISTRICT associated with these areas is the community district by which they are serviced.  

Marble Hill is legally located in Manhattan, but is serviced by the Bronx and is divided between community districts 207 and 208. Rikers Island is legally located in the Bronx, but is serviced by Queens and is part of community district 401.  

COMMUNITY DISTRICT contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, COMMUNITY DISTRICT is calculated spatially using the tax lot’s XY COORDINATES and DCP’s Administrative District Base Map files.

FIELD DESCRIPTION

The 2010 US census tract in which the tax lot is located. This field contains a one to four-digit census tract number, sometimes with a decimal point and a two-digit suffix.

2010 census tracts are geographic areas defined by the U.S. Census Bureau for the 2010 Census. Census tracts are comprised of census blocks. If a tax lot is split by a
census tract boundary, only one census tract is retained.

Each census tract is unique within a borough (see Borough).

Examples:
Census Tract 203.01
Census Tract 23

CENSUS TRACT contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, CENSUS TRACT is calculated spatially using the tax lot’s XY COORDINATES and DCP’s Administrative District Base Map files.

Each census block number is unique within a census tract (see CENSUS TRACT).

Examples:
Census Block 101A
Census Block 102

CENSUS BLOCK contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, CENSUS BLOCK is calculated spatially using the tax lot’s XY COORDINATES and DCP’s Administrative District Base Map files.

The school district in which the tax lot is located.

This field contains a two-digit school district number, which is preceded with a zero when the district number is one digit.

The city is divided up into 34 school districts. Those districts are then divided into smaller zones which determine the area served by local schools. Each district has its own superintendent and receives guidance from a Community District Education Council made up of parents and local representatives.

SCHOOL DISTRICT contains the value returned by Geosupport for one of the addresses assigned to the lot. If Geosupport does not return a value, SCHOOL DISTRICT is calculated spatially using the tax lot’s XY COORDINATES and DCP’s Administrative District Base Map files.

**FIELD DESCRIPTION**

An address for the tax lot.

Tax lots may be assigned a single house number on a street, a range of house numbers on a street, or addresses on multiple streets. ADDRESS contains the address in PTS, using the low number when there is a range of house numbers. Some tax lots, such as
vacant lots or parks, have only a street name and no house number.

The general format is house number or low house number, if there is a house number range, and a space followed by a street name.

A complete list of the addresses assigned to a tax lot is available through Geosupport or by downloading the Property Address Directory (PAD) from Bytes of the Big AppleTM.

Most house numbers in Queens contain a hyphen.

FIELD DESCRIPTION
The zoning district classification of the tax lot. Under the Zoning Resolution, the map of New York City is generally apportioned into three basic zoning district categories: Residence (R), Commercial (C) and Manufacturing (M), which are further divided into a range of individual zoning districts, denoted by different number and letter combinations. In general, the higher the number immediately following the first letter (R, C or M), the higher the density or intensity of land use permitted.

If the tax lot is divided by a zoning boundary line, ZONING DISTRICT 1 represents the zoning district classification occupying the greatest percentage of the tax lot’s area. Only zoning districts that cover at least 10% of a tax lot’s area are included.

For example: Tax lot 98 is divided by a zoning boundary line into part A and part B. Part A, the largest portion of the lot, is in a commercial zoning district, while part B is in a residential zoning district. ZONING DISTRICT 1 will contain the commercial zoning district associated with part A.

Tax lots that intersect with areas designated in NYC Zoning Districts as PARK, BALL FIELD, PLAYGROUND, and PUBLIC SPACE are assigned a single value of PARK in PLUTO. The NYC Zoning Districts do not constitute a definitive list of parks in the city. Lots designated as PARK should not be used to calculate the amount of open space in an area.

See SPLIT BOUNDARY INDICATOR to determine if the tax lot is divided.

If the tax lot is not divided by a zoning boundary line, the field is blank.

For example: Tax lot 98 is divided by a zoning boundary line into part A and part B. Part A, the larger portion of the lot, is in a commercial zoning district, while part B is in a residential zoning district. ZONING DISTRICT 2 will contain the residential zoning district associated with part B.

See SPLIT BOUNDARY INDICATOR to determine if the tax lot is divided.

If the tax lot is divided by zoning boundary lines, ZONING DISTRICT 3 represents the zoning classification occupying the third greatest percentage of the tax lot’s area. Only zoning districts that cover at least 10% of a tax lot’s area are included.

If the tax lot is not split between three zoning districts, the field is blank.

