## Summary

MapPLUTO was created by the Department of City Planning to meet the growing need for extensive land use and geographic data at the tax lot level in PC mapping format.

## Description

This dataset represents a compilation of data from various government agencies throughout the City of New York. The underlying geography is derived from the Tax Lot Polygon feature class which is part of the Department of Finance's Digital Tax Map (DTM). The tax lots have been clipped to the shoreline, as defined by NYCMAP planimetric features. The attribute information is from the Department of City Planning's PLUTO data. The attribute data pertains to tax lot and building characteristics and geographic, political and administrative information for each tax lot in New York City. The Tax Lot Polygon feature class and PLUTO are derived from different sources. As a result, some PLUTO records did not have a corresponding tax lot in the Tax Lot polygon feature class at the time of release. These records are included in a separate non-geographic PLUTO Only DBase (\*.dbf) table. There are a number of reasons why there can be a tax lot in PLUTO that does not match the DTM; the most common reason is that the various source files are maintained by different departments and divisions with varying update cycles and criteria for adding and removing records. The attribute definitions for the PLUTO Only table are the same as those for MapPLUTO. DCP Mapping Lots includes some features that are not on the tax maps. They have been added by DCP for cartographic purposes. They include street center 'malls', traffic islands and some built streets through parks. These features have very few associated attributes.

ACCURACY INFORMATION  
EXPLANATION

Two portions of the city, Marble Hill and Rikers Island, are each legally located in one borough but are serviced by different boroughs. The BOROUGH codes associated with these areas are the boroughs they are legally located in. Specifically, Marble Hill is serviced by the Bronx but is legally located in Manhattan and has a Manhattan BOROUGH code. Rikers Island has a Bronx BOROUGH code because it is legally located in the Bronx although it is serviced by Queens.

ACCURACY INFORMATION  
EXPLANATION

Each unit in a building that is a condominium is defined by the Department of Finance as a separate tax lot. To make condominium information more compatible with parcel information, the Department of City Planning aggregated condominium unit tax lot information so that each condominium complex within a tax block is represented by only one tax lot record. A condominium complex is defined as one or more structures or properties under the auspices of the same condominium association. The Department of City Planning then assigned the condominium billing tax lot number to the condominium complex tax lot record. If the Department of Finance has not yet assigned a billing tax lot number to the condominium complex then the lowest tax lot number within the condominium complex was used.

The Department of Finance DTM uses the formerly known as (FKA) Tax Lot number for Condominiums. The Department of City Planning has modified the Tax Lot number of DOF DTM by replacing the FKA with the condominiums billing tax lot number. Often the tax lot number can tell you the type of tax lot. Of course there are exceptions to each convention. Usually tax lot number '1-999' correspond with traditional tax lots; '1001-6999' correspond with condominium unit lots; '7501-7599' correspond with condominium billing lots; '8000-8899' correspond with subterranean tax lots; '8900-8999' correspond with DTM dummy tax lots; '9000-9899' correspond with air right tax lots. The Air Rights Tax Lot goes with the base Tax Lot or Donating Tax Lot. For example: If Tax Lot 32 has Air Rights, those Air Rights would be identified as 9032. When the structure is built the Air Rights Tax Lot is retired. Property owners do not have to create an Air Rights Tax Lot to transfer development rights.

#### ACCURACY INFORMATION

**ACCURACY** Only one data source is used per tax lot.

#### EXPLANATION

The Department of City Planning - CD Layer for the DTM is used as the source when it identifies a community district for a tax lot. If a tax lot is split among more than one community district then PLUTO uses one of the community district numbers. If the Department of City Planning - CD Layer for the DTM does not identify a community district, the district is obtained from the Department of City Planning Geosupport System. If the community district is not available from the Geosupport System the DOF-RPAD Master file is used. If a tax lot is split by a community district boundary, only one community district is retained. Two portions of the city, Marble Hill and Rikers Island, are legally located in one borough and are each serviced by different boroughs. The COMMUNITY DISTRICT codes associated with these areas are the community districts they are serviced by. Specifically, Marble Hill is legally located in Manhattan but is serviced by the Bronx and has Bronx COMMUNITY DISTRICT codes of 207 or 208. Rikers Island has a Queens COMMUNITY DISTRICT code of 401 since it is serviced by Queens even though it is legally located in the Bronx.

FIELD DESCRIPTION

The zoning district classification of the tax lot. If the tax lot is divided by a zoning boundary line, ZoneDist1 represents the primary zoning district classification occupying the greatest percentage of the tax lot's area. Properties under the jurisdiction of NYC Department of Parks and Recreation are coded PARK. Properties under the jurisdiction of NYS Office of Parks, Recreation, and Historic Preservation are coded PARKNY. DROP LOT is a designation that City Planning devised to identify tax lots that no longer exist in the DCP version of the Digital Tax Map but have not yet been removed from the Department of Finance RPAD File. RPAD retains tax lots that have been dropped, due to merger, reapportionment or conversion to condominium, until the end of the City's Fiscal Year. To avoid confusion DROP LOT was created to identify these lots.

ACCURACY INFORMATION  
EXPLANATION

If there are multiple uses or buildings on a tax lot, the building class describes the use with the greatest square footage on the tax lot. Several building classes describe mixed use buildings (combinations of residential and office or retail uses). A tax lot changes from a vacant to non-vacant building class:

1. With the issuance of Selected Department of Buildings Permits including New Building, Demolitions; and Alterations where there are changes to use, square footage, type and the neighborhood where the permit is issued;
2. When the Assessors sees change in the field; and
3. Feedback from the public.

