## EXECUTIVE SUMMARY

---

This report provides geotechnical recommendations for a multi story building at 544 Union Avenue in Brooklyn, New York. URS was originally retained by 544 Union Owner LLC to provide geotechnical engineering design services for a building that was designed by others and went dormant after driving piles. URS has been retained by 544 Unioncon LLC to update the geotechnical engineering report to include the work that was performed prior to the project going dormant.

Based on the 13 test borings performed at the site, the subsurface conditions consist of 5 to 18 ft of fill material underlain by a peat and organic clay layer with a thickness ranging from 2 to 15 ft. A 60 to 80 ft thick layer of sand is present beneath the peat and organic clay layer. Bedrock was not encountered. Groundwater was encountered at a depth of approximately 5 ft below the ground surface.

The recommended New York City Building Code soil profile type for this site is S<sub>3</sub>, with a corresponding S-factor of 1.5. The potential for liquefaction, in accordance with the NYC Building Code, is a concern and needs to be considered in the design.

As part of the original foundation recommendations and the initial construction in 2007-2008, 14 inch diameter Tapertube piles with a nominal yield strength of 50 ksi and a wall thickness of 0.25 inch were installed by Underpinning & Foundation Skanska, Inc. The pile driving hammer used was a Junttan HHK-5 hydraulic hammer. Initial test pile results indicated that the piles might have ultimate capacities in the 150 to 180 ton range. However, since some of the piles were damaged, it was decided to install additional piles to a shorter length to possibly avoid potential obstructions. The test pile results for these shorter test piles indicated that the piles may have ultimate capacities of approximately 100 tons. A total of two piles were selected for static load testing. The test results confirmed an allowable compression capacity of 70 tons and an allowable geotechnical uplift capacity of 24 tons. A total of 222 production piles were installed. Due to the proximity of the 31 Withers Street building and concerns regarding the effect of pile vibration on the building, the piles in this area were not installed. In order to potentially avoid having to install drilled piles in this area, the possibility of constructing a mat foundation for this building was investigated. The mat analyses performed previously are no longer applicable to the new building design.

Any additional piles that need to be installed can use the same size Tapertube pile. If the piles are driven with the same pile driving hammer and pile driving criteria, no additional static pile load tests will be required. However, it is recommended that additional PDA tests be performed on several of the initial piles installed once pile driving recommences. The Tapertube pile is a proprietary pile and is driven in New York City only by Underpinning. Recommendations for timber piles, Monotube piles, and straight pipe piles are included in the report. However, because these piles are different than the previously installed Tapertube piles, additional PDA and static load tests may be required.

Driving of piles close to adjacent structures may lead to excessive vibrations of the structure and possible settlement of the structure, depending on the foundation system of the adjacent structure. The distance at which vibrations and/or settlements will become a concern is dependent on many factors and should be determined in the field based on the results of vibration and settlement measurements made during the driving of the initial piles. For the

## **EXECUTIVE SUMMARY**

---

purpose of estimating costs, it is recommended that piles located within 20 ft of adjacent structures should be considered to need a drilled-in foundation element (i.e., minipile). Due to the potential for large differential settlements between the existing piles and spread footings, the use of spread footings are not recommended.

A design groundwater depth of 4 ft below grade is recommended. Considering this, and that both buildings will not have a cellar level, the need for permanent groundwater control is not a concern; however, a vapor barrier installed beneath the cellar slab is recommended.

## 1.1 GENERAL

This report presents the results of the geotechnical investigation performed by URS Corporation (URS) for the proposed building located at 544-566 Union Avenue in the Borough of Brooklyn, New York (see Figure 1). URS was originally retained by 544 Union Owner LLC to provide geotechnical engineering design services for a building that was designed by Gene Kaufman, Architect PC (GKA). URS performed geotechnical investigations and submitted a report on July 25, 2007. URS was also retained by 544 Union Owner LLC to provide construction support and controlled inspection services for the piles. After driving the piles at the site, the project went dormant. URS has been retained by 544 Unioncon LLC to update the geotechnical engineering report to include the work that was performed prior to the project going dormant. Authorization to proceed with this work was obtained in the form of an agreement between 544 Unioncon LLC and URS Corporation and executed on December 20, 2010.

The foundation recommendations provided herein are in accordance with the 1968 New York City Building Code.

## 1.2 PROJECT DESCRIPTION

The project site encompasses the properties at 544 Union Avenue (Block 2736, Lot 1), 18 Frost Street (Block 2736, Lot 9), and 29 Withers Street (Block 2736, Lot 48). At the time of the field investigation, a one story industrial building encompassed all of the lots. Based on the information collected by us, the existing building was mainly used as a machine shop. The building has three garage doors on opposite ends of the building. The building does not have a cellar.

The “G” subway train is present beneath Union Ave. Based on the drawings provided by GKA, the bottom of the subway is estimated to be 25 ft below ground surface and the distance from the proposed building to the edge of the subway structure is estimated to be 23 ft.

The city records show that there is a 3 story residential building at 31 Withers Street (southeast corner of the site), and a 2 story industrial building at 22 Frost Street (northeast corner of the site). The depth and type of foundations of these buildings is unknown.

It is proposed to construct a multi-story building along Union Ave. and Frost St. It is not planned to construct a cellar for this building. The revised building configuration will include additional piles.

## 1.3 OBJECTIVES AND SCOPE OF SERVICES

The objectives of this investigation were to evaluate the subsurface conditions beneath the proposed building site and to provide geotechnical recommendations for design and construction. In order to achieve these objectives, the following scope of work was performed:

- Retained a drilling subcontractor to perform test borings at the proposed building site.
- Provided full-time controlled inspection of the drilling operations.

- Prepared this geotechnical report that includes the following:
  - a) A description of the subsurface investigation performed for this project;
  - b) A boring location plan showing the locations of the completed test borings;
  - c) The results of engineering evaluations and recommendations regarding the foundation design including:
    - Foundation type and estimated capacity; and bearing elevation;
    - Settlement estimates;
    - Evaluation of various pile foundations, if applicable, including estimated pile lengths and capacities;
    - Geotechnical earthquake engineering considerations including soil profile type and liquefaction potential;
    - Permanent groundwater control measures, as necessary;
    - Pile load test requirements, if applicable.
  - d) A discussion of construction related issues including:
    - Subgrade preparation and backfill requirements;
    - Excavation considerations;
    - Temporary groundwater control;
    - Temporary support of excavation system;
    - Construction monitoring considerations including vibration monitoring and compaction control.
  - e) Appendices that include test boring logs and laboratory test results.

## 2.1 GENERAL

The subsurface investigation consisted of a field investigation and geotechnical laboratory testing. The field investigation included test borings prior to construction and test pits during construction. Laboratory testing included physical index and property tests to characterize samples obtained from the field investigation. Details are described in the following sections.

## 2.2 FIELD INVESTIGATION

The field investigation was conducted in two phases. In the first phase, four test borings were performed between December 5 and December 12, 2005, and inspected on a full time basis by Mr. Mynul Chowdhury and Mr. Jonathan Ciampi of URS. One of the four borings was located on the sidewalk along Withers Street and the remaining three were located within the existing building. The borings were performed by Aquifer Drilling and Testing, Inc. of New Hyde Park. The sidewalk boring was advanced with a Mobile B-61 truck-mounted hydraulic rig, while the inside borings were advanced with a Davey DK515 track rig.

The second phase consisted of nine additional borings located within the existing building. The borings were performed by Warren George Inc. (WGI) between June 26 and July 10, 2007 under continuous inspection by Ms. Carol Hawk of URS. WGI used two Davey DK50 track mounted drill rigs. All boring locations are shown in Figure 2.

All borings used the rotary drilling technique with a 3-7/8 in. or 2-7/8 in. diameter tri-cone roller bit and 4 in. or 3 in. steel casing. Soil samples were obtained using techniques and equipment in general accordance with the American Society for Testing and Materials (ASTM) Standard Specification D1586-Standard Penetration Test (SPT). The SPT consists of driving a 2 inch O.D. split spoon sampler for a distance of 24 inches, with repeated blows of a 140 lb. hammer free falling a distance of 30 inches. The standard penetration, or N-value, is determined as the number of blows required to advance the sampler 12 inches after the initial 6 inches of penetration. The recovered split-spoon samples were placed in jars, labeled with the project name and number, boring number, sample, depth, SPT blow counts and the amount of recovery. Undisturbed tube samples were also obtained at two locations using a piston-type sampler.

Upon the completion of Boring B-1, a groundwater observation well was installed. The well was constructed from PVC Schedule 40 pipe. The lower section consists of a 10 ft long screen that is connected to a riser section. The annulus between the PVC and the wall of the test boring was backfilled with sand to near the top of the borehole. The remainder of the annulus was backfilled with bentonite.

The test boring logs are included in Appendix A.

During construction, test pits were performed adjacent to the 31 Withers Street building for the purpose of observing the foundation conditions and the potential impacts to the design and construction of the building at 544 Union Ave. A total of five test pits were performed. The test pit logs are included in Appendix B.

### 2.3 LABORATORY TESTING

Geotechnical laboratory testing consisting of six grain size analyses, three Atterberg limit tests, and one consolidation test was performed on selected soil samples to verify the field classifications and to assist in engineering evaluations. The results of the laboratory testing program are included in Appendix C.

### 2.4 SUBSURFACE CONDITIONS

Generally, subsurface conditions can be described by the following major strata:

#### **Stratum 1 - Fill (11-65)<sup>1</sup>**

This stratum generally consists of a medium dense to very loose brown to gray silty or gravelly fine to coarse SAND with some to trace gravel, brick fragments, or cinders. This stratum was encountered from the ground surface to a depth of about 5 to 18 feet in all test borings. SPT N-values varied from 1 blow per foot (bpf) to 39 bpf.

#### **Stratum 2: Peat and Organic Clay (11-65)**

This material was encountered under Stratum 1 in all borings except B-1. It generally consisted of very soft to medium stiff brown to black PEAT that transitioned into gray ORGANIC SILTY CLAY or sandy CLAY. SPT N-values in this material ranged from 1 to 15 bpf. The thickness of this stratum ranges from approximately 2 ft to 15 ft.

#### **Stratum 3 - Sand (7-65)**

This stratum was encountered under Stratum 1 in boring B-1 and under Stratum 2 in all other borings. It generally consists of a medium dense to dense brown silty fine to coarse SAND with some to trace gravel to fine to coarse SAND, trace silt. This stratum was encountered at depths of about 8 to 30.5 feet below the ground surface to the termination depth of boring except in borings B-1 and B-9 where it extended to a depth of about 90 feet. SPT N-values varied from 8 blows per foot (bpf) to 95 blows per foot (bpf).

### 2.5 GROUNDWATER CONDITIONS

Groundwater was measured inside the observation well installed at Boring B-1 on December 12, 2005 (6 days after well installation), at a depth of 4.8 feet below grade. The well was bailed (i.e., water removed from the well) to ensure that it is working properly. Additional groundwater measurements were made in five of the borings from Phase Two (June 26 – July 10, 2007). Measurements were made in open uncased boreholes after ground water levels had stabilized over night. Ground water depths consistently measured in the range of 4-ft to 6-ft, with an average depth of 4.7-ft. These measurements do not adequately reflect seasonal variations, but confirm a typical ground water surface.

---

<sup>1</sup> Number in parentheses indicates classification according to the New York City Building Code.

### 3.1 GENERAL

This section of the report presents our geotechnical analyses and recommendations for the design of the proposed building foundation. Our evaluations and recommendations are based on the results of the field investigations performed for this project and our current understanding of the proposed project requirements.

### 3.2 SEISMIC CONSIDERATIONS

Based on the subsurface conditions, the seismic site classification (S type) is between an S<sub>1</sub> and an S<sub>3</sub>, mainly because of the presence of Stratum 1 and 2. In accordance with the NYC Building Code, the S type with the larger S factor must be used. Therefore, the recommended S type for this site is S<sub>3</sub>, which has an S factor of 1.5.

It is assumed that the buildings are classified as “Standard Occupancy” structures, as defined by the NYC Building Code. Based on this classification, liquefaction is only a concern if the N-values for the sandy soils below the groundwater plot to the left of the solid line shown in Figure 4. The N-values between depths of about 5 to 25 ft indicate that liquefaction is a concern; therefore, liquefaction needs to be considered in the design of the foundations.

### 3.3 FOUNDATION RECOMMENDATIONS

As part of the original foundation recommendations and the initial construction in 2007-2008, steel pipe piles were installed at the site. The following sections provide a summary of the pile load testing and production pile installation and recommendations for any future pile installations.

#### 3.3.1 Existing Piles

The piles driven previously are 14 inch diameter Tapertube piles with a nominal yield strength of 50 ksi and a wall thickness of 0.25 inch. The tapered section of the pile is 15 ft long with an 8 inch tip diameter. The piles were installed by Underpinning & Foundation Skanska (Underpinning) between October 9, 2007 to February 15, 2008. The pile driving hammer used was a Junttan HHK-5 hydraulic hammer. The hammer maximum rated energy is 54.6 k-ft with a ram weight of 11.0 kips, and a maximum theoretical height-of-fall of 4.9 ft. During driving, the height of the fall was limited to 2 ft.

#### *Pile Load Testing Results*

On October 9, 2007, 16 production piles (including one replacement pile) and 2 test piles, denoted as TP-1 and TP-2, were installed by Underpinning. In addition, Underpinning retained Urkkada Pacific Ltd. (Urkkada) to perform Pile Driving Analyzer (PDA) testing during the driving of 6 piles. The PDA results indicated that the piles might have ultimate capacities in the 150 to 180 ton range. However, four piles are noted on the logs as being bent (how this was determined and the extent of the bend is not noted). It is our understanding that it was then decided by others to install 3 additional piles (replacement piles) to a shorter length to possibly

avoid potential obstructions. These piles were installed on October 15, 2007 and included 2 test piles, denoted as TP-1R and TP-2R, which were driven to depths of about 31 ft and 35 ft, respectively. The PDA results for these shorter test piles indicates that they may have ultimate capacities of approximately 100 tons.

The installation of the piles noted above were inspected by Special testing & Consulting (SPC). After the driving of these piles, the client retained URS to observe the load test program, develop the pile driving criteria, and inspect the production piles.

A total of two piles were selected for static load testing. The test results confirmed an allowable compression capacity of 70 tons. In addition, monitoring of the reaction piles used for the load test indicate an allowable geotechnical uplift capacity of 24 tons.

Additional details regarding the test pile driving, PDA results, and static load test results are included in Appendix D.

#### *Pile Recommendations*

Based on the results of the pile load tests, the pile driving records and analyses, the following conclusions and recommendations were made:

1. Allowable compression capacity of test piles is 70 tons.
2. During production driving of piles, the piles should be driven to a minimum driving criteria of 16 blows per foot (bpf) and 10 bpf for at least 5 ft above the 16 bpf. The second criteria (i.e., for 5 ft above the 16 bpf) is done to provide some assurances that the piles are installed a minimum of 5 ft into the sand stratum below the clay stratum.
3. The driving criteria provided herein are based on the use of the same hammer used for the test piles. If the pile driving equipment is changed or modified during driving of production piles, it may be necessary to perform additional PDA tests to assist in ensuring that an adequate pile capacity is being achieved.
4. Allowable geotechnical tension capacity of 24 tons, which includes the pile weight.

#### *Production Piles Summary*

A total of 222 production piles were installed. The latest as-built pile drawing provided to URS is dated February 13, 2008 and is included in the Figures section of this report.

Due to the proximity of the 31 Withers Street building and concerns regarding the effect of pile vibration on the building, the piles in this area were not installed. The original design included this a separate building (referred to as Building B) from the main building (referred to as Building A). In order to potentially avoid having to install drilled piles in this area, the possibility of constructing a mat foundation for this building was investigated. The results of the analyses performed by URS for this foundation are include in Appendix E. We are not aware of any decision by the architect / structural engineer or the owner to proceed with a mat foundation. The mat analyses performed previously are no longer applicable to the new building design.

### **3.3.2 Future Piles and Foundations**

Any additional piles that need to be installed can use the same size Tapertube pile. If the piles are driven with the same pile driving hammer and pile driving criteria, no additional static pile

load tests will be required. However, it is recommended that additional PDA tests be performed on several of the initial piles installed once pile driving recommences. The Tapertube pile is a proprietary pile and is only driven in New York City by Underpinning.

The following pile types can also be considered. However, because they are different pile types than those previously installed, additional PDA and static load tests may be required.

#### *Timber Piles*

It is estimated that timber piles having a 12 inch butt diameter and 7 inch tip diameter will achieve an allowable capacity of 25 tons at a depth of approximately 50 ft below pile cutoff. Since this depth is close to the maximum length of a timber pile, it is recommended that test piles be installed at the site prior to selecting this foundation system. If this is not performed, it is possible that the piles may have a lower capacity than estimated when they are installed to the same depth. In order to avoid pile damage during driving through the fill layer, the timber piles should have a steel tip reinforcement.

A liquefaction induced downdrag load of 2 tons should be added to the seismic load case.

#### *Monotube Piles and Pipe Piles*

Monotube piles are a proprietary pile system that use a steel shell that has a continuous taper for the bottom section and is filled with concrete after installation. Based on a Monotube pile with a 14 inch butt diameter and a J taper, it is estimated that an allowable capacity of 60 tons will be achieved at a depth of 40 ft and 100 tons will be achieved at a depth of 50 ft below pile cutoff. Based on the pile driving results from the Tapertube pile, which is very similar to the Monotube pile, an allowable compression capacity of 70 tons is recommended.

Based on a 12 inch outside diameter straight concrete filled steel pipe pile, driven closed-end, it is estimated that an allowable capacity of 60 tons will be achieved at a depth of approximately 70 ft and 100 tons at a depth of approximately 100 ft below pile cutoff.

Liquefaction induced downdrag loads of 12.5 tons and 4 tons should be added to the seismic load case for the 14 inch Monotube and 12 inch pipe pile, respectively.

In order to avoid pile damage during driving through the fill layer, it is recommended that all steel piles have a minimum yield strength of 50 ksi. The maximum 3 gauge steel thickness is recommended for the Monotube pile. A preliminary 3/8 inch thickness is recommended for the straight pipe pile. The thickness of the straight pipe pile should be finalized based on the contractor's pile driving equipment and the results from the contractor's wave equation analyses.

#### *Pile Load Test Recommendations*

Confirmation of allowable capacity of friction piles in excess of 30 tons is required by performing static compression load tests. A minimum of two static load tests. For friction piles having capacities of less than 60 tons, the maximum test load of twice the proposed working capacity of the pile must be applied for at least 48 hours. For friction piles with capacities greater than 60 tons, a hold time of 96 hours at the maximum test load is required. During the installation of the test piles, a Pile Driving Analyzer (PDA) should be used to confirm that the allowable stresses in the pile are not exceeded during driving and to assist in developing pile driving criteria.

The above requirements are based on the 1968 NYCBC. The 2008 NYCBC requirements for pile load testing are less stringent, including less number of load tests and reduced hold times for the maximum loads. Therefore, if it is allowed to use the 2008 NYCBC for this project, some cost savings may be recognized.

### 3.3.3 Adjacent Structures

The piles located along Union Avenue are within the influence line of the subway structures. Therefore, drilled-in casings were installed prior to driving the piles, the soil in the casing was removed and the Tapertube piles were installed through the casing. URS had no involvement in obtaining approval from the Transit Authority (TA) for this work. It is our understanding that GKA coordinated the pile requirements with the TA. Any additional piles to be installed within the subway influence line will need to be installed in a similar manner.

Driving of piles close to adjacent structures may lead to excessive vibrations of the structure and possible settlement of the structure, depending on the foundation system of the adjacent structure. Therefore, the structural engineer should locate the driven piles as far away from existing structures as possible. The distance at which vibrations and/or settlements will become a concern is dependent on many factors and should be determined in the field based on the results of vibration and settlement measurements made during the driving of the initial piles. For the purpose of estimating costs, we recommend that piles located within 20 ft of adjacent structures should be considered to need a drilled-in foundation element (i.e., minipile).

It is estimated that a spread footing having an allowable bearing pressure of 1 tsf and placed at a depth of approximately 5 ft will experience settlements on the order of 2 to 3 inches. It is likely that much of this settlement will occur after the building is constructed. The deflection of the piles will be relatively small; therefore, the estimated settlement should be considered as a differential settlement. Considering this, spread footings are not recommended.

### 3.3.4 Floor Slab

The data from the laboratory tests on the soils of Stratum 2 indicate that the soil is somewhat overconsolidated. Therefore, considering that no additional fill will be placed at the site, settlement of this layer beneath the floor slab is not anticipated to be a concern. Therefore, the first floor slab of the buildings can be constructed as a slab-on-grade. The subsurface conditions at the proposed slab level are likely to consist of Stratum 1. Upon proper preparation of the subgrade, as given in Section 4.2, the slabs should bear on a minimum of 6 inches of crushed stone.

## 3.4 LATERAL EARTH PRESSURE

The design lateral pressures for permanent below grade walls consist of static and seismic pressures that are influenced by the thickness and type of overburden material. We recommend that the below grade walls located above the design groundwater level be designed for a static lateral soil pressure of 45 pcf. For the portion of the below grade walls located below the design

groundwater level, we recommend a static lateral pressure based on an equivalent fluid pressure of 85 pcf.

The NYC Building Code also requires that the below grade walls be designed to resist seismic loads. We recommend using a seismic lateral soil force of  $5H^2$  (lb/ft of wall), where H is the total vertical height of the wall, in feet. This force is in addition to the static force and should be applied at a distance of H/3 from the top of the wall (i.e., wall pressure is an inverted triangle).

The recommended lateral pressure does not include any surcharge loads adjacent to the walls or at the ground surface. We recommend adding a uniform (i.e., rectangular) lateral pressure distribution of 0.40 times the surcharge to the lateral soil pressure distribution. The structural engineer should determine the magnitude of the surcharge loads (i.e., live loads).

### **3.5 PERMANENT GROUNDWATER CONTROL**

A design groundwater level of 4 ft below grade is recommended. Considering that the proposed building will not have a cellar level and provided that the first floor slab level is above the design groundwater level, the need for permanent groundwater control is not a concern. However, it is recommended that a vapor barrier be placed beneath the slab.

#### 4.1 GENERAL

This section presents a discussion and recommendations regarding special geotechnical aspects of the proposed construction, which should be addressed in the project specifications and contract documents.

#### 4.2 SUBGRADE PREPARATION

In order to limit differential settlement of the slab-on-grade, it is recommended that the soil subgrade be proof-rolled with a minimum of 6 passes of a smooth drum vibrating roller with a minimum 10 ton static weight, or other approved equipment having similar energy. Any unstable areas encountered which cannot be stabilized by additional compaction should be excavated to competent material and the area backfilled with compacted structural fill. The proof-rolling should not be performed when the subgrade is wet, muddy, or frozen.

If foundations or the lowest level floor slab are constructed in the winter, the subgrade should be protected from frost action to limit possible subgrade deterioration resulting from freezing and thawing cycles. The concrete for the footings or slab should not be poured if the subgrade is wet, muddy, or frozen.

#### 4.3 EXCAVATION CONSIDERATIONS

Local temporary soil excavations above the natural groundwater level can have cut slopes as steep as 1.5H:1V. Temporary soil excavations below the natural groundwater level should be no steeper than 2H:1V.

All vertical soil faces will require temporary support until the new basement walls and foundations are constructed and the area is properly backfilled. A feasible support system may consist of soldier piles or concrete piers and wood lagging with sufficient lateral restraint (e.g., anchors, rakers, bracing, etc.), as required. Measurements of vibration levels should be made in selected adjacent structures during the installation of the support system. The maximum vibration levels should be established as part of the pre-construction survey. In order to reduce excessive noise and vibrations that might develop from hard driving of the piles through obstructions in the soil, the piles could be placed in pre-drilled holes.

The design and construction of any slopes and/or temporary excavation support systems should be the responsibility of a licensed New York Professional Engineer retained by the foundation contractor. All excavations and temporary support systems should conform to pertinent OSHA and local safety regulations. The soil and rock parameters used in the design of the temporary excavation support systems should be reviewed by the owner's geotechnical engineer prior to construction of the temporary support structures. Excavations and bracing will be subject to controlled inspection in accordance with the New York City Building Code.

#### **4.4 TEMPORARY GROUNDWATER CONTROL**

Assuming that the groundwater remains at the measured depth of 5 ft, and considering that neither building will have a cellar level, the need for significant dewatering during construction should not be anticipated. If portions of the buildings are located below the groundwater level, the groundwater should be lowered to at least 2 ft below the bottom of the foundation level so that the subgrade can be properly prepared and inspected. Depending on the size and depth of the excavation, the use of sumps connected to perimeter drainage trenches may not be sufficient to lower the groundwater to the necessary level. Therefore, if large or deep areas need to be excavated, the contractor should develop and submit a groundwater control plan for review and approval by the design engineer.

#### **4.5 UNDERPINNING**

Underpinning will be required at locations where the foundations of existing adjacent structures are above the proposed excavation levels. Underpinning of the adjacent structures should transfer the foundation loads from their present bearing level to a level below the lowest excavation elevation of the proposed building. Some information regarding the depth and type of the adjacent building foundations is available. It is recommended that additional information be collected regarding the depth and type of adjacent building foundations. This information should be provided to the Contractor for the purpose of estimating underpinning needs and for the preparation of the foundation bid. The proposed underpinning system, designed by the Contractors engineer, should be reviewed and inspected by a qualified engineer during construction.

#### **4.6 BACKFILL AND COMPACTION REQUIREMENTS**

Backfill materials should be granular soils free of organic material, cinder, brick, asphalt, ash, and other unsuitable materials. The sandy soils encountered above the bedrock can be used as structural fill provided that unsuitable materials are removed prior to placement. Backfill beneath slabs-on-grade should be compacted to a minimum of 95% of the maximum dry density, as determined by ASTM D1557-88, Method C. All backfill should be placed in lifts not exceeding 8 inches in loose thickness.

#### **4.7 PRE-CONSTRUCTION SURVEY**

A pre-construction survey should be performed for any adjacent structure or utility that is within 50-ft of the proposed construction site, to provide the Owner with documentation of existing conditions in the event of a future damage claim. Based on the survey results, a monitoring program should be designed for checking the performance of the adjacent structure or utility and for monitoring construction procedures. This monitoring program should include recommendations for the location of survey points to monitor vertical and horizontal movements and locations for monitoring vibrations during key construction activities. The monitoring program should also included criteria for allowable movements and vibrations, and the procedures to be implemented if the criteria are exceeded during construction.

**4.8 CONSTRUCTION MONITORING**

It is recommended that a geotechnical engineer familiar with the subsurface conditions and foundation design criteria review and approve the foundation contractors procedures and provide inspection services during excavation and foundation construction. Inspection services should include:

- Observation and documentation of all phases of excavation and foundation construction.
- Special inspection of the subgrade and pile installation, as required by the NYC Building Code.
- Monitoring of vibrations.
- Monitoring of subgrade preparation, backfill placement, and compaction.
- Load test inspection and report preparation, if required.

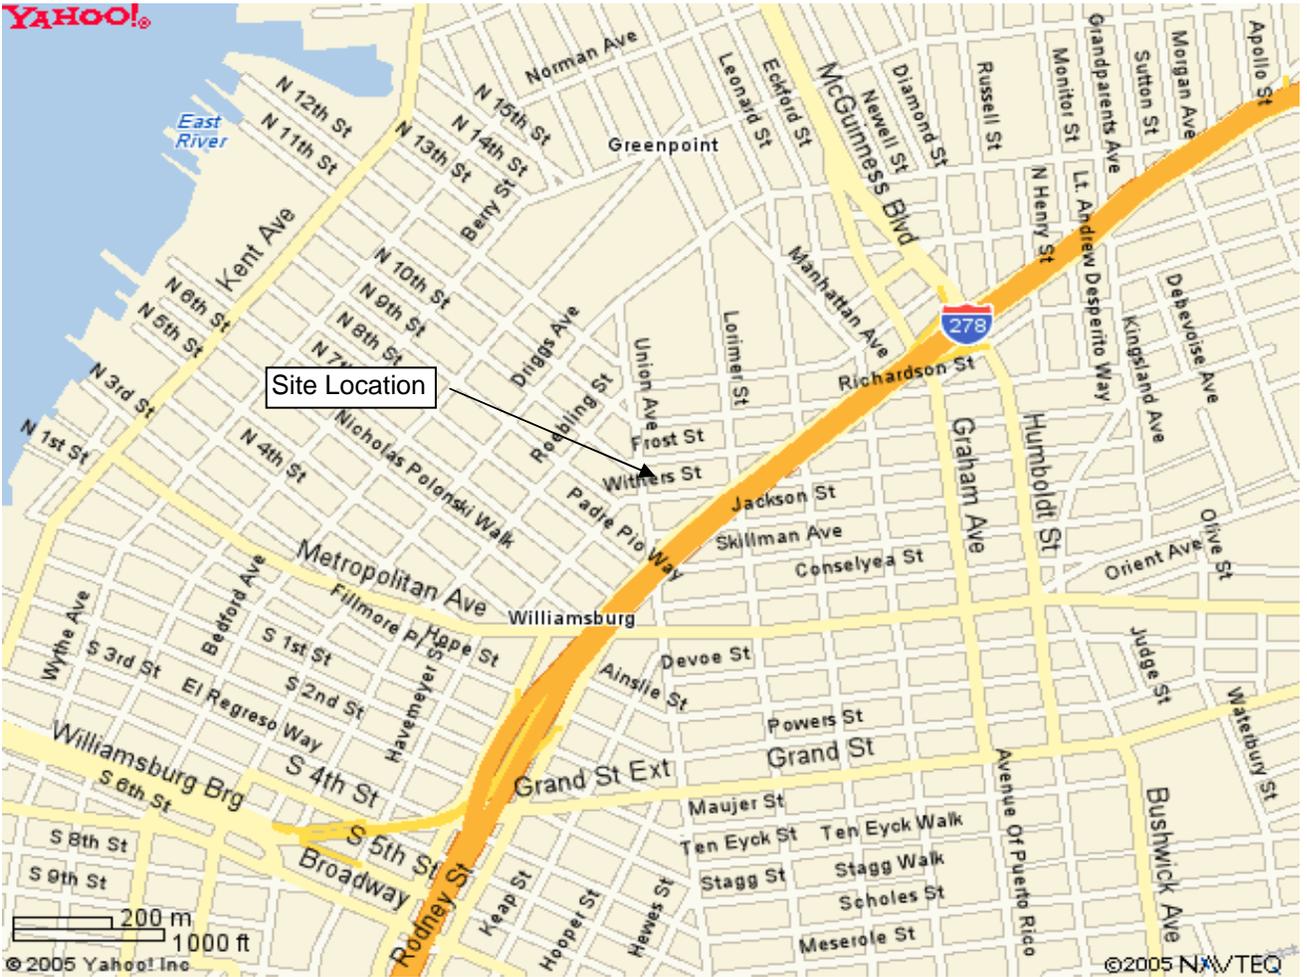

Professional judgments were necessary in relation to determining stratigraphy and soil properties from the subsurface investigations. Such judgments were based partly on the evaluation of the technical information gathered, and partly on our experience with similar projects. If further investigation reveals differences in the subsurface conditions and/or groundwater level, or if the proposed building design is different from indicated herein, or is changed, it is recommended that we be given the opportunity to review the new information and modify our recommendations, if deemed appropriate.

The results presented in this report are applicable only to the present study, and should not be used for any other purpose without our review and consent. This study has been conducted in accordance with the standard of care commonly used as state-of-the-practice in the profession. No other warranties are either expressed or implied.

### SAMPLE INFORMATION

Boring: B-4  
 Sample: U-1C  
 Depth: 21.40 feet  
 Elevation:  
 Type: 3-inch thin wall tube  
 Description: CH-OH, gray ORGANIC CLAY, some c-f sand;  
 peat mat'l noted.  
 LL = 66, PL = 30, PI = 36

### SPECIMEN INFORMATION

(NOTE: Initial and final states refer to beginning and end of test)

Initial height: 0.61 inch  
 Diameter: 2.50 inch

Initial water content: 48.8 %  
 Initial total unit weight: 108.2 pcf  
 Initial dry unit weight: 72.7 pcf  
 Initial void ratio: 1.404  
 Initial degree of saturation: 97 %

Final water content: 44.5 %  
 Final total unit weight: 112.6 pcf  
 Final dry unit weight: 77.9 pcf  
 Final void ratio: 1.243  
 Final degree of saturation: 100 % (assumed specific gravity = 2.80)

### TEST SUMMARY

Construction Method: Casagrande (Log)  
 Estimated preconsolidation stress (tsf): 2.2 (Range: 1.5 to 2.4)  
 Estimated in situ effective overburden stress (tsf):  
 Compression Ratio (strain per log cycle stress): 0.179  
 Compression Index (void ratio per log cycle stress): 0.430  
 Swell Ratio (strain per log cycle stress): 0.041  
 Swell Index (void ratio per log cycle stress): 0.099  
 Recompression Ratio (strain per log cycle stress): 0.033  
 Recompression Index (void ratio per log cycle stress): 0.079

**Subject: Axial Pile Load Test Results – 14” Tapertube Piles  
544 Union Avenue, Brooklyn, NY**

Dear Ms. Westreich:

This letter report presents the results of static axial pile load tests performed on 14” Tapertube® piles for the proposed building located at 544 Union Avenue in Brooklyn, New York. The following sections present information regarding the pile type and installation, load test results, and conclusions and recommendations.

## **Pile Type and Installation**

The piles tested are 14” Tapertube piles with a nominal yield strength of 50 ksi and a wall thickness of 0.25”. The tapered section of the pile is 15 ft long and with an 8” tip diameter. It is our understanding that 18 piles were driven on October 9, 2007 by Underpinning and Foundation Contractors, Inc. (Underpinning). These piles consisted of 16 production piles (including one replacement pile) and 2 test piles denoted as TP-1 and TP-2. Installation of these piles were inspected by Special testing & Consulting (SPC). In addition, Underpinning retained Urkkada Pacific Ltd. (Urkkada) to perform Pile Driving Analyzer (PDA) dynamic pile testing on 6 of the 18 piles installed on October 9, 2007. PDA dynamic testing of these 6 piles, indicated that the piles might have ultimate capacities in the 150 to 180 ton range.

Out of these 18 piles, 4 piles are noted on the logs as being bent (how this was determined and the extent of the bend is not noted). It is our understanding that it was then decided by others to install 3 additional piles (replacement piles) to a shorter length so as to possibly avoid potential obstructions to the piles. These piles were installed on October 15, 2007 and consisted of 2 load test piles denoted as TP-1R and TP-2R, which were driven to depths of about 31 ft and 35 ft, respectively. In addition, PDA testing was also performed on these test piles. The PDA dynamic testing of these shorter test piles indicates that they may have ultimate capacities of approximately 100 tons.

Page 2

The driving hammer is a Junttan HHK-5 hydraulic hammer. According to the manufacturer specifications, the hammer maximum rated energy is 54.6 ft-kip with a ram weight of 11.0 kips, and a maximum theoretical height-of-fall of 4.9 ft. The maximum practical height of fall is 4.5 ft. During driving, the height of fall was limited to 2.0 ft.

The pile driving records are included in Appendix A. The results from PDA testing are included in Appendix B.

### **Axial Static Load Test Results**

The axial static load tests were performed in general accordance with the requirements given in the New York City Building Code (NYCBC). The loads were applied by Underpinning, under the supervision of URS field representative. The measurements of pile displacements and pile loads were performed by the URS field representative. The static load tests on test piles TP-1R and TP-2R were started on November 12, 2007 and completed on November 21, 2007. In addition to the compression load tests, URS also monitored the upward movement of the reaction piles at the request of Underpinning.

The movement of the pile as a function of the load is given in Figures 1 and 2 for TP-1R and TP-2R, respectively. Also included on these figures are the estimated movements of the pile due to elastic compression of the pile. The NYCBC requires that the net settlement of the pile at twice the working load (200 % load) be less than 0.75 inches. The net settlement is defined as the gross settlement of the pile minus the elastic compression of the pile. The net settlement of the test piles (TP-1R and TP-2R) at the 200% load of 140 tons is less than 0.75 inches; therefore, the test piles have a compression working capacity of 70 tons.

Each test pile was connected to four reaction piles during the load test. Therefore, when the compression test piles were loaded to a maximum load of 180 tons each reaction pile may have experienced an uplift load of about 45 tons. The observed upward displacement measurements obtained from all (total 8) reaction piles indicated that gross displacements were less than 1/10 inch. Considering that elastic extension of the reaction piles for 45 tons load is also about 1/10 inch, measured net settlement of the reaction piles for a maximum (ultimate) load of about 45 tons was negligible.

The measured data from the compression load tests are included in Appendix C. The upward movements of reaction piles are included in Appendix D.

### **Conclusions and Recommendations**

Based on the results of the pile load tests, pile driving records and our analyses, the following conclusions and recommendations are provided:

1. Allowable compression capacity of test piles is 70 tons.

2. During production driving of piles, the piles should be driven to a minimum driving criteria of 16 blows per foot (bpf) and 10 bpf for at least 5 ft above the 16 bpf. The second criteria (i.e., for 5 ft above the 16 bpf) 10 bpf is done to provide some assurances that the piles are installed a minimum of 5 ft into the sand stratum below the clay stratum.
3. The driving criteria provided herein are based on the use of same hammer as the test piles. If the pile driving equipment is changed or modified during driving of production piles it may be necessary to perform additional PDA tests to assist in ensuring that an adequate pile capacity is being achieved.
4. Allowable tension capacity of 24 tons, which includes the weight of the pile (about 2 tons).

Thank-you for selecting us for this technically challenging project. Please contact me if you have any questions, or need additional information.

Sincerely,

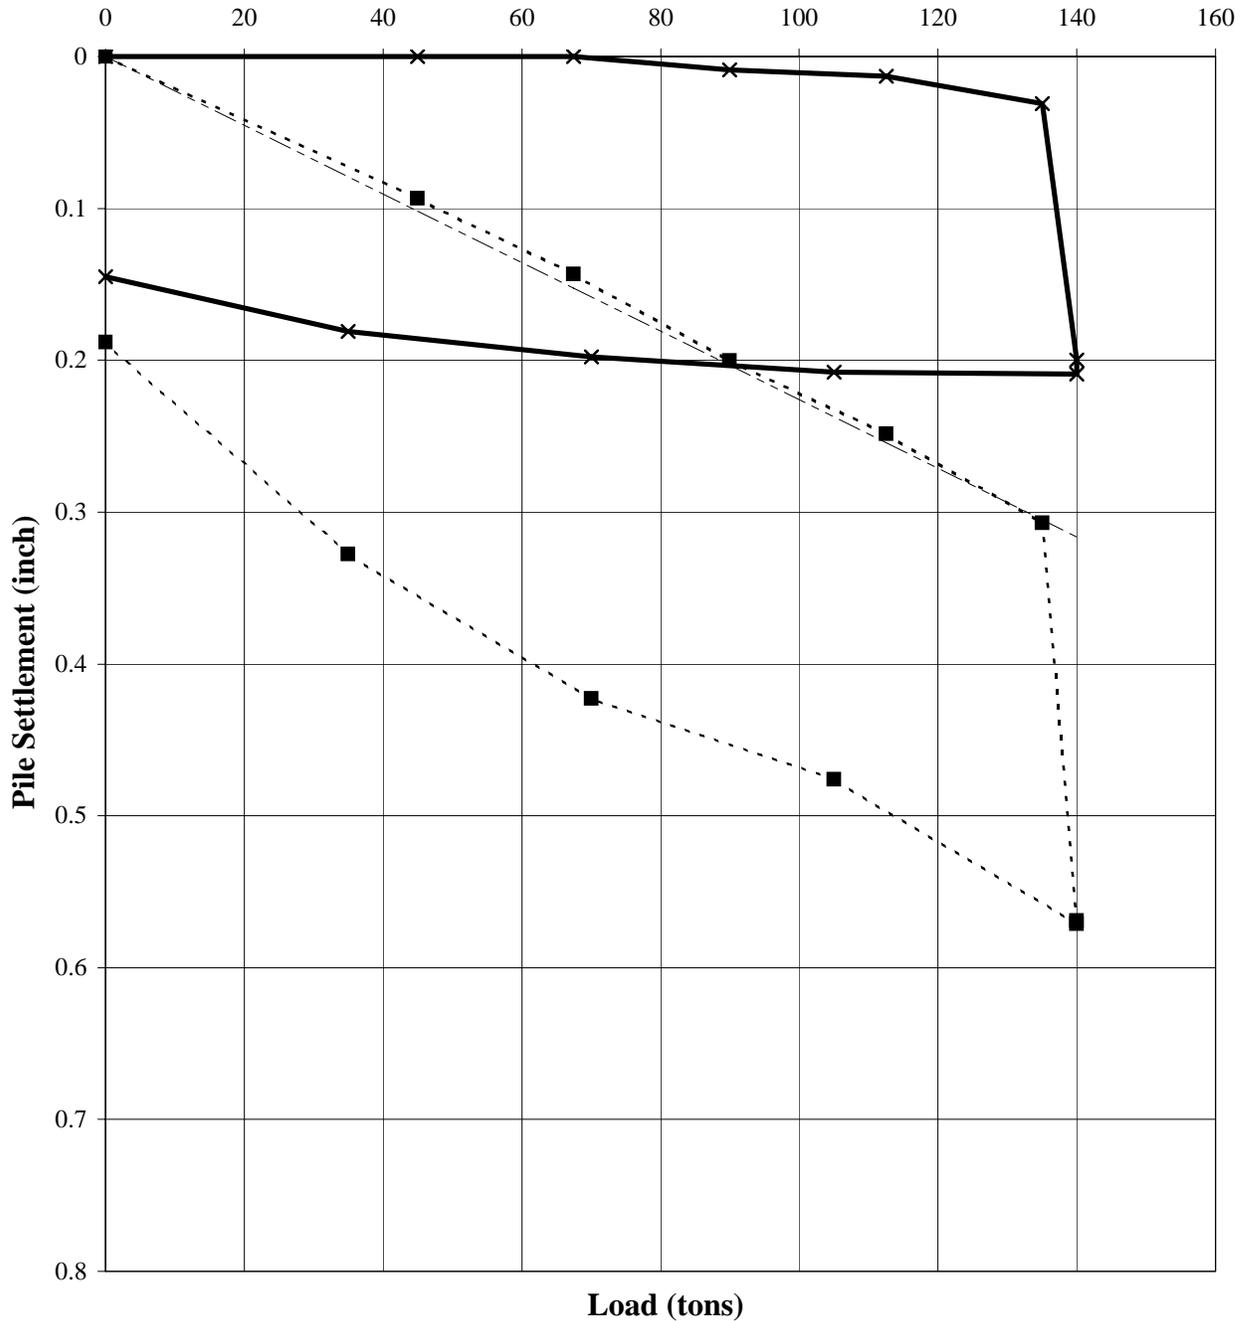

A handwritten signature in black ink, appearing to read 'Thomas G. Thomann', written over a light blue grid background.

Thomas G. Thomann, Ph.D., P.E.  
Vice President

PDA TESTING RESULTS

Comprehensive Geotechnical Engineering Services

# Report on Dynamic Testing and Analysis of Piles

**544 Union Ave.**

**Brooklyn, NY**

## 1. Terms of Reference

Urkkada has been retained by Underpinning and Foundation Contractors, Inc. (Underpinning) to perform PDA testing and analysis of piles driven at 544 Union Ave., Brooklyn, NY. Mr. Stanley Merjan, P.E., Underpinning, is contact person.

This report presents results of dynamic testing and analysis of eight piles driven at the subject site. The piles were tested using the PAL-R remote PDA system, owned and operated by Underpinning. The data was collected and analyzed in Urkkada office, utilizing a telephone connection to the remote system. The data was collected on October 9, 2007. Also, an Urkkada representative tested additional piles during our site visit on October 15, 2007.

## 2. Piles

Eight piles, designated TP1, TP1R, TP2, TP2R, 70, 145, 146, and 152, are tested. The piles are 8" x 14" x 15' x 0.25" wall thickness Tapertube piles with 14" x 0.25" wall thickness pipe extensions. The nominal yield strength of the steel is 50 ksi. The piles are driven at production locations.

The desired ultimate capacity is 360 kips.

## 3. Hammer

The driving hammer is a Junttan HHK-5 hydraulic hammer. According to the manufacturer specifications, the hammer maximum rated energy is 54.6 ft-kip with a ram weight of 11.0 kips, and a maximum theoretical height-of-fall of 4.9 ft. The maximum practical height of fall is 4.5 ft. During driving, the height of fall was limited to 2.0 ft.

## 4. Results of Testing and Analysis

### 4.1 General

Details of the piles tested, hammer specifics, dates of driving and testing, depths, etc. are summarized in Table 1 placed after the text portion of the report.

Dynamic test data, such as Case Method Estimates of mobilized static resistance, transferred energy, maximum compressive stresses, corresponding penetration resistance values, CAPWAP results, and other information, are presented in Table 2.

Eight CAPWAP analyses are performed as indicated in Table 2. Detailed CAPWAP results are enclosed in Appendix I. The CAPWAP results include two graphics sheets. The first shows the measured wave traces, and the results of the analysis shown as force match, simulated static loading tests for pile head and pile toe, and the distribution of shaft resistance and pile forces. The second shows diagram of the distribution of "extrema" along the pile, that is, the following values:

- Maximum Force and Maximum Transferred Energy
- Maximum Compressive Stress and Maximum Tension Stress
- Maximum Velocity and Maximum Displacement

### 4.2 Pile Capacity

As indicated in Table 2, the CAPWAP computed capacities of the piles tested are as follows:

Pile	Testing Condition	Embedment (ft)	Mobilized Resistance (kips)	Shaft Resistance (kips)	Toe Resistance (kips)
TP1	ID	42.0 /	300 /	200 /	100
TP1R	ID	34.0 /	230 /	140 /	90
TP2	ID	40.0	200 /	100	100
TP2	RSTR	40.0	320 /	220	100
TP2R	ID	27.0	200 /	120	80
70	ID	42.0	320	220	100
145	RSTR	42.0	360	260	100
152	RSTR	42.0	320	220	100

### 4.3 Maximum Transferred Energy, EMX

185 kips ← Ave.

The maximum transferred energy at the end of driving varied between 19.5 ft-kip and 22.0 ft-kip. At restrike, the maximum transferred energy varied between 19.4 ft-kip and 23.1 ft-kip.

#### **4.4 Maximum Compressive Stresses, CSX and CSB**

During PDA testing, the maximum compressive stress did not exceed 41 ksi, which is within the industry acceptable limit of 90% yield strength. These values are acceptable and pile-damage is unlikely to occur if proper pile alignment is maintained.

#### **4.5 Pile Structural Integrity**

The CAPWAP analyses indicate no structural damage in any of the piles tested.

### **5. Summary of Test Results and On-Site Observations**

- At end of drive, the CAPWAP computed capacity ranged between 200 kips and 320 kips. The shaft resistance ranged between 100 kips and 220 kips and the toe resistance ranged between 80 kips and 100 kips.
- At restrike, the CAPWAP computed capacity ranged between 320 kips and 360 kips. The shaft resistance ranged between 220 kips and 260 kips and the toe resistance ranged between 80 kips and 100 kips.
- During PDA testing, the maximum compressive stress did not exceed the industry acceptable limit of 90% yield strength.
- The maximum transferred energy at end of drive varied between 19.5 ft-kip and 22.0 ft-kip. At restrike, the maximum transferred energy varied between 19.4 ft-kip and 23.1 ft-kip.
- Five index piles that were not tested with PDA were damaged by obstructions. These damages were sustained when the piles were driven to lengths of 38 feet and longer.
- Seven other index piles that were not tested with PDA did not develop driving resistances in excess of 18 blows per foot at depths to 40 feet.
- No pile damage is observed in the piles tested.

### **6. Recommendations**

Based on the PDA testing and CAPWAP analysis results, we recommend to use the piles as 240 kips (60t design load) rather than 360 kips (90t design load) piles. Pile lengths should generally be limited to 38 feet from existing grade in order to limit damage by obstructions and excessive lengths. Based on the PDA testing and CAPWAP analysis we expect the pile capacity in this length range to fall short of the intended 90 tons. The results of statically load testing piles TP1R and TP2R in accordance with the New York City Building Code will determine the pile capacity.

**APPENDIX E**  
**MAT FOUNDATION RECOMMENDATION LETTER**

---

February 11, 2008

Mr. Terry Jacobs  
Tryad Group  
190 North 10<sup>th</sup> Street  
Brooklyn, NY 11211

**Subject: Mat Foundation Recommendation  
544 Union Avenue, Brooklyn, NY**

Dear Mr. Jacobs:

In our final geotechnical report (July 25, 2007) a mat foundation for Building B (otherwise known as the townhouse) was not recommended because of the very compressible and thick peat / organic clay layer located at a depth of approximately 15 ft. We have performed additional analyses to estimate the settlement of a mat foundation. The calculations are based on the soil pressure distribution provided by Yuriy Ryappo of Gene Kaufman Associates (GKA) on January 31, 2008. A modulus of subgrade reaction of 75 pounds per cubic inch (pci) was recommended to GKA for the analysis of the mat foundation.

The bottom of the mat foundation will have to be at the same depth as the bottom of the foundation of the adjacent building so that the adjacent walls and/or foundation are not loaded by the mat foundation. Based on the test pit information and the depth of the adjacent cellar, we have estimated that the bottom of the mat foundation will be at a depth of approximately 5 ft. Based on the calculations, it is estimated that the settlement will be on the order of 2 inches. Provided that the subsurface conditions underneath the building are uniform, it is anticipated that the settlements will be relatively uniform. The settlement is due to the compression of the peat / organic clay layer, which will occur very slowly with most of the settlement occurring after the building is constructed.

Based on discussions with the structural engineer and architect during a meeting on February 5, 2008, they stated that these settlements will not be detrimental to the performance of the building. Therefore, considering this, and provided that the total soil bearing pressure is consistent with the values given in the soil pressure distribution provided by GKA, the use of a mat foundation is acceptable from a geotechnical perspective. The bottom of the mat should be placed at the bottom of the adjacent building foundation and on a minimum of 6 inches of gravel. In addition, the subgrade soil should not be wet, muddy, or frozen prior to pouring the concrete. Considering that the groundwater is at a depth of approximately 4 to 5 ft below grade, dewatering will be required to obtain a stable subgrade. In accordance with the NYC Building Code, the subgrade is subject to controlled inspection.

## Preface

---

This Health and Safety Plan (HASP) presents health and safety requirements and guidelines for the Remedial Investigations (the “RI”) being conducted around 538 and 544 Union Avenue, Brooklyn, New York (hereinafter, collectively referred to as the “Site”), specifically the work described in Section 4 of this HASP (the “Project”). This HASP has been prepared in compliance with applicable sections of Occupational Safety and Health Administration (OSHA) Regulations 29 Code of Federal Regulations (CFR) Part 1910 and 29 CFR Part 1926. This HASP has been prepared for the exclusive use of employees of URS Corporation (URS). This HASP shall be available at all times during field activities at the Site.

This HASP shall not be used for work activities other than those described in Section 4, nor shall it be modified or used after the expiration date (one year from date of issue) without written approval of the URS Project Manager and Health and Safety Manager (HSM). In addition, this HASP shall not be used by firms or persons not under contract to URS without written approval of URS. This HASP is not valid unless it is signed and dated by the Project Manager, HSM and Regional Health and Safety Manager (RHSM). Any modifications to this HASP require a written addendum and must be approved by the URS Project Manager and HSM.

URS subcontractors may use their own HASP if such a provision is contained in a written agreement with URS. General health and safety requirements in HASPs prepared by URS subcontractors must be as stringent as those contained in this HASP. URS Safety Management Standard (SMS) 046, Subcontractor Health and Safety Requirements, presents additional information on this subject (all SMSs referenced in this HASP are provided in Appendix A).

Contractors and URS subcontractors (hereinafter, all referred to as “Contractors”) involved in field activities who adopt this HASP for the protection of their employees are required to read the HASP and comply with its provisions. The adoption of this HASP does not relieve Contractors of their obligations to provide a safe working environment in accordance with all applicable Federal, State and local requirements including, but not limited to, OSHA Regulations 29 CFR Parts 1910 and 1926. Contractors are solely responsible for providing their employees with appropriate personal protective equipment and monitoring air quality; Contractors are solely responsible for actions taken by their personnel based on the readings.

The health and safety guidelines and requirements presented herein are based on a review of available information and an evaluation of potential hazards. This HASP outlines the health and safety procedures, and equipment required for work activities at this Site to reduce the potential for exposure to field personnel. Changing and/or unanticipated site conditions may require modification of this HASP to maintain a safe and healthful work environment. Any proposed changes to this HASP require a written addendum, which must be approved by the URS Project Manager and HSM. Under no circumstances will modifications to this HASP conflict with Federal, State or local health and safety requirements.

## List of Acronyms and Abbreviations

This section describes the roles of the various positions on the Project as they pertain to health and safety. The names, responsibilities and authorities of key individuals are presented in Table 1.

Other URS personnel who might be involved in field activities include those listed below. All personnel named on this list are qualified to serve as SSOs.

- Abdelaziz, Mira
- Dascoli, Megan
- Friedman, Cary
- Olivo, Nicholas
- Reed, Mark T.
- Trabucco, Tammy

Other personnel may be assigned to the Project as well. Personnel working on the Project must be approved by the HSM and must meet the qualifications of OSHA Regulation 29 CFR Part 1910.120 and this HASP.

### 3.1 GENERAL SITE DESCRIPTION AND HISTORY

This section provides a general description and brief history of the two contiguous sites located at 538 and 544 Union Avenue, King's County, Brooklyn, New York. The information presented below is based upon previous environmental documentation available for URS review at the time of HASP preparation.

#### 3.1.1 538 Union Avenue

This property is currently unimproved vacant land totaling approximately 5,000-square feet (SF). The property is located along the eastern side of Union Avenue between Withers Street and Jackson Street. The Tax Map Identification for this property is Block 2741, Lots 7 & 8.

In August 2007, CA Rich Consultants, Inc. (CARC) conducted a Phase I ESA of the property. The August 2007 Phase I Report identified the following "Recognized Environmental Conditions (RECs)" and additional issues associated with the property:

- Numerous oil stains observed on the concrete floor and concrete block walls near the entrance of a former on-site, one-story warehouse building;
- Historical usage since development of the property has included a junk yard, automobile repair shop, and a manufacturing facility; and,
- The subject property is 'E' designated HAZMAT.

Based on these Phase I findings, CARC completed a Phase II Investigation at the property on April 4, 2008. The Phase II Investigation consisted of obtaining subsurface soil samples from six (6) separate soil borings that were advanced from the surface down to shallow groundwater throughout the site, approximately six (6) feet below grade, and the collection of three groundwater samples from three of the borings.

A total of 12 soil samples were collected and analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), pesticides, and TAL metals. The lithology reported by CARC was that unconsolidated fill materials, commonly occurring in the New York City area, underlay the site. Analytical results from this Phase II soil testing indicate that the SVOCs (i.e. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene and phenol), pesticides (i.e. dieldrin and gamma-BHC) and metals (i.e. arsenic, cadmium, chromium, copper, lead, mercury and zinc) that were detected above NYSDEC TAGM values occurred at typical concentration ranges characteristic of "urban" fill. However, there were few SVOC exceedances in the soil detected at one location that were a few orders of magnitude above guidance. These elevated detections were reportedly related to the presence of ash beneath the site.

