

# COVID19 IMPACTS ON TRANSPORTATION

Produced by the NYC Department of City Planning's Transportation Division

July 14, 2020

- The NYC Department of City Planning's Transportation Division is compiling data to help understand the effects of COVID19 on the transportation network. This is our sixteenth weekly report.
- This week's report includes the following information:
  1. Executive Summary
  2. Citywide Trends
  3. Subway and Bus
  4. Ferry
  5. Traffic
  6. Citi Bike
  7. Airports
  8. Cell Phone-based Mobility
  9. 311 Data
  10. Timeline
- We continue to expand the content of these weekly reports as new data become available to us, and are prioritizing work around understanding how mobility trends relate to the economic and employment landscape.
- This report may serve to help in pandemic response and longer-term recovery. We are eager for feedback in how to make this more useful. Feel free to reach out to Laura Smith ([lsmith@planning.nyc.gov](mailto:lsmith@planning.nyc.gov)) with questions or comments.

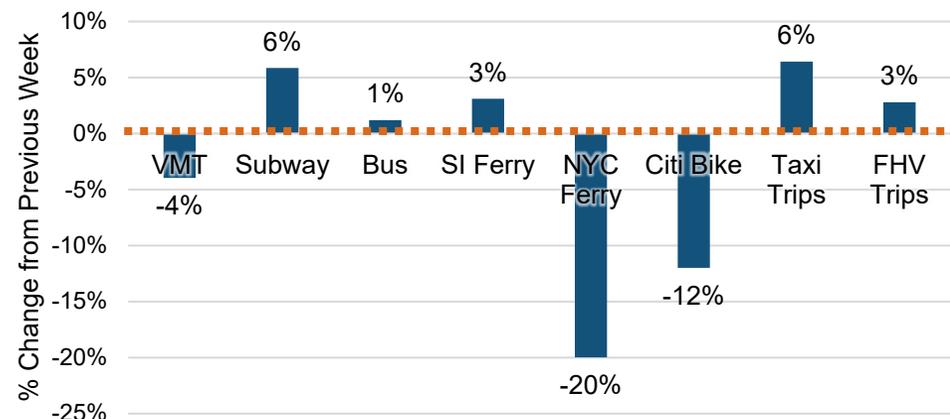

- New York City entered Phase 3 on Monday, July 6. All modes of travel are up substantially over early June.
- **As of the week of July 5, subway ridership was up 60 percent, and bus ridership up 40 percent, from early June. Vehicle Miles Traveled (VMT) is also up nearly 50 percent over this same period.**
- Total subway ridership the week of July 6<sup>th</sup> was up 7 percent over the previous week. Total bus ridership the week of July 6 was up 2 percent over the previous week.
- **The start of Phase 3 saw about 115,000 Staten Island Ferry riders.** This represents a 3 percent increase, or about 3,650 additional riders, from the previous week. This is the slowest week-to-week rate of increase since ridership started increasing in late April.
- After a steep decline in total inbound vehicles into the Manhattan CBD in the week leading up to the PAUSE, entries have been increasing since mid-April. Over the same time period, weekday daytime speeds in Midtown have been steadily declining, with weekday speeds in early July comparable to pre-PAUSE speeds.
- Citi Bike trip destinations vary substantially by time of day. **While hub-bound trips represent only a small share of total trips, Manhattan destinations (from any point of origin) predominate during the morning and evening hours.**
- Tracking cell-phone based mobility, the majority of devices remain at home, but that share has been declining since mid-April.
- **Face Covering Violation saw zero 311 complaints during the first week of Phase 3.** Social Distancing Complaints, saw its lowest weekly total since the start of its category. **Noncompliance with Phased Reopening complaints increased by more than 300 percent** during the first week of Phase 3, compared to the previous week.

# Citywide Trends

# Citywide Trends

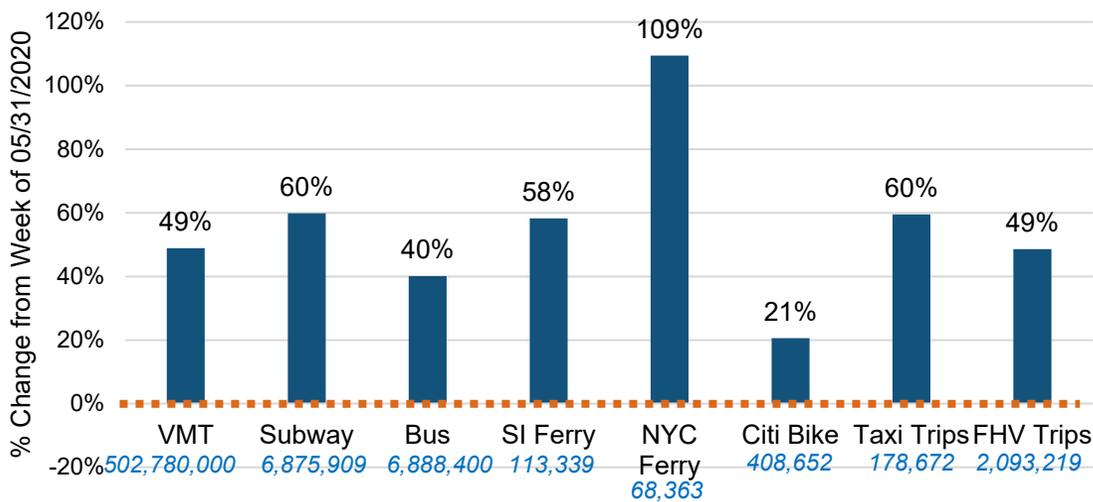

- New York City entered Phase 3 on Monday, July 6. Use of all modes of travel was up substantially over early June.
- As of the week of July 5, subway ridership was up 60 percent, and bus ridership up 40 percent, from early June. Vehicle Miles Traveled (VMT) is also up nearly 50 percent over this same period.

### Week of 07/05/2020 Compared to Previous Week

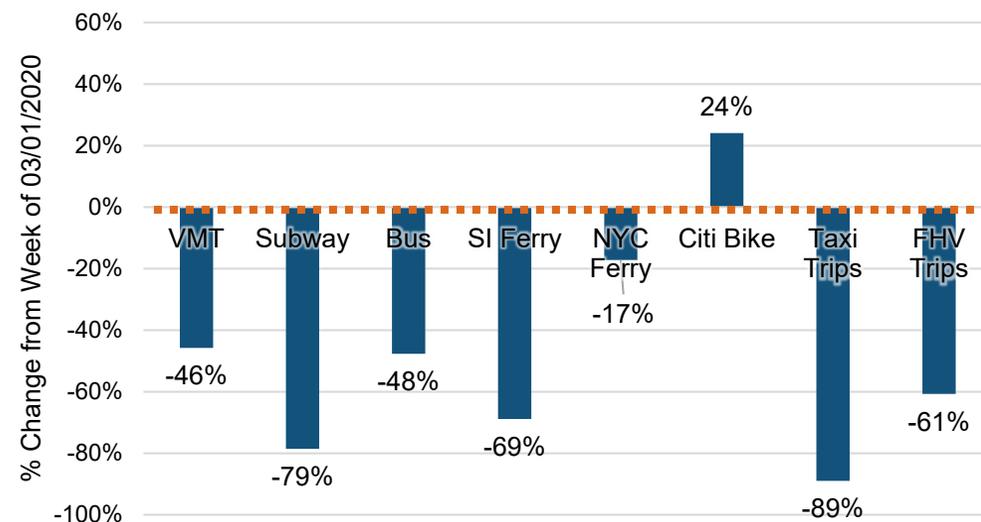

Baseline: Total trips/VMT week of 06/28/2020

### Week of 07/05/2020 Compared to Week of 05/31/2020

Baseline: Total trips/VMT week of 05/31/2020 (Last Week before Phase 1 Reopening)

### Week of 07/05/2020 Compared to Week of 03/01/2020

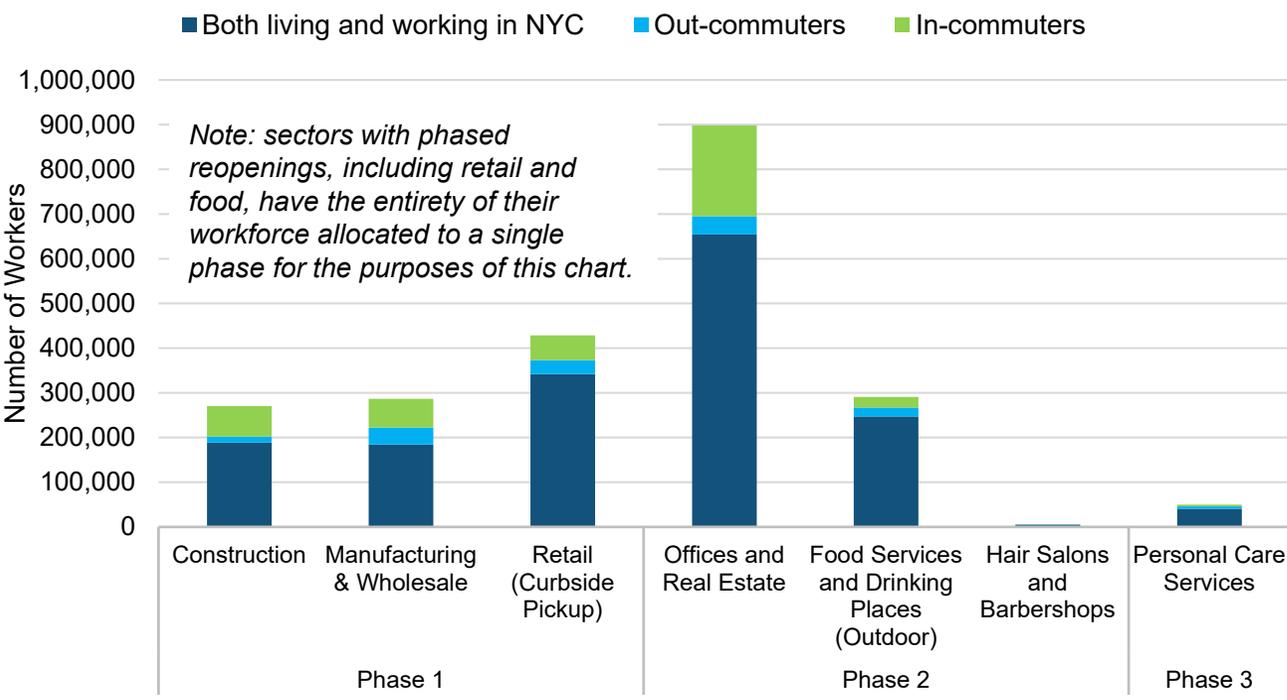

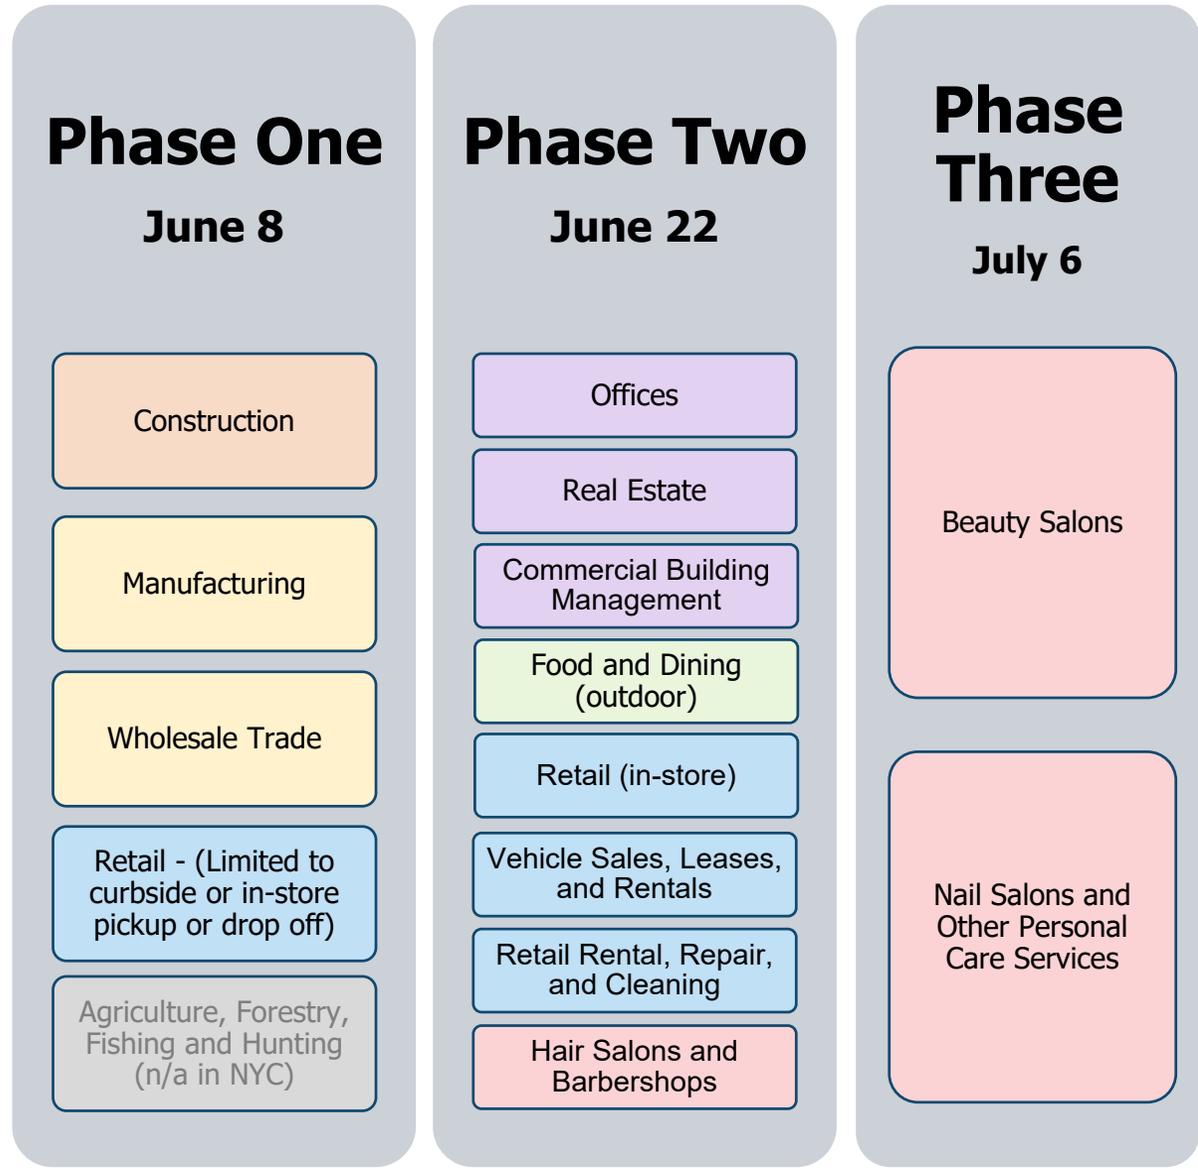

Baseline: Total trips/VMT week of 03/01/2020

\*Note: VMT for the most recent week is a sum from 07/04/2020 (Sat) to 07/10/2020 (Fri), not the same Sun-to-Sat week period for the other modes, as the VMT on 07/11/2020 is not yet available. Data sources: StreetLight (VMT), MTA (Subway, Bus), EDC (NYC Ferry), DOT (Citi Bike, SI Ferry)

# Reopening Analysis Introduction

- On June 8, New York City entered Phase 1 of its economic reopening, followed by Phase 2 on June 22 and Phase 3 on July 6.
- Workers associated with each phase may join essential workers across all industries who have been permitted to work through the PAUSE, with certain limitations around occupancy.
- Pre-COVID19 Census data indicate that approximately 1 million workers who either live or work in NYC were allowed to return to work in Phase 1, and 1.7 million in Phase 2. These phases are not mutually exclusive, as retail workers appear in both. An additional 50,000 workers associated with personal care services not included in prior phases may be added as part of Phase 3.
- These are not estimates of who might be commuting to work as a result of the phased reopening.

Source: NY Forward. <https://forward.ny.gov>

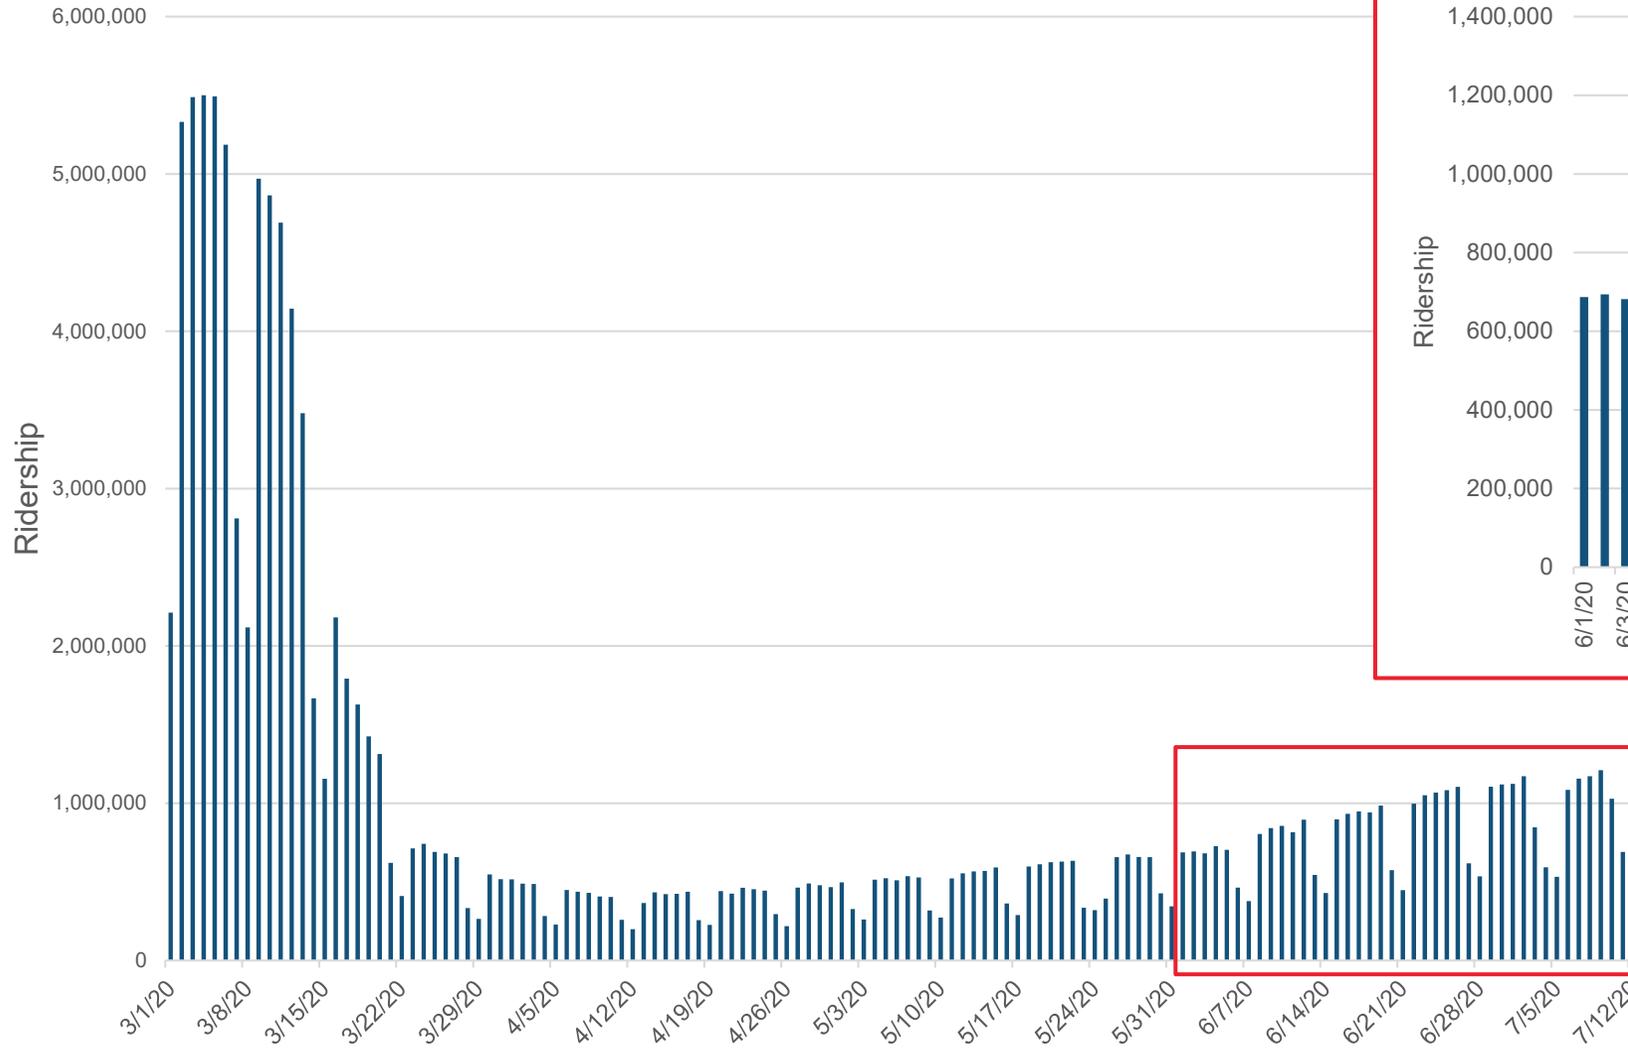

Data source: U.S. Census Bureau, 2014-2018 American Community Survey-- Public Use Microdata Sample. Universe: workers who either live or work in NYC. (in-commuters live outside NYC and work within; out-commuters live in NYC and work outside).

