# CERTIFICATION

I, Robert Wolff, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 544 Union Ave, Brooklyn, NY Site, (NYC BCP Site No. 12CBCP039K). I am responsible for the content of this Remedial Investigation Report (RIR, have reviewed its contents, and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Robert Wolff

# EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

## **Site Location and Current Usage**

544 Unioncon, LLC plans to enroll in the New York City Brownfield Cleanup Program (NYC BCP) to investigate and remediate a 0.819-acre site located at 544 Union Avenue in the Williamsburg section of Brooklyn, New York (the “Site”) as shown on Figure 1. A mixed commercial residential use is proposed for the property. The RI work was performed between July 2007 and January 2012. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

## **Summary of Proposed Redevelopment Plan**

The proposed development at the Site includes the construction of a six-story mixed use building with commercial space occupying the ground floor with residential space above. The structure will be constructed of reinforced concrete (Construction Class: 1-C as per the New York City Building Code) with a Steel Monotube pile foundation. There will be no basement or sub-grade parking. The building will include commercial, parking, recreational and mechanical space and a lobby on the first floor. The building will house 92 residential apartments including 13 studio apartments, 53 one-bedroom apartments and 26 two-bedroom apartments on floors two through six. The gross floor area is approximately 117,608 square feet. The building footprint will cover approximately 98% of the entire lot with the remaining 2% of the lot fronting Union Avenue covered with a combination of concrete sidewalks and planted landscape beds as required by the Zoning Resolution.

The current zoning designation is M1-2/R6A/MX-8 and M1-2/R6B/MX-8, which is mixed use with manufacturing/commercial uses and residential uses allowed in the same building,

according to the New York City Planning Commission website (2012). The proposed use is consistent with existing zoning for the property.

### **Summary of Past Uses of Site and Areas of Concern**

A review of historical records as described in the Phase I Investigation (CA Rich, 2007), indicated that a portion of the Site was initially developed during or prior to 1887 as an Iron Foundry. By 1905, the Site was completely developed as an Iron Works. Over time, through the 1960's, the Site was identified as a foundry; an iron, bronze and wire works; and a metal finisher. The Site was predominantly a warehouse by 1996 and was vacant and undeveloped by 2007. Foundation piles were installed throughout most of the Site in 2007-2008 by the previous owner. The property is currently owned by 544 Unioncon, LLC.

Based on the Site history and Phase II analytical results, the entire site is considered an area of concern.

### **Summary of the Work Performed under the Remedial Investigation**

1. Evaluation of CA Rich's 2007 RI and identification of data gaps;
2. A Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
3. Installation of thirty soil borings across the entire project Site, and collection of 124 soil samples for chemical analysis from the borings to evaluate soil contamination and quality;
4. Installation of seven temporary groundwater monitoring wells throughout the Site to establish groundwater contamination and collection of fourteen groundwater samples for chemical analysis to evaluate groundwater quality; and
5. Installation of four soil vapor points throughout the Site and collected three samples for chemical analysis.

### **Summary of Environmental Findings**

1. Elevation of the property ranges from approximately 7.5ft to 9ft above mean sea level. These elevations refer to Brooklyn Highway datum (*Barret, Bonacci & Van Weele, 2010*).

2. Depth to groundwater at the site is highly variable and ranges from approximately 4.5ft bgs to 10ft bgs at the Site.
3. Groundwater flow is generally from an east to west direction beneath the Site according to CA RICH Phase II ESA (2007) and surface topography.
4. Bedrock has not been encountered during any of the previous environmental and/or geotechnical investigations.
5. The stratigraphy of the site, from the surface down, consists of approximately 15 feet of fill underlain by approximately 2 to 15 feet of peat. According to URS's geotechnical evaluation, below the peat layer is a sand and silt layer containing varying proportions of sand and silt. The sand and silt layer is described as dense to very dense. Bedrock was not encountered during the geotechnical evaluation.
6. Soil/fill samples collected during the RI showed ubiquitous metals contamination in site soils (fill). Tables 1 and 2 summarize the results of soil and TCLP soil sampling during URS' remedial investigation. PCBs were not detected in any of the soil samples. The analytical results indicated that VOCs, SVOCs, and pesticides exceeded the NYSDEC Part 375 Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs), but did not exceed the Restricted Use (Track 2) Restricted Residential SCOs. The analytical results indicated that metals exceeded the NYSDEC Part 375 Restricted Use (Track 2) Restricted Residential SCOs.
7. Groundwater samples collected during the RI showed low-level exceedances of VOCs during CA RICH's Phase II investigation in 2007. Compounds exceeding NYSGWQS included 1,1-Dichloroethane, 1,1,1-Trichloroethane, Chloroethane, and Methylene Chloride. The VOC exceedances were attributed by CA RICH to a regional up gradient off-site source. Groundwater samples analyzed for metals, both filtered and unfiltered, showed that exceedances of groundwater quality standards were directly attributable to the sediment suspended in the unfiltered samples. There were no exceedances in any of the filtered metals groundwater samples during either URS' or CA RICH investigations.
8. Soil vapor samples collected during the RI showed that VOCs are present in the soil vapor. The VOC compounds detected were compared to NYSDOH 2006 Guidance for

Evaluating Soil Vapor Intrusion in the State of New York air guidance values (AGV's), the Health Effects Institute (HEI) 95<sup>th</sup> percentile concentrations for indoor air, and the EPA Building Assessment and Survey Evaluation (BASE) 90<sup>th</sup> percentile value. The analytical results indicate low level BTEX contamination, minor tetrachloroethene (PCE) detections, 1,1,1-trichloroethane (TCA) detections (maximum concentration of 116 ug/m<sup>3</sup>), and trichloroethene (TCE) detections (maximum concentration of 72.9 ug/m<sup>3</sup>). Table 4 summarizes the results of soil vapor sampling during URS' remedial investigation.

# REMEDIAL INVESTIGATION REPORT

## 1.0 SITE BACKGROUND

544 Unioncon, LLC has enrolled in the New York City Brownfield Cleanup Program (NYC BCP) to investigate and remediate a 0.819-acre site located at 544 Union Ave in Williamsburg section of Brooklyn, New York (the “Site”) as shown on Figure 1. A mixed commercial residential use is proposed for the property. The RI work was performed between July 2007 and January 2012. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

## 1.1 SITE LOCATION AND CURRENT USAGE

The Site is located at 544 Union Avenue in the Williamsburg section of Brooklyn, New York and is identified as Block 2736 and Lots 1, 9, and 48 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 35,692-square feet and is bounded by Frost Street and 568 Union Avenue to the north, Withers Street to the south, a warehouse and 3-story residential buildings to the east, and a vacant lot and auto body shop to the west across Union Avenue. Currently, the Site is unimproved and vacant with exposed soil and approximately 220 foundation piles throughout the site, installed by the former owner. There is currently a temporary office trailer on the west side of the site. Figure 2 shows the current site plan.

## 1.2 PROPOSED REDEVELOPMENT PLAN

The proposed future use of the Site includes the construction of a six-story mixed use building with commercial space occupying the ground floor with residential space above. The structure will be constructed of reinforced concrete (Construction Class: 1-C as per the New York City Building Code) with a Steel Monotube pile foundation. There will be no basement or sub-grade parking. The building will include commercial, parking, recreational and mechanical space and a lobby on the first floor. The building will house 92 residential apartments including 13 studio apartments, 53 one-bedroom apartments and 26 two-bedroom apartments on floors two through six. The gross floor area is approximately 117,608 square feet. The building footprint

will cover approximately 98% of the entire lot with the remaining 2% of the lot fronting Union Avenue covered with a combination of concrete sidewalks and planted landscape beds as required by the Zoning Resolution.

Layout of the proposed site development is presented in Figure 3. The current zoning designation is M1-2/R6A/MX-8 and M1-2/R6B/MX-8, which is mixed use with manufacturing/commercial uses and residential uses allowed in the same building, according to the New York City Planning Commission website (2012). The proposed use is consistent with existing zoning for the property.

Excavations as part of site development will include site grading, installation of piles and pile caps, elevator pit installation, and small trenches for underground utilities. Excavation to a depth of one foot will occur across the site for construction and development purposes. Utility trench and pile cap excavations are not planned to go beyond a maximum depth of 5ft bgs. Excavations related to the installation of the elevator pits are anticipated to be installed to a maximum depth of 8 feet bgs. A limited amount of dewatering may be necessary in the vicinity of the elevator pits. It is anticipated that excavations related to development of the site will be approximately 3,000 cubic yards. No demolition activities are planned as part development.

### **1.3 DESCRIPTION OF SURROUNDING PROPERTY**

The Site is bounded to the north by Frost Street and a mixed-use apartment building with ground level retail space. To the west of the Site there is a one-story manufacturing building and a three-story apartment building. To the south is Withers Street and a vacant lot (538 Union Avenue) and to the west is Union Avenue with a vacant lot and an auto body facility.

The neighborhood is primarily residential with some commercial use and a few miscellaneous factory/light manufacturing facilities. A NYC Transit Authority subway line runs beneath Union Avenue.

In the surrounding area is a day care facility, Williamsburg Neighborhood Nursery School, 211 feet west of the Site. There are no public schools or hospitals within a 500-foot radius of the Site.

Figure 4 shows the surrounding land usage.

## **2.0 SITE HISTORY**

### **2.1 PAST USES AND OWNERSHIP**

A review of historical records as described in the Phase I Investigation (CA Rich, 2007), indicated that a portion of the Site was initially developed during or prior to 1887 as an Iron Foundry. By 1905, the Site was completely developed as an Iron Works. Over time, through the 1960's, the Site was identified as a foundry; an iron, bronze and wire works; and a metal finisher. The Site was predominantly a warehouse by 1996 and was vacant and undeveloped by 2007. Foundation piles were installed throughout most of the Site in 2007-2008 by the previous owner. The property is currently owned by 544 Unioncon, LLC.

### **2.2 PREVIOUS INVESTIGATIONS**

A Phase I investigation was completed in 2007 by CA Rich in conformance with ASTM Practice E 1527-2005. After visiting the site and reviewing historical documentation, there was one recognized environmental condition (REC). The REC was the historical use of the property as a foundry and small quantity generator of regulated hazardous waste from 1947-2006 while the property was used as a machine shop. There was evidence of staining throughout the property during the site visit. Additionally, this Site has an E designation from the New York City Department of Planning for HAZMAT (hazardous materials) due to its manufacturing history. A copy of the CA Rich Phase I is found in Appendix A.

Based on the findings of the Phase I, a Phase II investigation was completed in 2007 by CA Rich for the previous owner, 544 Union Owner, LLC. The Phase II identified the presence of Arsenic, Barium, Cadmium, Calcium, Cooper, Lead and Magnesium, and Mercury, Selenium and Zinc above the New York State Department of Environmental Conservation (NYSDEC) TAGM 4046 or Eastern USA Background guidance values in one or more soil boring locations. Additionally, several SVOCs were detected above TAGM values in several soil samples. The typical SVOCs included those found in construction fill in urban areas of New York City. Most VOCs in soil were below TAGM values while the VOCs detected in the groundwater were attributed to regional off-site sources. After CA Rich's completion of the Phase II Investigation, 29.19 tons of hazardous lead soil was removed from the eastern portion of the Site in 2007. Copies of the hazardous waste manifests are provided in Appendix B.

Following URS's review of CA Rich's Phase II, remediation documentation and current site conditions, URS determined that a supplemental Phase II Remedial Investigation was needed to assist in re-characterizing the Site. Consequently, URS implemented an investigation focused on three targeted metals: Lead, Mercury and Arsenic. The CA Rich and URS Phase II Investigation reports and their combined results serve as the Remedial Investigation described in this Report. A copy of the CA Rich Phase II is found in Appendix C.

Also a Geotechnical Evaluation was completed by URS in 2007 and updated in 2011. This evaluation included review of the existing piles installed at the Site in 2007-2008 and recommendations on any future pile driving at the Site based on the characterization of the Site soil and geology. URS recommended a static load test performed on any additional piles to be driven, if they are different than the currently installed Tapertube piles. They also recommended that a vapor barrier be installed beneath the cellar slab as groundwater is at approximately four feet bgs. A copy of the URS Geotechnical Evaluation is found in Appendix D.

### **2.3 SITE INSPECTION**

The Site was inspected on December 7, 2011 by URS Environmental Scientist, Ms. Megan Dascoli. The Site was undeveloped with no permanent structures and surrounded on all sides by an eight-foot high plywood fence. The ground was mostly overgrown with weeds, though there were some muddy areas. The site topography was generally level and at grade with the street. Areas of stressed vegetation and staining were not visible throughout the site. A temporary office trailer was located on the west side of the property, two backhoes were parked on the Site, and on the north side was a stockpile of large concrete blocks. There were numerous foundation piles visible throughout the site. Site Photographs are presented in Appendix E.

### **2.4 AREAS OF CONCERN**

Based on the Site history and Phase II analytical results, the entire site is considered an area of concern. The Site has evidence of industrial usage as an Iron Foundry starting in 1887 with continuous usage through 2006 as a foundry and as a machine shop/ warehouse. At the time of the Phase I site visit, there was an existing structure with chemical/ petroleum staining on floors in the former manufacturing areas, floor sumps and pits containing unknown liquid, and oil stained soil and absorbent material (CA Rich, 2007). Therefore, there is the potential that

releases of chemical solvents, petroleum products, and metals occurred throughout the footprint of the site. The lone site structure was demolished by the previous owner sometime after the Phase I and Phase II investigations by CA RICH in 2007. The Phase II Report by CA RICH is presented in Appendix B.

### **3.0 PROJECT MANAGEMENT**

#### **3.1 PROJECT ORGANIZATION**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Robert Wolff

The project geologists and environmental scientists include Ms. Mira Abdelaziz, Ms. Megan Dascoli, and Ms. Cary Friedman

#### **3.2 HEALTH AND SAFETY**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

URS prepared a Health and Safety Plan that covered areas of common hazards including contamination, tool and material handling, cold stress, and drilling safety. The Health and Safety Plan identified the nearest hospital and included safety standards for reference. There were toolbox talks conducted with the drilling subcontractor, Zebra Drilling, before each day of field work was started to review the hazards of the site and the general hazards of the tasks. The Health and Safety Plan is provided as Appendix F.

#### **3.3 MATERIALS MANAGEMENT**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

During the soil sampling and groundwater sampling events, all soil was returned to the boring after completion. Purge water generated was poured into the borehole after sampling. All garbage generated during field activities was placed in a black trash bag and disposed of as non-hazardous waste.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

The Remedial Investigation included the Phase II investigation completed in 2007 by CA Rich for 544 Union Owner LLC and supplemental Phase II investigation activities completed by URS in 2011/2012 for 544 Unioncon LLC, the current site owner. The combined scope of work for the two investigations includes the following:

1. Evaluation of CA Rich's 2007 RI and identification of data gaps;
2. A Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
3. Installation of thirty soil borings across the entire project Site, and collection of 124 soil samples for chemical analysis from the borings to evaluate soil contamination and quality;
4. Installation seven temporary groundwater monitoring wells throughout the Site to establish groundwater contamination and collected fourteen groundwater samples for chemical analysis to evaluate groundwater quality; and
5. Installation of four soil vapor points throughout the Site and collected three samples for chemical analysis.

### **4.1 GEOPHYSICAL INVESTIGATION**

CA Rich conducted a geophysical investigation around proposed boring locations as part of their Phase II investigation in 2007. The purpose of the survey was to determine if USTs or subsurface structures were present that would interfere with proposed drilling activities. Naeva Geophysics conducted the survey using a Software Noggin Smart Cart Ground Penetrating Radar. The survey did not discover any subsurface anomalies.

A geophysical survey was not conducted as part of URS's Remedial Investigation. Any utilities on site were disconnected at the street prior to the structural piles being driven in 2007. No subsurface obstructions were encountered during the current drilling program.

Prior to commencing drilling activities, URS obtained a permit from New York City Metropolitan Transit Authority (MTA). The permit was obtained due to drilling locations falling within 200ft of the MTA subway beneath Union Ave. The permit application is included in Appendix G.

## **4.2 BORINGS AND MONITORING WELLS**

### **Drilling and Soil Logging**

On June 26, 2007, CA Rich advanced ten continuous soil borings utilizing a Geoprobe from the surface to shallow groundwater across the Site. The soil sample from 0-2 feet bgs and the sample containing the highest PID reading or the deepest soil/fill sample collected just above the groundwater were submitted for chemical analyses.

On December 7 and 8, 2011, twenty soil borings (B-1 through B-20) were advanced by URS on the Site in a grid pattern to evaluate potential targeted metals contamination (Mercury, Lead and Arsenic) throughout the Site. The borings were advanced to 15 ft bgs using a track mounted Geoprobe® with 2-inch diameter rods. Continuous soil cores were collected from each boring using 5-foot long macrocores fitted with dedicated acetate liners. Each soil core was classified using the Unified Soil Classification System.

Samples were collected in two-foot intervals from four to 14 ft bgs and analyzed for metals (mercury, lead, arsenic), with selected samples analyzed for toxic characteristic leachate procedure (TCLP) mercury, lead, and arsenic.

Boring logs were prepared by an environmental professional and are attached in Appendix H. A map showing the location of soil borings and monitor wells is shown in Figure 5.

### **Groundwater Monitoring Well Construction**

In June 2007, CA Rich installed three temporary monitoring wells (GW-1, 2 and 3) at soil borings SB-2, 6 and 10 via a Geoprobe. The depth to water at these borings was measured at approximately 10 feet below grade.

During December 7-8, 2011 field activities, unfiltered groundwater samples were collected from temporary points at borings B-2, B-4, B-12, and B-14 using a 5-foot long screen point sampler with a slot size of 0.020 inches installed at a depth deep enough below grade to have enough of a volume of groundwater to collect a sample (10 ft -15 ft bgs). The unfiltered samples contained substantial sediment and were not exclusively representative of groundwater conditions. Therefore, filtered groundwater samples were collected on January 14, 2012 from temporary points that were drilled at locations approximately five feet from the original boring locations listed above. These locations are labeled B-2B, B-4B, B-12B, and B-14B. Groundwater

samples were collected using a 5-foot long screen point sampler with a slot size of 0.020 inches installed at a depth deep enough below grade to have enough of a volume of groundwater to collect a sample (5 to 10 ft bgs). See Table 1, below, for temporary well construction details from the URS investigation.

**Table 1- Temporary Well Construction Details**

<b>Boring/ Temporary Well ID</b>	<b>Date Installed</b>	<b>Depth</b>	<b>Screened Interval</b>	<b>Sampling Method</b>
B-2, B-4, B-12, B-14	12/7-8/11	15 ft bgs	10 ft- 15 ft	¼” tubing with check valve through drill rods
B-2B, B- 4B, B-12B, B-14B	1/14/2012	10 ft bgs	5 ft – 10 ft	Peristaltic Pump
GW-1, GW-2, GW-3	6/26/2007	N/A	N/A	N/A

Temporary well locations are shown in Figure 5.

### **Survey**

Soil borings and soil gas points were drilled according to locations identified on the MTA approved site plan. Borings and soil gas point locations were measured from the Site property lines to correspond to locations on the approved site plan.

A Topographic Survey was conducted by Barrett, Bonaci & Van Weele, PC for the Site and a drawing produced dated August 2, 2010. This drawing depicts property and surrounding curb lines, fencing, utilities, drains, spot elevations, on-site pile locations, and other physical features of the site. The site survey is provided as Appendix I.

## **Water Level Measurement**

During soil sampling in December 2011, water levels were generally identified at approximately five to seven ft bgs, however variation was noted throughout the site. In addition, soil sampling on December 7 and 8 occurred during a rain event so a precise determination of the depth to groundwater was difficult given the unconsolidated nature of site soils. On January 14, 2012 water levels were measured at 10 ft bgs in some soil borings but was measured between 4ft and 5ft bgs in temporary well points. During the CA RICH Phase II investigation in 2007, water levels were identified at approximately 10ft bgs. During URS' geotechnical investigations in 2007 and 2011, the depth to water was identified at approximately 4ft to 6ft bgs.

### **4.3 SAMPLE COLLECTION AND CHEMICAL ANALYSIS**

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

#### **Soil Sampling**

Soil samples collected for laboratory analysis were collected using dedicated, disposable sampling equipment. Drill rods and reusable hardware was decontaminated using water and Alconox, a cleanser dissolved in the water, and brush action to remove sediment. Samples were handled using disposable nitrile gloves and were placed in laboratory supplied containers and shipped in coolers under chain of custody procedures via laboratory courier in accordance with EPA protocols. Samples collected during the 2007 field activities were shipped to a laboratory.

Samples collected during the 2011/2012 field activities were shipped to a different laboratory. Both laboratories are New York State Department of Health (NYSDOH) - certified laboratory.

One Hundred and twenty-four (124) soil samples were collected for chemical analysis during URS and CA RICH investigations. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported below in Table 2 and summarized in Table 3. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are also shown below.

**Table 2 – Analytical Methods Summary (Soils)**

<b>Boring Location</b>	<b>Collection Date(s)</b>	<b>Analyte(s)/Analytical Method</b>	<b>Analytical Laboratory</b>
SB-1 thru SB-10	6/26/2007	TCL VOCs (EPA 8260); SVOCs (EPA 8270); Pesticides (EPA 8081); PCBs (EPA 8082); TAL Metals	AAL
B-1 thru B-20	12/7 and 12/8 2011	TAL Metals (Mercury, Lead and Arsenic)	HCV

**Notes:**

1. TCL VOCs – Target Compound List Volatile Organic Compounds
2. TCL SVOCs - Target Compound List Semivolatile Organic Compounds
3. PCBs – Polychlorinated Biphenyls
4. TAL – Target Analyte List
5. The soil sample collected at 12 ft-14 ft bgs was held in contingency awaiting the analyses results of the 10 ft-12 ft bgs sample. If the 10 ft-12 ft sample exceeding the SCO, then the 12 ft-14 ft bgs sample was analyzed in an attempt to vertically delineate soil contamination.

Additionally, a targeted Toxicity Characteristic Leaching Procedure (TCLP) was implemented for selected soil boring locations. Table 4 below, shows the select boring locations with sample collection depths and recommended analysis. Similar to the sampling scheme outlined for the targeted TAL metals above, the lowest sampling interval, 12 ft-14 ft, would be collected and held in contingency until the 10 ft-12 ft results were known. If the 10 ft-12 ft

sample exhibited results above the criteria, then the 12 ft-14 ft sample would be analyzed for TCLP of the compound which exceeded the criteria. A map depicting TCLP Chemistry Results is provided as Figure 6.

**Table 4- TCLP Analytical Methods Summary (Soil)**

Sample Depths	Soil Borings			
	B-1	B-5	B-7	B-8
4 ft – 6 ft	Lead	Lead	Arsenic	Mercury
8 ft – 10 ft	Lead	Lead	Arsenic	Mercury
10 ft – 12 ft	Lead	Lead	Arsenic	Mercury
12 ft – 14 ft*	Lead	Sample & hold	Sample & hold	Sample & hold

### Groundwater Sampling

During the June 2007 field program, three groundwater quality samples were collected from soil borings SB-2, SB-6 and SB-10 via a Geoprobe and identified as GW-1, GW-2 and GW-3.

Unfiltered groundwater samples were collected during the December 7-8, 2011 sampling event and appeared dark brown and very turbid throughout purging and sample collection. The samples, therefore, contained substantial amounts of sediment which did not accurately represent groundwater conditions.

Subsequently, filtered groundwater samples were collected on January 14, 2012. Samples were collected through a five-foot long screen point sampler with a slot size of 0.020 inches that was installed across the observed water table from 5 ft to 10 ft bgs. Disposable polyethylene tubing fitted with a reusable, decontaminated check valve was lowered through the drill rods into the screened area. Approximately three well volumes of water were purged from the temporary well before a sample was collected. The purge water appeared dark brown and turbid. The groundwater sample was pumped using a peristaltic pump through a disposable, one-time use

0.45-micron filter to remove suspended sediment. Filtered samples appeared clear and free of sediment. All samples were collected directly into clean, laboratory provided containers, placed in coolers and shipped via laboratory courier in accordance with EPA protocols. Groundwater samples were analyzed by a laboratory, for Target Analyte List (TAL) metals. Additionally, a duplicate sample and a field blank were collected to provide QA/QC.

Fourteen (14) groundwater samples were collected for chemical analysis during both URS and CA RICH investigations. Groundwater sample analytical methods are reported in Table 5 below. Figures 5 and 7 show the location of groundwater sample locations and the results of laboratory analytical sampling.

**Table 5 – Groundwater Analytical Methods**

<b>Sample ID</b>	<b>Date</b>	<b>Analyte(s)/Analytical Method</b>	<b>Analytical Laboratory</b>
GW-1 thru GW-3	6/26/2007	TCL VOCs (EPA 8260); SVOCs (EPA 8270); Pesticides (EPA 8081); PCBs (EPA 8082); TAL Metals	AAL
B-2(B), B-4(B), B-12(B), B-14(B)	12/7-12/8 2011 and 1/14/2012	Selected TAL Metals filtered/unfiltered (EPA 6010B/7471A)	HCV

### **Soil Vapor Sampling**

Soil vapor monitoring points were installed by advancing borings to depths of 4 ft bgs, and in one case, 2.5 ft bgs. The depths of the newly installed soil vapor points was determined by the amount of moisture and/or the density of subsurface soils in the location of the soil vapor boring. Soil vapor points consist of 6-inch stainless steel implants with connected Teflon tubing placed in the borehole, the vapor points is then backfilled around the screen with sand. The point was sealed above the sand with hydrated bentonite. Soil vapor samples were collected from each monitoring point using 6 –liter (6L), batch-certified SUMMA canisters each equipped with a vacuum gauge and flow regulator set to collect a 6L sample over a 2-hour sampling period, corresponding to a flow rate of approximately 50 milliliters per minute (mL/min). Prior to sample collection, the sampling points were purged of two sample volumes using a SKC low flow air sampling pump. Purged vapors were collected into a Tedlar bag and field-screened for organic vapors using a calibrated MiniRae 2000 PID. Following purging, helium tracer gas was used to confirm that the sample was being extracted exclusively from the soil. The area where the probe intersects the ground surface was shrouded with a plastic container and then the atmosphere under the shroud was enriched with helium. A Tedlar bag was filled with a sample from the soil gas point and analyzed with a Dielectric Helium Detector to confirm that the

sample was less than 2% helium. When this threshold was achieved, the soil vapor samples were collected using the vacuum from the SUMMA canister.

For each soil vapor sample, immediately after opening the flow control valve equipped with the 2-hour regulator, the initial SUMMA canister vacuum (inches of mercury) was noted. After two hours, the flow controller valve was closed, the final vacuum noted, and the canister placed in a shipping carton for delivery by FedEx to Pace Environmental Laboratory.

Four (4) soil vapor probes were installed on December 8, 2011 (see Table 6 below for installation depths and Appendix J for soil gas point construction logs). Three soil vapor samples were collected for chemical analysis during this RI on January 16, 2011 for volatile organic compounds (VOCs) by method TO-15. One ambient air sample was collected using a 6L Summa canister connected to a vacuum gauge and flow regulator set to collect a 6L sample over a 2-hour period, which ran concurrently with the soil vapor probe sampling. Samples were collected at three of four soil gas points. In the point SG-4, no flow through the vapor point and tubing could be established, so a sample could not be collected from that soil gas point. Soil vapor sampling locations are shown in Figure number 5.