Chemical analysis of three groundwater samples revealed that the chlorinated solvents (i.e. 1,1,1-trichloroethane, 1,1-dichloroethane and 1,1-dichloroethene), metals (i.e. aluminum and iron) and pesticides (i.e. dieldrin and endrin) were detected slightly above NYSDEC TOGS. The VOCs detected were attributed to a regional up-gradient source.

### 3.1.2 544 Union Avenue

This property is currently unimproved vacant land totaling approximately 35,700-square feet (SF). The property is located along the eastern side of Union Avenue between Frost Street and Withers Street. The Tax Map Identification for this site is Block 2736, Lots 1, 9 & 48.

In May 2007, (CARC conducted a Phase I ESA of the property. The May 2007 Phase I Report identified the following “Recognized Environmental Conditions (RECs)” and additional issues associated with the property:

- Numerous oil stains, a white residue/powder and sumps/pits observed throughout a former on-site industrial building;
- Historical usage since development of the property has included an iron foundry in 1887 and continuous various industrial uses by others up through 2006. From 1947 to 2006, Beach Ross Company. A federal listed small quantity generator of hazardous wastes operated at the property; and,
- The subject property is ‘E’ designated HAZMAT.

Based on these Phase I findings, CARC completed a Phase II Investigation at the property on June 26, 2007. The Phase II Investigation consisted of obtaining subsurface soil samples from ten (10) separate soil borings that were advanced from the surface down to shallow groundwater throughout the site, approximately ten (10) feet below grade, and the collection of three groundwater samples from three of the borings.

A total of twenty (20) soil samples were collected and analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), pesticides, and TAL metals. The lithology reported by CARC was that unconsolidated fill materials, commonly occurring in the New York City area, underlay the site. Analytical results from this Phase II soil testing indicate that the SVOCs (i.e. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene and phenol), pesticides (i.e. gamma-BHC) and metals (i.e. arsenic, barium, cadmium, calcium, copper, lead, magnesium, mercury, selenium and zinc) that were detected above NYSDEC TAGM values occurred at typical concentration ranges characteristic of “urban” fill. However, there was one Pb exceedances (27,000 mg/kg) in the soil detected at one location (SB-1) at 8-10 feet bgs that was an order of magnitude above guidance.

Chemical analysis of three groundwater samples revealed that the chlorinated solvents (i.e. 1,1,1-trichloroethane, 1,1-dichloroethane and chloroethane) and metals (i.e. arsenic, barium, cadmium, calcium, copper, lead, mercury, selenium and zinc) were detected slightly above NYSDEC TOGS. The VOCs detected were attributed to a regional up-gradient source.

**3.2 PROJECT OBJECTIVES**

The objective of this project is to obtain a Notice of Satisfaction from the NYCDEP Office of Environmental Remediation for submittal to the NYC Department of Buildings. In order to achieve this objective, Remedial Investigations (RI) will have to re-characterize site soils (the fill), complete a soil vapor screening study and conduct groundwater sampling for contaminants of concern. Refer to Figures 1-1 and 1-2 for Proposed Boring Location Maps for each site. Based upon RI results, a Remedial Action Plan (RAP) will be developed for utilization during construction, so all excavated soils are properly handled and disposed off-site. The overall objective is to obtain a notice to proceed with construction of an apartment building from the NYC Department of Buildings.

This HASP covers the following activities:

- Inspection of “direct push technology” (DPT) drilling methods conducted by a drilling contractor including: advancement of test borings and installation of temporary/permanent groundwater and soil vapor monitoring wells;
- Collection of soil samples from DPT drilling using manual sampling techniques;
- Purge and/or collection of groundwater samples from temporary well points and permanent monitoring well locations;
- Manage sampling residuals; and,
- Inspection of Interim Remedial Measures (IRMs) conducted by a remedial contractor including: soil “hot spot” excavations and post-excavation sampling.

This HASP does not cover any site activities other than those specifically described above. Other possible work activities not described above may be conducted after approval of an appropriate Addendum to this HASP by the HSM.

This HASP will expire on November 2012. Use of this HASP after this date to perform the work activities described herein or other activities in addition to those described herein, is not permitted. The expiration date may be extended by the HSM by preparation of an addendum to the HASP approved by the URS Project Manager and HSM after a review of the applicability of the HASP and addenda issued, if any, to actual site conditions encountered has been made by the HSM.

## 5.1 OVERVIEW

This HASP covers work that could potentially be performed as part of the Remedial Investigations. The specific tasks covered in this HASP are described in Section 4. This HASP does not provide for worker protection in confined spaces, or in places with limited egress or in excavations.

The work in this HASP is investigative in nature. It must be recognized that knowledge of the types of substances or chemicals that might be encountered, or the concentrations of chemicals that might be found, are obtained from previous studies in specific areas and from histories of activities and work practices at the Site. Based on a review of the available information pertaining to the Site, contaminants of concern were identified. Material Safety Data Sheets (MSDSs) or Safety Cards for these contaminants can be found in Appendix B along with MSDSs for materials to be brought to the Site as part of the Inspection.

## 5.2 HAZARD SUMMARY

This HASP considers work tasks that will be performed at the Site during the Inspection. A general assessment of the hazards has been made based on the work activities described in Section 4. The following potential hazards have been identified:

- inhalation of dusts;
- inhalation of volatile chemical constituents;
- skin and eye contact with chemical constituents;
- ingestion of chemical constituents;
- physical hazards associated with the use of heavy equipment;
- noise exposure;
- slip-trip-fall hazards;
- lifting hazards;
- weather hazards;
- drilling hazards;
- underground structures/obstructions/utilities;
- traffic hazards;
- use of personal protective equipment;
- heat stress;
- cold exposure;
- biological hazards;
- flammable hazards; and,
- electrical hazards.

Other hazards may be identified during work at the Site; these hazards, if any, will be addressed by an addendum to this HASP prepared by the HSM and authorized by the URS Project Manager and the HSM.

### 5.3 CHEMICAL HAZARDS

An analysis was performed to determine site-specific health and safety requirements to protect workers performing tasks outlined in Section 4. The analysis was performed by studying available sampling and site history information. Taken into account were the chemical constituents found during previous investigations, the toxicity and routes of exposure to workers, and the capabilities of field detection devices. This HASP has adopted the use of the “lowest allowable exposure limit” which is the most conservative of the exposure limits given by OSHA, the National Institute of Occupational Safety and Health (NIOSH), or the American Conference of Governmental Industrial Hygienists. Inhalation and dermal contact would be the primary routes of exposure. Ingestion is a secondary route of exposure.

#### 5.3.1 Chemical Hazards Due to Site Contaminants

Based on the results of previous investigations conducted at the Sites, field personnel might potentially be exposed to a number of different classes of contaminants, including:

- volatile aromatic compounds (e.g., chlorethane, 1,1-dichlorethane, 1,1-dichlorethene, and 1,1,1-trichloroethane);
- base neutral compounds (e.g., benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, naphthalene, and phenol);
- heavy metals (e.g., arsenic, barium, cadmium, calcium, copper, lead, magnesium, mercury, selenium and zinc); and,
- pesticides (e.g., dieldrin, gamma-BHC and endrin)

Each of these classes of compounds is discussed below.

##### Volatile Organic Compounds

Based on the results of the previous work activities performed for the Site and our understanding of the history of the Site, field personnel might also be exposed to a number of chlorinated solvents. Tetrachloroethene (PCE) is a commonly used chlorinated hydrocarbon in dry cleaning, textile processing, and other industrial processes. Common chlorinated hydrocarbons encountered during subsurface investigations in groundwater include breakdown products of PCE such as chlorethane, 1,1-dichlorethane, 1,1-dichlorethene, and 1,1,1-trichloroethane. Specific effects and toxicities vary widely, but the most common effects from the chlorinated hydrocarbons of intermediate toxicity are central nervous system depression, dermatitis and injuries to the liver.

##### Base Neutral Compounds

Properties for base neutral compounds (polynuclear aromatic hydrocarbons [PAHs]) generally correlate with molecular weight, or number of rings in the compound structure. Solubilities range from 34.4 mg/l for the two ring naphthalene to less than 0.01 mg/l for four and five ring compounds (e.g., chrysene and benzo(a)pyrene). Estimated sediment/water

partition coefficients similarly vary from about 100 for naphthalene to 10,000 to 100,000 for representatives of the four and five ring compounds. This trend can be expected to continue for higher molecular weight PAH compounds, although available data are limited. Vapor pressures are relatively low for PAH compounds. The largest reported vapor pressure is 0.05 mm Hg for naphthalene, decreasing to less than 10<sup>-6</sup> mm Hg for four ring and heavier compounds.

With the possible exception of the relatively soluble naphthalene, the PAH compounds are strongly sorbed to soils and sediments, and are generally found in the particulate phase of surface waters and in sediments. This property limits the groundwater mobility of the heavier PAH compounds.

PAH compounds in subsurface soil and ground water are quite persistent, since the potential removal processes for PAHs (i.e., volatilization, photolysis and biodegradation) will not occur at significant rates under typical subsurface conditions.

In summary, PAH compounds will, in general, be sorbed to soils, sediments and suspended particulate matter. PAHs may be removed from shallow surface waters by volatilization and photolysis. Significant biodegradation of the lighter PAH compounds may occur in surface soil and sediments. The PAHs bioconcentrate significantly, but can be metabolized and excreted thus limiting bioaccumulation. The lighter (two and three ring) PAH compounds, especially naphthalene, may show mobility in the aqueous phase; heavier PAH compounds have extremely limited mobility in groundwater. PAH compounds are quite persistent in subsurface soils and groundwater.

#### Heavy Metals

Heavy metals found in the environment are derived from a variety of sources including: natural weathering of the earth's crust, mining; soil erosion; industrial discharge; urban runoff; sewage effluent; pest or disease control agents applied to plants; air pollution fallout; etc. While some heavy metals found in the environment are essential nutritionally, other are not. The latter include some heavy metals that generally have a density greater than 5 g/cm<sup>3</sup>, and an atomic mass exceeding that of calcium. Most heavy metals are toxic because, as ions or in certain compounds, they are soluble in water and can be readily absorbed into plant or animal tissue. After absorption, these metals tend to bind to biomolecules such as proteins and nucleic acids, impairing their functions. The most prominent adverse effects of heavy metals involve the nervous system, hematopoietic system and kidneys.

#### Pesticides

Pesticide poisoning is an important occupational health issue because pesticides are used in a large number of industries. The organochlorine pesticides, like DDT, aldrin, and dieldrin are extremely persistent and accumulate in fatty tissue. Through the process of bioaccumulation (lower amounts in the environment get magnified sequentially up the food chain), large amounts of organochlorines can accumulate in top species like humans. There is substantial evidence to suggest that DDT, and its metabolite DDE, act as endocrine disruptors, interfering with hormonal function of estrogen, testosterone, and other steroid hormones. Certain organophosphates have long been known to cause a delayed-onset toxicity to nerve

cells, which is often irreversible. Several studies have shown persistent deficits in cognitive function in workers chronically exposed to pesticides. Newer evidence suggests that these pesticides may cause developmental neurotoxicity at much lower doses and without depression of plasma cholinesterase levels.

Most pesticide-related illnesses have signs and symptoms that are similar to common medical conditions, so a complete and detailed environmental and occupational history is essential for correctly diagnosing a pesticide poisoning. Most occupational exposures are caused by absorption through exposed skin such as the face, hands, forearms, neck, and chest. This exposure is sometimes enhanced by inhalation in settings including spraying operations in greenhouses and other closed environments, tractor cabs, and the operation of rotary fan mist sprayers. Exposure can be significantly reduced by protecting certain parts of the body where the skin shows increased absorption, such as the scrotal region, underarms, face, scalp, and hands.

### 5.3.2 Chemical Hazards Due to Materials Brought to Site

Sampling may be performed by “low flow” methods which employ nitrogen gas. Groundwater samples to be analyzed for metals will be preserved with nitric acid; groundwater samples to be analyzed for VOCs will be preserved with hydrochloric acid. In addition, personnel and/or equipment decontamination may be performed using trisodium phosphate or Alconox<sup>®</sup>. Finally, isobutylene (i.e., isobutene) gas will be used as a calibration standard for the photoionization detector.

Workers might potentially be exposed to gasoline, diesel fuel and other chemical substances related to the operation of drilling equipment at the Site. Asphalt plug and/or bentonite are typically used for monitoring well installations.

Sunscreen and/or insect repellent including products containing N,N-diethyl-meta-toluamide (i.e., DEET) or permethrin (e.g., Permanone<sup>®</sup>) may be used at the Site. The sunscreen and insect repellent that may be used by site workers contain chemicals that may pose a hazard to site personnel

MSDSs for the chemical constituents of concern and chemicals to be brought to the Site are provided in Appendix B. The chemicals which are brought to the Site to conduct work activities may be hazardous and subject to regulation under OSHA’s Hazard Communication Standard (i.e., 29 CFR 1910.1200). See URS SMS 002, Worker Right-to-Know (Hazard Communication), for additional information.

## 5.4 PHYSICAL HAZARDS

### Working with/near Heavy Equipment

There is a risk of physical injury resulting from contact with heavy equipment such as construction and drilling equipment. Field personnel should be aware of the presence of these hazards and take steps to avoid them. Workers must be careful to communicate with equipment operators regarding their location and should maintain a safe distance from

operating equipment at all times. Personnel should be aware of their location relative to heavy equipment and avoid being struck by equipment or being present in “pinch points.” Use of steel-toed work boots, protective eyewear and hard hats will be required while in all work areas. URS SMS 019, Heavy Equipment Operations, presents additional information on this subject.

#### Drilling Hazards

The primary responsibility during drilling safety is with the drilling contractor. URS employees are responsible for their own safety including recognizing and avoiding drill rig hazards. URS employees that observe a drill rig condition believed to be unsafe shall advise the drill rig operator of the unsafe condition.

URS geologists, environmental scientists, engineers or other field staff assigned to monitor drilling operations or collect soil samples should observe the following guidelines:

- require a meeting at project start-up regarding the drill rig operator’s responsibility for rig safety and any site- or equipment-specific safety requirements;
- set up any sample tables and general work areas for the URS field staff to the side of the drill rig (preferably 20 ft away) and not directly behind the drill rig; and,
- URS geologists, environmental scientists, engineers or other field staff shall not assist the drillers with the drilling equipment or supplies and shall not at any time operate the drill rig controls.

*Before moving a rig, the drill rig operator must do the following:*

- to the extent practical, walk the planned route of travel and inspect it for depressions, gullies, ruts and other obstacles;
- check the brakes of the truck/carrier, especially if the terrain along the route of travel is rough or sloped;
- discharge all passengers before moving on rough or steep terrain; and,
- engage the front axle (on 4x4 or 6x6 vehicles) before traversing rough or steep terrain.

After the drill rig has been positioned to begin drilling, all brakes and/or locks must be set before drilling begins. If the drill rig is positioned on a steep grade and leveling of the ground is impossible or impractical, the wheel of the transport vehicle should be blocked and other means of preventing the drill rig from moving or tipping over employed. URS SMS 056, Drilling Safety Guidelines, presents additional information on this subject.

#### Dust Hazards

Airborne particulates during drilling activities will not generate much dust. However, dust can have some degree of chemical constituents and inhalation of dust particles at high levels can constitute a respiratory hazard. If visible dust is observed in the breathing zone by the SSO, dust suppression techniques (such as spraying water onto exposed soil piles or work areas) will be used as required to reduce airborne dust concentrations.

Excavation Hazards

Excavations are anticipated during the work activities for this Site and will be performed by a remedial contractor. The remedial contractor will use their own site-specific HASP based upon a written agreement made with URS. The general health and safety requirements in their site-specific HASP must be as stringent as those contained in this HASP. Underground and aboveground utilities, adjacent structures or retaining walls, spoil layout, truck routes, and emergency procedures must be identified by the remedial contractor before work begins. The remedial contractor will be required to assign an excavation-competent person to the project. Documentation of this person's qualifications will be maintained in the project safety file. The excavation-competent person:

1. Has formal documentation of training as an excavation-competent person.
2. Must be physically located at the excavations at all times while work is in progress.
3. Is responsible for conducting daily inspections of excavations, adjacent areas, and protective systems prior to each shift.
4. Is responsible for inspection after every rainstorm or other potentially hazard-producing event.
5. Must have knowledge of soils and soil classification.
6. Understands design and use of protective systems.
7. Understands the requirements of the applicable regulations.
8. Has authority to stop work and take corrective actions when conditions change.
9. Has the ability to recognize and test hazardous atmospheres.

URS field personnel will only be observing excavations and trenching. When performing observations on an excavation or trench greater than 4 feet in depth, URS field personnel must remain at least more than 2 feet from the leading edge of the excavation and must **never** enter a trench or excavation. Post-excavation soil samples will be collected from soil collected in the backhoe bucket.

Noise Exposure

The primary noise hazard during the Investigation on-Site is from the operation of the drilling and heavy equipment. Work activities may also be conducted in proximity to active taxiways where a potential for high background noise levels from aircraft does exist. In accordance with OSHA Regulation 29 CFR 1910.95, hearing protection is required to be used when noise levels exceed 85 decibels on the A-scale (dBA) averaged over an 8-hour day; hearing protection is required to be worn for exposures of greater than 100 decibels (dB) for any length of time. In the absence of instrumentation, an appropriate rule of thumb is that when normal conversation is difficult at a distance of 2 to 3 ft, hearing protection is required. Contractors shall have hearing protection at the Site for use by their employees. Ear plugs and/or muffs will be worn at all times when URS personnel are within 25 ft of operating equipment. Hearing protection will also be worn in the vicinity of generators, concrete cutters and any other high noise emitting equipment. Personnel will wash their hands with soap and potable water prior to inserting earplugs to avoid initiating ear infections. URS SMS 026, Noise and Hearing Conservation, presents additional information on this subject.

### Slip-Trip-Fall Hazards

Slip-trip-fall hazards are common at field sites due to open holes; muddy, slippery or unstable surfaces; and equipment on the ground. Workers should exercise caution when working around the Site to avoid slip-trip-fall hazards. If there are holes or uneven terrain in the work area that could cause workers to slip, trip or fall, they must be covered, flagged or marked to warn workers. Slip-trip-fall hazards are greatly increased during work in or near water. If conditions become slippery, workers should take small steps with their feet pointed slightly outward to decrease the probability of slipping. Workers should watch where they are walking and, if possible, walk only in areas of good stability. While it is difficult to eliminate all slip-trip-fall hazards, implementing safe work practices, wearing proper footwear, and keeping the work area free of obstructions will reduce risk of injury. URS SMS 021, Housekeeping, provides additional information about this hazard.

### Lifting Hazards

Field operations often require the performance of laborious tasks such as lifting equipment such as portable generators, coolers filled with samples and sampling equipment. All employees must implement proper lifting procedures such as keeping the load close to the body and using leg muscles instead of back muscles to perform lifting tasks. Additionally, employees will not attempt to lift large, heavy or awkwardly shaped objects without assistance. Safe lifting procedures include:

- Get help when lifting heavy loads. Lift portable generators using a two-person lift.
- When moving heavy objects such as drums or containers, use a dolly or other means of assistance.
- Plan the lift. If lifting a heavy object, plan the route and where to place the object. In addition, plan communication signals to be used (e.g., “1-2-3-lift”).
- Wear sturdy work boots shoes that are in good condition and supply traction when performing lifts.
- Keep your back straight and head aligned during the lift, and use your legs to lift the load – do not twist or bend from the waist. Keep the load in front of you – do not lift or carry objects from the side.
- Keep the heavy part of the load close to your body to help maintain your balance.

See URS SMS 069, Manual Material Handling, for additional information on this subject.

### Weather

Weather conditions are an important consideration in planning and conducting site operations. Extremely hot or cold weather can cause physical discomfort, loss of efficiency and personal injury. Lightning may accompany storms, creating an electrocution hazard during outdoor operations. To eliminate this hazard, weather conditions must be monitored and work suspended during electrical storms.

Underground Structures/Obstructions/Utilities

Prior to initiating any drilling activities, the SSO will obtain utility clearances. The SSO is responsible for ensuring a safe work environment when working around electrical devices, pressurized utilities, gas, steam, water, sewage, and pipeline utilities. Pre-work walkthroughs will be performed with personnel familiar with the facility to identify any overhead, underground, and in-work area utilities such as electrical lines, gas lines, pipelines, and discharge of steam or hot liquids. These walkthroughs will minimize the chance for accidental contact with or damage to these utilities. Areas designated for intrusive investigation will be cleared of underground power cables and other utilities prior to the onset of work.

Subsurface work (i.e. drilling) will not be initiated until locations of underground utilities and similar obstructions are verified. Locations shown on as-built drawings must be confirmed with additional geophysical or other surveys.

The SSO will contact “One Call” service at least 2 working days prior to site activities to advise of the proposed work, and ask them to establish the location of the utility underground installations prior to the start of actual drilling and/or excavation. Utility clearances will be obtained for subsurface work on both public and private property. Clearances are to be in writing and signed by the party conducting the clearance. URS may also be required to contact a third party utility locate service to verify all locations prior to disturbance.

The markings of approximate locations of utilities will be protected and preserved until the markings are no longer required for safe and proper drilling. If the markings of utility locations are destroyed or removed before drilling commences or is completed, the SSO must notify the utility company or utility protection service to inform them that the markings have been destroyed.

Mechanical-assisted subsurface work (e.g., powered drill rig) will not be conducted within 5 feet (1.5 meters) of a confirmed or suspected utility or other subsurface structure. Minimum distances for mechanical-assisted subsurface work should be confirmed with the utility owner, as distances greater than this 5-foot minimum may be required.

Subsurface work within 5 feet (1.5 meters) of a confirmed or suspected utility or other subsurface structure must be done by hand (e.g., hand auger or shovel) to the point where the obstruction is visually located and exposed. Once the obstruction location is confirmed in this manner, mechanical-assisted work may commence. See URS SMS 034, Utility Clearance and Isolation, for additional information.

Overhead Hazards

Overhead power lines pose a danger of shock or electrocution if the power line is contacted or severed during site operations. Prior to conducting work in areas where overhead lines could be impacted, the appropriate utility company must be notified and information obtained regarding the line voltage and the minimum separation distance required for work in this area. Drilling work operations adjacent to overhead lines will not be initiated until operations are coordinated with utility officials. Operations adjacent to overhead lines are prohibited unless one of the following conditions is satisfied:

1. Power has been shut off and positive means (e.g., lockout/tagout) have been taken to prevent lines from being energized. In all cases, utility company personnel will certify in writing to the Site Manager or SSO that the overhead utilities have been deactivated and the certification will be retained in the project files. The Site Manager or SSO must also attempt to verify power shut off by checking that power is no longer available to the affected building or equipment.
2. Equipment, or any part of the equipment, cannot come within the following minimum clearance from energized overhead lines:

<b>Power Lines Nominal System (kilovolts)</b>	<b>Minimum Required Clearance (ft)</b>
0-50	10
51- 200	15
201-300	20
301-500	25
501-750	35
751-1000	45

See URS SMS 034, Utility Clearance and Isolation, for additional information about this subject.

#### Work Area Protection

As some project operations may be undertaken near roadways or parking areas, motor vehicles and trucks could pose a hazard. Consideration should be given to parking work vehicles within the coned area between the work area and oncoming traffic. Guidance on properly coning and flagging the work area is presented in URS SMS 032, Work Zone Traffic Control.

#### Use of Personal Protective Equipment

The personal protective equipment (e.g., protective clothing and air purifying respirators) which may be required for some activities for this Project places a physical strain on the wearer. When personal protective equipment (PPE) such as respirators, gloves and protective clothing are worn, visibility, hearing and manual dexterity are impaired. URS SMS 029, Personal Protective Equipment, presents additional information on this subject.

#### Heat Stress

Hot weather can cause physical discomfort, loss of efficiency and personal injury. Work which is conducted when temperatures exceed 70 degrees Fahrenheit (°F) may result in increased incidence of heat-related illness. The risk is increased for personnel who are required to don impermeable protective clothing during warm weather, which decreases the body's natural cooling processes. Fluids will be provided at regular intervals during the work periods in order to maintain adequate body fluid levels for the field personnel.

URS SMS 018, Heat Stress, presents additional information on this subject. This SMS describes heat stress identification, treatment, prevention and monitoring.

Cold Exposure

Cold weather can cause physical discomfort, loss of efficiency and physical injury. Persons working outdoors in temperatures at or below freezing may be frostbitten. Extreme cold for a short time may cause severe injury to the surface of the body, or result in profound generalized cooling, causing death. Areas of the body which have high surface area-to-volume ratio such as fingers, toes and ears are the most susceptible.

Exposure to cold working conditions can result in cold stress (i.e., hypothermia) and/or injury (frostbite) to hands, feet, and head. Hypothermia can result when the core body temperature drops below 96.8°F. Lower body temperature will be likely to result in dizziness, drowsiness, disorientation, slurred speech or loss of consciousness, with possible fatal consequences. Pain in the extremities may be the first warning of danger from cold stress. Shivering develops when the body temperature falls to 95°F. Hypothermia can be brought on by exposure to cold air, immersion in cold water, or a combination of both. The wind chill factor, which is the cooling power of moving air, is a critical factor in cold stress.

Workers must wear adequate insulating clothing if work is performed in temperatures below 40°F. At temperatures of 35.6°F or less, workers whose clothing becomes wet will be provided immediately with a change of clothing and, if necessary, treated for hypothermia. Treatment includes warming the victim (with skin-to-skin contact or by providing warm blankets or other coverings) and providing warm liquids for the victim to drink. Skin exposure will not be permitted at temperatures of -25°F or below.

If fine work is to be performed with bare hands for more than 10 to 20 minutes at temperatures below 60°F, provisions will be made for keeping the workers' hands warm. If equivalent chill temperatures fall below 40°F and fine manual dexterity is not required, gloves will be worn. Metal handles of tools will be covered with insulating material at air temperatures below 30°F.

If work is to be performed continuously in the cold when the wind chill factor is at or below 19°F, heated warming shelters (e.g., tents, trailers, vehicle cabs) will be made available nearby.

URS SMS 059, Cold Stress, presents additional information on this subject. This SMS presents the effects of cold exposure, and treatment, prevention and monitoring procedures.

## 5.5 BIOLOGICAL HAZARDS

Potential biological hazards include illnesses and/or injuries transmitted by plants, insects, animals and pathogenic agents. There are many plants, animals and insects that are potentially harmful to humans including ticks, poison ivy/poison oak, spiders, bees and wasps, mosquitoes and poisonous snakes.

Bloodborne pathogens include diseases that can be transmitted by contact with blood or other bodily fluids as well as contaminated items that may be encountered on the Site (e.g. used syringes). Universal precautions should be used when administering First Aid. Good hygiene practices and proper decontamination of nondisposable PPE will minimize potential for transmission of bloodborne pathogens.

During field work at the Site, personnel may encounter a wide variety of insects including bees, mosquitoes, ticks and spiders. Field personnel are encouraged to use insect repellent when insects are present. Stings of bees and wasps may cause serious allergic reactions in certain individuals. The SSO should be made aware of all personnel with known insect allergies or sensitivities before field work begins.

Ticks are parasites that feed on the blood of an animal/human host and can carry several severe diseases, the least bringing several days of fever and pain and the worst causing brain damage. Deer tick bites may result in the transmission of Lyme Disease. A characteristic rash may develop a few days to a few weeks after the bite of an infected tick. The rash generally looks like an expanding red ring with a clear center, but it can vary from a blotchy appearance to red throughout the rash. However, it is important to note that some victims never exhibit a rash. Lyme Disease symptoms include flu-like symptoms such as a headache, stiff neck, fever, muscle aches and/or general malaise. Long-term effects of Lyme Disease may include arthritis of the large joints, meningitis, neurological complications (such as numbness or tingling of the extremities, loss of concentration and memory retention or Bell's Palsy), withdrawal and lethargy, or cardiac symptoms. Site workers should use the following prevention tactics in accordance with URS SMS 047, Biological Hazards, contained in Appendix B. Other suggested behaviors to reduce the hazards posed by ticks include:

- avoid walking through brush, woods or grassy areas; try to avoid contact with plants if you must walk through these areas;
- dress in light-colored clothing to make adhering ticks more visible. Wear long-sleeved shirts and tuck pants into socks. Wear a hat and tie back long hair;
- use a tick repellent containing permethrin or DEET; and,
- perform self or assisted searches each day to check for ticks.

Pigeon nesting and roosting habits may result in an accumulation of excrement at some sites. Exposure to pigeon excrement can cause illness in humans. Of primary concern is the contracting of psittacosis which is a flu-like illness which can cause death in vulnerable individuals. All workers should avoid coming in contact with these materials and, if exposed to them, should thoroughly wash areas of contact as soon as possible.

Assume that all animals are dangerous. A person who is bitten by an animal may become infected by tetanus or rabies. Warm-blooded animals such as dogs, cats and rats can transmit rabies. Rabies can also be transmitted when the saliva of an infected animal contacts an open wound (even a scratch) or any normal body opening such as the mouth or eye.

URS SMS 047, Biological Hazards, presents additional information on this subject.

## **5.6 FLAMMABLE HAZARDS**

Flammable hazards are expected to be low during the course of this work based on the levels of flammable materials encountered during previous investigations at the Site and the nature of the work to be performed. However, as a precaution, air monitoring, as specified in Section 6, will be conducted during all work activities. URS SMS 014, Fire Prevention, presents additional information on this subject.

## 5.7 EXPOSURE ROUTES

The primary exposure pathways of concern for these identified contaminants are as follows:

### Inhalation of Dust

Several of the work activities to be performed have the potential for generating dust in the breathing zone. Dust suppression techniques will be used as required to reduce airborne exposures.

### Inhalation of Volatile Contaminants

Several VOCs may be present in the soil and groundwater. Previous experience during activities at this site and at other sites suggests that airborne concentrations of these contaminants during these activities will probably not exceed exposure limits during activities due to emissions from contaminated soil or groundwater, or gasoline or diesel fuel-powered equipment in open areas.

### Ingestion of Contaminants

Personnel may be exposed to accidental ingestion of contaminants by hand to mouth contact after contact with contaminated materials. Ingestion of contaminants will be controlled during work activities by prohibiting eating and smoking in the contamination reduction zone and exclusion zone and by requiring all field personnel to decontaminate themselves upon leaving the exclusion zone. Drinking of liquids will take place only after partial decontamination has taken place (except in a heat stress emergency situation).

### Skin and Eye Contact with Contaminants

Skin and eye contact with some of the contaminants at the Site or due to the operation of gasoline or diesel fuel-powered equipment may cause skin or mucous membrane irritation. Many of these contaminants can be absorbed into the bloodstream through the skin or eyes. Skin contact with potentially contaminated materials will be reduced by the wearing of personal protective clothing. Any body area which comes in contact with contaminants will be washed with soap and rinsed immediately. All field personnel will report any skin or eye contact symptoms to the SSO. The person will be treated by a physician and steps will be taken to eliminate similar exposures.

## 5.8 CONTROL OF EXPOSURE TO CHEMICAL HAZARDS

Potential hazards will be reduced by protecting against exposures to contaminants via utilization of appropriate personal protective equipment. Personal protective equipment to protect the body against contact with known or anticipated chemical hazards is divided into five levels of protection categories (i.e., Levels A, B, C, Modified D and D personal protective equipment) according to the degree of protection afforded. The initial levels of personal protective equipment to be used while performing the work activities described in Section 4 are discussed in Section 7, Site-Specific Health and Safety Requirements. If the personal protective equipment for any level of protection needs to be modified to be

appropriate for the specific hazard encountered, an appropriate addendum to this HASP must be prepared by the HSM.

Periodic air monitoring will be employed to assess respiratory hazards in the work zones for work activities as appropriate. Levels of protection can be upgraded or downgraded by the SSO if they are not appropriate; the HSM will be notified of any changes of levels of protection as soon as practical.

## **5.9 HAZARD ASSESSMENT BY TASK AND JOB SAFETY ANALYSES**

This section presents an evaluation of general risk by tasks from the particular hazards associated with working at the Site (i.e., chemical exposure and physical injury). Specific personal protective equipment requirements by task and task location based on these judgments as well as available information on chemical hazards and anticipated work activities are listed in Section 7.

Prior to any work being performed each day, based on the information provided in this HASP and relevant site-specific information for that day (e.g., weather conditions, other work being performed at the Site), the SSO shall prepare a Job Safety Analysis (JSA) for all tasks which are anticipated to be conducted that day. No work activity shall be performed unless a JSA for that work activity has been prepared and discussed with all site personnel. JSAs shall be reviewed and modified as necessary to ensure that all job hazards are identified and mitigated or controlled. The Job Safety Analysis forms for this project are provided in Section 11.

**5.9.1 Inspection of DPT Drilling Activities including Advancement of Test Borings and Installation of Temporary/Permanent Groundwater and Soil Vapor Monitoring Wells****5.9.1.1 General Hazards**

The following hazards will be a concern during this task:

**POTENTIAL HAZARD****ANTICIPATED RISK**

Inhalation of Dusts	low to moderate
Inhalation of Volatile Contaminants	moderate
Ingestion of Contaminants	moderate
Skin/Eye Contact with Contaminants	moderate to high
<b>Working with/near DPT Equipment</b>	<b>high</b>
Excavation Hazards	low
<b>Noise Exposure</b>	<b>high</b>
Slip-Trip-Fall Hazards	moderate to high
Lifting Hazards	moderate
Weather Hazards	moderate
Underground Utilities	moderate to high
Overhead Hazards	moderate to high
Use of Personnel Protective Equipment	low to moderate
Heat Stress	depends on ambient temperature
Cold Exposure	depends on ambient temperature
Biological Hazards	moderate
Flammable Hazards	moderate
Electrical Hazards	moderate

**5.9.1.2 Additional Task-Specific Hazards**

None.

**5.9.2 Collection of Soil Samples from DPT Drilling****5.9.2.1 General Hazards**

The following hazards will be a concern during this task:

**POTENTIAL HAZARD****ANTICIPATED RISK**

Inhalation of Dusts	low to moderate
Inhalation of Volatile Contaminants	moderate to high
Ingestion of Contaminants	moderate
Skin/Eye Contact with Contaminants	moderate to high
<b>Working with/near DPT Equipment</b>	<b>high</b>
Excavation Hazards	low
Noise Exposure	moderate to high
Slip-Trip-Fall Hazards	moderate to high
Lifting Hazards	moderate
Weather Hazards	moderate
Underground Utilities	low
Overhead Hazards	low
Use of Personnel Protective Equipment	moderate
Heat Stress	depends on ambient temperature
Cold Exposure	depends on ambient temperature
Biological Hazards	moderate
Flammable Hazards	low
Electrical Hazards	low

**5.9.2.2 Additional Task-Specific Hazards**

None.

**5.9.3 Purge and Collect Samples from Temporary Well Points and Permanent Monitoring Well Locations****5.9.3.1 General Hazards**

The following hazards will be a concern during this task:

**POTENTIAL HAZARD****ANTICIPATED RISK**

Inhalation of Dusts	low
Inhalation of Volatile Contaminants	moderate to high
Ingestion of Contaminants	moderate to high
Skin and Eye Contact with Contaminants	moderate to high
Working with/near DPT Equipment	moderate to high
Excavation Hazards	low
Noise Exposure	moderate to high
Slip-Trip-Fall Hazards	moderate to high
Lifting Hazards	moderate to high
Weather Hazards	moderate
Underground Utilities	low
Overhead Hazards	low to moderate
Use of Personnel Protective Equipment	moderate
Heat Stress	depends on ambient temperature
Cold Exposure	depends on ambient temperature
Biological Hazards	moderate
Flammable Hazards	moderate
Electrical Hazards	moderate

**5.9.3.2 Additional Task-Specific Hazards**

None.

**5.9.4 Manage Sampling Residuals****5.9.4.1 General Hazards**

The following hazards will be a concern during this task:

**POTENTIAL HAZARD****ANTICIPATED RISK**

Inhalation of Dusts	low to moderate
Inhalation of Volatile Contaminants	moderate to high
Ingestion of Contaminants	moderate
Skin and Eye Contact with Contaminants	moderate to high
Working with/near DPT Equipment	moderate to high
Excavation Hazards	low
Noise Exposure	moderate
Slip-Trip-Fall Hazards	moderate to high
Lifting Hazards	moderate to high
Weather Hazards	low to moderate
Underground Utilities	low
Overhead Hazards	low to moderate
Use of Personnel Protective Equipment	moderate
Heat Stress	depends on ambient temperature
Cold Exposure	depends on ambient temperature
Biological Hazards	low
Flammable Hazards	low
Electrical Hazards	low

**5.9.4.2 Additional Task-Specific Hazards**

None.

**5.9.5 Inspection of Interim Remedial Measures Conducted by a Remedial Contractor including Soil “Hot Spot” Excavations and Post-Excavation Sampling****5.9.5.1 General Hazards**

The following hazards will be a concern during this task:

**POTENTIAL HAZARD****ANTICIPATED RISK**

Inhalation of Dusts	moderate to high
Inhalation of Volatile Contaminants	moderate to high
Ingestion of Contaminants	moderate
Skin and Eye Contact with Contaminants	moderate to high
Working with/near Heavy Equipment	moderate to high
<b>Excavation Hazards</b>	<b>high</b>
Noise Exposure	moderate to high
Slip-Trip-Fall Hazards	moderate to high
Lifting Hazards	low
Weather Hazards	moderate
Underground Utilities	moderate to high
Overhead Hazards	moderate to high
Use of Personnel Protective Equipment	moderate
Heat Stress	depends on ambient temperature
Cold Exposure	depends on ambient temperature
Biological Hazards	moderate
Flammable Hazards	moderate
Electrical Hazards	moderate

**5.9.5.2 Additional Task-Specific Hazards**

**The remedial contractor will be required to assign an excavation-competent person to the project. When performing observations on an excavation or trench greater than 4 feet in depth, URS field personnel must remain at least more than 2 feet from the leading edge of the excavation and must never enter a trench or excavation.**

## 6.1 SAFETY TRAINING

Employees shall not participate in field activities until they have been trained to a level required by their job function and responsibility. Trainers shall have received a level of training higher than and including the subject matter of the level of instruction they are providing. All training and field experience shall be certified. Training requirements are discussed below.

All personnel working in any contamination reduction zone or exclusion zone exposed to hazardous substances, or health or safety hazards shall be thoroughly trained as specified in OSHA Regulation 29 CFR Part 1910.120(e). This training program will include:

### 40-Hour Initial Training

All field employees must have completed the 40-hour (hr) initial health and safety training required under OSHA Regulation 29 CFR Part 1910.120. They must receive an 8-hr annual refresher training thereafter.

### Three-Day On-Site Supervision

All field employees shall be required to receive a minimum of three-days of on-site training under the supervision of a trained and experienced supervisor. On-site time under supervision shall be documented.

### Site Supervisor

The Site Supervisor (URS Project Manager or designated alternate) must have completed the basic 40-hr training course, three days of on-site supervision, and at least 8 hours of specialized training on managing hazardous waste operations. The eight hours of specialized training shall include instruction covering the URS Health and Safety Program, employee training program, personal protective equipment program, spill containment procedures and health hazard monitoring procedures and techniques.

### Site Safety Officer

The SSO must have completed 40-hr training, 3-day on-site supervision and first aid training. A first aid refresher is required every three years. Any other on-site personnel trained to do first aid will be identified during the Daily Site Safety Briefings.

Personnel involved in any of the work activities designated for this project may also be required to meet other applicable OSHA Regulations or Standards.

OSHA Regulation 29 CFR 1910.120 require that special training be provided at the time of job assignment to personnel who may be exposed to unique or special hazards not covered by the initial 40-hr basic health and safety course. It is not anticipated that any unique or special hazards will be encountered during this project, other than those previously described; therefore, special training will not be needed. If unique or special hazards are unexpectedly encountered, specialized training must be provided.

Contractors must provide documentation and certificates indicating that their field personnel working within the contamination reduction zone or exclusion zone have successfully completed all the training requirements stipulated under OSHA Regulations 29 CFR Part 1910.120 and 29 CFR Part 1926 and that they have been successfully fit-tested within the previous 12 months for the brand, size and type of respirator to be used.

**An individual that either refuses to or cannot produce a record of course completion will be prohibited from participation in field activities. An individual that refuses to or cannot produce a satisfactory fit-test record will be prohibited from wearing respiratory protection.**

URS SMS 055, Health and Safety Training, presents additional information on this subject.

### 6.1.1 Safety Orientation Meeting

A safety orientation meeting will be conducted for all employees, including contractors, prior to the commencement of field activities. The following topics will be discussed at this meeting:

- names of health and safety personnel and alternates responsible for site health and safety;
- health and safety organization;
- hazards at the Site;
- exposure risk;
- required work procedures including, but not limited to, lockout and tagout, excavation safety, and confined space entry, as applicable;
- personal protective equipment to be used;
- respiratory protection;
- personnel and equipment decontamination procedures;
- air monitoring; and,
- emergency procedures.

All field personnel must be provided with and read a copy of this HASP. At the end of the meeting, attendees will be informally quizzed to assess their understanding of the health and safety requirements. They must sign a safety compliance agreement form stating they have read, understand and agree to comply with the provisions of the HASP. Anyone refusing to sign the form will be prohibited from working at the Site.

If a new employee, who has not gone through the site-specific safety orientation meeting is assigned to the Site, the SSO must present a similar briefing to the new employees before he/she participates in any field activities. All new employees must sign the safety compliance agreement form before beginning field work.

### 6.1.2 Daily Safety Briefings

During field operations, daily safety briefings must be held at the start of each work shift by the SSO to review and plan specific health and safety aspects of scheduled work. Topics discussed during these briefings will include site hazards, precautions, lockout and tagout procedures (as necessary), PPE, air monitoring, respiratory protection, decontamination and applicable procedures for the work activities to be conducted during that work shift. All site personnel who are following this HASP and working within the contamination reduction zone or exclusion zone are required to attend these briefings. Names and affiliations of individuals attending these briefings and items discussed must be documented by the SSO.

### 6.1.3 Site Inspections

The Site Manager or SSO is to conduct a daily site inspection prior to the start of each shift. It is the responsibility of the URS Project Manager or Site Manager to resolve discrepancies immediately, contacting the HSM, if necessary, for assistance. Inspections are to be documented and maintained at the Site until the completion of the Project, at which time they are placed in the project files.

### 6.1.4 Hazard Communication Program

Materials that are considered hazardous under the OSHA Communication Standard (i.e., OSHA Regulation 29 CFR 1910.1200) may be brought to the Site (e.g., acids for sample preservation). Field personnel, including Contractors, must comply with the requirements of the OSHA Hazard Communication Standard. MSDSs or Safety Cards must be available at the Site for all applicable materials. Data on these materials must be presented as part of the safety orientation meeting. The SSO is responsible for maintaining an MSDS/Safety Card file for these chemical constituents and for all materials which are brought to the Site. Personnel shall receive training for safe use of these materials during safety orientation meetings and daily site safety briefings, as required. URS SMS 002, Work Right-to-Know (Hazard Communication), presents additional information on this subject.

### 6.1.5 Site Security

- Access to the Site will be controlled.
- Only authorized personnel shall be permitted to enter work areas. No one shall enter the work area without appropriate authorization.
- All persons entering the work area shall be equipped with appropriate PPE.
- All personnel entering the contamination reduction zone or exclusion zone must be familiar with and abide by the HASP. All of these individuals must have signed the Health and Safety Plan Compliance Agreement form.

### 6.1.6 Underground Structures/Obstructions/Utilities

Before any intrusive work, a “call-before-you-dig” service will be requested to provide utility mark outs for the Site. Caution must be exercised whenever the possibility of encountering unexpected subsurface structures/obstructions/utilities exists. Before beginning intrusive activities, all available sources of information (e.g., site utility drawings, public utility drawings, construction drawings and contract documents) will be reviewed. Work will proceed only when identified subsurface structures/obstructions/utilities are clearly marked in the field. Controlled excavation will be performed to expose known structures/obstructions/utilities, until the area has been opened sufficiently to utilize mass excavating techniques. Borings or excavations will not be conducted at locations of close proximity to existing utilities until the area has been hand excavated or jetted to a depth of 4 ft, or as specified on the contract documents. If underground structures/obstructions/utilities are unexpectedly encountered, the area will be excavated using manual equipment until the nature of the obstruction is discerned and appropriate precautions taken. Additional information about this subject is contained in URS SMS 034, Utility Clearances and Isolation.

## 6.2 MEDICAL SURVEILLANCE

All employees involved in field activities shall be active participants in the URS medical surveillance program or the equivalent. All medical examinations and procedures shall be performed by or under the supervision of a physician who is board eligible or board certified in occupational medicine.

Before commencing any of the activities defined in Section 4, all personnel must take an entry medical examination and periodic medical examinations as required by OSHA Regulation 29 CFR 1910.120(f) as part of a medical surveillance program. Contractors involved in field activities must provide documentation of medical examinations for their employees.

Medical surveillance is a major component of all health and safety programs. It was established to monitor and promote the health of employees engaged in projects which have the potential for exposure to hazardous substances. Exposure to chemicals has the potential to cause adverse health effects although the use of recognized safety procedures and protective equipment substantially mitigates associated risks. In the event a potentially harmful exposure occurs, early detection of symptoms is extremely important to successful treatment. Thus, the medical surveillance procedures prescribed as part of this health and safety program must be followed by all relevant personnel without exception.

Medical surveillance provides a clinical base of information that is used to evaluate an employee’s fitness to work on a hazardous waste site, to identify anomalies in a person’s medical history that may be related to potential impaired health, and to evaluate a person’s capability to use respiratory protective equipment. This base of medical information includes personnel health history, exposure history, physical examination results, laboratory analyses and results of screening and special tests.

Medical examinations must include (at a minimum):

- Past medical history - on entry to the program, information concerning past occupational and personal as well as family history of disease.
- Present medical profile - all pertinent medical information regarding present state of health and during each year of field work in hazardous material projects.
- Exposure history - information concerning the cumulative duration of time spent on potentially hazardous sites, the primary toxic substances, and the levels of protection employed by each site.
- Kidney and liver function tests - possible exposure to aromatic hydrocarbons warrant examination of the liver enzymes and blood exams to evaluate kidney and liver function.
- Hematology - complete blood-forming function exams including complete blood count, white blood count, red blood count and hemoglobin exams.
- Urinalysis.
- Physical examination.
- Hearing test.
- Vision test.
- Pulmonary function test.

Optional tests, if recommended by the examining physician for this specific site, could include:

- Electrocardiogram.
- Radiography (X-ray Examinations).
- Special tests - medical information concerning the effects of exposure to specific contaminants.

The objectives of the medical surveillance component of the health and safety program are:

- Protect the health of employees assigned to work on sites containing potentially hazardous substances.
- Pre-assignment screening of employee's health to determine present status and to identify existing problems that may be aggravated by chemical exposure or physical stress.
- Monitor employee's health for early signs of work-related illness and employee suitability for further assignments on sites containing potentially hazardous substances.
- Evaluation and care of individuals with work-related illnesses or injuries.
- Satisfy the requirements of OSHA Regulation 29 CFR Part 1910.134 regarding respiratory protection and OSHA Regulation 29 CFR Part 1910.120 for hazardous waste workers.

Examining physicians will use information provided by the employee in the questionnaire, the examination results, and the results of laboratory tests to determine if any work restrictions (e.g., medical fitness to wear respiratory protection during work activities) or occupational health problems appear to be present. Contractors must provide documentation indicating that their field personnel working within any contamination reduction zone or exclusion zone are active participants in good standing in a medical surveillance program and are medically fit to wear a respirator.

**An individual that either refuses to or cannot produce documentation of active participation in good standing in a medical surveillance program or medical fitness to wear a respirator will be prohibited from participation in field activities or wearing of respiratory protection, respectively.**

URS SMS 024, Medical Screening & Surveillance, presents additional information on this subject.

### **6.3 INJURY/ILLNESS/INCIDENT REPORTING**

In the event of an injury or incident, the SSO will immediately notify the URS Project Manager and HSM. Types of injuries, illnesses or incidents considered reportable are as follows:

- illness resulting from chemical exposure or unknown causes;
- near misses;
- physical injury including scratches and/or abrasions;
- fire, explosions and flashes resulting from activities performed by URS or contractors;
- infractions of safety rules and requirements; and,
- unexpected chemical exposures.

Work will be suspended to correct the cause of the injury/illness/incident and to modify this HASP, as necessary.

A URS Injury/Illness/Incident Report form must be submitted to the URS Project Manager and HSM within 24 hours of occurrence. The URS Project Manager will be responsible for informing the Client of any accidents/illnesses/incidents reported by site personnel. URS SMSs 049, Injury/Illness/Incident Reporting & Notifications, and 065, Injury and Claims Management and present additional information on this subject.

### **6.4 VISITOR CLEARANCES**

All visitors entering the contamination reduction zone (CRZ) or exclusion zone (EZ) at the Site will be required to read and verify compliance with the provisions of this HASP. All visitors must provide their own personal protective equipment unless specifically authorized by the URS Project Manager to don URS-supplied personal protective equipment. Documentation of site visitor registration and training will be maintained on the Project Safety Log forms found in Section 11.

In the event that a visitor does not adhere to the provisions of the HASP, he/she will be requested to leave the Site. All nonconformance incidents will be recorded on the Project Safety Log form.

## **6.5 BUDDY SYSTEM**

Unless the requirements of URS SMS 084, Lone Worker, are strictly complied with, the “buddy system” will be used during all field activities. Under the “buddy system,” at no time will an individual enter or leave an EZ alone. Before entering an EZ, each individual will identify his/her “buddy.”

## **6.6 PROJECT SAFETY LOGS**

Project Safety Log forms (Section 11) will be maintained by the SSO throughout the Project and provided to the URS Project Manager after the Project is completed. Logged information shall include: (1) names of all URS, Client, visitor and Contractor personnel entering and leaving the Site each day, (2) dates each major field activity started and was completed, (3) air monitoring data, (4) description of unforeseen hazards and steps taken to mitigate these hazards, (5) summary of telephone conversations regarding health and safety, (6) safety infractions, if any, (7) accidents, near misses and injuries, if any, and (8) all other significant health and safety items.

## **6.7 CONTROLLED AREA**

A controlled area is defined as an area within which all entry and activities are regulated by URS because of activities underway in that area. Rationale for the establishment of a controlled area would include the need to control exposure of URS and non-URS personnel to any anticipated hazards, and to protect URS personnel from the consequences of non-URS operations at the Site.

Barricade tape and/or barricades will be used to delineate the controlled area for safety purposes around the work area. The barriers will be set in a 15-ft or greater (as necessary and/or practical) radius around the work area to provide sufficient maneuvering space for personnel and equipment. A short piece of barricade tape can be affixed to a secure upright (e.g., a drill rig mast or a vehicle antenna) to serve as an indicator of wind direction. A 5-ft wide opening in the barricades at the support zone (upwind of the work area) will serve as the personnel and equipment entry and exit point.

The personnel decontamination station will be established at this point if formal decontamination procedures are required. All entry and exit from the work area will be made at this opening to control potential sources of contamination; contaminated soil and debris must be confined to the work area.

At the end of the shift, all boring/sampling holes must be covered or otherwise secured. All cuttings and decontamination fluids are to be handled in accordance with relevant regulations and instructions from the URS Project Manager.

The Site Manager or SSO will determine an upwind evacuation area prior to each shift, and all personnel will be notified of its location. A horn or other signaling device will be used to signal an evacuation in the event of an emergency. Three blasts of the horn will be the signal to immediately stop work and proceed to the evacuation area.

## **6.8 WORK ZONES**

Field personnel will establish three work zones around each work activity: the exclusion zone, the contamination reduction zone and the support zone.

### **6.8.1 Exclusion Zone**

The EZ is the area where contamination is or may be present. All individuals entering this area must be approved by the SSO. Access control points will be established at the periphery of the EZ to regulate the flow of personnel and equipment into and out of the EZ. Initially, the EZ will extend a distance of 15 ft from the edge of intrusive activity unless conditions at the Site warrant either a larger or smaller distance as determined by the SSO. All persons entering the EZ will wear the applicable PPE. It is anticipated that EZ will be established at each individual area of intrusive work rather than encompass the entire Site.

### **6.8.2 Contamination Reduction Zone**

The CRZ is established outside the EZ to minimize the migration of contaminants from the EZ to clean or support areas, and to reduce the exposure potential of individuals leaving the EZ. All personnel must decontaminate as appropriate when leaving the EZ. A CRZ will be established adjacent to each individual area of intrusive work. The CRZ will be delineated by using warning tape, snow fence and/or traffic cones in addition to posting directions (to exit and enter the EZ) and signs, as appropriate, at the discretion of the SSO. No one will be permitted into the CRZ or EZ unless he/she is in full compliance with the requirements of this HASP.

### **6.8.3 Support Zone**

The support zone is the outermost part of the work area and is located in a clean area, preferably upwind and immediately outside of the CRZ, or in the on-site vehicles. Supplies, emergency equipment, vehicles and support personnel are located in the support zone. Normal work clothes are appropriate within this zone. The location of the support zone depends on factors such as accessibility, wind direction (if possible, it should be located upwind of the work area) and the presence of on-site resources (e.g., roads, shelters and utilities).

**6.9 FIELD ACTIVITIES****6.9.1 Personnel Requirements/Prohibitions**

- No running or “horseplay.”
- The required level of personal protective equipment must be worn by all on-site personnel.
- Eating, drinking, chewing gum or tobacco, smoking or any practice that increases the probability of hand-to-mouth transfer and ingestion of material is prohibited in the EZ and the CRZ; drinking of water, Gatorade® or equivalent fluids may occur in the CRZ at the discretion of the SSO. Fluids for consumption in the CRZ will be prepared outside the CRZ by a thoroughly decontaminated person and supplied to personnel inside the CRZ using disposal cup with lids and straws such that hand-to-mouth transfer of potential contaminants will be prevented.
- Smoking, carrying lighters and/or matches is prohibited in the EZ and in the CRZ.
- No contact lenses may be worn by personnel engaged in field work requiring respirators.
- No jewelry (including rings) may be worn by personnel engaged in field work except watches which will be disposed of if they become contaminated.
- Facial hair that interferes with a satisfactory fit of the respirator mask-to-face seal is not allowed on personnel required to wear air purifying respirators.
- Medicine and alcohol can increase the effects of exposure to toxic chemicals; personnel taking any prescribed drugs must inform the SSO of this fact. They shall not be assigned to operations where the potential for absorption, inhalation or ingestion of toxic substances exists unless specific approval has been obtained from a qualified physician. Alcoholic beverage intake will not be allowed during breaks.
- No person will enter the EZ alone.
- Safety devices on equipment must be left intact and used as designed.
- Equipment and tools will be kept clean and in good repair and used only for their intended purpose.
- Eye protection must be worn when any hammering or pounding may produce flying particles or slivers.
- Leather gloves must be worn when handling objects that may produce slivers (e.g., wooden stakes).
- Whenever possible, field personnel should work from a position upwind of sources of exposure to contaminants.