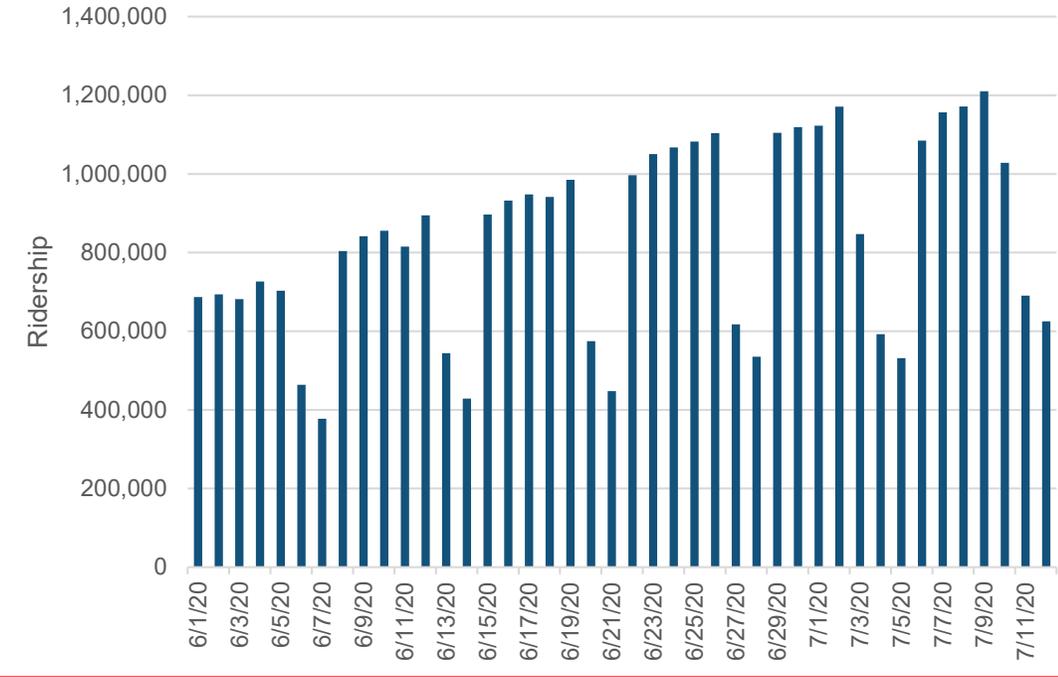

# Subway and Bus

# Subway System-wide Ridership Changes

Estimated\* MTA Subway Ridership (March 1- July 12, 2020)

June 1- July 12, 2020

- Weekday subway ridership for the week of July 6 was up 5 percent over the previous week while the weekend ridership was up 17 percent. Much of this increase may be attributed to lower ridership the previous week due to the July 4<sup>th</sup> holiday.

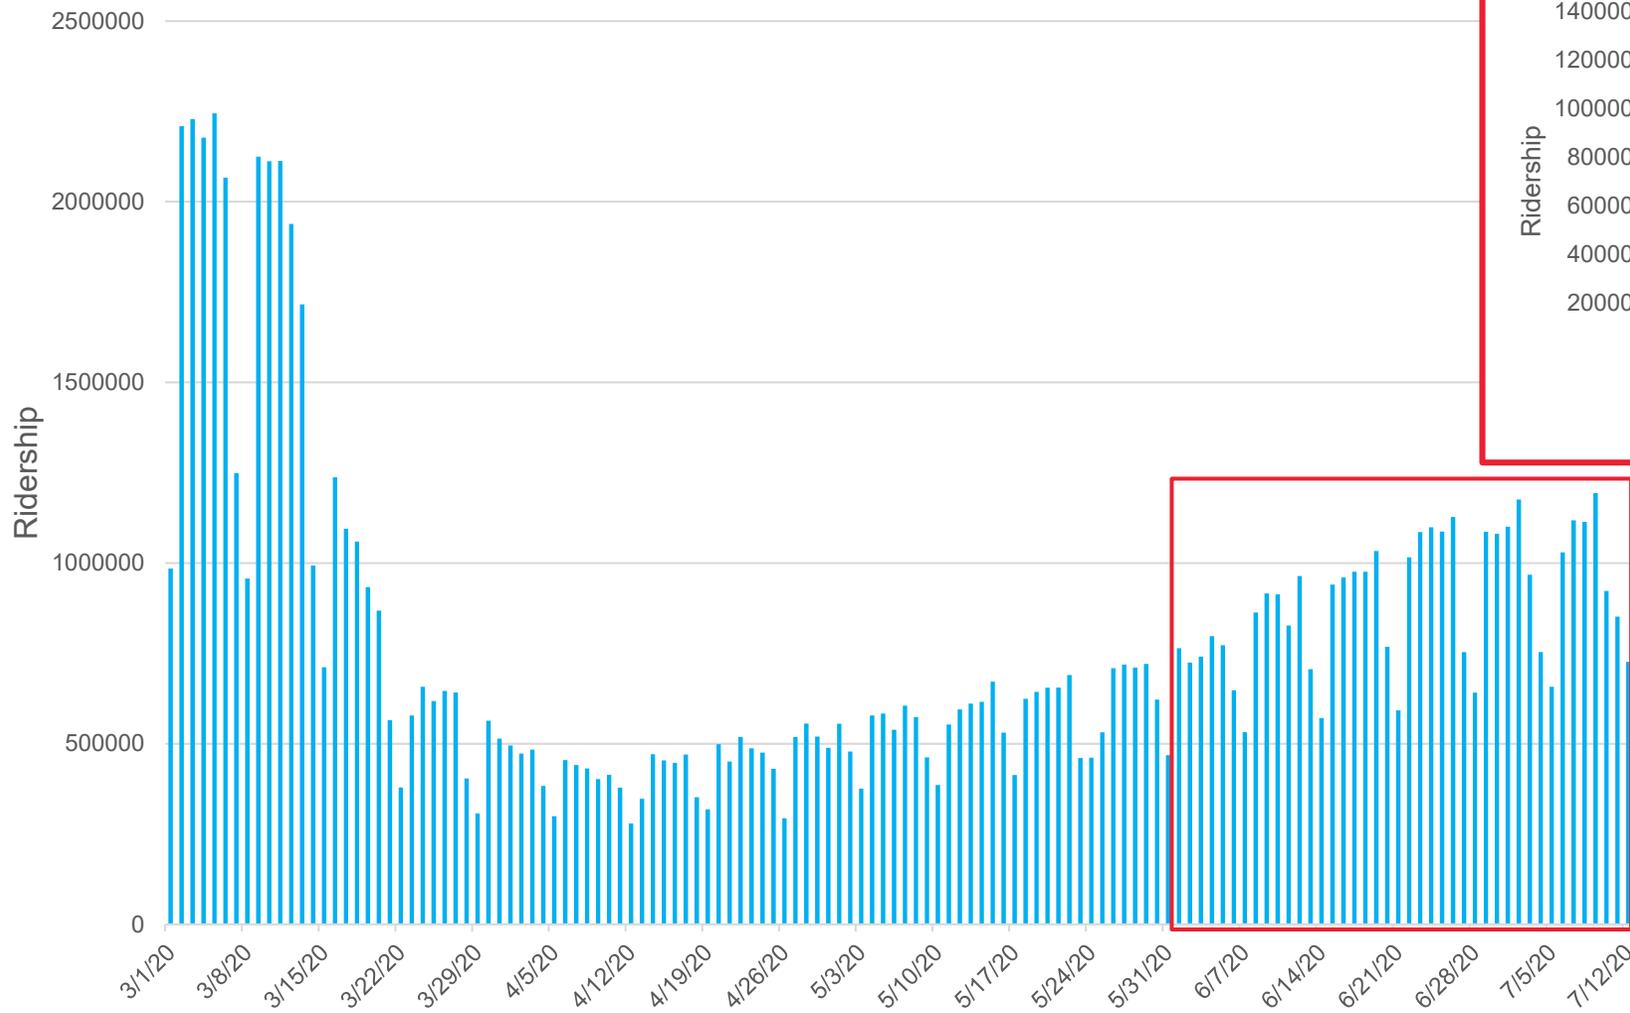

\*From the MTA: Subway ridership figures are determined from MetroCard and OMNY swipes and taps. Figures from recent days may be revised as data reconciliation processes are carried out. Data sources: MTA

(<https://new.mta.info/coronavirus/ridership>)

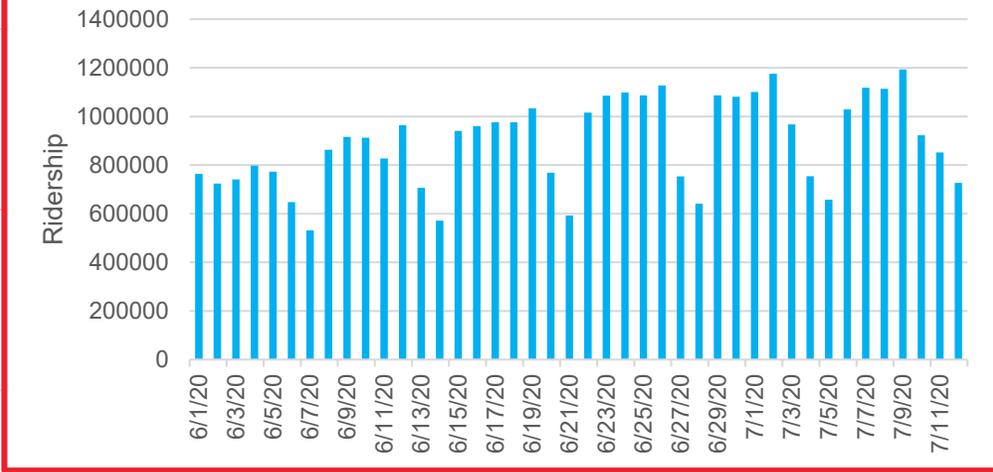

# MTA Bus System-wide Ridership Changes

Estimated \* MTA Bus Ridership (March 1- July 12, 2020)

June 1- July 12, 2020

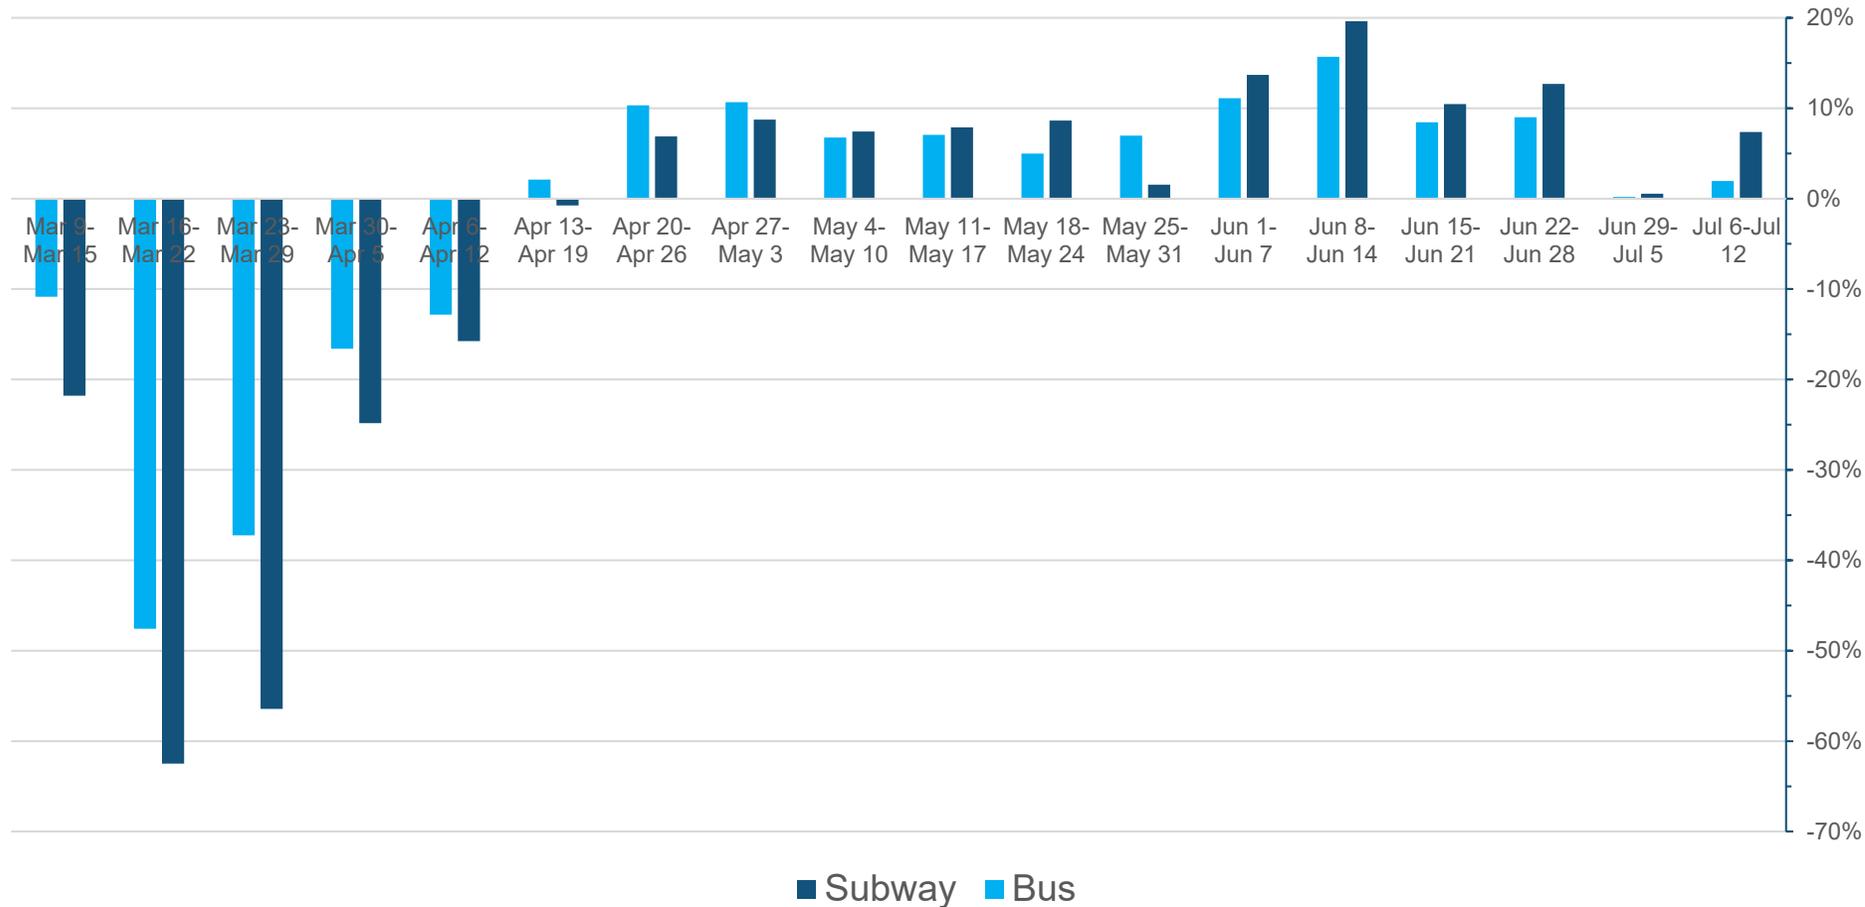

- Weekday ridership the week of July 6<sup>th</sup> was fairly steady over the previous week, while weekend ridership was up 11 percent.