For example: Tax lot 98 is divided by zoning boundary lines into three sections - part A, part B and part C. Part A represents the largest portion of the lot, part B is the second...
largest portion of the lot, and part C covers the smallest portion of the tax lot. ZONING DISTRICT 3 will contain the zoning associated with part C.

For example: Tax lot 98 is divided by zoning boundary lines into four sections - part A, part B, part C and part D. Part A represents the largest portion of the lot, part B is the second largest portion of the lot, part C represents the third largest portion of the lot, and part D covers the smallest portion of the tax lot. The commercial overlay assigned to the tax lot. A commercial overlay is a C1 or C2 zoning district mapped within residential zoning districts to serve local retail needs (grocery stores, dry cleaners, restaurants, for example).

If more than one commercial overlay exists on the tax lot, COMMERCIAL OVERLAY 1 represents the commercial overlay occupying the greatest percentage of the lot area. The commercial overlay district must either cover at least 10% of a tax lot’s area or at least 50% of the commercial overlay district must be contained within the tax lot.

FIELD BldgClass

A code indicating whether the tax lot is split between multiple zoning features. The split boundary indicator is equal to "Y" if the tax lot has a value for ZONING DISTRICT 2, COMMERCIAL OVERLAY 2, or SPECIAL DISTRICT BOUNDARY 2.
**FIELD DESCRIPTION**

A code describing the major use of structures on the tax lot.

Except as described below, BUILDING CLASS is taken from PTS without modification.

For condominiums, PTS contains the building class for each unit lot. When merging this data into a single record for the billing lot, DCP creates several mixed-use building classes (RC, RD, RI, RM, RX, and RZ). These are assigned as follows:

- If all unit lots have the same building class, that building class is used for the billing lot.
- PTS building class types are grouped as follows:
  - Commercial - R5, R7, R8, RA, RB, RH, and RK
  - Residential - R1, R2, R3, R4, R6, and RR
  - Mixed commercial and residential – R9
  - Industrial/warehouse - RW
- If the unit lots are a mixture of commercial building types, BUILDING CLASS = RC.
- If the unit lots are a mixture of residential building types, BUILDING CLASS = RD.
- If the unit lots are a mixture of commercial and residential building types, BUILDING CLASS = RM.
- If the unit lots are a mixture of commercial and industrial/warehouse building types, BUILDING CLASS = RI.
- If the unit lots are a mixture of commercial, residential, and industrial/warehouse building types, BUILDING CLASS = RX.
- When unit lots with a building class of RG (Indoor Parking), RP (Outdoor Parking), RS (Non-Business Storage Space), or RT (Terraces/Gardens/Cabanas) have the same billing lot as another building class, their building class is ignored. For example, if the billing lot has unit lots with a building class of R4 (Residential Unit in Elevator Bldg) and RG (Indoor Parking), BUILDING CLASS = R4.

Q0 is assigned by DCP to tax lots with an PTS building class starting with "V" that are identified in the NYC GIS Zoning Database as PARK, BALL FIELD, PLAYGROUND, or PUBLIC SPACE.

PTS contains two building classes for some tax lots, with one of the building classes being Z7 (Easement). BUILDING CLASS is only set to Z7 when it is the only PTS building class for the tax lot.

FIELD Easements

* ALIAS Easements
* DATA TYPE SmallInteger
* WIDTH 2
* PRECISION 0
* SCALE 0
**FIELD DESCRIPTION**
The number of unique easements on the tax lot.

PTS contains a record for each easement. NUMBER OF EASEMENTS is calculated by counting the number of unique PTS easement records for the tax lot.

If the number of easements is zero, the tax lot has no easements.

**DESCRIPTION SOURCE**
Department of City Planning - based on data from: Department of Finance – Property Tax System (PTS)

**FIELD OwnerType**
* ALIAS OwnerType
* DATA TYPE String
* WIDTH 1
* PRECISION 0
* SCALE 0

**FIELD DESCRIPTION**
A code indicating type of ownership for the tax lot.

Only one data source is used per tax lot.

The COLP file, which contains more accurate and specific type of city ownership data than PTS, is used when data is available for that lot. Codes C, M, O, P are derived from COLP.

If the tax lot is not in COLP, PTS is checked to see if the lot’s EXEMPT TOTAL VALUE equals its ASSESSED TOTAL VALUE. If the two values are the same, the lot is given a code of X. Otherwise the tax lot is not given any TYPE OF OWNERSHIP CODE.