**Table 6 – Soil Gas Installation Depths**

<b>Soil Gas Point ID</b>	<b>Installation Depth (ft bgs)</b>	<b>Sampling Date</b>	<b>PID Reading before sampling (ppm)</b>	<b>Analytical Method/Laboratory</b>
SG-1	4	1/16/12	0	VOCs (EPA TO-15)/Pace
SG-2	2.5	1/16/12	0	VOCs (EPA TO-15)/Pace
SG-3	4	1/16/12	0	VOCs (EPA TO-15)/Pace
SG-4	4	No sample collected	Not recorded	No sample collected

Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

### Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

<b>Factor</b>	<b>Description</b>
Quality Assurance Officer	The chemical analytical quality assurance is directed by Robert Wolff
Chemical Analytical Laboratory	<p>Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were:</p> <p>For soil and water analysis:</p> <p style="padding-left: 40px;">Hampton-Clarke/Veritech 175 Route 46 West Fairfield, NJ 07004</p> <p>For soil gas samples:</p> <p style="padding-left: 40px;">Pace Environmental 1700 Elm Street SE Suite 200 Minneapolis, MN 55414</p>

### **Results of Chemical Analyses**

Laboratory data for soil, groundwater and soil vapor are summarized in Table 3, 7, 8, and 9, respectively. Laboratory data deliverables for all URS samples evaluated in this RIR are provided in digital form in Appendices K, L, and M. Results are discussed in Section 5.2

## **5.0 ENVIRONMENTAL EVALUATION**

### **5.1 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS**

#### **Stratigraphy**

Soil borings throughout the site were drilled to 15 ft bgs during the 2011 field activities. Fill was encountered consisting of sand, silt, and clay with foreign material including bricks, metal, wire, pottery, concrete, recycled concrete aggregate (RCA) and possible paint chips. A peat layer was noted in three of the borings at 15 ft bgs. The previous Geotechnical Evaluation (URS, 2011) drilled one boring to 102 ft bgs, two borings to 57 ft bgs, and three borings to 52 ft bgs. According to the corresponding boring logs, these deeper borings did not reach bedrock, but did confirm a 2-15 foot thick peat layer at around 15-20 ft bgs. They also described the layer below 15 ft bgs as sand and silt in varying proportions. The sand was dense to very dense. Three borings in the northeast corner of the site (B-16, B-19, and B-20) contained faint to moderate petroleum odors and an intermittent sheen was noted in some of the saturated soil samples.

#### **Hydrogeology**

The average depth to groundwater is 5.2ft bgs and the range in depth is from 4.5ft to 10ft bgs based on previous investigations. The Geotechnical Evaluation indicates groundwater elevations in December 2005 averaging 4.8 ft bgs and in July 2007 at 4-6 ft bgs for an average of 4.7 ft bgs (URS, 2007). Past studies report the area of the Site having a groundwater elevation of approximately 6 ft bgs with groundwater moving from east to west, towards the East River (USGS, 1997). Actual groundwater flow can be affected by many factors, including subsurface opening or obstructions such as basements, underground utilities, tunnels (including the NYCT subway tunnel adjacent to the site), bedrock geology, and other factors beyond the scope of this assessment.

### **5.2 SOIL CHEMISTRY**

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 3. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Restricted Use (Track 2) Restricted Residential

Soil Cleanup Objectives (RR SCOs) and subsequently TCLP extractions were performed. Laboratory data reports are provided in Appendix K.

The RR SCOs for the targeted metals at this site are 0.81 mg/kg for mercury, 400 mg/kg for lead, and 16 mg/kg for arsenic. There were TCLP extractions performed for selected metals, borings, and intervals. The Maximum Concentrations of Contaminants for Toxicity Characterization are 0.2 mg/l for mercury, 5 mg/l for lead, and 5 mg/l for arsenic. Soil samples collected by CA RICH as part of their 2007 Phase II investigation were compared to NYSDEC Technical and Administrative Guidance Memorandum: Determination of Soil Cleanup Objectives and Cleanup Levels (1994). They are also compared to the current SCOs, for the purposes of this RI.

For ease of discussion, the Site has been divided into quadrants based on directions. The borings are divided as follows:

1. The northeast quadrant contains URS borings B-14, B-15, B-16, B-19, and B-20.
2. The southeast quadrant contains URS borings B-11, B-12, B-13, B-17, and B-18.
3. The southwest quadrant contains URS borings B-1, B-2, B-3, B-8, B-9, and B-10.
4. The northwest quadrant contains URS borings B-4, B-5, B-6, and B-7.

### **1. Northeast Quadrant**

The northeast quadrant contains URS soil borings B-14, B-15, B-16, B-19, and B-20 which were sampled at intervals 4-6 ft, 8-10 ft, 10-12 ft, and 12-14 ft and were analyzed for mercury (Hg), lead (Pb), and arsenic (As). The 12-14 ft sample was held in contingency and analyzed depending on the 10-12 ft interval sample results. Four borings had intervals analyzed for TCLP extraction: B-14 for TCLP Pb (4-6 ft), B-15 for TCLP Pb and TCLP As (10-12 ft), B-16 for TCLP Hg, Pb, and As (12-14 ft), and B-20 for TCLP As (4-6 ft, 8-10 ft, 10-12 ft).

The CA Rich Phase II located one boring (SB-7) in the northeast quadrant and collected a shallow and a deep interval (2 ft and 9-10 ft). The boring was sampled for VOCs, SVOCs, metals, PCBs and pesticides. The CA Rich data indicated an exceedance of the commercial SCO for Benzo-a-Pyrene no exceedances of the SCO for VOCs and exceedances of the restricted residential SCOs for lead, mercury and arsenic.

Laboratory results from URS's investigations indicated mercury exceedances at each interval 4-6 ft, 8-10 ft, and 10-12 ft in all five borings; except B-16 8-10 ft where there was a detection, but not an exceedance; and at B-20, 12-14 ft, because it was not analyzed. The exceedances ranged from 0.95 mg/kg (B-19 at 10-12 ft) to 390 mg/kg (B-16 at 12-14 ft). A soil sample from boring B-16 interval 12 -14 ft was submitted for TCLP Hg, but there was no detection of mercury using this method.

Lead was detected in every interval of the five borings in the northeast quadrant. In boring B-14, lead exceeded the RR SCOs in each interval sampled. The results ranged from 980 mg/kg at 10-12 ft to 16,000 mg/kg at 4-6 ft. The 4-6 ft interval at B-14 was submitted for TCLP Pb analysis and the results were 160 mg/l, an exceedance of the criteria. Boring B-15 lead results were 1000 mg/kg for 4-6 ft, 500 mg/kg for 8-10 ft, and 2400 mg/kg for 10-12 ft. The 12-14 ft interval was detected below the RR SCOs. There was a TCLP Pb extraction at B-15 from 10-12 ft that was 3.9 mg/l, less than the 5 mg/l criteria. Boring B-16 had one exceedance value of 4700 mg/kg for lead at the 12-14 ft interval. This interval was also submitted for TCLP Pb and the results were an exceedance of 15 mg/l. Boring B-19 had exceedances at 4-6 ft (850 mg/kg) and 12-14 ft (810 mg/kg). At B-20, the 8-10 ft interval result was 550 mg/kg, the only exceedance at that boring location. Consequently, the 12-14 ft interval sample was not submitted for analysis.

Arsenic was another metal targeted for analysis. The northeast quadrant contained the borings with the greatest number of arsenic exceedances on the site. Boring B-14 had exceedances at each interval ranging from 19 mg/kg at 12-14 ft to 27 mg/kg at 4-6ft. Borings B-15 and B-16 had arsenic exceedances at 10-12 ft and 12-14 ft: 130 and 32 mg/kg at B-15 and 65 and 1800 mg/kg at B-16. The B-15 interval of 10-12 ft was submitted for TCLP and the arsenic was not detected by the laboratory. The B-16 interval of 12-14 ft was submitted for TCLP and arsenic was detected at 0.21 mg/l, not an exceedance of the criteria. Boring B-19 had arsenic exceedances at 4-6 ft (28 mg/kg), 8-10 ft (17 mg/kg) and 10-12 ft (23 mg/kg). Boring B-20 had an exceedance at 8-10 ft of 31 mg/kg, the only exceedance at that boring location. Consequently, the 12-14 ft interval sample was not submitted for analysis.

## **2. Southeast**

The southeast quadrant contains soil borings B-11, B-12, B-13, B-17, and B-18 which were sampled at intervals 4-6 ft, 8-10 ft, 10-12 ft, and 12-14 ft and were analyzed for mercury

(Hg), lead (Pb), and arsenic (As). The 12-14 ft sample was held in contingency and analyzed depending on the 10-12 ft interval sample results. Boring B-12 had multiple intervals analyzed for TCLP Lead (6-8 ft, 8-10 ft, 10-12 ft, and 12-14 ft).

The CA Rich Phase II located three borings (SB-5, -6, and -10) in the southeast quadrant. The borings were sampled for VOCs, SVOCs, metals, PCBs and pesticides at a shallow and a deep interval (approximately 0-3 ft and 8-10 ft). The CA Rich data indicated an exceedance of the Commercial SCO for Benzo-a-Pyrene at the shallow interval in SB-5 and -6, no exceedances of the SCO for VOCs, PCBs and pesticides and exceedances of the restricted residential SCOs for lead and mercury.

URS's investigation detected mercury throughout the sampled depth intervals and exceedances in each boring as follows. In boring B-11, mercury was detected in amounts that exceed the criteria in each interval at a range of 1.1 to 4.5 mg/kg. The 12-14 ft interval sample for B-11 was not submitted for analysis. In boring B-12, there was one exceedance of 12 mg/kg at 12-14 ft. In boring B-13, intervals 8-10 ft through 12-14 ft had exceedances in the range of 1.3 to 2.7 mg/kg. Boring B-17 exceedances were 1.7 and 2.4 mg/kg and were found at 8-10 ft and 10-12 ft, respectively. Boring B-18 had exceedances at the 4-6 ft interval of 1 mg/kg and at 8-10 ft of 1.6 mg/kg.

Lead detections were found in each depth interval in each boring in the southeast quadrant. Boring B-11 had one exceedance of 520 mg/kg at 10-12 ft. Boring B-12 had exceedances at 4-6 ft, 10-12 ft, and 12-14 ft of 710, 1200, and 590 mg/kg, respectively. Boring B-12 also was analyzed for TCLP Pb. The results found detections at 8-10 ft and 10-12 ft, but no exceedances of TCLP criteria. Boring B-13 samples exhibited lead detections at each interval, but the results did not exceed the criteria. Boring B-17 had exceedances at 4-6 ft, 8-10 ft, and 10-12 ft of 1700, 1200, and 820 mg/kg, respectively. The 12-14 ft sample was analyzed and resulted in a lead detection, but not an exceedance. Boring B-18 yielded one lead exceedance at 450 mg/kg at 8-10 ft. The 12-14 ft interval sample for B-18 was not submitted for analysis.

Arsenic was detected in three of the five borings in concentrations that exceeded the criteria. Borings B-11 and B-18 had arsenic detections, but no exceedances. The 12-14 ft interval sample for B-18 was not submitted for analysis. In boring B-12, arsenic exceedances of 17 and 22 mg/kg were found at 4-6 ft and 12-14 ft, respectively. At boring B-13, arsenic exceedances of

29 and 17 mg/kg were found at 10-12 ft and 12-14 ft, respectively. At boring B-17, an arsenic exceedance of 16 mg/kg was detected at 10-12 ft.

### **3. Southwest**

The southwest quadrant contains soil borings B-1, B-2, B-3, B-8, B-9, and B-10 which were sampled at intervals 4-6 ft, 8-10 ft, 10-12 ft, and 12-14 ft and were analyzed for mercury (Hg), lead (Pb), and arsenic (As). The 12-14 ft sample was held in contingency and analyzed depending on the 10-12 ft interval sample results, which was only analyzed for B-1. Three borings had intervals analyzed for TCLP extraction: B-1 for TCLP Pb (4-6 ft, 8-10 ft, 10-12 ft, and 12-14 ft), B-2 for TCLP Pb at 8-10 ft, and B-8 for TCLP Hg (4-6ft, 8-10 ft, and 10-12 ft).

The CA Rich Phase II located three borings (SB-3, -4 and -8) in the southwest quadrant. The borings were sampled for VOCs, SVOCs, metals, PCBs and pesticides at a shallow and a deep interval (approximately 0-2 ft and 5 ft or 10 ft). The CA Rich data indicated an exceedance of the commercial SCO for Benzo-a-Pyrene at the shallow interval of SB-3 and -8, no exceedances of the SCO for VOCs, PCBs and pesticides and exceedances of the restricted residential SCOs for lead, mercury and arsenic.

URS's investigation indicated mercury detections throughout the depth intervals and exceedances in each boring as follows. In B-1 mercury was detected in amounts exceeding the criteria in each interval ranging from 1.8 to 6 mg/kg. In boring B-2, there were exceedances at 8-10 ft and 10-12 ft and the results were 4.3 and 0.81 mg/kg, respectively. At B-3, there was an exceedance at 10-12 ft of 5.3 mg/kg. In B-8, B-9, and B-10 there were exceedances in the 4-6 ft, 8-10 ft, and 10-12 ft samples. The range of exceedances at B-8 was 1.5 to 41 mg/kg at 10-12 ft to 8-10 ft, respectively. The range at B-9 was 1.6 to 3.5 mg/kg, at 8-10 ft and 4-6 ft, respectively. The range at B-10 was 1.5 to 5.4 mg/kg at 10-12 ft and 8-10 ft, respectively. Boring B-8 was submitted for TCLP mercury analysis and the results were non-detect.

Lead detections were found in each analyzed depth interval in each boring in the southwest quadrant. There were exceedances found at B-1 and B-2 at 4-6 ft and 8-10 ft. At B-1, the results were 510 and 1,400 mg/kg, respectively, and at B-2 the results were 550 and 5,100 mg/kg, respectively. Boring B-1 was submitted for TCLP Pb and there were detections at each interval, but no exceedances. Boring B-2 depth interval 8-10 ft was submitted for TCLP Pb analysis and was found to exceed the criteria with a result of 24 mg/l. The lead exceedances at B-

3 were found at 4-6 ft and 10-12 ft and were 630 and 600 mg/kg, respectively. The borings B-8 and B-9 had lead detections, but no exceedances. The B-10 boring had exceedances at 4-6 ft and 8-10 ft of 490 and 820 mg/kg, respectively.

Arsenic was detected throughout the borings and intervals sampled in this quadrant. There were exceedances found at the 8-10 ft interval at three borings: B-1 of 22 mg/kg, at B-2 of 28 mg/kg, and at B-9 of 21 mg/kg.

#### **4. Northwest**

The northwest quadrant contains soil borings B-4, B-5, B-6, and B-7 which were sampled at intervals 4-6 ft, 8-10 ft, 10-12 ft, and 12-14 ft and were analyzed for mercury (Hg), lead (Pb), and arsenic (As). The 12-14 ft sample was held in contingency and analyzed depending on the 10-12 ft interval sample results. Based on the results from the 10-12 ft samples, the 12-14 ft samples were not analyzed. Two borings had intervals analyzed for TCLP extraction: B-5 for TCLP Pb (4-6 ft, 8-10 ft, and 10-12 ft), and B-7 for TCLP As (4-6ft, 8-10 ft, and 10-12 ft).

The CA Rich Phase II located three borings (SB-1, -2 and -9) in the northwest quadrant. The borings were sampled for VOCs, SVOCs, metals, PCBs and pesticides at a shallow and a deep interval (approximately 0-2 ft and 7 ft or 10 ft).

The CA Rich data indicated an exceedance of the commercial SCO for Benzo-a-Pyrene in the shallow interval of SB-1 and -9, no exceedances of the SCOs for VOCs, PCBs, pesticides and exceedances of the restricted residential SCOs for lead and mercury.

URS's investigation indicated mercury detections throughout the sampled depth intervals and one to two exceedances in each boring as follows. In B-4 at 8-10 ft, the result was 4.3 mg/kg. In B-5 at 4-6 ft and 10-12 ft the results were 3.9 and 1.7 mg/kg, respectively. At B-6 at 4-6 ft and 8-10 ft the results were 4.5 and 8.7 mg/kg, respectively. In B-7, at 8-10 ft, the result was 3.1 mg/kg.

Similar to the mercury findings, lead detections were found in each boring throughout the sampled depth intervals. The exceedances are as follows: At boring B-4 at 8-10 ft, the result was 490 mg/kg. At boring B-5 at 4-6 ft and 10-12 ft, the results were 940 and 630 mg/kg, respectively. Also at B-5, there were TCLP Pb samples collected at 6-8 ft, 8-10 ft, and 10-12 ft. There was detection of lead of 2.4 mg/l at 10-12 ft, but no exceedances. At B-6, at 4-6 ft and 8-

10 ft the results were 960 and 490 mg/kg, respectively, and at B-7, the exceedance of 810 mg/kg was detected at 8-10 ft.

Arsenic was detected in the northwest quadrant borings, at each depth interval sampled, but only one exceedance of the RR SCOs was reported. The result at B-5 at 4-6 ft was 19 mg/kg. At boring B-7, TCLP As was collected and analyzed for the 6-8 ft, 8-10 ft, and 10-12 ft intervals. TCLP Arsenic was not detected at these intervals.

### **5. Toxicity Characterization Leaching Procedure (TCLP) Sampling**

Based on the results of the CA RICH Phase II investigation (2007) and URS' limited Phase II investigation, select samples collected by URS during the 2011 investigation were analyzed for TCLP of the compound (arsenic, lead, or mercury) which exceeded its SCOs by at least two orders of magnitude. Figure 6 shows the locations and results of TCLP sampling and the associated soil samples which triggered TCLP analysis. The soil at three of these locations (B-2, B-14, and B-16) exceeded EPA's maximum toxicity guidance values for lead and therefore meet the definition of EP Toxicity, that is, carry a hazardous waste code under RECRA (40 CFR Part 261). The soil in these borings is considered a characteristic hazardous waste. As such, soil at these locations will be excavated and disposed of off-site in accordance with all applicable laws and regulations.

In summary, the site lithology was consists of urban fill. The soil chemistry shows a heterogeneous mix of selected metals contamination, heavier in the northeast quadrant, but present at different depths throughout the site. There are exceedances of the RR SCOs for mercury, lead, and arsenic, in some cases as much as two or three orders of magnitude above the SCOs. Because of the heterogeneous character of the fill on-site, complete delineation of metals contamination on-site was not feasible; therefore the TCLP sampling plan was implemented. The TCLP sampling was used to determine the presence and location of potentially hazardous soil at the site.

### **5.3 GROUNDWATER CHEMISTRY**

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on

groundwater samples is included in Table 5. Exceedence of applicable groundwater standards are shown in Table 8. Laboratory data reports are provided in Appendix K.

Additional groundwater data was collected in 2007 by CA RICH as part of its Phase II investigation. Samples collected during that investigation were submitted for analysis for VOCs, SVOCs, PCBs, Pesticides, and filtered and unfiltered TAL Metals samples. Results were compared to NYSDEC TOGS Ambient Water Quality Standards and Guidance Values. Groundwater data in 2007 indicated that metals exceedances were only present in unfiltered samples, no SVOCs were detected above criteria, PCBs and pesticides were not detected at all in site groundwater, and low-level VOC exceedances were limited to chlorinated solvent breakdown products (1,1-dichloroethane, 1,1,1-trichloroethane, chloroethane, and methylene chloride). CA RICH attributed the presence of these compounds to an up gradient off-site regional source. CA RICH's Phase II investigation is provided as Appendix C.

Figure 7 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards, where the criteria for mercury is 0.7 ug/L, lead is 25 ug/L, and arsenic is 25 ug/L.

Groundwater samples were collected during two different field events. On December 7-8, 2011 unfiltered samples were collected at B-2, B-4, B-12, and B-14. The unfiltered samples appeared very turbid and brown in color. These results did not fully represent site groundwater conditions because of the quantity of sediment found in the samples. Total metals analysis indicated the presence of the three targeted metals, mercury, lead, and arsenic which exceeded their respective Class GA standards.

On January 14, 2012, filtered samples were collected at B-2B, B-4B, B-12B, and B-14B. The filtered samples were visually clear of sediment. The samples were analyzed for dissolved metals, specifically mercury, lead, and arsenic. In the B-2B and B-14B samples targeted metals analysis was non-detect. In the B-4B and B-12B samples, targeted metals analysis did not detect mercury and arsenic. Lead was detected, but the results do not exceed the Class GA groundwater standard.

The analytical results suggest that the metals detections in the unfiltered (total) analysis are primarily due to suspended sediments.

## 5.4 SOIL VAPOR CHEMISTRY

Concentrations of VOCs detected in the soil gas samples were compared to the NYSDOH 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York air guideline values (AGVs), the Health Effects Institute (HEI) 95<sup>th</sup> percentile concentrations for indoor air, the EPA Building Assessment and Survey Evaluation (BASE) 90<sup>th</sup> percentile value, and the ambient air sample for outdoor air quality on-site. The guidance values provide a means of comparison to background underground conditions; however, these values refer to indoor air quality conditions. NYSDOH “does not have any standards, criteria, or guidance values for concentrations of volatile chemicals in subsurface vapors (either soil vapor or sub-slab vapor)” (NYSDOH, 2006).

Concentrations of detected VOCs in soil vapor ranged from 0.57  $\mu\text{g}/\text{m}^3$  of benzene at SG-1 to 129  $\mu\text{g}/\text{m}^3$  of 1,4-Dichlorobenzene in SG-2. Seven VOCs were detected in one or more of the soil gas samples above their respective HEI and/or EPA background values. These compounds are carbon disulfide, 1,4-dichlorobenzene, 1,1-dichloroethene, cis-1,2-dichloroethene, n-hexane, methylene chloride, and trichloroethene. Carbon tetrachloride was not detected in any of the samples. 1,1,1-trichloroethane (TCA) was detected in SG-1, SG-2, and SG-3 with results of 82.8  $\mu\text{g}/\text{m}^3$  in SG-1, 12.7  $\mu\text{g}/\text{m}^3$  in SG-2 and 116  $\mu\text{g}/\text{m}^3$  in SG-3. TCA was not detected in the ambient air sample. Trichloroethene (TCE) was detected in SG-1, SG-2, and SG-3 above the NYSDOH guidance value of 5  $\mu\text{g}/\text{m}^3$  with results of 11  $\mu\text{g}/\text{m}^3$  in SG-1, 72.9  $\mu\text{g}/\text{m}^3$  in SG-2, and 7.4  $\mu\text{g}/\text{m}^3$  in SG-3. Methylene chloride was detected at 95.1  $\mu\text{g}/\text{m}^3$  in SG-3, a value above the NYSDOH guidance of 60  $\mu\text{g}/\text{m}^3$ . The ambient air sample 01162012\_AA\_1, which was located in the center portion of the site detected twelve different VOCs, with 1,4-dichlorobenzene detected over the HEI background value.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 6. Exceedances of guidance values are shown on Table 9. Laboratory data reports are provided in Appendix K.

## **5.5 PRIOR ACTIVITY**

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

## **5.6 IMPEDIMENTS TO REMEDIAL ACTION**

There are existing impediments to remedial action at this property. They include the presence of approximately 220 piles that are driven throughout the site. Widespread soil excavation would be difficult and result in the existing piles having to be removed and re-driven. Additionally, the water table at 544 Union Ave is shallow so large scale excavating of the site below the water table would require a prohibitive amount of site dewatering, collection and disposal.

**Re: Phase I Environmental Site Assessment**  
544 Union Avenue  
Brooklyn, New York

Dear Mr. Glicksman:

The following report summarizes a Phase I Environmental Site Assessment (ESA) of the above-referenced location (hereinafter referred to as the Property or the Site), performed by CA Rich Consultants, Inc. (CA RICH). This Phase I ESA was completed in substantive conformance with the scope and limitations of ASTM Practice E 1527-2005, which sets forth nationally, accepted Phase I guidance criteria.

If you have any questions pertaining to this report, please feel free to contact the undersigned. We thank you for the opportunity to provide you with our professional environmental services.

Sincerely,

**CA RICH CONSULTANTS, INC.**

## EXECUTIVE SUMMARY

CA RICH CONSULTANTS, INC. ("CA RICH") of Plainview, New York has completed this Phase I Environmental Site Assessment (ESA) of a property located at 544 Union Avenue in Brooklyn, New York (hereinafter referred to as the "Property" or "Site"). CA RICH performed this Phase I ESA in substantive conformance with the suggested informational requirements, scope and limitations of the American Society for Testing & Materials (ASTM) prevailing Standard Practice E 1527-05 for environmental site assessments. Any exceptions to, or deletions from, these practices are described in Section 1.4 of this Report.

The information and findings presented herein are based upon the data acquired during the Property visit, and through pertinent information obtained from regulatory agencies, responsible persons knowledgeable about the Property, and other historical information sources.

The subject Property is improved with a vacant one-story industrial building that contains an additional ½-story level on the northwestern corner of the building, which is accessed via interior stairs. Multiple entrances service the building on Frost Street, Union Avenue, and Withers Street. A back door located on the southeast portion of the building leads to an exterior courtyard. Roof drainage is directed to a series of drains running down the sides of the building that eventually discharge into the municipal sewer. The topography of the Property is generally level.

The building is heated via overhead natural gas blowers. Natural gas is supplied by Keyspan and electricity is supplied by the Consolidated Edison Company. The City of New York provides municipal sewer and potable water to the building.

Based upon the information reviewed for this Phase I ESA, the following "Recognized Environmental Conditions" (RECs) have been identified in connection with the subject Property.

**REC-1** Historical industrial usage of this Property since its development as an Iron Foundry in 1887 with continuous various industrial usages by others up through 2006 is considered a *Recognized Environmental Condition*. Since approximately 1947 up to 2006, Beach Ross Company, a federally listed small quantity generator of regulated hazardous waste operated at the Property. Although the building was unoccupied and vacant at the time of our April 2007 inspection, the following *Recognized Environmental Conditions* were observed: chemical and/or petroleum staining on floors in former manufacturing areas, floor sumps and pits throughout the building that contained unknown liquid, oil stained soil and absorbent material, and an unknown residue/powder on the floor in a former manufacturing or storage area of the building.

Based upon the historical industrial usage of the Property and the findings of our recent inspection, we recommend further Phase II-type investigation of certain areas and residual materials observed on the Property.

**Other Issue:** According to the NYCDOB building information search database, the subject Property is 'E' designated HAZMAT (Hazardous Materials). While the 'E' designation itself is not considered a *Recognized Environmental Condition*, since redevelopment of the Property from an industrial use to a residential multi-story building is currently planned, it is understood that a Phase II investigation be conducted in accordance with CEQR to satisfy the NYCDEP's 'E' designation requirements.

## 1.0 INTRODUCTION

### 1.1 Purpose

The purpose of this Phase I ESA is to identify ASTM-defined Recognized Environmental Conditions associated with the subject Property. This assessment was conducted in substantive conformance with ASTMs relatively newly-issued "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*" E 1527-05.

This Standard is designed to constitute "*all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice*" as defined in CERCLA 42 USC 9601 (35) (B). Consequently, this assessment investigates the historical land use and present-day condition of the Property in accordance with accepted standards prevailing within the lending industry and the environmental assessment profession. The term *recognized environmental conditions* does not include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate regulatory agencies.