\*From the MTA: Current bus ridership figures are estimated from models that use MetroCard and OMNY swipes and taps and Automatic Passenger Counter data that is available on a portion of our bus fleet. These figures are indicative of ridership but not a precise count. Figures from recent days may be revised as reconciliation processes are carried out. Data sources: MTA (<https://new.mta.info/coronavirus/ridership>)

# MTA Subway & Bus System-wide Ridership Changes

Percent Change of Estimated\* MTA Subway & Bus Weekly Ridership  
(March 1- July 12, 2020)

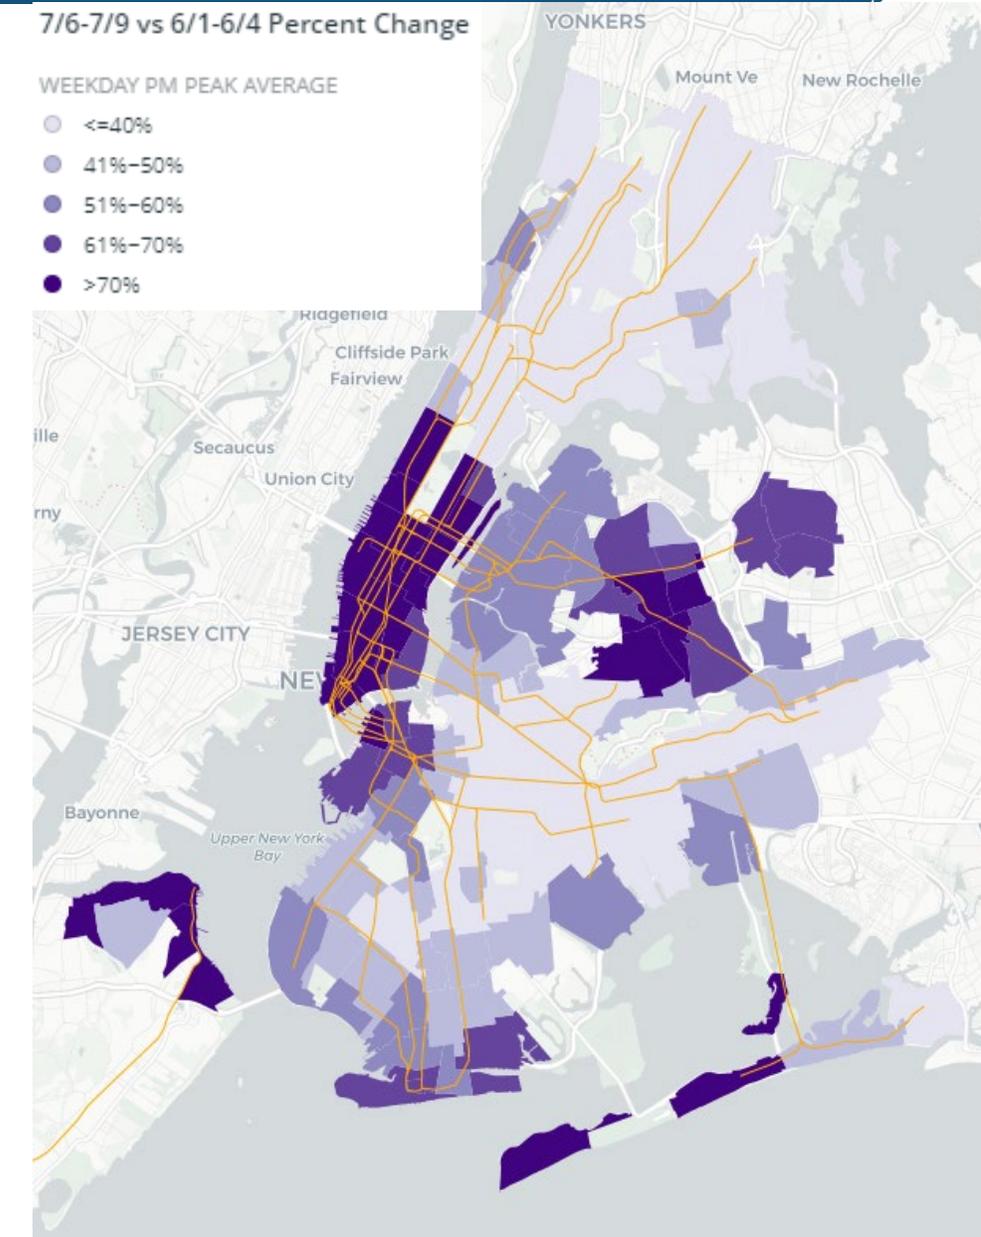

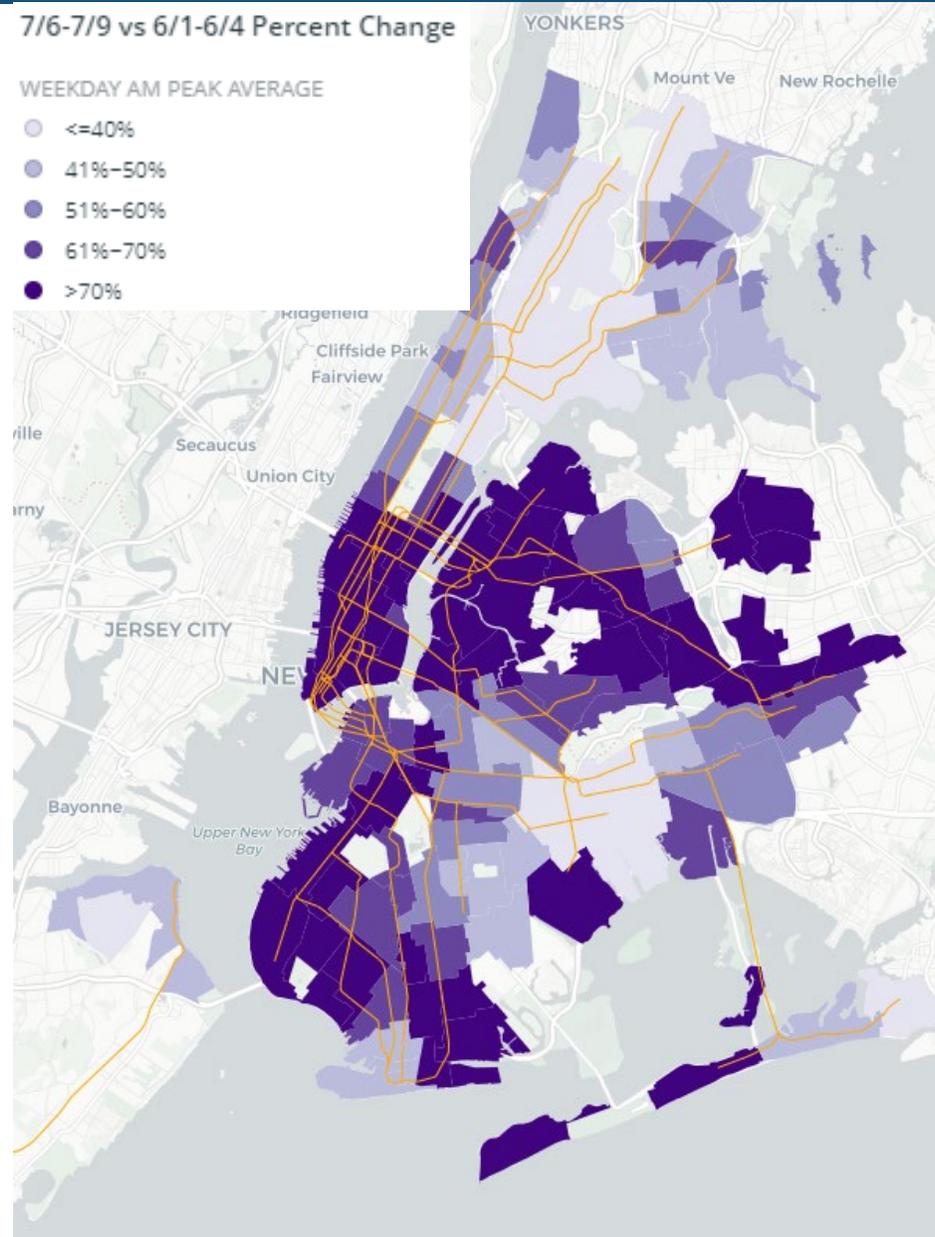

- Subway and bus ridership has been increasing week-over-week since mid-April. The greatest percent increase in ridership for both modes over the previous week occurred the week of June 8<sup>th</sup>, the first week of Phase 1.
- Total subway ridership the week of July 6<sup>th</sup> was up 7 percent over the previous week.
- Total bus ridership the week of July 6 was up nearly 2 percent over the previous week.

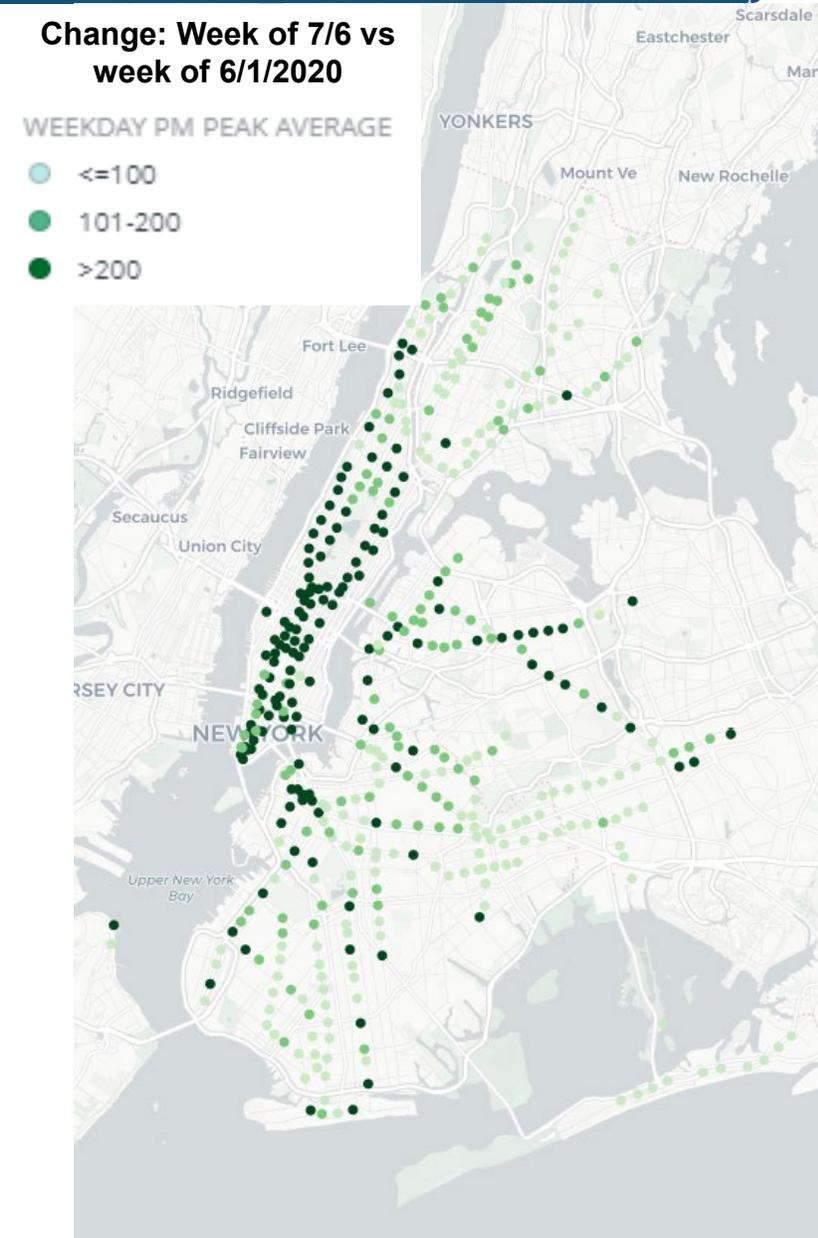

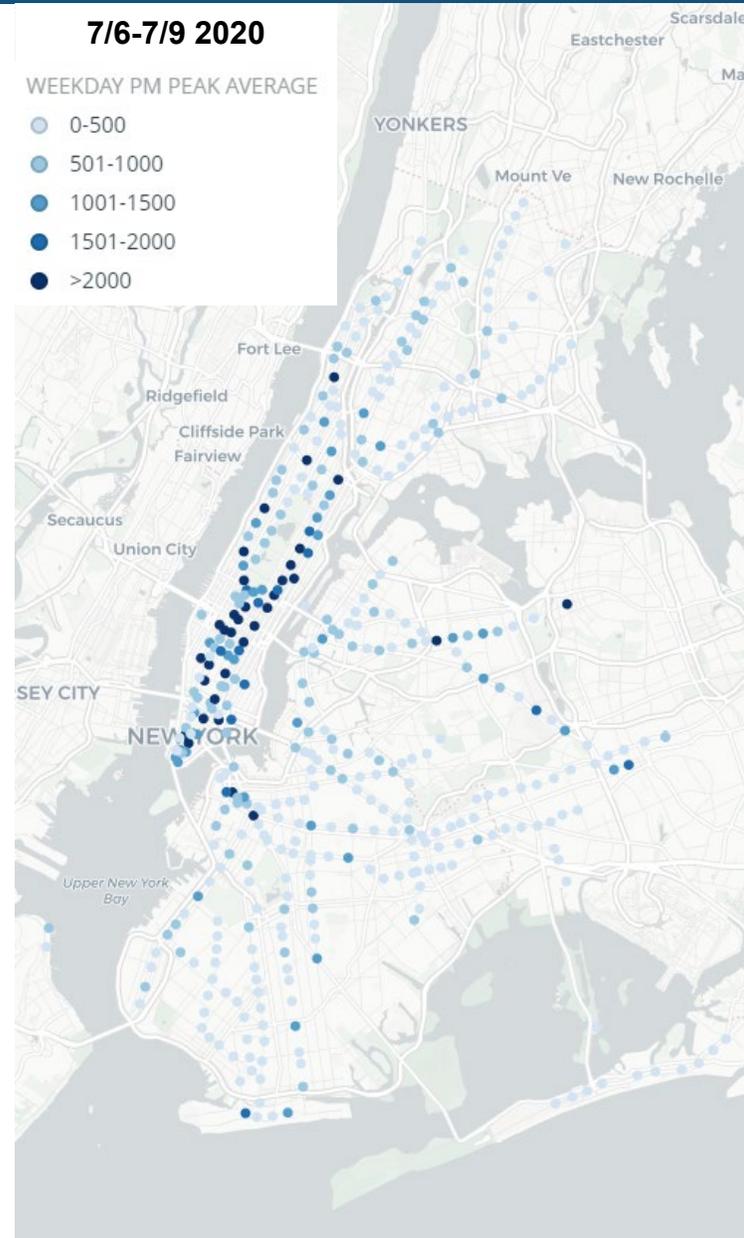

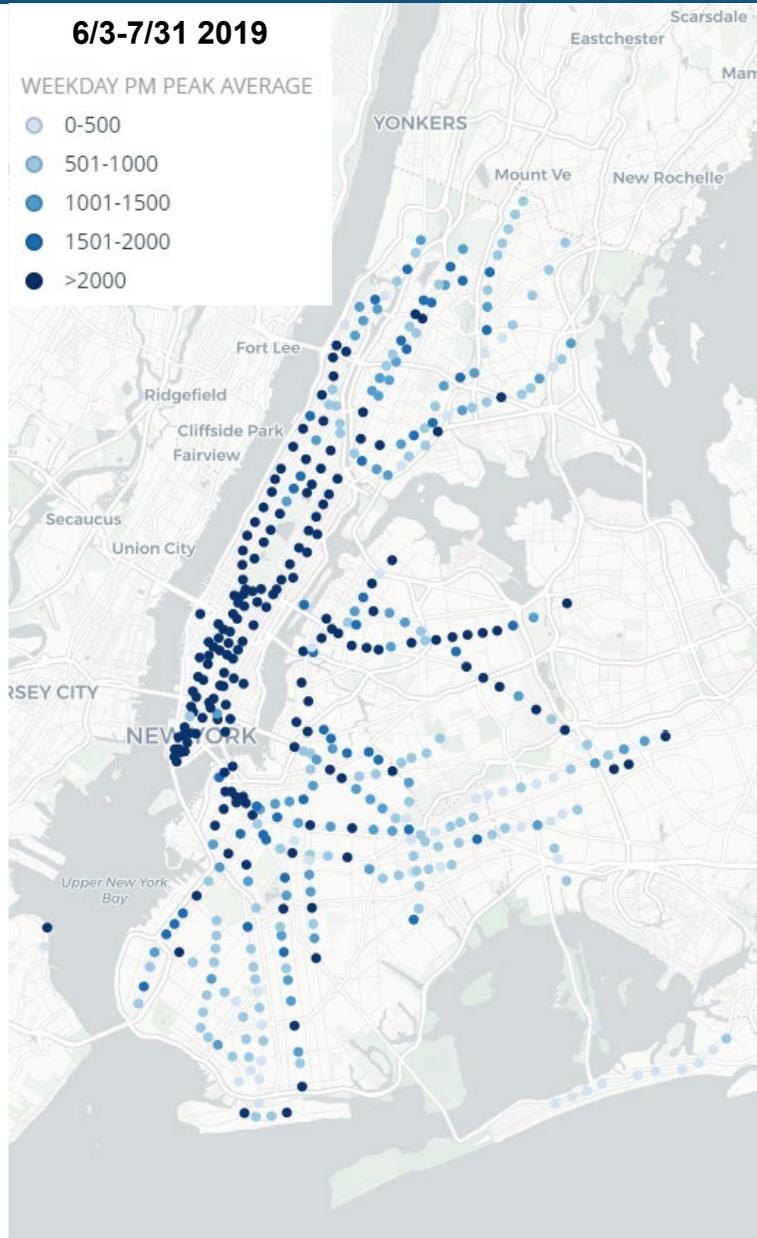

\*From the MTA: Current bus ridership figures are estimated from models that use MetroCard and OMNY swipes and taps and Automatic Passenger Counter data that is available on a portion of our bus fleet. These figures are indicative of ridership but not a precise count. Figures from recent days may be revised as reconciliation processes are carried out. Data sources: MTA (<https://new.mta.info/coronavirus/ridership>)

# Weekday AM and PM Peak Turnstile Data – Comparisons with early June

- The maps on the right illustrate changes in AM and PM peak ridership by neighborhood during the week of July 6 compared to the first week in June.
- AM peak ridership has increased by more than 70 percent since the start of June in some neighborhoods, including the Manhattan CBD, much of Queens, and western and southern Brooklyn.
- PM peak ridership – an indicator of where people are commuting home from – increased by more than 70 percent in the Manhattan CBD, Downtown Brooklyn, St. George Staten Island, and Rego Park.