- All persons entering and/or working in the CRZ or EZ will read, sign and become familiar with this HASP. A copy of the HASP will be available at the Site through the SSO.
- Field personnel will not be allowed in the CRZ or EZ without the prior knowledge and consent of the SSO.
- Field personnel will use the “buddy system” (i.e., working in pairs) when in the CRZ or EZ unless the requirements of URS SMS 084, Lone Worker, are being followed. Buddies shall prearrange hand signals for communication. Visual contact shall be maintained between crew members at all times. Crew members must observe each other for signs of toxic exposure. Indication of adverse effects include, but are not limited to:
  - changes in complexion and skin discoloration;
  - changes in coordination;
  - changes in demeanor;
  - excessive salivation and pupillary response; or,
  - changes in speech pattern.

Also, employees shall inform each other of non-visual effects of toxic exposure such as:

- headaches;
  - dizziness;
  - nausea;
  - blurred vision;
  - cramps; or,
  - irritation of eyes, skin or respiratory tract.
- All field personnel will bring to the attention of the SSO or Site Manager any unsafe condition or practice associated with work activities that they are unable to correct themselves.
  - Contaminated PPE (e.g., respirators and boots), and other equipment and supplies will not be removed from the CRZ or EZ until they have been cleaned, or properly packaged and labeled.
  - Hands will be thoroughly cleaned prior to smoking, drinking, eating or other sanitation activities.
  - Team members must avoid unnecessary contamination (e.g., walking through known or suspected “hot” zones or contaminated puddles, kneeling or sitting on the ground, and leaning against potentially contaminated drums or equipment).
  - Legible and understandable precautionary labels shall be affixed prominently to containers of contaminated scrap, waste, debris and clothing.
  - Removal of contamination from protective clothing or equipment by blowing, shaking or any other means which disperses contaminants into the air is prohibited.
  - Containers shall be moved with proper equipment only. Containers shall be secured to prevent dropping or loss of control during transport.

- Emergency equipment shall be located in storage areas in readily accessible locations which will remain minimally contaminated in an emergency.

### 6.9.2 Contamination/Exposure Prevention

Ways in which on-site personnel may become contaminated include the following:

- being splashed by contaminated liquids while sampling or handling liquids;
- coming in contact with contaminated solids or liquids;
- walking through contaminated materials, either in solid or liquid state;
- being in contact with contaminated equipment;
- being in contact with contaminated solid substances in waste piles or on the soil surface;
- sitting or kneeling on the ground; and,
- being splashed by or coming into contact with analytical sample preservation chemicals and/or decontamination chemicals.

Field personnel will avoid becoming contaminated as much as possible.

Field personnel will avoid exposure to hazardous chemicals by strictly adhering to the required personal protective equipment and decontamination procedures.

Care will be taken to prevent equipment contamination as much as possible. Sampling and monitoring equipment will not be placed on contaminated surfaces. Monitoring equipment that cannot be easily decontaminated will be bagged, and the bag taped and secured around the instrument. Openings will be made in the bag for sample intake and exhaust ports.

### 6.9.3 Equipment Operation

The following information warrants extra attention regarding work around equipment (e.g., generators) and heavy materials:

- Use common sense.
- Hard hats, steel-toed work boots and safety glasses must be worn.
- Pay attention at all times.
- Maintain visual contact at all times.
- All mobile equipment must have backup alarms as specified by OSHA Regulation 29 CFR Part 1926.601.
- Only qualified persons are to operate equipment.
- Never walk directly in back of or to the side of mobile equipment without the operator's knowledge.

- Never use a piece of equipment unless you are familiar with the operation; this applies to light as well as heavy equipment.
- Hearing protection will be provided, if requested by an employee, and is required any time noise levels exceed 85 dBA (8-hour average) or 100 dB peak (impact/impulse).
- Be sure that underground and overhead power lines, sewer lines, gas lines and telephone lines have been identified and that they will not present a hazard in the work area.
- Wear high visibility vests during low light conditions and in areas subject to vehicular traffic. Additional information about working in traffic areas is presented in URS SMS 032, Work Zone Traffic Control.

All work involving hand tools and portable equipment must be performed in accordance with URS SMS 016, Hand Tools and Portable Equipment.

#### 6.9.4 Heavy Materials and Drum Handling Safety

The following are guidelines to follow when working with heavy materials:

- be aware of footing at all times;
- use chains, hoists, straps and any other equipment to safely aid in the moving or lifting of heavy objects/materials;
- use your legs, not your back;
- get help whenever in doubt about a material's weight; and,
- use the "buddy system."

Additional information concerning working with heavy materials is presented in URS SMS 069, Manual Material Handling.

#### 6.9.5 Safety Precautions when Sampling

All personnel engaged in sampling operations shall wear safety glasses or goggles, chemical-resistant steel-toed work boots and hard hats (if overhead hazards are present or whenever equipment, e.g., geoprobe rig or excavator is operating), and hearing and respiratory protection (if required). Because tools and equipment can create major hazards at sites, the following procedures are to be followed during these work activities:

- hard hats are required when working near overhead hazards and during drilling operations;
- goggles, safety glasses or face shields, as appropriate, will be worn when operating power tools;
- gloves are required to protect hands;
- no loose-fitting clothing, jackets with hoods, jewelry or free long hair is permitted near operating equipment;

- hands must be kept away from the moving parts of machinery when operating;
- a first-aid kit and appropriately-sized fire extinguisher will be available at all times;
- all crews will consist of at least two people, one of which will include a SSO or designated field team member, to monitor activities unless the requirements of URS SMS 084, Lone Worker, are being followed.
- no sampling will occur during impending electrical storms or when rain or icy conditions create a work hazard; and,
- keep clear of any overhead power lines.

### 6.9.6 Housekeeping

Housekeeping is a very important aspect of an investigation program and will be strongly stressed in all aspects of field work. Good housekeeping plays a key role in occupational health protection and is a way of preventing dispersion of dangerous contaminants. All work areas will be kept as clean as possible at all time and spills will be cleaned up immediately. Housekeeping will be the responsibility of all employees.

To minimize the spread of contamination beyond the work site, URS will implement a housekeeping program for field activities. The program will include:

- checking the work area at the end of each work day to ensure that tools, chemicals, etc. are properly secured and that all work is properly containerized;
- changing of wash and rinse water for hands, face and equipment when the water becomes visibly dirty; and,
- periodic (daily minimum) removal of all garbage bags and containers used to dispose of food products, plastic inner gloves and contaminated disposable clothing.

URS SMS 021, Housekeeping, presents additional information on this subject.

### 6.9.7 Sanitation

#### Potable Water

- An adequate supply of potable water will be provided.
- Portable containers used to dispense drinking water will be capable of being tightly closed and equipped with a tap. Water will not be “dipped” from the container.
- Containers used to distribute drinking water will be clearly marked and not used for any other purpose.
- When single service cups (to be used but once) are supplied, both a sanitary container for the unused cups and a receptacle for disposing of the used cups will be provided.

Non-Potable Water

- Outlets for non-potable water will be identified to clearly indicate that the water is unsafe and is not to be used for drinking, washing or cooking purposes.
- There shall be no cross-contamination (open or potential) between potable and non-potable water systems.

Toilet Facilities

Due to infrequent visitation of project personnel, a portable restroom is not required. Project personnel will seek restroom accommodations at local establishments. Portable hand washing capability is available on-site and shall be maintained by project personnel under oversight by the SSO

Toilet facilities shall be provided for employees as follows:

<u>Number of Employees</u>	<u>Minimum Number of Facilities</u>
20 or fewer	One toilet seat
More than 20, fewer than 200	One toilet seat and one urinal per 40 employees
More than 200	One toilet seat and one urinal per 50 employees

Food Handling

Food handling will not be permitted in the CRZ or EZ.

URS SMS 030, Sanitation, presents additional information on this subject.

**6.9.8 Notifications**

All field personnel must inform the SSO before entering the CRZ or EZ.

IF ANY PREVIOUSLY UNIDENTIFIED POTENTIAL HAZARDS ARE DISCOVERED DURING ANY FIELD WORK, LEAVE THIS AREA OF THE SITE IMMEDIATELY AND CONTACT THE SSO FOR FURTHER INSTRUCTIONS.

**6.9.9 OSHA Information Poster**

In accordance with the Occupational Safety and Health Act of 1970, a copy of the OSHA information poster must be present on all sites. This poster is provided in Appendix C. It should be posted at full size (11 inches x 17 inches) in the office trailer or other conspicuous area. If the Site does not have such a facility, it should be maintained in the field copies of the HASP.

**6.10 PERSONAL PROTECTIVE EQUIPMENT**

The level of PPE required for each of the tasks will be continually reevaluated as field work progresses. It is expected that there will be increases or decreases in the level of PPE

required for particular tasks. The PPE requirements for specific operations shall be agreed upon beforehand by the URS Project Manager, the HSM and the SSO. A document to that effect will be drawn up, dated and signed by the URS Project Manager and SSO. At site safety meetings, as required, the SSO shall inform field personnel of the PPE requirements and announce changes and justification for these changes. The HSM will publish a change to this HASP if PPE changes are permanent and if the HSM considers the changes substantive.

### **6.11 EMERGENCY EQUIPMENT**

The following emergency equipment will be available at each location of intrusive activity:

- first aid kit;
- first aid directions; and,
- fire extinguisher (10-pound ABC minimum).

### **6.12 PERSONNEL DECONTAMINATION PROCEDURES**

The SSO will be responsible for overseeing personnel decontamination. Personnel decontamination will be performed in a separate area from equipment decontamination. The CRZ will be located immediately outside the EZ. In this area, workers will:

- 1) wash and rinse outer gloves
- 2) wash and rinse outer boots or rubber boots (if required)
- 3) remove outer boots (if required)
- 4) remove outer gloves
- 5) remove Tyvek<sup>®</sup> coveralls (if required)
- 6) remove respiratory protection (if required)
- 7) remove inner gloves
- 8) wash and rinse hands and face

Decontamination procedures will be reviewed and revised, as necessary, by the SSO to be appropriate for the nature, level and extent of contamination. Decontamination for some work activities may be limited to visual inspection for contaminants prior to leaving work area.

Disposable PPE will be disposed of in drums located within the CRZ. The field activities described in this HASP are expected to be conducted over a time period not to exceed six months. If this situation changes at a later date and the planned field work is scheduled over a time period exceeding six months, showers will be made available to field personnel.

Personal decontamination procedures for personnel doffing Modified Level D/Level D PPE and Level C PPE are depicted in Figures 6 and 7, respectively.

### **6.13 LARGE EQUIPMENT AND VEHICLE, FIELD INSTRUMENT AND SMALL EQUIPMENT, AND OTHER EQUIPMENT DECONTAMINATION PROCEDURES**

#### **6.13.1 Decontamination of Large Equipment and Vehicles**

If determined to be necessary by the SSO, a decontamination pad will be constructed at the Site which will function as a washdown area for all large equipment and vehicles used in the EZ.

Large equipment and vehicles will be placed or driven onto the decontamination pad. Gross contamination will be removed through the use of shovels and/or brooms prior to large equipment and vehicles being washed with a high pressure, hot water washer, with cleaning agents being used on an as-needed basis to assist in the removal of contamination. All waters will drain to a collection basin.

Large equipment and vehicles will be held for a short period of time on the decontamination pad to allow for the wash water drippings and loose materials to be retained in the collection basin.

Personnel will don goggles and face shields while decontaminating large equipment and vehicles.

#### **6.13.2 Decontamination of Field Instruments and Small Equipment**

Field instruments should be decontaminated in accordance with the instructions of the manufacturer. Probes such as those used in pH and conductivity meters will be rinsed after each use with deionized water. When possible, instruments which are difficult to decontaminate (e.g., video cameras), may be protectively wrapped to reduce or eliminate the need for decontamination.

Small equipment will be decontaminated using appropriate portions of the personnel decontamination procedures.

#### **6.13.3 Decontamination of Other Equipment**

Generally only the tires of delivery trucks which have been in the EZ will need to be decontaminated (unless visual evidence of contamination is observed). This will be performed by spraying the tires and undercarriage with a high pressure, hot water washer, with cleaning agents being used on an as-needed basis to assist in the removal of contamination, before leaving the work area.

Only areas of large non-intrusive equipment (e.g., cranes) which have come into contact with potentially contaminated materials (e.g., tracks, undercarriage) require washing with a high pressure, hot water washer with cleaning agents being used on an as-needed basis to assist in the removal of contamination.

Personnel will don goggles and face shields during decontamination using a high pressure, hot water washer.

#### 6.14 DISPOSAL OF DECONTAMINATION FLUIDS

Decontamination fluids will be disposed of in accordance with all applicable Federal, State and local requirements.

#### 6.15 AIR QUALITY MONITORING INSTRUMENTATION

Air quality monitoring will be dependent on the specific operation, specific location and available data concerning that location. Personal air monitoring is conducted to provide real time warning of excessive exposure to contaminants and also to provide a characterization of personnel exposure for this work.

While performing field activities in the CRZ and EZ, air quality surveys must be performed and the results recorded. Several instruments which may be used to monitor air quality are discussed below:

- Photoionization Detector

The MiniRAE 2000 Model PGM Photoionization Detector (PID) with an 10.5 electron volt (eV) lamp or equivalent will be used to detect trace concentrations of certain organic gases and a few inorganic gases in the air. This PID was selected for the Project due to its ability to quantify the group of contaminants of concern at this Site (the ionization potential for other types of PIDs should be similar). A PID detects mixtures of compounds simultaneously. PID readings do not measure concentrations of any individual compound when a mixture of compounds is present. Concentrations of these chemical constituents are measured in parts per million (ppm).

The PID will be calibrated twice during each 8-hour work shift (i.e., before start of work and at the conclusion of work) using an isobutylene standard for calibration. Calibrations will be documented. PID readings must be measured in the breathing zone of the most highly exposed worker (i.e., closest to the source) at least each 30 minutes.

- Combustible Gas Indicator/Oxygen Meter

The Neotronics Exotox Model 40 Combustible Gas Indicator/Oxygen Meter (CGI) or equivalent will be used at the discretion of the SSO to measure the concentration of flammable vapors and gases, oxygen and carbon monoxide in the air during field activities. Flammable gas concentrations are measured as percentages of the Lower Explosion Limit (LEL). Oxygen content is measured as a percentage of total air. Carbon monoxide concentration is measured in ppm.

- Multigas Detector Tubes

Draeger Multigas Detector Tubes or equivalent will be used at the discretion of the SSO to detect and quantify the concentration of selected contaminants in air. The detector tubes to be employed must be sensitive in the concentration ranges in the OSHA Permissible Exposure Limit (PEL) range for those contaminants. It should be

realized that most “compound specific” detector tubes also detect other aromatic or aliphatic hydrocarbons; readings do not differentiate between which compounds are present.

The tube readings will be compared to OSHA PELs to determine what level of protection is required. If PID or readings are elevated when compared to background (i.e., 5 ppm or more above background) or if phase product and/or odorous material are detected.

The detector tube readings should be compared to OSHA PELs to determine which level of PPE is required. Information concerning the use of detector tubes, including the reasons for use, results of readings and actions taken, will be thoroughly documented in the Project Safety Log form.

- Personal Monitor for Aerosol and Dust

The MIE, Inc. Model PDM-3 MiniRam Personal Monitor for Aerosol and Dust or equivalent will be used at the discretion of the SSO to detect and quantify the concentration of aerosols and fugitive dust that may be created during work activities.

The Personal Monitor for Aerosol and Dust must be calibrated twice daily (i.e., before start of work and at the conclusion of work).

## 6.16 AIR QUALITY MONITORING PROGRAM

### 6.16.1 Air Quality Monitoring Locations and Frequency

Air quality monitoring will be initially performed using a PID or Personal Monitor for Aerosol and Dust (if necessary) at least each 30 minutes in the breathing zone of the most highly exposed worker (i.e., closest to the source) at the Site. All air quality measurements, with the exception of CGI measurements for flammable vapors and gases, should be made in the breathing zone of personnel who, in the opinion of the SSO, are most exposed to airborne contaminants. Measurements of flammable vapor and gas levels should be made in the vicinity of the nearest ignition source.

When air quality monitoring is performed using a CGI, measurements will be made at least every 30 minutes in areas where flammable conditions, oxygen deprivation or enrichment, and/or elevated levels of carbon monoxide may develop.

Air quality monitoring frequencies and locations using these and other instruments may be modified by the SSO based on actual field conditions.

### 6.16.2 Determination of Background Levels of Organic Vapors, and Aerosols and Fugitive Dust

Background levels for the purpose of evaluating PID and Personal Monitor for Aerosol and Dust readings will be taken at least twice per work shift (i.e., before start of work and at the conclusion of work). Background levels will be taken in an area free of contaminants. Once work at the Site commences, alterations may require relocation of the originally established

background measurement area. Although background measurements will be taken, air quality monitoring response levels, as shown in Table 2, are not to be effected by these measurements unless background contaminants are identified and an Addendum addressing this issue is prepared by the HSM.

### 6.16.3 Initial Levels of Protection and Air Quality Monitoring Response Levels

A number of response levels will be used during field work if airborne contaminants are encountered during air monitoring. The HSM will be notified as soon as possible of upgrading from the initial levels of protection. Initial Levels of Protection and response levels applying to the field activities covered by this HASP are contained in Table 2.

## 6.17 HEAT STRESS MONITORING

To ensure operational and personal safety of field personnel, initial heat stress monitoring for workers wearing protective clothing will be conducted based on the following table. Additional information on heat stress is included in URS SMS 018, Heat Stress.

<u>ADJUSTED TEMPERATURE</u>	<u>TIME INTERVALS FOR HEAT STRESS MONITORING</u>
90°F or above	After each 15 minutes of work
87.5 to 90°F	After each 30 minutes of work
82.5 to 87.5°F	After each 60 minutes of work
77.5 to 82.5°F	After each 90 minutes of work
72.5 to 77.5°F	After each 120 minutes of work

## 6.18 COLD STRESS MONITORING

Persons working outdoors in temperatures at or below freezing may be frostbitten. Areas of the body most susceptible are the extremities. Workers should be aware of loss of feeling in these areas. A more serious form of cold stress is hypothermia. This results when the body loses heat faster than it can produce it and can result in death. Cold stress procedures are discussed in URS SMS 059, Cold Stress.

## 6.19 WORK DURING DARKNESS

Work may be performed at times when low light conditions exist. If the level of lighting impacts safety of work operations, work must cease until appropriate procedures can be established. Adequate illumination (i.e., a minimum of 5 foot-candles throughout the work area) will be provided using lanterns and/or spotlights to enable personnel to conduct their work. Each work crew will consist of a minimum of two individuals.

All illumination will meet the requirements of OSHA Regulation 29 CFR Part 1910.120(m).

## 6.20 CONFINED SPACE WORK

Confined space entry is not anticipated for the work activities authorized by this HASP. Should actual work procedures require that confined spaces be entered, an addendum to this HASP must be prepared by the HSM and approved by the URS Project Manager and the HSM. This addendum will require that work be performed in accordance with all applicable OSHA regulations including OSHA Regulation 29 CFR Part 1910.146 and applicable URS SMSs.

## 6.21 HOT WORK

No hot work (e.g., use of torches or welders, and open flames) is anticipated to be necessary for the scope of work covered by this HASP. If hot work is required, an addendum to this HASP must be prepared in accordance with applicable URS SMSs.

## 6.22 MITIGATIVE MEASURES FOR CONTROL OF EMISSIONS

Based on previous experience at this site and at the similar sites, vapor emissions resulting from normal field operations, if they were to occur, are not anticipated to exceed the response levels. If the response levels are exceeded at any monitoring location, implementation of appropriate mitigative measures to suppress vapor emissions will be initiated. Appropriate mitigative measures may include ceasing operations until the exact cause of the emissions can be identified and corrected. Vapor control actions include vapor suppression foams, covering exposed soil piles with plastic sheeting, and/or spraying exposed soil piles with water.

Site activities may impact the local air quality through generation of fugitive dust. Fugitive dust emission control actions include minimizing the area of the Site which is subject to disturbance at any one time and limiting the movement of trucks and other equipment over exposed soil surfaces. During dry weather conditions, spraying water on unpaved areas subject to construction vehicle traffic may be used to help control dust. Attempts will be made to keep large paved areas clear of loose dirt which can be re-entrained into the air. The use of stone tracking pads at access points to the Site may also lessen the tracking of soil onto adjacent roadways.

## 6.23 SITE SECURITY, SITE CONTROL AND SITE EVACUATION PROCEDURES

In emergency situations, the following actions will be enforced:

- All personnel will report to a prescribed designated area as soon as possible. If access to that area is prohibited due to the nature of the emergency, all personnel will meet at a location upwind from the emergency. These areas will be designated by the SSO at the Daily Site Safety Briefing.
- Security and control of the work area will be the responsibility of the SSO. The SSO will coordinate the emergency situation with appropriate personnel and emergency responders (e.g., fire department, ambulance squad, haz-mat responders).

- If present, site security personnel will not permit any additional personnel (with the exception of emergency response personnel) from entering the work area.
- The SSO will communicate with supervisors during emergencies. Supervisors will then relay information to their employees. Two-way portable radios, if available, or audio and/or visual signals will be used to communicate the nature of the emergency and response actions.

## 6.24 URS SUBCONTRACTORS

Subcontractors retained by URS and its subsidiary companies must follow the requirements of URS SMS 046, Subcontractor Health and Safety Requirements. The provision of URS SMS 046 are applicable to the operations of URS-retained subcontractors and sub-subcontractors of any tier. URS SMS 046 does not apply to “third party” contractor operations where there is no subcontract relationship between the contractor and URS. Health and safety issues regarding “third party” contractor operations are governed by project-specific contracts and are not covered by URS SMS 046.

URS SMS 046 provides requirements for the pre-evaluation of “high risk” subcontractor safety programs. It also provides requirements on contractual risk management, subcontractor safety performance, and responsibilities of the URS Project Manager.

Completed Subcontractor Safety Evaluation forms (Attachment 46-1 to URS SMS 046) must be kept in the project files; in addition, a copy of this form must be submitted to the HSM prior to that subcontractor being contracted to perform work at the Site. If the subcontractor meets the requirements of URS SMS 046 as defined in the Subcontractor Evaluation Criteria (Attachment 46-2 of URS SMS 046), no additional verification is required. If a potential subcontractor does not meet URS SMS 046 safety requirements, a Subcontractor Variance Form (Attachment 46-3 of URS SMS 046) must be completed and submitted to the RHSM for review by the URS Project Manager. Once the variance has been approved by the RHSM, a copy of the approved form must be placed in the project files and provided to the HSM. This variance must be obtained prior to the subcontractor being retained by URS. Variances are site-specific; they are applicable to only a single project and the scope of work defined in the variance when it is approved (i.e., variances obtained for a subcontractor on a project may not be applied to a different project for that subcontractor even if the scope of work is similar or, even, identical).

To facilitate review of safety programs of potential subcontractors, a list of contractors which have previously submitted safety information is provided on the HSE website on The Source. To access this list, click on “Related Links”; the list may be found under “Subcontractor Safety PreQualification.”

## 6.25 BEHAVIOR BASED SAFETY

URS has implemented a behavior based safety program to enhance the performance of our Corporate HSE Programs. Behavior based safety is a process that provides a higher level of safety excellence by promoting proactive responses, building ownership and developing opportunities which relate to employee safety. A primary concept of behavior based safety is

that most accidents are due to unsafe behavior, and that behavioral changes may be made that significantly reduce accident risk. URS SMS 072, Behavior Based Safety, provided in Appendix B, provides additional information about this program. As stated in URS SMS 072, it is the responsibility of the URS Project Manager to implement the behavior based safety procedures. The URS Project Manager must mandate the implementation of safety observations to field personnel using the Behavior Based Safety Checklist (Attachment 72-1 of URS SMS 072); copies of completed checklists must be kept in the project files. If any “unsafe” observations are indicated on the checklist, a copy of that checklist must be provided to the HSM within two working days of the date of the observation.

## 7.1 INTRODUCTION

Site-specific health and safety requirements generally consist of protective equipment and decontamination procedures chosen according to the activity being performed and the potential contaminants in the area of the activity. Table 2 identifies activity-specific initial levels of protection and action levels for the investigatory activities planned at the Site.

The PPE specified in this HASP will be available to all field personnel. The following requirements will be followed in accordance with OSHA regulations:

- facial hair which interferes with the proper fit of air-purifying respirators must not be worn;
- wearers of contact lenses must also wear appropriate eye and face devices in a hazardous environment; and,
- eyeglasses which interfere with the proper fit of full-face respirators must not be worn.

## 7.2 PERSONAL PROTECTIVE EQUIPMENT

Selection of the PPE specified for the Project is based on a review of the identified or suspected hazards, routes of potential exposure to workers (i.e., inhalation, skin absorption, ingestion, and skin or eye contact) and the performance of the PPE in providing a barrier to these hazards. In addition, the choice of PPE has been reviewed to match the work requirements and task-specific conditions to provide adequate protection without causing unnecessary physical impairment to the worker.

### 7.2.1 Level D Personal Protective Equipment

Level D PPE may be used when the atmosphere contains no known hazard and when work functions preclude splashes, immersion or the potential for unexpected inhalation of or contact with hazardous levels of any chemical substance. Level D PPE consists of:

- cloth coveralls/work clothes;
- chemical resistant, steel-toed work boots; or steel-toed rubber boots; or rubber overboots or disposable boot covers over steel-toed work boots;
- American National Standards Institute (ANSI) Z87.1 – 2003 High Impact – compliant safety glasses (equipped with polycarbonate side shields) or goggles (hereinafter, safety glasses or goggles) when conducting, or in the vicinity of, any activity covered by this HASP;
- ANSI Z89.1 – 2003, Type I, Class E – compliant hard hat (hereinafter, hard hat) when physical hazard to head exists;
- Nitrile<sup>®</sup>-butadine rubber or polyvinyl chloride (PVC) gloves (when handling potentially contaminated soil, water or other material); well-fitting work gloves for clean tasks; and,

- ANSI S3.19 – 1974 – compliant hearing protection (i.e., ear plugs or ear muffs) of an appropriate Noise Reduction Rating (hereinafter, hearing protection) if noise levels exceed 85 dBA (eight hour average) or 100 dB peak (impact/impulse).

### 7.2.2 Modified Level D Personal Protective Equipment

Modified Level D PPE may be used in areas that normally can qualify for Level D PPE, but where a potential hazard requiring a minor upgrade in the level of protection may exist. Modified Level D PPE consists of:

- uncoated, polyethylene-coated or Saranex<sup>®</sup>-impregnated Tyvek<sup>®</sup> coveralls or equivalent;
- chemical-resistant, steel-toed rubber boots; or steel-toed rubber boots; or rubber overboots or disposable boot covers over steel-toed work boots;
- Nitrile<sup>®</sup>-butadiene rubber or PVC gloves; well-fitting work gloves for clean tasks;
- hard hat (when physical hazard to head exists);
- safety glasses or goggles (when conducting, or in the vicinity of, any activity covered by this HASP); and,
- hearing protection (i.e., ear plugs or ear muffs) if noise levels exceed 85 dBA (eight hour average) or 100 dB peak (impact/impulse).

### 7.2.3 Level C Personal Protective Equipment

Level C PPE consists of:

- polyethylene-coated or Saranex<sup>®</sup>-impregnated Tyvek<sup>®</sup> coveralls or equivalent;
- chemical-resistant, steel-toed rubber boots; or steel-toed rubber boots; or rubber overboots or disposable boot covers over steel-toed work boots;
- Nitrile<sup>®</sup>-butadiene rubber or PVC inner gloves;
- chemical-resistant Nitrile<sup>®</sup> outer gloves;
- half-face respirator with appropriate organic vapor/acid gas and/or particulate cartridges;<sup>(1)</sup>
- hard hat (when physical hazard to head exists); and,
- hearing protection (i.e., ear plugs or ear muffs) if noise levels exceed 85 dBA (8-hour average) or 100 dB peak (impact/impulse).

---

<sup>(1)</sup> Cartridge selection (i.e., organic vapor/acid gas, particulate or organic vapor/acid gas/particulate combination filter cartridge) to be based on the results of air quality monitoring.

### 7.2.4 Limitations of Protective Clothing

The PPE ensembles selected for this Project are anticipated to provide protection against the types and concentrations of hazardous materials that may be encountered during field operations. However, no protective garment, glove or boot is resistant to all chemicals at any concentration; in fact, chemicals may continue to permeate or degrade a garment even after the source of the contamination is removed.

To obtain optimal usage from PPE, the following procedures are to be followed by all URS personnel:

- When using Tyvek<sup>®</sup> or equivalent coveralls, don a clean new garment after each rest break or at the beginning of each shift or when they become damaged or torn.
- Inspect all clothing, gloves and boots, both prior to and during use, for:
  - imperfect seams;
  - non-uniform coatings;
  - tears; and,
  - poorly functioning closures.
- Inspect reusable garments, boots, and gloves prior to and during use for:
  - visible signs of chemical permeation such as swelling, discoloration, stiffness or brittleness; and,
  - cracks or any signs of puncture or abrasion.

Reusable garments exhibiting any of these characteristics must be discarded.

### 7.2.5 Duration of Work Tasks

The SSO will establish the duration of work tasks in which personnel use PPE ensembles that include chemical protective clothing (including uncoated Tyvek<sup>®</sup> or equivalent coveralls). Variables to be considered include ambient temperature and other weather conditions, the capacity of individual personnel to work in the required level of PPE in heat and cold, and the limitations of specific PPE ensembles. Recommended rest breaks are as follows:

- 15 minutes midway between shift startup and lunch;
- lunch break (30 to 60 minutes); and,
- 15 minutes midway between lunch and shift end.

Rest breaks are to be taken in the support zone or other clean area after personnel have completed the decontamination process, including washing the hands and face with soap and water. Additional rest breaks will be scheduled according to heat stress monitoring protocols as described in SMS 18, Heat Stress.

### 7.3 RESPIRATORY PROTECTION PLAN

Air-purifying respirators provide respiratory protection to the wearer in atmospheres where limited concentrations of known contaminants are present. Cartridges were selected based on a knowledge of the concentration and type of contaminant to be encountered. At a minimum, cartridges must be replaced after each 8-hr work period or at any time when breakthrough is detected while in use.

The following checks must be performed before donning an air-purifying respirator:

- Exhalation valve - pull off plastic cover and check valve for debris or for tears in the valve which could cause leakage.
- Inhalation valves - screw off both cartridges and visually inspect valves for tears. Make sure that the inhalation valves and cartridge receptacle gaskets are in place.
- Make sure a protective lens cover is attached to the lens.
- Make sure you have the right cartridge.
- Make sure that the face piece harness is not damaged. The serrated portion of the harness can fragment which will prevent proper face seal adjustment.
- Make sure the speaking diaphragm retainer ring is hand tight.

To don respirator, fit facepiece on nose bridge making sure that you are able to breathe through the nose. Then swing bottom of facepiece into contact with the chin. When using elastic or rubber headbands, position headbands with longest straps above the ears and over the crown of the head and headbands with shortest straps below the ears around nape of the neck. When using cradle headband, position cradle headband around the crown of the head; position bottom headbands below the ears and around the nape of the neck. Then, adjust the straps for a comfortable fit by moving adjustment slides to lengthen or shorten straps. Adjust the straps just snug enough so that no air leaks around the facepiece. It is not necessary to pull the straps so tight that the respirator “digs” into the face.

**THE RESPIRATOR MUST BE SUBJECTED TO THE FOLLOWING FIT CHECK BEFORE EACH USE.**

Test respirator for leakage using a positive pressure method. Lightly place palm over exhalation valve cover. Exhale gently. A slight positive pressure should build up inside the respirator. If any leakage is detected around the facial seal, readjust head harness straps and repeat test until there is no leakage. If other than facial seal leakage is detected, the condition must be investigated and corrected before another test is made. A negative pressure test should also be performed. Lightly place palms over cartridges or filter holders. Inhale gently and the facepiece should collapse against the face. The respirator must pass the tightness tests before the respirator is used. The respirator will not furnish protection unless all inhaled air is drawn through suitable cartridges or filters.

For specific instructions on air-purifying respirators, consult the manufacturer’s directions.

### Respirator Selection

*Engineering controls and safe work practices (e.g., elimination of the source of contamination, ventilation equipment, working upwind, limiting exposure time) always must be the primary control for air contaminants. Respirators will be used if engineering or work practice controls are not feasible for controlling airborne exposures below acceptable concentrations and as an interim control measure while engineering or work practice controls are implemented.*

Once the need for respirators has been established, the respirators will be selected on the basis of the hazards to which the worker is exposed. Only NIOSH-approved respirators will be issued. Selection criteria established in OSHA Regulation 29 CFR 1910.134 have been used in determining respirator requirements for this Project.

**CAUTION:** *Air purifying respirators are not to be used where there is an oxygen deficiency. Only air-supplied respirators with an emergency escape cylinder or self-contained breathing apparatus will be worn when an oxygen deficiency exists.*

**CAUTION:** *No air purifying protection is available for certain gases. Be sure that the filter cartridge and type of respirator are appropriate for the type and concentration of gas in the environment in which you will be working.*

**CAUTION:** *A respirator does not protect against excessive heat or against a hazardous substance that can attack the body through the skin.*

Airborne contaminants have been evaluated based on the suspected contaminants of concern. The concentration of the airborne chemical hazard will be evaluated using direct-reading instruments to determine what type of respirator will be used.

### Fit Testing

A person wearing a respirator must be clean-shaven in the area of the face-piece seal. Long hair, sideburns and skullcaps that extend under the seal are not allowed. Glasses with temple pieces extending under the seal are not allowed for full-face respirators. Persons with facial conditions that prevent a proper seal are not allowed to wear a respirator until the condition is corrected. Facial conditions that may cause a seal problem include missing dentures, scars, severe acne, etc. Contact lenses may be worn with respiratory protection.

No individual will enter an area where the use of respiratory protective equipment is required unless the person has been fit tested within the last year. Fit testing will be performed in accordance with accepted fit test procedures defined in SMS 042, Respiratory Protection, a copy of which is to be maintained at the Site.

### Respirator Use Instructions

Only those employees who have been properly trained and qualified on the specific type of respirator to be worn may use respirators. No individual will enter an area where the use of respiratory protective equipment is required unless the person has been trained.

All employees whose job assignments require the use of respirators are trained in accordance with OSHA Regulation 29 CFR 1910.134 during initial 40-hour training and annual 8-hour refresher training for hazardous waste operations.

Hands-on training in inspecting and donning a respirator, including user seal checks, is also provided at the time of fit testing. Retraining is performed annually on each type of respirator worn by the individual. In addition, site-specific respirator training is provided during Daily Safety Briefings conducted by the SSO. Training records are kept in the employee's health and safety file.

A particulate respirator cartridge will be changed out when the wearer has difficulty breathing through the cartridge or, at least, daily. Chemical gas or vapor respirator cartridges will be changed out at least daily.

The fit of a chemical gas or vapor respirator will be rechecked and the cartridges will be changed if the wearer detects chemical odor or feels chemical irritation on the skin, both of which are indicators of leakage or cartridge breakthrough. Where available, an End-of-Service Life Indicator (ESLI) will be used on chemical respirator cartridges. Cartridges will be changed as soon as the ESLI indicates that the cartridge is saturated and no longer effective in absorbing airborne chemicals.

#### Respirator Inspection

The user will inspect respirators before and after each day's use. The inspection procedure for air-purifying respirators (full-face piece and half-face piece cartridge respirators) is as follows.

Examine the face piece for:

- excessive dirt;
- cracks, tears, holes or distortion from improper storage;
- inflexibility;
- cracked or badly scratched lenses (full-face only);
- incorrectly mounted eyeglass lenses or broken or missing mounting clips (full-face only); and,
- cracked or broken air-purifying element holder, badly worn threads or missing gaskets.

Examine the head straps or head harness for:

- breaks or cracks;
- broken or malfunctioning buckles; and,
- excessively worn serration on the headstraps, which may permit slippage.

Examine the two inhalation valves and the exhalation valve for:

- foreign material (e.g., hairs, particles);
- improper insertion of the valve body in the face piece;
- cracks, tears or chips in the valve body (particularly in the sealing surface); and,
- missing or defective exhalation valve covers.

Examine the air-purifying cartridge for:

- missing or worn cartridge-holder gasket;
- incorrect cartridge/canister for the hazard;
- incorrect cartridge installation, loose connections or cross threading in the holder; and,
- cracks or dents in the outside case or threads of the filter or cartridge/canister.

#### Cleaning of Respirators

Respirators assigned and worn by one individual must be dismantled and thoroughly cleaned and disinfected after each day's use. Visitors' respirators or respirators assigned to several individuals must be cleaned and disinfected after each use. A disinfectant spray or wipe is approved as a disinfectant between uses during the day but not for cleaning and sanitizing after each day's use. Care must be taken to prevent damage from rough handling during the cleaning procedure. After cleaning, respirators must be reassembled. The procedures for cleaning respirators follow:

- Washing: Disassemble and wash with a mild liquid detergent in warm water (not to exceed 110°F). A stiff bristle (not wire) brush may be used.
- Rinsing: Rinse in clean water (110°F maximum) to remove all traces of detergent. This is important to prevent dermatitis.
- Disinfecting: Thoroughly rinse or immerse in a sanitizer provided by the manufacturer. Alternatively, a weak chlorine bleach solution (1 milliliter of liquid bleach per liter of water) may be used.
- Final Rinsing: Rinse thoroughly in clean water (110°F maximum) to remove all traces of disinfectant. This is important to prevent dermatitis.
- Drying: Drain and dry by hanging by the straps from racks (take care to prevent damage) or by towel drying with clean, soft cloths or paper towels.

#### Maintenance of Respirators

Routine respirator maintenance, such as replacing missing valves, gaskets and nose cups, must only be performed by trained respirator users or a respirator manufacturer's representative. Only approved replacement parts must be used. The substitution of parts from a different brand or type of respirator is generally not possible, invalidates the technical

approval of the respirator, and is not permitted. Any respirator suspected of being defective must be removed from service and replaced.

#### Storage of Respirators

When not in use, respirators must be stored to protect them from dust, sunlight, heat, extreme cold, excessive moisture, damaging chemicals, and physical damage. Respirators must be stored in sealable (e.g., Ziplock<sup>®</sup> or twist-tie) reusable plastic bags between shifts.

The respirator storage environment must be clean, dry and away from direct sunlight. Onsite cabinets or cases are suggested. Storing bagged respirators in vehicles is discouraged because of the potential for damage from other materials or equipment.

The SSO will oversee the respirator maintenance program, including documentation of maintenance and repair.

The purpose of this section of the HASP is to address how field personnel will respond to on-site emergencies. The types of potential emergencies which are addressed by this HASP include:

- fires;
- chemical exposures to personnel; and,
- physical injuries to personnel.

After any emergency, the SSO will document in a detailed emergency summary report the nature of the emergency, causes for occurrence, chemical exposures or physical injuries to personnel, physical damage and emergency responses taken. This report will be in addition to the Injury/Illness/Incident Report. Copies of this report must be submitted to the URS Project Manager and the HSM within 24 hours of the emergency. The HSM will review this report as soon as possible and issue a critique of the response to the emergency within 48 hours of receiving the report; this critique will be distributed to all personnel receiving copies of the Injury/Illness/Incident Report. If this critique indicates that additional emergency response equipment, training, personnel or response procedures are required at the Site, these actions will be implemented as soon as possible.

## **8.1 EMERGENCY RECOGNITION AND PREVENTION**

### **8.1.1 Fires**

Fires are possible whenever flammable gases or vapors are present in proper concentrations and an ignition source is present. Construction equipment itself provides an ignition source. To prevent fires, a CGI as specified in Section 6 will be used at the discretion of the SSO to detect flammable concentrations of gases or vapors. Ignition sources (including construction equipment) will be turned off and the area evacuated if vapors or gases reach 10 percent of the LEL. Work will not resume until the SSO observes CGI flammable gas concentrations continuously below 10 percent of the LEL for 15 minutes or more.

### **8.1.2 Chemical Exposures**

Work will be performed in such a manner that exposure to contaminants through skin or eye contact, inhalation or ingestion is minimized. Work practices that will be followed to reduce chemical exposures include:

- PPE, as specified in Section 7, for the appropriate work activities and areas as defined by the SSO, will be used by all field personnel. An addendum to the HASP must be prepared by the HSM and authorized by the URS Project Manager and HSM in order to modify the PPE requirements.
- Keep hands away from face during work activities.
- Minimize all skin and eye contact with contaminants.

Early recognition of chemical exposure symptoms is essential to the prevention of serious chemical exposure incidents. Symptoms of exposure to the type of compounds potentially present at the Site include the following: fatigue; weakness; eye, nose or throat irritation; headache; dizziness; nausea; vomiting; malaise; tremors; aggressive confusion; cyanosis (i.e., blue color to skin); anemia and muscle spasms.

If a person experiences any of these symptoms or others, or recognizes any of the symptoms in a fellow worker, the person experiencing the symptoms will stop work and report his/her symptoms to the SSO. If the symptoms persist or appear to be damaging in any way, the SSO will make arrangements to have the individual taken to a hospital for medical treatment as soon as possible. If symptoms are serious, work activities in the area where the person was exposed will be discontinued until more is known about the incident.

### 8.1.3 Physical Injuries

Personnel should constantly look for potential safety hazards such as holes or ditches; precariously positioned objects such as drums or equipment that may fall; sharp objects such as nails, metal shards and broken glass; protruding objects at eye or head level; slippery surfaces; steep grades; uneven terrain or unstable surfaces such as walls which may cave in or flooring that may give way. Personnel will inform the SSO of any potential hazards identified so that corrective mitigative action can be taken.

## 8.2 EMERGENCY ALERTING PROCEDURES

In the event of an emergency, personnel will use the following hand signals where voice communications are not feasible:

<b>Signal</b>	<b>Definition</b>
Hands clutching throat	“Out of air/can’t breathe”
Hands on top of head	“Need assistance”
Thumbs up	“OK/I’m all right/I understand”
Thumbs down	“No/negative”
Arms waving upright	“Send back support”
Grip partner’s wrist	“Exit area immediately”

The SSO will use a portable radio or direct contact to alert the appropriate work groups when and if an emergency occurs. The SSO and any isolated work group will carry two-way radios if reasonable contact cannot be maintained. If radios fail, blast(s) from an alarm horn will be used to signal workers. The following signals will be used:

- one long blast .....evacuate area
- two short blasts .....localized problem (no danger to workers)
- two long blasts .....all clear
- three short blasts .....medical emergency

### 8.3 EMERGENCY TELEPHONE

If it is determined during the Safety Orientation Meeting that no individuals in a distinct work area possess a cell phone, the closest accessible telephone during working hours will be identified by the SSO prior to commencing field activities in that work area. When working in remote areas, a cell phone must be available. Emergency telephone numbers will be posted in URS field vehicle(s) and any field office trailer and will be available from the SSO present at all site activities.

### 8.4 EMERGENCY MEDICAL RESPONSE

The SSO will have the primary role in responding to all emergencies in the work area. All personnel present in the work area will contact the SSO in case of emergency. The SSO or designee must be present at the Site during all work activities in a CRZ or EZ. If reasonable contact cannot be maintained, the SSO will carry a two-way portable radio and each isolated work activity group will also have a two-way portable radio. If any emergency such as a fire, chemical exposure or physical injury occurs, the SSO will be immediately contacted. The SSO, or designee performing in this capacity, must have First Aid and bloodborne pathogens training, and be familiar with universal precautions. In cases of emergency response, all field personnel will take direction from the SSO. If the SSO or designee is not present or has been injured, the Site Manager will respond to emergencies.

To obtain emergency medical treatment and ambulance service at the Site, dial 911 (for cellular phones, be prepared to give the operator your name and location address). Other emergency telephone numbers are included in Table 3. This table will be maintained by the SSO and kept readily available in URS field vehicle(s) and any field office trailer. It will be revised and updated to reflect any and all new emergency information. The revised table will be approved by the URS Project Manager before distribution.

The SSO will have the primary role in responding to all emergencies in the work area. In the event of a serious personal injury requiring off-site medical attention, the injured person will first be moved outside the work zone where an attempt will be made to go through the decontamination procedures including removal of protective clothing. If a head, neck, back or spinal injury is suspected, the injured person will not be moved and an ambulance will be summoned.

#### 8.4.1 Emergency Decontamination Procedures

Decontamination of an injured or exposed worker will be performed only if decontamination does not interfere with essential medical treatment.

If decontamination can be performed: wash, rinse and/or cut off protective clothing and equipment and bag immediately.

If decontamination cannot be performed:

- wrap the victim in blankets or plastic sheeting to reduce contamination of other personnel;

- alert emergency and medical personnel to potential contamination; and,
- arrange to have the SSO or other personnel familiar with the incident and contaminants at the Site accompany the victim to the hospital.

#### 8.4.2 Physical Injury

In the event of physical injury, the following steps will be taken:

- evaluate the extent of injuries;
- summon emergency help as deemed necessary by the SSO or the SSO's designee;
- modify decontamination procedures as appropriate considering the actual levels of contaminants on the person, if any, and type or severity of injuries; and,
- apply First Aid.

**In case of a severe injury requiring immediate attention (e.g., a neck or back injury, victim is unconscious or a severe burn or laceration), dial 911 for emergency medical services. Other emergency telephone numbers are provided in Table 3.**

If the injury is clearly minor (e.g., a minor burn or cut), after decontamination, the injured individual may be driven to a First Aid Medical Services Facility. The First Aid Medical Services Facility selected for this project is Concentra Medical Center (see Table 3 for directions from the Site to the First Aid Medical Services Facility).

Medical attention must be sought regardless of how minor the injuries appear to be.

#### 8.4.3 Injury Due to Cold Exposure

First aid for frostbite consists of the following procedures:

- decontaminate victim;
- bring victim indoors and quickly rewarm the affected areas in water between 102° and 105°F;
- give victim a warm drink - not coffee, tea or alcohol;
- do not permit the victim to smoke;
- keep the frozen parts in warm water or covered with warm cloths for 30 minutes, even though the tissue will be very painful as it thaws;
- evaluate the injured areas and cover with sterile, soft, dry material;
- keep the victim warm and get immediate medical care;
- do not rub the frostbitten part;
- do not allow blisters to be broken;
- do not use ice, snow, gasoline or anything cold on frostbite;

- do not use heat lamps or hot water bottles to rewarm the part; and,
- do not place the affected part near a hot stove.

First Aid for exposure to cold (hypothermia) consists of the following procedures:

- decontaminate victim;
- bring victim into a warm area as quickly as possible;
- remove wet or cold garments;
- dry the person thoroughly;
- provide warm, dry clothing or covering;
- provide rapid but gentle rewarming;
- give victim a warm drink - not coffee, tea or alcohol; and,
- keep the victim warm and get immediate medical care.

## 8.4.4 Injury Due to Chemical Exposure

If it is suspected that a person has suffered from chemical exposure, the following procedures shall be undertaken:

- Skin Contact: Flush with water. Remove clothing, if necessary. Wash/rinse affected area for at least 15 minutes. Decontaminate and provide appropriate medical attention.
- Inhalation: Move person away from area; decontaminate and transport person to the hospital for medical attention.
- Ingestion: Decontaminate and transport person to the hospital for medical attention.
- Eye Contact: Irrigate with water for at least 15 minutes. Decontaminate and transport person to the hospital for medical attention.

## 8.4.5 Emergency Medical Services for Severe Injuries

Emergency telephone numbers are listed in Table 3. If emergency medical treatment is required, the following procedures will be taken:

- Call 911 (for cellular phones, be prepared to give the operator your name and location address) to request an ambulance.
- Contact the URS Occupational Nurse (Jeanette Schrimsher).

## 8.4.6 First Aid Medical Services Facility for Minor Injuries

If the injury is clearly minor (e.g., a minor burn or cut) contact the URS Occupational Nurse (Jeanette Schrimsher). After decontamination, the injured individual may be driven to the First Aid Medical Services Facility. **If there is any question of the severity of an injury,**

call for emergency medical services by dialing 911 (see Section 8.5.5, Contacting Emergency Services for Severe Injuries, immediately above, for additional information).

The First Aid Medical Services Facility selected for this project is as follows:

Concentra Medical Center  
1 Journal Square Plaza  
Jersey City, New Jersey  
(201) 656-7678

Directions to Concentra Medical Center from the Site site are presented in Table 3.

## 9.1 PURPOSE AND APPLICABILITY

This Discharge Prevention and Cleanup Plan (the “Plan”) provides procedures relating to discharge prevention of hazardous substances onto the lands and into the waters of the State of New York during field activities associated with this project and, if necessary, cleanup of such discharge. By definition a discharge is any intentional or unintentional action or omission resulting in the releasing, spilling, pumping, pouring, emitting, emptying or dumping of a hazardous substance onto the lands of the State and/or into its waters. A hazardous substance is defined as any substance designated in 40 CFR Part 302 (Designation, Reportable Quantities and Notification Requirements for Hazardous Substances Under the Comprehensive Environmental Response, Compensation and Liability Act of 1980).

In addition, the requirements of NYCDEP’s Environmental, Health & Safety Policies and Procedures, Volume 2, entitled “Spill Prevention, Environmental Release Reporting & Investigation” (hereinafter, the “NYCDEP Spill Procedures”) must be strictly adhered to at all times. Section 7, Bureau of Wastewater Treatment (BWT)-Protocol for Reporting Spills/Releases, of the NYCDEP Spill Procedures, presents BWT-specific procedures for reporting spills. The “All Other Sites (Non-BWS Sites)” section of Part B of the NYCDEP BEDC Emergency and Spill/Release Incident Reporting Protocols presents additional information about reporting spills. A copy of the NYCDEP Spill Procedures is provided in Attachment 1.

The NYCDEP Spill Procedures apply to all releases of petroleum, hazardous substances, wastewater/sewage or other pollutants on NYCDEP property or a field work locations, whether or not caused by NYCDEP activities or those of its contractors. The NYCDEP Spill Procedures do not apply to transportation accidents or other releases caused by third parties unrelated to NYCDEP water or wastewater operations in New York City or its watersheds although NYCDEP may respond to these incidents as part of its water supply protection New York City Hazmat technical support roles.

## 9.2 RESPONSIBILITIES

The URS Project Manager is responsible for ensuring that the Plan is implemented. The URS Project Manager will provide guidance to the Site Manager relating to compliance with the provisions of this Plan.

## 9.3 DISCHARGE CONTAINMENT AND CLEANUP

Procedures for discharge containment should be enacted immediately following a discharge event. Absorbent sheets and rolls, and booms can be used to contain the discharged hazardous substance on both land and water. Storm sewers or other access points to the subsurface should be protected with barrier materials and/or absorbent materials as soon as possible.

Listed below are a number of cleanup procedures which can be employed. The methods presented below should not be considered as “all inclusive.” Absorbent materials will be stored in a designated area at the Site. In selecting the appropriate method, keep in mind the

health and safety of personnel. In addition, consider the potential of a discharge emitting vapors or presenting a flammability hazard.

For discharges on a hard surface, mop with a commercial mop, apply absorbent material to the residue, and sweep clean. Alternatively, vacuum with an explosion proof wet vacuum. Place the residue in a Department of Transportation (DOT)-approved storage container.

For pooled discharges on a hard surface, pump the discharge into a DOT-approved container with an explosion proof centrifugal or vacuum pump. Alternatively, for large discharges, contact an environmental services company to remediate the discharge.

For non-pooled discharges on gravel or soil, apply absorbent and/or absorbent sheets to absorb as much of the product from the gravel or dirt as possible. Apply additional absorbent and/or absorbent sheets as required to recover the remaining contaminated material. Place the recovered product and saturated absorbent material in a DOT-approved container.

All residue recovered from the discharge cleanup will be disposed of in accordance with applicable Federal, State and local rules and regulations.

For quick response, as appropriate, the following discharge containment and cleanup materials will be maintained at a readily accessible location at the Site:

- squeegees;
- brooms;
- shovels;
- DOT-approved containers;
- a small explosion proof pump or wet vacuum unit (if deemed necessary by SSO);
- one or more of the following absorbents:
  - inorganic perlite (granular),
  - inorganic vermiculite (granular),
  - straw,
  - synthetic organic polypropylene sheets or rolls of absorbent material, and/or
  - loose sand;
- commercial mops; and,
- commercial absorbent and/or absorbent sheets.

#### **9.4 DISCHARGE NOTIFICATION REQUIREMENTS**

The responsibility for informing the required agencies in the event of a hazardous substance discharge is assigned to the URS Task Manager. All notifications must be made in strict accordance with the requirements of the NYCDEP Spill Procedures. Additionally, the URS Task Manager is responsible for initiating control and countermeasures relating to the discharge.

Any notification performed by a person responsible for a discharge must include the following information as a minimum:

- the name, title, affiliation, address and telephone number of the person reporting the discharge;
- the location of the discharge, with as much specificity as NYCDEP requested, and in any event with sufficient specificity to enable the NYCDEP to direct its agents and employees and any other person to the discharge site, including:
  - the name of the Site, the street address, the municipality and the county; and,
  - for discharges into water, the name of the water body, location of the discharge with reference to a fixed point or points, and a description of the area which the discharge may reach.
- the common name of the hazardous substance(s) discharged;
- an estimate of the quantity of each hazardous substance discharged, including best estimates if the quantities are unknown;
- the date and time at which the discharge began, the date and time at which the discharge was discovered, and, if the discharge has ended, the date and time at which it ended;
- the actions such person proposes to take to contain, clean up and remove the hazardous substance(s) discharged; and,
  - the name and address of any person responsible for the discharge.

**10.1 GENERAL**

Records shall be kept documenting the site safety program. Logs and records will be kept for training, safety meetings, injury/exposure and air monitoring data. A daily health and safety log will be maintained by the SSO. This log shall include a description of the field work being conducted, any changes in the operations, names of all personnel working at the Site, types of air monitoring equipment being used and how calibrated, air monitoring results, level of PPE being worn, accidents and injuries, and a description of any unusual occurrences or physical complaints.

**10.2 PERSONNEL RECORDS**

Records shall be kept for each on-site individual. Records include a medical clearance statement from a qualified physician, and fit test and training documentation. When site safety meetings are conducted, an attendance sheet, including topics discussed, must be kept.

The following forms must be completed, as appropriate, by the SSO:

- Equipment Calibration Log;
- Project Safety Log;
- Compliance Agreement Form;
- URS Injury/Illness/Incident Report;
- Safety Orientation Meeting/Daily Site Briefings Form; and,
- Job Safety Analysis Forms

The SSO will be responsible for completing the Equipment Calibration Log, the Project Safety Log, the URS Injury/Illness/Incident Report and the Site Safety Briefing Form. The SSO will also ensure that all URS and Contractor personnel working on the Site complete the Compliance Agreement Form, review the Job Safety Analysis Forms and sign the Site Safety Briefing Form. The URS Project Manager will be responsible for completing any accident or investigation information required by the Client. All completed forms will be provided to the URS Project Manager for placement in the project files.

Copies of these forms (with the exception of the URS Injury/Illness/Incident form which is contained in URS SMS 049) are provided on the following pages.