### 1.2 Detailed Scope of Services

The following general activities were performed by CA RICH as part of this Phase I ESA:

- Visual and physical inspection of representative reasonably accessible interior and exterior areas of the Property by an experienced CA RICH Environmental Professional (EP), whom also satisfies the educational and experience qualification requirements stipulated under the Federal EPA's companion "AAI" Rule, effective November 1, 2006. The review included a search of environmental liens for the property, activity and use limitations, if any, and any applicable engineering and institutional controls, information data gaps, as well as building practices at adjacent properties;
- Investigation of historical land use practices including review of NY City-Directory publications and historical Sanborn® Maps, discussions with knowledgeable parties associated with the Property and other readily available records or reports;
- Review and inquiry of relevant Federal, State, and NY City database records pertaining to the subject Property and properties located within approximate minimum search distances for the purposes of identifying potential sources of any migrating hazardous substances or petroleum products; and,
- Review of the Property's proximity to ecologically sensitive areas or media (i.e. parks, rivers, underlying ground water, etc.) using records and maps published by the NYCDEP and the Federal United States Geological Survey (USGS) along with neighborhood reconnaissance.

### **1.3 Significant Assumptions**

For the purpose of performing this Phase I ESA, CA RICH assumes that information provided to us by the Client, database search companies, historical records, interviews, etc. is accurate. Our findings and conclusions regarding the potential environmental impact of nearby, off-site buildings or adjoining property facilities upon the subject Property are based upon readily available information from review of the environmental databases and observable conditions at the time of inspection by the EP. Any further, more detailed review or interpretation of a specific file or record is beyond the standard Phase I scope of work approved at this time.

Further, the Environmental Professional investigator(s) cannot be held responsible for either innocent or intentional misrepresentations, inaccurate statements, claims made, or information furnished to CA RICH regarding the environmental integrity of this Property.

### **1.4 Limitations and Exceptions**

CA RICH performed this Phase I ESA of the subject Property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry as set forth in ASTM E1527-05. CA RICH has included review of some non-ASTM issues for this assessment including asbestos, radon gas and lead-based paint; otherwise there have been no intentional deviations or deletions from this practice in the performance of this assessment. The assessment included a visual (observable) inspection of representative areas of the Property, the examination of readily ascertainable and practically reviewable public records concerning the current and prior use of the Property, recorded environmental conditions, and further discussions with responsible and knowledgeable parties associated with the Property.

The findings, conclusions and professional opinion set forth in this environmental report are based upon the limited information available to CA RICH during this assessment period. If new information becomes available concerning the Property or the future property and its environs relative to existing or future intended land use after the date of this report, the findings and conclusions contained herein may be subject to modification. While this assessment was performed in accordance with good commercial and customary practice and generally accepted protocols within the environmental consulting industry, CA RICH cannot guarantee that the Property is completely free of hazardous substances or other materials or conditions that could subject the Owner(s) to potential liabilities. The presence or absence of any such condition may only be revealed or confirmed through the sample collection and analysis of any stored or suspect residual liquids, gels, or solid waste materials, chemicals, miscellaneous hazards, residues, biologicals, odors, soot, refuse, building materials, underlying fill, fluids, or soils, soil vapors, ground water, and/or surface water etc.

Subsurface conditions were not field-investigated and were outside the scope of this Phase I ESA and therefore, may differ from the conditions implied by records review and/or surficial observations. Building contamination, waste emplacement, lead-based paint, asbestos, fill, and soil or groundwater contamination would be disclosed to CA RICH only by surficial indications, interviews, or available regulatory records. In the absence of such information, these possible conditions may only be revealed through further specific media testing or sampling and testing methodologies all of which are beyond the scope of this 'Phase I' assessment, with exceptions as reported herein.

Because there are limitations to the amount of time and resources expended at this level of an initial Phase I Assessment, CA RICH cannot guarantee that all existing and pertinent Property information was reviewed. There may remain data gaps and/or additional relevant information not discovered through the standard level of all appropriate inquiry employed at this time. However, we do acknowledge that to the best of our belief, the readily ascertainable information we have supplied is true, complete and correct, and that facts or figures that may have an adverse effect upon the validity of the findings and professional opinion provided herein have not purposely been omitted.

CA RICH has no interest other than professional in this Environmental Site Assessment and neither its performance, nor compensation for same, is contingent upon the findings and/or opinion or recommendation(s), if any, represented herein. Any litigation matters that may pertain to the Property are not discussed and this Report is not a legal opinion.

## **1.5 User Reliance**

This Report is intended for the sole use of the Client. It may not be used or relied upon by any other party, or third party, without the written consent of CA RICH. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, future occupants, future prospective purchasers, and/or altered land usage, or altered future land usage, and the use or re-use of this document or the findings, professional opinion, or aforementioned recommendations provided herein is at the risk of said user.

## **2.0 PROPERTY DESCRIPTION**

### **2.1 Location and Legal Description**

The subject Property located at 544 Union Avenue in Brooklyn, Kings County, New York is comprised of a one-story industrial building on three lots totaling 35,692.57 square feet. The subject Property is located along the entire eastern side of Union Avenue between Frost Street and Withers Street (see Figure 1). The Tax Map Identification for this Property is Block: 2736; Lots: 1, 9, and 48.

### **2.2 Description of Property**

The subject Property is improved with a vacant one-story industrial building that contains an additional ½-story level on the northwestern corner of the building, which is accessed via interior stairs. Multiple entrances service the building on Frost Street, Union Avenue, and Withers Street. A back door located on the southeast portion of the building leads to an exterior courtyard. Roof drainage is directed to a series of drains running down the sides of the building that eventually discharge into the municipal sewer. The topography of the Property is generally level.

The building is heated via overhead natural gas blowers. Natural gas is supplied by Keyspan and electricity is supplied by the Consolidated Edison Company. The City of New York provides municipal sewer and potable water to the building.

### **2.3 Description of Surrounding Area**

The subject Property is located in a mixed-use industrial/commercial/residential section of Williamsburg in Brooklyn, New York. The surrounding area consists mostly of warehouses and multi-story residences.

### **2.4 Current Uses of the Property**

The Property is currently a vacant one-story industrial building.

## 2.5 Current Uses of Adjoining Properties

Specific neighboring property usage is outlined below:

North: Vacant Chocolate Factory (across Frost Street)  
South: Northside Catholic Academy, Vacant Lot, Residence (across Withers Street)  
East: Warehouse (22 Frost Street), 3-Story Residence (Withers Street)  
West: Vacant Lot, T. Quick Auto Body & Collision Repairs (across Union Avenue)

## 2.6 Site Geology & Hydrogeology

According to the United States Geological Survey (USGS Open File Report 81-1186; *Reconnaissance of the Ground-Water Resources of Kings and Queens Counties, New York*; 1981), the Site is underlain by a series of unconsolidated deposits of clay, sand, and gravel of late Cretaceous and Pleistocene age, which rest unconformably on crystalline bedrock of Precambrian to Ordovician geologic age at an elevation of 18 feet above sea level. These unconsolidated earth materials contain corresponding hydrogeologic units consisting of three separate aquifers. These are identified, in descending order, as the Upper Glacial Aquifer, the Magothy Aquifer, and the Lloyd Aquifer, which are separated by two relatively impermeable clay confining units: the Gardiners Clay and the clay member of the Raritan formation (the Raritan Clay).

To the east out on Long Island, these underlying aquifers are highly regulated and relied upon as the "sole source" of potable water for almost three million people. Overpumping of groundwater resources in both the Boroughs of Brooklyn and western Queens in the early to mid-1900s (through 1947) caused saltwater intrusion and thereby the gradual deterioration of the quality of groundwater occurring in these areas. Currently, with the exception of certain parts of eastern Queens, these two metropolitan Boroughs rely upon the New York City surface water supply system (from upstate reservoirs) to meet most potable water supply needs.

No site-specific hydrogeological information is available concerning groundwater depth and flow direction. However, based upon review of USGS maps and reports, groundwater is expected to be at a depth of approximately 6-10 feet below land surface and likely flows to the west. Site-specific groundwater depth and flow direction can only be accurately determined by a focused hydrogeologic study, which is beyond the scope of this Phase I ESA.

## 3.0 USER-PROVIDED INFORMATION

ASTM E 1527-05 defines the "User" as: "*the party seeking to use practice E 1527-05 to complete an environmental site assessment of the property*". The user is responsible for providing certain information (if available) to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete. As such, a User Questionnaire was prepared in conformance with E 1527-05, X3; and was submitted to the Client to satisfy the requirements for user-provided information. In addition, it was determined that some of the questions contained in the Questionnaire could best be answered by the current property owner. As such, a copy of CA RICH's questionnaire was forwarded to the property owner as well. Information from the completed questionnaires was used to complete the following sections along with an environmental lien search provided by the Client.

### 3.1 Title Records

Title records were not provided by the User.

### **3.2 Environmental Liens**

An environmental lien search was not provided by the User, but was requested by CA RICH from EDR on April 20, 2007. No environmental liens or AULs were found for the subject Property. The lien search report is included in Appendix D.

### **3.3 Specialized Knowledge**

The User did not provide CA RICH with specialized knowledge of the Property.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

The User did not provide CA RICH with any commonly known or reasonably ascertainable information about the subject Property.

### **3.5 Valuation Reduction for Environmental Issues**

A valuation reduction for environmental issues was provided by the User. According to the User, the purchase price paid for the Property reflected the fair market value of the Property.

### **3.6 Owner, Property Manager, and Occupant Information**

Based on an interview that was conducted with Mr. Brian Glicksman, Vice President of the Tryad Group, the Property is currently owned by 544 Union Owner, LLC and is currently unoccupied. In addition, Mr. Glicksman stated that the Property was occupied by Abbe Engineering Company (manufacturer of chemical machinery and equipment) and Beech Russ Company (manufacturer of vacuum pumps) until the end of 2006.

### **3.7 Reason for Performing Phase I**

The purpose of performing this Phase I ESA is to comply with the CEQR requirements for a HAZMAT 'E' designation in anticipation of the planned property redevelopment from an industrial building to a multi-story apartment building.

## **4.0 SITE RECONNAISSANCE**

### **4.1 General**

The subject Property was inspected by Deborah Shapiro, EP and Victoria Whelan of CA RICH on April 25, 2007 with the assistance of Mr. Brian Glicksman, Vice President of Tryad Group. Accessible interior and exterior areas of the Property were inspected. In addition, photographs were taken to document observations at the time of the walk-through inspection. Selected photographs illustrating salient observations are included in Appendix A.

### **4.2 Methodology and Limiting Conditions**

The inspection on April 25, 2007 began with a general walk-through of interior and exterior accessible areas of the building. Ms. Shapiro, Ms. Whelan, and Mr. Glicksman then proceeded to inspect the roof. Due to safety issues, the entire roof and the partial 1/2-story landing could not be inspected.

#### **4.3 Interview Information**

An interview was conducted with Mr. Brian Glicksman, Vice President of the Tryad Group, on April 25, 2007. The interview revealed that to best of his knowledge the Property was purchased by 544 Union Owner LLC in January 2007 and was previously occupied by Beach Russ Company and Abbe Engineering Company. In addition, Mr. Glicksman stated that in anticipation of the planned property redevelopment, 544 Union Owner LLC is in the process of retaining New York Insulations to conduct an asbestos survey and abatement.

#### **4.4 Exterior Observations**

Building improvements cover a majority of the Property except for the sidewalk frontage and a small concrete courtyard located in the back of the building. Access to the Property from the street is provided via two curb cuts on Frost Street and one on Union Avenue. Numerous doors provide access from the sidewalk on Frost Street, Union Avenue, and Withers Street.

Natural gas utility vaults were observed on the sidewalk near the building on Withers Street, Union Avenue, and Frost Street. A NYCDEP drinking water sampling station was observed on the Union Avenue sidewalk near the intersection with Frost Street. The part of the roof that was accessible was observed to be in fair to poor condition.

#### **4.5 Interior Observations**

CA RICH's interior inspection included an escorted walk-through of the first floor of the building, which consisted of former manufacturing work areas, locker room, bathrooms, and offices. Interior building materials consisted of concrete and vinyl tile (offices only) floors; brick and wood panel (offices only) walls; and, exposed wood frame and drop-tile (offices only) ceilings. Numerous fluorescent lights were also observed throughout the building.

Numerous overhead cranes, work tables, empty shelves, empty offices, overhead gas-fired blowers, and two gas-fired hot water heaters were observed. According to Mr. Glicksman, the overhead cranes, work tables, shelves, offices, and blowers belong to the former occupants, Abbe Engineering Company and Beach Russ Company.

Numerous oil stains were observed on the concrete floor in the manufacturing areas where equipment was once present. In addition, a white residue/powder was observed in the small manufacturing room. Small sumps/pits were also observed throughout the building. Standing water was observed in one of the sumps near the courtyard, while a sump on the Frost Street side of the building was observed to contain oily soil and an absorbent material.

#### **4.6 Storage Tanks**

Storage tanks, both aboveground and underground, are often used for storing fuel, waste oils, solvents, and other waste and/or potentially hazardous materials. The principal concern from storage tanks is leakage of contents due to corrosion of the tank or associated lines. The leakage may result in migration of the stored material onto the subject and/or neighboring properties via soil migration or underlying shallow groundwater flow. In general, soil and groundwater contaminated by leaks from on-site storage tanks may constitute an environmental or health hazard.

No storage tanks, fills or vent pipes were observed on the subject Property during the time of our inspection.

**4.7 Toxic / Hazardous Materials**

No identifiable toxic/hazardous materials other than two 5-gallon buckets of flashing cement being stored on the roof were observed at the time of our inspection. The continued storage of these materials is not anticipated to have had a negative impact upon the subject Property. A white residue/powder was observed on the floor in a small manufacturing room. The origin and the nature of the chemical makeup of this residue/powder is unknown.

**4.8 Proximity to Environmentally Hazardous and/or Sensitive Areas**

The Property is situated within a residential/commercial neighborhood in Brooklyn, New York. The computerized database records (Appendix C) report approximately 191 sites in the categories of government reported sites located in proximity to the Property in accordance with ASTM E 1527-05 minimum search distances. Any locatable sites have been mapped on the radius search maps included in Appendix C and are discussed in further detail in Section 6.0 of this Report.

The database map indicates that there is one public supply well (NY0007257) owned by Mayor Rosenberg of 570 Bedford Avenue, Brooklyn, New York within ¼ - mile of the Property. National Wetlands and the East River are mapped within 1-mile radius of the subject Property. There are no on-site or adjacent bodies of water, wetlands or other environmentally sensitive areas with the exception of the underlying soils and ground water. The 100 and 500-year Floodplains are mapped within a 1-mile radius of the Property. The shallow groundwater directly underlying the Property is not utilized as a water resource. Current operations on the Property are not expected to have an impact on these resources; however, historical operations indicate the storage, handling, and use of regulated chemicals and wastes, which may have impacted the Property.

**5.0 HISTORICAL LAND USE PRACTICES**

In order to further determine the past land use and the Property's developed use, historical aerial photographs, historical topographic maps, Sanborn® maps, and Local Directory records were reviewed.

**5.1 Aerial Photography**

The following tables summarize the findings of our review of historical aerial photographs.

<b>Year</b>	<b>Description and Comments</b>
1954	The subject Property appears developed. The surrounding area appears as developed.
1966	The subject Property appears developed. The surrounding area appears as developed.
1975	The subject Property appears developed. The surrounding area appears as developed.
1984	The subject Property appears developed. The surrounding area appears as developed.
1994	The subject Property appears developed. The surrounding area appears as developed.

Review of historical aerial photographs indicates that the subject Property has been developed since at least 1954. A copy of each of the aerial photographs reviewed is attached to this report as Appendix D.

## 5.2 Topography

The following table summarizes the findings of the Topographic Map.

<b>Year</b>	<b>Description and Comments</b>
1900	The subject Property and adjacent properties appear as developed.
1947	The subject Property and adjacent properties appear as developed.
1956	The subject Property appears as it did in the 1947 map except that the Brooklyn-Queens Expressway (BQE) now appears a few blocks to the east and specific property information is not shown.
1967	The subject Property appears as it did in the 1956 map.
1967-1979 (photorevision)	The subject Property appears as it did in the 1967 map.
1995	The subject Property appears as it did in the 1967-1979 (photorevised) map.

Review of historical topographic maps dating back to 1900 indicates that the subject Property was initially developed during or prior to 1900. A copy of each topographic map is attached to this report as Appendix D.

## 5.3 Sanborn Fire Insurance Mapping

The following table summarizes the findings of the Sanborn® Fire Insurance Maps review:

<b>Year</b>	<b>Description and Comments</b>
1887	The western and southern portions of the subject Property appear as undeveloped. The northeastern portion of the subject Property appears as developed with a one-story building occupied by J.G. Morrison's Iron Foundry. The building appears with a room containing an engine and a room containing sand. Surrounding properties include dwellings to the southeast and north, and Brass Finishing to the east.
1905	The subject Property is now completely developed as John Pirkel and Iron Works. The building formerly occupied by J.G. Morrison's Iron Foundry now appears to contain "Sawdust." One storage room, one iron storage room, and one iron working room appear in the eastern portion of the property. The eastern adjacent property now appears as a machine shop. The northern and southern adjacent properties appear as dwellings and stores.
1916	The subject Property now appears as the Esily Bros. Co., Iron, Bronzes and Wire Works, The Erikson Wagon Works, and the N. Lockner Iron Works. Five separate rooms appear within the Esily Bros Co. building and are labeled office, polishing, iron works, shop, and foundry. Four pipes (not labeled) now appear in the foundry. Surrounding properties appear as they did in 1905.
1942	The subject Property now appears as Abbe Engineering Co and Beach Russ Co. A machine shop appears in the northern portion of the building. One room labeled Commercial Autobody Manufacturing and a second room labeled Machinery Warehouse appears at the eastern portion of the building. A one-story shed now appears south of the Machinery Warehouse room. The southern and eastern surrounding properties appear as they did in 1916. The northern properties now appear as commercial and industrial buildings.
1951	The subject Property appears as it did in 1942. The surrounding area appears relatively unchanged. An auto repair shop now appears across Frost Street from the commercial autobody manufacturing room.

<u>Year</u>	<u>Description and Comments</u>
1965	The subject Property still appears as the Abbe Engineer Co and Beach Russ Co; however, the commercial autobody manufacturing room no longer appears and the machinery warehouse room is significantly smaller. A small storage room now appears on the southern portion of the property. The eastern adjacent property is no longer a machine shop. The southern adjacent properties now include an undertaker. The northern surrounding properties no longer include an auto repair shop, but now include wholesale groceries, cabinet manufacturing, club, and parking in addition to dwellings.
1978-1996	The subject Property and eastern and southern surrounding properties appear as they did in 1965. The wholesale groceries and cabinet manufacturing to the north now appears as one large warehouse.

Review of Sanborn® Map coverage of the Property indicated that a portion of the Property was initially developed during or prior to 1887 as J.G. Morrison's Iron Foundry, while the entire Property was initially developed during or prior to 1905 as John Pirkl and Iron Works. Previous occupants of the Property included an Iron Foundry, Iron, Bronze, and Wire Works, and a Metal Finisher. Copies of the Sanborn® Maps are attached to this report as Appendix D.

**5.4 Local Directory**

CA RICH conducted a review of available Local Directory records for the subject Property. From 1928 through 1934, the subject Property was not listed in the research source. From 1940 through 1949, 1965 through 1976, and 1985 through 2000, the subject Property was listed in the directory as Abbe Engineering Co Pulverizing Machinery, Beach Russ Co Blowers Rotary Pumps, and Provost Engineering Corp. In 1960, the subject Property was listed as Abbe Engineering Co Pulverizing Machinery, Beach Russ Co Blowers Rotary Pumps, Provost Engineering Corp., and Angelina Lombardi. In 1980, the subject Property was listed in the directory as Abbe Engineering Co Pulverizing Machinery. A copy of the Local Directory records is attached to this report as Appendix E.

**6.0 ENVIRONMENTAL RECORDS REVIEW**

This Section discusses database records maintained by Federal, State and local environmental agencies for the Property and for sites located within an approximate minimum search distance. Available information was compiled from computerized database sources of regulatory agency records. The purpose of this database records review is to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The minimum search distances are specified within ASTM Practice E 1527-05.

The database searches were conducted by EDR at the request of CA RICH on April 20, 2007 (Inquiry Number: 1908261). The existence of an actual toxic hazard at a specific site can be concluded only when government authorities make that determination or when that conclusion is fully documented by the findings of an appropriate site investigation undertaken by licensed professionals.

The resulting database information is briefly summarized below. Complete copies of the database report and radius maps are included in Appendix C. Additional site-specific information was requested elsewhere by CA RICH under the provisions of the Freedom of Information Law (FOIL).

**6.1 Federal**

The number of ASTM federally listed database sites identified in proximity to the Property is tabulated below. The search categories and database review findings are discussed in greater detail below the summary table.

Federal ASTM Database Search Category	Approx. Minimum Search Distance	Subject Property	Total Sites Plotted
EPA National Priority List Sites (NPL)	1 mile	Not identified	0
EPA DELISTED NPL	1 mile	Not identified	0
EPA CERCLIS Sites	1/2 mile	Not identified	0
EPA CERCLIS-NFRAP	1/2 mile	Not identified	2
CORRACTS	1 mile	Not identified	1
RCRIS-TSD	1/2 mile	Not identified	0
RCRIS Lg. Quan. Gen.	1/4 mile	Not identified	1
RCRIS Sm. Quan. Gen.	1/4 mile	Identified	13
ERNS	TP	Not identified	0
FINDS	TP	Identified	0
CONSENT	1 mile	Not identified	0
ROD	1 mile	Not identified	0
US ENG CONTROLS	1/2 mile	Not identified	0
US INST ENG CONTROL	1/2 mile	Not identified	0

◆ **EPA Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS), National Priorities List (NPL)**

The CERCLIS list is a compilation by the USEPA of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), commonly known as the Superfund Act.

Once sites are designated on the CERCLIS list, the USEPA uses its Hazard Ranking System to determine potential risks to human health and the environment. Those CERCLIS sites that present the greatest risk are placed on the National Priority List (NPL), which qualifies the sites to receive remedial funding.

The subject Property was not identified as a CERCLIS or NPL site and there are no NPL sites within a 1-mile radius of the Property.

◆ **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), No Further Remedial Action Planned (NFRAP)**

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was quickly removed without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat these investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

The subject Property is not identified as a CERCLIS-NFRAP site. There are two CERCLIS-NFRAP sites located within the approximate search radius from the Property, Service Plating Co. Ltd. and City Barrel and Drum Co. Inc. Service Plating Co. Ltd. was listed on the database for an odor complaint made to the New York City Department of Environmental Protection. A preliminary assessment completed in 1998 concluded that the site was removal eligible. Service Plating Co. Ltd. was archived on April 11, 2005. City Barrel and Drum Co. Inc. was listed on the database in 1980 and was archived on September 2, 1987. Based on the information reviewed and the location of the NFRAP sites, there is no reasonable basis to conclude that these sites have had a direct negative impact on the subject Property.

◆ **Delisted National Priority List (Delisted NPL)**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425. (e), sites may be deleted from the NPL where no further response is appropriate.

The subject Property does not appear as a Delisted NPL site, and there are no Delisted NPL sites located within the approximate search radius from the Property.

◆ **Corrective Action Activity (CORRACTS)**

CORRACTS is a list of handlers with RCRA Corrective Action Activity. It reports which nationally defined corrective action core events have occurred for every handler that has had a corrective action activity.

The subject Property is not identified as a CORRACTS site. There is one CORRACTS site located within the approximate search radius from the Property. Specifically, Radiac Research Corp. appears on the CORRACTS database.

Radiac Research Corp. – 33 S. First Street, Brooklyn, NY

Located approximately ½ to 1 mile west, northwest of the subject Property. It is hydrologically downgradient of the subject Property and therefore is unlikely to have had a negative impact on the Property.

◆ **Resource Conservation and Recovery Act (RCRA) (RCRIS-TSD)  
Large and Small Quantity Generators (LQG/SQG)**

RCRA was enacted to regulate facilities that generate, store, transport, or dispose of hazardous waste. These facilities must file notification forms with the EPA, which maintain the records in the RCRA Information System (RCRIS) Notifiers database. Inclusion on the RCRIS list does not signify contamination or mishandling of hazardous materials by hazardous waste Notifiers. RCRIS-listed sites are not indicative of an environmental concern unless an actual hazard is known to exist.

The subject Property is identified on the RCRIS list as an SQG (NYR000014472). The listing as a SQG is for the former occupant, Beach Russ Co. Beach Russ Co. was a manufacturer of vacuum pumps. The database listed one violation from August 24, 1999 that was associated with Beach Russ Co. The violation was an oversight violation that was removed the same day.

There are 13 RCRIS-SQGs and one RCRIS-LQG of hazardous waste listed within the search radius of the Property. According to the database reviewed, the RCRIS-LQG/SQG sites do not have outstanding violations and are in compliance with Federal regulations.

◆ **Emergency Response Notification System (ERNS)**

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances. Pursuant to the ASTM Practice E 1527-05, the ERNS database is searched only for the subject Property.

The subject Property is not identified in the U.S. EPA ERNS database.

◆ **Facility Index System/Facility Identification Initiative Program Summary Report (FINDS)**

The Facility Index System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

The subject Property appears in the U.S. EPA FINDS database for the listing of the former occupant Beach Russ Co. on the RCRIS-SQG database.

◆ **Records of Decision (ROD)**

ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid cleanup.

There have been no RODs documented for the subject Property. There are no RODs documented for sites within the approximate search radius from the Property.

◆ **EPA CERCLIS Consent Order**

A signed Order on Consent signifies major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites.

There have been no Federal Consent Orders signed with respect to the subject Property. There are no documented Federal Consent Orders reported within the approximate search radius from the Property.

◆ **US Engineering (ENG) Controls**

The US Engineering Controls Site List is a listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

No Engineering Controls are listed for the subject Property. There are no documented Engineering Controls reported within the approximate search radius from the Property.

◆ **US Institutional (INST) Controls**

The US Institutional Controls List is a listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

No Institutional Controls are listed for the subject Property. There are no documented Institutional Controls reported within the approximate search radius from the Property.

**6.2 State**

The numbers of state-listed database sites identified in proximity to the Property are tabulated below. The search categories and database review findings are discussed in greater detail below the summary table.

State ASTM Database Search Category	Approx. Minimum Search Distance	Subject Property	Total Sites Plotted
NYS Inactive Hazardous Waste Sites (SHWS)	1 mile	Not identified	1
NYS Landfills	1/2 mile	Not identified	1
NYS Leaking Underground Storage Tanks (LTANKS)	1/2 mile	Not identified	31
NYS Registered Storage Tank (UST)	1/4 mile	Not identified	17
NYS Chemical Bulk Storage Facilities (CBS UST)	1/4 mile	Not identified	0
NYS Major Oil Storage Facilities (MOSF UST)	1/2 mile	Not identified	0
NYS Hazardous Substance Waste Disposal Sites (HSWDS)	1/2 mile	Not identified	1
NYS Registered Storage Tank (AST)	1/4 mile	Not identified	7
NYS Chemical Bulk Storage Facilities (CBS AST)	1/4 mile	Not identified	1
NYS Major Oil Storage Facilities (MOSF AST)	1/2 mile	Not identified	0
NY Spills (NYSPILLS)	1/8 mile	Not identified	11
Manifest	1/4 mile	Identified	13
ENG Controls	TP	Not identified	0
INST Control	TP	Not identified	0

◆ **New York State Inactive Hazardous Waste Sites (SHWS)**

NYSDEC publishes an annual directory of Inactive Hazardous Waste Disposal Sites currently being investigated or requiring investigation. Sites are assigned a Classification number from 1 to 5. Class 1 sites are believed to be an imminent danger to the public health or environment and Class 5 sites have been properly closed and require no further action.