# Weekday PM Peak Turnstile Data

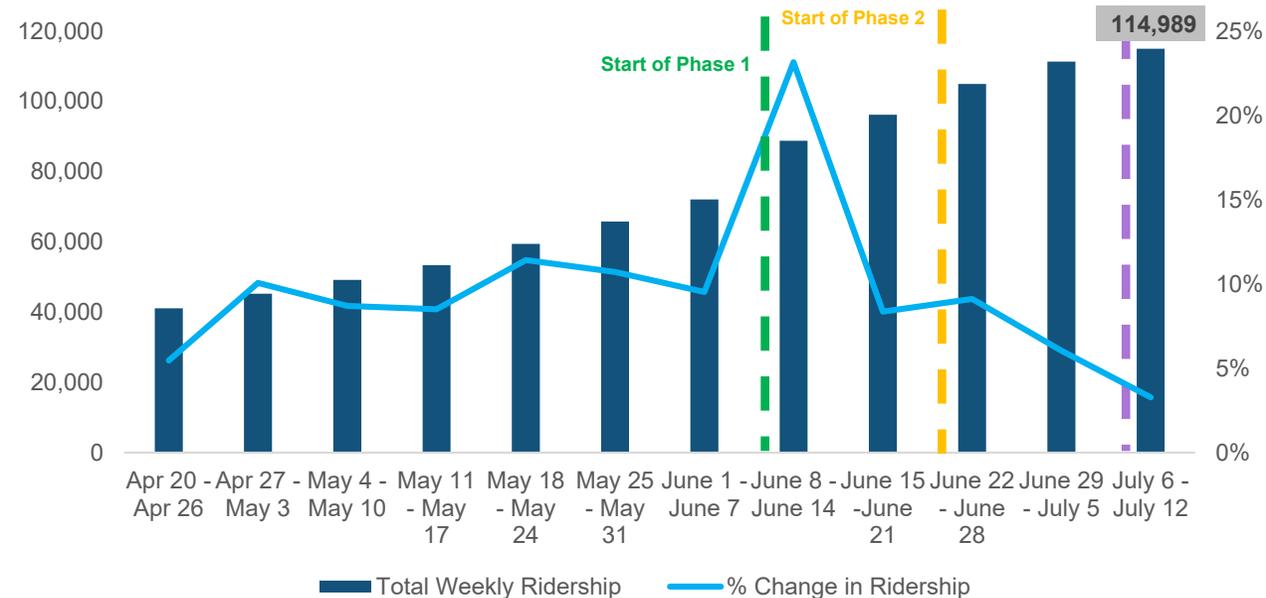

# Ferry

# The Staten Island Ferry and NYC Ferry

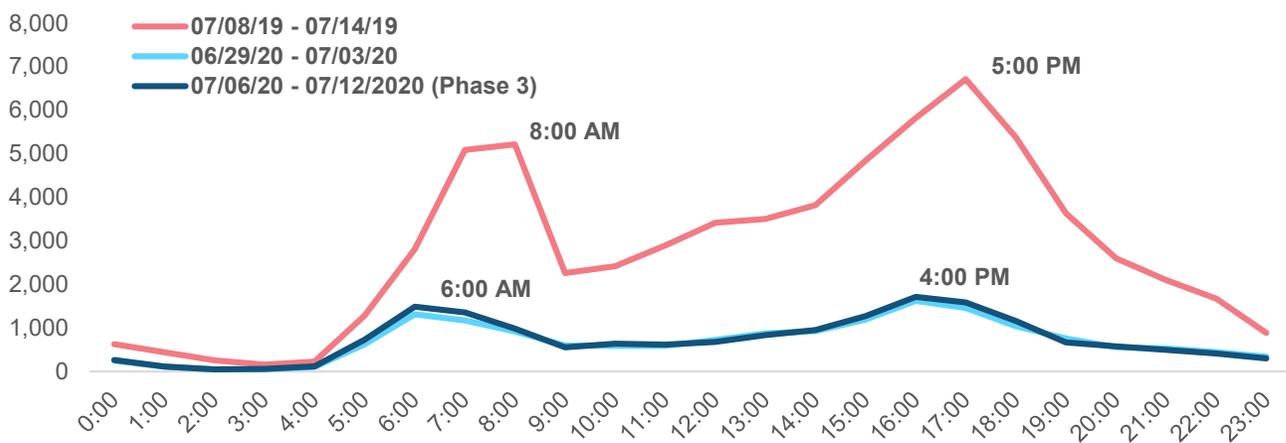

### SIF Total Weekly Ridership

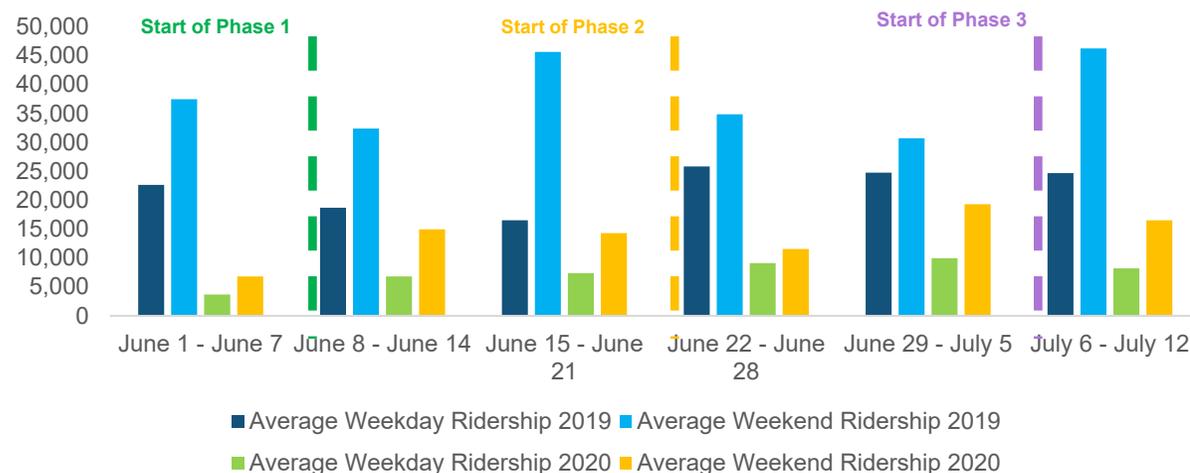

- On July 6<sup>th</sup>, rush hour service returned to the Staten Island Ferry, with boats running every 15 or 20 minutes during the busiest commuting times.
- The start of Phase 3 saw about 115,000 Staten Island Ferry riders. This represents a 3 percent increase, or about 3,650 additional riders, from the previous week. This is the **slowest week-to-week rate of increase** since ridership started increasing in late April.
- Weekday peak hour ridership remained at 6:00 am for the morning and 4:00 pm in the afternoon. Morning trips saw the highest increase in ridership with an average increase of 14 percent between 3 am to 8 am, compared to the previous week.
- NYC Ferry weekly ridership decreased by 16 percent, or by about 14,300 riders compared to last week.
- Since the start of the phased reopenings, NYC Ferry ridership has been increasing by an average of 21 percent.

### SIF Average Weekday Total Ridership Per Hour

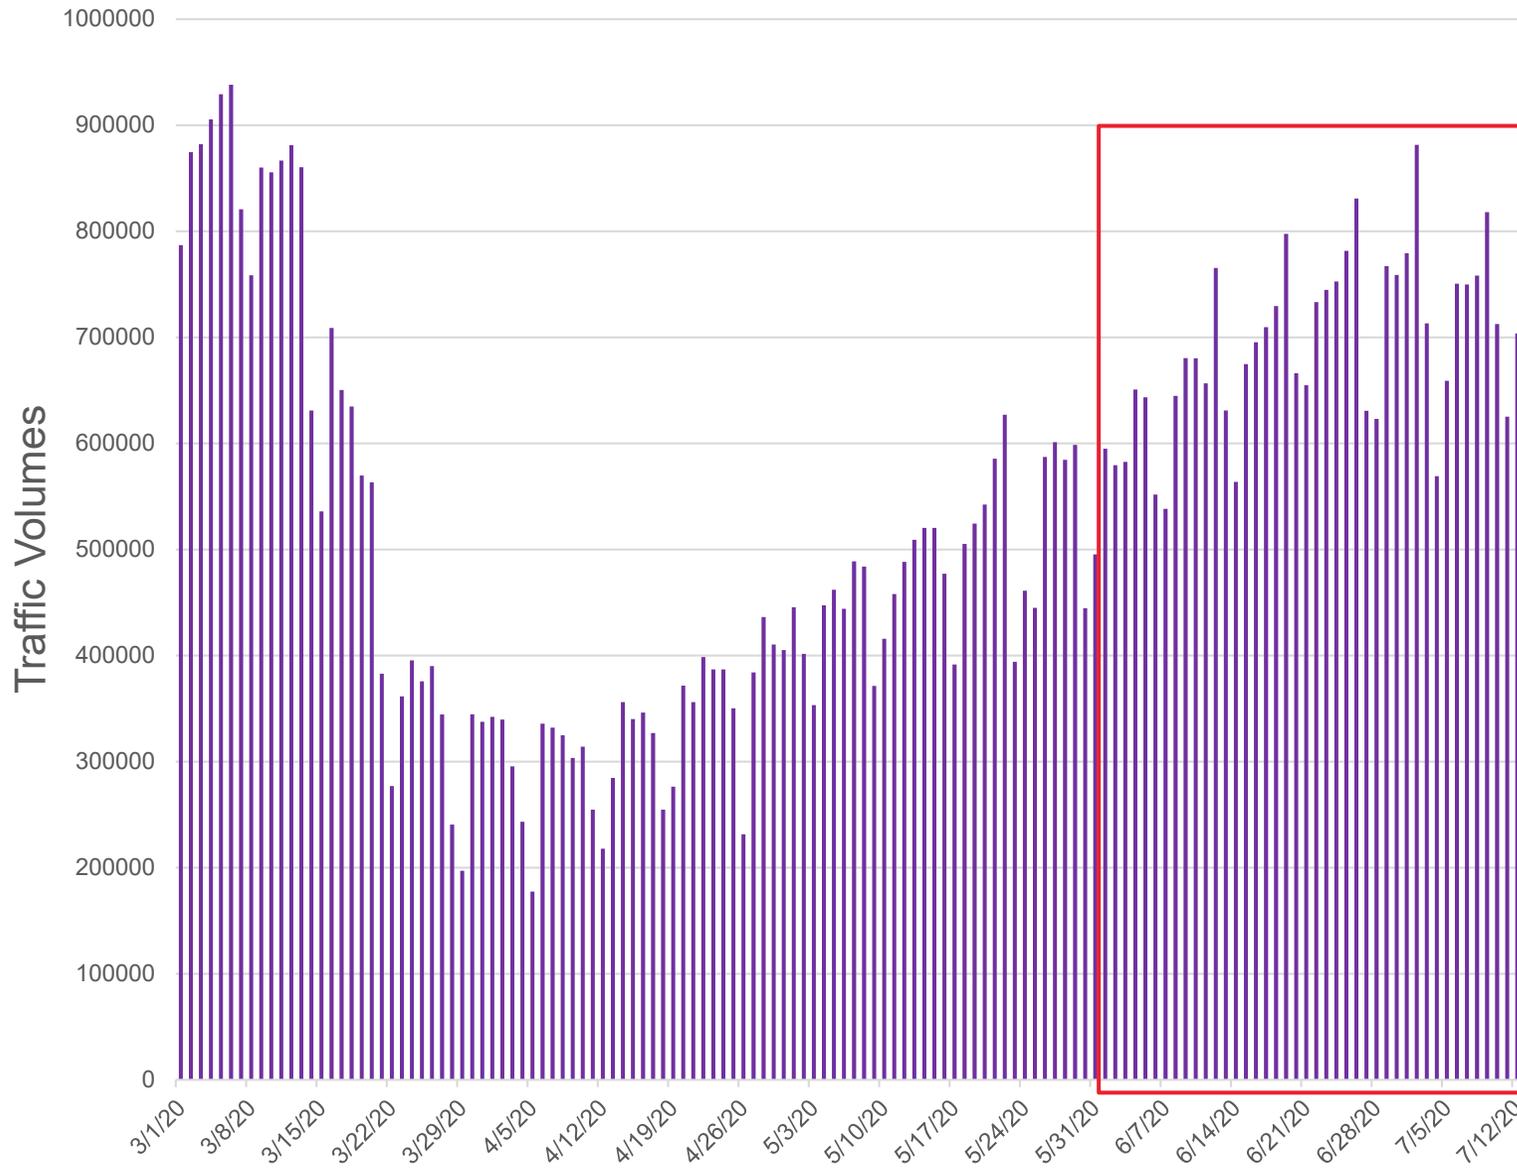

### NYC Ferry Weekly Ridership Weekday vs. Weekend Averages

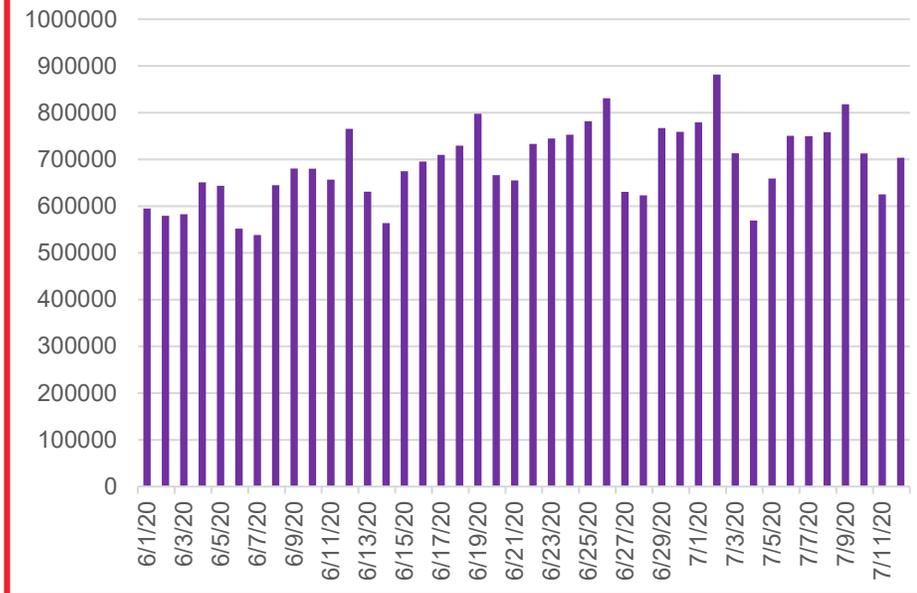

# Traffic

# MTA Bridge and Tunnel Traffic Volumes

Estimated \* MTA Bridge and Tunnel Traffic Counts (March 1- July 12, 2020)

June 1- July 12, 2020

- Total weekday traffic counts during the week of July 6<sup>th</sup> were down nearly 3 percent over the previous week. Weekend traffic counts were up 8 percent.

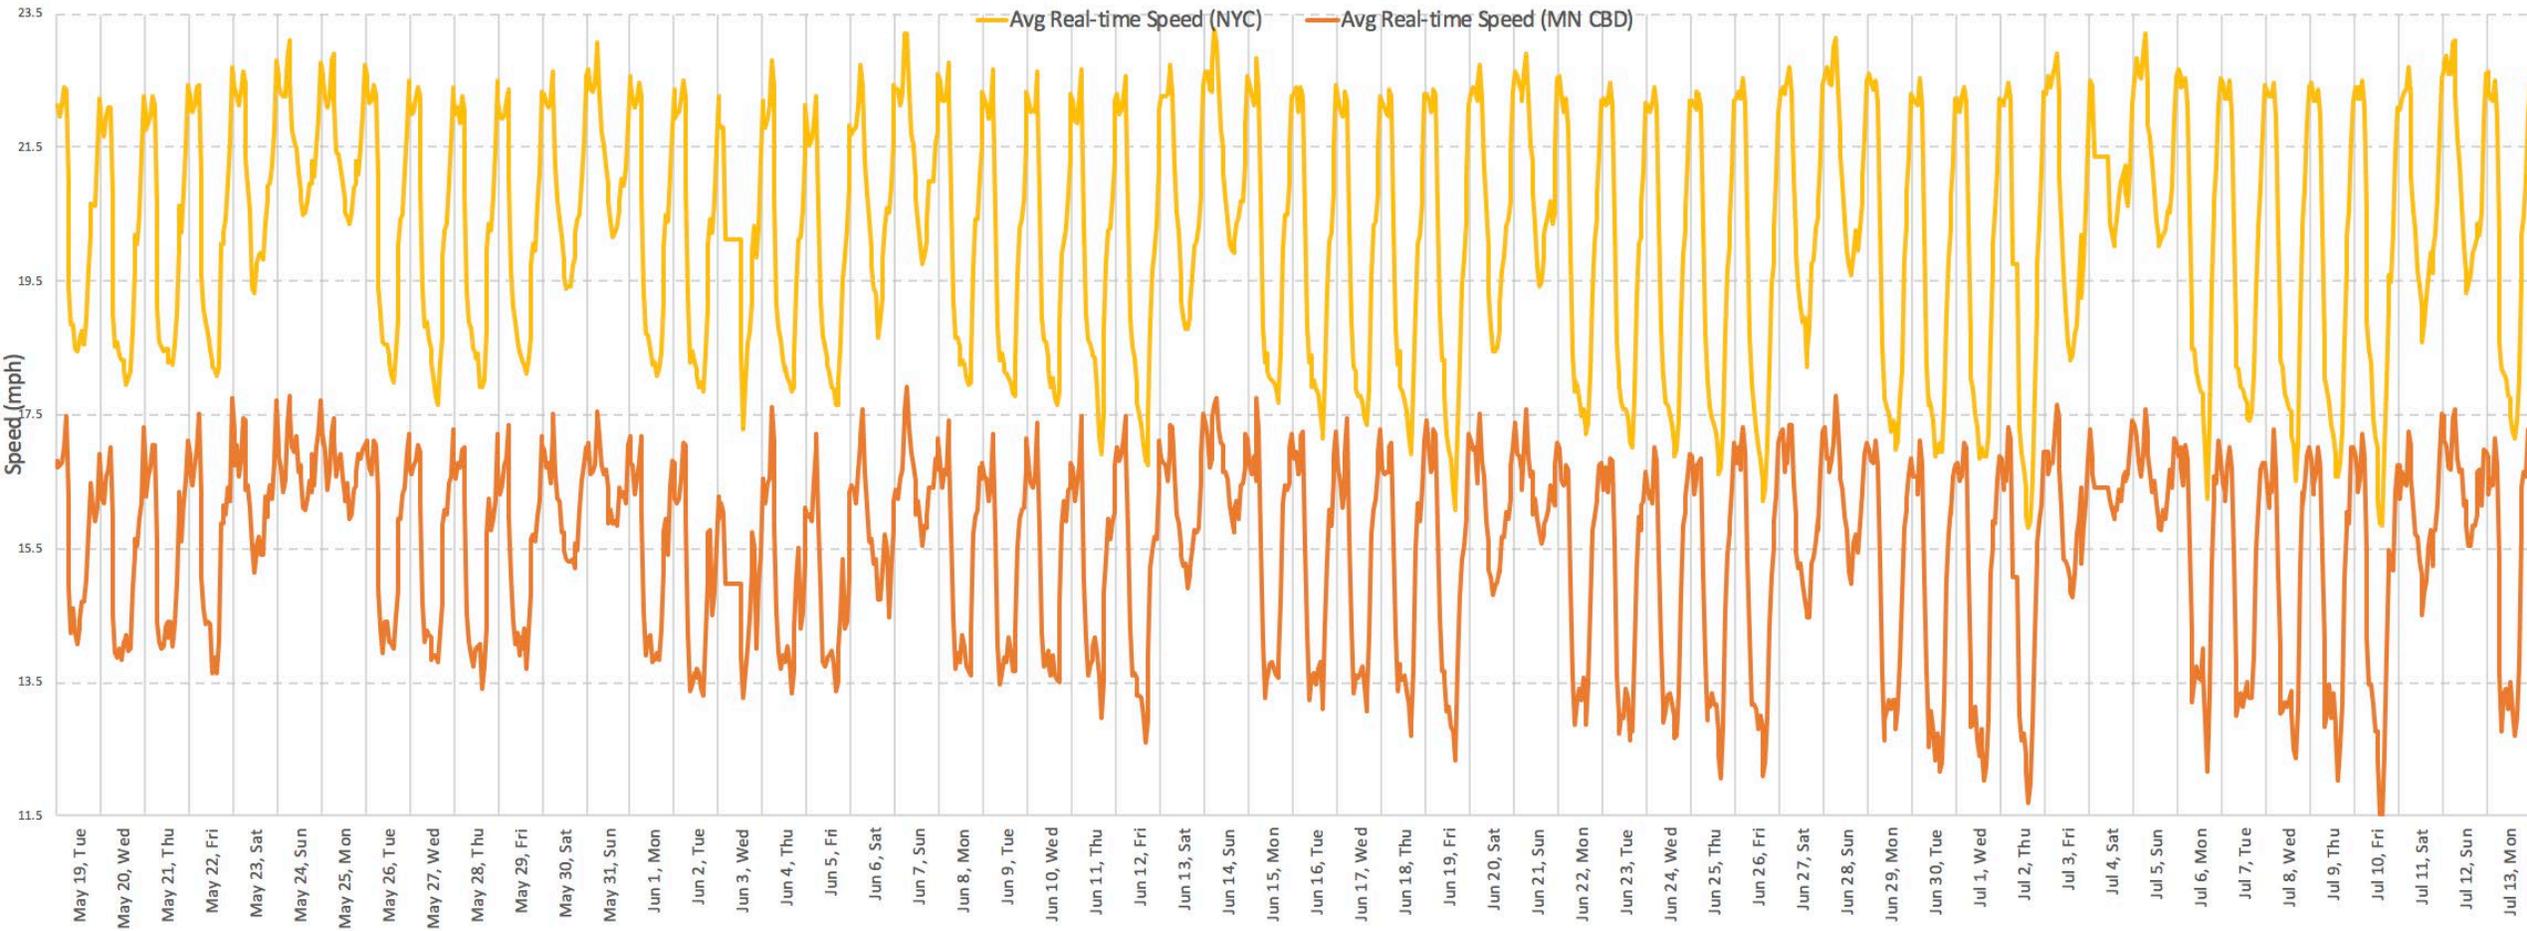

MTA crossings include:

- Bridges: Robert F. Kennedy, Throgs Neck, Verrazzano Narrows, Bronx-Whitestone, Henry Hudson, Marine Parkway-Gil Hodges Memorial, and Cross Bay Veterans Memorial bridges.
- Tunnels: the Hugh L. Carey Tunnel and the Queens Midtown Tunnel.