Demolition is not enough to change a Building Class but the presence of wall studs is. Property value is assessed as of January 5th. If a site is not completed by April 14th the assessed building value is 0 and the Building Class reverts to Vacant. See Appendix C - Building Class Codes for codes and decodes.

#### ACCURACY INFORMATION

##### EXPLANATION

A tax lot's land use category is derived from the lot's building class (see BldgClass). The Department of City Planning assigned building classes to the most appropriate land use category. Park properties were identified using data sources other than the DOF Building Classes and, where appropriate, were classified with a Land Use Category of 09- Open Space and Outdoor Recreation, regardless of the tax lot's building class.

ACCURACY Varying

##### EXPLANATION

Lot Area contains street beds when the tax lot contains paper streets, i.e. streets mapped but not built. If the tax lot is not an irregularly shaped lot (IrrLotCode) the

Department of Finance derives the Lot Area by multiplying the Lot Frontage by the Lot Depth. If the tax lot is irregularly shaped Finance manually calculates the Lot Area from the Tax Maps. If the lot area is zero, data is not available for the tax lot.

- \* DATA TYPE Number
- \* WIDTH 9

#### FIELD DESCRIPTION

The total gross area in square feet.

#### DESCRIPTION SOURCE

Department of City Planning based on data from: Department of Finance - Mass Appraisal System; Department of Finance- RPAD Master File

#### ACCURACY INFORMATION

##### EXPLANATION

Only one data source is used per tax lot (See FLOOR AREA, TOTAL BUILDING SOURCE CODE) except for condo measurements which come from the Condo Declaration and are net square footage not gross.

If FLOOR AREA, TOTAL BUILDING SOURCE CODE field has a code of 2 or 7, the TOTAL BUILDING FLOOR AREA is based on gross building area also known as total gross square feet. The TOTAL FLOOR AREA is for all of the structures on the tax lot, including stairwells, halls, elevator shafts, attics and extensions such as attached garages. Measurements are based on exterior dimensions and does take into account setbacks.

If the FLOOR AREA, TOTAL BUILDING SOURCE CODE field has a value of 5, the floor area was calculated from the DOF RPAD Master File using the building dimensions and number of stories for ONLY the largest structure on the tax lot.

NOTE: This is a rough estimate of the gross building floor area and does not necessarily take into account all the criteria for calculating floor area as defined in section 12-10 of the Zoning Resolution. If a roof is used for parking/garden/playground the square footage is not included in the Floor Area. The two main things that trigger an update is the issuance of a Department of Buildings permit and a request from the owner to update the data. The sum of COMMERCIAL and RESIDENTIAL FLOOR AREA does not always equal TOTAL BUILDING FLOOR AREA. If the FLOOR AREA, TOTAL BUILDING SOURCE CODE is 2, the TOTAL BUILDING FLOOR AREA contains the Common Area for condominiums.

If the FLOOR AREA, TOTAL BUILDING SOURCE CODE is 7, the TOTAL BUILDING FLOOR AREA does not include finished basement below grade. A TOTAL BUILDING FLOOR AREA of zero can mean it is either not available or not applicable. If NUMBER OF BUILDINGS is greater than zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not available. If NUMBER OF BUILDINGS is zero, then a TOTAL BUILDING FLOOR AREA of zero means it is not applicable.

ACCURACY INFORMATION

EXPLANATION

All basements in brownstones, high ranches, split-levels and attached row houses are Above Grade. A fully exposed basement garage door does not, in itself, satisfy the criteria for Above Grade. A finished basement must be at least four feet above ground to be considered a Finished Basement Above grade (FBA). A Finished Basement Below grade (FBB) is not included in living area square footage. A cellar is below a basement and not habitable.

FIELD DESCRIPTION

The Built Floor Area Ratio (FAR) is the total building floor area divided by the area of the tax lot.

DESCRIPTION SOURCE

Department of City Planning based on data from: Department of Finance- RPAD Master File

ACCURACY INFORMATION

EXPLANATION

This is an estimate by City Planning based on rough building area and lot area measurements provided by the Department Of Finance. FAR is calculated using the TOTAL BUILDING FLOOR AREA and the LOT AREA. The TOTAL BUILDING FLOOR AREA is either based on gross building area also known as total gross square feet for all of the structures on the tax lot, including basements, attics and extensions such as attached garages, detached garages, pool houses and greenhouse OR the floor area was calculated from the DOF RPAD Master File using the building dimensions and number of stories for ONLY the largest structure on the tax lot depending on the source available. The LotArea contains street beds when the lot contains paper streets, i.e., streets mapped but not built.

FIELD MAPPLUTO\_F

- \* ALIAS MAPPLUTO\_F
- \* DATA TYPE Number
- \* WIDTH 4

FIELD DESCRIPTION

The Department of Finance's DTM handles condominium lots differently from many other MapPLUTO sources. The DTM Tax Lot Polygon feature class uses the base

borough - block - lot (BBL) as the unique identifier of a parcel currently occupied by a condominium. The Department of City Planning and some of the other data sources for MapPLUTO use the billing bbl for condominiums. Therefore, in creating MapPLUTO from DTM, DCP has had to reassign the billing bbl as the primary key for condominium tax parcels. In most cases, there is one to one relationship between the DTM's base bbl and MapPLUTO's billing bbl. In some cases, further processing has been necessary. In a very few cases, non-condominium tax lots have also been modified. All of these cases are identified in the MapPluto Flag field. The data type for MapPLUTO flag is a number, each number represents how the base bbl is reassigned.

#### ACCURACY INFORMATION

#### EXPLANATION