The subject Property does not appear as a NYS-Inactive Hazardous Waste Site. There is one SHWS site, BQE/Ansbacher Color & Dye Factory located within the approximate search radius from the Property. Soil and groundwater contamination exists underneath the elevated BQE south of Union Avenue related to the former Ansbacher Color & Dye Factory. This site is hydrologically downgradient of the subject Property and therefore is unlikely to have had a negative impact on the Property.

◆ **New York State Landfills**

State landfill records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

The subject Property is not identified as a solid waste disposal facility or landfill. There is one State operated transfer station located within the search radius of the Property. This site is under continued environmental management by New York State. Based upon the information reviewed, it appears unlikely that this solid waste facility has had a negative environmental impact upon the Property.

◆ **New York State LUST Sites (LTANKS) and Spills (SPILLS)**

The Leaking Storage Tank Incident Reports contain an inventory of reported leaking storage tank reported from 4/1/86 through the most recent update. Causes of the incidents include tank test failures, tank failures and tank overfills or releases determined during the removal of USTs that have leaked.

The subject Property is not identified on the Spills or LTANKS databases. There are 11 NY Spills and 31 LTANKS sites located within the search distance from the Property. Most of the LTANKS and NY Spills sites have been closed by NYSDEC. Based on the location of the remaining LTANKS and NY Spills sites, there is no reasonable basis to conclude that these sites have had a direct negative impact on the subject Property.

◆ **New York State Registered Storage Tank List (UST/AST)**

New York State requires the registration of all bulk petroleum storage tank facilities with a combined storage capacity that is greater than 1,100 gallons and less than 400,000 gallons.

The subject Property was not identified on the UST/AST database. A review of the UST/AST list revealed that 7 AST and 17 UST sites are located within approximately 0.25 miles of the subject Property. The presence of registered storage tank facilities does not indicate an area of environmental concern unless the tanks have leaked product into the subsurface. Based upon the information reviewed, there is no reasonable basis to conclude that these sites have had a direct negative impact on the subject Property.

◆ **New York State Chemical Bulk Storage Facilities (CBS UST/AST)**

New York State requires the registration of all facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185-gallons or greater, and/or in underground tanks of any size. The presence of Chemical Bulk Storage facilities does not indicate an area of environmental concern unless the tanks have leaked product into the subsurface.

The subject Property is not identified as a CBS UST/AST site. There is one CBS AST site, Robinson Brothers Industries Corp., located within the approximate search radius from the Property. Based upon the information reviewed, there is no reasonable basis to conclude that this site has had a direct negative impact on the subject Property.

◆ **New York State Major Oil Storage Facilities (MOSF UST/AST)**

These are facilities that may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater.

The subject Property is not identified on the MOSF UST/AST list and there are no MOSF UST/AST sites located within approximately 0.5 miles of the subject Property.

◆ **New York State Hazardous Substance Waste Disposal Sites (HSWDS)**

The Hazardous Substance Waste Disposal Site Inventory includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites which the U.S. EPA Preliminary Assessment reports or Site Investigation reports were prepared.

The subject Property is not identified as a HSWDS site. There is one HSWDS site, City Barrel, located within the approximate search radius from the Property. Based upon the information reviewed, there is no reasonable basis to conclude that this site has had a direct negative impact on the subject Property.

◆ **NY Manifest**

The NY Manifest database contains facility and manifest data. A manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

The subject Property is identified on the NY Manifest database for waste disposed of by Beach Russ Company, the former occupant of the Property. According to the database, 550 gallons, 350 gallons and 300 gallons of halogenated solvents and still bottoms from the recovery of solvents were disposed of by Beach Russ Company (Generator ID# NYR000014472) in October 1995, July 1996, and July 1997, respectively. Based on the information reviewed, the proper disposal of waste does not appear to have had a negative impact on the subject Property.

◆ **Engineering (ENG) Controls**

The Engineering Controls Site List is a listing of sites with engineering controls in place.

No Engineering Controls are listed for the subject Property. There are no documented Engineering Controls reported within the approximate search radius from the Property.

◆ **Institutional (INST) Controls**

The Institutional Controls List is a listing of sites with institutional controls in place.

No Institutional Controls are listed for the subject Property. There are no documented Institutional Controls reported within the approximate search radius from the Property.

◆ **Orphan Sites**

The Federal and State database records search also revealed the presence of 35 sites that were not mapped. These sites are listed on page 686 of Appendix C. Based on the limited information reviewed for this report, there is no indication that these Orphan Sites represent a significant environmental liability to the subject Property.

### **6.3 Local**

#### **New York State Department of Health (NYSDOH)**

CA RICH requested a site-specific search via the Freedom of Information Law (FOIL) of the New York State Department of Health (NYSDOH) records for information regarding bulk storage tanks, violations, spills, leaks, inspections, and solid waste. As of the date of this report, we have not received a response from NYSDOH. This is considered a data gap. Upon receipt of approval to review records, we will forward any pertinent information as an addendum to this Report. Copies of FOIL Requests are included as Appendix B.

#### **New York City Department of Environmental Protection (NYCDEP)**

CA RICH requested a site-specific search via the Freedom of Information Law (FOIL) of the New York City Department of Environmental Protection (NYCDEP) records for information regarding bulk storage tanks, violations, spills, leaks, inspections, and solid waste. As of the date of this report, we have not received a response from NYCDEP. This is considered a data gap. Upon receipt of approval to review records, we will forward any pertinent information as an addendum to this Report. Copies of FOIL Requests are included as Appendix B.

#### **New York City Fire Department (NYCFD)**

CA RICH requested a site-specific search via the Freedom of Information Law (FOIL) of the New York City Fire Department (NYCFD) records for information regarding bulk storage tanks. As of the date of this report, we have not received a response from NYCFD. This is considered a data gap. Upon receipt of approval to review records, we will forward any pertinent information as an addendum to this Report. Copies of FOIL Requests are included as Appendix B.

#### **New York State Department of Environmental Conservation (NYSDEC)**

CA RICH requested a site-specific search via the Freedom of Information Law (FOIL) of the New York City Department of Environmental Conservation (NYCDEC) records for information regarding bulk storage tanks, violations, spills, leaks, inspections, and solid waste. CA RICH received a response from NYSDEC on April 23, 2007 stating that no records could be located for the subject property. Copies of FOIL Correspondence are included as Appendix B.

#### **New York City Department of Buildings (NYCDOB)**

CA RICH conducted a search of the New York City Department of Buildings (NYCDOB) building information search database for Block: 2736, Lots: 1, 9, and 48, which correspondences to 544-566 Union Avenue, 17-21 Withers Street, and 2-10 Frost Street in Brooklyn, New York. The database search revealed that the Property consists of an industrial building/factory (F9) located in the MX-8 Mixed Use Greenpoint-Williamsburg Special Purpose District. In addition, all three lots are little 'e' designated HAZMAT. A Certificate of Occupancy dated May 13, 1926 for 23/27 Withers Street was listed under Block: 2736; Lot: 48. According to the Certificate of Occupancy, the lot consisted of a poultry slaughter house and private garage. A Certificate of Occupancy dated September 29, 1964 for 25/29 Withers Street was listed under Block: 2736; Lot 1. According to the Certificate of Occupancy, the lot consisted of a one-story building that manufactured and stored machine tools, including metal letters, metal presses, metal stamping machines, woodworking machines and/or similar products and accessory uses. In addition, no DOB or ECB violations were listed. Copies of records are included in Appendix B.

## **New York City Department of Finance (NYCDOF)**

CA RICH conducted a search of the New York City Department of Finance (NYCDOF) ACRIS database for the subject Property. According to the database for Block: 2736; Lot: 1, title was transferred from Charles A Beach to Mildren B Miller and from Charles A Beach to Arthur T. Beach on February 1, 1976; from Mildred B. Miller and Arthur T. Beach to Beach-Russ Company on December 31, 1986; from Karin Krebs and Kevin Krebs to Beach-Russ Company on July 29, 2987; from Barbara B. McEvoy and Arthur T. Beach, Jr. as trustees for the benefit of Barbara B. McEvoy to Beach-Russ Company; and, from Beach-Russ Company to 544 Union Owner LLC on December 14, 2006. According to the database for Block: 2736; Lot: 9, title was transferred from Beach-Russ Company to 544 Union Owner LLC on December 14, 2006. According to the database for Block: 2736; Lot: 48 title was transferred from Beach-Russ Company to 544 Union Owner LLC on December 14, 2006. Copies of records are included in Appendix B.

## **7.0 ADDITIONAL SERVICES**

### **7.1 Asbestos**

Until the late 1970s, asbestos was used in, but not limited to, insulating materials, fire proofing, roofing, flooring, and decorative building materials. The U.S. EPA defines asbestos material as any material containing greater than 1-% asbestos by weight. Asbestos-containing materials (ACM), in a form which can crumble or be reduced to powder under hand pressure (friable), can release asbestos fibers which are proven to be carcinogenic and cause respiratory illness. The presence of asbestos in a building does not mean that the health of building occupants is necessarily endangered. As long as ACM remains in good condition and is not disturbed, exposure to asbestos fibers is unlikely.

Suspect ACM observed includes; drop ceiling tiles, vinyl floor tiles, and roofing material. No sampling and analysis was performed on any of the suspect materials as such testing was beyond the scope of our Assessment. The presence of asbestos can only be ascertained through a survey and analytical testing. All suspect ACM should be analytically tested prior to any construction or demolition activity that may disturb the material. Also, all suspect ACM should be treated as ACM until proper analytical testing proves that asbestos is not present. It is noted that Mr. Glicksman stated that in anticipation of the planned property redevelopment, 544 Union Owner LLC is in the process of retaining New York Insulations to conduct an asbestos survey and abatement.

## **7.2 Lead-Based Paint**

Research has shown that, when ingested, lead can cause permanent neurological problems and brain damage. Federal regulations were promulgated in 1978 that ban the sale of paint containing more than 0.06 percent lead by weight. Consequently, any paint known to contain lead in excess of 0.06 percent is considered to be lead-based.

Based upon the age of the structure, lead may be present in covered layers of paint throughout the building. Therefore, proper precautionary measures should be taken prior to any construction or demolition activities that involve areas where paint is present.

## **7.3 Radon Gas**

Radon is a naturally occurring, invisible, odorless, carcinogenic gas that is generated by the decay of radioactive elements found in certain crystalline rock types or derivatives thereof. Inhalation of radon gas represents the principal exposure pathway. In outdoor air, radon is diluted to such low concentrations that it does not pose a health hazard. However, once inside an enclosed space such as basements, pipe chases, drains and foundation crawl spaces, radon gas may accumulate to dangerous concentrations. Confirmation of the presence or absence of radon gas is possible through testing.

Based upon our review of geologic maps prepared by the United States Geological Survey and the findings of an EPA Residential Radon Survey (Appendix C, page A-52), naturally occurring radon gas contamination at levels that would be a concern at the Property is unlikely.

## **8.0 FINDINGS AND PROFESSIONAL OPINION**

- *Fluorescent lights were observed throughout the building. The older fluorescent light ballasts may contain small quantities (1-2 oz.) of PCB-containing dielectric fluid.*

There does not appear to be a significant health or environmental hazard related to any potential presence or historical presence of PCBs at this time and therefore, this finding is not considered a Recognized Environmental Condition. Future renovations which require removal of these kinds of existing light fixtures should examine the light fixture ballasts to determine if they are PCB-containing prior to their handling or disposal.

- *Based on the age of the structure, asbestos is likely present in some of the building materials especially in the lower layers of the tar roofing materials, drop-in ceiling and vinyl-floor tiles. Upon inspection, it appeared that the roof, drop-ceiling and the vinyl tile floors observed were in fair to poor condition. In addition, Mr. Glicksman stated that in anticipation of the planned property redevelopment, 544 Union Owner LLC is in the process of retaining New York Insulations to conduct an asbestos survey and abatement.*

Since the building is currently unoccupied, there does not appear to be a significant health or environmental hazard related to any potential presence of ACM at this time and therefore, this finding is not considered a *Recognized Environmental Condition*. However, as redevelopment of the Property is currently planned, it is recommended that 544 Union Owner LLC retain a NYC licensed asbestos contractor as planned to conduct an asbestos survey and abatement prior to any demolition/construction activities.

- *Based upon the age of the structure, lead may be present in covered layers of paint throughout the building.*

Since the building is currently unoccupied, there does not appear to be a significant health or environmental hazard related to any potential presence of lead paint at this time and therefore, this finding is not considered a *Recognized Environmental Condition*. However, it is recommended that proper precautionary measures be taken prior to any construction or demolition activities that involve areas where paint is present.

- *According to the NYCDOB building information search database, the subject Property is little 'e' designated HAZMAT (Hazardous Materials).*

An 'E' designation means that no development, change of use, or extension requiring a building permit can occur without the approval of the New York City Department of Environmental Protection (NYCDEP) through the CEQR process. The type of 'E' designation determines the requirements needed to satisfy NYCDEP. While the 'E' designation itself is not considered a *Recognized Environmental Condition*, since redevelopment of the Property is currently planned, it is recommended that a subsurface investigation and other testing activities be conducted in accordance with CEQR to satisfy NYCDEP's 'E' designation requirements.

- *The subject Property is identified on the NY Manifest, RCRA-SQG, and FINDS databases as Beach Russ Company, the former occupant of the subject Property.*

The listing on the FINDS database relates to Beach Russ Company's listing on the RCRIS-SQG database. The NY Manifest database listing is related to the disposal of regulated waste by Beach Russ Company. The listing as a SQG is also for the former occupant, Beach Russ Company. As the proper disposal of waste is not a *Recognized Environmental Condition*, this finding is not considered a *Recognized Environmental Condition*.

- *Numerous oil stains were observed on the concrete floor in the building in areas where heavy equipment was once present. In addition, a white residue/powder was observed in small manufacturing room. Small sumps/pits were also observed throughout the building. One of the sumps near the courtyard contained water, while a sump on the Frost Street side of the building was observed to contain oily soil and an absorbent material.*

The presence of oil stains, an unknown residue/powder, and oily soil is considered a *Recognized Environmental Condition*. Therefore, it is recommended that a Phase II investigation be completed to determine if the residue is hazardous and if the surface and subsurface soils have been impacted by the former industrial usage of the Property.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed this Phase I Environmental Site Assessment in substantive conformance with the scope and limitations of ASTM Practice E 1527-05 for the Property located at 544 Union Avenue in Brooklyn, New York (hereinafter referred to as the "Property" or "Site"). Based upon the information reviewed for this Phase I ESA, the following "Recognized Environmental Condition" (REC) has been identified in connection with the subject Property.

**REC-1** Historical industrial usage of this Property since its development as an Iron Foundry in 1887 with continuous various industrial usages by others up through 2006 is considered a *Recognized Environmental Condition*. Since approximately 1947 up to 2006, Beach Ross Company, a federally listed small quantity generator of regulated hazardous waste operated at the Property. Although the building was unoccupied and vacant at the time of our April 2007 inspection, the following *Recognized Environmental Conditions* were observed: chemical and/or petroleum staining on floors in former manufacturing areas, floor sumps and pits throughout the building that contained unknown liquid, oil stained soil and absorbent material, and an unknown residue/powder on the floor in a former manufacturing or storage area of the building.

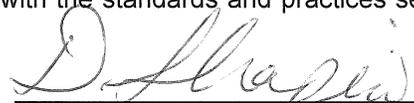

Based upon the historical industrial usage of the Property and the findings of our recent inspection, we recommend further Phase II-type investigation of certain areas and residual materials observed on the Property.

**Other Issue:** According to the NYCDOB building information search database, the subject Property is 'E' designated HAZMAT (Hazardous Materials). While the 'E' designation itself is not considered a *Recognized Environmental Condition*, since redevelopment of the Property from an industrial use to a residential multi-story building is currently planned, it is understood that a Phase II investigation be conducted in accordance with CEQR to satisfy the NYCDEP's 'E' designation requirements.

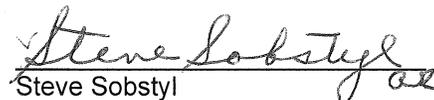

## 10.0 DECLARATIONS OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Deborah Shapiro  
Environmental Professional  
Project Environmental Scientist

Steve Sobstyl  
Environmental Professional

April 20, 2007

**New York City Department of Environmental Protection**  
59-17 Junction Blvd.  
Corona, New York 11368

Attention: Rena Bryant, Records Access Officer

**Re: FOIL request for:  
544 Union Avenue  
Brooklyn, New York**

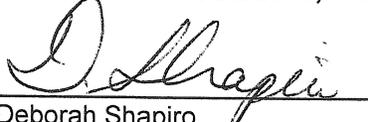

Dear Ms. Bryant:

CA Rich Consultants, Inc. requests a search of the files throughout the Department for any and all environmental violations, actions, or documentation on the above-referenced properties.

Your immediate attention to this matter would be greatly appreciated. If you have any questions or require further information, please contact the undersigned.

Sincerely,

**CA RICH CONSULTANTS, INC.**

**Re: FOIL request for:  
for 544 Union Avenue  
Brooklyn, New York  
Block: 2736; Lots: 1, 9, and 48**

Dear Ms. Caruso:

CA Rich Consultants, Inc. requests a search of the files maintained by the Department for any and all environmental violations, actions, investigations, or documentation relating to the above-referenced property. If any records are discovered by the Department, we respectfully request the opportunity to review them.

CA Rich makes this request to satisfy, in part, an environmental due diligence being performed on behalf of our client who has an interest in the environmental history of the property.

If you require additional information to carry out the search, please contact the undersigned.

Thank you for your attention to this matter.

Respectfully submitted,

**CA RICH CONSULTANTS, INC.**

**Re: Freedom of Information Law (FOIL)  
Request  
for 544 Union Avenue  
Brooklyn, New York**

To Whom it May Concern:

CA Rich Consultants, Inc. requests a search of the files throughout the Department for any and all environmental violations, actions, spills, or documentation for the above-referenced property as part of due diligence. Per your request, CA RICH searched the two databases on NYSDEC's website and no records were found for the above-referenced property. Therefore, we are requesting that NYSDEC search its files to see if NYSDEC has any information, files, violations, etc. for the above-referenced property.

Your immediate attention to this matter would be greatly appreciated. If you have any questions or require further information, please contact the undersigned.

Sincerely,

**CA RICH CONSULTANTS, INC.**

RE: 544 Union Ave, Brooklyn, NY

Dear Ms. Shapiro:

NYSDEC/Region 2 has reviewed your request for the above referenced records under New York State's Freedom of Information Law (FOIL). Please note that most of our records are filed by number under the names of individuals or corporations. We have no way of locating or retrieving records if they are filed under names or addresses other than those you have provided.

If no records have been located, this does not necessarily mean, and should not be interpreted to mean that there have never been any violations, complaints, claims, investigations or inquiries involving those names or addresses. We cannot make any representations as to whether there are or have been any such violations, complaints, claims, investigations or inquiries.

After a diligent search, no records could be located for the names and/or addresses you provided.

Thank you for your request. If additional information is needed, please call Gloria Silva/FOIL Secretary at (718) 482-4507, or fax your response to me.

Sincerely yours,

Fawzy I Abdelsadek, Ph.D., P.E.  
Regional Enforcement Coordinator

2736  
1  
-0-

THIS INDENTURE, made the 1st day of February, nineteen hundred and Seventy-six BETWEEN CHARLES A. BEACH, residing at 63 Huntington Bay Road, Huntington, New York

party of the first part, and MILDRED B. MILLER, residing at 31 Kennett Road, Nanhauset, New York

party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, more particularly bounded and described as follows:

BE G I N N I N G at the corner formed by the intersection of the easterly side of Union Avenue, with the southerly side of Frost Street; running thence southerly along the easterly side of Union Avenue, two hundred (200) feet to the northerly side of Withers Street; thence easterly along the northerly side of Withers Street, forty-one (41) feet, six (6) inches to land now or late of John Skillman; thence northeasterly along said land of John Skillman to a point where the same would be intersected by a line drawn parallel with Union Avenue, and distant one hundred (100) feet easterly from the easterly side thereof; thence northerly along said line and parallel with Union Avenue, one hundred and sixty-nine (169) feet to the southerly side of Frost Street; and thence westerly along the southerly side of Frost Street, one hundred (100) feet to the point or place of beginning. Be the said several distances and dimensions more or less.

TO G E T H E R WITH all the right, title and interest of the party of the first part, of, in and to Union Avenue, Frost & Withers Streets lying in front of and adjoining said premises to the center lines of the streets, respectively.

TOGETHER with all right, title and interest, if any, of the party of the first part, in and to any streets and roads abutting the above-described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires. IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

*Charles A. Beach*

**THIS INDENTURE**, made the 1st day of February, nineteen hundred and Seventy-six  
**BETWEEN** CHARLES A. BEACH, residing at 63 Huntington Bay Road,  
Huntington, New York

party of the first part, and ARTHUR T. BEACH, residing at 73 Huntington Bay Road,  
Huntington, New York

party of the second part,

**WITNESSETH**, that the party of the first part, in consideration of ten dollars paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

**ALL** that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, more particularly bounded and described as follows:

**B E G I N N I N G** at the corner formed by the intersection of the easterly side of Union Avenue, with the southerly side of Frost Street; running thence southerly along the easterly side of Union Avenue, two hundred (200) feet to the northerly side of Withers Street; thence easterly along the northerly side of Withers Street, forty-one (41) feet, six (6) inches to land now or late of John Skillman; thence northeasterly along said land of John Skillman to a point where the same would be intersected by a line drawn parallel with Union Avenue, and distant one hundred (100) feet easterly from the easterly side thereof; thence northerly along said line and parallel with Union Avenue, one hundred and sixty-nine (169) feet to the southerly side of Frost Street; and thence westerly along the southerly side of Frost Street, one hundred (100) feet to the point or place of beginning. Be the said several distances and dimensions more or less.

**T O G E T H E R** with all the right, title and interest of the party of the first part, of, in and to Union Avenue Frost and Withers Streets lying in front of and adjoining said premises to the center lines of the streets, respectively.

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

**AND** the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

**IN WITNESS WHEREOF**, the party of the first part has duly executed this deed the day and year first above written.

THIS INDENTURE, made the 31<sup>st</sup> day of December, nineteen hundred and eighty-six  
BETWEEN MILDRED B. MILLER, residing at 31 Kensett Road, Manhasset,  
New York 11030, and ARTHUR T. BEACH, residing at 73 Huntington Bay  
Road, Huntington, New York 11743,

party of the first part, and

BEACH-RUSS COMPANY, a domestic corporation with offices at 544  
Union Avenue, Brooklyn, New York 11211

party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars paid by the party of the second  
part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and  
assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate,  
lying and being in the Borough of Brooklyn, County of Kings, City and State  
of New York, more particularly bounded and described as follows:

BEGINNING at the corner formed by the intersection of  
the easterly side of Union Avenue, with the southerly side of  
Frost Street; running thence southerly along the easterly side  
of Union Avenue, two hundred (200) feet to the northerly side of  
Withers Street; thence easterly along the northerly side of Withers  
Street, forty-one (41) feet, six (6) inches to land now or late  
of John Skillman; thence northeasterly along said land of John  
Skillman to a point where the same would be intersected by a  
line drawn parallel with Union Avenue, and distant one hundred  
(100) feet easterly from the easterly side thereof; thence northerly  
along said line and parallel with Union Avenue, one hundred and  
sixty-nine (169) feet to the southerly side of Frost Street; and  
thence westerly along the southerly side of Frost Street, one  
hundred (100) feet to the point or place of BEGINNING.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and  
roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances  
and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO  
HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of  
the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party  
of the first part will receive the consideration for this conveyance and will hold the right to receive such consid-  
eration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply  
the same first to the payment of the cost of the improvement before using any part of the total of the same for  
any other purpose.

**Customer Billing Information:**

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

**PLEASE TAKE NOTICE that the within are true copies of the following Orders of the Hon. Wayne P. Saitta, Justice, made and entered in the Kings County Clerk's Office, in the Supreme Court of the State of New York, County of Kings, located at 360 Adams Street, Brooklyn, New York, in this action, on the dates as hereinafter set forth and attached hereto:**

The "So Ordered" Transcript, dated December 11, 2006, was entered on December 19, 2006, (Exhibit "A"), and, inter alia, granted Plaintiffs' motion to the extent of modifying the Order dated November 20, 2006, entered on November 30, 2006 (Exhibit "B") to permit 544 Union Owner LLC to purchase the real Properties hereinafter set forth on December 14, 2006 based upon the written stipulation (Exhibit "C") of Plaintiffs, Leslie Westreich, and 544 Union Owner LLC, and the stipulation of Plaintiff's Counsel in the Transcript (Exhibit "A") to be bound by the November 20, 2006 Order, which provided, inter alia, that if Plaintiff's designee, 544 Union Owner LLC acquires title to the Property -- and thereafter seeks to sell or transfer the property, or any building, development or project developed on the property, Plaintiff shall give Defendants' attorney's 15 days notice of the sale and the amount of the net proceeds of such sale and then 30% of the net proceeds from any such sale, development or project shall be delivered into an escrow account to be maintained by Plaintiff's attorney, the law firm of Vandenberg & Feliu, LLP, and not released except upon further Order of the Court. Notice to defendant's attorney shall be by fax. The November 20, 2006, Order amended this Court's Order, dated August 11, 2006 which was entered on August 21, 2006 (Exhibit "D")

The aforesaid Court Orders affect and concern four parcels of real properties, all situate in Kings County, known as Block No. 2736, Lot No. 1; Lot No. 9; and Lot No. 48; and Block No. 2741, Lot No. 8; (as more particularly described in the metes and bounds description annexed hereto as Exhibit "E").

BEFORE: HONORABLE WAYNE P. SAITTA, Justice

APPEARANCES:

For the Plaintiff:

VANDENBERG & FELIU, LLP  
110 East 42nd Street  
New York, NY  
BY: MARK R. KOOK, ESQ.

For the Defendant:

SOL MERMELSTEIN, ESQ.  
5521 New Utrecht Avenue  
Brooklyn, NY

Frances Napoli  
Senior Court Reporter

RECEIVED  
COURT CLERK  
2006 DEC 19 AM 11:34

A

1 THE COURT: Is there a proposed transfer at  
2 this point?

3 MR. KOOK: There is, your Honor, but I'd  
4 like to renew our request that the prior order be  
5 vacated.

6 The requirement for any kind of a set aside  
7 for 30 percent is an alienation on transfer of  
8 property. The contract of sale, February 9, 2005,  
9 contract specifically gives the purchaser the right  
10 to transfer either to an entity in which they're  
11 involved or, at the closing to transfer to any  
12 entity.

13 And this 30 percent set aside is a  
14 prejudgment attachment. money to satisfy a potential  
15 judgment down the road. Whatever rights the  
16 defendants have fully -- if they obtained a judgment  
17 down the road, it's a money judgment. What they're  
18 seeking is a pre-attachment. the money set aside, the  
19 funds. the payment of that judgment.

20 In the case we cited, the Court of Appeals  
21 case, which is that is not a remedy to be had in  
22 connection with a preliminary judgment application,  
23 which is how this all arose.

24 So we, again, request that we just be  
25 allowed to close and we sign, as allowed with a

1 contract.