OWNER NAME should be referenced to verify type of ownership, particularly when it’s important to distinguish between state, federal, and public authority ownership.

FIELD DESCRIPTION
  The name of the owner of the tax lot.

For publicly owned tax lots, owner names have been normalized. For example, “NYC PARKS”, “PARKS DEPARTMENT”, and “PARKS AND RECREATION (GENERAL)” have been changed to “NYC DEPARTMENT OF PARKS AND RECREATION”.

If OWNER NAME is normalized, DCPEdited is set to “1”.

DESCRIPTION SOURCE

FIELD LotArea ▶
  * ALIAS LotArea
  * DATA TYPE Integer
  * WIDTH 4
  * PRECISION 0
  * SCALE 0
FIELD DESCRIPTION
  Total area of the tax lot, expressed in square feet rounded to the nearest integer.

LOT AREA contains street beds when the tax lot contains “paper streets” i.e., street mapped but not built.

If the tax lot is not an irregularly shaped lot (see IRREGULAR LOT CODE) the Department of Finance calculates the LOT AREA by multiplying the LOT FRONTAGE by the LOT DEPTH. If the tax lot is irregularly shaped, DOF calculates the LOT AREA from the Digital Tax Map.

If PTS contains a zero value for LOT AREA, this field is changed to show the area of the tax lot’s geometric shape in the Digital Tax Map and DCPEdited is set to “1”.

DESCRIPTION SOURCE
  Department of Finance - Property Tax System (PTS)

FIELD BldgArea ▶
  * ALIAS BldgArea
  * DATA TYPE Integer
  * WIDTH 4
  * PRECISION 0
  * SCALE 0
FIELD DESCRIPTION
The total gross area in square feet, except for condominium measurements which come from the Condo Declaration and are net square footage not gross.

TOTAL BUILDING FLOOR AREA is populated in the following order of preference:
1. Gross floor area from PTS
2. Gross floor area from CAMA
3. Calculated from the PTS building dimensions and number of stories for the primary building on the lot. TOTAL BUILDING FLOOR AREA calculated by this method will not include floor area for any other buildings on the lot.
4. TOTAL BUILDING FLOOR AREA is set to zero if the building class starts with “V” and the number of buildings is zero.

See TOTAL BUILDING FLOOR AREA SOURCE CODE to determine which method was used.

If TOTAL BUILDING FLOOR AREA SOURCE CODE has a value of 2 (PTS) or 7 (CAMA), the TOTAL BUILDING FLOOR AREA is based on gross building area, also known as total gross square feet. For these data sources, the TOTAL BUILDING FLOOR AREA is for all of the structures on the tax lot, including stairwells, halls, elevator shafts, attics and extensions such as attached garages. Measurements are based on exterior dimensions and take into account setbacks.

If the TOTAL BUILDING FLOOR AREA SOURCE CODE field has a value of 5, the floor area was calculated from the DOF Property Tax System (PTS) using the building dimensions and number of stories for ONLY the largest structure on the tax lot.

In all cases, this is a rough estimate of the gross building floor area and does not necessarily take into account all the criteria for calculating floor area as defined in section 12-10 of the Zoning Resolution.

Roof areas used for parking/garden/playground are not included in the floor area.

If TOTAL BUILDING FLOOR AREA SOURCE CODE is 2, TOTAL BUILDING FLOOR AREA contains the common area for condominiums.

If FLOOR AREA, TOTAL BUILDING SOURCE CODE is 7, TOTAL BUILDING FLOOR AREA does not include below grade finished basements.

If the basement in a one, two or three family structure is above grade and finished, its square footage is included in TOTAL BUILDING FLOOR AREA.

A TOTAL BUILDING FLOOR AREA of zero can mean it is either not available or not applicable. If NUMBER OF BUILDINGS is greater than zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not available. If NUMBER OF BUILDINGS is zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not applicable.

DESCRIPTION SOURCE
Department of City Planning based on data from: Department of Finance - Property Tax System (PTS); Department of Finance - Mass Appraisal System (CAMA)
FIELD DESCRIPTION
An estimate of the exterior dimensions of the portion of the structure(s) allocated for commercial use.

Value is taken from PTS, if available. When calculated from PTS data, COMMERCIAL FLOOR AREA is the sum of floor areas for office, retail, garage, storage, factory, and other uses. If these fields are not populated in PTS, the value is taken from CAMA.

Originally square footage came from sketches, but, for both new construction and alterations, it now comes from site visits.

