This example is a three-story masonry building with party-walls and a mix of commercial and residential space on the ground-floor and two stories of residential units above.

Retrofit strategies that will result in partial NFIP reduction in flood insurance premiums require filling the basement to the lowest adjacent grade and limiting the ground-floor space to commercial use to allow for dry floodproofing. The ground-floor residential unit is relocated to an addition at the roof within the building envelope. The commercial storage is relocated to a new addition in the rear.

Due to the high flood elevation, resulting in undue hardship for egress from the building, the property owner can file for a variance to install deployable flood shields around the building façade as long as these are structurally integral to the building foundation. Temporary emergency egress stairs must be deployed over the gates.

This retrofit strategy minimizes the loss of commercial and residential floor area but requires significant structural reinforcement of the entire structure, as well as attention to structural reinforcement at party-walls so as not to affect neighbors’ property.

Alternative adaptation strategies, currently not recognized by FEMA and NFIP, include simply relocating critical systems to a new rear addition, or leaving existing commercial and residential uses on the ground floor and wet or dry floodproofing below the DFE.

**FLOOD RISK**

- **Flood Zone/BFE**: AE +11’
- **Grade Elevation**: +6’ at sidewalk, +0’ at rear property
- **Design Flood Elevation (DFE)**: +12’ (8’ above sidewalk grade)
- **Lowest Occupiable Floor**: +5.5’ (1.5’ above grade)
- **Cellar Elevation**: -2’ (6’ below sidewalk grade)

**TYPOLGY**

- **Lot Size**: 33’ x 66’
- **Building Size**: 33’ x 48’
- **Yards**: 2’ front, 15’ rear
- **Construction Type**: Masonry with wood joists
- **Foundation Type**: Rubble
- **Year Built**: 1925
- **Stories**: 3 + cellar
- **Residential Floor Area**: 4,000 s.f.
- **Residential Units**: 2 single storey, 1 triplex
- **Commercial Floor Area**: 800 s.f.
- **Commercial Units**: 1

**SITE CONDITIONS**

- **Sidewalk Width**: 12’
- **Roadbed Width**: 37’
- **Zoning District**: R5 + C1-3 Overlay, Mixed Use

**SITE & BUILDING CONDITIONS**

**SITE CONDITIONS**

Sites with standard lot size and no side yards. Rear yards typically range from 0 to 6 feet below the sidewalk grade. Standard-width public streets and sidewalks are typical of this commercial corridor typology.

**BUILDING TYPOLOGY**

Commercial and residential use is located at the ground floor with residential use above. Buildings are two to four-story masonry party-wall with wood joists and a rubble foundation. Critical systems are located in cellar with commercial space storage. Entrances are provided at or above sidewalk grade.
**EXISTING CONDITIONS**

- **FLOOD ELEVATION**
  - 12' DFE = BFE + freeboard
  - = 6.5' above lowest occupiable floor
  - = 12' above lowest property grade

- **ZONING ENVELOPE**
  - The allowable building height is measured from the DFE.
  - The building is built to the maximum allowable floor area.
  - In compliance with zoning, the floor area below the DFE can be relocated within the adjusted bulk envelope.

- **STRUCTURAL SYSTEMS**
  - Three-story combustible construction with unreinforced masonry bearing party-walls and wood joists on a rubble foundation.

- **CRITICAL SYSTEMS**
  - All systems are located in a mechanical room in the cellar.

- **ACCESS**
  - Building access is provided at three front locations - one commercial entrance, one residential lobby and one residential entrance, all at 1.5' above the sidewalk grade.
  - The building access at the rear yard is provided at two locations - one 4' above and the second 5' below the rear yard grade.

- **STREETSCAPE**
  - Residential lobby to remain.
  - Provide accessible entry at new commercial storefront.
  - When deployable flood shields are in use, all egress paths must be provided via temporary stairs up and over the gates.
  - Obtain DOT permit as required.

**ILLUSTRATIVE RETROFIT STRATEGY**

- **ELEVATE & DRY FLOODPROOF**
  - Dry floodproof building below the DFE. Reinforce slabs, foundation walls and exterior walls below the DFE to withstand hydrodynamic and hydrostatic forces.
  - Install deployable flood shields at building frontage.
  - Dry floodproof systems within enclosures below grade. Fill remainder of cellar to grade.
  - While in full compliance with NYC Construction Code, dry floodproofing commercial uses below the DFE may not receive NFIP premium reduction.

- **FLOOD ELEVATION**
  - 15' front setback
  - 4' rear setback

- **STREETSCAPE ZONING ENVELOPE CRITICAL SYSTEMS ACCESS USE STREETSCAPE**

**ILLUSTRATIVE RETROFIT STRATEGY**

- **ACCESS**
  - Residential lobby to access remain.
  - Provide accessible entry at new commercial storefront.
  - When deployable flood shields are in use, all egress paths must be provided via temporary stairs up and over the gates.
  - Obtain DOT permit as required.

**EXISTING CONDITIONS**

ADAPTATION CONSIDERATIONS

DRY FLOODPROOFING

Temporary flood shields and egress stairs deployed in front of a building are subject to building code requirements as well as the Department of Transportation (DOT) requirements where shields and/or stairs are partially or fully in the public right-of-way. NYC DOB requirements for building access, width of egress, structural stability, headroom, and clearances are tied to the building’s occupancy and use, while NYC DOT has requirements and clearances for the public right of way – streets and sidewalks. Given that a portion of the flood shield assembly and stairs falls into the sidewalk, the property owner would be required to apply for revocable consents from the City which, if approved, grants the right to an individual or organization to construct and maintain certain structures or, over or under the inalienable property of the City – the streets and sidewalks.

ACCESS & STREETSCAPE

NYC DOT has requirements and clearances for streets and sidewalks. Given that a portion of the flood shield assembly and stairs falls into the sidewalk, the property owner would be required to apply for revocable consents from the City which, if approved, grants the right to an individual or organization to construct and maintain certain structures or, over or under the inalienable property of the City – the streets and sidewalks.

NON-SUBSTANTIAL DAMAGE/IMPROVEMENT STRATEGIES

Non-substantially improved buildings within the floodplain are not required to comply with Appendix G of the NYC Building Code. This allows for greater flexibility in adapting buildings for flood resiliency. The alternatives illustrated below lower the risk for buildings and provide practical pathways for adaptation. Under current NFIP regulations, these measures may not lower insurance premiums.

The blue icons below illustrate adaptive measures that receive full reduction of NFIP premiums. Icons in gray indicate strategies that improve building resilience, but receive no or partial reduction of NFIP premiums.

If the lowest occupiable floor is left below the DFE, life safety must be considered. Residents should always follow evacuation procedures.