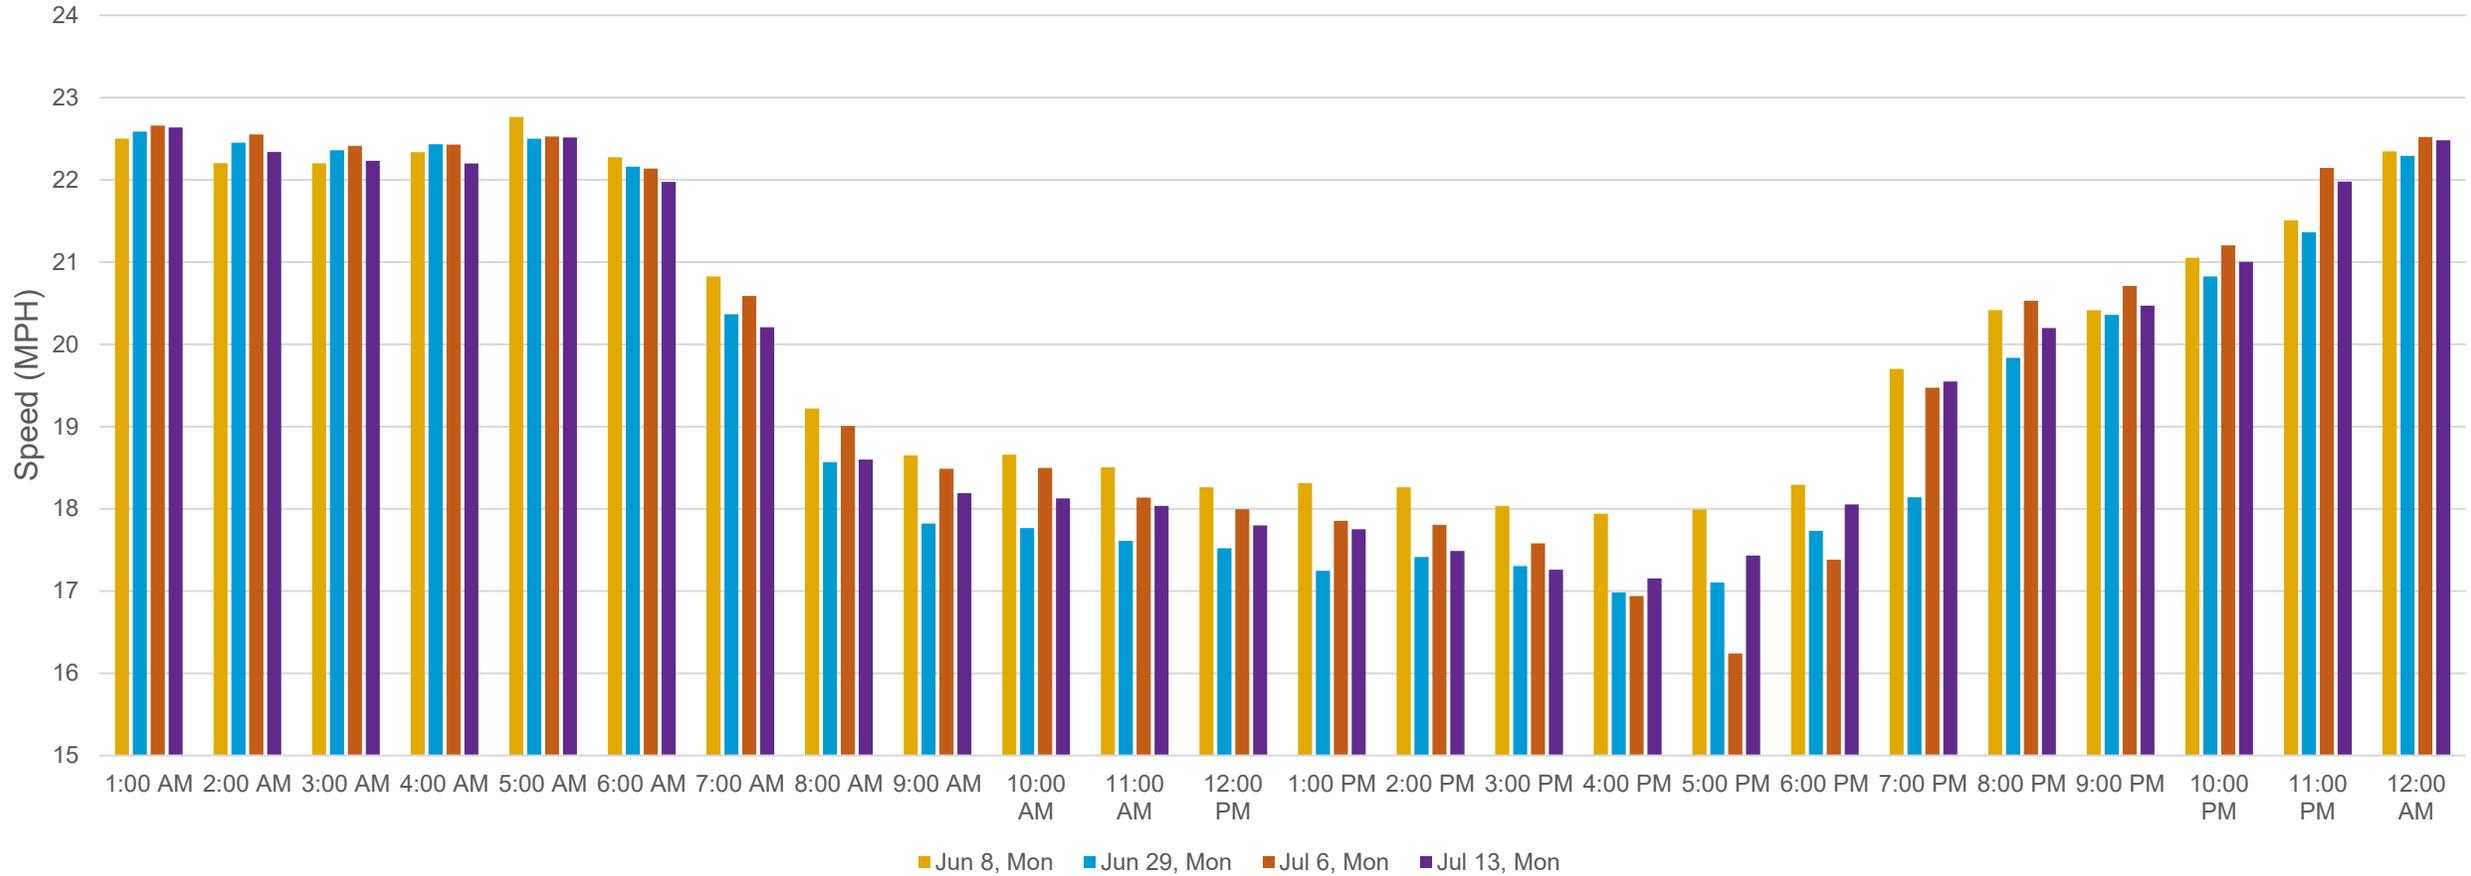

Real-time vs Free Flow Traffic Flow Speed by Hour in NYC and MN CBD (May 19 -Jul 13, 2020)

- Average traffic speeds across NYC and within the Manhattan CBD continue to decline.
- Since June 8<sup>th</sup>, weekday traffic speeds have followed a consistent trend of slowing as the week progressed.

Real-time Traffic Flow Speed by Hour in NYC (Jun 8, Jun 29, Jul 6, Jul 13, 2020)

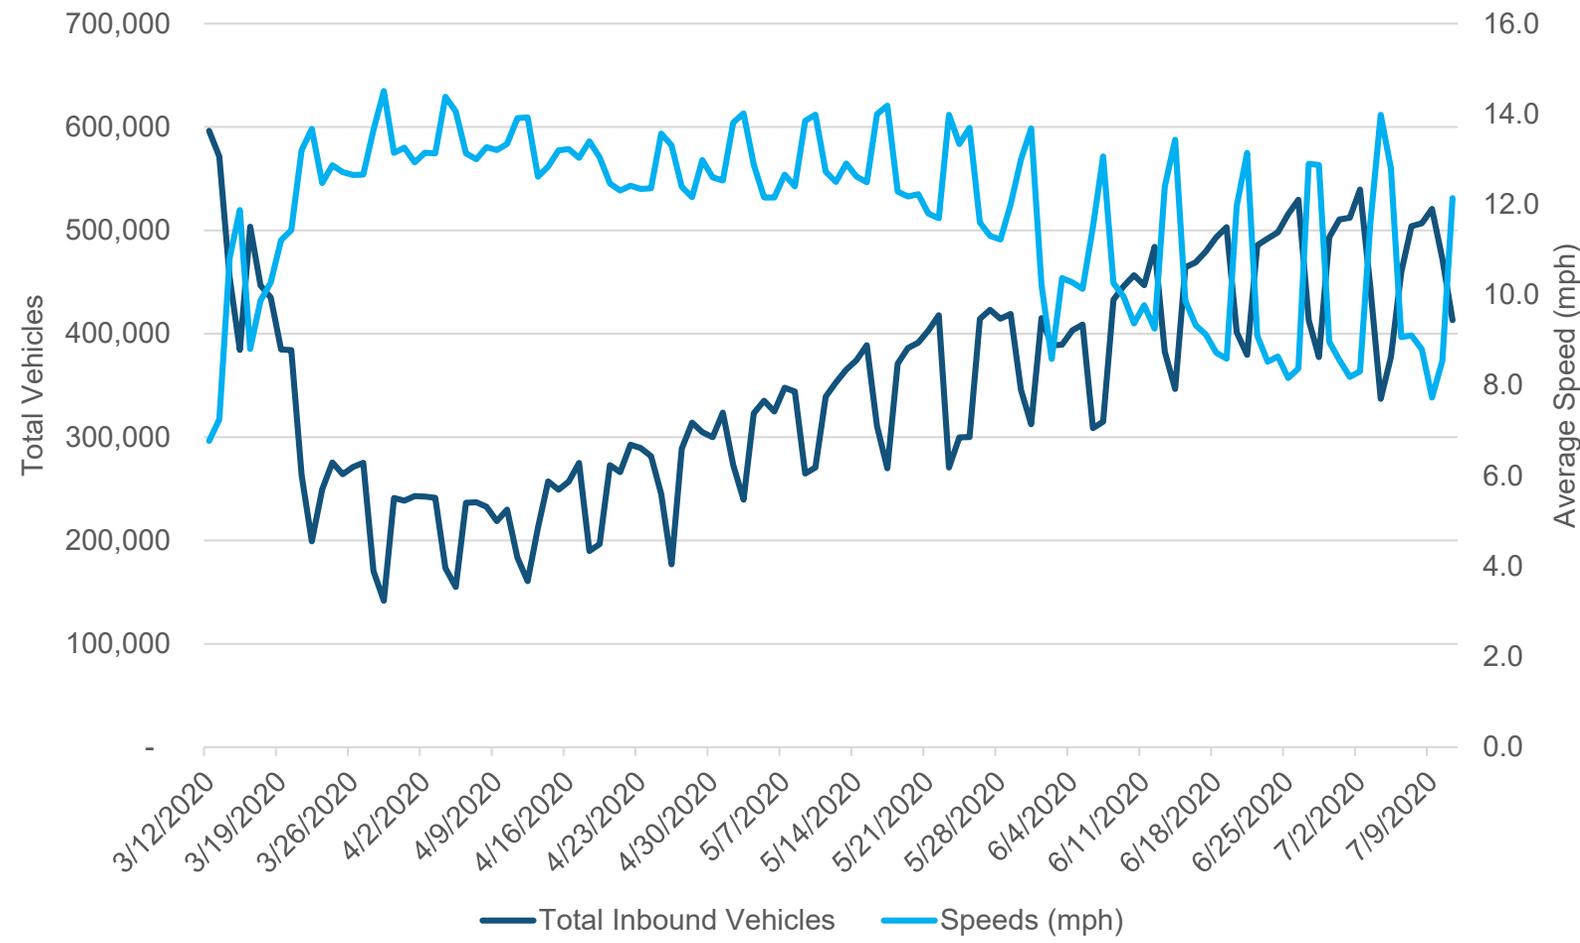

- Compared to earlier weeks, average hourly traffic flow speeds on Monday, July 13 were generally consistent with the previous week, with some afternoon fluctuations.

# Manhattan Inbound Traffic

Average vehicles entering CBD via river crossings & average daytime travel speeds in Midtown

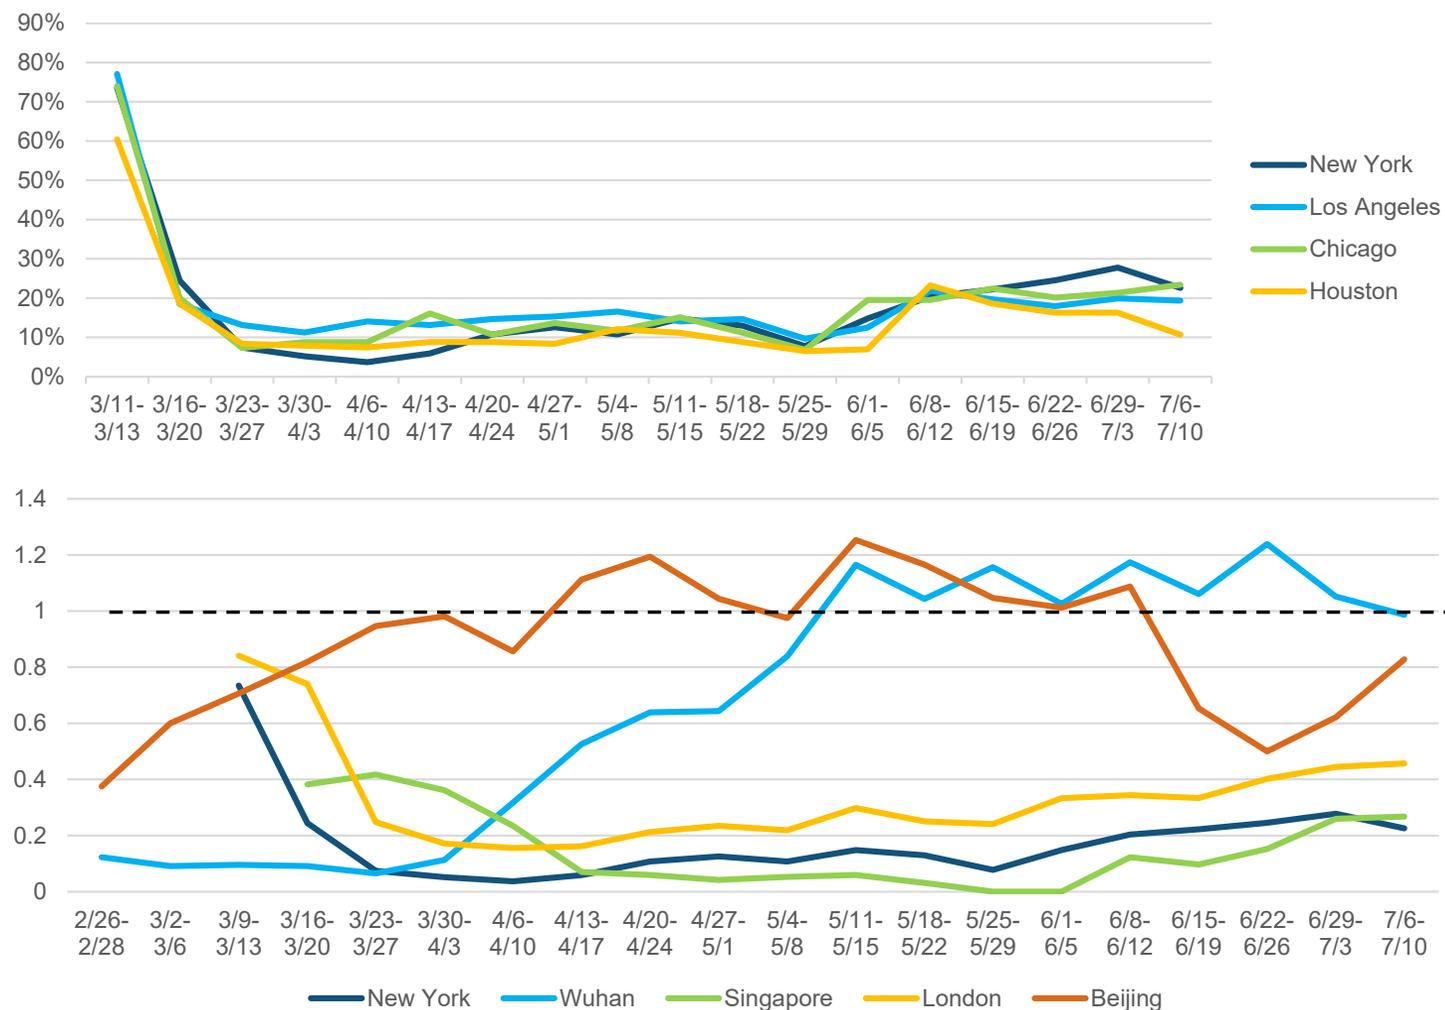

- After a steep decline in total inbound vehicles into the Manhattan CBD in the week leading up to the PAUSE, entries have been increasing since mid-April.
- Over the same time period, weekday daytime speeds in Midtown have been steadily declining, with weekday speeds in early July comparable to pre-PAUSE speeds.

Source: NYCDOT, NYCTLIC, Port Authority, Triborough Bridge and Tunnel Authority

# Traffic Congestion

- Congestion is a measure of the average amount of additional travel time needed to get to a destination anywhere in a city compared to free flow conditions. Zero percent represents free flow speeds.
- After a significant initial decline in congestion in March, all four U.S. cities measured here saw increases in June.
- On the bottom chart, 100 percent represents 2019 yearly average congestion for each city.
- Wuhan and Beijing, which opened sooner than other world cities, have seen higher than average congestion. Congestion has subsequently fallen under Beijing's second outbreak.

Pandemic Average Weekly Traffic Congestion vs. 2019 Yearly Average\*

\*Some weeks contain less than five days due to holidays and gaps in the data.

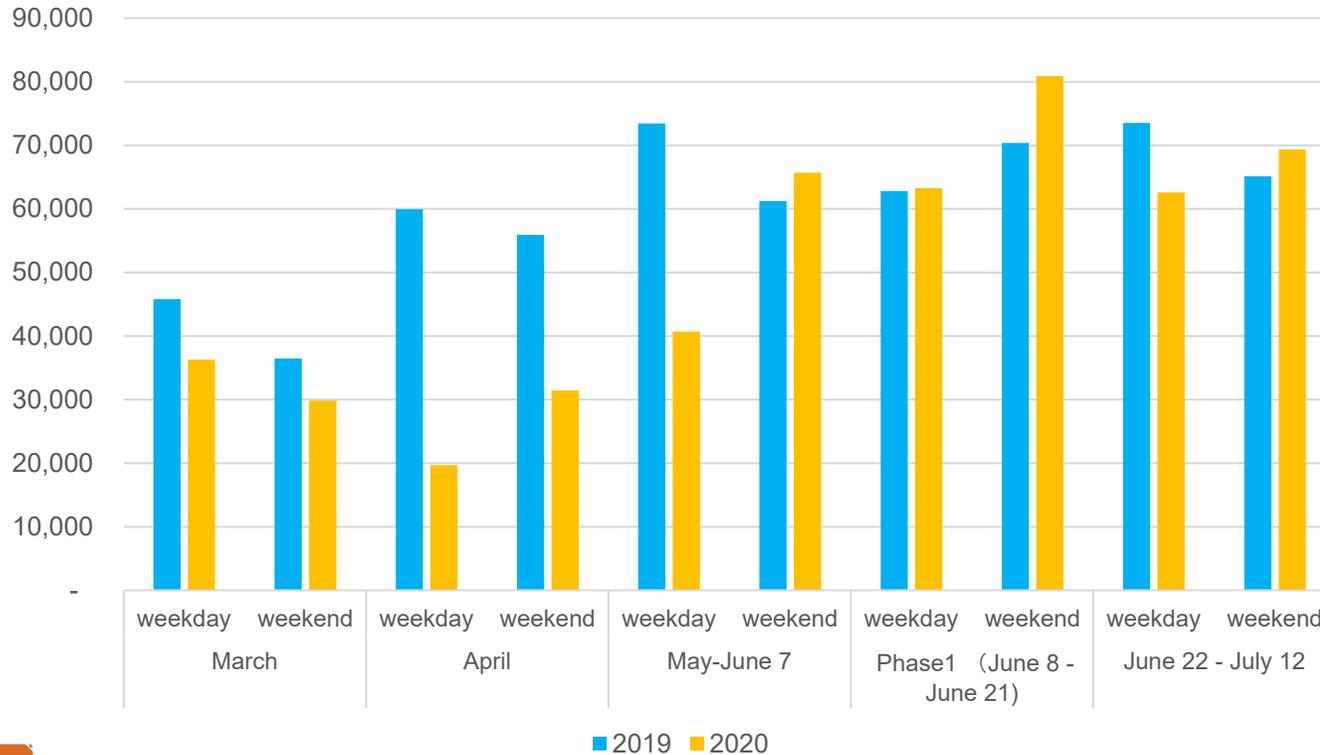

Data source: TomTom Traffic Index ([https://www.tomtom.com/en\\_gb/traffic-index/](https://www.tomtom.com/en_gb/traffic-index/))

# Citi Bike

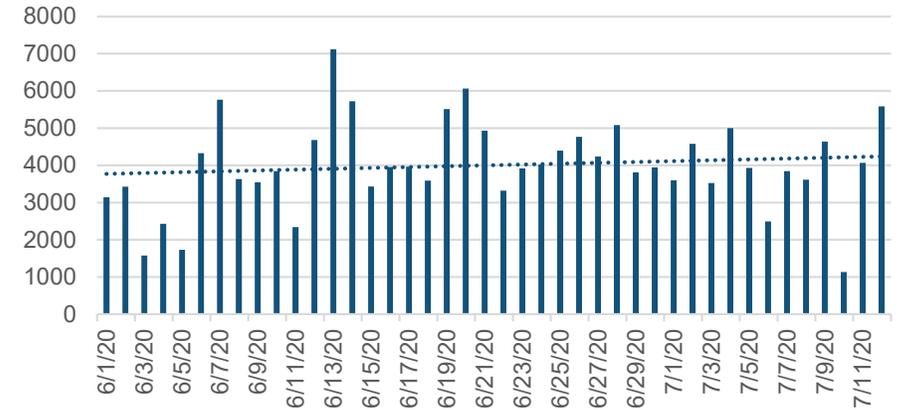

# Citi Bike Ridership Trends

- Citi Bike ridership in June 2020 has fluctuated compared to ridership volumes for June 2019. Much of this inconsistency may be attributed to weather.
- Citi Bike ridership on East River bridge crossings has been fairly steady since early June 2020, with peak travel occurring on weekends.
- The percentage of trips taken by Critical Workers has been declining.