Basement square footage may be included in COMMERCIAL FLOOR AREA if the commercial buildings meets two of the three following criteria:
- Finished
- Active
- Publicly accessible

For condominiums, COMMERCIAL FLOOR AREA is the sum of the commercial floor area for condominium lots with the same billing lot. COMMERCIAL FLOOR AREA does not contain the condominium’s common area.

A COMMERCIAL FLOOR AREA of zero can mean it is either not available or not applicable.

An update to the floor area is triggered by the issuance of a Department of Buildings permit, feedback from the public, or site visits by Department of Finance assessors.

The sum of the various floor area fields does not always equal TOTAL BUILDING FLOOR AREA.

**FIELD DESCRIPTION**

The assessed total value for the tax lot.

The Department of Finance calculates the assessed value by multiplying the tax lot’s estimated full market value by a uniform percentage for the property’s tax class.

Property value is assessed as of January 5th. If a new building is not completed by April 14th, the assessed building value is 0 and the Building Class reverts to Vacant.

Assessed and exempt values are updated twice a year. Tentative values are released in mid-January and final values are released around May 25. **FIELD DESCRIPTION**
The maximum allowable commercial floor area ratio, based on the zoning district classification occupying the greatest percentage of the tax lot's area as reported in ZoneDist1. If the lot is assigned to more than one zoning district and ZoneDist1 does
not allow commercial uses, MAXIMUM ALLOWABLE COMMERCIAL FAR is based on ZoneDist2, ZoneDist3 or ZoneDist4, in that order.

The maximum allowable commercial floor area ratios are exclusive of bonuses for plazas, plaza-connected open areas, arcades, or other amenities.

Users should consult Section 43-12 of the Zoning Resolution for more information.

**Field BBL**

* Alias: BBL  
* Data Type: Double  
* Width: 8  
* Precision: 0  
* Scale: 0  

**Field Description**

A concatenation of the borough code, tax block and tax lot.

This field consists of the borough code followed by the tax block followed by the tax lot. The borough code is one numeric digit. The tax block is one to five numeric digits, preceded with leading zeros when the block is less than five digits. The tax lot is one to four digits and is preceded with leading zeros when the lot is less than four digits.

For condominiums, the BBL is for the billing lot. See TAX LOT for more information on how condominiums are handled.

**Examples:**

Manhattan Borough Code 1, Tax Block 16, Tax Lot 100 would be stored as 1000160100.
Brooklyn Borough Code 3, Tax Block 15828, Tax Lot 7501 would be stored as 3158287501.

**Field CondoNo**

* Alias: CondoNo  
* Data Type: Integer  
* Width: 4  
* Precision: 0  
* Scale: 0  

**Field Description**

The condominium number assigned to the complex.

Condominium numbers are unique within a borough (see BOROUGH).
FIELD Tract2010

* ALIAS Tract2010
* DATA TYPE String
* WIDTH 7
* PRECISION 0
* SCALE 0

FIELD DESCRIPTION
This field contains a one to four-digit census tract number and a two-digit suffix. There is an implied decimal point between the census tract number and the suffix. The census tract number is preceded with leading zeros when the tract is less than four digits. If the tract has no suffix, CENSUS TRACT 2 contains 4 characters.

2010 census tracts are geographic areas defined by the U.S. Census Bureau for the 2010 Census.

Examples:

Census Tract 203.01 would be stored as 020301
Census Tract 23 would be stored as 0023

**FIELD PLUTOMapID**
- **ALIAS** PLUTOMapID
- **DATA TYPE** String
- **WIDTH** 1
- **PRECISION** 0
- **SCALE** 0

**FIELD DESCRIPTION**
A code indicating whether the tax lot is in the PLUTO file, the MapPLUTO file with water areas included, and/or the MapPLUTO file that is clipped to the shoreline.

Because the Digital Tax Map (DTM) and the PTS Master File are not updated at the same time, they are slightly out-of-sync. There will be lots in PTS that are not in the DTM and vice versa. In addition, some lots are wholly underwater and are not included in the version of MapPLUTO that is clipped to the shoreline.

The lot geographies in MapPLUTO (with water areas included) are created from the DTM. City Planning modifies the DTM for condominium lots to show the billing tax lot in MapPLUTO, rather than the base tax lot. If there is more than one base tax lot with the same billing lot, the base tax lots are merged into a single feature and assigned to the billing lot. See LOT for more information on condominium lots.

MapPLUTO (clipped to shoreline) is created by clipping the full MapPLUTO using DOF’s Shoreline File.