## Initial Job Safety Analysis

JOB LOCATION	URS PERSONNEL ASSIGNED	DATES OF WORK
Remedial Investigations 538 and 544 Union Avenue Brooklyn, New York	Cary Friedman (SSO) Megan Dascoli	November 2011 - November 2012
<b>TASK DESCRIPTION:</b>		
Inspection of Geoprobe® Drilling Activities (i.e., advance test borings, collect soil samples and installation of temporary/permanent groundwater monitoring wells).		
<b>HAZARD DESCRIPTION:</b>		
<p><b>Physical Hazards Associated with Drilling Equipment</b> – There may be a risk of physical injury (e.g., crushing, pinch points) resulting from contact with drilling equipment.</p> <p><b>Noise Exposure</b> – Work activities may be conducted at locations with high noise levels from site operations (e.g., drilling).</p> <p><b>Chemical Hazards</b> – There maybe a risk of chemical exposures resulting from contact with contaminated dusts, liquids, vapors, mists or chemical constituents brought to the Site. Inhalation and dermal contact are generally the primary routes of exposure; ingestion is a secondary route of exposure.</p> <p><b>Slip-Trip-Fall Hazards</b> – Dangerous conditions may result from muddy, uneven and slippery surfaces and equipment/supplies in the vicinity of the work area.</p> <p><b>Traffic Hazards</b> – Traffic hazards may occur in work areas, especially when work activities are performed in highly trafficked areas (e.g., parking lots, roadways).</p> <p><b>Cold Stress Hazards</b> – Work may be performed during winter when ambient weather is expected to be cold and windy.</p> <p><b>Heat Stress Hazards</b> – Work may be performed during daylight hours in summer when ambient weather is expected to be warm and humid.</p> <p><b>Underground Structures/Obstructions/Utilities</b> – The proximal location of underground structures/obstructions/utilities may pose hazards (e.g., fire, explosion, exposure, electrical, environmental release) when intrusive activities are conducted.</p> <p><b>Overhead Hazards</b> – Overhead power lines may pose a shock or electrocution hazard if the power line is contacted or arcing occurs. Also, overhead piping carrying chemicals may be present.</p> <p><b>Hand Tool Hazards</b> – Physical hazards (e.g., cuts, pinch points) associated with the use of hand tools may cause injury.</p> <p><b>Biological Hazards</b> – Poisonous plants (e.g., poison ivy), insects (e.g., ticks, spiders) and feral animals (e.g., dogs) may be present at the Site.</p> <p><b>Weather Hazards</b> – Severe storms may develop which include lightning hazards and/or exacerbate other hazards (e.g., slip-trip-fall hazards).</p> <p><b>Radiant Energy Hazards</b> – Work activities may be conducted outside during periods of strong sunlight; even on cloudy days, exposure to radiant energy may occur.</p> <p><b>Lifting Hazards</b> – Field operations may require lifting heavy items (e.g., portable generators, sampling equipment and supplies, sample shuttles, boxes of soil samples, core boxes).</p> <p><b>Hazards to Public</b> – Work activities may be performed in or adjacent to publicly accessible areas.</p>		

## HAZARD CONTROLS:

- 1) An Initial Site Safety Orientation Meeting will be conducted by the URS Site Safety Officer (SSO) prior to conducting any fieldwork. Meeting topics will include the Job Safety Analysis, personal protective equipment requirements, working around heavy equipment, general and site-specific health and safety, site hazards, safe work procedures, releases to the environment, decontamination, air quality monitoring and emergency response. Topics discussed at this meeting and all attendees present will be documented by the SSO as described in the site-specific Health and Safety Plan (HASP). Thereafter, Daily Site Safety Briefings, covering the same topics as the Initial Site Safety Orientation Meeting (as necessary), will be conducted and documented by the SSO.
- 2) Check weather conditions before going to the Site. No work will be performed during “severe” weather conditions.
- 3) The SSO will determine whether any employee performing fieldwork has any special medical condition (e.g., allergy to poisonous plants, insects [especially bees]) that may need to be conveyed to emergency response personnel in case of an accident.
- 4) At least one member of each field team will carry a cellular telephone at all times. Individuals having cellular telephones will have ready access to emergency telephone numbers and directions to the First Aid Medical Facility.
- 5) All work activities will be performed in strict accordance with the requirements of the HASP prepared by URS. All aspects of the URS HASP must be understood by all site personnel and strictly adhered to.
- 6) Personnel will be aware of their location relative to heavy equipment and maintain a safe distance from operating equipment at all times.
- 7) While it is difficult to eliminate slip-trip-fall hazards, implementing safe work practices (e.g., good housekeeping), wearing proper footwear and keeping the work area free of obstructions will reduce the risk of injury.
- 8) The drilling contractor will call for a utility mark-out (e.g., “DigSafe” request) of all underground utilities at least 72 hours prior to field activities to identify underground utilities that may enter onto the Site. Documentation of this call must be provided to the URS SSO prior to the start of intrusive work and maintained on-site. URS will also request that a representative of the Client/Site Owner identify and mark-out the location of underground structures (e.g., utilities) at the Site.
- 9) Prior to conducting drilling operations adjacent to overhead power lines, work activities must be coordinated with the appropriate utility. The utility company will be notified and information will be obtained regarding line voltage and minimum separation distance required for work in this area. Operations adjacent to overhead lines will not be conducted unless the lines have been de-energized and positive means (e.g., lockout/tagout) have been taken to prevent lines from being energized.
- 10) Fluids will be provided regularly during the work periods in order to maintain adequate body fluid levels for field personnel to reduce heat stress hazards.
- 11) If work is to be performed continuously in the cold when the wind chill factor is at or below 19 degrees Fahrenheit, heated warming shelters (e.g., tents, trailers, vehicle cabs) will be made available nearby.
- 12) Consider erecting barriers (e.g., snow fencing, caution tape) to control public access to work areas.
- 13) Field personnel are encouraged to use insect repellent to reduce biological hazards.
- 14) Field personnel are encouraged to use sunscreen to reduce radiant energy hazards.

<b>PERSONAL PROTECTION EQUIPMENT</b>
<p>Personal Protective Equipment (PPE) – Potential hazards will be reduced by protecting against exposures to contaminants by using appropriate PPE. If site conditions require respiratory protection to be used, work should be stopped and the requirements to upgrade PPE should be evaluated. Hearing protection will be required when noise levels exceed 85 decibels (8-hr time weighted average) or are greater than 100 decibels at any given time. See Personal Protective Equipment Section of the HASP for additional information.</p>
<b>AIR QUALITY MONITORING</b>
<p>Air Quality Monitoring – The type and frequency of air quality monitoring for worker protection will be dependent on the specific operation, location and available data concerning the work activity being performed. Personal monitoring may be conducted to provide real-time measurements of exposure to Site contaminants. See Air Quality Monitoring Section of the HASP for additional information.</p>
<b>EMERGENCY RESPONSE PROCEDURES</b>
<p>Emergency Response Procedures – Emergency telephone numbers are provided in a table in the HASP. The table will be carried by the SSO and at least one member of each work team, and kept readily available in URS field vehicle(s) and all field trailers. The table will be revised and updated, as necessary, to reflect all new emergency information. The SSO will have the primary role in responding to all emergencies at the Site. All personnel present in the work area will contact the SSO in case of an emergency.</p> <p>If an injury is clearly minor (e.g., a minor burn or cut) contact the Health and Safety Representative and/or the URS Occupational Nurse (Jeanette Schrimsher). The injured individual should be driven to the Occupational Health Clinic. If emergency medical treatment is required, call 911 (for cellular phones, be prepared to give the operator your name and location address) to request an ambulance and then contact the URS Occupational Nurse (Jeanette Schrimsher).</p> <p>See Emergency Response Procedures Section of the HASP for additional information.</p>
<b>DISCHARGE PREVENTION AND CLEANUP PLAN</b>
<p>Discharge Prevention and Cleanup Plan – Procedures for discharge containment will commence immediately following a discharge event. Absorbent sheets, rolls, booms, etc. will be used to contain discharged substances as soon as possible. Storm sewer or other access points to the subsurface will be protected with barrier materials and/or absorbent materials as soon as possible. See Discharge Prevention and Cleanup Section of the HASP for additional information.</p>

## HAZARD CONTROLS:

- 1) An Initial Site Safety Orientation Meeting will be conducted by the URS Site Safety Officer (SSO) prior to conducting any fieldwork. Meeting topics will include the Job Safety Analysis, personal protective equipment requirements, working around heavy equipment, general and site-specific health and safety, site hazards, safe work procedures, releases to the environment, decontamination, air quality monitoring and emergency response. Topics discussed at this meeting and all attendees present will be documented by the SSO as described in the site-specific Health and Safety Plan (HASP). Thereafter, Daily Site Safety Briefings, covering the same topics as the Initial Site Safety Orientation Meeting (as necessary), will be conducted and documented by the SSO.
- 2) Check weather conditions before going to the Site. No work will be performed during “severe” weather conditions.
- 3) The SSO will determine whether any employee performing fieldwork has any special medical condition (e.g., allergy to poisonous plants, insects [especially bees]) that may need to be conveyed to emergency response personnel in case of an accident.
- 4) At least one member of each field team will carry a cellular telephone at all times. Individuals having cellular telephones will have ready access to emergency telephone numbers and directions to the First Aid Medical Facility.
- 5) All work activities will be performed in strict accordance with the requirements of the HASP prepared by URS. All aspects of the URS HASP must be understood by all site personnel and strictly adhered to.
- 6) Personnel will be aware of their location relative to heavy equipment and maintain a safe distance from operating equipment at all times.
- 7) While it is difficult to eliminate slip-trip-fall hazards, implementing safe work practices (e.g., good housekeeping), wearing proper footwear and keeping the work area free of obstructions will reduce the risk of injury.
- 8) Fluids will be provided regularly during the work periods in order to maintain adequate body fluid levels for field personnel to reduce heat stress hazards.
- 9) Field personnel are encouraged to use insect repellent to reduce biological hazards.
- 10) Field personnel are encouraged to use sunscreen to reduce radiant energy hazards.

## PERSONAL PROTECTION EQUIPMENT

Personal Protective Equipment (PPE) – Potential hazards will be reduced by protecting against exposures to contaminants by using appropriate PPE. If site conditions require respiratory protection to be used, work should be stopped and the requirements to upgrade PPE should be evaluated. Hearing protection will be required when noise levels exceed 85 decibels (8-hr time weighted average) or are greater than 100 decibels at any given time. See Personal Protective Equipment Section of the HASP for additional information.

<b>AIR QUALITY MONITORING</b>
Air Quality Monitoring – The type and frequency of air quality monitoring for worker protection will be dependent on the specific operation, location and available data concerning the work activity being performed. Personal monitoring may be conducted to provide real-time measurements of exposure to Site contaminants. See Air Quality Monitoring Section of the HASP for additional information.
<b>EMERGENCY RESPONSE PROCEDURES</b>
Emergency Response Procedures – Emergency telephone numbers are provided in a table in the HASP. The table will be carried by the SSO and at least one member of each work team, and kept readily available in URS field vehicle(s) and all field trailers. The table will be revised and updated, as necessary, to reflect all new emergency information. The SSO will have the primary role in responding to all emergencies at the Site. All personnel present in the work area will contact the SSO in case of an emergency.  If an injury is clearly minor (e.g., a minor burn or cut) contact the Health and Safety Representative and/or the URS Occupational Nurse (Jeanette Schrimsher). The injured individual should be driven to the Occupational Health Clinic. If emergency medical treatment is required, call 911 (for cellular phones, be prepared to give the operator your name and location address) to request an ambulance and then contact the URS Occupational Nurse (Jeanette Schrimsher).  See Emergency Response Procedures Section of the HASP for additional information.
<b>DISCHARGE PREVENTION AND CLEANUP PLAN</b>
Discharge Prevention and Cleanup Plan – Procedures for discharge containment will commence immediately following a discharge event. Absorbent sheets, rolls, booms, etc. will be used to contain discharged substances as soon as possible. Storm sewer or other access points to the subsurface will be protected with barrier materials and/or absorbent materials as soon as possible. See Discharge Prevention and Cleanup Section of the HASP for additional information.

**Initial Job Safety Analysis**

<b>JOB LOCATION</b>	<b>URS PERSONNEL ASSIGNED</b>	<b>DATES OF WORK</b>
Remedial Investigations 538 and 544 Union Avenue Brooklyn, New York	Cary Friedman (SSO) Megan Dascoli	November 2011 - November 2012
<b>TASK DESCRIPTION:</b>		
Residuals Management Activities		
<b>HAZARD DESCRIPTION:</b>		
<p><b>Lifting Hazards</b> – Field operations may require lifting heavy items (e.g., drums of purge water, drill cuttings, waste PPE).</p> <p><b>Cold Stress Hazards</b> – Work may be performed during winter when ambient weather is expected to be cold and windy.</p> <p><b>Heat Stress Hazards</b> – Work may be performed during daylight hours in summer when ambient weather is expected to be warm and humid.</p> <p><b>Slip-Trip-Fall Hazards</b> – Dangerous conditions may result from muddy, uneven and slippery surfaces and equipment/supplies in the vicinity of the work area.</p> <p><b>Hand Tool Hazards</b> – Physical hazards (e.g., cuts, pinch points) associated with the use of hand tools may cause injury.</p> <p><b>Chemical Hazards</b> – There maybe a risk of chemical exposures resulting from contact with contaminated dusts, liquids, vapors, mists or chemical constituents brought to the Site. Inhalation and dermal contact are generally the primary routes of exposure; ingestion is a secondary route of exposure.</p> <p><b>Weather Hazards</b> – Severe storms may develop which include lightning hazards and/or exacerbate other hazards (e.g., slip-trip-fall hazards).</p> <p><b>Biological Hazards</b> – Poisonous plants (e.g., poison ivy), insects (e.g., ticks, spiders) and feral animals (e.g., dogs) may be present at the Site.</p> <p><b>Radiant Energy Hazards</b> – Work activities may be conducted outside during periods of strong sunlight; even on cloudy days, exposure to radiant energy may occur.</p>		

## HAZARD CONTROLS:

- 1) An Initial Site Safety Orientation Meeting will be conducted by the URS Site Safety Officer (SSO) prior to conducting any fieldwork. Meeting topics will include the Job Safety Analysis, personal protective equipment requirements, working around heavy equipment, general and site-specific health and safety, site hazards, safe work procedures, releases to the environment, decontamination, air quality monitoring and emergency response. Topics discussed at this meeting and all attendees present will be documented by the SSO as described in the site-specific Health and Safety Plan (HASP). Thereafter, Daily Site Safety Briefings, covering the same topics as the Initial Site Safety Orientation Meeting (as necessary), will be conducted and documented by the SSO.
- 2) Check weather conditions before going to the Site. No work will be performed during “severe” weather conditions.
- 3) The SSO will determine whether any employee performing fieldwork has any special medical condition (e.g., allergy to poisonous plants, insects [especially bees]) that may need to be conveyed to emergency response personnel in case of an accident.
- 4) At least one member of each field team will carry a cellular telephone at all times. Individuals having cellular telephones will have ready access to emergency telephone numbers and directions to the First Aid Medical Facility.
- 5) All work activities will be performed in strict accordance with the requirements of the HASP prepared by URS. All aspects of the URS HASP must be understood by all site personnel and strictly adhered to.
- 6) While it is difficult to eliminate slip-trip-fall hazards, implementing safe work practices (e.g., good housekeeping), wearing proper footwear and keeping the work area free of obstructions will reduce the risk of injury.
- 7) Fluids will be provided regularly during the work periods in order to maintain adequate body fluid levels for field personnel to reduce heat stress hazards.
- 8) If work is to be performed continuously in the cold when the wind chill factor is at or below 19 degrees Fahrenheit, heated warming shelters (e.g., tents, trailers, vehicle cabs) will be made available nearby.
- 9) Field personnel are encouraged to use insect repellent to reduce biological hazards.
- 10) Field personnel are encouraged to use sunscreen to reduce radiant energy hazards.

## PERSONAL PROTECTION EQUIPMENT

Personal Protective Equipment (PPE) – Potential hazards will be reduced by protecting against exposures to contaminants by using appropriate PPE. If site conditions require respiratory protection to be used, work should be stopped and the requirements to upgrade PPE should be evaluated. Hearing protection will be required when noise levels exceed 85 decibels (8-hr time weighted average) or are greater than 100 decibels at any given time. See Personal Protective Equipment Section of the HASP for additional information.

<b>AIR QUALITY MONITORING</b>
<p>Air Quality Monitoring – The type and frequency of air quality monitoring for worker protection will be dependent on the specific operation, location and available data concerning the work activity being performed. Personal monitoring may be conducted to provide real-time measurements of exposure to Site contaminants. See Air Quality Monitoring Section of the HASP for additional information.</p>
<b>EMERGENCY RESPONSE PROCEDURES</b>
<p>Emergency Response Procedures – Emergency telephone numbers are provided in a table in the HASP. The table will be carried by the SSO and at least one member of each work team, and kept readily available in URS field vehicle(s) and all field trailers. The table will be revised and updated, as necessary, to reflect all new emergency information. The SSO will have the primary role in responding to all emergencies at the Site. All personnel present in the work area will contact the SSO in case of an emergency.</p> <p>If an injury is clearly minor (e.g., a minor burn or cut) contact the Health and Safety Representative and/or the URS Occupational Nurse (Jeanette Schrimsher). The injured individual should be driven to the Occupational Health Clinic. If emergency medical treatment is required, call 911 (for cellular phones, be prepared to give the operator your name and location address) to request an ambulance and then contact the URS Occupational Nurse (Jeanette Schrimsher).</p> <p>See Emergency Response Procedures Section of the HASP for additional information.</p>
<b>DISCHARGE PREVENTION AND CLEANUP PLAN</b>
<p>Discharge Prevention and Cleanup Plan – Procedures for discharge containment will commence immediately following a discharge event. Absorbent sheets, rolls, booms, etc. will be used to contain discharged substances as soon as possible. Storm sewer or other access points to the subsurface will be protected with barrier materials and/or absorbent materials as soon as possible. ## Initial Job Safety Analysis

JOB LOCATION	URS PERSONNEL ASSIGNED	DATES OF WORK
Remedial Investigations 538 and 544 Union Avenue Brooklyn, New York	Cary Friedman (SSO) Megan Dascoli	November 2011 - November 2012
<b>TASK DESCRIPTION:</b>		
Inspection of Interim Remedial Measures (IRMs) conducted by a remedial contractor, including soil “hot spot” excavations and/or post-excavation sampling.		
<b>HAZARD DESCRIPTION:</b>		
<p><b>Physical Hazards Associated with Heavy Equipment</b> – There may be a risk of physical injury (e.g., crushing, pinch points) resulting from contact with heavy equipment.</p> <p><b>Excavation Hazards</b> - URS field personnel will be observing excavations and trenching. When performing observations on an excavation or trench greater than 4 feet in depth, URS field personnel must remain at least more than 2 feet from the leading edge of the excavation and must <b>never</b> enter a trench or excavation.</p> <p><b>Noise Exposure</b> – Work activities may be conducted at locations with high noise levels from site operations (e.g., drilling).</p> <p><b>Chemical Hazards</b> – There maybe a risk of chemical exposures resulting from contact with contaminated dusts, liquids, vapors, mists or chemical constituents brought to the Site. Inhalation and dermal contact are generally the primary routes of exposure; ingestion is a secondary route of exposure.</p> <p><b>Slip-Trip-Fall Hazards</b> – Dangerous conditions may result from muddy, uneven and slippery surfaces and equipment/supplies in the vicinity of the work area.</p> <p><b>Traffic Hazards</b> – Traffic hazards may occur in work areas, especially when work activities are performed in highly trafficked areas (e.g., parking lots, roadways).</p> <p><b>Cold Stress Hazards</b> – Work may be performed during winter when ambient weather is expected to be cold and windy.</p> <p><b>Heat Stress Hazards</b> – Work may be performed during daylight hours in summer when ambient weather is expected to be warm and humid.</p> <p><b>Underground Structures/Obstructions/Utilities</b> – The proximal location of underground structures/obstructions/utilities may pose hazards (e.g., fire, explosion, exposure, electrical, environmental release) when intrusive activities are conducted.</p> <p><b>Overhead Hazards</b> – Overhead power lines may pose a shock or electrocution hazard if the power line is contacted or arcing occurs. Also, overhead piping carrying chemicals may be present.</p> <p><b>Hand Tool Hazards</b> – Physical hazards (e.g., cuts, pinch points) associated with the use of hand tools may cause injury.</p> <p><b>Biological Hazards</b> – Poisonous plants (e.g., poison ivy), insects (e.g., ticks, spiders) and feral animals (e.g., dogs) may be present at the Site.</p> <p><b>Weather Hazards</b> – Severe storms may develop which include lightning hazards and/or exacerbate other hazards (e.g., slip-trip-fall hazards).</p> <p><b>Hazards to Public</b> – Work activities may be performed in or adjacent to publicly accessible areas.</p> <p><b>Radiant Energy Hazards</b> – Work activities may be conducted outside during periods of strong sunlight; even on cloudy days, exposure to radiant energy may occur.</p>		

## HAZARD CONTROLS:

- 1) An Initial Site Safety Orientation Meeting will be conducted by the URS Site Safety Officer (SSO) prior to conducting any fieldwork. Meeting topics will include the Job Safety Analysis, personal protective equipment requirements, working around heavy equipment, general and site-specific health and safety, site hazards, safe work procedures, releases to the environment, decontamination, air quality monitoring and emergency response. Topics discussed at this meeting and all attendees present will be documented by the SSO as described in the site-specific Health and Safety Plan (HASP). Thereafter, Daily Site Safety Briefings, covering the same topics as the Initial Site Safety Orientation Meeting (as necessary), will be conducted and documented by the SSO.
- 2) Check weather conditions before going to the Site. No work will be performed during “severe” weather conditions.
- 3) The SSO will determine whether any employee performing fieldwork has any special medical condition (e.g., allergy to poisonous plants, insects [especially bees]) that may need to be conveyed to emergency response personnel in case of an accident.
- 4) At least one member of each field team will carry a cellular telephone at all times. Individuals having cellular telephones will have ready access to emergency telephone numbers and directions to the First Aid Medical Facility.
- 5) All work activities will be performed in strict accordance with the requirements of the HASP prepared by URS. All aspects of the URS HASP must be understood by all site personnel and strictly adhered to.
- 6) Personnel will be aware of their location relative to heavy equipment and maintain a safe distance from operating equipment at all times.
- 7) While it is difficult to eliminate slip-trip-fall hazards, implementing safe work practices (e.g., good housekeeping), wearing proper footwear and keeping the work area free of obstructions will reduce the risk of injury.
- 8) The excavation contractor will call for a utility mark-out (e.g., “DigSafe” request) of all underground utilities at least 72 hours prior to field activities to identify underground utilities that may enter onto the Site. Documentation of this call must be provided to the URS SSO prior to the start of intrusive work and maintained on-site. URS will also request that a representative of the Client/Site Owner identify and mark-out the location of underground structures (e.g., utilities) at the Site.
- 9) Prior to conducting excavation operations adjacent to overhead power lines, work activities must be coordinated with the appropriate utility. The utility company will be notified and information will be obtained regarding line voltage and minimum separation distance required for work in this area. Operations adjacent to overhead lines will not be conducted unless the lines have been de-energized and positive means (e.g., lockout/tagout) have been taken to prevent lines from being energized.
- 10) Fluids will be provided regularly during the work periods in order to maintain adequate body fluid levels for field personnel to reduce heat stress hazards.
- 11) If work is to be performed continuously in the cold when the wind chill factor is at or below 19 degrees Fahrenheit, heated warming shelters (e.g., tents, trailers, vehicle cabs) will be made available nearby.
- 12) Field personnel are encouraged to use insect repellent to reduce biological hazards.
- 13) Field personnel are encouraged to use sunscreen to reduce radiant energy hazards.

<b>PERSONAL PROTECTION EQUIPMENT</b>
<p>Personal Protective Equipment (PPE) – Potential hazards will be reduced by protecting against exposures to contaminants by using appropriate PPE. If site conditions require respiratory protection to be used, work should be stopped and the requirements to upgrade PPE should be evaluated. Hearing protection will be required when noise levels exceed 85 decibels (8-hr time weighted average) or are greater than 100 decibels at any given time. See Personal Protective Equipment Section of the HASP for additional information.</p>
<b>AIR QUALITY MONITORING</b>
<p>Air Quality Monitoring – The type and frequency of air quality monitoring for worker protection will be dependent on the specific operation, location and available data concerning the work activity being performed. Personal monitoring may be conducted to provide real-time measurements of exposure to Site contaminants. See Air Quality Monitoring Section of the HASP for additional information.</p>
<b>EMERGENCY RESPONSE PROCEDURES</b>
<p>Emergency Response Procedures – Emergency telephone numbers are provided in a table in the HASP. The table will be carried by the SSO and at least one member of each work team, and kept readily available in URS field vehicle(s) and all field trailers. The table will be revised and updated, as necessary, to reflect all new emergency information. The SSO will have the primary role in responding to all emergencies at the Site. All personnel present in the work area will contact the SSO in case of an emergency.</p> <p>If an injury is clearly minor (e.g., a minor burn or cut) contact the Health and Safety Representative and/or the URS Occupational Nurse (Jeanette Schrimsher). The injured individual should be driven to the Occupational Health Clinic. If emergency medical treatment is required, call 911 (for cellular phones, be prepared to give the operator your name and location address) to request an ambulance and then contact the URS Occupational Nurse (Jeanette Schrimsher).</p> <p>See Emergency Response Procedures Section of the HASP for additional information.</p>
<b>DISCHARGE PREVENTION AND CLEANUP PLAN</b>
<p>Discharge Prevention and Cleanup Plan – Procedures for discharge containment will commence immediately following a discharge event. Absorbent sheets, rolls, booms, etc. will be used to contain discharged substances as soon as possible. Storm sewer or other access points to the subsurface will be protected with barrier materials and/or absorbent materials as soon as possible. ## **TABLES**

---

## **TABLE 1: HEALTH AND SAFETY RESPONSIBILITIES AND AUTHORITIES**

### **URS GENERAL ENGINEERING DIVISION PRESIDENT: Gary Jandegian**

#### **Responsibilities**

monitor the implementation of the health and safety program; and,  
provide leadership and adequate resources for health and safety.

#### **Authority**

direct changes in the health and safety program; and,  
determine and implement personnel disciplinary actions, as required.

### **URS OPERATIONS MANAGER: Jack Spencer**

#### **Responsibilities**

provide leadership and adequate resources for health and safety;  
communicate regularly with the RHSM regarding health and safety; and,  
monitor the implementation of the health and safety program within the operations area of  
responsibility.

#### **Authority**

determine and implement personnel disciplinary actions, as required;  
appoint the RHSM in cooperation with the health and safety matrix manager; and,  
suspend work on a project that jeopardizes the health and safety of personnel.

### **URS HEALTH AND SAFETY DIRECTOR: Phillip L. Jones, CIH**

#### **Responsibilities**

administer the health and safety program;  
track health and safety regulations that affect URS;  
maintain records pertaining to medical surveillance, training, fit testing, chemical exposure and  
incidents;  
update URS Health and Safety Manual;  
manage the employee medical surveillance program;  
audit key aspects of health and safety program and report effectiveness;  
supervise RHSMs through a matrix management system; and,  
provide practice leadership for the occupational safety and hygiene practice.

#### **Authority**

implement improvements to the URS health and safety program;  
approve the health and safety qualifications of employees;  
approve or disapprove HASPs;  
establish employee training and medical surveillance procedures;  
suspend work on any project that jeopardizes the health and safety of personnel; and,  
determine the types of occupational safety and industrial hygiene services to be provided by  
URS.

**TABLE 1: HEALTH AND SAFETY RESPONSIBILITIES AND AUTHORITIES  
(continued)**

**URS REGIONAL HEALTH AND SAFETY MANAGER: Benjamin J. Bertolotti, CIH**

**Responsibilities**

direct the implementation of the health and safety program of the Operating Group and provide recommendations for improvement of the program;  
coordinate health and safety activities of the Operating Units in the Operating Group;  
determine need for project HASPs;  
maintain a high level of understanding regarding health and safety regulations affecting URS;  
review and approve HASPs;  
monitor implementation of HASPs;  
investigate reports of incidents or accidents and report to URS Health and Safety Director;  
provide employee health and safety training in the Operating Group;  
determine whether an accidental exposure or injury merits a change in the affected individual's work assignments and whether changes in work practices are required;  
coordinate Operating Units with regard to health and safety equipment needs; and,  
supervise HSMs through a matrix management system, in cooperation with the Operating Unit Managers.

**Authority**

approve or disapprove HASPs;  
direct Operating Unit HSM to prepare project HASPs;  
access and review project files;  
direct changes in personnel work practices to improve health and safety of employees;  
remove individuals from projects, if their conduct jeopardizes their health and safety or that of co-workers; and,  
suspend work on any project that jeopardizes the health and safety of personnel involved.

**URS PROJECT MANAGER: Robert Wolff**

**Responsibilities**

assure that projects are performed in a manner consistent with the URS health and safety program;  
assure that the project HASPs are prepared, approved and properly implemented;  
implement HASPs;  
assure that adequate funds are allocated to fully implement project health and safety; and,  
coordinate with the HSM on health and safety matters.

**Authority**

- assign HSM-approved SSO to project and, if necessary, assign a suitably qualified replacement;
- suspend field activities if health and safety of personnel are endangered, pending an evaluation by the HSM; and,  
suspend an individual from field activities for infractions of the HASP, pending an evaluation by the HSM.

**TABLE 1: HEALTH AND SAFETY RESPONSIBILITIES AND AUTHORITIES**  
(continued)

**OPERATING UNIT HEALTH AND SAFETY REPRESENTATIVE: Peter G. Gregory**

**Responsibilities**

administer the health and safety program within the Operating Unit;  
maintain a working understanding of key government health and safety regulations and URS health and safety policies;  
interface with Project Managers in matters of health and safety;  
report to RHSM on health and safety matters;  
develop or review, approve or disapprove project HASPs prior to submittal to the RHSM for review;  
conduct staff training and orientation on health and safety related activities;  
appoint or approve SSOs;  
monitor compliance with HASPs and conduct site audits;  
assist Project Managers in obtaining required health and safety equipment;  
approve personnel to work on hazardous waste management projects with regard to medical examinations, and health and safety training; and,  
answer employee questions and concerns regarding health and safety.

**Authority**

suspend work or otherwise limit exposures to personnel if health and safety risks are unacceptable;  
direct personnel to change work practices if existing practices are deemed to be hazardous to health and safety of personnel; and,  
remove personnel from projects, if their actions or conditions endanger their health and safety or the health and safety of co-workers.

**SITE SAFETY OFFICER: Cary Friedman**

**Responsibilities**

direct health and safety activities on-site;  
report immediately all safety-related incidents or accidents to the HSM and Project Manager;  
verify that URS and Contractor personnel working on-site have met current training and medical clearance requirements;  
determine that air quality monitoring equipment is used properly by URS personnel in accordance with manufacturer's instructions and that the monitoring results are properly documented and filed;  
coordinate with the URS Project Manager and HSM to identify URS personnel on-site for whom special personal protective equipment, exposure monitoring or work restrictions may be required;  
conduct safety meetings, as required;  
conduct daily site safety inspections;  
assist the Project Manager in all aspects of implementing the HASP and addenda, if any; and,  
maintain health and safety equipment on-site.

**Authority**

implement emergency procedures as required;

**TABLE 1: HEALTH AND SAFETY RESPONSIBILITIES AND AUTHORITIES  
(continued)**

temporarily suspend field activities if health and safety of personnel are endangered, pending further consideration by the HSM; and,  
temporarily suspend an individual from field activities for infractions of the HASP pending further consideration by the HSM.

**URS PROJECT PERSONNEL**

**Responsibilities**

take all reasonable precautions to prevent injury to themselves and to their fellow employees;  
perform only those tasks that they believe they can do safely and immediately reporting any accidents and/or unsafe conditions to the SSO or URS Project Manager;  
implement the procedures set forth in the HASP and reporting any deviations from the procedures described in that HASP to the SSO or URS Project Manager for action;  
notify the URS Project Manager and SSO of any special medical conditions (i.e., allergies) and seeing that all onsite URS personnel are aware of such conditions; and,  
reviewing the project-specific HASP and addenda, if any, and signing the Safety Plan Compliance Agreement.

**Authority**

all field personnel following this HASP have “stop work” authority in situations where they believe that injury to themselves, their fellow employees, Contractor or Client personnel or the public, and/or property damage may occur.

**TABLE 2: ACTIVITY-SPECIFIC INITIAL LEVELS OF PROTECTION AND ACTION LEVELS**

Location	Activity	Initial Level of Protection	Monitoring Requirements	Action Levels
Throughout Site	All work activities authorized in Section 4, Work Activities.	Level D PPE	Organic vapors using PID with 10.5 eV lamp	<p>&gt;5 ppm above background in the breathing zone (sustained reading): Go to Level C PPE (half-face APR)</p> <p>&gt;50 ppm in the breathing zone (sustained reading): Evacuate CRZ and EZ</p> <p>If free product is encountered, go to Modified Level D PPE</p>
			CGI	<p>Flammable gas reading &gt;10 percent LEL: Shut off all ignition sources. Do not resume work until the flammable gas readings are continuously below 10 percent LEL for 15 minutes or more. Notify the URS Project Manager and HSM as soon as possible.</p> <p>Oxygen reading &lt;19.5 percent or &gt;23.5 percent: Suspend work in immediate area and notify the Site Manager, URS Project Manager and HSM as soon as possible. Conduct air monitoring periodically to determine when work may be continued.</p> <p>Carbon monoxide reading &gt;25 ppm: Suspend work in immediate area and notify the Site Manager, URS Project Manager and HSM as soon as possible. Conduct air monitoring periodically to determine when work may be continued.</p>
			Personal Meter for Aerosol and Dust	<p>&gt;2.5 milligrams per cubic meter (mg/m<sup>3</sup>) (sustained reading): Go to Level C PPE</p> <p>&gt;10 mg/m<sup>3</sup> (sustained reading): Evacuate CRZ and EZ</p> <p>*If dust is generated from any ash material encountered in the subsurface, dust suppression methods should be implemented.</p>
			Detector Tube	<p>&gt;0.5 ppm: Go to Level C PPE</p> <p>&gt;5 ppm: Evacuate CRZ and EZ</p>

**APPENDIX A**  
**URS SAFETY MANAGEMENT STANDARDS**

---

**URS SAFETY MANAGEMENT STANDARD 002  
HAZARD COMMUNICATION (WORKER RIGHT-TO-KNOW)**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Hazard Communication (Worker Right-to-Know)**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies.

This standard is not applicable to chemical laboratory operations that are covered under 29 Code of Federal Regulations (CFR) 1910.1450 (Occupational Exposure to Chemicals in Laboratories).

### **2. Purpose and Scope**

The purpose of this Hazard Communication standard (also known as worker right-to-know program) is to provide URS personnel with information and training about safety and health hazards associated with the chemicals they may encounter in the workplace. This procedure describes how chemical safety hazards are communicated to URS personnel and how information is to be provided to employees of other companies working at the location. The requirements include steps to acquire this information, maintain the information, and train personnel in the hazard communication program.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager who directs activities at the facility, site, or project location. For office locations and large projects, this program may be incorporated into the general site orientation and training program or administered by project management.

### **4. Requirements**

#### **A. Hazardous Material Inventory**

Maintain a hazardous material inventory that lists all of the hazardous materials used at each workplace (i.e., office, field location). Use chemical names consistent with the applicable material safety data sheet (MSDS).

#### **B. Site-Specific Written Program**

A site-specific written program may be prepared as a stand-alone document or included within a site-specific health and safety plan. The program must cover hazardous materials in all physical forms (liquids, solids, gases, vapors, fumes, and mists); regardless of whether they are “contained.”

#### **C. Material Safety Data Sheets (MSDSs)**

**URS SAFETY MANAGEMENT STANDARD**  
**Hazard Communication (Worker Right-to-Know)**

---

1. The safety representative will obtain an MSDS for each chemical before it is used. MSDSs will generally be received by the person ordering the product. MSDSs for products frequently used should be kept on file because additional copies may not be included in repeat shipments.
2. The safety representative will review each MSDS when it is received to evaluate whether the information is complete and to determine whether existing protective measures are adequate.
3. Each office or project location will assign a responsible person or department to maintain a collection of all applicable and relevant MSDSs in an area that is accessible by all employees at all times. An electronic database is an acceptable method of maintaining the MSDSs.
4. The assigned person or department will replace MSDSs when updated sheets are received and will communicate any significant changes to those who work with the chemical.
5. MSDSs are required for all hazardous materials brought on site by project personnel.
6. General household products to be used for their specific purpose, as well as food, drugs, and cosmetics brought into the workplace for employee consumption, are exempt, as are supplies in the first aid kit, such as isopropyl alcohol and antibacterial wipes.
7. Subcontractors bringing hazardous materials on to a site or project must submit MSDSs to the safety representative. The safety representative may restrict the use of certain hazardous materials on a site or project due to occupational health risk, hazardous physical properties of the material, or potential employee sensitivity to odor or irritating properties of the material.

D. Labels

Unless each container has appropriate labeling, label all chemical containers with the following information:

1. Product name and identity of the hazardous chemical(s).
2. Appropriate hazard warnings.

**URS SAFETY MANAGEMENT STANDARD**  
**Hazard Communication (Worker Right-to-Know)**

---

3. Name and address of the chemical manufacturer, importer, or other responsible party.

Labels on incoming containers of hazardous materials will not be removed or defaced.

Labels are also required when a hazardous substance is transferred from a primary container to a secondary container. Labels on secondary containers must indicate the product name or the names of the hazardous substances contained therein, as well as related physical and health hazards and their associated target organs.

Labels may incorporate words, pictures, symbols, or combinations thereof to ensure the appropriate information is provided to the end user. Examples of acceptable labeling systems include the National Fire Protection Association (NFPA) Diamond, the Hazardous Materials Identification System (HMIS), the Chemical Hazard Identification and Training (CHIT) system, or similar.

**E. Hazardous Non-routine Tasks**

Periodically, employees are required to perform hazardous nonroutine tasks. Prior to starting work on such projects, each employee must be provided with information about hazards to which they may be exposed, as follows:

1. Specific chemical hazards.
2. Protective/safety measures that must be taken.
3. Measures that have been taken to lessen the hazards, including ventilation, respirators, presence of another employee, and emergency procedures.

**F. Informing Contractors/Subcontractors**

Provide other contractors/subcontractors working in the same area with the following information on chemicals used by or provided to URS personnel:

1. Names of hazardous chemicals to which they may be exposed while on the jobsite.
2. Precautions the employees may take to lessen the possibility of exposure by usage of appropriate protective measures, such as

**URS SAFETY MANAGEMENT STANDARD**  
**Hazard Communication (Worker Right-to-Know)**

---

ventilation or isolation of the work. In some cases, as an administrative control measure, a task may be delayed to a time when a minimal number of employees are present in the area.

3. Location of MSDSs.

G. Training

1. Provide training to all employees who have the potential to be exposed to hazardous materials, on the following schedule:
  - a. At the time of the initial task assignment,
  - b. Whenever new chemicals are introduced into the workplace, or
  - c. More frequently where required by site-specific conditions or client-specific requirements.
2. This training will include the following:
  - a. Applicable regulatory requirements.
  - b. Location of the program, inventory, and MSDS.
  - c. Site-specific chemicals used and their hazards (chemical, physical, and health), including:
    1. General characteristics of chemicals
    2. Signs and symptoms of exposure
  - d. How to detect the presence or release of chemicals including the location, types, and usage of any portable and fixed monitoring or detection equipment and their associated alarms, where applicable.
  - e. Safe work practices and methods employees can take to protect themselves from chemical hazards, including the use of respiratory protection.
  - f. How to read an MSDS.
  - g. Site- or project-specific information on hazard warnings and labels in use at the location, if applicable.

**URS SAFETY MANAGEMENT STANDARD**  
**Hazard Communication (Worker Right-to-Know)**

---

- h. Site-specific evacuation and rescue procedures in the event of chemical release, including the location of staging areas and personnel accounting procedures.
- 3. Document the training.
- 4. Where non-English-speaking workers are employed, arrange provisions for training in the appropriate language. International Chemical Safety Cards (see Section 6, ILO) may be used in conjunction with MSDS information to provide non-English-language information. MSDSs are required to be on site, but there is no requirement for the MSDSs to be in a language other than English.

## 5. Documentation Summary

The following documentation will be maintained in the project file:

- A. Chemical Inventory.
- B. MSDSs.
- C. Training records.
- D. Contractor/Subcontractor notifications.

### Appendices

- I. Hazard Communication Checklist
- II. Potentially Hazardous Substances
- III. List of Jobsite Hazardous Substances
- IV. Sample Letter to Suppliers to Obtain MSDS

**A. PURPOSE**

A-1 To protect the health and safety of our employees, URS Corporation has developed this Hazard Communication program.

1. As an organization we intend to provide information about chemical hazards and other hazardous substances, and the control of hazards via our comprehensive Hazard Communication Program, which includes container labeling, Material Safety Data Sheets (MSDS), and training.
2. This written Hazard Communication Program applies to all operations that MAY expose employees to hazardous substances because of normal work conditions or as the result of a reasonably foreseeable emergency.
3. This written Hazard Communication Program is available, upon request, to employees, their designated representatives and to appropriate representatives of state and/or federal safety and health agencies.

**A-2 Scope**

This program is part of URS Corporation's comprehensive health and safety program and shall be applied in conjunction with that overall program.

**A-3 Responsibilities**

1. The Project Manager is responsible for implementing and ensuring compliance with this written hazard communication program. The Hazard Communication checklist found in Appendix I is provided to assist the Project Manager in carrying out this responsibility.
2. The designated Project Safety Representative is responsible for coordinating and administering the program, in developing and assisting in the presentation of training materials and in providing technical assistance to project supervision.
3. Each Project Supervisor shall become familiar with the hazard communication procedures and shall supervise the application of these procedures to tasks for which they are responsible.
4. The Safety Manager is the designated safety professional for the project or office location and is responsible for providing technical assistance to the Project Supervisor or Safety Representative to implement the hazard communication program.

**B. IDENTIFICATION OF HAZARDOUS SUBSTANCES**

- B-1 "Hazardous Substances" are materials or mixtures that are or have physical or health hazards (See Appendix II for examples of potentially hazardous materials).
- B-2 "Exposure" is any situation arising from work conditions where an employee may ingest, inhale, absorb or otherwise come in contact with a hazardous substance.
- B-3 A master list and the MSDSs of all of the hazardous substances to which employees may be exposed on this jobsite shall be maintained in the project office (see Appendix III).

**C. CONTAINER LABELING**

- C-1 When hazardous substances are received, the project safety representative shall examine the containers to determine if the labels provide the following information (primary containers):
1. The identity of the hazardous substances they contain;
  2. Appropriate warnings of the physical and health hazards associated with those substances;
  3. The name and address of the chemical manufacturer or distributor.
- C-2 When hazardous substances are transferred into portable or secondary containers, the responsible Project Supervisor shall ensure that these containers are labeled with an extra copy, of the manufacturer's label or with a printed label that includes the information in one (1) and two (2) above.
- EXCEPTION: When an employee transfers a hazardous substance into a portable container for his/her own immediate use, within the work shift the portable container need not be labeled.
- C-3 Each Project Supervisor shall ensure that the labels on containers of hazardous substances are not removed or defaced, unless the containers are immediately relabeled with the information in C-1 above. The labels shall be written legibly in English. However, for non-English speaking employees information may be presented in their native language as well.
- C-4 Containers without complete labels or with defaced labels will not be used on the job.
- C-5 The Project Supervisor or Safety Representative shall review the jobsite labeling procedure at least quarterly and update as required.

**D. MATERIAL SAFETY DATA SHEETS (MSDS)**

- D-1 Material Safety Data Sheets (MSDSs) are documents that supply information about a particular hazardous substance or mixture. Manufacturers are required to provide MSDSs when the hazardous substances are sold to distributors or purchasers. In most cases, MSDSs are sent to the purchaser of the project (e.g. the procurement department or Project Supervisor) not the safety department.
- D-2 The Safety Manager / Project Safety Representative or Project Supervisor in coordination with the purchasing agent or project business manager, will be responsible for obtaining and maintaining the master sets of MSDSs and other information on all hazardous substances used (see sample letter in Appendix IV).
- D-3 The Project Safety Representative will review MSDSs for completeness. If an MSDS is missing or obviously incomplete, a new MSDS will be requested from the manufacturer. In some cases, MSDSs may be obtained on-line through the manufacturer's web site. The Project Safety Representative should review products for highly toxic or dangerous constituents prior to use and consult with the Safety Manager for any items considered hazardous or toxic.
- D-4 MSDSs are available to all employees in their work area for review during each work shift. If MSDSs are not available or new hazardous substance(s) in use do not have MSDSs, contact the Project Safety Representative immediately. Additional information such as chemical safety cards and the NIOSH Pocket Guide to Chemical Hazards may be used for additional information.
- D-5 Project Supervisors shall be alert to other employees (such as subcontractors) whose work on the jobsite may expose employees to additional hazardous substances. When it appears such exposure will occur, MSDSs for the substances must be obtained.
- D-6 When doing renovation or remodeling work, the Project Supervisor shall coordinate MSDSs of hazardous materials used by contractors. Contractors bringing hazardous materials on to a site or project must submit MSDSs to the Project Supervisor. The Project Supervisor should consult with the Safety Manager if there are any questions regarding hazardous constituents of products.

**E. EMPLOYEE TRAINING AND INFORMATION**

- E-1 Initial Orientation

Before starting work, each new employee must attend a health and safety orientation. Also, URS Corporation's on-line training program on Hazard Communication may be used as a component of the initial training but employees still require site specific information on hazards of chemicals in use, site specific spill and emergency procedures, and site specific labeling systems as described below.

- E-2 Training shall be provided before employees are assigned duties that may cause exposure to hazardous substances. Training shall also be given when new hazardous substances are introduced into the work area or when an MSDS is changed. In general, this training shall include:
1. Information on which hazardous substances are in the work area.
  2. How to read and interpret information on MSDSs and labels.
  3. Any physical or health hazards associated with the use of a hazardous substance or mixture being used in the work area.
  4. Proper precautions for handling, including specific procedures the company has implemented to protect workers from exposure such as personal protective equipment and work practices.
  5. Proper procedures for reporting of releases or threatened releases of hazardous substances.
  6. Emergency procedures for spills, fires, disposal and first aid.
  7. The methods and observations that can be used to detect the presence of a hazardous substance in the work place (odor, visual appearance or monitoring).
  8. The right of employees, their physicians or their collective bargaining agents to receive information on hazardous substances to which they may be exposed.
  9. The right against discharge or discrimination due to an employee's exercise of the rights afforded by law.
  10. The details of this written Hazard Communication Program; the availability and location of this written Hazard Communication Program and of MSDSs or other information.
- E-3 Hazard communication training must be documented.
- E-4 Additional training shall be provided as needed during the weekly safety and health training ("toolbox") meetings in order to emphasize the safe handling, use and storage of onsite hazardous substances.

**F. NON-ROUTINE TASK TRAINING**

- F-1 When employees are assigned to a non-routine task that may expose them to a hazardous substance for which they have not been trained, they shall be trained in the manner required by Section E.
- F-2 Some examples of non-routine tasks are:
- Confined space entry.
  - Tank cleaning.
  - Reactor vessels.
  - Repair of pipes or tanks containing hazardous substances.

Prior to starting work on such projects, each affected employee will be given information about the hazardous chemicals he or she may encounter during such activity. This information will include specific chemical hazards, protective and safety measures the employee can use, and steps the jobsite is using to reduce the hazards, including ventilation, respirators, presence of another employee and emergency procedures including site specific warnings, evacuation routes, and assembly points.

**G. ACCESS TO INFORMATION BY OTHER EMPLOYERS**

- G-1 It is the responsibility of the Project Safety Representative or Project Supervisor to provide contractors and subcontractors with information about hazardous chemicals their employees may be exposed to on a jobsite and suggested precautions for the contractor's employees to follow to avoid exposure to hazardous conditions.
- G-2 Contractors and subcontractors on the job site with potential exposure or risk will be contacted before work is started, to gather and distribute information concerning any chemical hazard that they may bring or be exposed to, in areas that are under URS Corporation control.

**APPENDIX I****HAZARD COMMUNICATION CHECKLIST**

- \_\_\_\_\_ 1. Have we prepared a list of all the hazardous chemicals in our workplace?
- \_\_\_\_\_ 2. Are we prepared to update our hazardous chemical list?
- \_\_\_\_\_ 3. Have we obtained or developed a material safety data sheet for each hazardous chemical we use?
- \_\_\_\_\_ 4. Have we developed a system to ensure that all incoming hazardous chemicals are checked for proper labels and data sheets?
- \_\_\_\_\_ 5. Do we have procedures to ensure proper labeling or warning signs for containers that hold hazardous chemicals?
- \_\_\_\_\_ 6. Are our employees aware of the specific information and training requirements of the Hazard Communication Standard?
- \_\_\_\_\_ 7. Are our employees familiar with the different types of chemicals and the hazards associated with them?
- \_\_\_\_\_ 8. Have our employees been informed of the hazards associated with performing non-routine tasks?
- \_\_\_\_\_ 9. Do our employees understand how to detect the presence or release of hazardous chemicals in the workplace?
- \_\_\_\_\_ 10. Are employees trained about proper work practices and personal protective equipment in relation to the hazardous chemicals in their work area?
- \_\_\_\_\_ 11. Does our training program provide information on appropriate first aid, emergency procedures and the likely symptoms of overexposure?
- \_\_\_\_\_ 12. Does our training program include an explanation of labels and warnings that are used in each work area?
- \_\_\_\_\_ 13. Does the training describe where to obtain data sheets and how employees may use them?
- \_\_\_\_\_ 14. Have we worked out a system to ensure that new employees are trained before beginning work?
- \_\_\_\_\_ 15. Have we developed a system to identify new hazardous chemicals before they are introduced into a work area?
- \_\_\_\_\_ 16. Do we have a system for informing employees when we learn of new hazards associated with a chemical we use?
- \_\_\_\_\_ 17. Have the employees been advised of the consequences for failure to follow established procedures?
- \_\_\_\_\_ 18. Do we have a system to ensure Subcontractors are sharing information with one another, concerning the hazardous chemicals they have brought to the site?

**APPENDIX II****EXAMPLES OF POTENTIALLY HAZARDOUS MATERIALS THAT MAY BE  
FOUND ON URS CORPORATION  
CONSTRUCTION AND GENERAL INDUSTRY PROJECTS**

Acetone	Kerosene
Acetylene gas	Lead
Adhesives	Lime (calcium oxide)
Aluminum etching agent	Limestone
Ammonia	Lubricating oils
Anti-freeze	Lye (sodium hydroxide, potassium hydroxide)
Arsenic compounds	Magnesium
Asbestos	Metals (aluminum, nickel, copper, zinc, cadmium, iron, etc.)
Asphalt (Petroleum) fumes	Methanol (methyl alcohol)
Battery Fluids	Methyl ethyl ketone (2-butanone)
Benzene (and derivatives)	Motor oil additives
Bleaching agents	Muriatic acid (hydrochloric acid)
Carbon black	Naptha (coal tar)
Carbon monoxide (in cylinders)	Nitroglycerin
Caulking, sealant agents	Oxalic acid
Caustic soda (sodium hydroxide)	Ozone
Chromate salts	Paint remover
Chromium	Paint stripper
Cleaners	Paints/lacquers
Cleaning agents	Particle board
Coal tar pitch	Pentachlorophenol
Coal tar epoxy	Pesticides
Coatings	Photographic developers and fixers
Cobalt	Photogravure ink (copy machine)
Concrete curing compounds	Plastics
Creosol	Polishes for metal floors
Cutting oil (oil mist)	Propanol
De-emulsifier for oil	Putty Resins, epoxy/synthetics
Diesel gas, diesel oil	Sealers
Drywall	Shellac
Dusts (brick, cement block)	Solder, flux (zinc chloride, fluorides, etc.)
Enamel	Solder, soft (lead, tin)
Etching agents	Solvents
Ethyl alcohol	Sulfuric acid
Fiberglass, mineral wool	Thinner, paint/lacquer
Foam insulation	Tin
Freon 20, R20 (and others)	Transite
Gasoline (petrol, ethyl)	Turpentine, gum spirit, oil of turpentine
Glues	Varnishes
Graphite	Waterproofing agents
Greases	Waxes
Helium (in cylinders)	Welding Rods
Hydraulic brake fluid	Wood alcohol (methanol)
Hydrochloric acid	Wood preservative
Hydrogen (in cylinders)	Xylene
Inks	Zinc
Insulations	
Iron	

	<p>Health, Safety and Environment <b>HAZARD COMMUNICATION PROGRAM - TEMPLATE</b></p>	<p>SMS 002 NA Supplemental Information A Issue Date: February 2009 Revision 2: August 2010</p>
---	--	--

### **APPENDIX III**

#### **LIST OF PROJECT SPECIFIC HAZARDOUS SUBSTANCES**

On the following page(s) is a current list of the specific hazardous substances and the manufacturer's name of the product known to be present at this jobsite.

This list uses the chemical name referenced on the MSDS. Specific information on each substance may be found on the MSDSs located in the project office.

	<p align="center"><b>Health, Safety and Environment</b> <b>HAZARD COMMUNICATION PROGRAM -</b> <b>TEMPLATE</b></p>	<p align="right">SMS 002 NA Supplemental Information A Issue Date: February 2009 Revision 2: August 2010</p>
---	---	--

**APPENDIX IV**

**(PROJECT LETTERHEAD)**

Date

Product Manufacturer's Name  
Product Manufacturer's Address

Subject: Material Safety Data Sheet Requisition

Dear Manufacturer:

Please provide the following material safety data sheet(s):

---

---

---

---

Thank you for your support and assistance in this matter.

Sincerely,

Requestor's Name  
Requestor's Address

This document presents information that can be used for hazard communication training.

This information has been developed based on groups (types) of hazardous substance(s) used and the common hazards associated with them.

For specific hazard information on each brand of material the MATERIAL SAFETY DATA SHEETS (MSDS) must be reviewed.

## **OVERVIEW OF THE HAZARD COMMUNICATION REGULATION**

The Hazard Communication Regulation is intended to ensure that both employers and employees are aware of the dangers associated with hazardous substances in their workplaces. The following information is a review of the specific requirements of a hazard communication program, including container labeling, MSDS and training.

## **WRITTEN HAZARD COMMUNICATION PROGRAM**

We have a written program that outlines how we will provide information and control your exposure to hazardous substances. This plan is available for your review during our training and at the project office for review during your work shift.

## **HAZARDOUS SUBSTANCES USED IN OUR WORKPLACE**

On this job, we use a variety of products. Many of these products contain one or more hazardous substances. Let's review the HAZARDOUS SUBSTANCE INVENTORY LIST in your work area.

## **READING LABELS AND MSDS**

**LABELS:** A product label on both the original and secondary containers should be reviewed prior to working with the material. Each label will have three important pieces of information you should be familiar with:

1. The identity of the Hazardous Substance.
2. Hazard Warnings.
3. Target Organs.

The label on the original container will also state the name and address of the manufacturer.

The label should act as a visual reminder of the information we have presented in this training session and of the information found in more detail on the MSDS. It is essential for your safety that you read the Hazard Warning and only use the Hazardous Substance(s) within the guidelines prescribed on the label. Questions concerning the label should be directed to your supervisor/foreman.