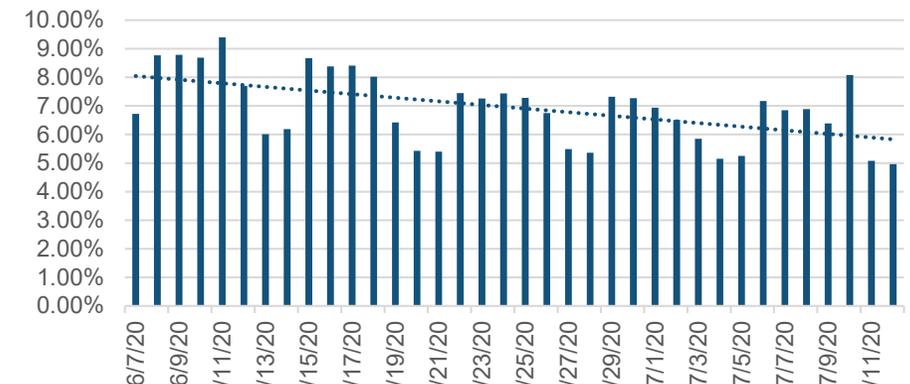

Citi Bike Average Daily Trips 2019 vs 2020 (March-June)

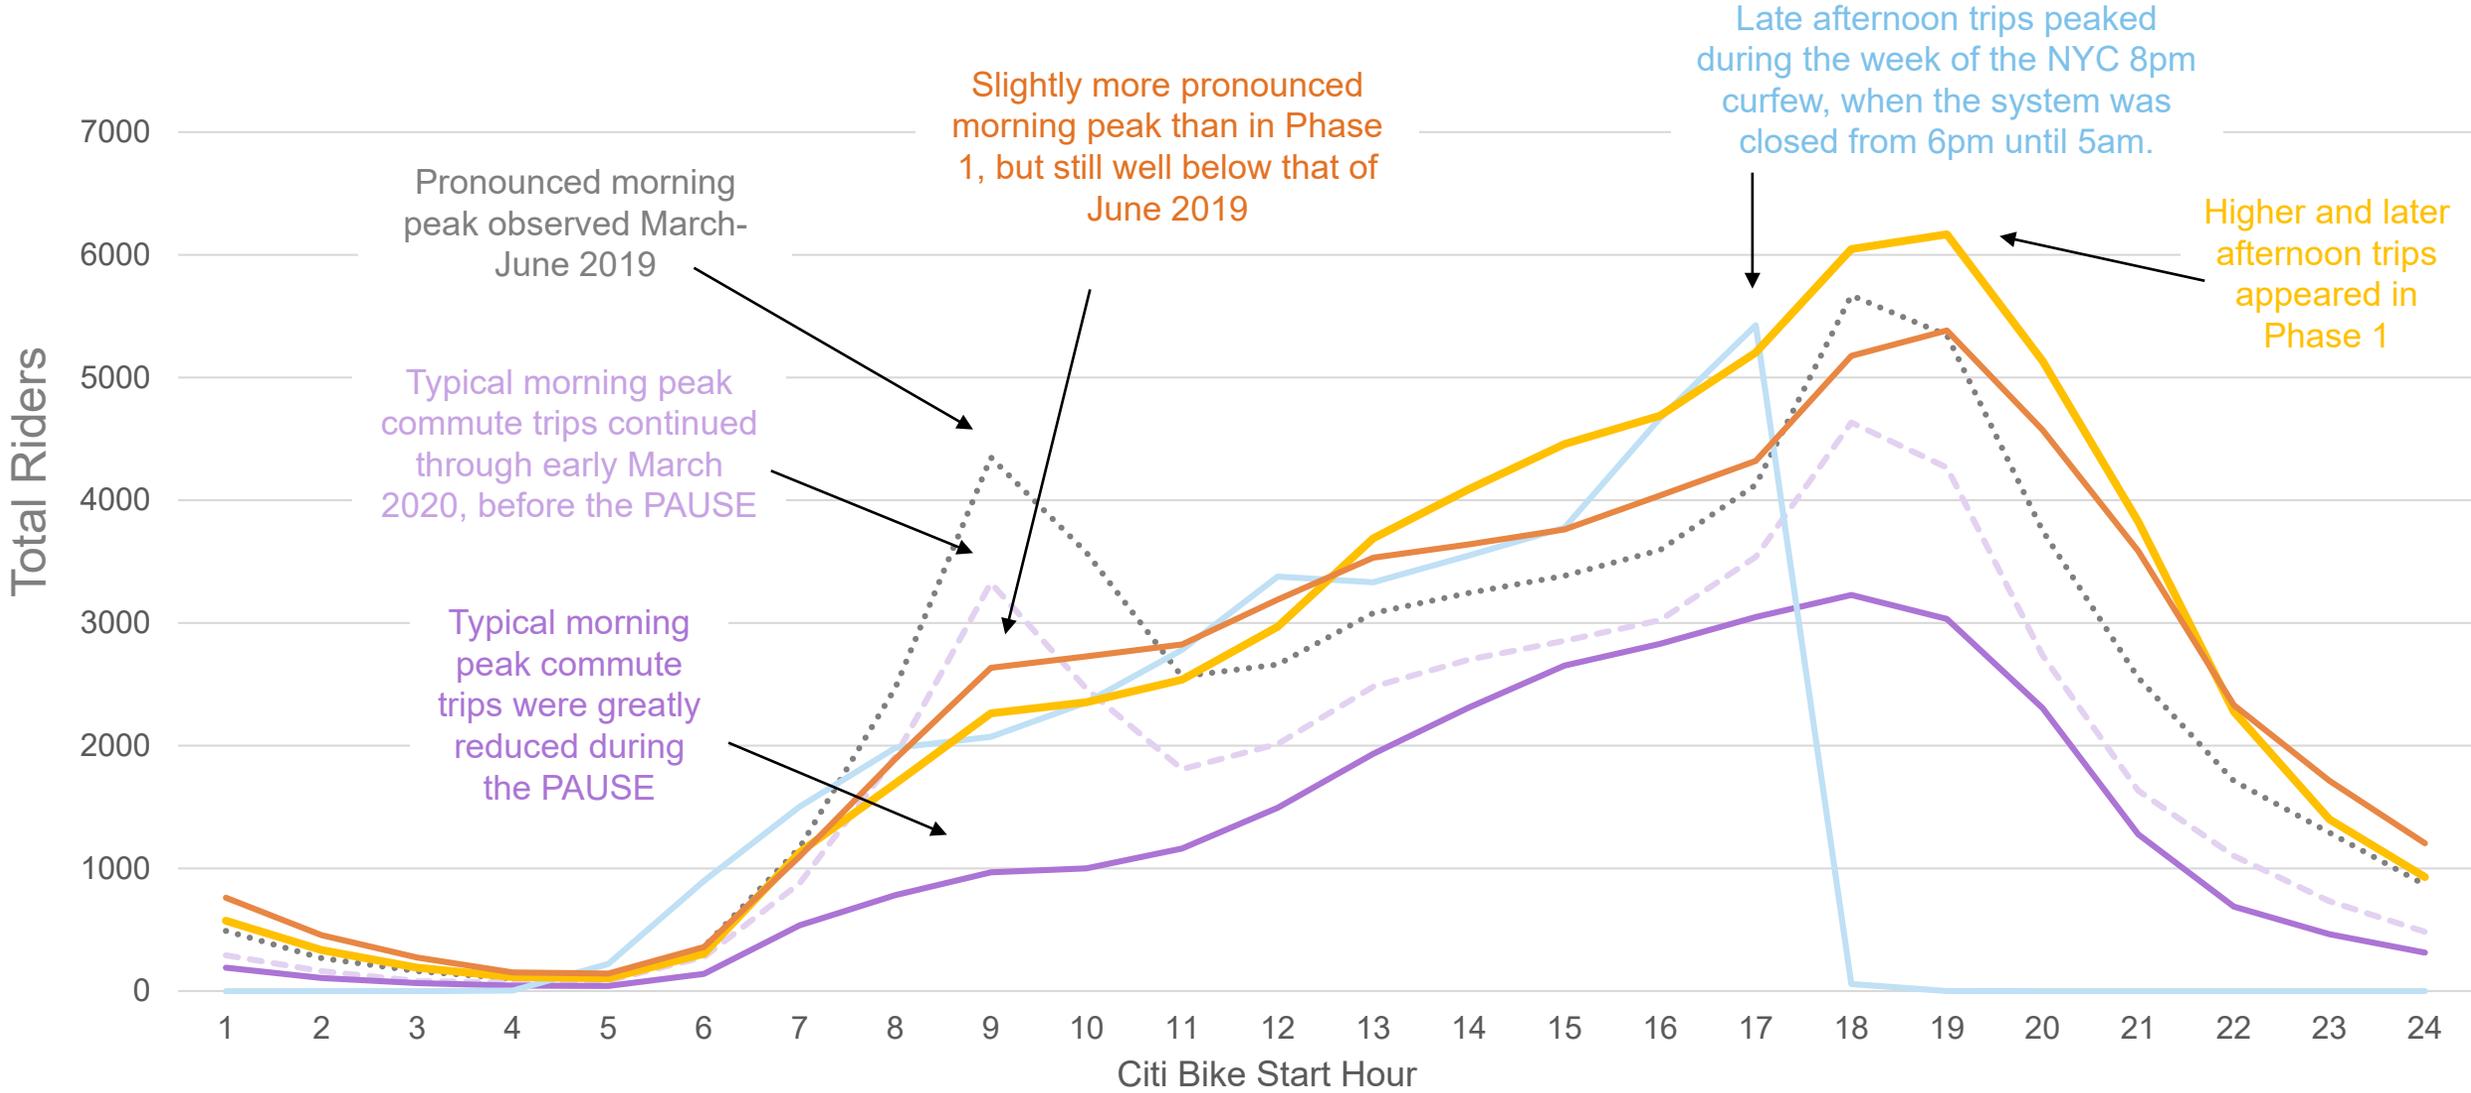

Daily East River Bridge Crossings

Percent of all trips taken by Critical Workers

# Citi Bike Ridership by Time of Day

..... March-June 2019    - - - - March 01-21 2020    - - - - March 22 - June 2    - - - - 06-03 ~ 06-06 curfew    - - - - Phase 1 June 8 - June 21    - - - - June 22- July 12

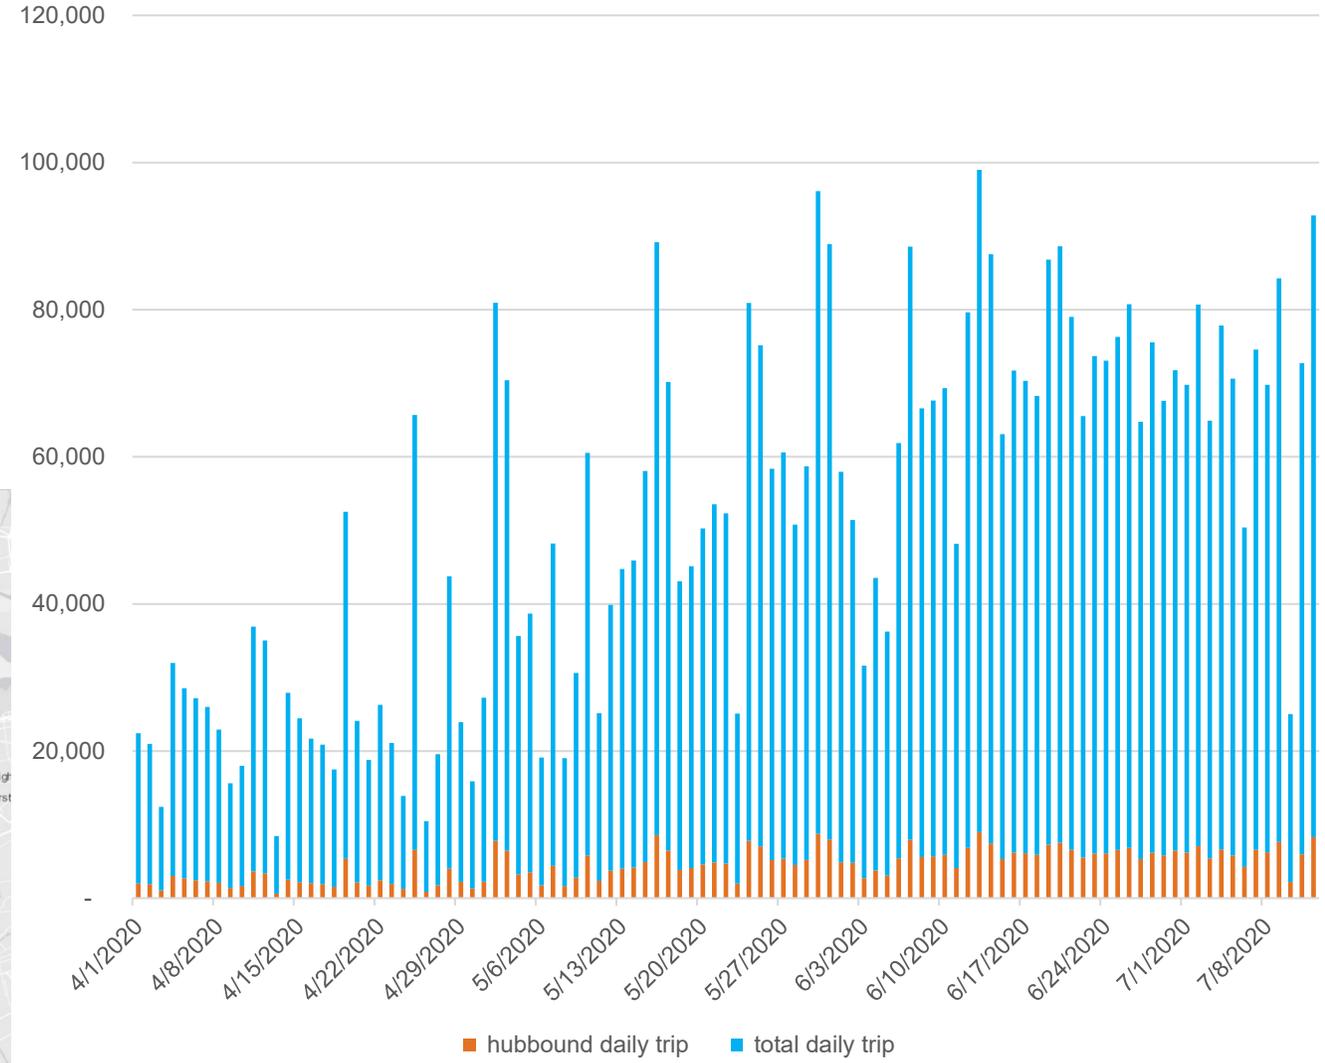

# Citi Bike Ridership Trends – Hub Bound Travel

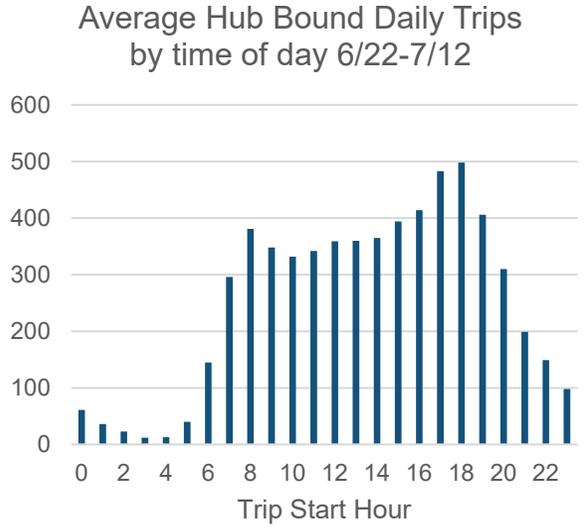

## Hub Bound Daily Average Trips By NTA

- While overall Citi Bike ridership has been high through May and June, the number of trips\* starting outside of the Manhattan CBD and ending within it remain low.
- The low percentage of Citi Bike trips to the Manhattan CBD from outside of it imply that only a few new hub-bound commuters have been using Citi Bike to commute in Phases 1 and 2.