2 And in the event Mr. Hasenfeld is successful  
3 down the road, although in the August 11 order there  
4 was no finding of a successful, of a possible --  
5 likelihood of success on merits, and it cannot be a  
6 showing of irreparable injury because he's asking for  
7 money damages, it's all money and if he wins he gets  
8 a judgment and he gets to collect money against the  
9 entities that the judgment directs.

10 We would say there will not be a judgment  
11 after the facts of discovery and a motion summary for  
12 judgment after trial.

13 As it stands, this 30 percent set aside is  
14 protax adjustment from a judgment. The defendants  
15 may know -- hide the fact that that's what they were  
16 seeking. That was the title of their reply evidence,  
17 their application and they request that the closing  
18 be held pursuant to the contract and that a purchaser  
19 can assign the contract at the closing.

20 THE COURT: But, the difference here is that  
21 At first what was contested is who was -- who  
22 controlled the purchaser. And the sale is only  
23 possible, or it is only possible for the sale to go  
24 forward because other parts of the injunction have  
25 barred Mr. Hasenfeld from interfering with the sale,

1 from asserting the rights of the corporation that  
2 signed the contract. So, it's not a mere -- it's not  
3 a typical or a mere situation of a prejudgment  
4 attachment. It's part of a whole order that allowed  
5 the sale to go forward. It's unclear as to who the  
6 party is that closed, the purchaser. And on that  
7 basis I'm denying it, but you have your remedy.

8 MR. KOOK: On appeal, yes, your Honor.

9 So, with respect to the transfer, first of  
10 all, Mr. Yashar is basically out of McCarron at this  
11 point. And what we would ask permission to do is to  
12 transfer the contract for the sum of the deposits for  
13 some \$600,000. And 30 percent of that would be set  
14 aside in escrow, held by my firm.

15 THE COURT: Counsel.

16 MR. MERMELSTEIN: Judge, that completely  
17 violates the spirit and intent of your order.

18 We weren't here fighting for 30 percent of  
19 \$600,000. My client claimed it was his complete  
20 deal, as your Honor previously stated.

21 We even said the last time we were here in  
22 court, we had people lined up, ready to take the  
23 deal. We only brought them in for financing. Now,  
24 they have to go out looking for financing. We have  
25 people lined up ready to take the deal. If they want

1 out of the deal, we're ready to give them back their  
2 600 grand and take the deal over.

3 We don't need them for the deal. We only  
4 brought them in for financing. For them to come in  
5 now and say they're ready to set aside 30 percent of  
6 \$600,000 is outrageous based upon the intent and  
7 spirit of the order.

8 MR. KOOK: Your Honor, the deal was Coby  
9 Group. Mr. Hasenfeld, as a contemporaneous e-mail  
10 shows --

11 THE COURT: We're not going to decide today  
12 whose deal it was. The whole purpose of this is, you  
13 said you wanted a different entity to buy the  
14 corporation because of a tax exchange.

15 So do you have a different entity that  
16 wants to buy it?

17 MR. KOOK: We do.

18 The entity is 544 Union Owner LLC. And I  
19 have a stipulation, post stipulation, signed by 544  
20 Union Owner LLC's control person, Mr. Westreich, who  
21 is one of the defendants in the consolidated action.

22 THE COURT: Do you have the filing papers of  
23 the LLC?

24 MR. KOOK: I don't have them, but I'll  
25 represent to the Court that it has been filed. I got

1 a confirmation e-mail from the attorneys handling  
2 that, a confirmation e-mail on Friday, that the 544  
3 owner LLC is fully filed. And if your Honor  
4 requests, I will get those papers from the attorneys  
5 and have a copy sent to you Judge and a copy to  
6 Mr. Mermelstein. I'll represent to the Court that I  
7 received an e-mail from the attorneys on Friday,  
8 saying it was done.

9 THE COURT: I'll just ask you to do one more  
10 thing, unless you can answer that right now.

11 Have you seen the papers and -- the filing  
12 papers?

13 MR. KOOF: No. I generally don't do that.  
14 The attorneys who are handling the closing, 544 Owner  
15 LLC on December 14, they did that. And I spoke with  
16 them and we go back and forth to make sure that was  
17 done, the Friday before Mr. Westreich signed the  
18 stipulation.

19 THE COURT: I guess my real question is, in  
20 the absence of the papers in front of me, can you  
21 check with the attorneys to verify the information in  
22 paragraph four that Mr. Westreich is the single  
23 member that controls the majority?

24 MR. KOOF: I will confirm that with the  
25 attorneys this afternoon and send a fax.

1 THE COURT: If we could do it this morning,  
2 I'd prefer to do it this morning, but that's the only  
3 question I have.

4 Mr. Mermelstein.

5 MR. MERMELSTEIN: Judge, first of all, it  
6 says here incorrectly, owns a majority. It's  
7 qualified that ownership is a majority of that  
8 member, that's number one. I don't know what that  
9 word means.

10 THE COURT: Controls indirectly.

11 MR. KOOK: It says it. 544 Union, the  
12 single -- is a single member entity and the entity  
13 that owns 95 percent of it, owns 75 percent by  
14 entity.

15 MR. MERMELSTEIN: Judge, the whole thing

16 is --

17 MR. KOOK: He's the president, sole officer.

18 MR. MERMELSTEIN: 544 has a single member.

19 He hasn't disclosed who that other member is  
20 of 544. There's either an LLC or some corporate  
21 entity, which he's not telling you about. He has 544  
22 has a single member and the rest controls or owns a  
23 majority of that member, which means there is another  
24 entity involved now.

25 MR. KOOK: If may, Judge, in the last order

1 of this, your Honor required that he owns or  
2 controls.

3 THE COURT: Right. So what's the member --  
4 the name of the members that's referred to in  
5 paragraph four?

6 MR. KOOK: I believe it's High Ridge Company  
7 LLP, but I have to check.

8 THE COURT: Why don't you make a call and  
9 we'll just identify that. We'll add that. We'll put  
10 that on the record.

11 MR. MERMELSTEIN: Judge, paragraph number  
12 five, he shouldn't qualify, he agrees to be bound by  
13 the order of this Court, dated November 20.

14 Why is he qualifying it?

15 MR. KOOK: Because the order requires him to  
16 be bound by the paragraph about the escrow.

17 MR. MERMELSTEIN: It says stipulation  
18 identified as -- it says stipulated to be bound by  
19 this order.

20 MR. KOOK: The paragraph reads -- what else  
21 is there in the order?

22 MR. MERMELSTEIN: To be bound by the whole  
23 order.

24 THE COURT: I would assume to cover it, it  
25 would be covered by paragraph one that they can't

1 further transfer the contract of sale between now and  
2 Thursday.

3 MR. MERMELSTEIN: In number four, Judge.

4 MR. KOOK: Four is a judgment against the  
5 defendants.

6 MR. MERMELSTEIN: Why shouldn't they be  
7 bound by the whole order?

8 THE COURT: Paragraph four enjoins your  
9 client.

10 I think they should be bound by number one,  
11 even though it's unlikely to be another transfer  
12 between now and Thursday. So, why don't you see if  
13 you can confirm with the attorneys who handle it the  
14 accuracy of what's in number four and the name of the  
15 member and then --

16 MR. KOOK: I will make the phone calls and  
17 hopefully reach the people.

18 MR. MERMELSTEIN: Will he agree that he is  
19 not going to divest himself of that membership,  
20 Mr. Westreich, while all this is going on?

21 It says here he controls --

22 THE COURT: He's bound by the LLC. Whatever  
23 happens to the ownership of the LLC thereafter,  
24 they're bound by this order.

25 MR. MERMELSTEIN: Okay, Judge.

1 MR. KOOK: Let me call my office, get the  
2 number in, hopefully, five minutes.

3 (Pause)

4 THE COURT: Okay, Mr. Kook.

5 MR. KOOK: Judge, the papers were filed and  
6 when they're filed they don't have to state, only  
7 that it's filed. The operating done is going to be  
8 done today. The High Bridge House Company LP is the  
9 sole owner of 544 Union Owner LLC. And Mr. Westreich  
10 owns 70 percent of the entity, but only High Bridge  
11 House, the company.

12 THE COURT: You cannot represent that  
13 Mr. Westreich and 544 Owner LLC consents to be bound  
14 by paragraphs one two and three of the order.

15 MR. KOOK: Paragraph one is up until the  
16 time of December 14 sale?

17 THE COURT: Right.

18 MR. KOOK: Yes, Judge.

19 MR. MERMELSTEIN: Your Honor, I just have a  
20 few things I'd like to add before we close this.

21 One, Mr. Kook is well aware as an attorney  
22 that there are no presidents of LLC. And he calls  
23 Mr. Westreich a president of the LLC.

24 Number two, it's the same thing. He calls  
25 him a member of the LLC. Is he a managing member or

1 he's a member?

2 That's what I wanted to know.

3 Paragraph number four, Judge, again it says  
4 president and sole officer. There are no officers of  
5 544 Union. There's either a member, a managing  
6 member.

7 Is he the president; is he the sole member  
8 of Union?

9 Now he just said something else. He said  
10 544, he says he owns 75 percent of High Bridge which  
11 is a member of 544 Union which contradicts paragraph  
12 number four.

13 THE COURT: Counsel, what it says is that  
14 544 Union has a single member and Westreich controls  
15 and individually owns a majority of that member. The  
16 member is High Bridge House Company?

17 MR. KOOK: Yes, Judge.

18 THE COURT: Is he an officer in that  
19 corporation aside from owning 75 percent?

20 MR. KOOK: Yes, Judge.

21 THE COURT: What's his position with High  
22 Bridge House Company?

23 MR. KOOK: I believe he's the president.  
24 I've been representing Mr. Westreich on a number of  
25 these LPs and LLCs and he's always the president.

1 MR. MERMELSTEIN: I don't know what  
2 indirectly means, through his wife, through another  
3 entity.

4 MR. KOOK: What it means is what it says,  
5 because he indirectly owns 544 Union LLC, through the  
6 ownership of the company that owns 75 percent of High  
7 Bridge House Company which owns a hundred percent of  
8 544 Union.

9 MR. MERMELSTEIN: Judge, one more thing. It  
10 says on number five, upon acquiring title to the  
11 property. According to your stipulation he's  
12 supposed to agree today that he's going to be bound.

13 MR. KOOK: He can't do the escrow until he  
14 acquires title.

15 THE COURT: As to paragraph one, that's  
16 going to apply today.

17 MR. MERMELSTEIN: Next paragraph is a  
18 stipulation normally signed by all the parties to the  
19 agreement. Our original agreement provided it's  
20 going to be Westreich and Yashar together. They've  
21 always been representing to this Court they've been  
22 in this together.

23 It's been Westreich, but no matter what,  
24 Westreich only signs here. There's no signature by  
25 Coby, no signature by McCarron Park, no signature by

1 Westreich individually and no signature by Yashar.

2 MR. KOOK: The order of November 20 requires  
3 stipulation signed by the designees to be so ordered  
4 by your Honor. And this is what this complies with,  
5 your Honor's order. And what it is is, the designee.  
6 Everybody else is a party, either plaintiff or  
7 defendant, and the subject to --

8 MR. MERMELSTEIN: If Mr. Kook is  
9 representing --

10 THE COURT: Let him finish.

11 MR. KOOK: They're all parties to the  
12 lawsuit and they're bound to the orders. because  
13 they're orders entered by your Honor.

14 The order which was approved without -- by  
15 Mr. Mermelstein on behalf of plaintiffs in the  
16 consolidated action says at that time stipulation  
17 signed by the designee to be so ordered by the Court.  
18 This is signed by the designee and your Honor is  
19 going to so order, your Honor, I hope.

20 MR. MERMELSTEIN: Judge, if Mr. Kook is  
21 ready to represent that they agree as their counsel  
22 to this stipulation, because he is representing them  
23 here, I don't have a problem with it.

24 THE COURT: That's what I understood him to  
25 do.

1 MR. MERMELSTEIN: I didn't hear him say it.

2 THE COURT: Is that correct, that you're  
3 representing your clients agree to be bound by the  
4 order --

5 MR. KOOK: Your Honor, whether my clients  
6 agree or not, they're bound by the order. The order  
7 of November 20 was upon my client --

8 THE COURT: I meant the new purchasing  
9 entity, that 544 Union Avenue LLC agrees to be bound  
10 by the terms of the order as I'm going to modify it.

11 MR. KOOK: I'm not sure we -- 544 union is  
12 agreeing to be bound by the order?

13 THE COURT: That's what I mean.

14 MR. KOOK: Yes.

15 THE COURT: Including my modification.

16 MR. KOOK: Including Mr. Westreich, who  
17 signed it. And Mr. Yashar has nothing to do with  
18 anything.

19 THE COURT: And including that paragraph  
20 one -- that they'll be bound by paragraph one as  
21 well.

22 MR. KOOK: Yes, they are bound.

23 MR. MERMELSTEIN: Now, I just need him to  
24 just agree that as the attorney representing the  
25 plaintiffs and the defendant Westreich and Yashar

1 individually, they also agree to this.

2 THE COURT: They're already bound by it.  
3 He's correct this is about binding the new party  
4 who's buying it.

5 MR. KOOK: As your Honor said, we have  
6 remedies and maybe we'll pursue them. As of now, the  
7 order is in effect.

8 THE COURT: I'm going to modify the order to  
9 the extent, and I guess you can get a copy of it, to  
10 allowing 554 Union Owner LLC to the entity that is  
11 purchasing the property on the 14th. The  
12 modification is based explicitly on their consent to  
13 be bound by the orders in paragraphs one, two and  
14 three.

15 MR. KOOK: Thank you, Judge.

16 THE COURT: If you need to get a copy of  
17 that.

18 MR. MERMELSTEIN: Judge it's a very short  
19 order that you rendered, can we say based upon  
20 stipulations rendered by counsel, could we write up a  
21 short form order?

22 THE COURT: We have the transcript.

23 MR. MERMELSTEIN: You'll sign a short form  
24 order stating, according to the transcript?

25 THE COURT: The transcript's certified.

s it.

MR. MERMELSTEIN: The transcript is deemed

order itself because it was done in court?

The Court will so order the transcript?

THE COURT: Right.

MR. KOOK: Thanks, Judge.

Index No. 36200/2005

Upon plaintiff's Motion for Reargument, and upon all the papers submitted thereon, the Order, dated August 11, 2006, is hereby amended as follows:

1. Plaintiffs remain enjoined from selling, transferring, or assigning the Contract of Sale (the "Contract") for 544 Union Avenue, Brooklyn, New York (the "Property"),

provided that plaintiffs can seek a determination from the Court, upon an Order to Show Cause, in the event plaintiffs seek to sell, transfer or assign the Contract.

2. Either of the plaintiffs, or an entity that is <sup>owned or</sup> controlled either by plaintiffs or <sup>which is scheduled for</sup> their principals (the "Designee"), may close on the Contract and acquire title to the Property, <sup>December 14, 2006</sup>

provided, however, that the party acquiring title must agree and stipulate to be bound by this

Order, specifically Paragraph 3 which requires delivery into escrow of 30 percent of the net

proceeds of any subsequent sale or transfer of the Property, which stipulation must ~~then~~ be

presented to the Court to be So Ordered <sup>on December 11, 2006 at 9:30 a.m.</sup>

3. The preliminary injunction prohibiting plaintiffs (or the Designee as

provided in Paragraph 2 above) from selling or transferring the Property after the Property is

purchased under the Contract is vacated. In the event plaintiffs (or the Designee), after acquiring

title, thereafter sell or transfer the Property, or any building, development or project developed

~~plaintiff shall give defendant's attorney <sup>15 days</sup> notice of the sale and the amount of net proceeds of such sale, and~~ on the Property, then 30 percent of the net proceeds from any such sale, development or project <sup>submit</sup>

shall be delivered into an escrow account to be maintained by plaintiffs' attorney, the law firm of

Vandenberg & Feliu, LLP, and not released except upon further Order of the Court. <sup>Notice to</sup>

~~defendant's attorney shall be by fax.~~

4. Defendants are preliminary enjoined from interfering in the management,

control, development and sale of the Property, the entity that closes on the Contract, or in any

other manner interfering with the management, sale and development of the Property.

" P "

Plaintiffs in action #1 move for preliminary relief enjoining defendant Steve Hasenfeld from interfering with their purchase of a building located at 544 Union Avenue, in Brooklyn, from using the names "Coby" or "Coby Group", and from using the domain name "cobygroup.com", and directing Defendant to dissolve two LLCs he filed with the State of New York using the "Coby" name, and directing Hasenfeld to return the "cobygroup.com" domain name, as well as various records, files, and e-mails.

Hasenfeld cross-moves to dismiss the underlying action on the ground that Plaintiffs had not complied with the requirements of establishing a limited liability company, at the time the action was commenced, and alternatively for a preliminary injunction enjoining Plaintiffs and Leslie Westreich and Morty Yashar, from using the names "Coby Group (Union Avenue) LLC" and "Coby Group LLC (New York)", from using the "cobygroup.com" domain name, and from transferring the contract of sale for 544 Union Avenue or transferring the property 544 Union Avenue without leave of the court.

Plaintiffs originally moved by Order to Show Cause, returnable January 6, 2006, and then moved for much of the same relief by a second Order to Show Cause, returnable April 11, 2006. On April 11<sup>th</sup> Plaintiffs stipulated to withdraw the earlier Order to Show Cause except as to that relief which was also requested in the second Order to Show Cause. On that date, the parties also agreed to consolidate the two above captioned actions.

Now upon reading the Order to Show Cause returnable January 6, 2006, the Verified Amended Complaint, dated December 16, 2005, the Affirmation of Corey Kupter, Esq., dated December 16, 2005, the Affirmation Mark R. Kook, Esq., dated December 16, 2005, and the exhibits annexed thereto; the Notice of Cross-Motion, dated February 7, 2006, the Affidavit of Steve

Hasenfeld, dated January 16, 2006, and the exhibits annexed thereto; the Reply Affidavit of Josh Yashar, dated January 19, 2006, and the exhibits annexed thereto; the Affirmation in Opposition of Mark R. Kook Esq, dated February 10, 2006, and the exhibits annexed thereto; the Reply Affidavit of Steve Hasenfeld, dated February 12, 2006, and the exhibits annexed thereto; the Supplemental Affirmation of Mark R. Kook, dated April 10, 2006, and the exhibits annexed thereto; the Order to Show Cause returnable April 11, 2006, the Affirmation of Mark R. Kook, Esq., dated April 3, 2006, and the exhibits annexed thereto; the Notice of Cross-Motion, dated June 5, 2006, the Affirmation of Sol Mermelstein, Esq., dated May 29, 2006, the Affidavit of Steve Hasenfeld, dated May 29, 2006, and the exhibits annexed thereto; the Affidavit of Leslie Westreich, dated June 22, 2006, and the exhibits annexed thereto; Plaintiff's Memorandum, dated June 26, 2006; the Reply Affirmation of Steve Hasenfeld, dated July 26, 2006, and the exhibits annexed thereto; and upon all proceedings heretofore had herein, and after hearing oral argument by counsel and after due deliberation thereon, the motions and cross motions are partially granted to the extent indicated below.

The underlying consolidated actions involve a contested business relationship between Steve Hasenfeld, on the one hand, and Leslie Westreich and Morty Yashar, who are members of Coby Group LLC, a Delaware limited liability company, on the other. Westreich and Yashar allege that Hasenfeld was merely an unpaid intern who has converted their trade name, their web site, and a contract to purchase 544 Union Avenue, for his own benefit. Hasenfeld contends that he entered into a joint venture with Westreich and Yashar to purchase and develop real property, that he entered into a contract to purchase 544 Union Avenue on behalf of the joint venture, and that Westreich and Yashar are trying to deprive him of his interests in the companies he created and in the contract to purchase 544 Union Avenue.

The nature of the relationship between the parties is contested and unfortunately there are no written agreements or other documents specifying the nature of the relationship or the various rights and interests of the parties.

Hasenfeld began his relationship with Westreich and Yashar sometime in December of 2004. Both sides agree Hasenfeld set up a computer system and web site under the name Coby Group. The relationship between Hasenfeld, and Westreich and Yashar ended in June of 2005.

***Contract to Purchase 544 Union Avenue***

A contract, dated February 9, 2005, to purchase 544 Union Avenue, was entered into by Beach-Russ Co., the owner of the site, and Coby Group (Union Avenue) LLC. The contract originally listed "Coby Group LLC a New York limited liability company" as purchaser. No such LLC existed at the time the contract was executed. The contract was later amended to change the purchaser to "Coby Group (Union Avenue) LLC", which also was not then in existence, but which the buyers intended to form to purchase the building.

Leslie Westreich signed the contract on behalf of Coby Group (Union Avenue) LLC. A check for \$400,000 as a down payment, signed by Yashar, was sent to the seller. An additional \$200,000 was wired to the seller by Westreich and Yashar.

Hasenfeld claims he located the property and negotiated the sales price. He further claims that his agreement with Westreich and Yashar was that they would provide the financing for the purchase and receive 80% interest in the entity that bought the building and Hasenfeld would receive 20%. Westreich and Yashar claim that Hasenfeld had no role in locating the property or negotiating the contract, but simply performed administrative tasks, at their direction, in connection with the contract.

Hasenfeld filed Articles of Organization for Coby Group (Union Avenue) LLC on August 17, 2005, which were accepted by the Secretary of State of the State of New York. Westreich and Yashar attempted to do so on the same date but were denied, as the name had been assigned to Hasenfeld first. Westreich and Yashar then amended their application to change the name of their LLC to McCarron Park Condominiums LLC.

Westreich and Yashar seek to enjoin Hasenfeld from interfering with the sale of the building to "McCarron Park Condominiums LLC" in lieu of "Coby Group (Union Avenue) LLC". Hasenfeld states that he has no objection to the sale going forward as long as his interest in the contract, which he claims to be 20%, is protected.

Unfortunately, there is nothing in writing between the parties indicating what their interests in the contract are. At this point, all that is clear is that the contract was made in the name of an LLC subsequently organized by Hasenfeld, but was signed by Westreich, and the down payment check was signed by Yashar.

Further complicating matters is the fact that it is unclear whether the contract will ever be closed. The seller has declared McCarron Park Condominiums LLC to be in default, and has cancelled the contract. Plaintiffs have brought an action against the seller for specific performance which is currently pending. If the cancellation of the contract is upheld then the dispute over the contract, between the parties herein, will be moot.

Under these circumstances, preliminary relief is warranted so as not to prevent the sale from going forward, and to allow dispute between the parties herein to be resolved after the sale. The Court will enter a preliminary injunction barring Hasenfeld from interfering with the sale of 544 Union Avenue to McCarron Park Condominiums LLC, and also barring the named plaintiffs in

action #1, and Westreich and Yashar, from selling or transferring either the contract of sale for 544 Union Avenue, or in the event they close on 544 Union Avenue, either in the name of Coby Group (Union Avenue) LLC, or McCarron Park Condominiums LLC, from selling or transferring the building, without permission of the court.

This injunction is the least restrictive remedy which will preserve the status quo, and prevent the res of the dispute from disappearing during the pendency of this action. The injunction protects Hasenfeld's claim while allowing Westreich and Yashar to consummate the sale and proceed with their plans to develop condominiums. Further, in the event that the sale does close, the injunction can be modified to conform to what is necessary and equitable at the time Westreich and Yashar seek to sell the property.

#### *The Coby Names and Website*

Westreich and Yashar also seek to enjoin Hasenfeld from using the names "Coby Group", "Coby Group LLC (New York)", and "Coby Group (Union Avenue) LLC" and from using the cobygroup.com domain name as a website or e-mail address. Hasenfeld in turn seeks to enjoin Westreich and Yashar from representing themselves as "Coby Group (Union Avenue) LLC" or "Coby Group LLC (New York)" and from using the cobygroup.com domain name as a website or e-mail address.

Westreich and Yashar annex to their papers, an e-mail from Hasenfeld dated June 17, 2005 in which he states that he is no longer affiliated with "the Coby Group". Hasenfeld the authenticity of the e-mail. Hasenfeld also concedes that the only purposes for which he uses the names "Coby Group (Union Avenue) LLC" and "Coby Group LLC (New York)", is in connection with the contract to purchase 544 Union Avenue. Since Hasenfeld has agreed to allow Westreich and Yashar

to go forward with the sale, using McCarron Park Condominiums LLC as an assignee, and his interest in the contract is protected by the injunction against transfer without leave of the court, he will suffer no hardship from being enjoined from doing business under the two Coby companies he formed. Therefore the Court will grant a preliminary injunction barring Hasenfeld from using the Coby Group name or doing business as either "Coby", "Coby Group", "Coby Group LLC (New York)", or "Coby Group (Union Avenue) LLC" during the pendency of these actions.

Since at this point the sale of 544 Union Avenue may close under the name of "McCarron Park Condominiums LLC", "Coby Group LLC (New York)", or "Coby Group (Union Avenue) LLC", the court will not enjoin Westreich or Yashar from doing business under those names. The Court makes no determination at this time as to which of the parties have rights to those entities, but simply declines to enjoin Westreich and Yashar from conducting business under those names at this time.

It is not contested that Hasenfeld purchased the domain name "cobygroup.com" in January, 2005, shortly after beginning his relationship with Coby. What is contested is whether he did so in furtherance of a joint venture with Westreich and Yashar, or on their behalf, as their intern or agent. This is a question of fact that will ultimately have to be settled at trial. In light of the facts and circumstances set forth above, the Court will issue a preliminary injunction prohibiting all parties from using the "cobygroup.com" domain name for a web site or for e-mail during the pendency of these actions. The injunction shall not however, prohibit Westreich or Yashar from registering or using a different domain name which includes the name Coby or Coby Group. The Court also grants a preliminary injunction prohibiting Hasenfeld from deleting or destroying any e-mails or responses sent to or from the cobycgroup.com e-mail address, currently in his possession.

Lastly movants seek an order mandating Hasenfeld to dissolve Coby Group LLC (New York), and Coby Group (Union Avenue) LLC. Westreich and Yashar have failed to demonstrate that they will suffer irreparable harm without such injunctive relief, or that it is otherwise necessary at this time.

### ***CROSS MOTION TO DISMISS***

Hasenfeld has cross moved to dismiss action #1 on the grounds that at the time it was commenced the Coby Group, a Delaware LLC, and McCarron Park Condominiums LLC did not have legal capacity to maintain the action, and also that Westreich and Yashar are necessary parties.

Hasenfeld contends that Coby Group, a Delaware LLC, is prohibited from maintaining this action because it did not file for authority to do business in New York. He also contends that McCarron Park Condominiums LLC, a New York LLC, is prohibited from maintaining this action because it did not publish its application for authority to do business, or file applications of publication. While the publications were not complete at the time action #1 was commenced, the required filings and publication were completed by March of 2006. Like corporations, limited liability companies may maintain an action once they have complied with the filing and publication requirements, even if they were not in compliance at the time that action was commenced. *Mentor Credit Corp. v Eisenberg*, 204 AD2d 284, 614 NYS2d 156 (2<sup>nd</sup> Dept. 1994); *Acquisition America V LLC v Lamadore*, 5 Misc3d 461, 784 NYS2d 329 (NY Civ Ct., 2004).

Therefore, Hasenfeld's cross-motion to dismiss for failure to comply with the publication requirements of the Limited Liability Company Law is denied. As action #2 in which Westreich and Yashar are defendants, has been consolidated with action #1, the cross motion to dismiss action #1 for failure to name Westreich and Yashar as parties is denied as moot.