	<p align="center"><b>Health, Safety and Environment</b></p> <p align="center"><b>HAZARD COMMUNICATION</b></p> <p align="center"><b>EMPLOYEE TRAINING PROGRAM</b></p>	<p align="right">SMS 002 NA Supplemental Information B</p> <p align="right">Issue Date: February 2009 Revision 2: August 2010</p>
---	--	---

**MATERIAL SAFETY DATA SHEETS (MSDS):** The MSDS is the primary means we will use to convey the necessary information about the hazards of the substances we use. The manufacturers and importers are responsible for providing us with the MSDS. The manufacturer must provide us with adequate information to use the substance safely.

## **PHYSICAL AND HEALTH HAZARDS OF THE HAZARDOUS SUBSTANCE(S) USED**

Employees are to be trained specifically about the hazards of the substances in their work areas. This may be done by specific Hazardous Substance(s) or by categories of hazards, but in any case, the employee is to be aware that information is available on the specific hazards of individual Hazardous Substances through MSDSs.

Employees may be trained using the common type or generic chemical group or by reviewing the specific MSDS as long as the training includes the following information:

1. Measures to protect employee from the hazards (i.e., work practices, engineering controls and the use of personal protective equipment).
2. The physical and health hazards of the Hazardous Substance(s).
3. Detection of release of the substance; emergency and first aid procedures.

## **EXAMPLE OF GENERAL HAZARDOUS SUBSTANCE GROUP TYPE TRAINING**

### **Product/Chemical Group: Hydrocarbon Solvents.**

**Health Effects – Effect of Overexposure:** High concentrations of solvent vapors are irritating to the eyes, nose, throat and lungs, may cause headaches and dizziness and sleepiness. Even higher levels may cause unconsciousness and may have other brain and central nervous system effects.

Prolonged or repeated liquid contact with the skin may cause defatting of the skin, leading to dryness, possible irritation and dermatitis (reddening and inflamed skin). Some solvents are absorbed right through the skin and the health effects are just as if the solvent vapor was inhaled.

Each organic solvent's possible long term health effects will vary; however, prolonged solvent exposures are related to possible liver, kidney and central nervous system and brain damage (NOTE: THE VARIETY OF SOLVENT TYPES SHOULD BE REVIEWED).

**Physical Hazards:** Hydrocarbon solvents are flammable and combustible and represent fire and explosion hazards if the materials are not handled correctly. Hydrocarbon solvents are generally stable and will not react violently with water. Review the MSDS section on Fire and Explosion Hazard information. Most solvents will vaporize rapidly and become airborne.

**Detection of Release:** Odor – Solvent vapor may produce an odor or cause your nose or eyes to be irritated, but do not depend on odor to warn you. Odor thresholds (lowest level that can be detected) for most solvents vary widely from person to person. Also, some solvents produce “olfactory fatigue” - the rapid loss of ability to smell the odor. However, odor can warn you of exposure to some solvents (confirm this with industrial hygiene monitoring).

Appearance – Most solvent vapors are invisible so do not rely on appearance to warn you for exposure.

Instrumentation – A variety of industrial hygiene instruments can be used to measure employee exposure. This equipment should be operated only by qualified personnel.

**Emergency Response – For Flammable Solvents:** If the material is spilled or leaks, shut-off and eliminate all sources of ignition. Recover the free product by adding absorbents to the spill. Minimize breathing vapors and skin contact. Ventilate the area by opening windows and doors. Follow the established hazardous waste disposal procedures.

**Exposure Control:** Protective Equipment, Engineering Controls and Proper Work Practices:

- Protective Equipment – Use chemical-resistant gloves, aprons or clothing if prolonged or repeated skin contact may occur. Use splash goggles and face shield when eye or face contact may occur. Use approved respiratory protective equipment as established by our Safety Program (NOTE: if needed, a review of the respiratory protective program may be appropriate).
- Engineering Controls/Work Practices – Ventilation is to be used when it is necessary to prevent build-up of vapors from both a health or fire and explosion concern. Keep containers closed when not in use. Do not handle or store near heat or sources of ignition or strong oxidants. No smoking, burning or welding is permitted near the flammable vapors. Use the bonding and/or grounding system when transferring materials. Most solvents will vaporize rapidly and become airborne.

## **APPROPRIATE EMERGENCY AND FIRST AID PROCEDURES**

Eye contact – If splashed into the eyes, flush with water for 15 minutes or until irritation subsides. If irritation continues, call a physician.

Skin contact – In case of skin contact, remove any contaminated clothing and wash skin thoroughly with water and soap.

Inhalation – If overcome by vapors, remove from exposure and call a physician immediately. If breathing is irregular or has stopped, start resuscitation.

Ingestion – If ingested, DO NOT induce vomiting, call emergency medical aid immediately.

## HAZARDOUS PROPERTIES OF CHEMICALS TRAINING

Chemicals are a part of every aspect of our lives. A minute does not go by that we do not use something that contains chemicals, or chemicals were used in the manufacturing process. The chemicals you use in the work place only present potential health and physical hazards when they are mishandled, improperly used, incompatible mixtures combined, improperly stored or labeled.

Depending upon the chemical and the level of exposure, health hazards can vary from minor skin irritations to serious chemical burns, nerve damage, different forms of cancer and even death. Physical damage may include fires, explosions, property and environmental damage.

Hazard awareness is recognizing and understanding the potential injuries and illnesses or physical damage the chemicals can cause. The communication of this information is essential for your being aware of, understanding and respecting the potential hazards. This knowledge is important for the decisions you make concerning how you use the chemicals and the safe work practices you follow.

Remedial action response personnel may be exposed to a number of substances that are hazardous because of their properties. These properties can be summarized into three broad categories:

- a. physical/chemical
- b. biological
- c. radiological

It should be noted that many hazards may be present at any one time. It is important to understand the fundamentals of each of these properties and their relationships so that effective safety practices may be employed to reduce the risk to the public and remedial response personnel. Some hazards that may be encountered at this work site are toxic substances, flammable materials, explosive materials, corrosive materials, biological agents, excessive noise, heat or cold stress, oxygen deficient work areas, and radioactive materials.

### PHYSICAL/CHEMICAL PROPERTIES

Physical hazards. Chemical compounds possess inherent properties, which determine the type and degree of the hazard they represent. Evaluating risks of an incident depends on understanding these properties and their relationship to the environment.

- a. Solubility. The ability of a solid, liquid, gas or vapor to dissolve in a solvent is solubility. An insoluble substance can be physically mixed or blended in a

solvent for a short time but is unchanged when it finally separates. The solubility of a material is important when determining its reactivity, dispersion, mitigation and treatment.

- b. Density. The density of a substance is its mass per unit volume, commonly expressed in g/cc.
- c. Specific gravity. Specific gravity is the ratio of the density of a substance to the density of water. If the specific gravity of a substance is greater than 1 it will sink in water. The substance will float in water if its specific gravity is less than 1.
- d. Vapor density. The vapor density is the density of a gas compared to the density of air. If the density of a gas is greater than that of air then the gas will tend to pocket and settle into the lowest points. If the vapor density is close to air or lower than air then the gas will disperse. If the vapor or gas displaces oxygen in the low spots then it can become an asphyxiant problem. If the gas or vapor is an explosive, when it pockets it will become an explosive hazard.
- e. Flashpoint. If the ambient temperature in relation to the material of concern is right, then it may give off enough vapor at its surface to allow ignition by an open flame or spark. The minimum temperature at which a substance produces sufficient flammable vapors to ignite is its flashpoint. If the vapor does ignite, combustion can continue as long as the temperature remains at or above the flashpoint. The relative flammability of a substance is based on its flashpoint. An accepted relation between the two is:

Highly flammable:	Flashpoint <100°F
Moderately flammable:	Flashpoint >100°F & <200°F
Relatively inflammable:	Flashpoint >200°F
- f. Chemical Hazards. Hazardous conditions that may exist because of the chemical nature of substances may be summarized as fire hazards, explosive hazards, corrosive hazards, and chemical reactivity.

### **Fire Hazards**

- a. Combustibility: Combustibility is the ability of a material to act as a fuel, that is, to burn. Materials that can be readily ignited and sustain a fire are considered to be combustible, while those that cannot are called noncombustible. Three elements are required for combustion to occur: fuel, oxygen, and heat. The concentration of the fuel and the oxygen must be high enough to allow ignition and maintain the burning process. Combustion is a chemical reaction that requires heat to proceed. Heat is supplied by the

ignition source and is maintained by the combustion, or it must be supplied from an external source. The relationship of these three fire components can form a triangle. If one leg of the triangle is removed, then the fire can be extinguished. For example, water applied to a fire removes the heat, thereby extinguishing the fire. When a material generates enough heat by itself to self-ignite and combust, spontaneous combustion occurs, either as a fire or explosion (e.g., diesel greater than 140 degrees Fahrenheit is combustible.)

- b. Flammability: Flammability is the ability of a material (liquid or gas) to generate a sufficient concentration of combustible vapors under normal conditions to be ignited and produce a flame. It is necessary to have a proper fuel-to-oxygen (oxygen) ratio (% fuel in air) to allow combustion. A flammable material is considered highly combustible if it can burn at ambient temperatures. But a combustible material is not necessarily flammable because it may not be easily ignited or the ignition maintained. Pyrophoric materials will ignite at room temperature in the presence of a gas or vapor or when a slight friction or shock is applied.

The substances listed below are easily ignited (pyrophorics), require little oxygen to support combustion, have low flammability limits and explosive limits and a wide flammable and explosive range.

**Flammable liquids**

Aldehydes  
Ketones  
Amines  
Ethers  
Aliphatic Hydrocarbons  
Aromatic Hydrocarbons  
Alcohols  
Nitroaliphatics

**Flammable solids**

Phosphorus  
Magnesium Dust  
Zirconium Dust  
Titanium Dust  
Aluminum Dust  
Zinc Dust

**Water Reactive Flammable Solids**

Potassium  
Sodium  
Lithium

**Pyrophoric Liquids**

Organometallic compounds  
Dimethyl Zinc  
Tributyl Aluminum

Some of the hazards related to fires and explosions can cause physical destruction due to shock waves, heat, and flying objects. Secondary fires can be created as well as other flammable conditions. Toxic or corrosive compounds may also be released to the surrounding environment as well.

**Explosives**

An explosive is a substance, which undergoes a very rapid chemical transformation producing large amounts of gases and heat. The gases

produced, for example, nitrogen, oxygen, carbon monoxide, carbon dioxide, and steam, due to the heat produced, rapidly expand to velocities exceeding the speed of sound. This creates both a shockwave (high pressure front) and noise. The main categories of explosives are listed below.

High or detonating – produces a shock wave followed by combustion.

Primary high explosive – detonation occurs in a short time. Examples: lead azide, mercury fulminate, and lead styphnate.

Secondary high explosive – needs a booster to detonate. Examples: Tetryl, cyclonite, dynamite and TNT

Low or deflagrating – Explosive rate very fast. Combustion followed by a shock wave. Examples: smokeless powder, magnesium, and molotov cocktail.

### **Corrosive Hazards**

Corrosion is a process of material degradation. Upon contact, a corrosive material may destroy body tissues, metals, plastics, and other materials. Corrosivity is the ability of material to increase the hydrogen ion concentration of a material or to transfer electron pairs of or from itself or another material. A corrosive material is a reactive compound or element that produces a destructive chemical change in the material it is acting on. Common corrosives are:

#### **Halogens**

Bromine  
Chlorine  
Fluorine  
Iodine

#### **Acids**

Acetic acid  
Hydrochloric acid  
Hydrofluoric acid  
Nitric acid  
Sulfuric acid

#### **Bases (Caustics)**

Potassium Hydroxide  
Sodium Hydroxide

Skin irritation and burns are typical results when the body contacts an acidic or basic corrosive material.

The measure of an acid or a base is the pH scale. The pH scale ranges from 0 to 14 with a pH <7 being acidic and a pH >7 being basic. The lower the pH of the acid the more acidic is the material, and the higher the pH of the base the more basic the material. A pH of 7 is considered neutral.

### **Chemical Reactivity**

- a. Reactivity hazards. A reactive material is one that undergoes a chemical reaction under specified conditions. Generally, the term “reactive hazard” is used to refer to a substance that undergoes a violent or abnormal reaction in

the presence of water or under normal ambient atmospheric conditions. Among this type of hazard are the pyrophoric liquids that will ignite in air at or below normal room temperature in the absence of added heat, shock, or friction, and the water-reactive flammable solids that will spontaneously combust upon contact with water.

The most common reactive mixture in construction is found in gas welding or brazing. Acetylene gas mixes with oxygen to provide an extremely powerful reaction in the form of a very intense flame.

- b. Compatibility. If two or more hazardous materials remain in contact indefinitely without reaction, they are compatible. Incompatibility, however, does not necessarily indicate a hazard. For example, acids and bases (both corrosive) react to form salts and water, which may not be corrosive.

The compatibility of materials must be determined before the materials are used or stored. Some examples of incompatibilities are sulfuric acid and plastics (toxic gas or vapor is produced), acids and metal (flammable gas or vapor is produced), chlorine and ammonia (chlorine gas is created, toxic gas). There are many other incompatibilities that may be found. Check to make sure that the materials used for a project are compatible.

All of the hazards listed above will be found on the material safety data sheet (MSDS). The MSDS is a short technical report that provides you with the known hazards of a specific material. The MSDS explains how to properly use the material, handle any problems related to the material and how to store the material. Know what the MSDS says for the materials that you work with.

All materials should have a label on them. This is the first and easiest place to look to see if a material is hazardous. Labels should tell you any precautions that must be taken when handling the material. Read the label on the materials that you use and abide with the cautions and warnings. If a material is not properly labeled, notify your supervisor so that the problem is corrected.

## **BIOLOGICAL HAZARDS**

Biological agents are living organisms that can cause sickness or death to exposed individuals. Biological hazards can cause infection or disease to persons who are exposed.

Biological hazards may involve plants or animals including microorganisms. Biological hazards, such as disease causing agents, may be present at a hazardous waste site or involved in a spill. Like chemical hazards, they can be dispersed throughout the environment via wind and water.

Many biological agents require a carrier to inoculate a person. For instance, rabid rodents at a landfill may be a biological hazard. Deer carry ticks that may have Rocky Mountain Spotted fever; prairie dogs will not.

The same personnel protective requirements for a response to a chemical hazard apply to biological hazards. Body coverings and respiratory protective equipment might have to be utilized. Especially important is the need to maintain personnel cleanliness. Before eating, drinking or smoking residual contamination should be washed off.

## **BIOHAZARDS**

Biohazard training will be provided to employees as per the blood borne pathogen program on biohazardous materials.

## **HAZARDOUS MATERIAL PROTECTION**

The routes of exposure for hazardous materials include the following:

- Inhalation – Breathing contaminated air (e.g. welding fumes.)
- Skin Absorption – Contact with harmful liquids, gases, solids or contaminated clothing, equipment, medications, cosmetics, etc. A good example is solvents. Materials can also enter through an open wound.
- Ingestion – Eating or drinking contaminated foods, water or medications. (Remember food and cigarettes can become contaminated by your unwashed hands, gloves, equipment. Good hygiene practices are very important.)
- Injection – A contaminated material can be injected into some part of the body.

Protection from potentially hazardous materials include the following:

- Use good personal hygiene. This is the simplest control measure to chemical hazards.
- Know what protective equipment is required for the specific job you are doing. Ask your supervisor what risks you might encounter and what hazardous substances you are working with.
- Know what potential explosive and or flammable conditions may exist with the job you are doing.
- Have all confined spaces checked for explosives, hydrogen sulfide, carbon monoxide, and oxygen deficiency. Know what hazards are involved with confined spaces.
- Know where emergency equipment is located and how to use it. For example know where the nearest fire extinguisher is from your work area.

- Know the standard operating procedures for rescue and emergency situations.
- Know the proper method for decontamination when working with hazardous materials.
- Use the buddy system when at all possible. Keep communication lines open when working with hazardous materials.
- Stay out of contaminated areas if you are not properly trained, equipped, or authorized to enter. Do not take chances with life-threatening materials or situations.

### **PERSONAL PROTECTIVE EQUIPMENT**

Different types of protective equipment will be required depending on the substances to be handled, the existing conditions, and the particular situation. Personal protective equipment includes a variety of special suits, hard hats, goggles, face shields, aprons, boots, gloves, and respirators. Each is designed to protect you from certain hazards. It is important for you to know the advantages and disadvantages of all the equipment you may use or need. Use all equipment as instructed and follow all written procedures for the specific equipment.

### **STANDARD OPERATING PROCEDURES FOR EMERGENCY SITUATIONS**

Standard operating procedures exist for any unexpected event such as an accident, fire, explosion, etc.

If you know or suspect that you have been contaminated with a hazardous substance, **TELL YOUR SUPERVISOR**. You should know the general symptoms of over-exposure to toxic substances. These include:

- Irritation of skin, eyes, nose, throat, or respiratory tract
- Changes in complexion or skin discoloration
- Headache
- Difficulty in breathing
- Nausea
- Dizziness or light-headedness
- Excessive salivation (drooling)
- Lack of coordination
- Blurred vision
- Cramps and/or diarrhea
- Changes in behavior patterns

You should know the location of emergency eyewash and shower facilities.

	<p style="text-align: center;">Health, Safety and Environment</p> <p style="text-align: center;"><b>HAZARD COMMUNICATION EMPLOYEE TRAINING PROGRAM</b></p>	<p style="text-align: right;">SMS 002 NA Supplemental Information B</p> <p style="text-align: right;">Issue Date: February 2009 Revision 2: August 2010</p>
---	--	---

Before you enter, and periodically while you are working in confined spaces such as tanks, crawl spaces, ditches, etc., the air in the space should be tested by a qualified individual for oxygen content, explosive levels, gases, and contamination of hazardous materials.

Understand the site emergency response procedures and know the locations of response equipment before the need arises. If you must rescue someone, use proper precautions and protective equipment. **DO NOT BECOME A CASUALTY YOURSELF.** Move the affected person from the hazardous exposure if possible. Get help and follow emergency rescue procedures.

For spills and leaks of hazardous materials limit the leak or spill as quickly as possible. Small spills should be cleaned up immediately. If a valve must be closed to prevent a spill from continuing then do so. If the spill is large, or your skin, eyes or clothing are contaminated, leave the work area immediately. Wash eyes, skin, and clothes off with lots of water to remove the material. Get to fresh air. Notify your foreman or supervisor as soon as it is safe for you to do so. Unless you have special training and the proper protective equipment, do not try to clean up large spills yourself.

If a corrosive material is splashed in your eyes or on your skin and clothes, deal with it immediately. Wash the affected area with plenty of water (at least 15 minutes with a continuous stream). Remove any contaminated clothing. Get to fresh air if you feel burning in the nose, throat or lungs. Do not vomit if you have swallowed a corrosive material. Drink large quantities of water to dilute the material, and seek immediate medical attention.

## **EXAMPLES OF HAZARDOUS MATERIALS POSSIBLY FOUND ON SITE**

### **SOLVENTS**

Solvents are among the most common toxic materials in the workplace. Many processes, mixing and cleaning, use or give off solvent vapors. They are also used as thinners in paints and adhesives. Solvents vary in their toxicity from practically non-toxic materials such as the alcohols, ketones, halogenated solvents, to the very toxic such as dimethyl acetamide, methyl acrylate and other materials. Some solvents are also flammable or reactive.

Solvents can cause irritations to the eyes and skin when in high concentrations. Most will dissolve the protective layer of oils on the skin and leave it looking white in the small cracks. They should never be used to clean the skin; if there is a problem with contamination, some form of glove or barrier cream should be used to protect the skin. The early signs of overexposure often include headaches, dizziness, nausea and other related symptoms.

## **METALS AND SOLID PARTICULATES**

Examples: Babbitt metal, cadmium, galvanized metal, lead, manganese, nickel, zinc

Metals and other particulate solids can be toxic and are usually given off when welding or grinding. Some, like gypsum dust are only nuisance dusts, while others, like zinc fume from welding cause flu-like symptoms. Others, like asbestos have been linked to cancer and other chronic diseases. Dusts can irritate the skin and be ingested with food, drinks or smoking materials if they aren't washed off the hands and removed from clothing. They may also be carried home to family members and cause problems there if they are not washed off before leaving the work area.

When the welding, brazing, grinding or cutting of metal is performed, care should be taken to avoid breathing the fumes or dusts. Local exhaust ventilation should be used to reduce your exposure. If fumes and dust cannot be controlled with exhaust ventilation, appropriate approved respirators should be used. Approved safety goggles and gloves should be worn when working with metals. Gloves may be necessary to prevent skin sensitization and dermatitis.

## **ACIDS**

Examples of acids found on URS Corporation sites are sulfuric acid (used in water treatment plants and found in batteries), hydrochloric acid, and nitric acid. Acids are considered corrosives and cause material degradation. Acids destroy tissues, metals and other materials. Acids can cause skin irritations in the form of rashes or other types of dermatitis, and more severe problems such as skin or eye burns. When working with acids proper eye and face protection should be worn as well as hand protection.

## **LUBRICANTS, COOLANTS AND MACHINE OILS**

Lubricants, coolants and machine oils are common in construction sites. There are three types: petroleum based (straight oils), water based, and synthetic fluids that contain no oils. Many cutting oils contain additives to inhibit corrosion, prevent bacterial growth and permit high temperature operation. The fumes and mist from cutting operations can be irritating to the eyes and lungs. Skin exposure can result in acne-like conditions and can cause other problems. Avoid breathing mist and fumes and use gloves and aprons to minimize contact with materials.

## **GASES**

Examples: Acetylene, ammonia, carbon dioxide, carbon monoxide, freon, oxygen, hydrogen, liquefied petroleum gas, propane

Gases present a range of problems. Some, like nitrogen, are simple asphyxiates. They prevent the body from getting enough oxygen by displacing it from the air stream. Some are chemically hazardous, like carbon monoxide, or nitrous oxide, which cause poisoning of the body systems. Some are very toxic, like arsine and phosphine. Some are very reactive and should be dealt with in very careful manners. Other gases, like hydrogen, oxygen and acetylene are explosives and must be treated with great care. Chains and stands should secure all compressed gas cylinders at all times, and only the proper fittings should be used. Liquefied and petroleum gases are extremely flammable and considered simple asphyxiates.

## **PLASTICS, EPOXIES AND POLYMERS**

Plastics, epoxies and polymers are a growing group of industrial chemicals. Materials such as polystyrene, polypropylene, acrylates, vinyl, and polyurethane are but a few. Although most of these materials are not toxic in their final form, where they are being molded, extruded, laid up, there can be significant hazards. When burned, these materials can be very hazardous.

## **CLEANERS**

Cleaners contain acid, alkalis, aromatics, surfactants, petroleum products, ammonia and hypochlorite. Because of these ingredients these materials are considered to be irritants, and can be harmful to you if swallowed or inhaled. Many may cause eye, nose, throat, and skin and lung irritation. Some cleaners are flammable and burn easily. Others may be caustic or corrosive and cause severe skin burns. Because many cleaners used in the job area are consumer products commonly found in our homes, you may underestimate the hazard they pose. Protect yourself from these hazards by reading the labels and following the recommended precautions. Wear gloves and eye protection. Avoid inhaling the vapors and mists. Wash your hands and face thoroughly before eating, drinking or smoking.

Specific emergency procedures for each chemical will be detailed on that cleaner's material safety data sheet. In general, if a cleaning chemical gets into your eyes, flush the eyes with clean running water for at least 15 minutes, then seek medical attention. If the chemical gets on your skin, wash the area of contact and seek medical attention.

Do not mix two cleaning chemicals together, unless specifically told to do so by your supervisor. For example, the dangerous gas, chlorine, will be created if you mix bleach and ammonia or bleach and drain cleaner together.

Examples: Abrasive cleaners, bleach, drain cleaner, general purpose cleaning spray, germicide, and glass cleaner, metal cleaner, rug and upholstery cleaners, stain remover.

## FUELS

Examples: Diesel oil, gasoline, propane, kerosene

The primary hazard posed by fuels is obviously, fire. Fuels are either flammable or combustible. Whether flammable (a material which is easily ignited and burns with extreme rapidity) or combustible (a material capable of fueling a fire), they should be handled with care.

Proper storage and transport of fuels in approved, self-closing, safety containers is extremely important and should be strictly adhered to at all times. When filling portable containers with flammable materials they should be properly grounded and bonded to the container to prevent ignition from static electricity.

Store gasoline in containers marked "gasoline". Store kerosene in containers marked "kerosene". Never use kerosene containers for the transport or storage of gasoline.

Excessive skin contact with fuels can result in dermatitis. Some petroleum products have been shown to cause skin tumors. Inhalation of fuel vapors over a long period of time can cause central nervous system depression, and may aggravate any existing respiratory problems that may exist. Ingestion of fuels can cause poisoning. Do not induce vomiting. If fuels get in your eyes, rinse with clean water for at least 15 minutes and seek medical attention.

## LABELING

Proper labeling of all chemical containers is another excellent control measure to chemical hazards. Container labels give the name of the chemical in the container, the name/address of the manufacturer and a hazard warning statement and/or graphic hazard statement that warns you of possible dangers. Read the label on all materials with which you work.

Examples of hazard warning statements:

- Danger, will cause death if swallowed
- Warning, causes eye irritation, harmful if swallowed
- Caution, avoid contact with skin and avoid breathing of vapors

Labels and their warnings should be taken seriously since they provide you with the first clue to the hazards posed to your health and safety. They also give information on personal protective equipment required, emergency response and first-aid steps in case of an exposure, proper procedures in case of a spill and emergency phone numbers.

## **MSDS**

Material safety data sheets, if read and followed, are a powerful means of controlling chemical exposures. Chemical manufacturers are required to provide MSDSs for the chemicals they produce or import. The purpose of the MSDS is to communicate information on the recommended safe use and handling procedures for that chemical.

MSDS may look different, yet the Occupational Safety and Health Administration (OSHA) requires that all MSDS must provide certain categories of information about the chemical substance or mixture:

- Material identification (physical and chemical)
- Hazardous ingredients
- Emergency and first aid procedures
- Recommended control measures
- Physical and health hazards
- Safe handling procedures
- Date of preparation/revision
- Manufacturer's name, address, and phone number
- Primary routes of entry
- National Toxicological Program (NTP) or Annual Report on Carcinogens from the International Agency for Research on Cancer

**MATERIAL SAFETY DATA SHEETS  
THEY ANSWER YOUR QUESTIONS ABOUT THE CHEMICALS YOU WORK WITH**

What product/chemical is this MSDS for?

NFPA RATING  
HEALTH = 1

## HAZARD COMMUNICATION TRAINING QUESTIONS

NAME: \_\_\_\_\_ LOCATION: \_\_\_\_\_

1. Container labels must:
  - A. Give directions to the manufacturing plant.
  - B. Give price of the product.
  - C. Notify the user of the physical and health hazards.
  - D. Provide translation in Spanish.
  
2. What is a MSDS?
  - A. Main Statistical Data Service.
  - B. Material Safety Data Sheet.
  - C. New accident reporting system.
  - D. Both A and C.
  
3. What are the requirements of the Hazard Communication Standard?
  - A. Chemical inventories.
  - B. Container labeling.
  - C. Negotiations for purchase price of chemicals.
  - D. MSDSs.
  - E. Employee Training.
  - F. All of the above except C.
  
4. What is one way to determine if a chemical has been spilled or released in your work area?
  - A. When you smell something out of the ordinary.
  - B. By reading the MSDS and being knowledgeable of the chemical appearance and odor.
  - C. Call somebody.
  - D. Both A & B.
  
5. How can you protect yourself from chemical exposures?
  - A. Personal protective equipment and proper work practices.
  - B. Stay upwind of vapors and gases.
  - C. Use proper ventilation.
  - D. All of the above.
  
6. What are the main examples of chemicals found on site?
  - A. Solvent, fuel, metals, lubricants, gases.
  - B. Toxic, flammable, corrosive, reactive, pressurized.
  - C. Physical properties and health effects.
  - D. The good, the bad and the ugly.
  
7. New and transferred employees must be trained on the hazards of their new work area.
  - A. True
  - B. False

8. A MSDS provides what?
  - A. Supervisor guide to acid unloading.
  - B. Engineering data.
  - C. Health, safety and first-aid information.
  - D. Chemical process checklist.
  
9. Where is your site-specific Hazard Communication program located?
  - A. Accident Prevention Manual.
  - B. Employee Handbook.
  - C. Budget Manual.
  - D. MSDS Book.
  
10. A new chemical used in your area is always considered a new hazard.
  - A. True
  - B. False
  
11. If a MSDS is not available for the chemical you are using, you should?
  - A. Notify your supervisor.
  - B. Call the manufacturer.
  - C. Contact the Safety Department.
  - D. Nothing, most chemicals are safe.
  - E. Both A & C.
  
12. Labeling systems use words, graphics, geometric shapes, and colors to warn you of any possible danger to your health and safety, and to tell you about safe work practices you need to follow when handling chemicals.
  - A. True
  - B. False
  
13. A flammable chemical is a liquid with a flashpoint:
  - A. Of 2,000 degrees Fahrenheit
  - B. Below 100 degrees Fahrenheit
  - C. At freezing
  - D. All of the above
  
14. Using the ANSI labeling system, which represents the most serious hazard?
  - A. Caution
  - B. Warning
  - C. Danger
  - D. Beware
  
15. Chemicals can enter the body through:
  - A. Breathing them in
  - B. Contact with body openings
  - C. Both A and B
  - D. None of the Above

16. If you are not familiar with a chemical, you should check the Material Safety Data Sheets.
- A. True
  - B. False
17. A primary/original container label for a chemical must include:
- A. The chemical name
  - B. The chemical manufacturers or importer's name and address
  - C. Warnings of its hazardous content
  - D. All of the above
18. A container label should be checked only if you do not know the contents of the container.
- A. True
  - B. False
19. If a label is torn or missing, you should report it right away to the proper personnel at your facility.
- A. True
  - B. False
20. The Hazard Communication Standard is also referred to as the Right to Know Standard.
- A. True
  - B. False
21. A material safety data sheet is required for all hazardous materials in your facility.
- A. True
  - B. False
22. Safe work practices require a complete understanding and respect for the potential hazards.
- A. True
  - B. False
23. The written emergency response plan contains the procedures to take in the event of an emergency.
- A. True
  - B. False

**HAZARD COMMUNICATION TRAINING QUESTIONS  
ANSWER SHEET**

1. Container labels must:
  - A. Give directions to the manufacturing plant.
  - B. Give price of the product.
  - C. Notify the user of the physical and health hazards.**
  - D. Provide translation in Spanish.
  
2. What is a MSDS?
  - A. Main Statistical Data Service.
  - B. Material Safety Data Sheet.**
  - C. New accident reporting system.
  - D. Both A and C.
  
3. What are the requirements of the Hazard Communication Standard?
  - A. Chemical inventories.
  - B. Container labeling.
  - C. Negotiations for purchase price of chemicals.
  - D. MSDSs.
  - E. Employee Training.
  - F. All of the above except C.**
  
4. What is one way to determine if a chemical has been spilled or released in your work area?
  - A. When you smell something out of the ordinary.
  - B. By reading the MSDS and being knowledgeable of the chemical appearance and odor.
  - C. Call somebody.
  - D. Both A & B.**
  
5. How can you protect yourself from chemical exposures?
  - A. Personal protective equipment and proper work practices.
  - B. Stay upwind of vapors and gases.
  - C. Use proper ventilation.
  - D. All of the above.**
  
6. What are the main examples of chemicals found on site?
  - A. Solvent, fuel, metals, lubricants, gases.**
  - B. Toxic, flammable, corrosive, reactive, pressurized.
  - C. Physical properties and health effects.
  - D. The good, the bad and the ugly.
  
7. New and transferred employees must be trained on the hazards of their new work area.
  - A. True**
  - B. False

8. A MSDS provides what?
- A. Supervisor guide to acid unloading.
  - B. Engineering data.
  - C. Health, safety and first-aid information.**
  - D. Chemical process checklist.
9. Where is your site-specific Hazard Communication program located?
- A. Accident Prevention Manual
  - B. Employee Handbook
  - C. Budget Manual
  - D. MSDS Book**
10. A new chemical used in your area is always considered a new hazard.
- A. True**
  - B. False
11. If a MSDS is not available for the chemical you are using, you should?
- A. Notify your supervisor.
  - B. Call the manufacturer.
  - C. Contact the Safety Department.
  - D. Nothing, most chemicals are safe.
  - E. Both A & C**
12. Labeling systems use words, graphics, geometric shapes, and colors to warn you of any possible danger to your health and safety, and to tell you about safe work practices you need to follow when handling chemicals.
- A. True**
  - B. False
13. A flammable chemical is a liquid with a flashpoint:
- A. Of 2,000 degrees Fahrenheit
  - B. Below 100 degrees Fahrenheit**
  - C. At freezing
  - D. All of the above
14. Using the ANSI labeling system, which represents the most serious hazard?
- A. Caution
  - B. Warning
  - C. Danger**
  - D. Beware
15. Chemicals can enter the body through:
- A. Breathing them in
  - B. Contact with body openings
  - C. Both A and B**
  - D. None of the Above

16. If you are not familiar with a chemical, you should check the Material Safety Data Sheets.
- A. **True**
  - B. False
17. A primary/original container label for a chemical must include:
- A. The chemical name
  - B. The chemical manufacturers or importer's name and address
  - C. Warnings of its hazardous content
  - D. **All of the above**
18. A container label should be checked only if you do not know the contents of the container.
- A. True
  - B. **False**
19. If a label is torn or missing, you should report it right away to the proper personnel at your facility.
- A. **True**
  - B. False
20. The Hazard Communication Standard is also referred to as the Right to Know Standard.
- A. **True**
  - B. False
21. A material safety data sheet is required for all hazardous materials in your facility.
- A. **True**
  - B. False
22. Safe work practices require a complete understanding and respect for the potential hazards.
- A. **True**
  - B. False
23. The written emergency response plan contains the procedures to take in the event of an emergency.
- A. **True**
  - B. False

**URS SAFETY MANAGEMENT STANDARD 013**  
**EXCAVATION**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Excavation**

---

### **1. Applicability**

This standard applies to operations where URS Corporation and subsidiary companies perform trenching and excavation activities, and/or where URS employees are exposed to hazards associated with trenching and excavation activities.

### **2. Purpose and Scope**

The purpose of this standard is to protect personnel from the hazards associated with excavation and trenching activities.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. Competent Person**

Where potential employee exposure to hazards associated with the excavation (e.g., entrapment, falls greater than 4 feet (1.2 meters), cave-ins, etc.) can reasonably be anticipated, an excavation-competent person must be on site. The excavation-competent person:

1. Has formal documentation of training as an excavation-competent person.
2. Must be physically located at the excavation site at all times while work is in progress.
3. Is responsible for conducting daily inspections of excavations, adjacent areas, and protective systems prior to each shift.
4. Is responsible for inspection after every rainstorm or other potentially hazard-producing event.
5. Must have knowledge of soils and soil classification.
6. Understands design and use of protective systems.
7. Understands the requirements of the applicable regulations.

## **URS SAFETY MANAGEMENT STANDARD**

### **Excavation**

---

8. Has authority to stop work and take corrective actions when conditions change.
9. Has the ability to recognize and test hazardous atmospheres.
10. If URS hires a subcontractor to perform excavation or trenching activities, the subcontractor will be required to assign an excavation-competent person to the project. Documentation of this person's qualifications will be maintained in the project safety file.

#### **B. Preliminary Planning**

1. Underground and aboveground utilities, adjacent structures or retaining walls, spoil layout, truck routes, and emergency procedures must be identified before work begins.
2. When the excavation or trench approaches the estimated location of underground utilities, the exact location will be determined by methods identified in SMS 034 – Utility Clearance and Isolation.

#### **C. Access/Egress**

1. Entry into an excavation or trench should not be made unless absolutely necessary.
2. If personnel enter an excavation or trench that is 4 feet (1.2 meters) deep or more, ladders, steps, ramps, or other safe means of access and egress must be provided, and located at intervals of 25 feet (7.6 meters) or less of lateral travel. If a ladder is used, the ladder must extend 3 feet (0.9 meter) above the original surface of the ground.
3. In excavations and trenches that employees may be required to enter, excavated or other material must be effectively stored and retained at least 2 feet (0.6 meter) or more from the edge of the excavation. As an alternative to this clearance requirement, barriers or other effective retaining devices may be used in lieu thereof in order to prevent excavated or other materials from falling into the excavation.
4. Surface crossing of trenches by personnel or vehicles should not be made unless absolutely necessary. When necessary, the following conditions must be met:

## **URS SAFETY MANAGEMENT STANDARD**

### **Excavation**

---

- a. Vehicle crossings must be designed by and installed under the supervision of a registered professional engineer.
  - b. Walkways or bridges must have a minimum clear width of 20 inches (50.8 centimeters [cm]), be equipped with standard guardrails, and extend a minimum of 24 inches (61 cm) past the surface edge of the trench.
5. When performing excavation oversight or observation on an excavation/trench greater than 4 feet (1.2 meters) in depth, personnel must remain at least more than 2 feet (0.6 meter) from the leading edge of the excavation.

#### D. Soil Classification

When sloping, benching, or installed protective systems are used, soil classification of each rock and soil deposit must be classified by a competent person. Soil and rock will be classified as one of the following: stable rock, Type A soil, Type B soil, or Type C soil. The classification will be based on the results of at least one visual analysis and one manual analysis, such as soil plasticity dry strength, thumb penetration, pocket penetrometer, or hand-operated shear vane. In the event that soil classification requires additional technical expertise, the competent person will consult with a registered professional engineer. (See Supplemental Information A – Soil Classification.)

#### E. Protective Systems

1. Employees in excavations deeper than 4 feet (1.2 meters) must be protected by means of properly designed protective systems.
2. Protective systems for excavations or trenches deeper than 20 feet (6.1 meters) must be designed and stamped by a registered professional engineer.
3. Protective systems must have the capacity to resist all loads that are intended or could reasonably be expected to be applied or transmitted to the system.
  - a. Sloping and Benching
    - When personnel are required to work in trenches or excavated areas, all slopes must be excavated to at least the angle of repose, or otherwise safely supported to prevent cave-ins.

## **URS SAFETY MANAGEMENT STANDARD**

### **Excavation**

---

- The determination of the angle of repose and design of the supporting system must be based on careful evaluation of pertinent factors such as: depth of cut; possible variation in water content of the material while the excavation is open; anticipated changes in materials from exposure to air, sun, water, or freezing; loading imposed by structures, equipment, overlying material, or stored material; and vibration from equipment, blasting, traffic, or other sources. (See Supplemental Information B – Angles of Repose – Simple Slopes.)
- The slopes and configurations of sloping and benching systems for excavations 4 feet (1.2 meters) to 20 feet (6.1 meters) deep will be selected and constructed by the employer or his designee, and must be in accordance with the following requirements.
- Soil must be analyzed by a competent person to determine the soil or rock type. The maximum allowable slope for each soil or rock type is identified in the table below.

<b>Soil or Rock Type</b>	<b>Maximum Allowable Slope (Horizontal: Vertical)</b>
Stable Rock	Vertical 90°
Type A	¾:1 or 53°
Type B	1:1 or 45°
Type C	1½: 1 or 34°

- Soil classification is not required if 1½:1 (Horizontal:Vertical) or 34° slope is used. If this slope is greater than 1½:1 (Horizontal:Vertical) or 34°, a soil classification must be made. The excavation must comply with one of the following three options.
  - Option I – Maximum allowable slope, and allowable configurations for sloping and benching systems will be determined in accordance with the conditions and requirements in Supplemental Information A – Soil Classification; and Appendix B – Sloping and Benching.
  - Option II – Designs of sloping or benching systems will be selected by using tabulated data based on soil

**URS SAFETY MANAGEMENT STANDARD**  
**Excavation**

---

conditions. These tables must be calculated and prepared by a registered professional engineer. The plan must be stamped by a registered professional engineer, and this information must be documented and filed on site.

- Option III – A registered professional engineer must design the sloping and benching system and stamp the plan. This information must be documented and filed on site.

Excavations with sloping and benching in excess of 20 feet deep must be designed and stamped by a registered professional engineer.

b. Timber and Aluminum Hydraulic Shoring for Trenches

Designs of support systems, shield system, and other protective systems will be selected and constructed by the employer or their designee, and must be in accordance with one of four options.

- Option I – Designs using Appendices A, C, and D (see 29 Code of Federal Regulations [CFR] 1926 Subpart P). Shoring in trenching will be determined using conditions and requirements of Supplemental Information A – Soil Classification; Appendix C – Timber Shoring; and Appendix D – Aluminum Hydraulic Shoring.
- Option II – Designs of support systems, shield systems, or other protective systems that are drawn from manufacturer's tabulated data will be in accordance with all specifications, recommendations, and limitations issued or made by the manufacturer (i.e., trench jacks, hydraulic). This information must be filed on site.
- Option III – Designs using other tabulated data. Designs of support systems, shield systems, or other protective systems will be selected from and be in accordance with tabulated data. This information must be filed on site.
- Option IV – Design by registered professional engineer. Support systems, shield systems, and other protective

**URS SAFETY MANAGEMENT STANDARD**  
**Excavation**

---

systems not using Option I, II, or III must be approved and stamped by a registered professional engineer.

- c. Alternatives to Timber Shoring
- Portable trench boxes or sliding trench shields may be used for the protection of personnel in lieu of a shoring system or sloping. Where such trench boxes or shields are used, they must be designed, constructed, and maintained in a manner that will provide protection equal to or greater than the sheeting or shoring required for the trench.
  - Trench boxes require placement using portable lifting equipment such as backhoes or other tractor-like devices. The job hazard analysis will consider the hazards of lifting and placement of the trench boxes, including the proper use of chains, stability of the mobile equipment, swing radius protection for load, and load rating for the lifting device.
  - Trench shields and boxes must either be pre-manufactured with listed load ratings, or designed, stamped, and constructed under the direction of a registered professional engineer.
- d. Protective systems designed to protect employees in excavations deeper than 20 feet (6.1 meters) must be designed and stamped by a registered professional engineer.
- e. Excavations must be clearly identified and barricaded to keep unauthorized individuals out.
- f. Walkways, runways, and sidewalks must be kept clear of excavated material or other obstructions, and no sidewalks should be undermined unless shored to carry a minimum live load of one 125 pounds (56.6 kilograms) per square foot.
- g. If it is necessary to place heavy objects or operate heavy equipment on a level above and near any excavation, the side of the excavation must be sheet piled, shored, and braced as necessary to resist the extra pressure due to such superimposed loads.

**URS SAFETY MANAGEMENT STANDARD**  
**Excavation**

---

F. Hazardous Atmospheres and Confined Spaces

1. In excavations or trenches greater than 4 feet (1.2 meters) deep where an oxygen deficient (<19.5 percent) or flammable (>10 percent Lower Explosive Limit [LEL]) or other potentially toxic environment could be expected to exist, the atmosphere of the excavation must be monitored before workers enter the excavation. Air monitoring must be conducted before personnel enter an excavation or trench, and then periodically to ensure that the atmosphere remains safe. Monitoring will be conducted at a minimum of three vertical depths of the excavation to detect potentially stratified gas layers (e.g., propane has a density 1.55 times that of normal air and will accumulate in the lower depths of an open trench).
2. The frequency of air monitoring will be increased if equipment used in or near the excavation or trench may alter the atmosphere where personnel are working. All air monitoring must be documented and maintained in the project safety files.
3. Attended emergency rescue equipment, such as a breathing apparatus, a safety harness and line, basket stretcher, etc., must be readily available where adverse atmospheric conditions may exist or develop in an excavation or trench.
4. Excavations or trenches may qualify as confined spaces. When this occurs, compliance with SMS 010 – Confined Spaces, is required.

G. Water Accumulation

1. Employees will not work in excavations where water is accumulating unless adequate precautions have been taken to protect employees. Personnel must exit excavations and trenches during rainstorms.
2. De-watering equipment must be installed and monitored by a competent person.
3. Diversion ditches, dikes, or other suitable means will be used to prevent water from entering an excavation and to provide adequate drainage of the area adjacent to the excavation.

## **URS SAFETY MANAGEMENT STANDARD**

### **Excavation**

---

4. Excavations and trenches must be inspected by a competent person after each rain event and before personnel are permitted to re-enter the excavation or trench.

#### H. Excavation and Trenching Permit

1. An Excavation/Trenching Permit (Attachment 013-1 NA) must be completed prior to all excavation or trenching activities.
2. The Excavation and Trenching Permit must be completed and signed by all applicable parties as indicated on the permit.
3. Excavation and Trenching Permits may be valid for up to 1 week.

#### I. Daily Inspections

1. Daily inspections must be made (Attachment 013-2 NA) of excavations and trenches. Where potential employee exposure to hazards associated with the excavation (e.g., entrapment, falls greater than 4 feet (1.2 meters), cave-ins, etc.) can reasonably be anticipated, these inspections must be made by a competent person.
2. Inspections must be conducted daily before the start of work, after every rainstorm, after other events that would increase hazards such as snowstorm, thaw, earthquake, or dramatic change in weather, and when fissures, tension crack, sloughing, undercutting, water seepage, bulging at the bottom or other similar conditions occur.
3. If evidence of possible cave-ins or slides is apparent, all work in the excavation or trench must cease until the necessary precautions have been taken to safeguard the personnel.

#### J. Excavating at Potential MEX/UXO Sites

1. If the project site is suspected of munitions and explosives of concern (MEC) or unexploded ordinance (UXO) contamination, the UXO team will conduct a reconnaissance and MEC/UXO avoidance to provide clear access routes to each site before excavation crews enter the area.
2. MEC/UXO sites with planned excavation activities will not be conducted until a complete plan for the site is prepared and/or approved by the URS UXO Safety Officer. MEC/UXO avoidance

## **URS SAFETY MANAGEMENT STANDARD**

### **Excavation**

---

must be conducted during excavation operations on known or suspect MEC/UXO sites (SMS 039).

#### K. Training/Briefings

1. Conduct and document daily safety briefings for all employees associated with excavation activities. Discuss excavation hazards, protective measures, and work practices that will be applicable to the day's activities.

### **5. Documentation Summary**

The following information will be maintained in the project file:

- A. Competent person qualifications.
- B. Excavation and Trenching Permit(s).
- C. Daily inspections by an excavation-competent person.
- D. Air monitoring records.

### **6. Resources**

**INSPECTION FORM**

Attachment 013-2 NA

Issue Date: July 2000  
Revision 5: December 2009

Competent Person: \_\_\_\_\_

Date: \_\_\_\_\_

Project Name: \_\_\_\_\_

Weather Conditions: \_\_\_\_\_

Excavation Location: \_\_\_\_\_

Rainfall Amounts 24 Hours Previous: \_\_\_\_\_

**Access/Egress**

Is access and egress located within 25 feet (7.6 meters) of entrants?  Yes  No  Not Applicable

If ladders are used, do they extend 3 feet (0.9 meter) beyond the top of the excavation?  Yes  No  Not Applicable

**Soil Characteristics**

Is any water seepage noted in trench walls or bottom?  Yes  No  Not Applicable

Are pumps in place, or available if needed?  Yes  No  Not Applicable

Is there evidence of significant fracture planes in soil or rock?  Yes  No  Not Applicable

Are there any zones of unusually weak soils or materials not anticipated?  Yes  No  Not Applicable

Have tension cracks been observed along the top on any slopes?  Yes  No  Not Applicable

Are there any noted dramatic dips or bedrock?  Yes  No  Not Applicable

Is there any evidence of caving or sloughing of soil since the last inspection?  Yes  No  Not Applicable

**Protective Systems**

Are slopes cut at design angle of repose?  Yes  No  Not Applicable

Is the shoring system installed in accordance with the design?  Yes  No  Not Applicable

Is the shoring being used secure?  Yes  No  Not Applicable

Does the design include an adequate safety factor for equipment being used?  Yes  No  Not Applicable

Is traffic being adequately kept away from the excavation/trenching operation?  Yes  No  Not Applicable

Are hydraulic shores pumped to design pressure?  Yes  No  Not Applicable

Is vibration from equipment or traffic too close to the trenching operation?  Yes  No  Not Applicable

Are trench box(s) certified?  Yes  No  Not Applicable

**Hazardous Atmosphere & Confined Spaces**

Is the hazardous atmosphere testing being conducted on a regular basis?  Yes  No  Not Applicable

Have rescue procedures been established, and is equipment immediately available?  Yes  No  Not Applicable

**Health, Safety and Environment**  
**DAILY EXCAVATION / TRENCH**  
**INSPECTION FORM**

Attachment 013-2 NA

Issue Date: July 2000  
Revision 5: December 2009

**Miscellaneous**

- Are utility markings in place?  Yes  No  Not Applicable
- Are trees, boulders, or other hazards located in the area?  Yes  No  Not Applicable
- Are barricades or covers in place and in good condition?  Yes  No  Not Applicable
- Is excavated material and equipment at least 2 feet (0.6 meter) from the edge of the excavation?  Yes  No  Not Applicable
- Are all short-term trench(es) covered within 24 hours?  Yes  No  Not Applicable
- Are GFCIs used on all temporary electrical cords?  Yes  No  Not Applicable
- Is the excavation within the original scope of the excavation permit?  Yes  No  Not Applicable
- Is a valid excavation permit executed for the excavation/trenching activity?  Yes  No  Not Applicable

**Date**

**SOIL CLASSIFICATION****"Type A" soils**

Cohesive soils with an unconfined, compressive strength of 1.5 ton per square foot (tsf) (144kPa) or greater. Examples of cohesive soils are clay, silty clay, sandy clay, clay loam and, in some cases, silty clay loam and sandy clay loam. Cemented soils such as caliche and hardpan are also considered Type A.

However, no soil is Type A if:

1. The soil is fissured;
2. The soil is subject to vibration from heavy traffic, pile driving, or similar effects;
3. The soil has been previously disturbed;
4. The soil is part of a sloped, layered system where the layers dip into the excavation on a slope of four horizontal to one vertical (4H:1V) or greater; or
5. The material is subject to other factors that would require it to be classified as a less stable material.

**"Type B" soils**

1. Cohesive soil with an unconfined compressive strength greater than 0.5 tsf (48 kPa) but less than 1.5 tsf (144 kPa); or
2. Granular cohesionless soils including angular gravel (similar to crushed rock), silt, silt loam, sandy loam and, in some cases, silty clay loam and sandy clay loam.
3. Previously disturbed soils except those which would otherwise be classed as Type C soil.
  - a. Soil that Dry rock that is not stable; or
  - b. Material that is part of a sloped, layered system where the layers dip into the excavation on a slope less steep than four horizontal to one vertical (4H:1V), but only if the material would otherwise be classified as Type B.

**"Type C" soils**

1. Cohesive soil with an unconfined compressive strength of 0.5 tsf (48 kPa) or less;
2. Granular soils including gravel, sand, and loamy sand;
3. Submerged soil or soil from which water is freely seeping;
4. Submerged rock that is not stable, or
5. Material in a sloped, layered system where the layers dip into the excavation or a slope of four horizontal to one vertical (4H:1V) or steeper.

**SOIL CLASSIFICATION**

Soil Texture	Visual detection of particle size and general appearance of the soil	Squeezed in hand and pressure released		Soil ribboned between thumb and finger when moist.
		When Air Dry	When Moist	
Sand	Soil has a granular appearance in which the individual grain sizes can be detected. It is free flowing when in a dry condition.	Will not form a cast and will fall apart when pressure is released.	Forms a cast, which will crumble when lightly touched.	Cannot be ribboned.
Sandy Loam	Essentially a granular soil with sufficient silt and clay to make it somewhat coherent. Sand characteristics predominate.	Forms a cast, which readily falls apart when lightly touched.	Forms a cast, which will bear careful handling without breaking.	Cannot be ribboned.
Loam	A uniform mixture of sand, silt and clay. Grading of sand fraction quite uniform from coarse to fine. It is mellow, has somewhat gritty feel, and yet is smooth and slightly plastic.	Forms a cast, which will bear careful handling without breaking.	Forms a cast, which can be handled freely without breaking.	Cannot be ribboned.
Silt Loam	Contains a moderate amount of the finer grades of sand and only a small amount of clay over half of the particles are silt. When dry it may appear quite cloddy which readily can be broken and pulverized to a powder.	Forms a cast, which can be freely handled. Pulverized it has a soft flour-like feel.	Forms a cast, which can be freely handled. When wet, soil runs together and puddles.	It will not ribbon but it has a broken appearance, feels smooth and may be slightly plastic.
Silt	Contains over 80% of silt particles with very little fine sand and clay. When dry, it may be cloddy, readily pulverizes to powder with a soft flour-like feel.	Forms a cast, which can be handled without breaking.	Forms a cast, which can be freely handled. When wet, it readily puddles.	It has a tendency to ribbon with a broken appearance, feels smooth.
Clay Loam	Fine textured soil breaks into hard lumps when dry. Contains more clay than silt loam. Resembles clay in a dry condition; identification is made on physical behavior of moist soil.	Forms a cast which can be handled freely without breaking.	Forms a cast, which can be handled freely without breaking. It can be worked into a dense mass.	Forms a thin ribbon, which readily breaks, barely sustaining its own weight.
Clay	Fine textured soil breaks into very hard lumps when dry. Difficult to pulverize into a soft flour-like powder when dry. Identification based on cohesive properties of the moist soil.	Forms a cast which can be freely handled without breaking.	Forms a cast, which can be handled freely without breaking.	Forms long, thin flexible ribbons. Can be worked into a dense, compact mass. Considerable plasticity.
Organic Soils	Identification based on the high organic content. Muck consists of thoroughly decomposed organic material with considerable amount of mineral soil finely divided with some fibrous remains. When considerable fibrous material is present, it may be classified as peat. The plant remains or sometimes the woody structure can easily be recognized. Soil color ranges from brown to black. They occur in lowlands. In swamps or swales. They have high shrinkage upon drying. Table 1. –Field Method for identification of soil texture			

**ANGLE OF REPOSE**

**FOR SLOPING OF SIDES OF EXCAVATIONS LESS THAN 20 FEET DEEP**

Note: Clays, Silts, Loams  
or Non-Homogenous  
Soils Require Shoring  
or Bracing

The Presence of  
Ground Water Requires  
Special Treatment

Examples\*

**Type A Soils:**

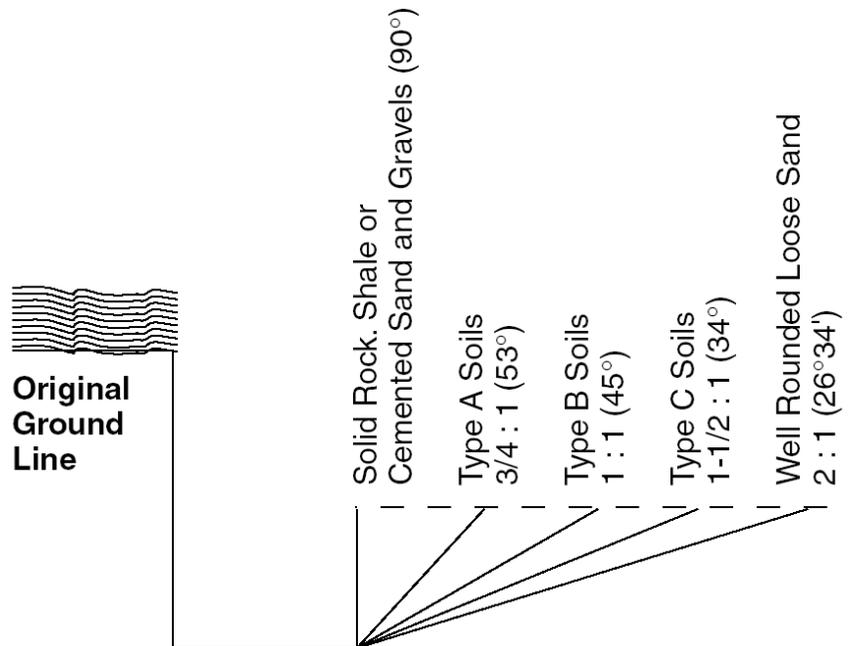

Clay, silt clay, sandy clay  
clay loam, caliches,  
and hardpan

**Type B Soils:**

Angular gravel, silt,  
silt loam, sandy loam,  
unstable dry rock

**Type C Soils:**

Gravel, sand and loamy  
sand, submerged  
soil and rock, and  
layered soils

Appendix A and B to Subpart P

**URS SAFETY MANAGEMENT STANDARD 014  
FIRE PROTECTION AND PREVENTION**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Fire Protection and Prevention**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies.