## Hub Bound Daily Trips vs Total Daily Trips

June 22 – July 12 2020

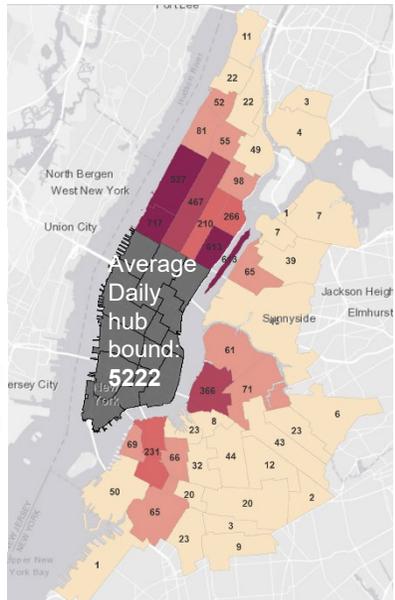

Legend

NTA HUB

Average Daily Trips

- > 500
- 300 - 500
- 100 - 300
- 50 - 100
- <= 50

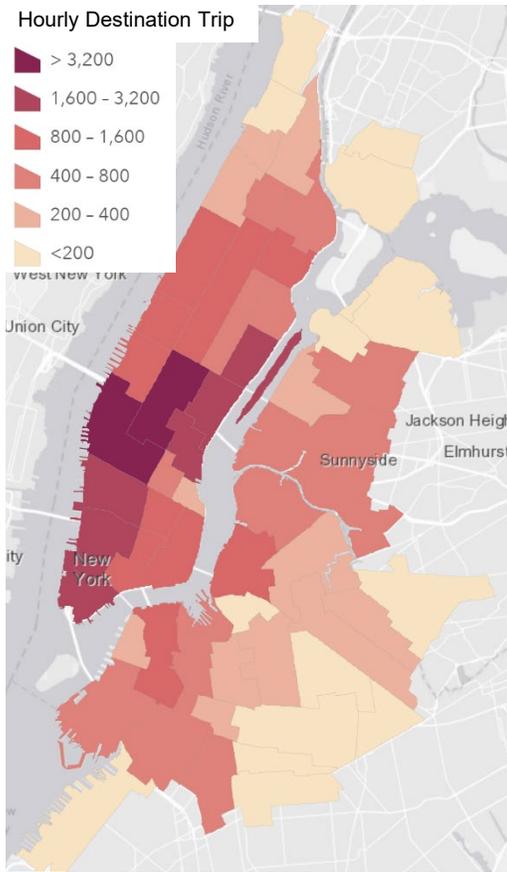

\*Hub-bound trips: trips originating outside the hub and ending inside the hub, where trip duration is greater than 1.5 min and less than 45 mins

# Citi Bike Destination Ridership By Time of Day Trends

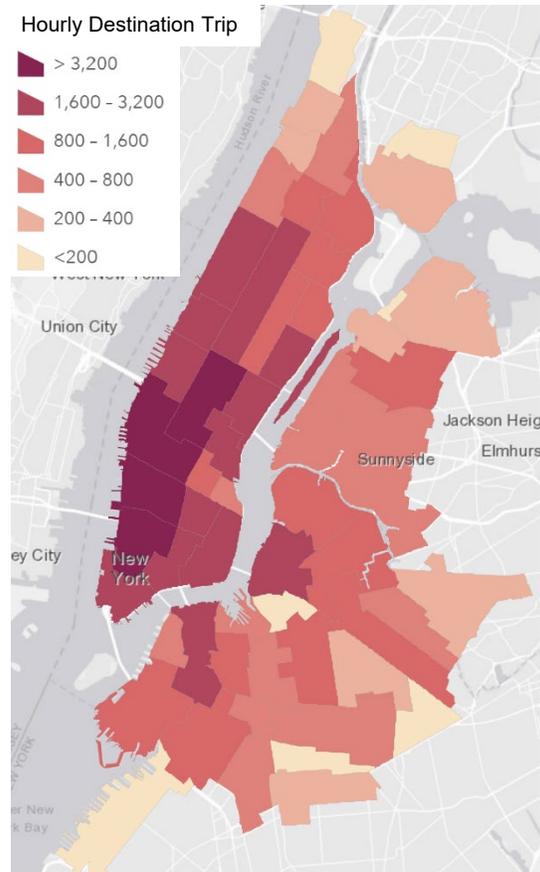

## Average Hourly NTA Destination Trips by time of day 6/22-7/12

- Citi Bike trip destinations vary substantially by time of day.
- Manhattan destinations predominate during the morning and evening hours. Unlike the hub-bound analysis on the previous slide, these trips include any trip that ends in Manhattan, regardless of origin. Williamsburg, Brooklyn, is also a common evening destination.

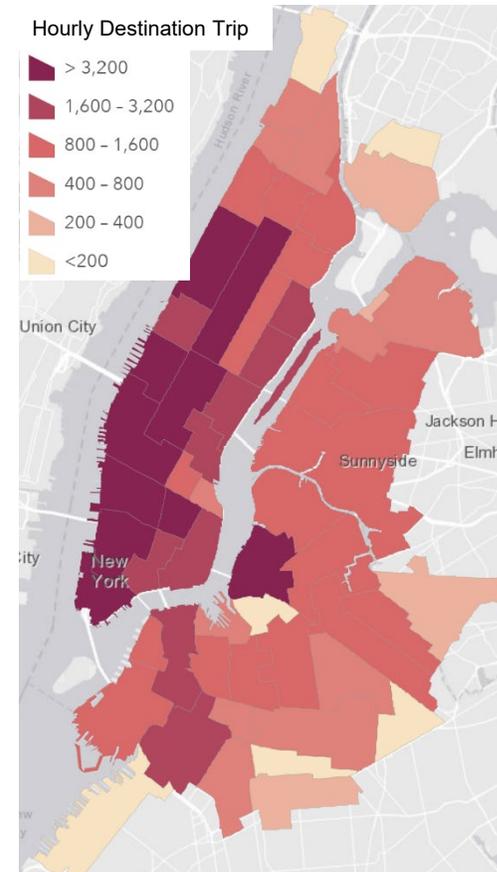

6am-10am

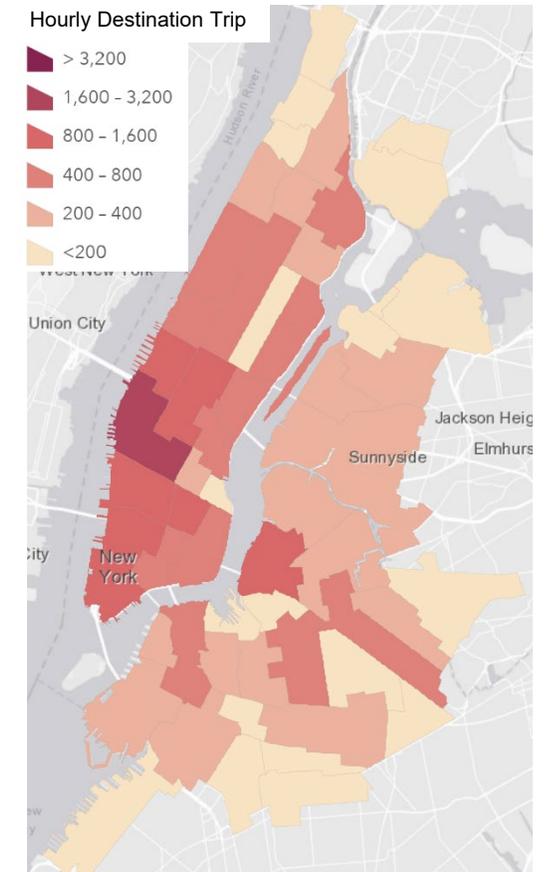

10am-4pm

4pm-8pm

8pm-6am

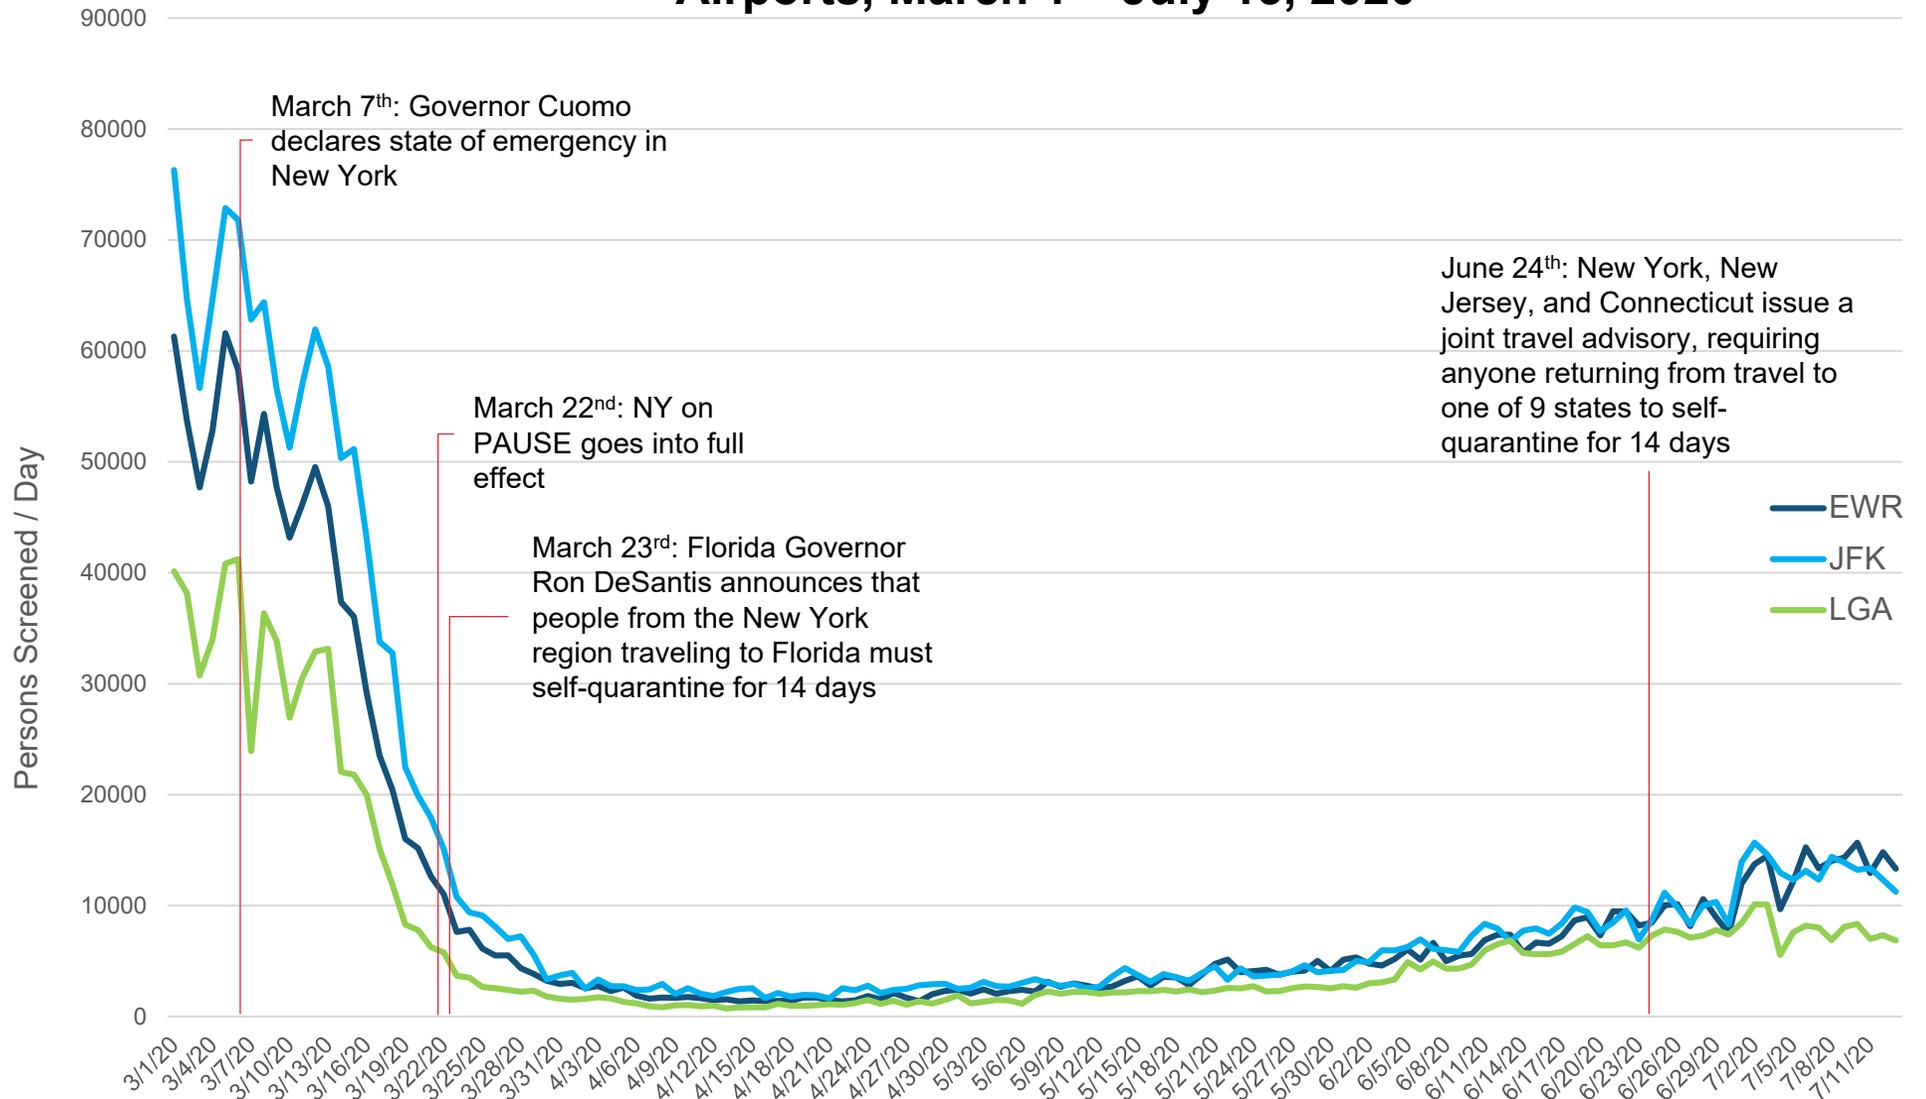

# Airports

# Changes in Regional Airport Usage

## Estimated\* Daily Passenger Throughput at Major New York City-Area Airports, March 1 – July 13, 2020

- Airport passenger screening volumes are slowly increasing week over week, but remain low.
- Approximate percentage difference, year over year:
  - EWR: -80%
  - JFK: -88%
  - LGA: -84%
- In recent weeks, the tri-state area governments have issued quarantine restrictions, requiring anyone returning from certain states with high infection rates to quarantine for 14 days.

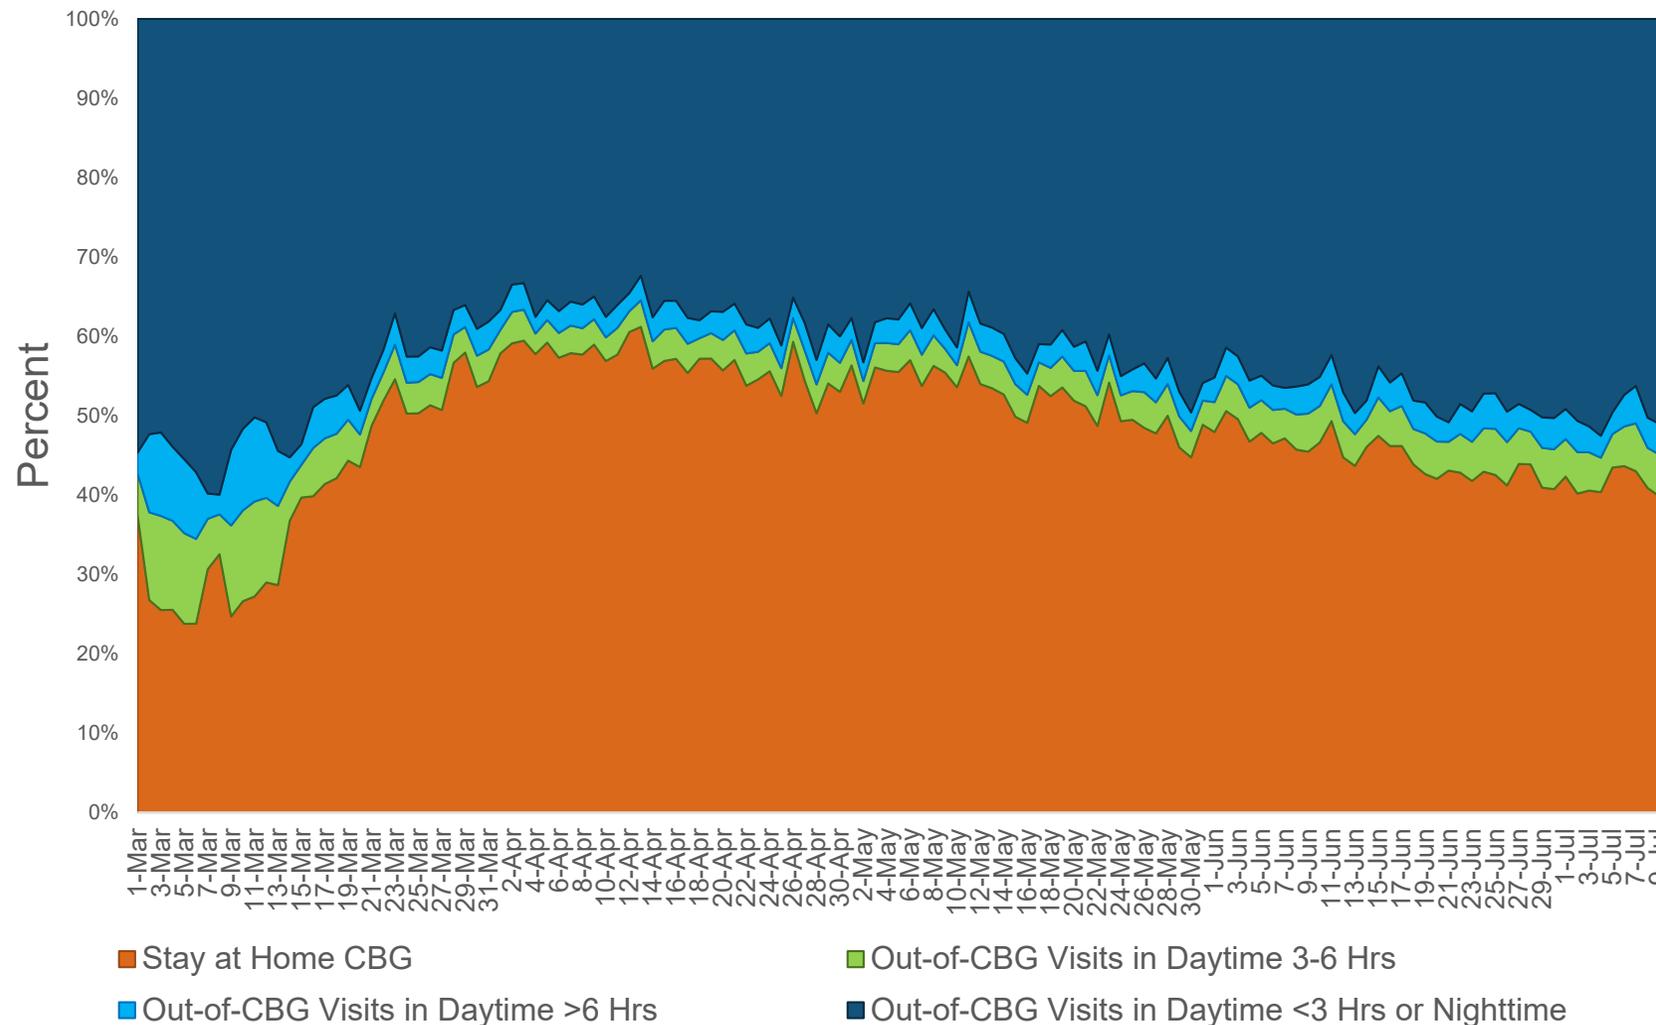

\*These figures represent all people screened each day at each airport by the TSA, including airline and airport employees. Actual passenger throughput tends to be approximately 1.5% lower than shown.

# Cellphone-based Mobility

# Measures of Mobility – Cell Phone Locations

Percent of Devices Out-of-Census-Block-Group (CBG) Visits & Staying at Home in NYC  
(March 1- July 10, 2020)

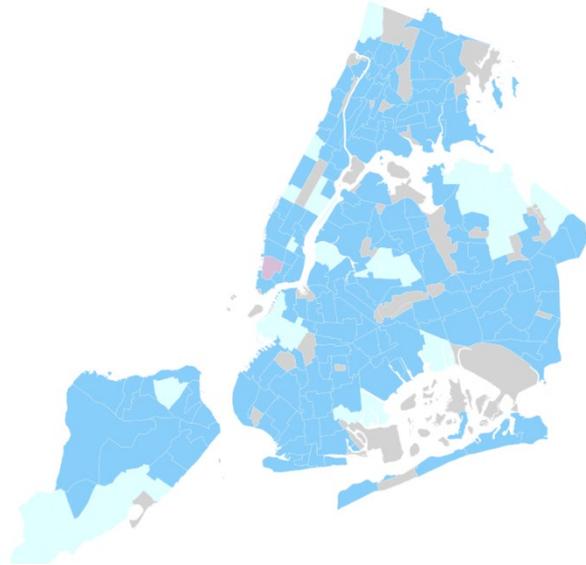

- Mobility patterns are based on data from SafeGraph, a company that generates data by pinging mobile devices throughout the day to determine their locations.
- Based on typical location of devices overnight, assumptions are made about a device’s “home” census block group, and interpretations are made about travel based on device location at different points throughout the day.
- SafeGraph data shown here provides information on general duration of trips. The orange area indicates devices that stayed entirely within their home CBG; dark blue area indicates devices that left for less than 3 hours that day, or during the night.
- The percent of devices remaining in their “home” census block group has been trending slightly down since mid-May 2020, with short trips trending up at the fastest rate.