WHEREFORE, the Court enjoins Steve Hasenfeld, during the pendency of these actions, from interfering with the sale of 544 Union Avenue; from using the Coby Group name or doing business as, Coby, Coby Group, Coby Group LLC (New York), or Coby Group (Union Avenue) LLC; from using the "cobysgroup.com" domain name, for a web site or for e-mail; and from deleting or destroying any e-mails or responses sent to or from the cobysgroup e-mail address currently in his possession. The Court further enjoins the Coby Group (the Delaware LLC), McCarron Park Condominiums LLC, Leslie Westreich and Morty Yashar, during the pendency of these actions, from selling or transferring either the contract of sale for 544 Union Avenue, or in the event they close on 544 Union Avenue, from selling or transferring the building, without prior permission of the court; and from using the "cobysgroup.com" domain name, for a web site or for e-mail. This constitutes the decision and order of the Court.

### Customer Registration Form for Water and Sewer Billing

#### Property and Owner Information:

- (1) Property receiving service is located in the Borough of **BROOKLYN**  
Block: **2736** Lot: **1**
- (2) Account Number (if applicable):  
Meter Number (if available—include the letter):
- (3) Street Address of Property Receiving Service:  
Street **544 UNION AVENUE** City **NY** State **NY** Zip **11211**
- (4) Full name, mailing address, home phone and business phone numbers of owner of property receiving service:  
(please provide information on owner ONLY; do NOT give information on property manager or tenant):  
Owner's Name **Business: 544 UNION OWNER LLC**  
or Individual:  
(Last Name) (First Name) (MI)  
Street **70 WEST 93RD STREET SUITE 100** City **NEW YORK** State **NY** Zip **10025**  
Home Phone(Numbers only): Business Phone(Numbers only):

#### Customer Billing Information:

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
Tenant  Other (please explain):

#### Owner's Approval

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

- A.** Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B.** Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C.** Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills: **544 Ste 307**
- (6) Mailing Address: Street **190 North 10<sup>th</sup> St., Suite 307 Brooklyn** City **Brooklyn** State **NY** Zip **11211**
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

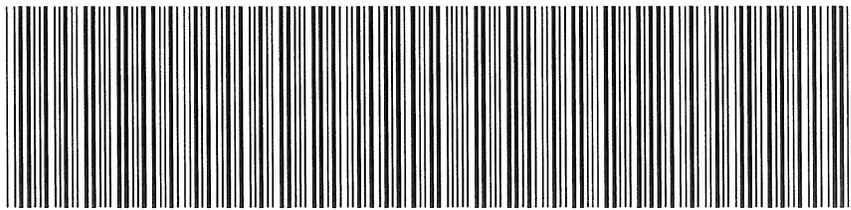

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

- (8) Owner's EIN or SSN(Numbers) E-mail:
- (9) Name of Owner: **544 UNION OWNER LLC**

NOTICE OF ENTRY OF COURT ORDERS REQUIRING, INTER ALIA, PLAINTIFFS'  
DESIGNEE -544 UNION OWNER LLC - TO DELIVER 30% OF THE NET PROCEEDS OF  
ANY SALE OR TRANSFER OF THE PROPERTY DEVELOPMENT, BUILDING OR  
PROJECT BEING DEVELOPED INTO AN ESCROW ACCOUNT MAINTAINED BY  
PLAINTIFFS' COUNSEL

S I R S:

PLEASE TAKE NOTICE that the within are true copies of the following Orders of the Hon. Wayne P. Saitta, Justice, made and entered in the Kings County Clerk's Office, in the Supreme Court of the State of New York, County of Kings, located at 360 Adams Street, Brooklyn, New York, in this action, on the dates as hereinafter set forth and attached hereto:

The "So Ordered" Transcript, dated December 11, 2006, was entered on December 19, 2006, (Exhibit "A"), and, inter alia, granted Plaintiffs' motion to the extent of modifying the Order dated November 20, 2006, entered on November 30, 2006 (Exhibit "B") to permit 544 Union Owner LLC to purchase the real Properties hereinafter set forth on December 14, 2006 based upon the written stipulation (Exhibit "C") of Plaintiffs, Leslie Westreich, and 544 Union Owner LLC, and the stipulation of Plaintiff's Counsel in the Transcript (Exhibit "A") to be bound by the November 20, 2006 Order, which provided, inter alia, that if Plaintiff's designee, 544 Union Owner LLC acquires title to the Property -- and thereafter seeks to sell or transfer the property, or any building, development or project developed on the property, Plaintiff shall give Defendants' attorney's 15 days notice of the sale and the amount of the net proceeds of such sale and then 30% of the net proceeds from any such sale, development or project shall be delivered into an escrow account to be maintained by Plaintiff's attorney, the law firm of Vandenberg & Feliu, LLP, and not released except upon further Order of the Court. Notice to defendant's attorney shall be by fax. The November 20, 2006, Order amended this Court's Order, dated August 11, 2006 which was entered on August 21, 2006 (Exhibit "D")

The aforesaid Court Orders affect and concern four parcels of real properties, all situate in Kings County, known as Block No. 2736, Lot No. 1; Lot No. 9; and Lot No. 48; and Block No. 2741, Lot No. 8; (as more particularly described in the metes and bounds description annexed hereto as Exhibit "E").

Dated: December 19, 2006

Frances Napoli  
Senior Court Reporter

RECEIVED  
CLERK  
2006 DEC 19 AM 11:34

1 THE COURT: Is there a proposed transfer at  
2 this point?

3 MR. KOOK: There is, your Honor, but I'd  
4 like to renew our request that the prior order be  
5 vacated.

6 The requirement for any kind of a set aside  
7 for 30 percent is an alienation on transfer of  
8 property. The contract of sale, February 9, 2005,  
9 contract specifically gives the purchaser the right  
10 to transfer either to an entity in which they're  
11 involved or, at the closing to transfer to any  
12 entity.

13 And this 30 percent set aside is a  
14 prejudgment attachment. money to satisfy a potential  
15 judgment down the road. Whatever rights the  
16 defendants have fully -- if they obtained a judgment  
17 down the road, it's a money judgment. What they're  
18 seeking is a pre-attachment. the money set aside, the  
19 funds. the payment of that judgment.

20 In the case we cited. the Court of Appeals  
21 case, which is that is not a remedy to be had in  
22 connection with a preliminary judgment application.  
23 which is how this all arose.

24 So we, again, request that we just be  
25 allowed to close and we sign, as allowed with a

1 contract.

2 And in the event Mr. Hasenfeld is successful  
3 down the road, although in the August 11 order there  
4 was no finding of a successful, of a possible --  
5 likelihood of success on merits, and it cannot be a  
6 showing of irreparable injury because he's asking for  
7 money damages, it's all money and if he wins he gets  
8 a judgment and he gets to collect money against the  
9 entities that the judgment directs.

10 We would say there will not be a judgment  
11 after the facts of discovery and a motion summary for  
12 judgment after trial.

13 As it stands, this 30 percent set aside is  
14 pretax adjustment from a judgment. The defendants  
15 may know -- hide the fact that that's what they were  
16 seeking. That was the title of their reply evidence,  
17 their application and they request that the closing  
18 be held pursuant to the contract and that a purchaser  
19 can assign the contract at the closing.

20 THE COURT: But, the difference here is that  
21 at first what was contested is who was -- who  
22 controlled the purchaser. And the sale is only  
23 possible, or it is only possible for the sale to go  
24 forward because other parts of the injunction have  
25 barred Mr. Hasenfeld from interfering with the sale,

1 from asserting the rights of the corporation that  
2 signed the contract. So, it's not a mere -- it's not  
3 a typical or a mere situation of a prejudgment  
4 attachment. It's part of a whole order that allowed  
5 the sale to go forward. It's unclear as to who the  
6 party is that closed, the purchaser. And on that  
7 basis I'm denying it, but you have your remedy.

8 MR. KOOK: On appeal, yes, your Honor.

9 So, with respect to the transfer, first of  
10 all, Mr. Yashar is basically out of McCarron at this  
11 point. And what we would ask permission to do is to  
12 transfer the contract for the sum of the deposits for  
13 some \$600,000. And 30 percent of that would be set  
14 aside in escrow, held by my firm.

15 THE COURT: Counsel.

16 MR. MERMELSTEIN: Judge, that completely  
17 violates the spirit and intent of your order.

18 We weren't here fighting for 30 percent of  
19 \$600,000. My client claimed it was his complete  
20 deal, as your Honor previously stated.

21 We even said the last time we were here in  
22 court, we had people lined up, ready to take the  
23 deal. We only brought them in for financing. Now,  
24 they have to go out looking for financing. We have  
25 people lined up ready to take the deal. If they want

1 out of the deal, we're ready to give them back their  
2 600 grand and take the deal over.

3 We don't need them for the deal. We only  
4 brought them in for financing. For them to come in  
5 now and say they're ready to set aside 30 percent of  
6 \$600,000 is outrageous based upon the intent and  
7 spirit of the order.

8 MR. KOOK: Your Honor, the deal was Coby  
9 Group. Mr. Hasenfeld, as a contemporaneous e-mail  
10 shows --

11 THE COURT: We're not going to decide today  
12 whose deal it was. The whole purpose of this is, you  
13 said you wanted a different entity to buy the  
14 corporation because of a tax exchange.

15 So, do you have a different entity that  
16 wants to buy it?

17 MR. KOOK: We do.

18 The entity is 544 Union Owner LLC. And I  
19 have a stipulation, post stipulation, signed by 544  
20 Union Owner LLC's control person, Mr. Westreich, who  
21 is one of the defendants in the consolidated action.

22 THE COURT: Do you have the filing papers of  
23 the LLC?

24 MR. KOOK: I don't have them, but I'll  
25 represent to the Court that it has been filed. I got

1 a confirmation e-mail from the attorneys handling  
2 that, a confirmation e-mail on Friday, that the 544  
3 owner LLC is fully filed. And if your Honor  
4 requests, I will get those papers from the attorneys  
5 and have a copy sent to you Judge and a copy to  
6 Mr. Mermelstein. I'll represent to the Court that I  
7 received an e-mail from the attorneys on Friday,  
8 saying it was done.

9 THE COURT: I'll just ask you to do one more  
10 thing, unless you can answer that right now.

11 Have you seen the papers and -- the filing  
12 papers?

13 MR. KOOF: No. I generally don't do that.  
14 The attorneys who are handling the closing, 544 Owner  
15 LLC on December 14, they did that. And I spoke with  
16 them and we go back and forth to make sure that was  
17 done, the Friday before Mr. Westreich signed the  
18 stipulation.

19 THE COURT: I guess my real question is, in  
20 the absence of the papers in front of me, can you  
21 check with the attorneys to verify the information in  
22 paragraph four that Mr. Westreich is the single  
23 member that controls the majority?

24 MR. KOOF: I will confirm that with the  
25 attorneys this afternoon and send a fax.

1 THE COURT: If we could do it this morning,  
2 I'd prefer to do it this morning, but that's the only  
3 question I have.

4 Mr. Mermelstein.

5 MR. MERMELSTEIN: Judge, first of all, it  
6 says here incorrectly, owns a majority. It's  
7 qualified that ownership is a majority of that  
8 member, that's number one. I don't know what that  
9 word means.

10 THE COURT: Controls indirectly.

11 MR. KOOK: It says it. 544 Union, the  
12 single -- is a single member entity and the entity  
13 that owns 95 percent of it, owns 75 percent by  
14 entity.

15 MR. MERMELSTEIN: Judge, the whole thing  
16 is --

17 MR. KOOK: He's the president, sole officer.

18 MR. MERMELSTEIN: 544 has a single member.  
19 He hasn't disclosed who that other member is  
20 of 544. There's either an LLC or some corporate  
21 entity, which he's not telling you about. He has 544  
22 has a single member and the rest controls or owns a  
23 majority of that member, which means there is another  
24 entity involved now.

25 MR. KOOK: If may, Judge, in the last order

1 of this, your Honor required that he owns or  
2 controls.

3 THE COURT: Right. So what's the member --  
4 the name of the members that's referred to in  
5 paragraph four?

6 MR. KOOK: I believe it's High Ridge Company  
7 LLP, but I have to check.

8 THE COURT: Why don't you make a call and  
9 we'll just identify that. We'll add that. We'll put  
10 that on the record.

11 MR. MERMELSTEIN: Judge, paragraph number  
12 five, he shouldn't qualify, he agrees to be bound by  
13 the order of this Court, dated November 20.

14 Why is he qualifying it?

15 MR. KOOK: Because the order requires him to  
16 be bound by the paragraph about the escrow.

17 MR. MERMELSTEIN: It says stipulation  
18 identified as -- it says stipulated to be bound by  
19 this order.

20 MR. KOOK: The paragraph reads -- what else  
21 is there in the order?

22 MR. MERMELSTEIN: To be bound by the whole  
23 order.

24 THE COURT: I would assume to cover it, it  
25 would be covered by paragraph one that they can't

1 further transfer the contract of sale between now and  
2 Thursday.

3 MR. MERMELSTEIN: In number four, Judge.

4 MR. KOOK: Four is a judgment against the  
5 defendants.

6 MR. MERMELSTEIN: Why shouldn't they be  
7 bound by the whole order?

8 THE COURT: Paragraph four enjoins your  
9 client.

10 I think they should be bound by number one,  
11 even though it's unlikely to be another transfer  
12 between now and Thursday. So, why don't you see if  
13 you can confirm with the attorneys who handle it the  
14 accuracy of what's in number four and the name of the  
15 member and then --

16 MR. KOOK: I will make the phone calls and  
17 hopefully reach the people.

18 MR. MERMELSTEIN: Will he agree that he is  
19 not going to divest himself of that membership,  
20 Mr. Westreich, while all this is going on?

21 It says here he controls --

22 THE COURT: He's bound by the LLC. Whatever  
23 happens to the ownership of the LLC thereafter,  
24 they're bound by this order.

25 MR. MERMELSTEIN: Okay, Judge.

1 MR. KOOK: Let me call my office, get the  
2 number in, hopefully, five minutes.

3 (Pause)

4 THE COURT: Okay, Mr. Kook.

5 MR. KOOK: Judge, the papers were filed and  
6 when they're filed they don't have to state, only  
7 that it's filed. The operating done is going to be  
8 done today. The High Bridge House Company LP is the  
9 sole owner of 544 Union Owner LLC. And Mr. Westreich  
10 owns 70 percent of the entity, but only High Bridge  
11 House, the company.

12 THE COURT: You cannot represent that  
13 Mr. Westreich and 544 Owner LLC consents to be bound  
14 by paragraphs one two and three of the order.

15 MR. KOOK: Paragraph one is up until the  
16 time of December 14 sale?

17 THE COURT: Right.

18 MR. KOOK: Yes, Judge.

19 MR. MERMELSTEIN: Your Honor, I just have a  
20 few things I'd like to add before we close this.

21 One, Mr. Kook is well aware as an attorney  
22 that there are no presidents of LLC. And he calls  
23 Mr. Westreich a president of the LLC.

24 Number two, it's the same thing. He calls  
25 him a member of the LLC. Is he a managing member or

1 he's a member?

2 That's what I wanted to know.

3 Paragraph number four, Judge, again it says  
4 president and sole officer. There are no officers of  
5 544 Union. There's either a member, a managing  
6 member.

7 Is he the president; is he the sole member  
8 of Union?

9 Now he just said something else. He said  
10 544, he says he owns 75 percent of High Bridge which  
11 is a member of 544 Union which contradicts paragraph  
12 number four.

13 THE COURT: Counsel, what it says is that  
14 544 Union has a single member and Westreich controls  
15 and individually owns a majority of that member. The  
16 member is High Bridge House Company?

17 MR. KOOK: Yes, Judge.

18 THE COURT: Is he an officer in that  
19 corporation aside from owning 75 percent?

20 MR. KOOK: Yes, Judge.

21 THE COURT: What's his position with High  
22 Bridge House Company?

23 MR. KOOK: I believe he's the president.  
24 I've been representing Mr. Westreich on a number of  
25 these LPs and LLCs and he's always the president.

1 MR. MERMELSTEIN: I don't know what  
2 indirectly means, through his wife, through another  
3 entity.

4 MR. KOOK: What it means is what it says,  
5 because he indirectly owns 544 Union LLC, through the  
6 ownership of the company that owns 75 percent of High  
7 Bridge House Company which owns a hundred percent of  
8 544 Union.

9 MR. MERMELSTEIN: Judge, one more thing. It  
10 says on number five, upon acquiring title to the  
11 property. According to your stipulation he's  
12 supposed to agree today that he's going to be bound.

13 MR. KOOK: He can't do the escrow until he  
14 acquires title.

15 THE COURT: As to paragraph one, that's  
16 going to apply today.

17 MR. MERMELSTEIN: Next paragraph is a  
18 stipulation normally signed by all the parties to the  
19 agreement. Our original agreement provided it's  
20 going to be Westreich and Yashar together. They've  
21 always been representing to this Court they've been  
22 in this together.

23 It's been Westreich, but no matter what,  
24 Westreich only signs here. There's no signature by  
25 Coby, no signature by McCarron Park, no signature by

1 Westreich individually and no signature by Yashar.

2 MR. KOOK: The order of November 20 requires  
3 stipulation signed by the designees to be so ordered  
4 by your Honor. And this is what this complies with,  
5 your Honor's order. And what it is is, the designee.  
6 Everybody else is a party, either plaintiff or  
7 defendant, and the subject to --

8 MR. MERMELSTEIN: If Mr. Kook is  
9 representing --

10 THE COURT: Let him finish.

11 MR. KOOK: They're all parties to the  
12 lawsuit and they're bound to the orders, because  
13 they're orders entered by your Honor.

14 The order which was approved without -- by  
15 Mr. Mermelstein on behalf of plaintiffs in the  
16 consolidated action says at that time stipulation  
17 signed by the designee to be so ordered by the Court.  
18 This is signed by the designee and your Honor is  
19 going to so order, your Honor. I hope.

20 MR. MERMELSTEIN: Judge, if Mr. Kook is  
21 ready to represent that they agree as their counsel  
22 to this stipulation, because he is representing them  
23 here, I don't have a problem with it.

24 THE COURT: That's what I understood him to  
25 do.

1 MR. MERMELSTEIN: I didn't hear him say it.

2 THE COURT: Is that correct, that you're  
3 representing your clients agree to be bound by the  
4 order --

5 MR. KOOK: Your Honor, whether my clients  
6 agree or not, they're bound by the order. The order  
7 of November 20 was upon my client --

8 THE COURT: I meant the new purchasing  
9 entity, that 544 Union Avenue LLC agrees to be bound  
10 by the terms of the order as I'm going to modify it.

11 MR. KOOK: I'm not sure we -- 544 union is  
12 agreeing to be bound by the order?

13 THE COURT: That's what I mean.

14 MR. KOOK: Yes.

15 THE COURT: Including my modification.

16 MR. KOOK: Including Mr. Westreich, who  
17 signed it. And Mr. Yashar has nothing to do with  
18 anything.

19 THE COURT: And including that paragraph  
20 one -- that they'll be bound by paragraph one as  
21 well.

22 MR. KOOK: Yes, they are bound.

23 MR. MERMELSTEIN: Now, I just need him to  
24 just agree that as the attorney representing the  
25 plaintiffs and the defendant Westreich and Yashar

1 individually, they also agree to this.

2 THE COURT: They're already bound by it.  
3 He's correct this is about binding the new party  
4 who's buying it.

5 MR. KOOK: As your Honor said, we have  
6 remedies and maybe we'll pursue them. As of now, the  
7 order is in effect.

8 THE COURT: I'm going to modify the order to  
9 the extent, and I guess you can get a copy of it, to  
10 allowing 554 Union Owner LLC to the entity that is  
11 purchasing the property on the 14th. The  
12 modification is based explicitly on their consent to  
13 be bound by the orders in paragraphs one, two and  
14 three.

15 MR. KOOK: Thank you, Judge.

16 THE COURT: If you need to get a copy of  
17 that.

18 MR. MERMELSTEIN: Judge it's a very short  
19 order that you rendered, can we say, based upon  
20 stipulations rendered by counsel, could we write up a  
21 short form order?

22 THE COURT: We have the transcript.

23 MR. MERMELSTEIN: You'll sign a short form  
24 order stating, according to the transcript?

25 THE COURT: The transcript's certified.

s it.

MR. MERMELSTEIN: The transcript is deemed

order itself because it was done in court?

The Court will so order the transcript?

THE COURT: Right.

MR. KOOK: Thanks, Judge.

Upon plaintiff's Motion for Reargument, and upon all the papers submitted thereon, the Order, dated August 11, 2006, is hereby amended as follows:

1. Plaintiffs remain enjoined from selling, transferring, or assigning the Contract of Sale (the "Contract") for 544 Union Avenue, Brooklyn, New York (the "Property"),

provided that plaintiffs can seek a determination from the Court, upon an Order to Show Cause, in the event plaintiffs seek to sell, transfer or assign the Contract.

2. Either of the plaintiffs, or an entity that is <sup>owned or</sup> controlled either by plaintiffs or their principals <sup>(WS)</sup> (the "Designee"), may close on the Contract and acquire title to the Property, <sup>which is scheduled for</sup> <sup>December</sup> <sup>14, 2006</sup>

provided, however, that the party acquiring title must agree and stipulate to be bound by this

Order, specifically Paragraph 3 which requires delivery into escrow of 30 percent of the net

proceeds of any subsequent sale or transfer of the Property, which stipulation must ~~then~~ be <sup>on December 11, 2006 at 9:30 a.m.</sup> presented to the Court to be So Ordered. <sup>identity to Designee and</sup>

3. The preliminary injunction prohibiting plaintiffs (or the Designee as provided in Paragraph 2 above) from selling or transferring the Property after the Property is purchased under the Contract is vacated. In the event plaintiffs (or the Designee), after acquiring

~~title, thereafter sell or transfer the Property, or any building, development or project developed on the Property, then 30 percent of the net proceeds from any such sale, development or project~~

<sup>WS</sup> shall be delivered into an escrow account to be maintained by plaintiffs' attorney, the law firm of Vandenberg & Feliu, LLP, and not released except upon further Order of the Court. <sup>15 days</sup> Notice to ~~defendants attorney shall be by fax.~~

4. Defendants are preliminary enjoined from interfering in the management, control, development and sale of the Property, the entity that closes on the Contract, or in any other manner interfering with the management, sale and development of the Property.

**STIPULATION**

STEVE HASENFELD,  
COBY GROUP UNION AVENUE  
THE COBY GROUP, LLC (Neighborhood "JOHN DOE Nos. 1 through 13")

C,

D

13,

X

STATE OF NEW YORK )  
COUNTY OF NEW YORK )s

IT IS HEREBY STIPULATED AND AGREED by 544 Union Owner LLC:

1. "Westreich" is the president of each of the plaintiffs.

1. Leslie Westreich, the president of each of the plaintiffs, hereinafter, The Coby Group LLC and MCCARRON PARK CONDOMINIUMS, LLC, and also is a defendant in the consolidated action hereinafter.

2. Westreich is the president of 544 Union Owner LLC, ("544 Union"), a limited liability company that has been organized in New York.

2. Westreich is the president of 544 Union Owner LLC, ("544 Union"), a limited liability company that has been organized in New York.

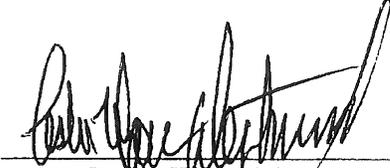

3. 544 Union Owner LLC is the Purchaser, scheduled to close on Thursday, December 14, 2006, under the Contract of Sale, dated February 9, 2005, and acquire title to the property located at 544 Union Avenue, Brooklyn, New York (the "Property").

3. 544 Union Owner LLC is the Purchaser, scheduled to close on Thursday, December 14, 2006, under the Contract of Sale, dated February 9, 2005, and acquire title to the property located at 544 Union Avenue, Brooklyn, New York (the "Property").

3. 544 Union Owner LLC is the Purchaser, scheduled to close on Thursday, December 14, 2006, under the Contract of Sale, dated February 9, 2005, and acquire title to the property located at 544 Union Avenue, Brooklyn, New York (the "Property").

4. Westreich is the president and sole officer of 544 Union. 544 Union has a single member and Westreich controls and indirectly owns a majority of that member and is the sole party who is authorized to act on behalf of that member.

5. 544 Union hereby agrees, upon acquiring title to the Property, to be bound by the escrow provisions in Paragraphs 2 and 3 of the Order of this Court, dated November 20, 2006, until such further court order.

Action #1

Index No. 36186/05

DECISION AND ORDER

Action #2

Index No. 36200/05

" P "

Plaintiffs in action #1 move for preliminary relief enjoining defendant Steve Hasenfeld from interfering with their purchase of a building located at 544 Union Avenue, in Brooklyn, from using the names "Coby" or "Coby Group", and from using the domain name "cobygroup.com", and directing Defendant to dissolve two LLCs he filed with the State of New York using the "Coby" name, and directing Hasenfeld to return the "cobygroup.com" domain name, as well as various records, files, and e-mails.

Hasenfeld cross-moves to dismiss the underlying action on the ground that Plaintiffs had not complied with the requirements of establishing a limited liability company, at the time the action was commenced, and alternatively for a preliminary injunction enjoining Plaintiffs and Leslie Westreich and Morty Yashar, from using the names "Coby Group (Union Avenue) LLC" and "Coby Group LLC (New York)", from using the "cobygroup.com" domain name, and from transferring the contract of sale for 544 Union Avenue or transferring the property 544 Union Avenue without leave of the court.

Plaintiffs originally moved by Order to Show Cause, returnable January 6, 2006, and then moved for much of the same relief by a second Order to Show Cause, returnable April 11, 2006. On April 11<sup>th</sup> Plaintiffs stipulated to withdraw the earlier Order to Show Cause except as to that relief which was also requested in the second Order to Show Cause. On that date, the parties also agreed to consolidate the two above captioned actions.

Now upon reading the Order to Show Cause returnable January 6, 2006, the Verified Amended Complaint, dated December 16, 2005, the Affirmation of Corey Kupfer, Esq., dated December 16, 2005, the Affirmation Mark R. Kook, Esq., dated December 16, 2005, and the exhibits annexed thereto; the Notice of Cross-Motion, dated February 7, 2006, the Affidavit of Steve

Hasenfeld, dated January 16, 2006, and the exhibits annexed thereto; the Reply Affidavit of Josh Yashar, dated January 19, 2006, and the exhibits annexed thereto; the Affirmation in Opposition of Mark R. Kook Esq, dated February 10, 2006, and the exhibits annexed thereto; the Reply Affidavit of Steve Hasenfeld, dated February 12, 2006, and the exhibits annexed thereto; the Supplemental Affirmation of Mark R. Kook, dated April 10, 2006, and the exhibits annexed thereto; the Order to Show Cause returnable April 11, 2006, the Affirmation of Mark R. Kook, Esq., dated April 3, 2006, and the exhibits annexed thereto; the Notice of Cross-Motion, dated June 5, 2006, the Affirmation of Sol Mermelstein, Esq., dated May 29, 2006, the Affidavit of Steve Hasenfeld, dated May 29, 2006, and the exhibits annexed thereto; the Affidavit of Leslie Westreich, dated June 22, 2006, and the exhibits annexed thereto; Plaintiff's Memorandum, dated June 26, 2006; the Reply Affirmation of Steve Hasenfeld, dated July 26, 2006, and the exhibits annexed thereto; and upon all proceedings heretofore had herein, and after hearing oral argument by counsel and after due deliberation thereon, the motions and cross motions are partially granted to the extent indicated below.