### **2. Purpose and Scope**

The purpose of this standard is to reduce/eliminate potential fire hazards in the workplace and to provide for a rapid, effective response should a fire occur.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location. At project sites controlled by contractors or building owners, some of these responsibilities may be covered by building/facility owners or owner agents.

### **4. Requirements**

#### **A. Fire Protection**

1. A fire protection program will be developed and followed throughout all phases of work.
  - a. Access to available firefighting equipment will be maintained at all times.
  - b. Firefighting equipment will be inspected monthly and maintained in operating condition. Defective equipment will be immediately replaced.
  - c. Fire extinguishers that out of service or discharged will be immediately tagged, removed from service, and replaced.
  - d. Firefighting equipment will be conspicuously located and not obstructed from view in the workplace.
  - e. Where and when required or necessary, the project manager will provide a trained and equipped firefighting organization (fire brigade) to assure adequate protection.
2. A temporary or permanent water supply (sufficient volume, duration, and pressure) required to properly operate the firefighting equipment will be made available as soon as combustible materials accumulate.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

- a. Where underground water mains are to be provided, they will be installed, completed, and made available for use as soon as practicable.
- b. Fire Hose and Connections
  - i. One hundred feet, or less, of 1.5-inch (3.75-cm) hose, with a nozzle capable of discharging water at 25 gallons (95 liters) or more per minute, may be substituted for a fire extinguisher rated not more than 2A 20BC in the designated area, provided the hose line can reach all points in the area.
  - ii. If fire hose connections are not compatible with local firefighting equipment, the project manager will provide adapters or equivalent to permit connections.
  - iii. During demolition involving combustible materials, charged hose lines supplied by hydrants, water trucks with pumps, or equivalent will be made available.
- c. Fixed Firefighting Equipment
  - i. Sprinkler Protection
    - Where URS is involved in the construction of a facility in which automatic sprinkler protection is required, the installation of the sprinklers will closely follow the construction, and sprinklers will be placed into service as soon as practicable.
    - Where URS is involved in the demolition or alteration of a facility, existing automatic sprinkler installations should be retained in service as long as reasonable. Only authorized persons will permit the operation of sprinkler control valves. Modification of sprinkler systems to permit alterations or additional demolition should be expedited so that the automatic protection may be returned to service as quickly as possible. Sprinkler control valves will be checked daily, at the close of work/business, to ascertain that the protection is in service.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

ii. Standpipes

In all structures requiring standpipes or where standpipes exist in structures being altered, they will be maintained to always be ready for fire protection use. Conspicuously marked standpipes will be provided with connections on the outside of the structure (at the street level). Each floor will be equipped with at least one standard hose outlet.

iii. Fire Alarm Devices

- An alarm system (e.g., telephone system, siren) will be established to alert both the employees on the site and the local fire department of an emergency.
- The alarm code and reporting instructions will be conspicuously posted at phones and at all employee entrances.

iv. Fire Cutoffs

- In new construction, firewalls and exit stairways required for the completed buildings will be given construction priority. Fire doors, with automatic closing devices, will be hung on openings as soon as practicable.
- Fire cutoffs will be retained in buildings undergoing alterations or demolition until operations necessitate their removal.

d. Jobsite Requirements

- i. Material storage areas will be equipped with fire extinguishers adequate for their size, construction, and the material stored therein.
- ii. Welding, cutting, grinding, and burning will not be done within 25 feet (7.6 meters) of any material fuel storage area. Fire extinguishers will be provided at the site of welding operations.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

- iii. Flammable materials will be stored as far as possible from the working area, at least 25 feet (7.6 meters). Safety cans will be used when handling and transporting fuel, gas, and other flammables.
- iv. Extinguishers are to be adequately maintained.
- v. The telephone number of the nearest organized firefighting group is to be displayed at jobsite telephones.

3. Fire Extinguishing Equipment

a. Extinguisher Requirements

Use only UL-listed extinguishers. Mark extinguishers and extinguisher locations, indicating the suitability of each extinguisher for a particular classification of fire.

b. Building and Occupancy Hazard Protection

Requirements for fire extinguisher protection are divided into two categories: building protection and occupancy hazard protection. Provide for extinguishing equipment to protect both the building structure (if it is combustible) and the occupancy hazards inside it.

- i. For building protection, provide fire extinguishers rated for Class A fires or greater, as required by applicable building codes.
- ii. For protection against occupancy hazards, provide fire extinguishers rated for Class A, B, C, or other fire potential as appropriate. Requirements may vary from section to section within a single building. Determine the occupancy hazards, as well as the proper ratings of necessary fire extinguishers, of each room or section. Classify rooms or sections as light hazard, ordinary hazard, or extra hazard. See Supplemental Information B for additional details and assistance in determining extinguisher requirements.

c. Extinguisher Placement

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

- i. Place extinguishers in conspicuous locations, along normal paths of travel, and near exits. If the extinguishers are not readily visible, use wall markings, signs, or lights to identify their locations.
- ii. Ensure that extinguishers are readily accessible. Keep the space in front of and below extinguishers clear at all times. The floor area beneath extinguishers may be marked as a reminder to keep the area clear.
- iii. Hang extinguishers on hangers, brackets, or other equipment furnished by the manufacturer, or place them on shelves. If an extinguisher weighs less than 40 pounds (18.1 kg), the top of the extinguisher will not be more than 5 feet (1.5 meters) above the floor. If an extinguisher weighs equal to or more than 40 pounds (18.1 kg), it will not be more than 3.5 feet (1.1 meters) above the floor. The clearance between the bottom of the extinguisher and the floor will never be less than 4 inches (10.2 cm).
- iv. Provide the appropriate number and types of fire extinguishers for operations being performed. Refer to Supplemental Information A for guidance.

d. Inspection

Properly trained personnel will inspect extinguishers at least monthly. The monthly inspection will include the following items at a minimum:

- i. Location.
- ii. Rating.
- iii. Access.
- iv. Visibility.
- v. Operating instructions.
- vi. Seals.
- vii. Tamper indicators.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

viii. Fullness.

ix. Physical condition.

Attach inspection tags to each extinguisher indicating the dates of purchase, inspection, testing, and recharging, and the initials of the inspector. In addition to the tag, a colored tape may be used to indicate that an extinguisher has been inspected.

Fire extinguishers must be inspected annually by a qualified fire services contactor.

e. Testing and Maintenance

- i. Establish periodic testing programs to ensure that extinguishers are in proper operating condition. Only properly trained personnel (preferably fire extinguisher vendors) should maintain extinguishers.
- ii. At the conclusion of testing or maintenance work, attach a tag to the extinguisher showing the date and the signature of the person who performed the service.

f. Testing Intervals

- i. Each year, recharge soda acid and foam extinguishers, and weigh others according to the manufacturer's instructions. Inspect the body, hose, and nozzle of the extinguisher, and examine the dry powder. Note: Testing is not necessary for stored pressure units unless a loss of pressure or other conditions indicates a need; however, units mounted in vehicles or otherwise subject to mechanical packing should have their powder examined.
- ii. Every five years, test the pressure parts of all extinguishers except Halon 1301 extinguishers; dry chemical extinguishers with braised-brass, mild steel, or aluminum shells; and dry-powder extinguishers for metal fires.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

- iii. Every six years, empty dry-chemical, stored-pressure extinguishers and examine working parts for operability.
- iv. Every 12 years, test the pressure parts of Halon 1301 extinguishers; dry-chemical extinguishers with braised-brass, mild steel, and aluminum shells; and dry-powder extinguishers for metal fires.

g. Employee Training

- i. Where fire extinguishers are provided for employee use, training will be provided on general principles of portable fire extinguishers, including stages of fires and classes of fire extinguisher. The emphasis should be on hazards of fighting a fire during the initial phases of a fire.
- ii. Personnel designated to use firefighting as part of a site Emergency Action Plan must have training in the use of appropriate equipment. Training must be conducted prior to initial assignment and annually thereafter or whenever there is a change in the Emergency Action Plan or new equipment is introduced.

B. Fire Prevention

1. General

- a. Develop an Emergency Preparedness Plan as outlined in SMS 003 – Emergency Preparedness Plan.
- b. Conduct evacuation drills at least annually.
- c. Maintain good housekeeping to reduce fire hazards and to provide safe routes of egress should a fire occur.
- d. Conduct periodic workplace inspections to identify fire hazards such as unnecessary accumulation of combustibles (including paper and boxes), unnecessary storage of flammables, and sources of ignition.

2. Ignition Hazards

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

- a. Electrical wiring and equipment for light, heat, or power purposes will be properly installed.
  - b. Equipment powered by internal combustion will be located with the exhausts positioned away from combustible materials. When the exhausts are piped outside the building under construction, a clearance of at least 6 inches (15 cm) will be maintained between piping and combustible material.
  - c. Smoking is prohibited at or in the vicinity of operations that constitute a fire hazard. Such areas will be conspicuously posted as follows: "NO SMOKING OR OPEN FLAME."
  - d. Portable, battery-powered lighting equipment, used in connection with the storage, handling, or use of flammable gases or liquids, will be approved for the hazardous locations. For more information, see SMS 015 – Flammable and Combustible Liquids and Gases.
  - e. The nozzles of air, inert gas, and steam lines or holes used in the cleaning or ventilation of tanks and vessels containing hazardous concentrations of flammable gases or vapors will be bonded to the tank or vessel shell. Bonding devices will not be attached or detached while hazardous concentrations of flammable gases or vapors exist.
3. Temporary Buildings
- a. Temporary buildings will not be erected where the location adversely affects any means of employee exit.
  - b. Temporary buildings, located within another building or structure, will be of noncombustible construction or combustible construction having a fire resistance rating of not less than 1 hour.
  - c. Temporary buildings, located other than inside another building and not used for handling and storage of flammable or combustible liquids, flammable gases, explosives, or blasting agents, or similar hazardous occupancies, will be located at a distance of not less than 10 feet (3 meters) from another building or structure. Groups of temporary buildings, not exceeding 2,000 square feet (186 square meters) in total, will be considered a single temporary building.

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

4. Open Yard Storage

- a. Combustible materials will be stored with regard to the stability of piles and in no case higher than 10 feet (3 meters).
- b. Driveways between and around combustible storage piles will be at least 15 feet (4.6 meters) wide and maintained free of accumulations of rubbish, equipment, or other articles or materials. Driveways will be spaced to produce a maximum grid system unit of 50 feet (15.2 meters) by 150 feet (45.7 meters).
- c. The entire storage site will be kept free from accumulations of unnecessary combustible materials. Weeds and grass will be maintained, and procedures will be established for periodic cleanup of the entire area.
- d. The method of piling combustible materials will be solid and in orderly regular piles. No combustible material will be stored outdoors within 10 feet (3 meters) of a building or structure.
- e. Portable fire extinguishing equipment, suitable for the fire hazard involved, will be provided at convenient, conspicuously accessible locations in the yard area. Portable fire extinguishers, rated not less than 2A:20BC, will be placed to assure that the maximum travel distance to the nearest unit will not exceed 100 feet (30.5 meters).

5. Indoor Storage

- a. Storage will not obstruct, or adversely affect, means of exit.
- b. Materials will be stored, handled, and piled with regard to their fire characteristics.
- c. Noncompatible materials, which may create a fire hazard, will be segregated by a barrier having a fire resistance of at least 1 hour.
- d. Materials will be piled to minimize the spread of fire internally and to permit convenient access for firefighting. Stable piling will be maintained at all times. Aisle space will be

**URS SAFETY MANAGEMENT STANDARD**  
**Fire Protection and Prevention**

---

maintained to safely accommodate the widest vehicle used within the building for firefighting purposes.

- e. A clearance of at least 36 inches (90 cm) will be maintained between the top level of the stored material and the sprinkler deflectors.
- f. Clearance will be maintained around lights and heating units to prevent ignition of combustible materials.
- g. A clearance of 24 inches (60 cm) will be maintained around the fire door's path of travel, unless a barricade is provided, in which case no clearance is needed. Material will not be stored within 36 inches (90 cm) of a fire door.

C. Temporary Heating Devices

1. Ventilation

- a. Fresh air will be supplied in sufficient quantities to maintain the health and safety of employees. Where natural means of fresh air supply are inadequate, mechanical ventilation will be provided.
- b. Heaters used in confined spaces necessitate that special care be taken to provide sufficient ventilation to ensure proper combustion, maintain the health and safety of workmen, and limit temperature increase in the area.

2. Clearance and Mounting

- a. Temporary heating devices will be installed to provide clearance to combustible materials not less than the amount shown in the following table:

<b>Minimum Clearance in inches (cm)</b>			
<b>Heating Appliance</b>	<b>Sides</b>	<b>Rear</b>	<b>Chimney Connector</b>
Room heater, circulating type	12 (30)	12 (30)	18 (45)
Room heater, radiant type	36 (90)	36 (90)	18 (45)

- b. Temporary heating devices that are listed for installation with lesser clearance than specified in the previous table must be

## **URS SAFETY MANAGEMENT STANDARD**

### **Fire Protection and Prevention**

---

installed in accordance with the manufacturer's specifications.

- c. Heaters not suitable for use on wood floors will not be set directly upon them or other combustible materials. When such heaters are used, they will rest on suitable heat-insulating material or concrete at least 1 inch (2.5 cm) thick or equivalent. The insulating material will extend beyond the heater 2 feet (60 cm) or more in all directions.
- d. Heaters used near combustible tarpaulins, canvas, or similar coverings will be located at least 10 feet (3 meters) from the coverings. The coverings will be securely fastened to prevent ignition or upsetting of the heater due to wind action on the covering or other material.

#### 3. Stability

When in use, heaters will be set horizontally level, unless otherwise permitted by the manufacturer's instructions.

#### 4. Solid Fuel Heaters

Solid fuel heaters are prohibited in buildings and on scaffolds.

#### 5. Oil Fired Heaters

- a. Flammable liquid-fired heaters will be equipped with a primary safety control to stop the flow of fuel in the event of flame failure. Barometric or gravity oil feed will not be considered a primary safety control.
- b. Heaters designed for barometric or gravity oil feed will be used only with integral tanks.
- c. Heaters specifically designed and approved for use with separate supply tanks may be directly connected for gravity feed, or an automatic pump, from a supply tank.

## **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Emergency Action Plans.

## **URS SAFETY MANAGEMENT STANDARD**

### **Fire Protection and Prevention**

---

- B. Fire extinguisher inspection logs.
- C. Employee training documentation.
- D. Site audits.
- E. Evacuation drills.

#### **6. Resources**

- A. U.S. Occupational Safety and Health Administration (OSHA) Standard – [Means of Egress](#) – 29 Code of Federal Regulations (CFR) 1910, Subpart E
- B. U.S. OSHA Standard – [Exit Routes, Emergency Action Plans, and Fire Prevention Plans](#) – 29 CFR 1910.38
- C. U.S. OSHA Standard – [Fire Protection](#) – 29 CFR 1910, Subpart L
- D. U.S. OSHA Software – [Fire Safety Advisor](#)
- E. U.S. OSHA Construction Standard – [Fire Protection and Prevention](#) – 29 CFR 1926.150, Subpart F
- F. National Fire Protection Association – Standard for Portable Fire Extinguishers – [NFPA 10](#)
- G. International Code Council – [International Fire Code](#)
- H. [SMS 003](#) – Emergency Preparedness Plan
- I. [SMS 015](#) – Flammable and Combustible Liquids and Gases

#### **7. Supplemental Information**

- A. [Fire Classifications](#)
- B. [General Fire Extinguisher Requirements](#)

	<p style="text-align: center;"><b>Health, Safety and Environment</b></p> <p style="text-align: center;"><b>FIRE CLASSIFICATIONS</b></p>	<p style="text-align: right;">SMS 014 NA Supplemental Information A Issue Date: February 2009</p>
---	---	---

## **A. Fire Classifications**

Fires are classified as Class A, B, C, D, or Special, depending upon the types of materials involved. These classifications are defined as follows:

1. Class A – Fires in ordinary combustible materials such as wood, cloth, paper, trash, rubber, and plastic.
2. Class B – Fires in flammable liquid, oil, grease, tar, oil-base paint, lacquer, and flammable gas.
3. Class C – Fires involving energized electrical equipment or systems, resulting in the extinguishing media conducting electricity. When electrical equipment or systems are de-energized, extinguishers for Class A or B fires can be used safely.
4. Class D - Fires involving combustible metals such as magnesium, titanium, zirconium, lithium, potassium, and sodium. Specialized techniques, extinguishing agents, and extinguishing equipment have been developed to control and extinguish fires of this type. Generally, do not use normal extinguishing agents on metal fires. In such fires, there is the danger of increasing the intensity of the fire because of a chemical reaction between some extinguishing agents and the burning metal.
5. Special - Fires that involve certain combustible metals or reactive chemicals require, in some cases, special extinguishing agents or techniques.

## **B. Extinguisher Classifications and Ratings**

All types of extinguishers are not equally effective against all classifications of fires. Therefore, extinguishers are rated according to the classification and size of the fires against which they are effective. Extinguisher ratings are found on the extinguisher label. A rating consists of a letter indicating the classification of fire on which the extinguisher is effective and a rating number indicating the relative extinguishing effectiveness. The significance of the rating number varies with the classification of fire for which the extinguisher is rated. The following rating criteria are used:

1. For extinguishers rated for Class A fires, the rating number indicates relative effectiveness, the higher the number, the more effective the extinguisher. The minimum recommended rating for extinguishers rated for Class A fires is 2A.

	<p style="text-align: center;"><b>Health, Safety and Environment</b></p> <p style="text-align: center;"><b>FIRE CLASSIFICATIONS</b></p>	<p style="text-align: right;">SMS 014 NA Supplemental Information A Issue Date: February 2009</p>
---	---	---

2. For extinguishers rated for Class B fires, the rating number represents the average size (in square feet) of the fire the extinguisher could put out.
3. No number is used for extinguishers rated for Class C fires, because Class C fires are essentially either Class A or B fires involving energized electrical wiring and equipment.

### **C. Hazard Classifications**

The materials in a building or area present hazards of varying potential. These hazards are classified. As follows:

1. Light or Low Hazard – A room or area where, considering the amount of combustible material or flammable liquids present, fires of small size should be anticipated (e.g., change trailers, toilet trailers, and general storage).
2. Ordinary or Moderate Hazard – A location where, considering the amount of combustibles or flammable liquids present, fires of moderate size should be anticipated (e.g., temporary construction offices and most shops).
3. Extra or High Hazard – A location where, considering the amount of combustibles or flammable liquids present, fires of severe magnitude should be anticipated (e.g., carpenter shops and storage areas for flammable liquids and lumber).

## 1. Fire Extinguishers – General

The following are **minimum** requirements for fire extinguisher placement in office buildings, construction facilities, support buildings, and/or buildings under construction. In some cases, client requirements may be more stringent, in which case the client’s requirements supersede the guidelines below.

### Extinguisher Requirements for Class A Hazards

Rating Shown on Extinguisher	Maximum Travel Distance to Extinguishers in Feet (m)	Maximum Area to be Protected per Extinguisher		
		Light Hazard sq. ft. (m <sup>2</sup> )	Ordinary Hazard sq. ft. (m <sup>2</sup> )	Extra Hazard sq. ft. (m <sup>2</sup> )
1-A	-	-	-	-
2-A	75 (23)	6,000 (557)	3,000 (279)	-
3-A	75 (22.9)	9,000 (836)	4,500 (418)	3,000 (279)
4-A	75 (22.9)	11,250 (1,045)	6,000 (557)	4,000 (372)
6-A	75 (22.9)	11,250 (1,045)	9,000 (836)	6,000 (557)
10-A	75 (22.9)	11,250 (1,045)	11,250 (1,045)	10,000 (929)
20-A	75 (22.9)	11,250 (1,045)	11,250 (1,045)	11,250 (1,045)
40-A	75 (22.9)	11,250 (1,045)	11,250 (1,045)	11,250 (1,045)

### Extinguisher Requirements for Class B Hazards

Type of Hazard	Minimum Extinguisher Rating	Maximum Travel Distance to Extinguishers in Feet (m)
Light	5-B	30 (9.1)
	10-B	50 (15.2)
Ordinary	10-B	30 (9.1)
	20-B	50 (15.2)
Extra	40-B	30 (9.1)
	80-B	50 (15.2)

### **Extinguisher Requirements for Class C Hazards**

Class C extinguishers are required wherever energized electrical equipment is located. Since a Class C fire itself is either Class A or Class B (involving ordinary combustible material, flammable liquids, or flammable gases), the extinguishers are sized and located as for a Class A or B hazard.

### **Types of Extinguishers Approved for Types of Hazards**

<b>Class A Hazards</b>	<b>Class B Hazards</b>	<b>Class C Hazards</b>
Cartridge-operated water or antifreeze	Carbon dioxide*	Carbon dioxide
Stored pressure water or antifreeze	Dry chemical	Dry chemical
Wetting Agent Foam	Multipurpose dry chemical (ABC)	Multipurpose dry chemical (ABC)
Loaded stream	Halon 1301	Halon 1301
Multipurpose dry chemical (ABC)	Halon 1211	Halon 1211
Pump tank water or antifreeze (Halon 1211)		

\*Certain sizes are not classified or acceptable to meet requirements.

## **2. Hot Work**

A minimum of one fire extinguisher, rated at least 20BC, must be provided for each hot work location. The extinguisher should be conspicuously positioned no more than 10 feet (3.04 meters) from the hot work. Refer to SMS 020- Hot Work”.

## **3. Motorized Construction Equipment**

At least one portable fire extinguisher, rated at least 20BC, must be provided on each piece of motorized construction equipment.

## **4. Temporary Construction/Work Trailer**

A minimum of one fire extinguisher, rated at a minimum of 2A, must be provided for each temporary construction/work trailer.

**URS SAFETY MANAGEMENT STANDARD 016  
HAND TOOLS AND PORTABLE EQUIPMENT**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Hand Tools and Portable Equipment**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies in which hand tools and/or portable powered equipment, including chain saws; brush cutters, powder-actuated tools, and similar high-hazard implements are used.

### **2. Purpose and Scope**

The purpose of this standard is to provide procedures for the safe use and handling of hand tools and portable powered equipment. SMS 064 – Hand Safety provides additional information on the safe use of hand tools.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site or project location.

### **4. Requirements**

#### **A. General**

1. Keep hand and power tools in good repair and use them only for the task for which they were designed. Use tools only in accordance with the manufacturer's recommendations.
2. Remove damaged or defective tools from service. Affix a "Do Not Use" tag (or similar) to the tool until repairs are made or the tool is destroyed.
3. Provide employees using hand tools or portable powered equipment with personal protective equipment (PPE) and train employees in the use of PPE required for the operation being undertaken.
4. Keep surfaces and handles clean and free of excess oil and grease to prevent slipping.
5. Do not carry sharp tools in pockets; this practice may cause puncture wounds.
6. Clean tools and return to a suitable toolbox, room, rack, or other storage area upon completion of a job.
7. Before applying pressure, ensure that wrenches have a good bite.

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

- a. Brace yourself by placing your body in the proper position so that that you will not fall in case the tool slips.
  - b. Make sure hands and fingers have sufficient clearance in the event the tool slips.
  - c. Always pull on a wrench, never push.
8. When working with tools overhead, place tools in a holding receptacle or secure when not in use to prevent them from falling.
  9. Do not leave tools in or on passageways, access ways, walkways, ramps, platforms, stairways, or scaffolds where they can create a tripping hazard.
  10. Do not throw tools from place to place or from person to person, or drop tools from heights.
  11. Use nonsparking tools in atmospheres with fire or explosive characteristics.
  12. Inspect all tools prior to start-up or use to identify any defects.
  13. Powered hand tools should not be capable of being locked in the ON position, except as noted elsewhere in this standard.
  14. Require that all power-fastening devices be equipped with a safety interlock capable of activation only when in contact with the work surface.
  15. Ensure that all portable powered tools designed to accommodate guards are equipped with such when in use.
  16. Do not allow loose clothing, long hair, loose jewelry, rings, and chains to be worn while working with power tools.
  17. Do not use cheater pipes.
  18. Make provisions to prevent machines from automatically restarting upon restoration of power (see SMS 023 – Lockout and Tagout Safety).
  19. Where URS issues tools to its employees, the supervisor is responsible for the safe condition of tools and equipment.

**URS SAFETY MANAGEMENT STANDARD**  
**Hand Tools and Portable Equipment**

---

20. Where workers furnish their own tools, their tools must conform to the requirements demanded for safety and efficiency. The supervisor has the responsibility to regularly inspect these tools for defects.

**B. Electrical Power Tools**

1. Electric-power-operated tools will be either of the approved double-insulated type or grounded in accordance with the National Electric Code.
2. The use of the electric cord for hoisting or lowering electric tools is an unsafe practice and will not be permitted.
3. All handheld powered drills, tappers, fastener drivers, horizontal, vertical, and angle grinders with wheels greater than 2 inches (5.1 centimeters) in diameter, disc sanders, belt sanders, reciprocating saws, saber saws, and other similar operating powered tools will be equipped with a momentary contact ON/OFF control and may have a lock-on control provided that turnoff can be accomplished by a single motion of the same finger or fingers that turn it on.
4. All other handheld powered tools such as circular saws, chain saws, and percussion tools without positive accessory holding means will be equipped with a constant pressure switch that will shut off the power when the pressure is released (i.e., "dead man" switch).

**C. Grinding Tools**

1. Inspect work rests and tongue guards for grinders.
  - a. Work rest gaps should not exceed  $\frac{1}{8}$  inch (3 mm).
  - b. Tongue guard gaps should not exceed  $\frac{1}{4}$  inch (6 mm).
2. Do not adjust work, guards, or tool rests while the grinding wheel is moving.
3. Inspect the grinding wheel for cracks, chips, defects, or excessive wear. Remove from service if any defects are found.
4. Wear goggles when grinding. A clear full face shield may be worn with the goggles.

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

5. Do not use the side of a grinding wheel unless the wheel is designed for side grinding.
6. Always stand to the side of the blade, never directly behind it.
7. Use grinding wheels only at their rated speed.
8. Grinding aluminum is prohibited.
9. For operations in the United Kingdom:
  - a. No grinding wheels exceeding 55 mm are to be used.
  - b. All wheels are to be marked with their safe maximum speed.
  - c. Abrasive wheels will be operated only by personnel who have been specifically trained and specified competent by URS.
  - d. Abrasive wheels will be operated only by persons specified as competent, under the abrasive wheel regulations.
  - e. Abrasive wheels must be operated only if the manufacturer's guard is fitted and they are in good working order.

#### D. Power Saws

1. Require that circular saws are fitted with blade guards.
2. Inspect each day prior to use. Remove damaged, bent, or cracked saw blades from service immediately.
3. Require that table saws are fitted with blade guards and a splitter to prevent the work from squeezing the blade and kicking back on the operator.
4. Require guards that cover the blade to the depth of the teeth on hand-held circular saws. The guard should freely return to the fully closed position when withdrawn from the work surface.

#### E. Woodworking Machinery

**URS SAFETY MANAGEMENT STANDARD**  
**Hand Tools and Portable Equipment**

---

1. Do not leave woodworking tools running when unattended.
2. Keep the operating table and surrounding area clear of debris.
3. Do not use compressed air to remove dust and chips from woodworking machinery.
4. Locate the ON/OFF switch to prevent accidental start-up. The operator must be able to shut off the machine without leaving the workstation. Safety goggles and kickback aprons should be provided for and worn by operators. Respirators or local exhaust ventilation may also be necessary based on the type of material being cut or sanded.
5. Guard planers and joiners to prevent contact with the blades throughout the full length of the cutting area.
6. Ensure that band saw blades are fully enclosed except at the point of operation.
7. Require that swing cut-off saws have a guard completely covering the upper half of the saw.
8. Require that circular cross-cut and rip saws are provided with a hood guard, splitter, and anti-kickback device. The hood should adjust itself automatically to the thickness of and remain in contact with the material being cut. All circular saws will be provided with a hood guard.
9. Ensure that exposed parts of the saw blade under the table are properly guarded.
10. Equip all swing cutoff and radial saws that are drawn across a table with limit stops to prevent the saw from traveling beyond the edge of the table.
11. Hold the material being cut firmly against a back guide or fence and cut with a single, steady pass.
12. Cut green or wet material slowly and with caution. Check all material being cut for nails, hard knots, etc.
13. Use a push stick when:

**URS SAFETY MANAGEMENT STANDARD**  
**Hand Tools and Portable Equipment**

---

- a. The cutting operation requires the hands of the operator to come close to the blade.
  - b. Small pieces are being machined.
14. When cutting long stock, provide extension tables and a helper to assist the operator.
15. Adjust saw blades so they clear only the top of the cut.
16. Automatic feed devices should be used whenever feasible.
17. When drills are used:
- a. Take care to prevent clothing from being wound around the drill. Wear sleeves buttoned at the wrist or short-sleeved shirts.
  - b. Clamp or hold down material being drilled to prevent spinning with the drill.
  - c. If the bit is long enough to pass through the material, provide against damage and injury.
  - d. Secure magnetic drills with a chain or rope to prevent falling. Label cord connections to prevent unplugging.
18. When sanders are used:
- a. Move sanders away from the body.
  - b. Because dust may create an explosion hazard, guard against open flames and sparks.

**F. Pneumatic Tools and Equipment**

1. Require that pneumatic tools have:
- a. Tool retainers to prevent the tool from being ejected from the barrel during use.
  - b. Safety clips, chains, tie wires, or other retaining devices to secure connections between tool/hose/compressor to prevent whipping in case of disconnection or failure.

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

2. Do not lay hose in walkways, on ladders, or in any manner that presents a tripping hazard.
3. Never use compressed air to blow dirt from hands, face, or clothing.
4. Do not use compressed air for cleaning purposes unless the pressure is reduced to 30 pounds per square inch (psi) or less. This rule does not apply for concrete form, mill scale, green cutting, and similar cleaning operations. Proper respiratory, hand, eye, and ear protection must be worn.
5. Never raise or lower a tool by the air hose.
6. Shut off the pressure and exhaust from the line before disconnecting the line from any tool or connection.

#### G. Powder-Actuated Fastener Tools

1. Use powder-actuated tools that comply with the requirements of the American National Standards Institute (ANSI)/American Society of Safety Engineers (ASSE) Standard A10.3 – 2006 – Powder-Actuated Fastening Systems.
2. Assess local and state regulations governing the use of these tools to ensure compliance.
3. Use only individuals who have been trained by a manufacturer's representative and possess the proper license to operate, repair, service, and handle powder-actuated tools.
4. With each tool, the manufacturer or supplier should furnish a detailed instruction manual covering the application, operation, and maintenance of the tool. The manufacturer's recommendation for size of charge, stud unit, or pin, and for specific application must be followed explicitly by the operator.
5. Keep cartridges or shells in the original containers, in separate metal containers, or in the carrying case provided with the tool, and then stored in locked containers. Keep cartridges of varied charges or forces segregated from each other.

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

6. Take precaution, as defined by the manufacturer, in the event of a misfire.
7. Provide information from the manufacturer on the safe use, testing, and maintenance of each type of tool in each tool kit.
8. Never use a powder-actuated tool in a flammable or explosive atmosphere.
9. Require the use of goggles or a full face shield as well as safety glasses during operation of powder-actuated tools.
10. Use only tools that are provided with a shield or muzzle guard. This shield or guard should be of a size, design, and material that will effectively confine flying particles and prevent escape of ricocheting studs and pins.
11. Ensure that powder-actuated tools are not able to be fired unless the tool is pressed against the work surface.
12. Always handle powder-actuated tools like firearms, with hands clear of the muzzle and barrel pointed away from all persons, especially when the tool is being closed or assembled after loading.
13. Ensure that the tool is not able to fire if the tool is dropped when loaded.
14. Ensure that firing the tool requires two separate operations, with the firing movement being separate from the motion of bringing the tool to the firing position.
15. Provide signs and barricades when shooting into walls or floors with personnel working on the other side.
16. Never fire into easily pierced or soft substrates or into materials of unknown resistance to piercing. In these situations, there is potential for the fastener to penetrate and pass through, creating a flying projectile hazard. If penetration of these materials is required, the material should be backed with a box of wood or sand at least four inches (10 cm) thick and of adequate area.
17. Do not use powder-actuated tools in reinforced concrete if there is the possibility of striking the rebar.

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

18. Do not use powder-actuated tools on cast iron, high carbon, heat treated steel, or armor plate, thin slate, marble, glass, live rock, glazed brick or tile, terra cotta, or other brittle substances, or where the composition is unknown.
19. Do not fire studs closer than three inches (7.5 cm) from the edge or corner when being used on brick or concrete. Do not fire studs closer than ½ inches (1.25 cm) from the edge when being used on steel.
20. Never load and leave a powder-actuated tool unattended. It should be loaded only prior to its intended firing. Use only studs or pins specifically designed for the tool.
21. Test tools each day prior to loading by testing safety devices according to the manufacturer's recommended procedure.
22. Inspect, clean, and store powder-actuated tools in a safe place at the end of each day. No tool will be stored loaded. Store tools with the barrels removed or breech open.
23. At the manufacturer's recommended intervals, the tool will be completely dismantled and carefully inspected for wear on the safety devices by a qualified person familiar with the tool. Worn parts will be replaced before the tool is used again. It is recommended that factory-authorized service representatives be utilized for inspection, repair, and parts replacement, where possible.

#### H. Chain Saws

1. Approval by the HSE manager is required for all use of chain saws.
2. Inspect the saw prior to each use and periodically during daily use.
3. Never cut above chest height.
4. Require that the idle is correctly adjusted on the chain saw. The chain should not move when the saw is in the idle mode.
5. Start cutting only after a clear escape path has been made.

**URS SAFETY MANAGEMENT STANDARD**  
**Hand Tools and Portable Equipment**

---

6. Shut the saw off when carrying through brush or on slippery surfaces. The saw may be carried no more than 50 feet (15 meters) while idling.
  7. Require applicable protective gear. This will include, but is not limited to:
    - a. Logger's safety hat.
    - b. Safety glasses and face shield.
    - c. Steel-toed boots.
    - d. Protective leggings.
    - e. Hearing protection.
    - f. Work gloves.
  8. Inspect saws to ensure that they are fitted with an inertia break and hand guard.
  9. *Never* operate a chain saw when fatigued.
  10. Do not allow others in the area when chain saws are operated.
  11. Make sure there are no nails, wire, or other imbedded material that can cause flying particles.
  12. Do not operate a chain saw that is damaged or improperly adjusted, or is not completely and securely assembled. Always keep the teeth sharp and the chain tight. Worn chains should be replaced immediately.
  13. Keep all parts of your body away from the saw chain when the engine is running.
  14. For all operations, only personnel specifically trained and certified as competent by URS may operate chain saws.
- I. Hand-Operated Pressure Equipment
1. Direct pressure equipment such as grease guns, and paint and garden sprayers away from the body and other personnel in the area. The person operating any equipment

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

such as this, which has a potential for eye injury, must wear protective goggles.

2. The noise produced when using certain types of pressure equipment may require the use of hearing protection.
3. Never allow the nozzle of a pressurized tool to come in contact with any body parts while operating. There is potential for injection of a chemical directly into the user's body, resulting in severe injury or death.

#### J. Gasoline-Powered Tools

1. Never pour gasoline on hot surfaces.
2. Never fuel around an open flame or while smoking.
3. Shut down the engine before fueling.
4. Provide adequate ventilation when using in enclosed spaces.
5. Use only Underwriters Laboratories (UL) - or FM-approved safety cans to transport flammable liquids. The use of unapproved containers for gasoline is strictly prohibited.
6. Label gasoline containers in compliance with Hazard Communication requirements, indicating the chemical and physical hazards of the product.

#### K. Inspection

Inspect all hand tools on a regular basis. Immediately remove defective tools from service, and tag or destroy them to prevent further use.

### **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Site briefings regarding tool use.
- B. Records of tools removed from service.
- C. Copies of powder-actuated tool licenses (as applicable).

## **URS SAFETY MANAGEMENT STANDARD**

### **Hand Tools and Portable Equipment**

---

D. Tool inspection documentation.

**URS SAFETY MANAGEMENT STANDARD 018**  
**HEAT STRESS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Heat Stress**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies on projects where ambient (not adjusted) temperatures exceed 70 degrees Fahrenheit (°F) (21 degrees Celsius [°C]) for personnel wearing chemical-protective clothing, including impermeable protective clothing such as Tyvek or Saranex coveralls, and 90°F (32°C) for personnel wearing standard permeable work clothes. Permeable clothing refers to clothes of standard cotton or synthetic materials. Note that certain governmental entities require heat stress prevention techniques be implemented at lower temperatures or whenever outdoor work is conducted. Always consult local regulations to determine if more stringent standards apply.

### **2. Purpose and Scope**

The purpose of this standard is to protect project personnel from the effects of heat-related illnesses.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

A. The project Health and Safety Plan will address heat stress control when temperatures identified in Section 1 of this standard are anticipated.

This standard introduces three different means of monitoring for heat stress conditions: Wet Bulb Globe Temperature (WBGT), Humidex Based Heat Response and Physiological Monitoring. These methods can be used separately or in conjunction. For employees wearing chemical-protective clothing, physiological monitoring (Section D) is the most effective approach, because evaporative cooling capability is limited.

B. Heat stress is influenced by air temperature, radiant heat, and humidity. The WBGT is a useful index of the environmental contribution to heat stress. Because WBGT is only an index of the environment, the contributions of work demands, clothing, and state of acclimatization must also be accounted for, as described in the following steps.

1. Monitor ambient temperatures and conduct heat stress monitoring in accordance with the project Health and Safety Plan. Revise the heat

**URS SAFETY MANAGEMENT STANDARD**  
**Heat Stress**

---

stress monitoring and controls if there are any reports of discomfort due to heat stress.

2. Monitor temperatures in each unique environment in which workers perform work (e.g., take WBGT measurements inside truck cabs for truck drivers, and take separate WBGT measurements in the outdoor area where field employees work, etc.). Follow manufacturer’s instructions on proper use of the WBGT.
3. Determine if individual workers are acclimatized or un-acclimatized. Full heat acclimatization requires up to 3 weeks of continued physical activity under heat-stress conditions similar to those anticipated for the work. Its loss begins when the activity under those heat-stress conditions is discontinued, or when there is a sustained increase in temperatures of 10 °F (5.6 °C) or more, and a noticeable loss occurs after 4 days. A worker can be considered acclimatized for the purpose of this procedure when they have been exposed to the site conditions (including level of activity) for 5 of the last 7 days.
4. Determine the approximate workload of each worker or group of workers. The following examples can be used for comparison:

**Table 1**  
**Examples of Activities within Workload Categories**

Categories	Example Activities
Resting	Sitting quietly
	Sitting with moderate arm movements
Light	Sitting with moderate arm and leg movements
	Standing with light work at machine or bench while using mostly arms
	Using a table saw
	Standing with light or moderate work at machine or bench and some walking about
Moderate	Scrubbing in a standing position
	Walking about with moderate lifting or pushing
	Walking on level at 6 Km/hr while carrying 3 Kg weight load
Heavy	Carpenter sawing by hand
	Shoveling dry sand
	Heavy assembly work on a non-continuous basis
	Intermittent heavy lifting with pushing or pulling (e.g., pick-and-shovel work)
Very Heavy	Shoveling wet sand

5. Determine the approximate proportion of work within an hour during a typical shift. Typically, the initial work schedule will be 60 minutes of work

**URS SAFETY MANAGEMENT STANDARD**  
**Heat Stress**

per hour (100 percent work) with a small break in the morning and afternoon, as appropriate, and a 30-minute lunch break mid-day.

6. Compare the WBGT values measured in 4.B.1 to the screening criteria values in the following table, using the determinations made in 4.B.3 through 4.B.5.

**Table 2**  
**SCREENING CRITERIA FOR HEAT STRESS EXPOSURE**  
**(WBGT Values in °F /°C)**

Work Cycle (60 min/ hour)	Acclimatized				Unacclimatized			
	Light Work	Mod. Work	Heavy Work	Very Heavy Work	Light Work	Mod. Work	Heavy Work	Very Heavy Work
100% Work	85.1/ 29.5	81.5/ 27.5	78.8/ 26.0	N/A	81.5/ 27.5	77.0/ 25.0	72.5/ 22.5	N/A
75% Work 25% Rest	86.9/ 30.5	83.3/ 28.5	81.5/ 27.5	N/A	84.2/ 29	79.7/ 26.5	76.1/ 24.5	N/A
50% Work 50% Rest	88.7/ 31.5	85.1/ 29.5	83.3/ 28.5	81.5/ 27.5	86/ 30	82.4/ 28	79.7/ 26.5	77/25
25% Work 75% Rest	90.5/ 32.5	87.8/ 31	86/ 30	85.1/ 29.5	87.8/ 31	84.2/ 29	82.4/ 28	79.7/ 26.5

- a. If the measured WBGT is *less than* the table value, there is little risk of excessive exposure to heat stress, and work can continue. Continue to monitor ambient conditions with the WBGT. However, if there are reports of the symptoms of heat-related disorders, then the analysis of little risk should be reconsidered.
- b. If the measured WBGT is *greater than* the table value, institute heat stress controls, including a work-rest cycle, and perform physiological monitoring as described in section D of this standard.
- c. Because of the physiological strain associated with very heavy work among less fit workers regardless of WBGT, values are not provided in Table 1 for continuous work. Physiological monitoring should always be implemented under these conditions.
- d. For workers wearing cloth coveralls (e.g., Nomex fire resistant clothing), add 3.5 to the measured WBGT. For impermeable clothing, such as Tyvek or Saranex, the WBGT procedures cannot be used. For these situations, workers should begin physiological monitoring as soon as the temperature in the work area exceeds 70°F (21°C).

## **URS SAFETY MANAGEMENT STANDARD**

### **Heat Stress**

---

#### C. Humidex Based Heat Response

1. The Humidex method is a simplified way of protecting workers from heat stress which is based on the WBGT to estimate heat strain. It is an equivalent scale intended to express the combined effects of warm temperatures and humidity. Humidex is used as a measure of perceived heat that results from the combined effect of excessive humidity and high temperature.
2. This method requires only a local air temperature and relative humidity value. Monitoring must continue throughout the day for changing conditions. Identify a representative location where measurements can be taken. Measurements should be recorded at least hourly when ambient temperatures and 90°F (32°C) for personnel wearing normal permeable work clothes.
3. Specific procedures to complete the Humidex Based Heat Response Plan are included in Attachment 018-1 NA – Humidex Worksheet.

#### D. Physiological Monitoring

Physiological monitoring provides a means to assess the effectiveness of the heat stress controls (training, hydration, work-rest cycles, etc.) that are in place. Based on the results of physiological monitoring and self-assessment, work-rest cycles can be adjusted to more effectively control heat stress by shortening the work period, or to allow for longer work periods if workers are recovering adequately during rest breaks.

1. Perform physiological monitoring as soon as the employee stops working and begins their break (rest). Perform *physiological monitoring at least every hour*. Base rest breaks on the results of the monitoring, workers' self-assessment, and professional judgment.
  - a. Example 1: If the WBGT is 85°F (29.4°C) or less for acclimatized, light-duty workers, they can work 60 minutes per hour (100 percent work), and they need only take their regularly scheduled breaks.
  - b. Example 2: If the WBGT is greater than 85°F (29.4°C) for acclimatized, light-duty workers, physiological monitoring must be performed, and workers' work-rest cycles must be adjusted as described below.
2. Have workers assess themselves and their body's reaction to the heat and work conditions (self-assessment), and report any signs or symptoms of

## **URS SAFETY MANAGEMENT STANDARD**

### **Heat Stress**

---

heat illness. These can include nausea or dizziness, heat cramps, extreme thirst, or very dark urine.

3. Based on the results of the physiological monitoring and on the workers' self-assessments, the work period may be adjusted as follows:
  - a. The work period may be *increased* (generally, by 5- to 10-minutes intervals, up to a maximum of 4 hours) if the results of the first 2 hours of the physiological monitoring and the workers' self-assessments indicate that workers *are* recovering adequately (see below), and on the judgment of the Health and Safety Technician.
  - b. The work period *must be decreased* if the results of the physiological monitoring and the workers' self-assessment indicate that workers are NOT recovering adequately (see below).
4. Perform physiological monitoring
  - a. The worker or the Health and Safety Technician must measure and record body temperature and pulse rate as described below. Use SMS 018-2 NA – Heat Stress Monitoring Record as a tool.
5. Body Temperature Monitoring
  - a. Monitor body temperature to determine if employees are adequately dissipating heat buildup. Ear probe thermometers which are adjusted to oral temperature (aural temperature) are convenient and the preferred method of measurement. Determine work/rest regimen as follows:
    - i. Measure oral body temperature at the end of the work period. Oral body temperatures are to be obtained prior to the employee drinking water or other fluids.
    - ii. If temperature exceeds 99.6°F (37.5°C), shorten the following work period by 1/3 without changing the rest period.
    - iii. If, at the next rest period, temperature still exceeds 99.6°F (37.5°C), the worker should not be allowed to continue work until repeated temperature measurements are in the acceptable range (i.e., less than 99.6°F). Do not leave the worker alone during the recovery time. Watch for signs of heat illness and be prepared to implement emergency response as necessary.

## **URS SAFETY MANAGEMENT STANDARD**

### **Heat Stress**

---

- iv. Do not allow a worker to wear impermeable PPE when his/her oral temperature exceeds 100.6°F (38.1°C).
  - b. Have employees assess themselves and their body's reaction to the heat and work conditions, and report any signs or symptoms of heat stress, including, but not limited to, feeling nauseous or dizzy, skin rash or skin irritation, muscle cramps, weakness or fatigue, extreme thirst, dizziness, blurred vision, headache, or very dark urine.
6. Pulse Rate Monitoring
- a. Take the radial (wrist) pulse as early as possible in the rest period and determine the worker's heart rate in beats per minute. The heart rate is determined by counting the pulse for ten seconds and multiplying the number by 6 to get the beats per minute. Record this as P1.
  - b. Wait 2 minutes and repeat the pulse measurement. Record this as P2.
  - c. If P1 is greater than or equal to 110 beats per minute (bpm) and if (P1 – P2) is less than or equal to 10 bpm (indicating that workers are not recovering adequately), shorten the next work cycle by 1/3 without changing the rest period.
  - d. At the next rest period, if P1 is still equal to or greater than 110 bpm, and if (P1 – P2) is still less than or equal to 10 bpm, shorten the following work cycle by 1/3 without changing the rest period.
  - e. At the third rest period, if P1 is still equal to or greater than 110 bpm and (P1 – P2) is still less than or equal to 10 bpm, the worker should not be allowed to continue work until repeated pulse measurements are in the acceptable range (i.e., P1 is less than 110 bpm and (P1 – P2) is greater than 10 bpm). Do not leave the worker alone during the recovery time. Watch for signs of heat illness and be prepared to implement emergency response as necessary.
- E. Record monitoring results and worker's self-assessments on Attachment 018-2 NA – Heat Stress Monitoring Record.
- F. Investigate the use of auxiliary cooling devices in extreme heat conditions.
- G. Conduct briefings for employees regarding health hazards and control measures associated with heat stress whenever conditions require the implementation of heat stress monitoring. Review the information provided in Supplemental Information A.

## **URS SAFETY MANAGEMENT STANDARD**

### **Heat Stress**

---

- H. Provide cool water and electrolyte replacement drinks as described in Supplemental Information A.
- I. Allow employees who are not accustomed to working in hot environments appropriate time for acclimatization, as described in Supplemental Information A.
- J. Provide break areas as described in Supplemental Information A.

**Step 2:** Place the Humidex value into the Heat Index Adjustment Table below. Determine the applicable adjustments based on the given work or task.

**Heat Index Adjustment Table**

<b>Step 2 - Risk Factor Adjustment</b>		
Write in value	What is the HUMIDEX value from the table in Step 1?	
<b>Radiant Heat</b>		<b>Adjustment</b>
	Working in full-sun	Add 2
	Working in ½ or partial sun or weak radiant heat source	Add 1
	Working near very hot equipment surfaces or processes	Add 2
<b>Clothing: Pick One Only</b>		
	Short/long sleeve shirt and pants – no overalls	None
	Overalls (e.g., Nomex suit)	Add 3
	Double layer overalls	Add 5
Stop	Impermeable clothing	Perform Physiological Monitoring
<b>Acclimatization</b>		
	Have been working at least 5 of last 7 days in heat stress conditions.	Subtract 4
<b>Work Load &amp; Miscellaneous Factors</b>		
	Light Work (Standing, slow walking)	Subtract 2
	Medium Work (Walking about with moderate lifting or pushing)	None
	Heavy Work (Shoveling dry sand, carrying 50 lbs)	Add 2
	Very Heavy Work (Shoveling wet sand)	Add 3
<b>TOTAL – Compare to Heat Index Response Plan</b>		

**Step 3:** Compare adjusted Heat Index Total to the Heat Index Response Plan table to obtain guidance for work/rest.

Heat Index Response Plan\*

TOTAL NUMBER	Final Step 3 - HEAT INDEX Response
30-33	alert & information & water
34-37	warning & increase water
38-39	75% work - 25% rest & monitor for signs of heat stress
40-41	50% work - 50% rest & monitor for signs of heat stress
42-44	25% work - 75% rest & monitor for signs of heat stress
45+	Perform Physiological Monitoring

\* Percent work and rest/recovery are on a per hour basis. Adjustments and subsequent work/rest cycle recommendations are rough guidelines only. No heat stress prediction scheme can replace monitoring of symptoms or a health care practitioners advice in the case of individuals with special medical conditions or predisposing circumstances for heat related illness. Always pay attention to the way workers are feeling. Recuperate if fatigued, nauseated, dizzy or thirsty.

## HEAT RASH

Heat rash (prickly heat) may result from continuous exposure to heat or humid air. It appears as red papules (elevated skin lesion), usually in areas where the clothing is restrictive, and gives rise to a prickly sensation, particularly as sweating increases. It occurs in skin that is persistently wetted by un-evaporated sweat. The papules may become infected unless treated.

**First Aid for Heat Rash** - To prevent heat rash, shower after work, dry off thoroughly, and put on clean, dry underwear and clothes. Try to stay in a cool place after work. If, in spite of this, you develop heat rash, see your physician.

## HEAT CRAMPS

Heavy sweating with inadequate electrolyte replacement causes heat cramps. Signs and symptoms include:

- Muscle spasms.
- Pain in the hands, feet and abdomen.

**First Aid for Heat Cramps** - Leave the work area, and rest in a cool, shaded place.

Mild heat cramps can be treated by drinking beverages that contain salt or eating salty food. Severe heat cramps are treated with fluids and salts given intravenously.

Once the spasms disappear, you may return to work. Taking adequate breaks and drinking electrolyte replacement drink should prevent the cramps from returning.

## HEAT EXHAUSTION

Heat exhaustion occurs from increased stress on various body organs including inadequate blood circulation due to cardiovascular insufficiency or dehydration. Signs and symptoms include:

- Pale, cool, moist skin.
- Heavy sweating.
- Dizziness.
- Nausea.
- Fainting.
- Headache.
- Blurred vision.
- Vomiting.

The key here is that the victim is still sweating, so the cooling system is still working; it's just under severe stress. The body core temperature may be elevated, but not higher than 104°F (40°C). It is important to recognize and treat these symptoms as soon as possible, as the transition from heat exhaustion to the very hazardous heat stroke can be quite rapid.

**First Aid for Heat Exhaustion** – Treatment involves replacing fluids (rehydration) and salts and removing the person from the hot environment. If symptoms are mild, sipping cool, slightly salty beverages every few minutes may be all that is needed. Removing or loosening clothing and applying wet cloths or ice packs to the skin also aid cooling.

## **HEAT STROKE**

Heat stroke is the most serious form of heat stress. Temperature regulation fails and the body temperature rises to critical levels, typically at or above 104°F (40°C). Immediate action must be taken to cool the body before serious injury and death occurs. Competent medical help must be obtained. Signs and symptoms are:

- Red, hot, usually dry skin.
- Lack of or reduced perspiration (lack of perspiration may be masked for those wearing chemical protective clothing since perspiration from earlier in the day will be present).
- Nausea.
- Vomiting.
- Dizziness and confusion.
- Strong, rapid pulse.
- Coma.

### **First Aid for Heat Stroke - THIS IS A MEDICAL EMERGENCY! SUMMON MEDICAL ASSISTANCE IMMEDIATELY!**

While awaiting transportation to the hospital, a person should be wrapped in cold, wet bedding or clothing; immersed in a lake, stream, or cool bathtub; or cooled with ice. At the hospital, body cooling is usually accomplished by removing the clothes and covering the exposed skin with water or ice. To speed evaporation and body cooling, a fan may be used to blow air on the body. Body temperature is measured frequently, often constantly. To avoid overcooling, cooling is stopped when the body temperature is reduced to about 102°F (38°C).

## **HEAT STRESS PREVENTION**

The best approach to avoiding heat-related illness is through preventative heat stress management.

**Rest areas** - A relatively cool, shaded area must be provided for breaks when ambient temperatures exceed 70°F (21°C) and workers are wearing chemical protective clothing (including uncoated Tyvek), or if temperatures exceed 80°F (26°C) and workers are wearing "Level D" coveralls or work clothes. For hazardous waste sites, the rest area should be located in the support zone adjacent to the contamination reduction zone, situated so that part of it is in the decon area so workers can take breaks without going through full decon. If shade is not available, shaded areas shall be constructed. This same type of canopy can be set up to shade personnel performing various types of work in hot weather. Cooling measures other than shade (e.g., misting, air conditioned break areas, air conditioned

	<p style="text-align: center;"><b>Health, Safety and Environment</b></p> <p style="text-align: center;"><b>HEAT STRESS</b> <b>INFORMATIONAL SUPPLEMENT</b></p>	<p style="text-align: right;">SMS 018 NA Supplemental Information A</p> <p style="text-align: right;">Issue Date: February 2009 Revision 2: August 2010</p>
---	--	---

vehicles, etc.) can be used in lieu of shade provided it can be demonstrated that they are at least as effective in cooling employees. Employees should have access to these rest areas at break times and at any other time when suffering from heat illness or believing a preventive recovery period is needed.

