

Public Comment Period

November 21, 2014
to
December 21, 2014

Where can I view project documents?

Online at:

<http://www.nyc.gov/html/oer/html/repository/RBronx.shtml>

Internet access to view documents is available at the public library. The closest location is:

Bronx Public Library
Clinton Hill Branch
321 East 140th Street
Bronx, NY 10454

Please call (718) 665-4878 for hours of operation

Whom can I contact for project information?

Eric Ilijevich
Project Manager
NYCOER
100 Gold Street, 2nd Floor
New York, NY 10038
212-341-2034
Eilijevich@dep.nyc.gov

and

Shaminder Chawla
Deputy Director

NYC VCP Cleanup Plan Available for Review and Comment

The New York City Office of Environmental Remediation (OER) provides this Fact Sheet pursuant to New York City's Voluntary Cleanup Program (VCP). An application has been submitted by Superior Glen Construction for enrollment of the property located at 82 Brown Place in the Port Morris/Bruckner Boulevard section of Bronx, New York and identified as Block 2277, Lot 1 into the VCP. The Remedial Investigation Report (RIR) details the results of an environmental investigation at the site including the nature and extent of contamination. The draft Remedial Action Work Plan (RAWP) proposes remedial actions to address contamination delineated in the RIR.

Public Comments on the RAWP

OER is accepting public comments on the draft RAWP for 30 days until December 21, 2014. The RIR and draft RAWP are available for review at the document repositories identified in the box on the left including a public library branch and through a link to OER's website. Comments should be sent to Mr. Shaminder Chawla via mail or e-mail (see contact information at left).

Site Description

The Site is 9,500 square feet and currently consists of a 1-story slab on-grade warehouse building with a mezzanine floor utilized as an office in the northern portion. The proposed future use of the Site will be a 12-story hotel with a full cellar and a landscaped area to the west of the building.

Summary of RIR

The environmental investigation identified historical fill material up to depths of 10 feet. Several Semi-Volatile Organic Compounds (SVOCs) and metals are above cleanup guidelines in soil and are above Groundwater Quality Standards. Soil vapor samples showed elevated levels of petroleum related VOCs. All VOCs were below the monitoring ranges established by State Department of Health.

Summary of the Remedy

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan;
- Implementation of a Community Air Monitoring Plan for particulates and volatile organic carbon (VOCs) compounds;
- Establishment of Site-Specific (Track 4) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. The footprint of the new building will be excavated 7 feet below grade for the cellar and the proposed landscaped area will be excavated to a depth of 2 feet. Approximately 5,153 tons of soil will be excavated and removed from Site;
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media onsite;
- Implementation of storm-water pollution prevention measures in compliance with applicable laws and regulations;
- Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs;
- Installation and operation of a passive Sub-Slab Depressurization System (SSDS);
- Installation of a vapor barrier system beneath the building slabs and behind foundation walls of the proposed building;
- Construction and maintenance of an engineered composite cover consisting of 2" rat slab and 6" concrete slab in the cellar and 2 feet of certified topsoil in the landscape area;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP;
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Continued registration with E-designation for the property.

Next Steps

OER will review the draft RAWP and consider all public comments submitted during the comment period before it approves a final RAWP. The approved RAWP will be placed on OER’s website and a second fact sheet will be issued before remedial work begins.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building.