The underlying consolidated actions involve a contested business relationship between Steve Hasenfeld, on the one hand, and Leslie Westreich and Morty Yashar, who are members of Cobv Group LLC, a Delaware limited liability company, on the other. Westreich and Yashar allege that Hasenfeld was merely an unpaid intern who has converted their trade name, their web site, and a contract to purchase 544 Union Avenue, for his own benefit. Hasenfeld contends that he entered into a joint venture with Westreich and Yashar to purchase and develop real property, that he entered into a contract to purchase 544 Union Avenue on behalf of the joint venture, and that Westreich and Yashar are trying to deprive him of his interests in the companies he created and in the contract to purchase 544 Union Avenue.

The nature of the relationship between the parties is contested and unfortunately there are no written agreements or other documents specifying the nature of the relationship or the various rights and interests of the parties.

Hasenfeld began his relationship with Westreich and Yashar sometime in December of 2004. Both sides agree Hasenfeld set up a computer system and web site under the name Coby Group. The relationship between Hasenfeld, and Westreich and Yashar ended in June of 2005.

*Contract to Purchase 544 Union Avenue*

A contract, dated February 9, 2005, to purchase 544 Union Avenue, was entered into by Beach-Russ Co., the owner of the site, and Coby Group (Union Avenue) LLC. The contract originally listed "Coby Group LLC a New York limited liability company" as purchaser. No such LLC existed at the time the contract was executed. The contract was later amended to change the purchaser to "Coby Group (Union Avenue) LLC", which also was not then in existence, but which the buyers intended to form to purchase the building.

Leslie Westreich signed the contract on behalf of Coby Group (Union Avenue) LLC. A check for \$400,000 as a down payment, signed by Yashar, was sent to the seller. An additional \$200,000 was wired to the seller by Westreich and Yashar.

Hasenfeld claims he located the property and negotiated the sales price. He further claims that his agreement with Westreich and Yashar was that they would provide the financing for the purchase and receive 80% interest in the entity that bought the building and Hasenfeld would receive 20%. Westreich and Yashar claim that Hasenfeld had no role in locating the property or negotiating the contract, but simply performed administrative tasks, at their direction, in connection with the contract.

Hasenfeld filed Articles of Organization for Coby Group (Union Avenue) LLC on August 17, 2005, which were accepted by the Secretary of State of the State of New York. Westreich and Yashar attempted to do so on the same date but were denied, as the name had been assigned to Hasenfeld first. Westreich and Yashar then amended their application to change the name of their LLC to McCarron Park Condominiums LLC.

Westreich and Yashar seek to enjoin Hasenfeld from interfering with the sale of the building to "McCarron Park Condominiums LLC" in lieu of "Coby Group (Union Avenue) LLC". Hasenfeld states that he has no objection to the sale going forward as long as his interest in the contract, which he claims to be 20%, is protected.

Unfortunately, there is nothing in writing between the parties indicating what their interests in the contract are. At this point, all that is clear is that the contract was made in the name of an LLC subsequently organized by Hasenfeld, but was signed by Westreich, and the down payment check was signed by Yashar.

Further complicating matters is the fact that it is unclear whether the contract will ever be closed. The seller has declared McCarron Park Condominiums LLC to be in default, and has cancelled the contract. Plaintiffs have brought an action against the seller for specific performance which is currently pending. If the cancellation of the contract is upheld then the dispute over the contract, between the parties herein, will be moot.

Under these circumstances, preliminary relief is warranted so as not to prevent the sale from going forward, and to allow dispute between the parties herein to be resolved after the sale. The Court will enter a preliminary injunction barring Hasenfeld from interfering with the sale of 544 Union Avenue to McCarron Park Condominiums LLC, and also barring the named plaintiffs in

action #1, and Westreich and Yashar, from selling or transferring either the contract of sale for 544 Union Avenue, or in the event they close on 544 Union Avenue, either in the name of Coby Group (Union Avenue) LLC, or McCarron Park Condominiums LLC, from selling or transferring the building, without permission of the court.

This injunction is the least restrictive remedy which will preserve the status quo, and prevent the res of the dispute from disappearing during the pendency of this action. The injunction protects Hasenfeld's claim while allowing Westreich and Yashar to consummate the sale and proceed with their plans to develop condominiums. Further, in the event that the sale does close, the injunction can be modified to conform to what is necessary and equitable at the time Westreich and Yashar seek to sell the property.

#### *The Coby Names and Website*

Westreich and Yashar also seek to enjoin Hasenfeld from using the names "Coby Group", "Coby Group LLC (New York)", and "Coby Group (Union Avenue) LLC" and from using the cobygroup.com domain name as a website or e-mail address. Hasenfeld in turn seeks to enjoin Westreich and Yashar from representing themselves as "Coby Group (Union Avenue) LLC" or "Coby Group LLC (New York)" and from using the cobygroup.com domain name as a website or e-mail address.

Westreich and Yashar annex to their papers, an e-mail from Hasenfeld dated June 17, 2005 in which he states that he is no longer affiliated with "the Coby Group". Hasenfeld the authenticity of the e-mail. Hasenfeld also concedes that the only purposes for which he uses the names "Coby Group (Union Avenue) LLC" and "Coby Group LLC (New York)", is in connection with the contract to purchase 544 Union Avenue. Since Hasenfeld has agreed to allow Westreich and Yashar

to go forward with the sale, using McCarron Park Condominiums LLC as an assignee, and his interest in the contract is protected by the injunction against transfer without leave of the court, he will suffer no hardship from being enjoined from doing business under the two Coby companies he formed. Therefore the Court will grant a preliminary injunction barring Hasenfeld from using the Coby Group name or doing business as either "Coby", "Coby Group", "Coby Group LLC (New York)", or "Coby Group (Union Avenue) LLC" during the pendency of these actions.

Since at this point the sale of 544 Union Avenue may close under the name of "McCarron Park Condominiums LLC", "Coby Group LLC (New York)", or "Coby Group (Union Avenue) LLC", the court will not enjoin Westreich or Yashar from doing business under those names. The Court makes no determination at this time as to which of the parties have rights to those entities, but simply declines to enjoin Westreich and Yashar from conducting business under those names at this time.

It is not contested that Hasenfeld purchased the domain name "cobygroup.com" in January, 2005, shortly after beginning his relationship with Coby. What is contested is whether he did so in furtherance of a joint venture with Westreich and Yashar, or on their behalf, as their intern or agent. This is a question of fact that will ultimately have to be settled at trial. In light of the facts and circumstances set forth above, the Court will issue a preliminary injunction prohibiting all parties from using the "cobygroup.com" domain name for a web site or for e-mail during the pendency of these actions. The injunction shall not however, prohibit Westreich or Yashar from registering or using a different domain name which includes the name Coby or Coby Group. The Court also grants a preliminary injunction prohibiting Hasenfeld from deleting or destroying any e-mails or responses sent to or from the cobycgroup.com e-mail address, currently in his possession.

Lastly movants seek an order mandating Hasenfeld to dissolve Coby Group LLC (New York), and Coby Group (Union Avenue) LLC. Westreich and Yashar have failed to demonstrate that they will suffer irreparable harm without such injunctive relief, or that it is otherwise necessary at this time.

### ***CROSS MOTION TO DISMISS***

Hasenfeld has cross moved to dismiss action #1 on the grounds that at the time it was commenced the Coby Group, a Delaware LLC, and McCarron Park Condominiums LLC did not have legal capacity to maintain the action, and also that Westreich and Yashar are necessary parties.

Hasenfeld contends that Coby Group, a Delaware LLC, is prohibited from maintaining this action because it did not file for authority to do business in New York. He also contends that McCarron Park Condominiums LLC, a New York LLC, is prohibited from maintaining this action because it did not publish its application for authority to do business, or file applications of publication. While the publications were not complete at the time action #1 was commenced, the required filings and publication were completed by March of 2006. Like corporations, limited liability companies may maintain an action once they have complied with the filing and publication requirements, even if they were not in compliance at the time that action was commenced. *Mentor Credit Corp. v Eisenberg*, 204 AD2d 284, 614 NYS2d 156 (2<sup>nd</sup> Dept. 1994); *Acquisition America V LLC v Lamadore*, 5 Misc3d 461, 784 NYS2d 329 (NY Civ Ct., 2004).

Therefore, Hasenfeld's cross-motion to dismiss for failure to comply with the publication requirements of the Limited Liability Company Law is denied. As action #2 in which Westreich and Yashar are defendants, has been consolidated with action #1, the cross motion to dismiss action #1 for failure to name Westreich and Yashar as parties is denied as moot.

WHEREFORE, the Court enjoins Steve Hasenfeld, during the pendency of these actions, from interfering with the sale of 544 Union Avenue; from using the Coby Group name or doing business as, Coby, Coby Group, Coby Group LLC (New York), or Coby Group (Union Avenue) LLC; from using the "cobygroup.com" domain name, for a web site or for e-mail; and from deleting or destroying any e-mails or responses sent to or from the cobypgroup e-mail address currently in his possession. The Court further enjoins the Coby Group (the Delaware LLC), McCarron Park Condominiums LLC, Leslie Westreich and Morty Yashar, during the pendency of these actions, from selling or transferring either the contract of sale for 544 Union Avenue, or in the event they close on 544 Union Avenue, from selling or transferring the building, without prior permission of the court; and from using the "cobygroup.com" domain name, for a web site or for e-mail. This constitutes the decision and order of the Court.

**GRANTOR/SELLER:**  
ABBE ENGINEERING COMPANY  
544 UNION AVENUE  
BROOKLYN, NY 11211

THIS INDENTURE, made the 14th day of December , 2006

**BETWEEN**

**BEACH-RUSS COMPANY**, a New York Corporation, as owner of Block 2736, Lot 1 and Block 2741, Lot 8, and **ABBE ENGINEERING COMPANY**, a New York Corporation, as owner of Block 2736, Lots 9 and 48, with offices at 544 Union Avenue, Brooklyn, New York 11211

party of the first part, and

**544 UNION OWNER LLC**, a New York limited liability company with offices at 70 West 93<sup>rd</sup> Street, Suite 100, New York, New York 10025

party of the second part,

**WITNESSETH**, that the party of the first part, in consideration of \$10.00 dollars paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

**ALL** that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

Block:  
2736

**SEE ATTACHED**

Lots:  
1, 9 & 48

Block:  
2741

This transfer is being made in the regular course of business.

Lot:  
8

This conveyance has been made with the consent of the holders of at least two-thirds of the outstanding shares of the party of the first part entitled to vote thereon at a meeting duly called.

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

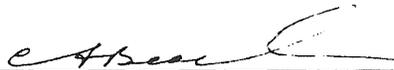

**AND** the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

**AND** the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

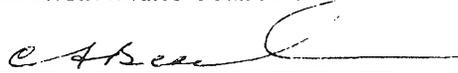

**IN WITNESS WHEREOF**, the party of the first part has duly executed this deed the day and year first above written

**Customer Billing Information:**

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.
- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

**Owner's Approval**

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## TARGET PROPERTY INFORMATION

### ADDRESS

544 UNION AVENUE  
BROOKLYN, NY 11211

### COORDINATES

Latitude (North): 40.717000 - 40° 43' 1.2"  
Longitude (West): 73.952000 - 73° 57' 7.2"  
Universal Transverse Mercator: Zone 18  
UTM X (Meters): 588517.4  
UTM Y (Meters): 4507659.0  
Elevation: 16 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 40073-F8 BROOKLYN, NY  
Most Recent Revision: 1995

### TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 6 of the attached EDR Radius Map report:

<u>Site</u>	<u>Database(s)</u>	<u>EPA ID</u>

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **FEDERAL RECORDS**

**CERCLIS-NFRAP:** Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/20/2006 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

**CORRACTS:** CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 01/04/2007 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<b><i>RADIAC RESEARCH CORP</i></b>	<b><i>33 S FIRST ST</i></b>	<b><i>1/2 - 1 W</i></b>	<b><i>99</i></b>	<b><i>411</i></b>

**RCRAInfo:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1

## EXECUTIVE SUMMARY

RCRA-LQG site within approximately 0.25 miles of the target property.

### STATE AND LOCAL RECORDS

**HSWDS:** The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
CITY BARREL	421 MEEKER STREET	1/4 - 1/2ENE	T84	376

**SHWS:** The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 03/05/2007 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

MOBIL OIL BROOKLYN TERMINAL	300 NORTH HENRY STREET	1/2 - 1 NNE	101	482

**SWF/LF:** The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/30/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
NATIONAL PAPER STOCK; INC.	136 NORTH 10TH STREET	1/4 - 1/2NW	81	370

**LTANKS:** Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 01/17/2007 has revealed that there are 31 LTANKS sites within approximately 0.5 miles of the target property.

**HIST LTANKS:** A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 21 HIST LTANKS sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

**AST:** The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the AST list, as provided by EDR, and dated 03/06/2007 has revealed that there are 7 AST sites within approximately 0.25 miles of the target property.

**CBS AST:** Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS AST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

**SPILLS:** Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 01/17/2007 has revealed that there are 11 NY Spills sites within approximately 0.125 miles of the target property.

**HIST SPILLS:** This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY Hist Spills sites within approximately 0.125 miles of the target property.

### EDR PROPRIETARY RECORDS

**EDR Manufactured Gas Plants:** The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 2 Manufactured Gas Plants sites within approximately 1 mile of the target property.

Vazquez, Alvaro 86 Havemeyer St Brooklyn NY 11211-3348 07/17/06 Rahman- As per Lisa from Don Carlo(718.857.3100), the property owner is 263 N Group LLC C/O Mr. Sam Pearl 80 Clay Street, Brooklyn, NY 11222. Ms. Lisa will get back to DEC with accurate info. 01/10/07 Rahman- Phase II report prepared by Don Carlo Env. Services Inc.Petroleumrelated VOC/SVOCs were not found in Phase II soil/ground water samples.Presence of only certain SVOCs(Benzo group)indicate that those are related with historic fill material.Heavy metals were found in ground water samples.In DCES's opinion, those matals came from the historic use of the site as a metal smelting and storage facility.The proposed development for the subject property is a five story residential building.Contaminated soil will be removed during the excavation for new foundation.Awater proofing barrier will be incorporated in the foundation slab.The site is a NYC DEP "E" designated site.Spill closed due to absence of petroleum constituents in soil/ground water.Presence of heavy metals will be addressed as part of NYC DEP'srequirement. END DECRemark - 0602498

 DEC Remarks: Start DECRemark - 0503901 gasoline contaminated soil need to track down the property owner and then prepare/send a contaminated soil letter. 11/21/05 - Mr. Ted Firetog, Attorney of owner which is Dekalb Aquisition Entity called. He said theynever got any letter from DEC. He aslo mentioned a report was given to Ed Rossan when Ed was out at the site for inspection on July? I requested Mr. Firetog to submit the report to me for review. - KST 12/2/05 - Mr. Firetog fax a letter requesting closure. I called him back and asked for the report again. He said he will eamil to me by Monday. - KST 12/8/05: Case transfered to Andersen. Reviewed above noted Waste Characterization Report. No Furthur action letter sent. Low level contamination due to old fill material. Acetone present probably from laboratory analysis. 12/29/05-Vought-Received message from Jack Eisenberg (917-494-9097) regarding status of spill. Vought referred call to DEFC Andersen. END DECRemark - 0503901  
 Remarks: Start CallerRemark - 0503901 DOING SAMPLES. CLEAN UP IS NOT IN PROCESS. END CallerRemark - 0503901

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Remarks:

Start DECRemark - 9703488 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHITOMIRSKY" TRANSFERRED FROM Y.KRIMGOLD. 8-3-2005 Reviewed report received by NYSDEC on June 13, 2005. The report stated that free product is present in wells MW-2 and MW-4. Petroleum absorbent socks have been replaced several times in both wells. Also, the report stated that in July 2001, laboratory analysis identified the product as kerosene. In addition, the report stated that the most likely off-site source is the upgradient neighboring property, which was known to have underground storage tanks. A letter was sent to DDC/URS to inform the City that at NYSDEC request, an investigation was performed at the neighboring property (Spill #0130048, 407 Leonard Street). The investigation results showed no signs of contamination and the spill report for that property was closed. Therefore, the Department requested that DDC/URS repeat the fingerprint analysis of the free product in wells MW-2 and MW-4, and investigate alternative sources for the free product contamination. AZ 9-28-2005 Staff received and reviewed a monitoring report from the City's contractor which stated that free product is present in several wells. The reports suggested that the most likely off-site source is the up-gradient neighboring property, which has underground storage tanks. Staff responded that an investigation was performed, at DEC's request, at the neighboring property (Spill #0130048, 407 Leonard Street). The investigation results showed no signs of contamination and the spill report for that property was closed. Staff asked the City to repeat the petroleum fingerprint analysis to help determine the source of the product. This analysis indicated that the product is likely kerosene. Although kerosene tanks were never present at the site, NYFD has practice of mixing kerosene and diesel fuel. There is a diesel AST in the basement of the facility. Staff asked Jane Staten (URS) to investigate the possibility of leakage from the diesel AST into the subsurface through underground lines or other conveyances. AZ 9/26/2006 The site was transferred from URS to Greyhawk on January 1, 2006. In July 2006 Greyhawk reported that due to the lack of documentation from the previous CM, Roux performed a reconnaissance visit to the site. Eight of nine monitoring wells were located and gauged. MW-08 was probably destroyed during ongoing construction activities at the neighboring property. MW-04 continues to contain free product at 0.16'. Absorbent socks in wells MW-04 and MW-02 were replaced. AZ 12-07-2006 Staff received and reviewed a monitoring reports from Roux dated September 22 and November 20, 2006. November report states that Gw sampling was not conducted for April through June 2006 because Greyhawk mistakenly considered the spill closed. Free phase (kerosene) was detected in MW-02(0.03') and MW-04(0.23') during July-September quarterly monitoring event. MW-08 could not be located. Roux recommended reduce frequency of gw sampling and reporting from quarterly to semi-annual since dissolved phase remains only in MW-09, continue quarterly gaging of wells, continue using absorbent socks, conduct additional investigation to determine potential sources of kerosene product (work plan will be submitted to DEC), attempt to locate MW-08. DEC concurred. MW-08 should be located or replaced. AZ 12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. Greyhawk will advance a few borings to resolve this issue. They will

 Updated By: JAAVERSA  
 Site Description:

This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Environmental Problems: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Health Problems Assesment: Soil with residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Contaminated groundwater is not used if any, in buildings formerly used by Ansbacher. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date Violation Determined:	03/23/2001
Actual Date Achieved Compliance:	04/12/2001
Enforcement Action:	WRITTEN INFORMAL
Enforcement Action Date:	04/05/2001
Penalty Type:	Not reported

There are 1 violation record(s) reported at this site:

Evaluation	Area of Violation
Compliance Evaluation Inspection	NYGCE

Date of  
Compliance  
 20010412

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks: Start DECRemark - 9212269 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SUN" 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING. 402 Metropolitan Avenue, Brooklyn Owner: Estate of James J. Mannix and Joseph M. Mattone Leased by: Joseph Macchia - Northland Marketing Spill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test. Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Mattone) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3. Spill # 9213355 reported on 3/2/93 when six 550 USTs failed a tightness test. Repairs were made to the stick box and vent lines and the tanks passed a retest on 4/2/93 3/9/93 Case No. R2-0941-93-03 initiated. 12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All threespill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations. After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, thereis now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits. In numerous meetings and letters dated8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediation system installed. According to DEC's file, VEFR was only performed on fiveoccasions with a total of 267 gallons of free product recovered. 9/12/03 Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03 Reassigned from Rommel to Sun. 02/12/04-Sun-File Update by Sun:-On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implemenmt a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2" PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened. The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent.

**S100494686**

-Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger, 631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells: MW-7, MW-8, MW-12 and Mw-13, and thus those wells were not gauged. Consultant's Report stated that " it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc." -02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells. 12/30/04 File Update by Sun: On 12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR) has been reviewed by the Department and has the following comments: - ASR proposed two remedial approaches for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review: 1. To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated. 2. Redraft the Soil Remediation section (page 5) for clarity, and refer to the product as cold mix asphalt as is done in the applicable Beneficial Use Determination (BUD) approvals. 3. The use of the term cement based (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion. 4. The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP. 5. The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP: 1. Provide the formula used to calculate the amount of BioRem required. 2. The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination.

This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested. 3. There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation. 4. The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP 5. The RAP should have a provision that samples will be collected and analyzed at the discretion of the ASR site supervisor (see page 9, second to last paragraph) or the direction of the DEC project manager. 6. If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate. 03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLC dated February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1. Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2. Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 Groundwater Remediation stated that ASR will attempt to salvage any groundwater observation wells still existing on the site. If additional wells are needed, they will be installed strategically, to maximize the data that can be obtained. It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation. 11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05. 11/23/05: Review of the monthly report dated 10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Monitoring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun) 12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.49 feet. (Sun) 02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun) 11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun) END

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**NY MANIFEST:**

Document ID: NYB2096343  
Manifest Status: Completed after the designated time period for a TSDF to get a copy to the DEC  
Trans1 State ID: MK8837

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource

 DEC Remarks:

Start DECRemark - 0413160 3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact: Lee Guterman 718-472-5802) SCA has now decided to remove the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005.  
 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. END DECRemark - 0413160

Remarks: Start CallerRemark - 0413160 OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REMOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY. END CallerRemark - 0413160

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Remarks:

Start DECRemark - 0212132 01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letter for more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to faxit at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transferred from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the following: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought. END DECRemark - 0212132

Corporation provided notarized documentation that the tank was properly removed from the site on July 13, 2001. On November 24, 2003, NYSDEC was provided documentation of two Non-hazardous Material Manifests for the disposal of petroleum-contaminated soil dated July 13, 2005. Also, on November 24, 2003, NYSDEC was provided documentation of six soil sample analyses from the sides of the tank pit and the bottom of the pit, dated July 3, 2001. The samples were analyzed for STARS 8021 and 8270 and are acceptable for closing (per TAGM 4046) Spill No.0103335. END DECRemark - 0103335

DEC Remarks: Start DECRemark - 9007766 Spill remediation is being tracked under spill no. 90-07766. See also spill no. 05-08671. 11/6/2000: Reassigned from Sullivan to Sigona. PBS records indicate that 14 x 550-gallon, 1 x 4,000-gallon and 1 x 1,000-gallon USTs were either closed in-place or removed from this site. (Sigona) 12/12/2003: Reassigned from Roberts to Harrington (central office) for management. (Rommel) 5/6/2005: Sent letter to Exxon Mobil approving off-site RI work plan. (Harrington) 7/18/2005: Sent letter to Exxon Mobil approving revised RAP. EFR events @ MW-3 and MW-4 will be conducted semi-annually. FS to address dissolved BTEX @ MW-3 will be submitted along with off-site RI report. (Harrington) 10/7/2005: Sent e-mail to Exxon Mobil approving the sensitive receptor survey. (Harrington) 11/28/2005: Sent Exxon Mobil letters approving the SI report and the supplemental SI work plan for the off-site plume delineation. Additional work was required due to the discovery of free product west of McGuinness Boulevard. (Harrington) 7/31/2006: Approved supplemental SI report. Monthly EFR events will now be conducted at wells MW-3, MW-4, MW-11, MW-12, and MW-15A. Work plan for recovery well installation near MW-15 is expected in October. (Harrington) 10/14/2006: Sent an e-mail to Exxon Mobil approving the SI work plan. Plan calls for the installation of six (6) monitoring wells along the west side of McGuinness Boulevard between Bayard and Newton Streets in order to fully delineate and recover the free product observed in this area. (Harrington) END DECRemark - 9007766

Other Pertinent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

## EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D004	ARSENIC
D005	BARIUM
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
D009	MERCURY
D011	SILVER
D018	BENZENE
D022	CHLOROFORM
D038	PYRIDINE
D039	TETRACHLOROETHYLENE
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **FEDERAL RECORDS**

### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/25/2007	Source: EPA
Date Data Arrived at EDR: 01/31/2007	Telephone: N/A
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 01/31/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006	Source: EPA
Date Data Arrived at EDR: 11/01/2006	Telephone: N/A
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 02/23/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/28/2006	Source: EPA
Date Data Arrived at EDR: 01/31/2007	Telephone: N/A

Number of Days to Update: 40	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **NPL RECOVERY:** Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 03/26/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/21/2007
	Data Release Frequency: No Update Planned

## **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/28/2006	Source: EPA
Date Data Arrived at EDR: 12/19/2006	Telephone: 703-603-8960
Date Made Active in Reports: 01/29/2007	Last EDR Contact: 03/21/2007
Number of Days to Update: 41	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

## **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/20/2006	Source: EPA
Date Data Arrived at EDR: 01/29/2007	Telephone: 703-603-8960
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 29	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

## **CORRACTS:** Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 01/04/2007	Source: EPA
Date Data Arrived at EDR: 01/18/2007	Telephone: 800-424-9346
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 03/05/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/04/2007
	Data Release Frequency: Quarterly

## **RCRA:** Resource Conservation and Recovery Act Information

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA
Date Data Arrived at EDR: 06/28/2006	Telephone: (212) 637-3660
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 04/18/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Quarterly

## **ERNS:** Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2006	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/24/2007	Telephone: 202-267-2180
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 01/24/2007
Number of Days to Update: 47	Next Scheduled EDR Contact: 04/23/2007
	Data Release Frequency: Annually

## **HMIRS:** Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 11/28/2006	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 01/17/2007	Telephone: 202-366-4555
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/17/2007
Number of Days to Update: 41	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Annually

## **US ENG CONTROLS:** Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/24/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 703-603-8905
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

## **US INST CONTROL:** Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/24/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 703-603-8905
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **DOD:** Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 703-692-8801
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 02/08/2007
Number of Days to Update: 62	Next Scheduled EDR Contact: 05/07/2007
	Data Release Frequency: Semi-Annually

## **FUDS:** Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/2005	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 09/20/2006	Telephone: 202-528-4285
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 04/02/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

## **US BROWNFIELDS:** A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 01/29/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 202-566-2777
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 03/12/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 06/11/2007
	Data Release Frequency: Semi-Annually

## **CONSENT:** Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 08/23/2006	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 03/06/2007	Telephone: Varies
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 02/06/2007
Number of Days to Update: 35	Next Scheduled EDR Contact: 04/23/2007
	Data Release Frequency: Varies

## **ROD:** Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 01/10/2007	Source: EPA
Date Data Arrived at EDR: 01/24/2007	Telephone: 703-416-0223
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 03/27/2007
Number of Days to Update: 34	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/08/2006	Telephone: 505-845-0011
Date Made Active in Reports: 01/29/2007	Last EDR Contact: 03/20/2007
Number of Days to Update: 82	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Varies

## **ODI:** Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/09/2004	Telephone: 800-424-9346
Date Made Active in Reports: 09/17/2004	Last EDR Contact: 06/09/2004
Number of Days to Update: 39	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **TRIS:** Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2004	Source: EPA
Date Data Arrived at EDR: 06/22/2006	Telephone: 202-566-0250
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 03/20/2007
Number of Days to Update: 62	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Annually

## **TSCA:** Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002	Source: EPA
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-260-5521
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/16/2007
Number of Days to Update: 46	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Every 4 Years

## **FTTS:** FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 02/26/2007	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-566-1667
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

## **FTTS INSP:** FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act) A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 02/26/2007	Source: EPA
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-566-1667
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **SSTS:** Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2004	Source: EPA
Date Data Arrived at EDR: 05/11/2006	Telephone: 202-564-4203
Date Made Active in Reports: 05/22/2006	Last EDR Contact: 04/12/2007
Number of Days to Update: 11	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Annually