**Liquids** - Encourage employees to drink plenty of cool plain water and electrolyte replacement drinks. Supplementing water with cool electrolyte replacement drinks, such as Gatorade, Squench or Quik-kick (drink), is helpful to employees who tend to sweat a lot. Do not use "community cups"; use paper cups. Employees should have access to potable drinking water equivalent to one quart of water per employee per hour during the shift. Less water can be available at the start of the shift provided it is effectively replaced when required.

Have workers drink 16 ounces (0.5 liters) of drink before beginning work, such as in the morning and after lunch. At each break, workers should drink 8 to 16 ounces (0.25 to 0.5 liters). Employees should not wait until they are thirsty to drink.

Discourage the use of alcohol during non-working hours, and discourage the intake of coffee during work hours, as these make heat stress control more difficult.

**Acclimatization** - This is the process by which your body "gets used to" hot work environments. This is achieved by slowly increasing workloads. Start at 50 percent capacity on day one, and increase by 10 percent per day; on day six, you'll be at 100 percent. You don't lose acclimatization over a weekend, but it'll start to decrease after three to four days. If you don't do hot work for a week, the acclimatization is gone. You don't have to do full shift hot work to achieve or retain acclimatization; a minimum of 100 minutes of continuous hot work exposure per day is adequate.

**Auxiliary Cooling** - Auxiliary cooling is usually obtained by providing workers with a specially-designed vest, which is worn under the protective clothing, but over any underclothing. These vests typically provide cooling via one of two methods: the use of ice or other frozen media, or the use of a vortex cooler. Each method has its advantages and disadvantages.

The frozen media vest requires a means for freezing the media, and the media (usually water or "blue ice") will melt, requiring replacement.

The vortex cooler tends to cool more uniformly. Instead of frozen media, this vest uses the expansion of compressed air to cool the wearer. The drawback is the compressed air requirement, but this is negated when the wearer is already using an airline respirator supplied by a compressor. A vortex cooler should not be supplied from air cylinders, as this will draw down the cylinders rapidly.

Auxiliary cooling should be considered when the following conditions exist:

- Ambient temperature over 80°F (26°C).
- Workers are wearing impermeable garments (i.e., Tyvek, Saranex, Chemrel, etc.).
- It is desirable to have long work shifts with minimum interruption.

**URS SAFETY MANAGEMENT STANDARD 019  
HEAVY EQUIPMENT OPERATIONS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Heavy Equipment Operations**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies where heavy equipment is in operation by URS employees or subcontractors.

### **2. Purpose and Scope**

The purpose of this standard is to require that heavy equipment is operated in a safe manner; that the equipment is properly maintained; and that ground personnel are protected. Heavy equipment includes construction and mining equipment such as backhoes, excavators, skid steers, graders, loaders, dozers, tractors, cranes, drills, and draglines.

In addition to this standard, refer to SMS 038 – Cranes and Derricks; and SMS 056 – Drilling Safety.

Military related vehicles and equipment (e.g., tanks) are not covered under this standard.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. Authorized Operators**

1. Evaluate operators through documented experience (resume), and as appropriate, a practical evaluation of skills. Supplemental Information A through G, or a similar method, may be used for evaluating operators.
2. Allow only qualified operators to operate equipment. Trainees may operate equipment under the direct supervision of a trainer.
3. Prohibit equipment from being operated by any personnel who have not been specifically authorized to operate it.
4. Maintain a list of operators for the project, and the specific equipment that they are authorized to operate.

**URS SAFETY MANAGEMENT STANDARD**  
**Heavy Equipment Operations**

---

5. Require operators to use seatbelts at all times in all equipment and trucks.
6. Except where allowed by the manufacturer, prohibit personnel other than the operator from riding in or on the equipment unless additional seating (with seatbelts) is provided by the manufacturer. In some cases, a trainer may ride in a cab not equipped with additional seating when training activities are being conducted.
7. Operators must maintain three points of contact whenever mounting and dismounting a piece of equipment.
8. Brief operators on the following rules of operation:
  - a. Operators are in control of their work area.
  - b. Equipment must be operated in a safe manner and within the constraints of the manufacturer's Operation Manual.
  - c. Operators must stop work whenever unauthorized ground personnel or equipment enter their work area, and only resume work when the area has been cleared.
  - d. Operators must not use mobile phones while operating heavy equipment.

**B. Ground Personnel**

1. Require that URS ground personnel or ground personnel interacting with URS heavy equipment operations have received training, and comply with the following rules of engagement:
  - a. Wear high-visibility protective vests when in work areas with any operating equipment.
  - b. Stay outside of the swing zone or work area of any operating equipment.
  - c. No standing or working in the equipment operator's blind spots.
  - d. Ground personnel may only enter the swing or work area of any operating equipment when:

## **URS SAFETY MANAGEMENT STANDARD**

### **Heavy Equipment Operations**

---

1. They have attracted the operator's attention and made eye contact.
  2. The operator has idled the equipment down, placed it in neutral, grounded engaging tools, and set brakes.
  3. The operator gives the ground personnel permission to approach.
- e. Ground personnel must never walk, or position themselves between, any fixed object (e.g., working face, highwall) and operating equipment, or between two operating pieces of equipment.

#### C. Equipment

1. Maintain operation manuals at the site for each piece of equipment that is present on the site and in use.
2. Require that operators have read or been trained on the manual for the equipment, and operate the equipment within the parameters of the manual and this standard.
3. Require that all equipment is provided with roll-over protection systems (ROPS). Tracked excavators, road trucks, and drills are exempt from ROPS requirements, but must have a cab that provides protection from overhead hazards.
4. Verify that seatbelts are present and functional in all equipment.
5. Prohibit the use of equipment that has or had cab glass (per the manufacturer's specifications) that is cracked, broken, or missing.
6. Require that backup alarms are functional on all trucks and equipment. Tracked excavators must have bi-directional alarms, or the operator must be provided with a spotter whenever tracking in either direction.
7. Require all extensions such as buckets, blades, forks, etc., to be grounded when not in use.
8. Require brakes to be set and wheels chocked or equivalent (when applicable) when not in use.

**URS SAFETY MANAGEMENT STANDARD**  
**Heavy Equipment Operations**

---

9. Require fire extinguishers to be placed on all vehicles or equipment as required, and inspected by the operator prior to each shift. Monthly inspection and service records will be maintained in the project office, if not kept on the extinguishing equipment.
10. Require that all haulage vehicles, whose payload is loaded by means of cranes, power shovels, loaders, or similar equipment, has a cable shield and/or canopy adequate to protect the operator from shifting or falling material. If protection is not available for the operator, the operator must leave the vehicle and wait in a designated safe location until it is loaded.
11. Require that a locking device be provided that will prevent the accidental separation of towed and towing vehicles on every fifth-wheel mechanism and two-bar arrangement.
12. Require that trip handles for tailgates of dump trucks and heavy equipment be arranged so that when dumping, the operator will be in the clear.
13. Require that motors and engines are shut off during fueling or maintenance operations. Ensure proper grounding/bonding between equipment and fuel vehicle prior to fueling operations. During fueling operations, ensure the fuel nozzle remains in contact with the tank and no smoking or open flame is present in the immediate area.

D. Subcontractor Equipment

1. Require that no unsafe vehicles or equipment be allowed in construction areas. Where compliance is refused, the project manager or his or her designate should be notified immediately.
2. Require that subcontractor employees follow established safety procedures in operation, inspection, and maintenance of vehicles and equipment.
3. Require that URS supervisors visually observe the subcontractors' vehicles and equipment, and report any unsafe conditions or practices to the project manager. Equipment not in compliance with applicable safety standards is prohibited.

**URS SAFETY MANAGEMENT STANDARD**  
**Heavy Equipment Operations**

---

E. Safe Operation

1. All vehicles transporting material or equipment on public roads must comply with local laws pertaining to weight, height, length, and width. Obtain any permits required for these loads.
2. Prohibit operating Company-owned, leased, or rented vehicles or equipment while under the influence of alcohol or illegal drugs.
3. Require seatbelts to be worn for all operators, drivers, and passengers for company owned or leased vehicles and equipment.
4. Do not drive equipment into an unsafe area. This includes areas of construction where unnecessary tire, steering, or body damage could result, or where soil conditions are not adequate to support the equipment.
5. Do not smoke on, in, or within 50 feet (15 meters) of vehicles hauling fuel oils, gasoline, or explosives.
6. Do not ride with arms or legs outside of the truck body, in a standing position on the body, on running boards, or seated on side fenders, cabs, cab shields, rear of truck bed, or on the load.
7. Do not drive any vehicle at a speed greater than is reasonable and proper, with due regard for weather, traffic, intersections, width, and character of the roadway, type of motor vehicles, and any other existing condition.
8. Oilers, apprentices, and other operators will not be allowed to operate equipment unless authorized by the project manager or general superintendent.
9. Do not operate any equipment beyond its safe load or operational limits.
10. Keep all employees clear of loads about to be lifted, or suspended loads.
11. Outfit equipment operated in hazardous atmosphere environments with the proper safety equipment (e.g., spark arrestors).
12. Utilize equipment with enclosed cabs where feasible or accessible. Where use of equipment with enclosed cabs is not feasible or said

## **URS SAFETY MANAGEMENT STANDARD**

### **Heavy Equipment Operations**

---

equipment is not accessible, require that operators use eye protection in accordance with potential airborne hazards present.

#### F. Inspection and Maintenance

1. Require operators to inspect equipment daily (or before each shift), using Attachment 019-1 NA or equivalent.
2. Prohibit use of equipment deemed to be unsafe, as determined by daily inspection, until required repairs or maintenance has been completed.
3. Conduct maintenance as prescribed by the manufacturer in the Operation Manuals for each piece of equipment.
4. During maintenance and repair, require that:
  - a. Motors are turned off, unless required for performing maintenance or repair.
  - b. All ground-engaging tools are grounded or securely blocked.
  - c. Controls are set in a neutral position.
  - d. Brakes are set.
  - e. Electrically driven equipment is installed with provision for tagging and locking out the controls while under repair.
  - f. Manufacturer's requirements for maintenance and repair are followed.
5. Provide and use a safety tire rack, cage, or equivalent protection when inflating, mounting, or dismounting tires installed on split rims, or rims equipped with locking rings or similar devices.
6. Maintenance records for any service, repair or modification which affects the safe performance of the equipment must be maintained and reasonably available to operator and maintenance personnel.

#### **5. Documentation Summary**

The following information will be maintained in the project file:

- A. Operator qualifications.

## **URS SAFETY MANAGEMENT STANDARD**

### **Heavy Equipment Operations**

---

- B. Daily Equipment Inspection Logs, Attachment 019-1 NA, or equivalent.
- C. Site briefing documentation for operator rules and ground personnel "rules of engagement".

#### **6. Resources**

- A. U.S. Occupational Safety and Health Administration (OSHA) Standard – [Motorized Vehicles and Mechanized Equipment](#) – 29 Code of Federal Regulations (CFR) 1926, Subpart O
- B. U.S. Mine Safety and Health Administration – [30 CFR 48](#) – Training and Retraining Miners
- C. U.S. Mine Safety and Health Administration – [30 CFR 56](#) Subpart H – Loading, Hauling, and Dumping
- D. U.S. Mine Safety and Health Administration – [30 CFR 56](#) Subpart M – Machinery and Equipment
- E. U.S. Mine Safety and Health Administration – [30 CFR 77](#) Subpart E – Safeguards for Mechanical Equipment
- F. U.S. Mine Safety and Health Administration – [30 CFR 77](#) Subpart K – Ground Control
- G. U.S. Mine Safety and Health Administration – [30 CFR 77](#) Subpart Q – Loading and Haulage
- H. [National Association of Demolition Contractors](#) – Safety Manual
- I. [SMS 038](#) – Cranes and Derricks
- J. [SMS 056](#) – Drilling Safety
- K. [Attachment 019-1 NA](#) – Equipment Inspection Form

Note: The above regulatory resources are for U.S. operations only.

7)	Fine grading	<input type="checkbox"/> Yes <input type="checkbox"/> No
8)	Obtaining compaction by tracking in material	<input type="checkbox"/> Yes <input type="checkbox"/> No
9)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Lower rippers d) Lower blade to the ground e) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

Date \_\_\_\_\_ Employee Name \_\_\_\_\_ Supervisor \_\_\_\_\_

Description:

Drives a heavy-duty gasoline or diesel-powered truck used in hauling material to fill areas or dump sites. The truck is either a tandem rear axle type, or is a tractor truck, single or tandem axle, pulling a trailer. May service and make necessary adjustments for proper operation of equipment.

STEPS	KEYPOINTS	SATISFACTORY
1)	Demonstrated abilities a) Pre-shift inspection check list i) Check equipment for loose bolts and leaks; check oil, air, hydraulic fluid and water ii) Make sure area around the equipment is clear of people and other equipment iii) Check for fire extinguisher iv) Make sure that the following equipment is operational (1) Brakes (2) Lights (3) Back-up alarms (4) Hand rails & ladders (5) Seat belts (6) Tires (7) Glass, wipers (8) Gauges, including temperature, oil, air and fuel v) Notify supervision of any equipment that is not operational vi) The operator can park or side line a piece of equipment that is unsafe to operate if it poses a danger or hazard to employees or property	<input type="checkbox"/> Yes <input type="checkbox"/> No
2)	Identification of equipment controls	<input type="checkbox"/> Yes <input type="checkbox"/> No
3)	Truck Weighing a) Tare weights b) Gross Weights	<input type="checkbox"/> Yes <input type="checkbox"/> No
4)	Loading Techniques a) Parking into load patterns b) Bed preparation for material	<input type="checkbox"/> Yes <input type="checkbox"/> No
5)	Shifting and Hauling	<input type="checkbox"/> Yes <input type="checkbox"/> No
6)	Stockpiling	<input type="checkbox"/> Yes <input type="checkbox"/> No
7)	Backing with the use of mirrors	<input type="checkbox"/> Yes <input type="checkbox"/> No
8)	Dumping/Spreading Material a) Fill material b) Base course material c) Surface materials d) Asphalt e) Lowers truck bed (dump trucks) or dump chutes (belly dumps)	<input type="checkbox"/> Yes <input type="checkbox"/> No
9)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Use park brake d) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

Health, Safety and Environment  
**ROLLER / COMPACTOR OPERATOR  
SKILL EVALUATION**

SMS 019 NA  
Supplemental Information E  
Issue Date: February 2009  
Revision 2: August 2010

Date \_\_\_\_\_ Employee Name \_\_\_\_\_ Supervisor \_\_\_\_\_

Description:

Operates a self-propelled gasoline or diesel machine, which has steel wheels used to compact earth fills, flexible bases and all types of materials. Rollers are also used for compaction to achieve a desired or specified density. Rides on the machine platform and moves lever and pedals or throttles to control and guide machine.

STEPS	KEYPOINTS	SATISFACTORY
1)	Demonstrated abilities a) Pre-shift inspection check list i) Check equipment for loose bolts and leaks; check oil, air, hydraulic fluid and water ii) Make sure area around the equipment is clear of people and other equipment iii) Check for fire extinguisher iv) Make sure that the following equipment is operational a) Brakes b) Lights c) Back-up alarms d) Hand rails & ladders e) Seat belts f) Tires, if applicable g) Glass, wipers h) Gauges, including temperature, oil, air and fuel v) Notify supervision of any equipment that is not operational vi) The operator can park or side line a piece of equipment that is unsafe to operate if it poses a danger or hazard to employees or property	<input type="checkbox"/> Yes <input type="checkbox"/> No
2)	Identification of equipment controls	<input type="checkbox"/> Yes <input type="checkbox"/> No
3)	Rolling techniques to obtain compaction a) Use of controls b) Vibratory controls c) Turns and maneuvers d) Aware of surroundings	<input type="checkbox"/> Yes <input type="checkbox"/> No
4)	Rolling patterns a) Staggered patterns with other rollers	<input type="checkbox"/> Yes <input type="checkbox"/> No
5)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

Health, Safety and Environment  
**FRONT END LOADER  
OPERATOR SKILL EVALUATION**

SMS 019 NA  
Supplemental Information F  
Issue Date: February 2009  
Revision 2: August 2010

Date \_\_\_\_\_ Employee Name \_\_\_\_\_ Supervisor \_\_\_\_\_

Description:

Operates a rubber tire or crawler type tractor with an attached bucket on front end. Moves a lever to raise and lower and dump contents of bucket. Machine is used to load materials from stockpiles, excavation, loading trucks.

STEPS	KEYPOINTS	SATISFACTORY
1)	Demonstrated abilities a) Pre-shift inspection check list i) Check equipment for loose bolts and leaks; check oil, air, hydraulic fluid and water ii) Make sure area around the equipment is clear of people and other equipment iii) Check for fire extinguisher iv) Make sure that the following equipment is operational a) Brakes b) Lights c) Back-up alarms d) Hand rails & ladders e) Seat belts f) Tires g) Glass, wipers h) Gauges, including temperature, oil, air and fuel v) Notify supervision of any equipment that is not operational vi) The operator can park or side line a piece of equipment that is unsafe to operate if it poses a danger or hazard to employees or property	<input type="checkbox"/> Yes <input type="checkbox"/> No
2)	Identification of equipment controls	<input type="checkbox"/> Yes <input type="checkbox"/> No
3)	Loading techniques a) Use of bucket and controls b) Crowding the pile c) Pump loading, etc. d) Loading patterns e) Loading trucks f) Loading scrapers	<input type="checkbox"/> Yes <input type="checkbox"/> No
4)	Control handling of contaminated soils	<input type="checkbox"/> Yes <input type="checkbox"/> No
5)	Shifting and hauling	<input type="checkbox"/> Yes <input type="checkbox"/> No
6)	Stockpiling	<input type="checkbox"/> Yes <input type="checkbox"/> No
7)	Mixing and moisture conditioning	<input type="checkbox"/> Yes <input type="checkbox"/> No
8)	Feeding crusher	<input type="checkbox"/> Yes <input type="checkbox"/> No
9)	Rough cut and fill	<input type="checkbox"/> Yes <input type="checkbox"/> No
10)	Spreading material	<input type="checkbox"/> Yes <input type="checkbox"/> No
11)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Lower bucket to the ground d) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

Date \_\_\_\_\_ Employee Name \_\_\_\_\_ Supervisor \_\_\_\_\_

Description:

Rides in control cab of grader and moves levers and hand wheels to guide machine and regulate the scraper blade. Blade is mounted on a carrying and turning circle at the front of the machine. Equipment is used to level or mix soils and aggregates to grade and to lay asphalt and flexible base materials.

STEPS	KEYPOINTS	SATISFACTORY
1)	Demonstrated abilities a) Pre-shift inspection check list i) Check equipment for loose bolts and leaks; check oil, air, hydraulic fluid and water ii) Make sure area around the equipment is clear of people and other equipment iii) Check for fire extinguisher iv) Make sure that the following equipment is operational a) Brakes b) Lights c) Back-up alarms d) Hand rails & ladders e) Seat belts f) Tires g) Glass, wipers h) Gauges, including temperature, oil, air and fuel v) Notify supervision of any equipment that is not operational vi) The operator can park or side line a piece of equipment that is unsafe to operate if it poses a danger or hazard to employees or property	<input type="checkbox"/> Yes <input type="checkbox"/> No
2)	Identification of equipment controls	<input type="checkbox"/> Yes <input type="checkbox"/> No
3)	Leveling and scraping techniques a) Use of levers b) Use of cutting edge c) Controlling front wheel tilt d) Controlling crab motion	<input type="checkbox"/> Yes <input type="checkbox"/> No
4)	Shifting and traveling with loaded moe board	<input type="checkbox"/> Yes <input type="checkbox"/> No
5)	Rough cut and fill	<input type="checkbox"/> Yes <input type="checkbox"/> No
6)	Spreading material	<input type="checkbox"/> Yes <input type="checkbox"/> No
7)	Fine grading	<input type="checkbox"/> Yes <input type="checkbox"/> No
8)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Lower moe board to the ground d) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

Date \_\_\_\_\_ Employee Name \_\_\_\_\_ Supervisor \_\_\_\_\_

Description:

Operates a rubber tire or crawler type tractor with an attached bucket on front end. Moves a lever to raise and lower and dump contents of bucket. Machine is used to load materials from stockpiles, excavation, loading trucks.

4)	Shifting and Hauling	<input type="checkbox"/> Yes <input type="checkbox"/> No
5)	Properly applies water to ramps/corners	<input type="checkbox"/> Yes <input type="checkbox"/> No
6)	Backing with the use of mirrors	<input type="checkbox"/> Yes <input type="checkbox"/> No
11)	Parking and shut down procedures a) Equipment line-up i) Straight line ii) Allow easy access for service b) Turn off all accessories c) Use park break d) Perform a general walk around looking for maintenance items	<input type="checkbox"/> Yes <input type="checkbox"/> No

**URS SAFETY MANAGEMENT STANDARD 021**  
**HOUSEKEEPING**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Housekeeping**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies.

### **2. Purpose and Scope**

The purpose of this standard is to ensure proper housekeeping in office locations, on construction sites, and fixed work facilities to prevent cross contamination of hazardous materials, fires, and injuries resulting from slips, trips and falls.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility or site.

### **4. Requirements**

#### **A. General**

1. Require tools, materials, extension cords, hoses, and other equipment to be stowed at the end of the day. These materials must not be strewn about the site in a manner that may cause tripping or other hazards while in use.
2. Clear general waste, scraps, debris, and rubbish from work areas, passageways, and stairs in and around the facility on a daily basis. Do not throw or drop materials from upper levels to lower levels or to the ground unless disposal areas are provided and the area below is barricaded or secured.
3. Provide metal or other approved containers in adequate numbers to handle waste and rubbish disposal.
4. Garbage (including solid or liquid wastes), refuse, and hazardous waste such as caustics, acids, and toxic materials must be stored in approved and covered containers. Containers must be appropriately labeled as to contents. SMS 009 – Corrosive and Reactive Materials and SMS 017 – Hazardous Waste Operations, provide additional information on hazardous materials.
5. Store supplies and generated wastes or scrap in locations away from walkways and in a manner that will not trip workers. Maintain

**URS SAFETY MANAGEMENT STANDARD**  
**Housekeeping**

---

stored materials in safe, neat stockpiles for ease of access and to prevent collapse or falling.

6. Keep weeds and vegetation away from stockpiled materials and walkways.
  7. Maintain flooring, stairways, gangways, access ways, and walkways in a clean, dry, and smooth condition.
  8. Ensure that oil, grease, water, ice, or other hazardous materials that may cause slipping or fire hazards are removed promptly.
  9. Ensure employees are trained in appropriate waste disposal procedures.
  10. Identify a member of line management (typically a site supervisor or foreman) with the responsibility of ensuring proper waste disposal and storage requirements are followed.
- B. Regularly inspect the work area for slip and trip hazards.
1. Office and trailer locations – Inspect work areas at least quarterly. Use the inspection sheet provided as Attachment 021-1 NA.
  2. Field sites – Inspect sites at least biweekly. Use the inspection sheet provided as Attachment 021-1 NA.
  3. Field sites performing aircraft and vehicle maintenance – Inspect the sites weekly if sanding, drilling, grinding, and/or painting operations are conducted. Use the inspection sheet provided as Attachment 021-2 NA.
  4. For European operations, the Workplace Inspection Checklist - Attachment 021-3 NA must be completed monthly.
- C. Thoroughly investigate all injuries resulting from slips, trips, and falls on site. Correct those housekeeping conditions contributing to injuries.
- D. Project management personnel shall address the following issues in project pre-planning:
1. Estimate the types and quantities of waste or scrap generated during site-specific project activities.

## **URS SAFETY MANAGEMENT STANDARD**

### **Housekeeping**

---

2. Identify any needs for specialized containers or waste disposal services.
  3. Coordinate waste disposal options with the client.
  4. Identify any hazards associated with handling or storage of waste or scrap and determine if control measures, including engineering, administrative controls, or personal protective equipment, are required.
  5. Identify waste or scrap handling and storage procedures that will minimize impacts to site personnel, client operations, and the environment.
  6. Identify waste segregation criteria, as well as opportunities for recycling.
- E. For operations involving work with hazardous materials (including metals associated with aviation maintenance activities), the manager directing activities of the facility or site will assure that:
1. Eating, drinking, and smoking areas are removed from the work areas. Hand washing stations shall be available nearby for employees entering the eating and smoking areas.
  2. Resting, eating and smoking areas will be kept clean.
  3. Work areas will be cleaned to remove accumulated contaminants. Working surfaces, including workbenches, desks, and other lateral working surfaces, will be wiped down daily with an appropriate cleaner (soap, solvent, or oxidizing agent). Walking surfaces will be cleaned to remove accumulated contaminants weekly or more often.

### **5. Documentation Summary**

The following information will be maintained in the project file:

- A. Completed Inspection Sheets.

### **6. Resources**

- A. U.S. Occupational Safety and Health Administration (OSHA) Standard – [Sanitation – 29 Code of Federal Regulations \(CFR\) 1910.141](#)

**URS SAFETY MANAGEMENT STANDARD**

- I. [Attachment 021-3 NA](#) – Workplace Inspection Checklist

**Building or Location:** \_\_\_\_\_

**Inspection Conducted by:** \_\_\_\_\_ **Date:** \_\_\_\_\_

Check Yes, No, or NA for Not Applicable.

### General Site Housekeeping

- 1. Do not block exits or emergency equipment.  Yes  No  NA
- 2. Do not leave equipment or materials lying on the ground.  Yes  No  NA
- 3. Keep storage areas free from the accumulation of materials that constitute trip hazards.  Yes  No  NA
- 4. Remove scrap materials and other debris from work area.  Yes  No  NA
- 5. Remove combustible scrap and debris by safe means at regular intervals.  Yes  No  NA
- 6. Store oily rags in metal cans with tight fitting lids. Remove oily rags at the end of the day.  Yes  No  NA

### Visibility

- 7. Ensure that halls, stairways and walkways are well lit.  Yes  No  NA
- 8. Ensure that well designed light switches are present in areas where walkways are not always lighted.  Yes  No  NA
- 9. Ensure that dust, smoke or steam does not create poor visibility.  Yes  No  NA
- 10. Ensure that glare from floodlights or windows does not create poor visibility in work areas.  Yes  No  NA

### Stairs

- 11. Ensure that handrails are tight and at the proper level.  Yes  No  NA
- 12. Ensure that handrails extend past the top and bottom step.  Yes  No  NA
- 13. Ensure that white or yellow strips are painted on the first and last step for better visibility. (Not an OSHA requirement – recommendation only).  Yes  No  NA
- 14. Ensure that steps are not rough or defective.  Yes  No  NA
- 15. Ensure that stair treads are wide enough and risers consistently spaced.  Yes  No  NA
- 16. Ensure that stairs are free of obstructions.  Yes  No  NA

### Floor Conditions

- 17. Ensure that floors of every workroom are clean, and so far as possible, in a dry condition.  Yes  No  NA
- 18. Ensure that floors are not oily, overly waxed, or polished.  Yes  No  NA
- 19. Where wet floors or processes are present, provide proper drainage and false floors, mats, or other dry standing places.  Yes  No  NA
- 20. Finish floor surfaces with non-slip coatings where spills are likely.  Yes  No  NA
- 21. Ensure that floors and passageways are free from protruding nails, splinters, holes, or loose boards.  Yes  No  NA
- 22. Ensure that floors are free of holes and depressions.  Yes  No  NA
- 23. Ensure that aisles or pathways are wide enough for easy passage and for carrying objects (48 inches is recommended).  Yes  No  NA

HOUSEKEEPING INSPECTION SHEET

- 24. Ensure that ramps are covered with non-slip surfaces or matting.  Yes  No  NA
- 25. Keep carpets or rugs free from loose or frayed edges that may catch boots or shoes.  Yes  No  NA
- 26. Keep walkways free from extension cords, air hoses and cables.  Yes  No  NA
- 27. Keep pathways free from boxes, containers, machine parts, or other tripping hazards.  Yes  No  NA

**Ground Conditions**

- 28. Ensure that trip hazards are not present.  Yes  No  NA
- 29. Ensure that fall hazards are not present.  Yes  No  NA
- 30. Ensure that holes or changes in ground elevation are either filled or guarded.  Yes  No  NA
- 31. Ensure that muddy walkways are filled with gravel to reduce slipping.  Yes  No  NA
- 32. Ensure that all employees who work in wet or greasy conditions wear slip resistant footwear.  Yes  No  NA

**Equipment**

- 33. Ensure that vehicle steps are of adequate size, surface placement for safe dismounting.  Yes  No  NA
- 34. Ensure that hand grips or ladders are adequate for getting into and out of equipment.  Yes  No  NA
- 35. Ensure that ladders have been checked for damage and removed from service if found unsafe.  Yes  No  NA

**Health, Safety and Environment**  
**SPECIAL HOUSEKEEPING INSPECTION SHEET**  
**Sanding / Drilling / Grinding / Painting**

Attachment 021-2 NA

Issue Date: June 1999  
Revision 5: August 2010

**Week Ending:** \_\_\_\_\_

**Checklist Completed by:** \_\_\_\_\_

The following checklist will be used as a guide and is considered the minimum housekeeping requirement for work areas where sanding, drilling, and grinding operations on aircraft and vehicles are performed. Dust from sanding/drilling/grinding on aircraft and vehicles contain metals, chemical coatings, and paint-based contaminants that can accumulate on work areas and flat surfaces. Good housekeeping practices throughout the work area are the key to mitigating this hazard.

	<b>Mon</b>	<b>Tues</b>	<b>Wed</b>	<b>Thurs</b>	<b>Fri</b>	<b>Sat</b>	<b>Sun</b>
1. Remove all metal grindings and dust from sanding or grinding areas using a vacuum equipped with a HEPA filter.	<input type="checkbox"/>						
2. Remove contaminants on top of flat surfaces with HEPA-filter-equipped vacuum. <i>Do not use fox-tails or low pressure air to blow dust off work benches, work areas or clothes.</i>	<input type="checkbox"/>						
3. Wipe down surfaces of workbenches with damp rags using water and a surface-active cleanser. (A weekly requirement, more often if needed)	<input type="checkbox"/>						
4. Sweep floors daily, without creating dust clouds. Wet mop work area floors. (A weekly requirement using water and a surface-active cleanser).	<input type="checkbox"/>						
5. Wipe down all other surfaces (besides the workbench) where dust collects using damp rags. (A bi-weekly requirement).	<input type="checkbox"/>						
6. Monitor personnel to ensure no drinking or eating occurs in the industrial work areas.	<input type="checkbox"/>						
7. Monitor personnel recognizing the hazards of cross contamination. Ensure all personnel are washing their hands before eating, drinking, or smoking on breaks.	<input type="checkbox"/>						

**Identify areas that need attention and describe the corrective actions to be implemented:**

### QUARTERLY OFFICE CHECKS - GUIDANCE NOTES/CHECKLISTS

To help in the completion of the "Workplace Inspection Checklist" the following brief notes summarise some of the most important aspects. Individual offices may need to modify them to deal with their particular arrangements.

The aspects are listed below in the same order as on the Form.

<b>1. Accident Book (UK)</b>	
<b>Location</b>	During the walk round inspection of the office, investigate the cause of any entries made during the previous month.
<b>Reporting</b>	All accidents/injuries dangerous occurrences known to have occurred in the property during the past month to be adequately reported.
<b>Check Site</b>	Employees to have easy access to the accident book whenever necessary.
<b>2. Fire</b>	
<b>Fire Doors Fire Exits</b>	All fire doors and exits to be closed, unobstructed and easy to open.
<b>Fire Extinguishers</b>	On hooks/brackets provided.
<b>Records</b>	Check that weekly fire alarm test is being carried out and that fire alarm system is being maintained
<b>3. Entrances and Doors</b>	
<b>Entrances</b>	Doors and doorways not obstructed by any article or substance. Doormats/doorsteps securely fixed and not constituting a tripping hazard.
<b>Doors</b>	Doors and gates secure on their hinges or sliding runners. Glazing panels on 2-way doors not covered over. Fire doors not fastened or wedged open. Fire doors able to completely close from fully open, automatically.
<b>4. Workstations and Equipment</b>	
<b>Workstations</b> (NB: Includes maintenance tools, equipment, printing equipment, etc.)	Workstation furniture and work equipment safe, clean and in a good state of repair. Workstation furniture and work equipment suitable for the person using it and for the work they are doing.
<b>Equipment</b>	To meet requirements of Safety System.
<b>5. Restricted Areas</b>	
<b>Access Secured</b>	Doors securely locked. Unauthorised access impossible by normal (unforced) means.
<b>Keys</b>	Keys not accessible to unauthorised persons.
<b>6. Steps, Staircases and Ladders</b>	
<b>Structure</b>	Treads and handrails secure and in good repair.
<b>Tripping</b>	Carpets/coverings untorn and secure. Edge strips well fixed. Steps and staircases free from litter. Stairs and landings clear of any unnecessary obstructions.
<b>Slipping</b>	Surfaces of steps not slippery. Spillages have been properly cleaned up.
<b>Lighting</b>	All stairs adequately lit so that the edges of each step can be clearly seen.
<b>Cleanliness</b>	All steps/staircases clean and free from dust dirt and litter.
<b>Ladders</b>	<u>No part of ladder damaged or weakened.</u> Securely positioned/fixated at base and top to prevent slipping, moving or falling of ladder when in use, or held by another person stationed at the foot of the ladder, at a slope of approximately 75°.

<b>URS</b>	<b>Health, Safety and Environment</b>	Attachment 021-3 NA
	<b>WORKPLACE INSPECTION CHECKLIST</b>	Issue Date: June 1999 Revision 5: August 2010

	Inspection Record available
<b>7. Floors</b>	
<b>Tripping</b>	All floor coverings even, level and securely fixed down. No obstructions in thoroughfares, which could cause people to trip or fall.
<b>Slipping</b>	Where floor surfaces are being polished, suitable signs warning of the slipping hazard are being displayed. Spillages have been properly cleaned up.
<b>Cleanliness</b>	All floors are clean and free from dust, dirt and litter.
<b>8. Electrical Equipment</b>	
<b>Electrical Equipment</b>	Working satisfactorily Undamaged in any way. All used in a proper and safe manner.
<b>Wiring</b>	No exposed wires or circuitry.
<b>Portable Electric Equipment</b>	Checked in accordance with SMS 012.
<b>9. Lighting</b>	
<b>Lamps, Light Fittings and Switches</b>	All lamps working satisfactorily and providing suitable light intensity. Light fittings are suitably orientated for task/ activity. Not damaged in any way, securely fixed and clean.
<b>10. Temperature</b>	
<b>Services Functioning</b>	Air conditioning and heating systems operating as and when required.
<b>Air Temperature</b>	No complaints of low or high temperatures from the building occupants (offices should be >16°C after first hour).
<b>Draughts</b>	No unacceptable draughts around doors, windows or grilles or through fixed or broken openings.
<b>Thermometers</b>	One thermometer to be provided for each floor.
<b>11. Building Services Equipment</b>	
<b>Indications of Malfunctioning Building Services Equipment:</b>	Leaks of water, oil or gas. Presence of unfamiliar noises. Presence of unfamiliar smells. Non-operation of important components. Gauges showing abnormal readings.
<b>12. Ventilation</b>	
<b>Indications of Inadequate Ventilation Rates:</b>	Presence of strong odours. Very high temperatures in summer. Condensation problems. Draughts.
<b>13. Toilet Facilities</b>	
<b>Hygienic</b>	WCs, urinals, floors, hand basins, taps and door handles kept clean.
<b>Tidy</b>	Toilet areas not used for storage or food/drink preparation. Litter-free and bins (including sanitary) regularly emptied.
<b>Well Stocked</b>	Sufficient and suitable provision of toilet paper and soap.
<b>Well Maintained</b>	Mechanical hand drying facilities fully operational, if provided. Towels clean, if provided. WC's, urinals, hand basins and taps in good order and functioning properly.
<b>Ventilation</b>	Mechanical ventilation is operational, ie. providing and/or extracting air. Problems evidenced by strong odours and/or lack of air movement. Windows and/or grilles open satisfactorily.

<b>URS</b>	<b>Health, Safety and Environment</b>	Attachment 021-3 NA
	<b>WORKPLACE INSPECTION CHECKLIST</b>	Issue Date: June 1999 Revision 5: August 2010

<b>14. Kitchens</b>	
<b>Housekeeping</b>	Kitchen area not being used for any other purpose than the preparation and consumption of food and drink, e.g. storage of cleaning materials. Kept clean and tidy.
<b>Hygiene</b>	No signs of infestation by insects or rodents. No signs of stale or rotten foodstuffs.
<b>Appliances</b>	Sharp kitchen implements suitably stored. All appliances in good working order.
<b>15. General Cleanliness</b>	
<b>Building Fabric</b>	Walls, floors, etc. clean and free from dust. Paint or plaster not flaking off walls or ceilings.
<b>Furniture</b>	Furniture clean and free from dust.
<b>Windows</b>	Windows not excessively dirty.
<b>Tidiness</b>	Corridors, fire escapes, electrical switch cupboards, etc. kept free of litter and are not used for storage.
<b>Cleaning Materials</b>	Suitable provision of cleaning chemicals and personal protective equipment, eg. gloves; cleaning chemicals are suitable stored.
<b>16. Chemical Substances</b>	
<b>Storage and Labelling of Chemicals</b>	Chemicals in secure, undamaged and clearly labelled containers. Chemicals stored so that they are not liable to fall or damage either themselves or other materials. Chemicals kept within locked cupboard/room if required.
<b>17. Refuse Facilities</b>	
<b>Well Maintained</b>	Bins and other refuse facilities in good state of repair.
<b>Clean and Tidy</b>	Waste facilities not overflowing. All refuse is being regularly collected. Area around waste facilities kept clean and tidy. Refuse bags/bins not presenting an obstruction or tripping hazard to the public or employees.
<b>18. First Aid</b>	
<b>First Aid Box</b>	First aid box fully stocked with listed items. First aid box contains guidance on the treatment of injured people. First aid box situated in the correct appointed location. Drugs, creams or ointments should not be available for use by employees, visitors or tenants (e.g. Aspirin).
<b>First Aider/Appointed Person</b>	At least one "appointed person" to be available during the designated working day times when people are at work, to administer first aid assistance and/or call an ambulance.
<b>First Aid Notices</b>	Check that first aid notices giving location of first aid box and name and location of appointed persons are up-to-date.
<b>19. Access Roads and Car Parks</b>	
<b>Access and Egress</b>	No obstructions to the safe and easy passage of vehicles throughout the property's traffic routes. All vehicle parking bays free from obstructions. In areas where vehicles and pedestrians circulate, the lines of sight available to both are not obscured. Gates/barriers in full working order and not presenting a risk to health and safety. Any fire escape route through a garage or car park not blocked by vehicles.
<b>Signage</b>	Signs directing traffic or pedestrians in place, visible, and, where possible to assess, being adhered to.
<b>Cleanliness</b>	Car-parking areas clean and tidy.

<b>URS</b>	<b>Health, Safety and Environment</b>	Attachment 021-3 NA
	<b>WORKPLACE INSPECTION CHECKLIST</b>	Issue Date: June 1999 Revision 5: August 2010

<b>20. Lifts</b>	
<b>Lifts</b>	Doors fully operational.
	No obvious signs of damage.
	Emergency phone operational.
	No unusual sounds when operating.
	Maintained in a clean condition and free from litter.
	Inspection Certificates
<b>21. Display Screen Equipment (See also SMS 054 and Attachment 054-1)</b>	
<b>Lighting</b>	Visual conditions for the task satisfactory, no glare from lights/sunlight, no shadowing and the screen easy to read.
<b>Noise</b>	Minimal nuisance from printers and heating/ventilation units
<b>Posture</b>	Operator able to adjust equipment in order to maintain good posture.
<b>Furniture</b>	Furniture and work equipment clean and in good repair.
<b>Training and Information Packages</b>	Information to be provided close to the workstation on the use of computer package(s), adjustment of display screen equipment and furniture, maintaining a good working posture.
<b>Risk assessment</b>	Completed by the main user and Office Safety Supervisor and satisfactory.
<b>22. Systems of Work and Work Equipment</b>	
<b>Working Methods and Work Equipment</b>	Safe working procedures established and being adhered to.
	Manufacturers instructions for the equipment used are being followed. Equipment working efficiently and in good repair.
	Appropriate protective clothing is being used, if necessary.
	Tools are properly stored when not in use, and safety carried especially when used at a height.
<b>Permits to Work</b>	In hazardous places/situations (eg. Roof work), permit to work system in place and being adhered to.
<b>23. Water</b>	
<b>Little-used Outlets</b>	Flush (run) any little-used hot and cold outlets for minimum of 3 minutes each month (5 minutes if very distant from storage).
<b>Hot Water Supplies</b>	Producing hot (>50°C) and not scalding (<65°C) water.
<b>24. Electrical Installation</b>	
<b>Electrical Equipment</b>	Working satisfactorily
	Undamaged in any way.
	All used in a proper and safe manner.
<b>Wiring</b>	No exposed wires or circuitry.
<b>Installation</b>	Tested every 5 years and certified by Competent Person
<b>25. H&amp;S Meetings/Notices</b>	
<b>Management Meetings</b>	Attend Management Meetings at which H&S is discussed. The Meeting should discuss as a minimum: Updates to Safety Management System, Accidents/Incidents, Results of Audits, Corrective actions, Project-related H&S and any issues raised by the Office Safety Supervisor and Representative of Employee Safety.
<b>H&amp;S Committee Meetings</b>	Attend H&S Committee Meetings and ensure record of meeting is made available to employees.
<b>Meetings with Representative of Employee Safety (UK)</b>	Meet monthly with the Representative of Employee Safety and record any items of concern.
<b>Notices</b>	All legally required notices such as H&S Law Poster (UK), H&S Committee Record, Insurance (UK), and URS material (4sight banner, Lessons Learned, etc.) on display.

**URS SAFETY MANAGEMENT STANDARD 024  
MEDICAL SCREENING AND SURVEILLANCE**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Medical Screening and Surveillance**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies for employees assigned to work environments where there is a potential for exposure to chemical, biological, and/or physical hazards.

Individuals will be selected for medical screening based on regulatory standards, project health and safety plan (HASP), assessments, the expected use of personal protective equipment (PPE), and client contract requirements.

### **2. Purpose and Scope**

The purpose of this standard is to prevent occupational illness and injury by early identification of exposure-related health effects before they result in disease. Medical examinations will be performed to determine whether employees are capable of safely performing assigned tasks, to verify that protective equipment and controls are effectively providing protection, and to comply with government regulations. Included are provisions for emergency medical consultation and treatment.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

The Occupational Health Manager (OHM) is responsible for development and administration of this program in coordination with the URS Medical Service Provider (MSP). The OHM will maintain current injury and illness data, and participate with corporate, division, regional, country, or strategic business unit Health, Safety, and Environment (HSE) Managers in evaluation of this program. The MSP will provide occupational medicine oversight for the program and will approve medical surveillance protocols.

Locations in the United States and Canada will follow all requirements of this program.

International locations will follow sections B.1, 2, 3, 5, 6, 7, and 8; G.3; and H.1 of this program.

## **URS SAFETY MANAGEMENT STANDARD**

### **Medical Screening and Surveillance**

---

#### **4. Requirements**

##### **A. Selection of program participants**

1. The Medical Surveillance Evaluation (MSE) form – Attachment 024-2 NA provides the primary guidance for determining whether medical screening is required for an employee and the frequency of periodic exams. The MSE is to be completed by the employee and his or her supervisor at the time of hire for any employee who may work outside an office environment. At each annual performance review, the MSE is to be reviewed for accuracy. Other reviews are required whenever there is a change in job tasks.
2. Additional site- or project-specific biological monitoring or toxicological screening may be required in addition to this program's scheduled core exams. These medical tests will be specified by the project-specific HASP and will be authorized by the MSP on the exam appointment protocol. Note: See Section D.2 if the employee will have an initial assignment at a HAZWOPER site.

##### **B. Types of medical screening and surveillance exams**

1. A baseline or preassignment baseline exam will be conducted prior to the start of work assignments requiring medical surveillance.
2. Periodic exam schedules are established by the MSP using the following criteria:
  - a. Employees performing the following types of work will receive annual exams: construction activities in the exclusion zone of HAZWOPER sites; field work activities in the exclusion zone of HAZWOPER sites for 30 or more days per year; or projects involving exposure to materials regulated by the Occupational Safety and Health Administration (OSHA) or Mine Safety and Health Administration (MSHA) at or above established action levels.
  - b. Employees performing the following types of work will receive biennial exams: field work activities at HAZWOPER sites less than 30 days per year; waste disposal activities; non-HAZWOPER environmental sampling; or chemistry laboratory, pilot plant projects, or bench-scale operations for 30 or more days per year.

## **URS SAFETY MANAGEMENT STANDARD**

### **Medical Screening and Surveillance**

---

3. Employees currently participating in an examination program will receive exit exams when they leave their work assignment as identified in the Exit Exam Determination – Attachment 024-6 NA. In the event an employee declines the exit exam, the employee will be requested to sign a Waiver of Exit Medical Surveillance Exam – Attachment 024-7 NA.
4. Department of Transportation (DOT) exams will be conducted biennially when an employee is assigned to drive a vehicle with a gross weight rating of more than 10,000 pounds or a placarded vehicle of any size used to transport hazardous chemicals. DOT exam certification can be added to a routine baseline or periodic exam protocol when scheduling with the MSP.
5. When noise levels in the employee's work environment equal or exceed an 8-hour time-weighted average of 85 decibels as measured on the A-scale (dBA), annual audiograms will be performed. For employees involved in construction activities or construction management, enrollment in this program will be required if more than 50% of their time is spent in an active construction area and working in an area with posted noise hazards.
6. Individual radiation dose monitoring will be conducted as required by the site-specific HASP with approval by a Radiation Safety Officer. Personal dosimetry (film badges) is typically required; however, depending on the specific radiation hazard, additional monitoring or scans may be required.
7. To determine an employee's ability to wear a respirator, a medical evaluation will be performed before an employee is fit tested or assigned to wear a respirator.
8. Employees assigned to work in environments with airborne concentrations of asbestos fibers at or above the established action level (OSHA, MSHA, state, or other applicable regulations) will receive asbestos-specific baseline and annual exams. Exit exams will be performed if an exam has not been performed within the previous 6 months or if an employee has medical complaints related to potential asbestos exposure.
9. Blood sampling and monitoring for lead and other heavy metals will be conducted every 6 months until two consecutive blood

## **URS SAFETY MANAGEMENT STANDARD**

### **Medical Screening and Surveillance**

---

samples/analyses are acceptable. An employee with elevated heavy metal blood levels should be temporarily assigned to a task with minimal exposure, pending medical clearance. Sampling and monitoring will be performed every 2 weeks during the reassignment period. Employees will be notified of results within 5 days when levels are not acceptable. Medical Removal Protection benefits may apply in this situation.

10. Urine samples may be collected for some heavy metal exposures such as cadmium and mercury. Samples must be collected within 30 days of assignment to any task with potential for exposure to cadmium or other heavy metals. Medical monitoring results will be used to assess worker exposure and exposure control methods.
11. Medical monitoring will also be required to assess potential worker health risk to other chemical hazards, including polyaromatic hydrocarbons (PAHs), pesticides, benzene, chlorinated solvents, crystalline silica, and other chemical hazards as identified in prejob hazard analysis. The MSP will be consulted to determine necessary testing protocols and acceptance levels. The physician's opinion letter will be used to determine the worker's ability to perform the specified task and to wear PPE necessary to accomplish the task in a safe manner.
12. Skin exposures to hazardous chemicals with "Skin" notation will be evaluated case by case in consultation with the MSP. Allergic and hyper-sensitivity symptoms will be evaluated by the MSP as required.

#### C. Exam protocols

1. The Medical Screening and Surveillance Exam Protocol – Attachment 024-3 NA identifies the medical exam components of this program.
2. Evaluation will be confidential and provided during normal hours. Employees will be offered the opportunity to discuss the results of the evaluation with the MSP. All exam results are considered personal and confidential information, and will not be stored in any unsecured records not transmitted without the employee's permission.

**URS SAFETY MANAGEMENT STANDARD**  
**Medical Screening and Surveillance**

---

D. Scheduling of exams

1. The Office or Project Manager, usually with assistance from the local HSE Representative, is responsible for contacting the MSP when baseline, exit, and project-specific exams are required. The MSP maintains an employee scheduling database for tracking periodic exams and will contact the employee for scheduling during the month the exam is due. These steps are detailed in the Medical Surveillance Exam Process – Attachment 024-4 NA.
2. Employees hired with an initial assignment to work at a HAZWOPER site whose work duties require passing a physical exam or who have an essential job function of wearing a respirator will receive a job offer contingent upon passing a preassignment baseline exam. See HAZWOPER and Respirator Preassignment Baseline Exam Protocol – Attachment 024-5 NA.
3. In the event of an urgent business need, a temporary clearance to begin work the day of the exam may be requested at the time a baseline exam is scheduled through the MSP. The temporary clearance will be issued by the local physician and will be good for up to 14 days or until the MSP physician's final clearance is received, whichever comes first.
4. If an exam becomes due during an employee's pregnancy, it is advised to defer the exam until after delivery and the employee returns to work from family/medical leave status.

E. Exam Follow-Up

1. Following each exam, the MSP will issue a physician's written opinion (Health Status Medical Report), which will include any medical restrictions and address the employee's ability to use personal protective equipment, to the HSE Representative. See Exam Follow-Up Procedures – Attachment 024-8 NA.
2. The MSP will mail the exam invoice to the Local Office HSE Representative, who will either approve the charge and forward the invoice to the accounts payable department for payment or forward the charge to the manager responsible for the employee for charge assignment and payment. (Medical exams that are part of this program are provided to URS employees at no cost to the employee.)

## **URS SAFETY MANAGEMENT STANDARD**

### **Medical Screening and Surveillance**

---

3. The MSP will mail a confidential letter detailing the results of the exam to the employee at his or her home address within 30 days of the exam date.

#### F. Emergency Medical Care

1. Preplanning is essential for a prompt and proper response to a medical emergency. Site-specific emergency procedures will be provided in the site HASP. Suggested preplanning actions are provided in SMS 065 – Injury Management. See Field First Aid Kit Supply List – Attachment 024-9 NA for recommended supplies. The contents of the first aid kit will be checked prior to being sent out to each site/project and periodically thereafter to ensure that the expended items are replaced.
2. A MSP occupational physician can be reached 24 hours a day for phone consultation at WorkCare™ (1-800-455-6155).
3. A workers' compensation claim should be filed by URS Occupational Health Nurses with Sedgwick CMS (1-866-566-1915) for an injured employee who receives professional medical care or who is disabled from working beyond the initial date of injury.
4. To comply with OSHA reporting regulations, the OHM or the applicable corporate, regional, country, or SBU HSE Manager should be notified immediately if there is a work-related hospitalization or death.

#### G. Medical Records

1. Medical records include records concerning an employee's health status that is made or maintained by a physician, nurse or other health care professional. Medical records are maintained and preserved in confidential, locked files in the custody of the MSP for at least the duration of employment plus 30 years. Only information regarding the employee's ability to perform the job assignment will be provided to company representatives.
2. Employees in medical monitoring programs are notified initially, and annually thereafter, of the existence, location and ability to access medical records maintained by the MSP. Upon request, each employee (or designated representative) will have access to the employee's medical record. Prior to the release of health information to the employee (or designated representative), a

## **URS SAFETY MANAGEMENT STANDARD**

### **Medical Screening and Surveillance**

---

specific written consent must be signed by the employee. Records will be provided in a reasonable time and manner at no cost to the employee.

3. International records (excluding the United States and Canada) will be maintained in-country at the local clinic.
4. Projects that use local clinics or employer/client clinics may store records at that site, but at the termination of the project, all employee medical records must be transferred to long-term records retention or forwarded to WorkCare™.
5. Subcontractors and vendors are expected to maintain their own employee records and reports, but the employee physician's opinion letters will be available for inspection and verification of compliance.
6. If in the event, URS ceases operations, medical records will be transferred to the successor employer. If no successor employer is available, records will be transferred to the National Institute for Occupational Safety and Health.

#### H. Program evaluation

1. The OHM and corporate, regional, country, or SBU HSE Managers will evaluate this program annually and as needed. Issues to review include program efficacy and efficiency, employee satisfaction, and cost-effectiveness.
2. The MSP will prepare an Annual Medical Trending Report specifying the number and types of exams performed and anonymous statistical exam results in group data format.
3. Each employee is mailed a Post-Exam Evaluation by the MSP. Employee feedback regarding the clinic, medical staff, and exam procedures are reviewed, and corrective actions are identified and taken as needed.

## **5. Documentation Summary**

The following documentation will be maintained in the office / project file:

- A. Medical Surveillance Evaluation.

# Medical History Questionnaire

### Your Instructions

- Location of your exam will be listed on your Appointment Protocol.
- Please have your Supervisor or Health & Safety Professional complete the Job Profile on the inside flap of this page if you do not know the responses.
- See your Supervisor or Health & Safety Professional for directions to the clinic. Please bring the completed exam packet and your Appointment Protocol.
- If lab work is ordered, do not eat for 8 hours prior to exam. (Water and unsweetened juice or black decaffeinated coffee is allowed. Dry toast if you have an afternoon appointment.)
- Avoid all alcohol consumption for 24 hours prior to the exam.
- Avoid loud noise exposure for 14 to 16 hours before the exam.
- If you wear contact lenses, please do not insert them on the day of the exam. Bring a pair of glasses.
- If you use hearing aids, please bring them to the clinic.
- Your employer is responsible for the cost of this exam. It is important to be on time for your appointment.
- If you cannot attend your appointment, please call (800) 455-6155 to cancel, or your employer may be charged.

**Please answer all the questions in this booklet.  
If you have any questions, please call 1-800-455-6155.**

**Making Health Count**

**I. Instructions**

Your supervisor must allow you to answer this questionnaire during normal working hours, or at a time and place that is convenient to you. To maintain your confidentiality, your employer or supervisor must not look at or review your answers, and your employer must tell you how to deliver or send this questionnaire to the healthcare professional who will review it.

Has your employer told you how to contact the healthcare professional who will review this questionnaire? Yes  No

This questionnaire is used to gather information about your health and physical condition, both now and in the past. This information will be used to determine if you can safely perform the duties of your job. This exam is not intended to substitute for care provided by your personal physician. Results of the exam will be sent to your home address. The results of the examination are kept confidential.