Data sources: SafeGraph, <https://www.safegraph.com/>. a data company that aggregates anonymized location data from numerous applications in order to provide insights about physical places. To enhance privacy, SafeGraph excludes census block group information if fewer than five devices visited an establishment in a month from a given census block group.

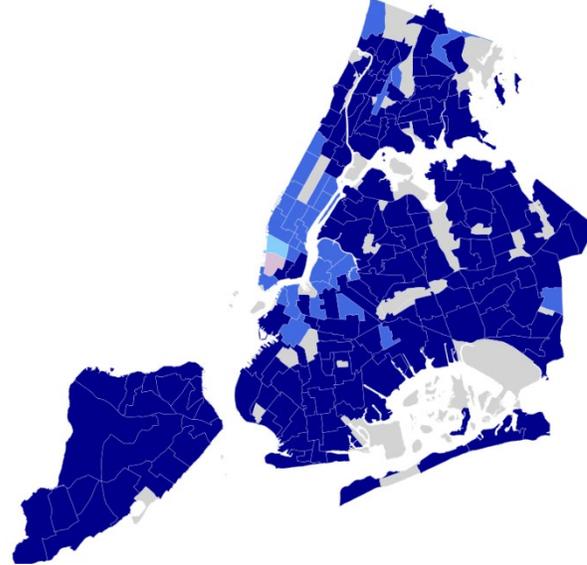

SafeGraph collects a semi-random sampling of data throughout the day. “Stay at Home CBG” indicates the devices did not leave the Geohash-7 in which their home is located during the time period that SafeGraph attempted to ping them. The same analysis is applied to each category

# Measures of Mobility – Percent of Devices Dwelling at Home in All Observed Time

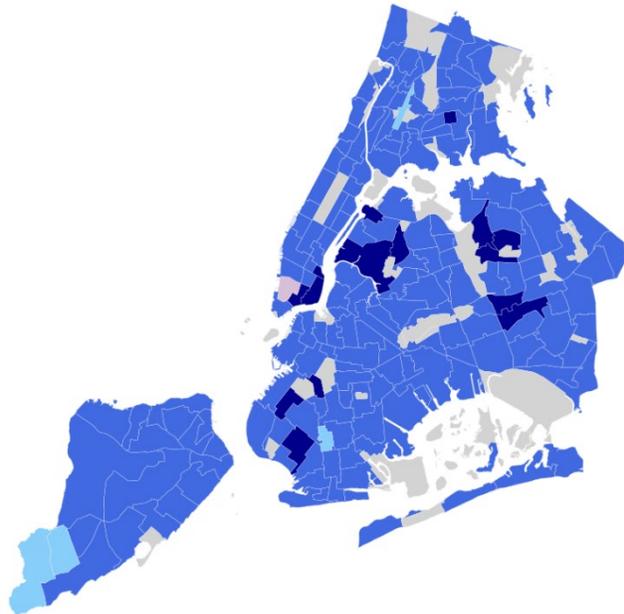

March 4, Wed, 2020

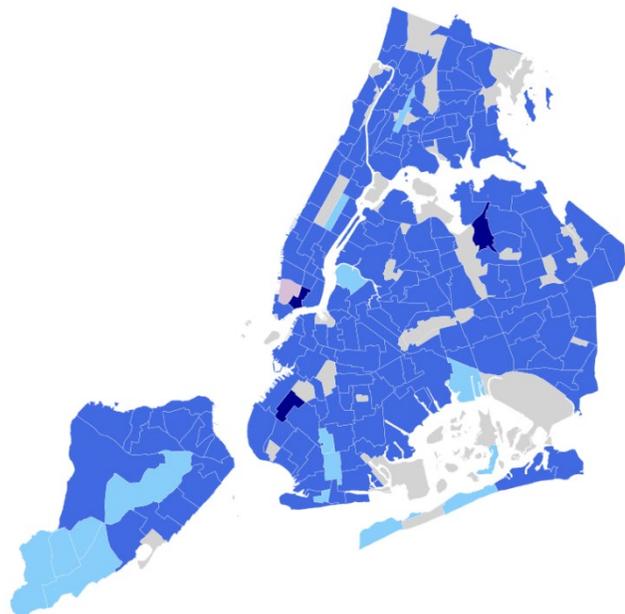

April 15, Wed, 2020

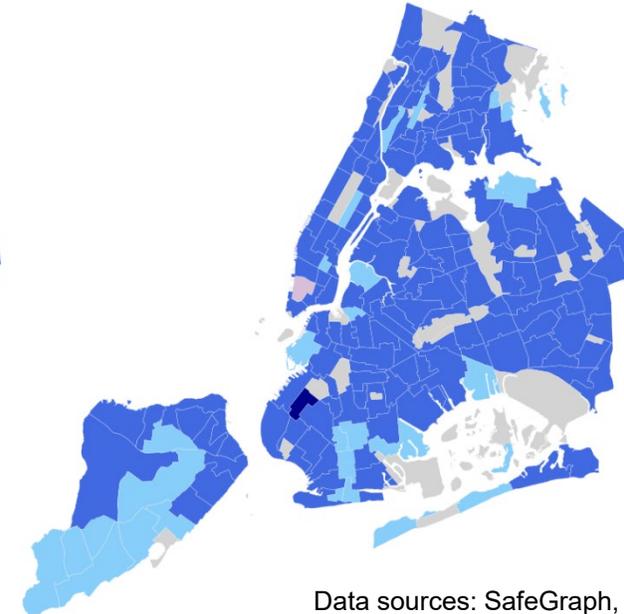

June 17, Wed, 2020

June 24, Wed, 2020

July 08, Wed, 2020

- Among the universe of devices tracked by SafeGraph, there was a significant increase in the share of devices (and, presumably, their owners) that “stayed at home”, or which didn’t leave their home census block group, between March and April. Manhattan and portions of Brooklyn showed slightly lower rates of staying at home.
- Data from mid- and late-June indicate increasing mobility across the city, with most neighborhoods demonstrating a greater share of devices leaving their home block group, though still at much lower rates than observed in early March. There was no clear increase in mobility between June 24 and July 8.

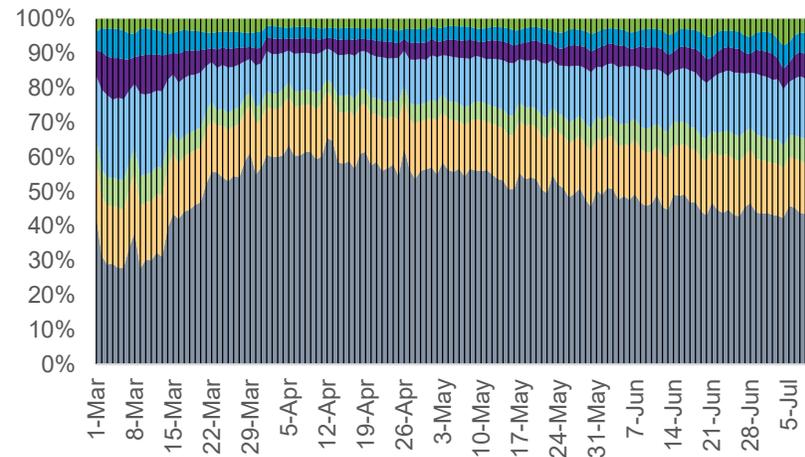

Percent of Devices Dwelling at Home in All Observed Time

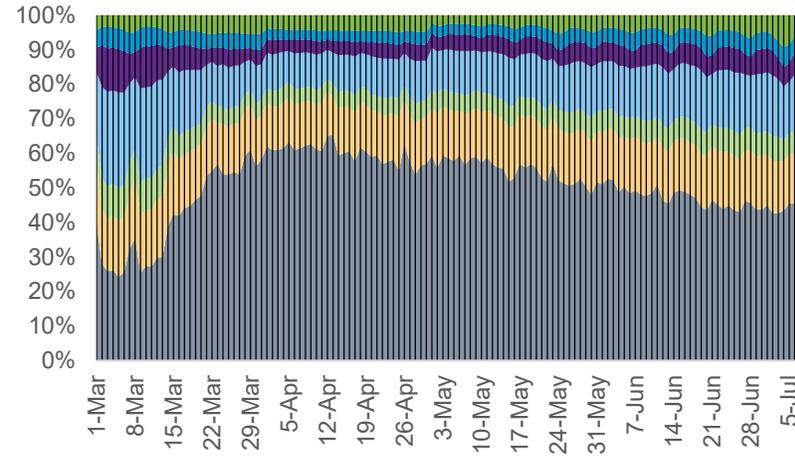

*\*GPS data issues result in some neighborhoods being over-indexed. Data from Tribeca in Manhattan appears invalid as a result.*

# Measures of Mobility – Distance Traveled (Meters) March-July 2020

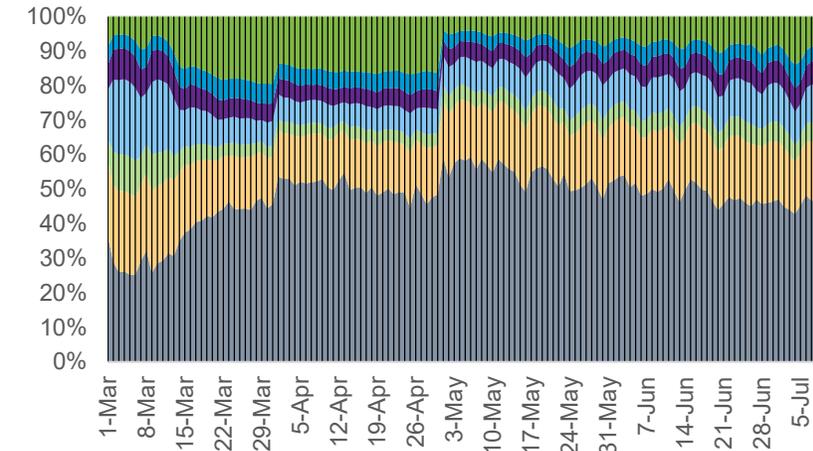

## Bronx

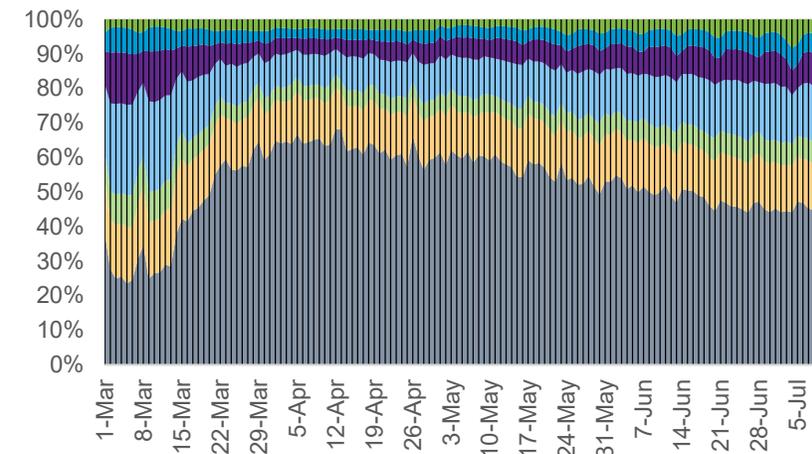

## Brooklyn

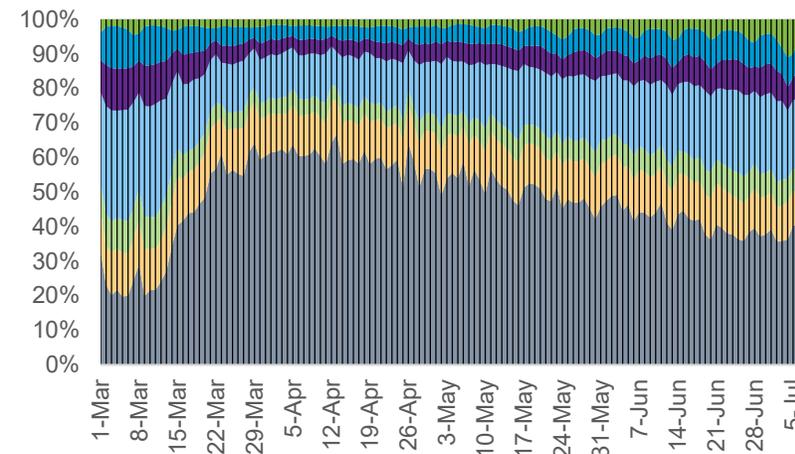

## Manhattan\*

## Queens

## Staten Island

- SafeGraph data can be used to calculate the percentage of devices within a geography travelling specific ranges of distance from their home CBG as devices are pinged.
- The majority of devices remain at home, having not traveled at all, but that share has been declining since mid-April.

■ Dist 0 ■ Dist 1-1000 ■ Dist 1001-2000 ■ Dist 2001-8000 ■ Dist 8001-16000 ■ Dist 16000-50000 ■ Dist >50000

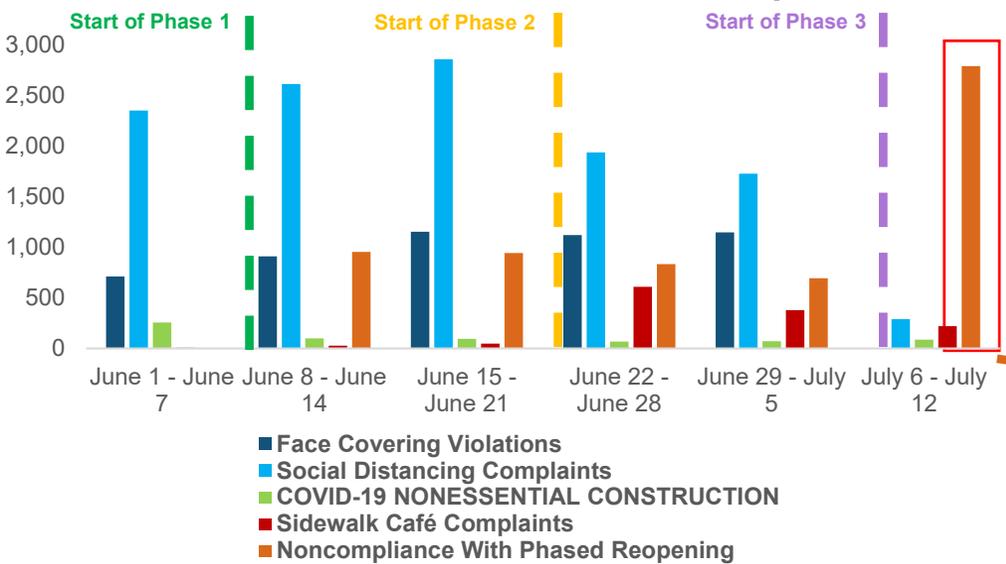

\*Variation may be due to the relatively large share of Manhattan residents who have temporarily relocated outside the city.

# 311 data

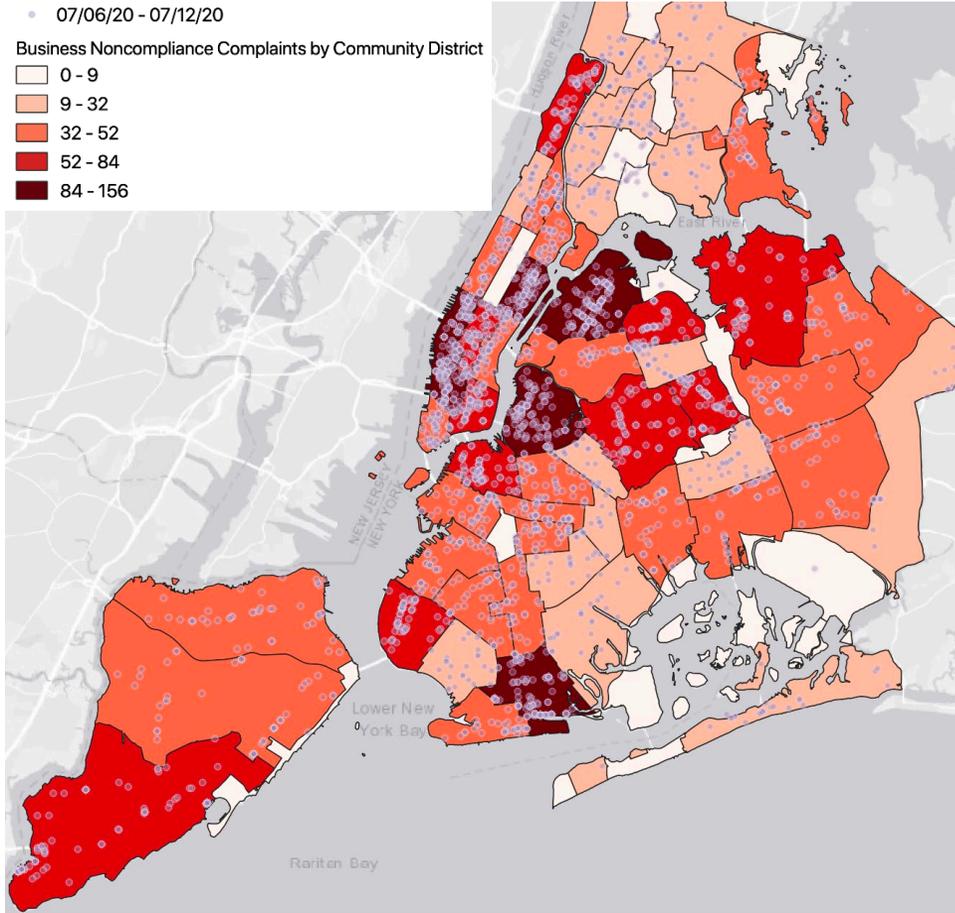

# 311 Complaints

- **Face Covering Violation** saw **zero** complaints during the first week of Phase 3. **Social Distancing Complaints**, saw its lowest weekly total since the start of its category. Social distancing complaints **decreased by over 80 percent** compared to the previous week.
- **Noncompliance with Phased Reopening** complaints increase by more than **300%** in during the first week of Phase 3, compared to the previous week.

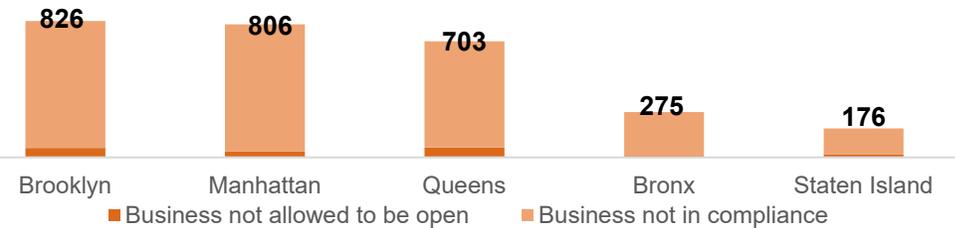

COVID-19 Related 311 Service Complaints

311 Service Complaints --Business Noncompliance With Phased Reopening

Noncompliance With Phased Reopening by "Complaint Type" per Borough

- The highest complaint concentrations of **“business noncompliance with phased reopening”** were in: **Northwest Queens, Upper East Side Manhattan, North Brooklyn, Lower Manhattan, and parts of South Brooklyn.**
- **Queens** had the highest number of complaints for **“business not allowed to be open.”**
- **Brooklyn and Manhattan** had the highest number of complaints for **“business not in compliance.”**