## **ICIS:** Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 11/06/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/02/2007	Telephone: 202-564-5088
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 04/16/2007
Number of Days to Update: 61	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Quarterly

## **DOT OPS:** Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 02/14/2007	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 02/28/2007	Telephone: 202-366-4595
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 02/28/2007
Number of Days to Update: 41	Next Scheduled EDR Contact: 05/28/2007
	Data Release Frequency: Varies

## **LUCIS:** Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/09/2005	Source: Department of the Navy
Date Data Arrived at EDR: 12/11/2006	Telephone: 843-820-7326

## **RADINFO:** Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/30/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 202-343-9775
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 01/31/2007
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

## **HIST FTTS:** FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: No Update Planned

## **CDL:** Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## **RAATS:** RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995  
Date Data Arrived at EDR: 07/03/1995

## **STATE AND LOCAL RECORDS**

### **HSWDS:** Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Date of Government Version: 01/01/2003  
Date Data Arrived at EDR: 10/20/2006

## **HIST SPILLS:** SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## **VCP:** Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

## **RES DECL:** Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

## EDR PROPRIETARY RECORDS

### **Manufactured Gas Plants:** EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### **CT MANIFEST:** Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2004

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

## **Electric Power Transmission Line Data**

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## **AHA Hospitals:**

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## **Medical Centers: Provider of Services Listing**

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## **Nursing Homes**

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## **Public Schools**

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## **Private Schools**

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## **Daycare Centers: Day Care Providers**

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## **State Wetlands Data: Freshwater Wetlands**

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

INDUSTRIAL BUILDING  
544 UNION AVENUE  
BROOKLYN, NY 11211

### TARGET PROPERTY COORDINATES

Latitude (North):	40.71700 - 40° 43' 1.2"
Longitude (West):	73.952 - 73° 57' 7.2"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588517.4
UTM Y (Meters):	4507659.0
Elevation:	16 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

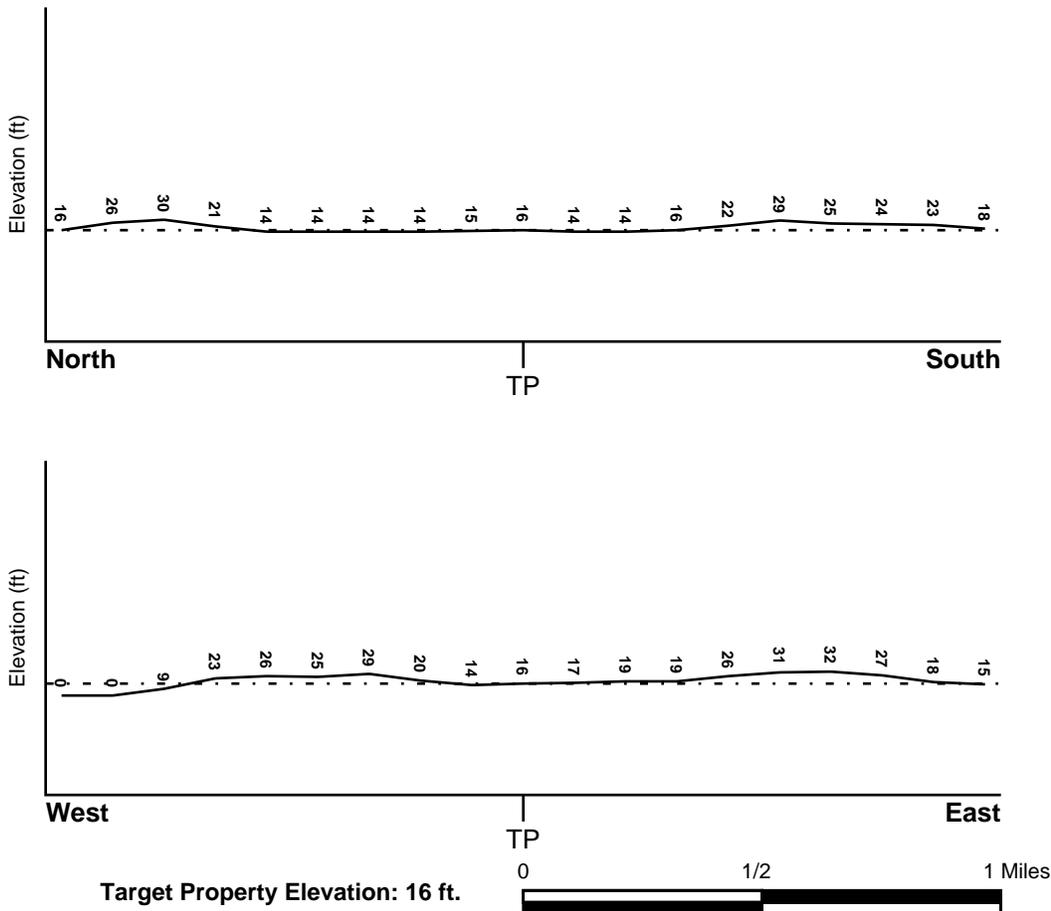

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Target Property County</u>	<u>FEMA Flood</u>
KINGS, NY	<u>Electronic Data</u>
	Not Available

Flood Plain Panel at Target Property: 3604970048B

Additional Panels in search area: 3604970047B

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic</u>
BROOKLYN	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

\* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era: Mesozoic  
System: Cretaceous  
Series: Upper Cretaceous  
Code: uK (decoded above as Era, System & Series)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand  
silt loam  
sandy loam  
fine sandy loam

Surficial Soil Types: loamy sand  
silt loam  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: very gravelly - loamy sand  
unweathered bedrock  
stratified  
sandy loam

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### **State Wetlands Data: Freshwater Wetlands**

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### **PWS:** Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### **PWS ENF:** Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### **USGS Water Wells:** USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### **New York Public Water Wells**

Source: New York Department of Health

Telephone: 518-458-6731

#### **Oil and Gas Well Database**

Department of Environmental Conservation

Telephone: 518-402-8056

These files contain records, in the database, of wells that have been drilled.

## OTHER STATE DATABASE INFORMATION

### RADON

#### **State Database: NY Radon**

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### **Area Radon Information**

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### **EPA Radon Zones**

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### **Airport Landing Facilities:** Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### **Epicenters:** World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

## USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.

### Reading Sanborn Maps

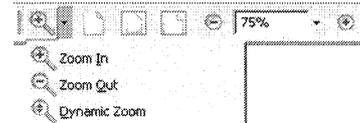

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: <http://www.edrnet.com/reports/samples/key.pdf>

### Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

### Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
  - A. On the menu bar, click "View" and then "Zoom to..."
  - B. Or, use the magnifying tool and drag a box around the TP

### Printing a Sanborn Map From the Electronic File

- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

#### Acrobat Versions 6 and 7

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

#### Acrobat Version 5

1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

### Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped into one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

## EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report includes results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers follows established procedures to:

- search for parcel information, legal description, and ownership based on client supplied address information;
- research indexes and title repositories;
- obtain a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument (title, parties involved, and description); and
- provide a copy of the deed.

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT-THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY

THIS INDENTURE, made the 14th day of December, 2006

BETWEEN

BEACH-RUSS COMPANY, a New York Corporation, as owner of Block 2736, Lot 1 and Block 2741, Lot 8, and ABBE ENGINEERING COMPANY, a New York Corporation, as owner of Block 2736, Lots 9 and 48, with offices at 844 Union Avenue, Brooklyn, New York 11211

party of the first part, and

544 UNION OWNER LLC, a New York limited liability company with offices at 70 West 93<sup>rd</sup> Street, Suite 100, New York, New York 10025

party of the second part,

WITNESSETH, that the party of the first part, in consideration of \$10.00 dollars paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

Block:  
2736

Lots:  
1, 9 & 48

SEE ATTACHED

Block:  
2741

This transfer is being made in the regular course of business.

Lot:  
8

This conveyance has been made with the consent of the holders of at least two-thirds of the outstanding shares of the party of the first part entitled to vote thereon at a meeting duly called.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

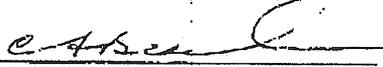

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written

IN PRESENCE OF:

BEACH-RUSS COMPANY

By:   
C. A. BEACH

ABBE ENGINEERING COMPANY

By:   
C. A. BEACH

SCHEDULE A

Parcel A as to Block 2741 Lot 8

ALL THAT CERTAIN, plot, piece or parcel of land, with the building and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, more particularly bounded and described as follows:

BEGINNING at a point formed by the intersection of the Southerly side of Withers Street with the easterly side of Union Avenue, and;

 Street **70 WEST 93RD STREET SUITE 100** City **NEW YORK** State NY Zip **10025**  
 Home Phone(Numbers only): Business Phone(Numbers only):

**Customer Billing Information:**

**PLEASE NOTE:**

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.
- B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.
- C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.

- (5) If you would like a duplicate copy of bills sent to another party, please check here  and fill out the following information:  
 Name of Party to Receive Duplicate Copies of Bills:
- (6) Mailing Address: Street City State Zip
- (7) Relationship to Owner (check one): Managing Agent  Mortgagee   
 Tenant  Other (please explain):

**Owner's Approval**

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

# EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

***Thank you for your business.***

Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. ## SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 100.32 Feet of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

# **APPENDIX F**

## **Qualifications of Environmental Professionals**

---

## **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS**

### **Steven T. Sobstyl**

Steve Sobstyl is Senior Project Manager of CA Rich Consultants Inc. Mr. Sobstyl received his Bachelor of Arts, Environmental Science (Natural Resource Planning and Management) degree from SUNY at Plattsburgh, New York in 1988. Certifications include: Hazardous Waste Operations and Emergency Response-Supervisor OSHA Part 1910.120; and Health & Safety Operations at Hazardous Materials Sites 29 CFR 1910.120 New York. Steve has over eighteen years of experience in the environmental consulting field. Specifically, conducting Phase I and Phase II assessments of commercial and industrial properties in the tri-state area.

### **Deborah Shapiro**

Ms. Shapiro serves as a Project Environmental Scientist with CA Rich Consultants, Inc. Deborah received her Bachelor of Arts in Environmental Studies, from The American University, Washington, DC in 1998; and her Master of Science degree in Environmental Science from the same University in 2001. She has over seven (7) years experience in the environmental field and has performed field investigations and remedial activities at numerous sites in Long Island and New York City (NYC). Ms. Shapiro has assisted in the design and construction of remediation systems and is currently performing operations and maintenance of remediation systems on a regular basis. In addition, Ms. Shapiro conducts Phase I and Phase II Environmental Site Assessments of commercial and industrial properties, as well as other non-industrial properties to facilitate real estate property transfers, loan workouts, and refinances. Ms. Shapiro is also currently working with several developers of 'E' designated and other properties in NYC that need to comply with CEQR on obtaining the "Notice to Proceed" and "Notice of Satisfaction" documents.

Dear Mr. Wuthenow:

Enclosed please find the Phase II Environmental Site Assessment (ESA) for the above-referenced location prepared by CA Rich Consultants, Inc. (CA RICH). A Remedial Action Plan (RAP) and Construction Health & Safety Plan (CHSP) will be submitted to you in a few days.

If you have any questions pertaining to the report, please feel free to contact the undersigned.

Sincerely,

**CA RICH CONSULTANTS, INC.**

## **1.0 EXECUTIVE SUMMARY**

A Phase II Investigation was conducted by CA Rich Consultants, Inc. (CA RICH) of Plainview, New York on behalf of 544 Union Owner LLC, for the property located at 544 Union Avenue in Brooklyn, New York (hereinafter referred to as the "Property" or "Site"). The technical approach was based upon findings from the Phase I Environmental Site Assessment (ESA), and from New York City Department of Environmental Protection's (NYCDEP) approval of the Phase II Work Plan dated May 4, 2007.

The Phase II Investigation consisted of a limited GPR survey, obtaining subsurface soil samples from ten (10) separate soil borings that were advanced from the surface down to shallow groundwater throughout the Site, approximately 10 feet below grade, and the collection of three groundwater samples from three of the borings.

The lithology observed during the soil testing indicates that the Site is underlain by unconsolidated fill materials, commonly occurring in the New York City area. Analytical results from this Phase II soil testing indicate that the semivolatile organic chemical compounds (SVOCs), pesticide, and metals constituents that were detected above NYSDEC TAGM values occur at typical concentration ranges characteristic of "urban" fill. There are a few metal exceedences in the soil that are a few orders of magnitude above the guidance, but these few dispersed elevated detections are not indicative of either a petroleum spill or a release. Therefore, the contamination noted at the Site is not indicative of a spill or other liquid release.

The planned Proposal for Property redevelopment will involve the limited excavation of on-site soil/fill earth materials for pile foundation purposes. Therefore, it is recommended that additional subsurface soil samples be collected to properly characterize the soil for off-site waste disposal purposes at an approved permitted disposal facility, as needed. In addition, it is further recommended that any material that is to be disturbed or excavated be properly handled and disposed of based upon the results of the waste characterization analysis. It is also recommended that a subsequent Remedial Action Plan (RAP) and a site-specific Construction Health & Safety Plan be submitted to NYCDEP for approval.

## **2.0 INTRODUCTION**

The following Report was prepared by CA Rich Consultants, Inc. ("CA RICH") of Plainview, New York, on behalf of 544 Union Owner LLC. This Report documents soil and groundwater testing activities recently completed by CA RICH at 544 Union Avenue in Brooklyn, New York (hereinafter referred to as the "Property" or "Site"). The technical approach for this investigation was based upon findings from the Phase I Environmental Site Assessment (ESA), and from New York City Department of Environmental Protection's (NYCDEP) approval of the Phase II Work Plan dated May 4, 2007.

## **3.0 BACKGROUND & PURPOSE**

The subject Property is improved with a one-story vacant industrial building on three contiguous lots totaling 35,692.57 square feet. The Property is located along the eastern side of Union Avenue between Frost Street and Withers Street (see Figure 1 Site Plan). The Tax Map designation for the Property is Block: 2736; Lots: 1, 9, and 48.

The Property is located in a mixed-use industrial/residential/commercial section of Brooklyn, New York and is designated Little 'E' Restricted: Hazmat. The surrounding area consists mostly of warehouses and multi-story residences. The area is serviced with municipal sewer and water.

The scope of Phase II testing is based upon the Phase I ESA findings and NYCDEP's approval of CA RICH's recommended Phase II dated May 29, 2007.

## **4.0 SITE HISTORY**

In May 2007, CA Rich Consultants, Inc. conducted a Phase I ESA of the subject Property. The May 2007 Phase I Report identified the following "Recognized Environmental Concerns (RECs)" and additional issue associated with the property: 1) numerous oil stains, a white residue/powder, and sumps/pits were observed throughout the building and, 2) the subject property is 'E' designated HAZMAT. Based on these findings a Phase II investigation was recommended to determine if the residue is hazardous and if the surface and subsurface soils have been impacted by the former site usage.

On May 4, 2007, CA RICH submitted the following requisite information to the NYCDEP for its review and approval: a Phase II Investigation Work Plan and associated Health and Safety Plan (HASP), the May 2007 Phase I Environmental Site Assessment (ESA) conducted by CA RICH; the proposed architectural site plans; and, a written description of the proposed redevelopment project.

On May 29, 2007, NYCDEP issued their approval letter on the Phase II Investigation Work Plan and associated HASP along with a comment that a GPR survey should be conducted across the entire Site. CA RICH conversed with Vlada Smorgunov of NYCDEP via e-mail on May 30, 2007 about limiting the scope of the GPR survey. At that time, NYCDEP agreed that the GPR survey could be limited to the proposed boring locations instead of Site-wide.

## **5.0 SCOPE OF WORK**

- ◆ A GPR survey was conducted over all proposed sampling locations;
- ◆ Ten (10) soil borings were advanced on-site utilizing a Geoprobe™ from the surface down to shallow groundwater throughout the Site, approximately 10 feet below grade; and,
- ◆ A total of 20 soil and three groundwater samples were collected and analyzed for the following parameters: Volatile Organic Compounds (VOCs) via EPA Method 8260, Semivolatile Organic Compounds (SVOCs) via EPA Method 8270, Pesticides via EPA Method 8081, PCBs via EPA Method 8082, and TAL Metals (filtered and unfiltered for groundwater).

According to the Phase II Work Plan, “a sample of the residue/powder will be obtained using properly decontaminated hand tools and placed on ice until delivered to a NYS-certified laboratory for analysis of hazardous waste characteristics.” However, an asbestos abatement was performed at the Site in June and the residue/powder was disposed of along with the asbestos tile it was on. Since the residue/powder is no longer present, CA RICH was unable to collect a sample.

All test locations are illustrated on Figure 2, and the analytical results are summarized on Tables 1 through 6. Copies of the original laboratory analytical report and soil boring logs are included as appendices.

## **6.0 FINDINGS**

### **6.1 GPR Survey**

To determine if any USTs or other subsurface structures were present beneath the proposed sampling locations, a GPR Survey was conducted around the proposed sampling locations on June 26, 2007. Naeva Geophysics (Naeva) conducted the GPR survey using a Software Noggin Smart Cart Ground Penetrating Radar. No suspect anomalies were identified during the GPR survey.

### **6.2 Soil Sampling**

On June 26, 2007, ten (10) continuous soil borings were advanced utilizing a Geoprobe™ from the surface down to shallow groundwater across the Site, approximately 10 feet below grade. Victoria Whelan of CA RICH was present on-site to oversee all of the soil boring activities. In addition, the borings were logged and characterized as to the shallow fill 'lithology', and the soil/fill samples produced from the test drilling were screened with a Photoionization Detector (PID).

The soil/fill sample from the 0-2 feet below grade interval and the sample containing the highest PID reading or the deepest soil/fill sample collected just above groundwater were collected for further chemical analyses. The soil/fill samples were chemically analyzed by American Analytical Laboratories (a State-Certified laboratory) of Farmingdale, NY subcontracted to CA RICH. The classes of chemical compounds or chemical constituents specified for analyses were Volatile Organic Compounds (VOCs) via EPA Method 8260, Semivolatile Organic Compounds (SVOCs) via EPA Method 8270, Pesticides via EPA Method 8081, PCBs via EPA Method 8082, and TAL Metals.

Overall, the subsurface soils and fill materials generally consisted of three inches of concrete at the surface followed by loose fill materials containing asphalt and brick fragments, which was in turn underlain by sand and gravels deposited upon a thick organic layer. Groundwater was encountered at approximately 10 feet below grade. No petroleum odors or staining was observed in any of these same earth fill materials. The PID readings of the soils ranged from 0 ppm (measured at multiple depths) to 12.5 ppm (measured in boring SB-9 at 8 feet). Soil boring logs are enclosed as Appendix A.

The laboratory analytical results were then compared to their applicable NYSDEC TAGM guidance values (Ref. 1) and are summarized on Tables 1 through 4. The results indicated the following:

- VOCs – Several low level detections below applicable TAGM values. Acetone and Methylene Chloride were detected above TAGM; however, these compounds are common laboratory contaminants and are not perceived to be representative of Site conditions;
- SVOCs – Several detections slightly above TAGM values in soil samples SB-1 (0-2 feet), SB-1 (8-10 feet), SB-2 (2 feet), SB-3 (0-2 feet), SB-4 (1-2 feet), SB-4 (10 feet), SB-5 (1-2 feet), SB-5 (8 feet), SB-6 (0-2 feet), SB-6 (10 feet), SB-7 (0-2 feet), SB-7 (9-10 feet); SB-8 (2 feet), SB-8 (10 feet), SB-9 (0-2), SB-9 (8-10), and SB-10 (3 feet);
- Metals – Several detections above TAGM in one or more samples (Arsenic, Barium, Cadmium, Calcium, Copper, Lead, Magnesium, Mercury, Selenium, and Zinc);
- PCBs – No detections; and,
- Pesticides – 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, Endosulfan Sulfate, Aldrin, Endrin, and gamma-BHC were detected in several soil samples significantly below NYSDEC TAGM. Gamma-BHC was detected slightly above TAGM in one sample SB-9 (0-2 feet).

The soil boring locations are depicted on the attached Sample Location Map (Figure 2) and a copy of the laboratory analytical results are enclosed as Appendix B.

### **6.3 Groundwater Quality**

On June 26, 2007, three (3) groundwater quality samples were collected from soil borings SB-2, SB-6, and SB-10 via the Geoprobe™, identified as GW-1, GW-2 and GW-3. The depth to water at these borings was measured at approximately 10 feet below grade. Based on regional hydrogeology, groundwater is assumed to be flowing in a westerly direction. The samples were analyzed for VOCs via EPA Method 8260, SVOCs via EPA Method 8270, Pesticides via EPA Method 8081, PCBs via EPA Method 8082, and filtered and unfiltered TAL Metals.

Groundwater test results were compared to applicable NYSDEC TOGS groundwater standards or guidance values (Ref. 2) and are summarized on Tables 5 and 6. The results indicate the following:

- VOCs – Several detections slightly above TAGM in one or more samples (1,1,1-Trichloroethane, 1,1-Dichloroethane, Chloroethane, and Methylene Chloride, which was detected in the laboratory method blank);
- SVOCs – Several detections significantly below NYSDEC TAGM;
- Metals – Several detections above TAGM in one or more samples (Arsenic, Barium, Cadmium, Calcium, Copper, Lead, Mercury, Selenium, and Zinc);
- PCBs – No detections; and,
- Pesticides – No detections.

The location of the groundwater samples are depicted on the attached Sample Location Map (Fig. 2) and a copy of the laboratory analytical results are enclosed as Appendix B.

## **7.0 CONCLUSIONS AND RECOMMENDATIONS**

This Phase II Environmental Investigation was performed in accordance with customary practice and generally accepted protocols within the environmental consulting industry. At the time of this study, and based upon the limitations inherent to the kind of information that can be generated by the specific data that was acquired, we provide the following conclusions and recommendations:

- The subsurface soils at the Site were investigated at ten (10) separate locations resulting in the chemical analysis of a total of 20 soil samples from beneath the Site. The lithology observed during the soil testing indicates that the Site is underlain by construction fill material, which is common in the New York City area. In addition, an organic layer was encountered and ranged from 7-9 feet below grade.

- The soil sample test results indicate that certain metals such as Arsenic, Barium, Cadmium, Calcium, Copper, Lead, Magnesium, Mercury, Selenium, and Zinc are present beneath the Site at levels above NYSDEC TAGM values or Eastern USA Background at one or more locations. In addition, levels of several SVOCs were detected above NYSDEC TAGM values in several soil samples. The typical SVOC constituents found benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenzo(a,h)anthracene, and chrysene, are commonly associated with byproducts of combustion found in construction fill throughout Brooklyn and Queens. Furthermore, the presence of select metals, SVOCs and one pesticide (at location SB-9) detected above NYSDEC TAGM values are typically characteristic of “urban” fill and are not considered indicative of any discrete spill or release. In addition, while there are a few metal exceedences in the soil that are a few orders of magnitude above the guidance, these few dispersed elevated detections are not indicative of either a petroleum spill or a release.
- The proposed Property redevelopment will involve the limited excavation and off-site removal of on-site unconsolidated soil/fill earth materials down to approximate 50-60 foot depths for pile foundation purposes. Therefore, it is recommended that additional soil samples be collected to properly characterize the soil for waste disposal purposes at an approved off-site waste disposal facility. In addition, it is recommended that any material that is to be disturbed or excavated be properly handled and disposed of based upon the results of a waste characterization analysis.
- The uppermost groundwater underlying the Site occurs at approximately 10-feet below grade and is assumed to flow in the westerly direction. It was sampled from three separate on-site temporary sampling points drilled beneath the surface. Chemical analyses of these three samples did reveal that the chlorinated solvents 1,1,1-Trichloroethene and 1,1-dichloroethene are dissolved in the groundwater at concentrations slightly above NYSDEC TOG levels in the upgradient sample location GW-2. In addition, Chloroethane- a chemical that was historically mainly produced for the production of tetraethyl lead, which is a gasoline additive was found at 1,600 ppb at upgradient location GW-2. The downgradient sample GW-1 contained only 13 ppb of chloroethane. 1,1,1-Trichloroethene and 1,1-dichloroethene were not detected in sample GW-1.

In summary, the VOCs detected appear to be attributable to a regional off-site source. The groundwater beneath the Site is not used for potable drinking water purposes. The presence of VOCs in the groundwater will not pose a threat to future building residents because a vapor barrier is planned for installation beneath the new building.

- Based upon the results of the Phase II investigation, CA RICH recommends that a site-specific Remedial Action Plan (RAP) and Construction Health & Safety Plan be prepared and submitted to NYCDEP.

## **8.0 INVESTIGATION LIMITATIONS**

CA RICH CONSULTANTS, INC. (CA RICH) performed the environmental work described herein in accordance with an approved limited scope of work and generally accepted protocols utilized within the environmental consulting profession. There were no intentional deviations or deletions from standard procedures in the performance of this work. The approved scope of work, as jointly agreed upon, was limited to the review of selected readily available and reasonably accessible documents/reports made available to CA RICH, and our evaluation of specific areas on the Site utilizing approved specific methods of investigation. As such, our findings and conclusions are limited to only those areas and media as described and studied herein.

CA RICH cannot warrant site-wide conditions because there may remain unknown or hidden conditions that could not be revealed during the limited testing conducted. Also, the undersigned cannot be held responsible for innocent or intentional misrepresentations or inaccurate information furnished to CA RICH regarding the environmental integrity of the area that may pose any potential for further environmental risk given a proposed redevelopment plan. However, we do acknowledge that to the best of our belief, the information we have supplied is true, complete and correct, and that facts or figures that may have an adverse effect upon the validity of the findings, conclusions and/or any recommendation(s) provided in this report have not purposely been omitted.

Should future testing/remediation activities reveal additional areas of environmental concern, then the findings and conclusions of this investigation and any further agency review may be subject to additional information needs and revision. In addition, CA RICH subcontracted State-Certified American Analytical Laboratories, Inc. of Farmingdale, NY as an independent entity to chemically analyze the environmental samples collected by CA RICH as part of this investigation.

CA RICH has no interest other than professional in this assignment and neither its performance, nor compensation for same, is contingent upon the findings or conclusions represented herein.

Plainview, NY 11803

TEL: (516) 576-8844  
FAX (516) 576-0093

RE: 544 Union Ave. Brooklyn, N.Y.

Order No.: 0706264

Dear Victoria Whelan:

American Analytical Laboratories, LLC. received 12 sample(s) on 6/28/2007 for the analyses presented in the following report.

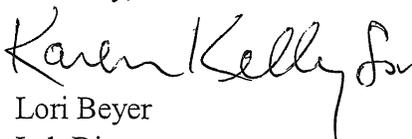

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

CLIENT: CA Rich Consultants Inc.  
Project: 544 Union Ave. Brooklyn, N.Y.  
Lab Order: 0706264

**TELEPHONE: (631) 454-6100      FAX: (631) 454-8027**

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

Order No.: 0706266

Dear Victoria Whelan:

American Analytical Laboratories, LLC. received 12 sample(s) on 6/28/2007 for the analyses presented in the following report.

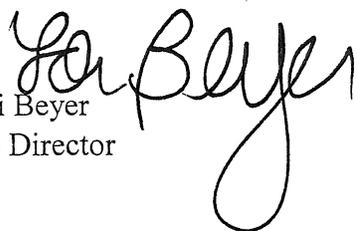

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

CLIENT: CA Rich Consultants Inc.  
Project: 544 Union Avenue Brooklyn, N.Y.  
Lab Order: 0706266

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time