**Print the following information:**

Last Name: \_\_\_\_\_ First Name: \_\_\_\_\_

Home Mailing Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip: \_\_\_\_\_

Email Address: \_\_\_\_\_ Social Security # : \_\_\_\_\_

Sex:  Male  Female Date of Birth: \_\_\_\_\_ Age: \_\_\_\_\_

Race:  Hispanic or Latino  White  Asian  Black or African American

American Indian or Alaska Native  Native Hawaiian or Other Pacific Islander

Two or More Races (Not Hispanic or Latino)

Position: \_\_\_\_\_ Site Location: \_\_\_\_\_ Date Employed: \_\_\_\_\_

What is the phone number (including area code) at which you can be reached by the healthcare professional who reviews this questionnaire? \_\_\_\_\_

What is the best time to reach you? From: \_\_\_\_\_  AM  PM To: \_\_\_\_\_  AM  PM

**Read and sign this Consent for Release of Medical Records:**

I hereby authorize **WorkCare** to release in confidence to \_\_\_\_\_ (company) and/or its subsidiaries medical information, including but not limited to the results of medical evaluations, physical examinations or medical testing, as it specifically pertains to my medical qualification to perform the stated Job Duty consistent with the applicable requirements of OSHA, MSHA. I further authorize the examining physician and/or clinic to release to WorkCare any medical information related to my medical or physical condition. You have a right to receive a copy of this authorization.

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

**Job Profile**

If you have questions regarding this Job Profile, please discuss with your supervisor in order to complete this section.

**Job Duty/Title:**

Indicate your job title: \_\_\_\_\_

*(Example: Driller, Engineer, Environmental Scientist, etc.)*

Indicate your job duty: \_\_\_\_\_

Indicate the time you spend in each area:

Field \_\_\_\_\_ % Office \_\_\_\_\_ % Travel \_\_\_\_\_ %

**Physical Requirements:**

Are there any specific physical demands of the job that are important? (Examples: Lifting, carrying)

If yes, please describe: \_\_\_\_\_

Yes  No

**Protective Equipment:**

Is clearance for the use of respiratory equipment needed?

Escape only (no rescue)       Emergency rescue only

Is there specific safety equipment (beyond hard hat, gloves, boots, and appropriate clothing) that is used in the safe performance of this job?

If yes, please describe: \_\_\_\_\_

Yes  No   
 Yes  No

1. **Please Check the Following Types of Respiratory Protective Equipment Used**

✓		Duration	Frequency	Temperature Extremes	Humidity
<input type="checkbox"/>	Half Face Piece Air Purifying Respirator				
<input type="checkbox"/>	Full Face Piece Air Purifying Respirator				
<input type="checkbox"/>	Powered Air Purifying Respirator				
<input type="checkbox"/>	Self-Contained Breathing Apparatus				
<input type="checkbox"/>	Air Line Respirator				

2. Is it possible that you will be required to wear Level A protection at any time? (SCBA, fully encapsulated suit, chemical resistant gloves & boots.)

Yes  No

3. Is it possible that you will be required to wear Level B protection at any time? (SCBA, chemical resistant clothing, chemical resistant gloves & boots.)

Yes  No

4. Describe significant potential chemical exposures: \_\_\_\_\_

5. Will you be working under hot conditions (temperatures exceeding 77 °F)?

Will you be working under humid conditions?

Will you be working at high altitudes?

Describe the work you'll be doing while you're using your respirator(s):

Yes  No   
 Yes  No   
 Yes  No

6. Describe any special or hazardous conditions you might encounter when you're using your respirator(s). (For example, confined spaces, life-threatening gases):

7. During the period in which you use the respirator(s), is your work effort:

a. Light (less than 200 kcal per hour) *Example: Sitting while mailing or filing; performing light assembly work, etc.*

Hours per shift: \_\_\_\_\_

Yes  No

b. Moderate (200 to 350 kcal per hour) *Example: Transferring a moderate load (about 35 lbs.) at trunk level; pushing a wheel barrel with a heavy load, etc.*

Hours per shift: \_\_\_\_\_

Yes  No

c. Heavy (above 350 kcal per hour) *Example: Lifting a heavy load (about 50 lbs.) from the floor to your waist; shoveling, etc.*

Hours per shift: \_\_\_\_\_

Yes  No

8. Describe any special responsibilities you'll have while using your respirator(s) that may affect the safety and well-being of others (e.g. rescue, security):

9. Are there any substances that you cannot work with?

Describe: \_\_\_\_\_

Yes  No

III.

Review of Systems

Answer "Yes" if you currently have any of these symptoms/conditions and/or have had them significantly in the past. List date when first occurred.

		Yes	No	Date
1.	A. Fever	<input type="checkbox"/>	<input type="checkbox"/>	
	B. Chills	<input type="checkbox"/>	<input type="checkbox"/>	
	C. Weight loss	<input type="checkbox"/>	<input type="checkbox"/>	
	D. Loss of energy/fatigue	<input type="checkbox"/>	<input type="checkbox"/>	
2.	A. Poor vision	<input type="checkbox"/>	<input type="checkbox"/>

	H. Breast lumps	<input type="checkbox"/>	<input type="checkbox"/>	
	I. Breast discharge	<input type="checkbox"/>	<input type="checkbox"/>	
18. Male	J. Repeated miscarriages	<input type="checkbox"/>	<input type="checkbox"/>	
	A. Inability to have an erection	<input type="checkbox"/>	<input type="checkbox"/>	
	B. Discharge or bleeding from the penis	<input type="checkbox"/>	<input type="checkbox"/>	
	C. Abnormal testicular self examination	<input type="checkbox"/>	<input type="checkbox"/>	
	D. Prostate problems	<input type="checkbox"/>	<input type="checkbox"/>	

Describe any "Yes" responses by number: \_\_\_\_\_

Are you currently unable to perform any type of activity?  Yes  No Describe: \_\_\_\_\_

**III.****Social History****Yes      No**

1. Do you now or in the past month ever smoked cigarettes?  Yes  No
2. Have you ever smoked cigarettes in the past?  Yes  No
3. If you now smoke or have smoked in the past, how many years total have you smoked? \_\_\_\_\_
4. If you now smoke or have smoked in the past, how many packs/day do/did you smoke on average?
 

<input type="checkbox"/> Less than one-half	<input type="checkbox"/> Two	<input type="checkbox"/> Three
<input type="checkbox"/> One	<input type="checkbox"/> Two and one-half	<input type="checkbox"/> More than three
<input type="checkbox"/> One and one-half		
5. Do you use any one of the following tobacco products?
 

<input type="checkbox"/> Pipe tobacco	<input type="checkbox"/> Snuff	<input type="checkbox"/> None
<input type="checkbox"/> Smokeless tobacco	<input type="checkbox"/> Cigars	
6. Do you regularly drink alcoholic beverages?  Yes  No
7. If yes, how many drinks, beers or glasses of wines do you drink daily?
 

<input type="checkbox"/> Less than 1	<input type="checkbox"/> 3-4	<input type="checkbox"/> 7-8
<input type="checkbox"/> 1-2	<input type="checkbox"/> 5-6	<input type="checkbox"/> More than 8
8. Do you exercise strenuously for at least 45 min.?
 

<input type="checkbox"/> Daily	<input type="checkbox"/> 1 time a week	<input type="checkbox"/> Never
<input type="checkbox"/> 3 times a week	<input type="checkbox"/> Rarely	
9. Do you feel frustrated, stressed or uptight?
 

<input type="checkbox"/> Daily	<input type="checkbox"/> 1 time a week	<input type="checkbox"/> Never
<input type="checkbox"/> 3 times a week	<input type="checkbox"/> Rarely	
10. Do you eat greasy or fatty foods?
 

<input type="checkbox"/> Daily	<input type="checkbox"/> 1 time a week	<input type="checkbox"/> Never
<input type="checkbox"/> 3 times a week	<input type="checkbox"/> Rarely	

**V.****Past Medical History****For Annual or Exit Exam – Indicate if There Has Been a Change Since Last Exam**

1. Are you currently being treated for illness or injury?  Yes  No
2. Have you been treated for persistent illness or injury?  Yes  No
3. Describe any "yes" responses: \_\_\_\_\_
4. Please list hospital admissions:    If none, check here 

Year	Reason for Hospitalization
_____	_____
_____	_____
_____	_____
5. Please list allergies to any medication, food, clothing, bee stings or other substances: \_\_\_\_\_
6. How many days of work did you miss in the last 12 months due to your health? \_\_\_\_\_
7. Have you ever pursued a compensation claim or received disability payment for an occupational injury or disease?  Yes  No
8. Have you ever been turned down for life insurance?  Yes  No
9. Have you ever had injuries from an auto accident?  Yes  No

## VI. Current Medications

Fill out the following questions for any exam type.

When was your last tetanus immunization booster? Month: \_\_\_\_\_ Year: \_\_\_\_\_

Do you currently have prescriptions for drugs or medications?  Yes  No

Have you ever been addicted to drugs?  Yes  No

Describe: \_\_\_\_\_

Have you ever abused prescription medication?  Yes  No

Describe: \_\_\_\_\_

### Do you take any of the following medications regularly?

Heart medicine	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Aspirin	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Thyroid medicine	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Blood pressure medicine	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Oral medicine for diabetes	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Diuretic (Water pill)	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Insulin for diabetes	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Medicine for seizures	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Nerve or sleeping pill	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Allergy/Asthma medications	<input type="checkbox"/> Yes	<input type="checkbox"/> No

## VII. Family History

Fill out the following questions for any exam type. Indicate change since last exam.

**Father:**  Living List Diseases: \_\_\_\_\_ If deceased, cause of death: \_\_\_\_\_

**Mother:**  Living List Diseases: \_\_\_\_\_ If deceased, cause of death: \_\_\_\_\_

**Brother:**  Living List Diseases: \_\_\_\_\_ If deceased, cause of death: \_\_\_\_\_

**Sister:**  Living List Diseases: \_\_\_\_\_ If deceased, cause of death: \_\_\_\_\_

Has any member of your immediate family had any of the following?

Cancer	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Diabetes	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Nervousness	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Mental Illness	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Tuberculosis	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Rheumatism	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Kidney Disease	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Heart Disease	<input type="checkbox"/> Yes	<input type="checkbox"/> No

**VIII. Past Job History**

List All Jobs Ever Held Starting With Your First – Include Part Time And Volunteer Work

Name Of Employer	From Mo/Yr	To Mo/Yr	# Hrs Worked Per Week/Shift	Description of Work	Potential Hazards (Dust, Fumes, Chemicals, Heat, Noise, Physical Agents, Metals, Radiation)

**IX. Toxic Exposure History**

At work or at home, have you ever been significantly exposed to hazardous solvents, hazardous airborne chemicals (e.g. gases, fumes, dust) or have you had significant skin contact with hazardous chemicals?

Yes       No

Describe: \_\_\_\_\_

Have you worked with any of the materials, or under any of the conditions, listed below:

	Yes	No
Asbestos	<input type="checkbox"/>	<input type="checkbox"/>
Silica (e.g. sandblasting)	<input type="checkbox"/>	<input type="checkbox"/>
Coal (e.g. mining)	<input type="checkbox"/>	<input type="checkbox"/>
Grinding	<input type="checkbox"/>	<input type="checkbox"/>
Welding	<input type="checkbox"/>	<input type="checkbox"/>
Asphalt, pitch or tar	<input type="checkbox"/>	<input type="checkbox"/>
Beryllium	<input type="checkbox"/>	<input type="checkbox"/>
Cadmium	<input type="checkbox"/>	<input type="checkbox"/>
Cotton Dust	<input type="checkbox"/>	<input type="checkbox"/>
Pesticides	<input type="checkbox"/>	<input type="checkbox"/>
Fuel	<input type="checkbox"/>	<input type="checkbox"/>
Oils	<input type="checkbox"/>	<input type="checkbox"/>
Lead	<input type="checkbox"/>	<input type="checkbox"/>
Nickel/Chrome	<input type="checkbox"/>	<input type="checkbox"/>
Paint	<input type="checkbox"/>	<input type="checkbox"/>
Microwave/Radio Frequency	<input type="checkbox"/>	<input type="checkbox"/>
Nuclear Radiation/X-Ray	<input type="checkbox"/>	<input type="checkbox"/>
Fiberglass	<input type="checkbox"/>	<input type="checkbox"/>
Plastics	<input type="checkbox"/>	<input type="checkbox"/>
Solvents	<input type="checkbox"/>	<input type="checkbox"/>
Compressed Gases	<input type="checkbox"/>	<input type="checkbox"/>
Aluminum	<input type="checkbox"/>	<input type="checkbox"/>
Iron	<input type="checkbox"/>	<input type="checkbox"/>
Tin	<input type="checkbox"/>	<input type="checkbox"/>
Dusty Environments	<input type="checkbox"/>	<input type="checkbox"/>

Have you ever worked around excessive noise?

Yes       No

Where: \_\_\_\_\_

Have you ever worked in an excessive hot or cold environment?       Yes       No

Where: \_\_\_\_\_

Have you ever worked around vibration or with vibrating tools?       Yes       No

Have you ever worked in a doctor's office, clinic or hospital where you might have had exposure to biohazardous materials?       Yes       No

Have you ever performed a site assessment on any of the potential hazards listed above in Past Job History?       Yes       No

Describe: \_\_\_\_\_

Any other hazardous exposures?       Yes       No

If yes, describe these exposures: \_\_\_\_\_

Have you ever lived near a large industrial plant or in areas of excessive air pollution?

Yes       No

Have you ever been in the military service?       Yes       No

If yes, were you exposed to biological or chemical agents (either in training or in combat)?       Yes       No

Have you ever worked on a HAZMAT team?       Yes       No

List any second jobs or side businesses you have:

\_\_\_\_\_

List your current and previous hobbies:

## Respirator Users Only

**The following two pages only need to be completed by those assigned to use respirators.  
If uncertain about respirator use, please complete.**

### Respirator Use

	Yes	No
1. Have you ever worn a respirator in the past?	<input type="checkbox"/>	<input type="checkbox"/>
<b>2. If no, go to Question #4.</b>		
If yes, what type of respirator did you wear:		
<input type="checkbox"/> Disposable particulate filter mask (non-cartridge dust mask)		
<input type="checkbox"/> Half face air purifying respirator		
<input type="checkbox"/> Full face air purifying respirator		
<input type="checkbox"/> Powered air purifying respirator		
<input type="checkbox"/> Supplied air (airline) respirator		
<input type="checkbox"/> Self contained breathing apparatus (SCBA)		
<input type="checkbox"/> Escape only respirator		
<b>3. If you've ever used a respirator, have you ever had any of the following problems:</b>		
Eye irritation	<input type="checkbox"/>	<input type="checkbox"/>
Skin allergies or rashes	<input type="checkbox"/>	<input type="checkbox"/>
Anxiety	<input type="checkbox"/>	<input type="checkbox"/>
General weakness or fatigue	<input type="checkbox"/>	<input type="checkbox"/>
Any other problem or difficulty that interfered with your use of a respirator	<input type="checkbox"/>	<input type="checkbox"/>
Describe: _____		

### Heart, Lungs and Other Body Systems

	Yes	No
4. Have you ever had an abnormal EKG (Electrocardiogram)	<input type="checkbox"/>	<input type="checkbox"/>
Describe: _____		
<b>5. Have you ever had or currently have any of the following cardiovascular or heart problems:</b>		
Heart attack	<input type="checkbox"/>	<input type="checkbox"/>
Stroke	<input type="checkbox"/>	<input type="checkbox"/>
Angina (chest pain)	<input type="checkbox"/>	<input type="checkbox"/>
Heart failure	<input type="checkbox"/>	<input type="checkbox"/>
High blood pressure	<input type="checkbox"/>	<input type="checkbox"/>
Heart arrhythmia	<input type="checkbox"/>	<input type="checkbox"/>
Swelling in your legs or feet (not caused by standing or walking)	<input type="checkbox"/>	<input type="checkbox"/>
Any other heart problem that you have been told about	<input type="checkbox"/>	<input type="checkbox"/>

### Heart, Lungs and Other Body Systems (cont.)

	Yes	No
6. Have you ever had surgery of the arteries, coronary bypass or angioplasty? If yes:	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Within the past year		
<input type="checkbox"/> More than one year ago		
<b>7. Have you ever had or currently have any of the following pulmonary or lung problems:</b>		
Asbestosis	<input type="checkbox"/>	<input type="checkbox"/>
Asthma	<input type="checkbox"/>	<input type="checkbox"/>
Chronic bronchitis	<input type="checkbox"/>	<input type="checkbox"/>
Emphysema	<input type="checkbox"/>	<input type="checkbox"/>
Pneumonia	<input type="checkbox"/>	<input type="checkbox"/>
Tuberculosis	<input type="checkbox"/>	<input type="checkbox"/>
Silicosis	<input type="checkbox"/>	<input type="checkbox"/>
Lung cancer	<input type="checkbox"/>	<input type="checkbox"/>
Broken ribs	<input type="checkbox"/>	<input type="checkbox"/>
Pneumothorax (collapsed lung)	<input type="checkbox"/>	<input type="checkbox"/>
Any chest injuries or surgeries	<input type="checkbox"/>	<input type="checkbox"/>
<b>8. Have you <u>ever</u> had seizures (fits)?</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9. Have you <u>ever</u> been told you had diabetes (sugar disease)?</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>10. Have you <u>ever</u> had allergic reactions that interfere with your breathing?</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>11. Have you <u>ever</u> experienced claustrophobia (fear of closed-in spaces)?</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>12. Have you <u>ever</u> had trouble smelling odors?</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>13. Have you <u>ever</u> had or currently have any of the following pulmonary, cardiovascular, lung or heart symptoms?</b>		
Shortness of breath	<input type="checkbox"/>	<input type="checkbox"/>
Shortness of breath when walking on level ground or walking up a slight hill or incline	<input type="checkbox"/>	<input type="checkbox"/>
Shortness of breath when walking with other people at an ordinary pace on level ground	<input type="checkbox"/>	<input type="checkbox"/>
Have to stop for breath when walking at your own pace on level ground	<input type="checkbox"/>	<input type="checkbox"/>
Shortness of breath when washing or dressing yourself	<input type="checkbox"/>	<input type="checkbox"/>
Shortness of breath that interferes with your job	<input type="checkbox"/>	<input type="checkbox"/>

### Heart, Lungs and Other Body Systems (cont.)

- |   | Yes                      | No                       |
|---|--------------------------|--------------------------|
| 14. Do you <u>currently</u> take medication for any of the following problems:      |                          |                          |
| Breathing   | <input type="checkbox"/> | <input type="checkbox"/> |
| Heart trouble   | <input type="checkbox"/> | <input type="checkbox"/> |
| Blood pressure  | <input type="checkbox"/> | <input type="checkbox"/> |
| Seizures (fits)   | <input type="checkbox"/> | <input type="checkbox"/> |
| 15. Have you had or currently have any of the following symptoms of lung illness:   |                          |                          |
| Coughing that produces phlegm (thick sputum)  | <input type="checkbox"/> | <input type="checkbox"/> |
| Coughing that occurs when you are lying down  | <input type="checkbox"/> | <input type="checkbox"/> |
| Coughing up blood in the last month   | <input type="checkbox"/> | <input type="checkbox"/> |
| Wheezing  | <input type="checkbox"/> | <input type="checkbox"/> |
| Wheezing that interferes with your job  | <input type="checkbox"/> | <input type="checkbox"/> |
| Chest pain when you breath deeply   | <input type="checkbox"/> | <input type="checkbox"/> |
| Coughing that wakes you early in the morning  | <input type="checkbox"/> | <input type="checkbox"/> |
| Any other symptoms that you think may be related to lung problems                   | <input type="checkbox"/> | <input type="checkbox"/> |
| 16. Have you ever had any of the following cardiovascular or heart symptoms:        |                          |                          |
| Frequent pain or tightness in your chest  | <input type="checkbox"/> | <input type="checkbox"/> |
| Pain or tightness in your chest during physical activity                            | <input type="checkbox"/> | <input type="checkbox"/> |
| Pain or tightness in your chest that interferes with your job                       | <input type="checkbox"/> | <input type="checkbox"/> |
| In the past two years, have you noticed your heart skipping or missing a beat?      | <input type="checkbox"/> | <input type="checkbox"/> |
| Heartburn or indigestion that is not related to eating                              | <input type="checkbox"/> | <input type="checkbox"/> |
| Any other symptoms that you think might be related to heart or circulation problems | <input type="checkbox"/> | <input type="checkbox"/> |

### Full Face or SCBA Respirator User Only (cont.)

- |   | Yes                      | No                       |
|---|--------------------------|--------------------------|

### Full Face or SCBA Respirator User Only

Answer the following questions if you have been selected to use either a full-face piece respirator or Self-Contained Breathing Apparatus [SCBA].

- |   | Yes                      | No                       |
|---|--------------------------|--------------------------|
| 17. Have you ever lost vision in either eye (temporarily or permanently)? | <input type="checkbox"/> | <input type="checkbox"/> |
| 18. Do you currently have any of the following vision problems?           |                          |                          |
| Wear contact lenses   | <input type="checkbox"/> | <input type="checkbox"/> |
| Wear glasses  | <input type="checkbox"/> | <input type="checkbox"/> |
| Color blind   | <input type="checkbox"/> | <input type="checkbox"/> |
| Any other eye or vision problem   | <input type="checkbox"/> | <input type="checkbox"/> |

**X.****For Yearly/Exit Examinations Only**

- 1a. Approximately how many days of hazardous fieldwork have you performed since your last exam? \_\_\_\_\_
- 1b. Approximately how many days in Level C (using an air-purifying respirator)? \_\_\_\_\_
- 1c. Approximately how many days in Level B (self-contained breathing apparatus or air line)? \_\_\_\_\_
2. Approximately how many different hazardous material sites have you worked on since your last examination? \_\_\_\_\_
3. What were the chemical or other hazards of concern to which you had or currently have significant potential exposure since your last examination? List chemicals of concern in table below.

Chemicals of Concern	Approximate # of Days	Exposure Frequency			Exposure Duration		
		Daily	Weekly	Monthly	<1 Hr.	1-8 Hr.	> 8 Hrs.

4. Since your last exam, have you had difficulty doing your job, because of:
- a. Sensitivity to chemicals, dust, sunlight, etc.?  Yes  No  Don't Know
- b. Inability to perform certain motions?  Yes  No  Don't Know
- c. Inability to assume certain positions?  Yes  No  Don't Know
- d. Heat stress?  Yes  No  Don't Know
- e. Other medical reasons?  Yes  No  Don't Know
5. Have you experienced any health symptoms that may be related to exposures to hazardous materials since your last examination? If so, please describe: \_\_\_\_\_
- 
6. Since your last examination, have you had any type of illness that resulted in more than 3 consecutive days lost time from work?  Yes  No
- Describe: \_\_\_\_\_
7. Do you feel that you have and/or had exposure to ticks?  Yes  No When: \_\_\_\_\_
- How would you quantify the exposure:  Very significant  Significant  Insignificant  None  Unknown
8. Have you ever had any symptoms or signs (e.g. rash) which you attribute to tick bites?  Yes  No
- If yes, please describe: \_\_\_\_\_
- 9a. How would you rate the effectiveness of the health and safety procedures used for work? *(Check only one.)*
- Poor  Fair  Good  Excellent
- 9b. Comments: \_\_\_\_\_
10. Have you ever had an illness, condition or symptom which:
- Occurred only during work?  Yes  No
- Occurred only after work, in evening?  Yes  No
- Occurred when you begin work after a weekend or holiday?  Yes  No
- Disappeared during vacations or weekends?  Yes  No
11. Have you ever developed an illness or symptoms that you think were related to work?  Yes  No
12. Have you ever worked with a substance that made your nose, chest or sinuses congested?  Yes  No
13. Have you ever worked with substances that irritated your skin or caused a rash?  Yes  No

## Summary of Findings and Comments Relevant to Abnormal Conditions

1. The results of the required testing should be recorded on page 11.
2. Please be sure to note EKG and chest x-ray readings on **Normal** or **Abnormal** on page 11, if required for this exam.
3. Please review any **Yes** answers **ONLY** for questions on pages 4, 5, 7, 8 and 9 of this booklet. You are not required to review the other history questions.
4. Your physical examination findings should be recorded on page 12 and 13.
5. The booklet and any specimens must be shipped to our laboratory **THE DAY OF THE EXAM.**

**Please answer all the questions in this booklet.  
If you have any questions, please call 1-800-455-6155.**

**Health, Safety and Environment**  
**MEDICAL SURVEILLANCE**  
**EVALUATION**

Attachment 024-2 NA

Issue Date: February 2001  
Revision 8: January 2011

This information will be used to determine routine medical screening exams for employees who work outside of an office setting. In addition, site-specific health and safety plans may specify project-related medical surveillance for regulated substances.

**Please answer each entry:**

Date: \_\_\_\_\_

Name: \_\_\_\_\_

Phone #: \_\_\_\_\_

Employee #: \_\_\_\_\_

Job Title: \_\_\_\_\_

Location: \_\_\_\_\_

Business: \_\_\_\_\_

Region/Business Unit: \_\_\_\_\_

Supervisor: \_\_\_\_\_

HSE Representative: \_\_\_\_\_

**Choose One:**

- New employee  Current employee with job change
- Transfer from \_\_\_\_\_ OFFICE

**The following questions assess federally mandated medical screenings and surveillance requirements:**

Respirator	<input type="checkbox"/> Yes <input type="checkbox"/> No	Does your job require you to wear a respirator or to be certified for respirator use? If yes, how many days per year? <input type="checkbox"/> 1-29 <input type="checkbox"/> 30+
Hearing	<input type="checkbox"/> Yes <input type="checkbox"/> No	Does your job require you to wear hearing protection because you: a) Work in an environment where noise levels equal or exceed an 8-hour time-weighted average of 85 decibels? b) Perform construction activities or construction management around heavy equipment on a construction project more than 50 percent of the time?
Asbestos	<input type="checkbox"/> Yes <input type="checkbox"/> No	Do you perform intrusive work with asbestos (i.e., sampling, demolition, etc.)?

**Health, Safety and Environment**  
**MEDICAL SURVEILLANCE**  
**EVALUATION**

Attachment 024-2 NA

Issue Date: February 2001  
Revision 8: January 2011

Lead	<input type="checkbox"/> Yes <input type="checkbox"/> No	Are you currently performing construction work where you may be exposed to airborne lead concentration at or above the OSHA action level or are you currently in a job that requires you to be in a medical surveillance program for lead (i.e., removal of lead-based paint or other demolition activities)?
Radiation	<input type="checkbox"/> Yes <input type="checkbox"/> No	Are you classified as a radiation worker?
DOT Driver	<input type="checkbox"/> Yes <input type="checkbox"/> No	Do you drive a truck with a gross vehicle weight rating of 10,000 pounds or more during company trips?
Diving	<input type="checkbox"/> Yes <input type="checkbox"/> No	Do you perform diving activities?
Biohazard	<input type="checkbox"/> Yes <input type="checkbox"/> No	Does your job require work with bloodborne pathogens?
Remediation	<input type="checkbox"/> Yes <input type="checkbox"/> No	Do you perform remediation construction activities, field construction sampling, or supervision activities at hazardous waste remediation sites or hazardous waste treatment, storage, or disposal (TSD) facilities that could expose you to hazardous substances above permissible exposure levels (i.e., work in exclusion zones)? If yes, how many days per year? <input type="checkbox"/> 1-29 <input type="checkbox"/> 30+
Field and Lab	<input type="checkbox"/> Yes <input type="checkbox"/> No	Answer Yes if you do ANY of the following: a) Work at HAZWOPER sites 1 to 29 days per year b) Perform waste disposal activities c) Perform non-HAZWOPER environmental sampling d) Work in a chemistry laboratory 30 or more days per year e) Work on a pilot plant project 30 or more days per year f) Conduct bench-scale operations 30 or more days per year
Other	<input type="checkbox"/> Yes <input type="checkbox"/> No	Site- or project-specific biological monitoring or toxicological screening as specified by the project-specific health and safety plan.

<b>Chest x-ray (one view)</b>								
Age < or = 50	X	Every 4 years	If symptomatic or due on periodic	X		Baseline and every 5 years per 1910.1001	Baseline and Annual if 20+ years of silica exposure or Biennial if <20 years silica exposure	
Age 50+	X	Every 2 years	If symptomatic or due on periodic	X		Baseline and every 2-5 years per 1910.1001		
B-reader						X	X	
Complete Blood Count with White Cell Differential	X	X	X	X			X	
Blood Chemistry Panel	X	X	X	X			X	
Other				Sickle Cell (Baseline) Treadmill Stress Test (Baseline & Biennial after age 40)		OSHA Asbestos Questionnaire (Initial/Periodic)	OSHA Silica Questionnaire (Initial/Periodic)  TB Skin Test (MSHA regulated sites)	

Note: Additional entry, periodic, and exit biological monitoring or toxicological screening may be indicated in the project-specific health and safety plan. Examples include blood lead/ZPP, serum/RBC cholinesterase, urine heavy metals (arsenic, cadmium, mercury, chromium, or beryllium), urine radiation (thorium, uranium), biological vaccinations (hepatitis A/B, tetanus), blood benzene, blood beryllium LPT, etc. Substance abuse testing is not included in the medical screening and surveillance program. Please consult the business-specific substance abuse testing program for more information.

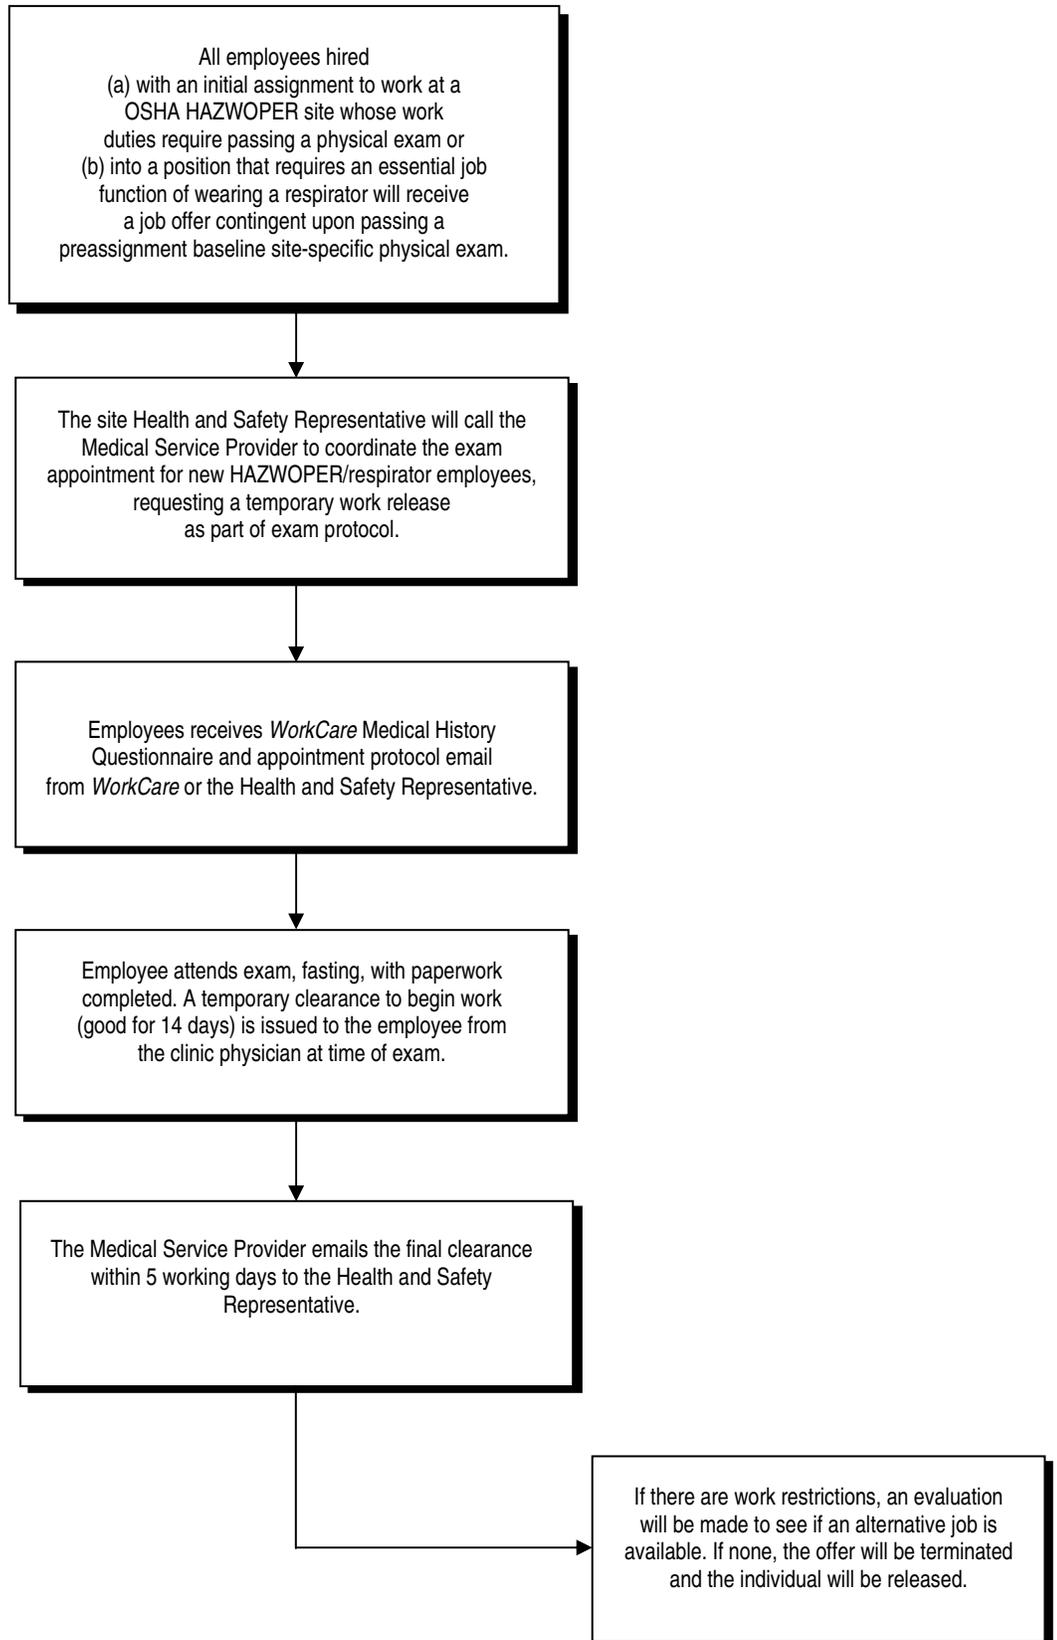

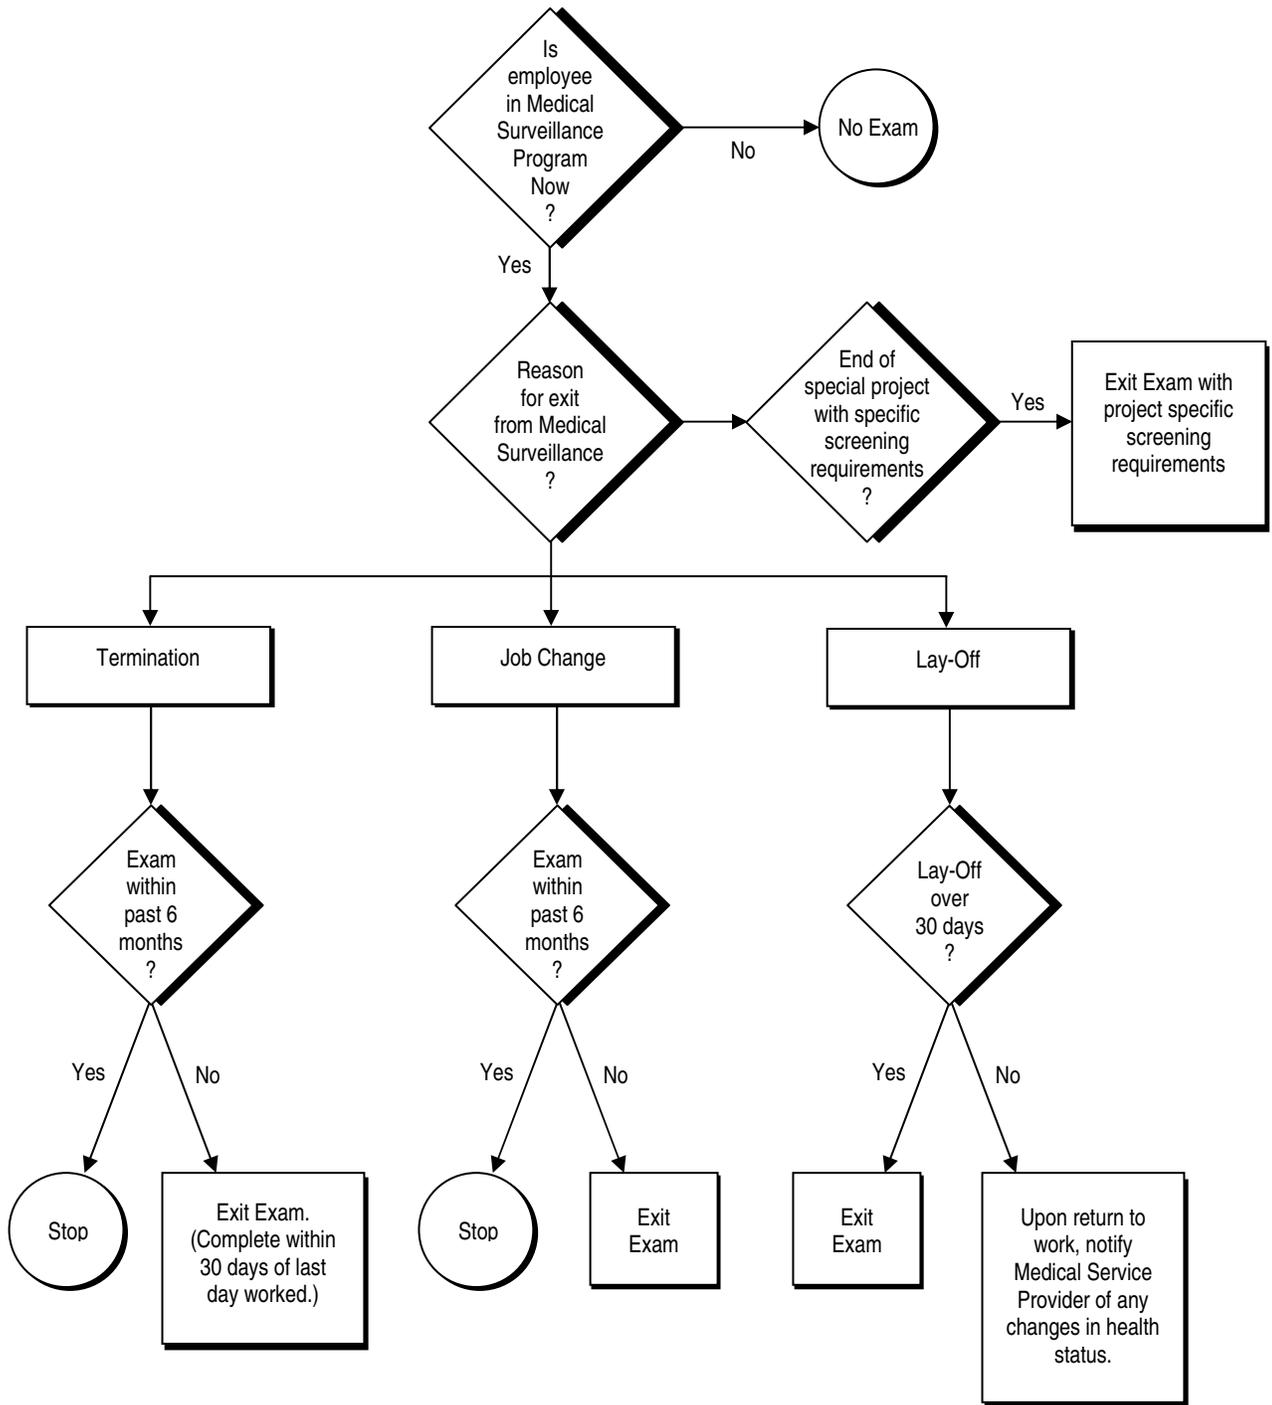

Health, Safety and Environment  
**HAZWOPER AND RESPIRATOR  
PRE-ASSIGNMENT BASELINE  
EXAM PROTOCOL**

Attachment 024-5 NA

Issue Date: February 2001  
Revision 8: January 2011

Note: Exit exams from Medical Service Provider or previous employer may be used for review as a URS Corporation baseline exam if completed within the past 3 months. A *WorkCare* Medical History Questionnaire is completed by the employee and submitted with a copy of the previous exam for physician review and approval.

**Health, Safety and Environment**  
**WAIVER OF EXIT MEDICAL**  
**SURVEILLANCE EXAM**

Attachment 024-7 NA

Issue Date: February 2001  
Revision 8: January 2011

I have been a participant in URS' Medical Screening and Surveillance Program, which entitles me to an exit medical surveillance exam upon reassignment to a position that does not require medical clearance or termination of my employment. I understand that URS encourages employees to schedule and complete an exit medical exam; however, I voluntarily relinquish the opportunity to have an exit medical exam.

### Billing

### Medical Surveillance Exam Clearances

**FIRST AID KIT  
SUPPLY LIST**

All first aid kits shall conform to the requirements of the ANSI Z308.1-2003, and shall contain the first aid items indicated below. The quantity, dimensions, or volume listed for each item is the **minimum** for compliance with this standard for Type I, II, or III kits. Type I kits are required to have a means for mounting in a fixed position and are generally not intended to be portable. Type II kits shall have a carrying handle. Type III kits shall have a carrying handle and shall provide a means to be mounted in a fixed position.

**Required Contents:**

- Absorbent Compress 32 sq in
- (16) Adhesive Bandages, 1X3 in
- Adhesive Tape - 3/8 in X 5 yd
- (10) Antiseptic 0.14 fl. oz. application
- (6) Burn Treatment, 1/32 oz. application
- Medical Exam Gloves
- Sterile pad - 3 X 3 in
- Triangular Bandage - 40 X 40 X 56 in

In addition to the required contents listed above, optional products and sizes may be included, depending on specific hazards, to augment a kit based upon the specific hazards existing in a particular work environment. Optional contents include:

- *Analgesic (Oral)* - Oral analgesics shall be packed in a single dose, tamper evident, package with full labeling as required by FDA regulations, and should contain no ingredients which are known to cause drowsiness.
- *Antibiotic Treatment* - Each antibiotic treatment shall be packaged in individual use applications containing at least 1/32 oz. of ointment. Each individual-use application shall not be reusable.
- *Bandage Compress* - Each compress shall consist of an absorbent, non-adherent pad substantially free from loose ends and raveling. The bandage shall be individually packaged, sealed and sterile.
- *Breathing Barrier* - The barrier shall be a single use disposable medical device for CPR use.
- *Burn Dressing* - Burn dressings shall be gel-soaked pad which is soluble in water and a single use.
- *Cold Pack* - Each cold pack shall be at least 4 X 5 in. and shall reach temperature within 10 seconds of activation. Cold packs shall activate under normal hand pressure and shall not leak under normal conditions of use.
- *Eye Covering* - Eye covering(s) shall have the ability to cover both eyes. Each eye covering shall be individually packaged, sealed, and sterile.
- *Eye Wash* - A minimum of 1 fl. oz. of a sterile isotonic buffered solution shall be contained in at least 0.5 fl. oz. individual use applications.
- *Roller Bandage* - Each bandage shall be at least 2 in. wide and at least 6 yd long. Each bandage shall be free from loose threads and raveling and individually packaged, and sealed

**URS SAFETY MANAGEMENT STANDARD 026  
NOISE AND HEARING CONSERVATION**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Noise and Hearing Conservation**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies where personnel may encounter noise exposures that may exceed 85 decibels, measured using an A-weighted scale (dBA), as an 8-hour time-weighted average (TWA).

### **2. Purpose and Scope**

The purpose of this procedure is to protect employees from hazardous noise exposures and to prevent hearing loss.

### **3. Implementation**

Implementation of this procedure is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. General**

1. The use of hearing protectors is required in any location where powered or motorized equipment or any other noise source could reasonably be expected to exceed 85 dBA. Whenever information indicates that any employee's exposure may equal or exceed an 8-hour TWA of 85 dBA, the project manager or location manager will be responsible for enforcing the proper use of hearing protectors.
2. Implement a hearing conservation program in accordance with 29 Code of Federal Regulations (CFR) 1910.95(c) when applicable. Work not applicable to 29 CFR 1910.95(c) will assess hazards of noise exposure on a task basis, and implement engineering or administrative controls to reduce employee noise exposure.
3. Hearing protectors will be used in the event that administrative or engineering controls are either not effective or not feasible, and the following criteria will be applicable to selection of hearing protection devices.
  - a. Require that at least two types of hearing protectors are available to employees free of charge, and that the type of hearing protector is suitable to the task.

## **URS SAFETY MANAGEMENT STANDARD**

### **Noise and Hearing Conservation**

---

- b. Require that hearing protectors are used in accordance with manufacturer's specifications to effectively protect hearing.
- c. Evaluate the effectiveness of the hearing protectors chosen. The manufacturer's assigned noise reduction rating (NRR) for hearing protection devices can seldom be achieved in workplace conditions; therefore this rating must be attenuated for real world conditions and use. To do so, subtract 7 from the NRR of the protector provided by the manufacturer. Divide this result by 2, and then subtract the remained from the observed "A" scale sound level measurement collected in the employee's work area (see Section 4.B). If this number is below 85, the hearing protectors are adequate for use in the work area.

#### **B. Noise Surveys**

1. Noise surveys must be conducted in a manner that reasonably reflects the exposure of the affected employees. Surveys must be conducted under the supervision of a URS Health, Safety, and Environment (HSE) Representative.
2. Sound-level meters and audio dosimeters used to determine employee exposure to noise sources must be Type II (accurate to within +/- 2 dBA), operated in "slow" response, on the "A" scale, and be calibrated to factory guidelines (including periodic factory recalibration).
3. Attachment 026-1NA (Sound Level Survey) and Attachment 026-2NA (Noise Dosimetry Field Sheet) may be used to record noise surveys.

#### **C. Noise Controls**

Eliminate noise sources to the extent possible. Examples of controls that must be considered include:

1. Adding or replacing mufflers on motorized equipment.
2. Adding mufflers to air exhausts on pneumatic equipment.
3. Following equipment maintenance procedures to lubricate dry bearings and replace worn or broken components.
4. Isolating loud equipment with barriers.
5. Replacing loud equipment with newer and quieter models.

## **URS SAFETY MANAGEMENT STANDARD**

### **Noise and Hearing Conservation**

---

6. Using caution signs and Hearing Protection Required signs to designate noisy work areas.
7. Installing HPD-dispensing devices at the entrance to noisy work areas.

#### D. Audiometric Exams

##### 1. Tests

- a. Details on the medical surveillance program (including audiometric testing) are included in SMS 024 – Medical Screening and Surveillance.
- b. Audiometric tests will be performed by a person meeting the requirements described in 29 CFR 1910.95(g)(3). Within 6 months of an employee's first exposure at or above the action level, a valid baseline audiogram will be established, against which subsequent audiograms can be compared. Testing to establish a baseline audiogram will be preceded by 14 hours without exposure to noise. Hearing protectors may be used as a substitute for the requirement that a baseline audiogram will be preceded by 14 hours without exposure to workplace noise. The medical surveillance provider will notify employees of the need to avoid high levels of non-occupational noise exposure during the 14-hour period immediately preceding the audiometric examination. For multi-year projects, an annual audiogram will be obtained for each employee exposed at or above an 8-hour time-weighted average of 85 decibels.
- c. Each employee's annual audiogram will be compared to that employee's baseline audiogram to determine if the audiogram is valid, and if there is a standard threshold shift (STS). A standard threshold shift is a change in hearing threshold relative to the baseline audiogram of an average of 10 dB or more at 2000, 3000, and 4000 hertz (Hz) in either ear. If the annual audiogram shows that an employee has suffered an STS, the employer will obtain a retest within 30 days, and consider the results in assessing an STS as the annual audiogram. The audiologist, otolaryngologist, or physician will review problem audiograms, and will determine whether there is a need for further evaluation. If an STS has occurred, the medical surveillance provider will notify the employee within 21 days of the determination.

#### E. Standard Threshold Shifts

## **URS SAFETY MANAGEMENT STANDARD**

### **Noise and Hearing Conservation**

---

If an employee's test results show a confirmed STS, their hearing protection will be evaluated and refitted, and a medical evaluation may be required.

#### **F. Training**

Verify that each employee who must work in a noisy environment is current on required Hearing Conservation Training. At a minimum, training shall be conducted annually. Training must include the following topics:

1. The effects of noise on hearing.
2. The purpose of hearing protectors.
3. The advantages and disadvantages of various types of hearing protectors.
4. The attenuation of various types of hearing protection.
5. The selection, fitting, care, and use of hearing protectors.
6. The purpose of audiometric testing.
7. An explanation of the audiometric testing procedure.

#### **5. Documentation Summary**

The following documentation will be maintained:

- A. Noise surveys, when applicable.
- B. Training records.
- C. Audiometric tests (must be maintained by the Company's medical record retention vendor (e.g., WorkCare)).

#### **6. Resources**

**URS SAFETY MANAGEMENT STANDARD 029**  
**PERSONAL PROTECTIVE EQUIPMENT**

---

# **URS** Safety Management Standard

## **Personal Protective Equipment**

---

### **1. Applicability**

This standard applies to all operations of URS Corporation and its subsidiary companies where the use of personal protective equipment (PPE) is anticipated.

### **2. Purpose and Scope**

The purpose of this standard is to provide information on recognizing those conditions that require PPE. PPE is designed to protect the employee from health and safety hazards that cannot be practically removed from the work environment.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Perform hazard assessments for those work activities that are likely to require the use of PPE.
  - 1. Use Attachment 029-1 NA to perform the assessment.
  - 2. Reevaluate completed hazard assessments when job conditions or duties change.
- B. Eliminate the hazards identified in Attachment 029-1 NA, if possible, through engineering or administrative controls.
- C. Select PPE that will protect employees if hazards cannot be controlled or eliminated.
  - 1. See Attachment 029-1 NA for recommended PPE.
  - 2. Review Material Safety Data Sheets for chemicals used for PPE recommendations.
  - 3. If needed, consult with the applicable safety representative for assistance in selecting PPE.
- D. Provide required PPE to employees free of charge (excluding, in some instances, components of standard work attire such as steel-toed boots and prescription safety glasses), assuring proper fit and providing a choice

**URS** Safety Management Standard  
**Personal Protective Equipment**

---

if more than one type of PPE is available. Where applicable, the local policy (office or project) regarding reimbursement for PPE will prevail.

- E. Provide the employees with the appropriate PPE whenever a hazard is recognized and PPE is required. However, when PPE is not required and the employee elects to wear his or her own PPE, the manager directing activities must ensure that the employee is properly trained in the fitting, donning, doffing, cleaning, and maintenance of his or her employee-owned equipment.
- F. Make employees aware that they are responsible for PPE maintenance, care, and proper use. Employees must inform their supervisors when a need arises to use PPE for which the employee has not received training, or when a condition exists where adequate PPE is not available.
- G. Conduct and document employee training.
  - 1. Train all employees who are required to wear PPE.
  - 2. Require that training includes:
    - a. When PPE is to be worn.
    - b. The type of PPE necessary for the task to be completed.
    - c. How to properly don, doff, adjust, and wear PPE.
    - d. Limitations of PPE.
    - e. Proper care, maintenance, useful life and disposal of PPE.
  - 3. Conduct training before PPE is assigned.
  - 4. Provide refresher training when:
    - a. The workplace changes, rendering previous PPE and training obsolete.
    - b. New types of PPE are assigned to the worker.
    - c. The worker cannot demonstrate competency in PPE use.
  - 5. Keep written records of the employees trained and type of training provided, including the date of training.

## **URS** Safety Management Standard **Personal Protective Equipment**

---

### H. PPE Specific Information

#### 1. Head Protection

- a. Use hard hats in areas where there is the possible danger of head injury from the impact of falling or flying objects, striking against objects, electrical shock and/or burns, or any combination of these hazards. Hard hats will be worn when required by site safety procedures, client/site requirements, or when posted as an entry requirement.
- b. Adjust the hard hat suspension to fit the wearer and to keep the shell a minimum of 1.25 inches (3.2 cm) above the wearer's head. Do not store materials in the suspension. Cold weather liners and perspiration control bands may be utilized within the hard hat unless specifically excluded by the manufacturer.
- c. Wear hard hats in the forward position unless written verification and instructions from the hard hat manufacturer indicate your hard hat model has been tested and found to be compliant when worn backwards.
- d. Type 1 helmets are designed to protect the employee from impact and penetration caused by objects hitting the top of the head; Type II helmets extend this protection to the sides of the head as well.
- e. Class G (General) helmets provide protection against impact, penetration, and limited electrical hazards up to 2,200 volts. Class E (Electrical) helmets meet the same criteria, but electrical protection is increased to 20,000 volts. Class C (Conductive) helmets only provide impact and penetration protection.
- f. Do not use bump caps as protection against head injury, except when the only potential hazard is striking against objects and the use has been approved a Business, Country, Group, Regional Business Unit (RBU), or Strategic Business Unit (SBU) Health, Safety and Environment Manager.
- g. Do not alter hard hats in a way that will downgrade their efficiency. Typical prohibited alterations include painting,

**URS** Safety Management Standard  
**Personal Protective Equipment**

---

drilling holes in shell, application of metal jewelry, etc. Replace hats with these alterations or with excessive scratches.

- h. Wear integral chinstraps when working in high-wind conditions or near helicopters.
- i. Inspect hard hats before use and remove from service if any of the following are observed: cracking, tearing, fraying, chalking, and flaking.
- j. Remove hard hats and their components from service and replace as recommended by the manufacturer. Hard hats must be replaced after no more than 5 years.

2. Hearing Protection

- a. Provide hearing protection in any location where powered or motorized equipment or any other noise source could reasonably be expected to exceed 85 dBA. Each task in the work area will be evaluated for potential worker noise exposure as required.
- b. Review SMS 026 – Noise and Hearing Conservation – for additional information.

3. Eye and Face Protection

- a. Use eye and/or face protection when machines or operations create the risk of eye and/or face injuries due to physical, chemical, and/or radiation sources. Safety glasses will be worn when required by site safety procedures, client/site requirements, or when posted as an entry requirement.
- b. Provide safety glasses that can be worn over corrective spectacles for employees whose vision requires the use of corrective lenses. Employees will consult with the applicable safety representative or project managers for policies on reimbursement for prescription safety glasses.
- c. Do not use of sunglasses in place of required safety glasses. Heavily tinted safety glasses will only be used in outdoor areas with suitable lighting. Colored or lightly tinted or gradient lenses may be used indoors as appropriate to the work conditions.

**URS** Safety Management Standard  
**Personal Protective Equipment**

---

- d. Tasks requiring grinding and cutting will require face shields over safety glasses. Tasks requiring power washing or handling corrosive chemicals will require a face shield over safety goggles. For welding tasks, refer to Supplemental Information B for lens selection criteria.
- e. Consult Supplemental Information A for additional information on types of eye and face protection and their various uses.

#### 4. Hand Protection

- a. Wear gloves when the hands are exposed to hazards such as, but not limited to, chemical absorption, cuts or lacerations, abrasions, punctures, chemical burns, thermal burns, vibration, or temperature extremes.
- b. Gloves must always be provided to workers for tasks with potential hand hazards.
- c. Identify hand hazards during job or task hazard analysis. A supply of appropriate gloves in various sizes must be provided to workers assigned to work on that task.
- d. Inspect chemical gloves for degradation or tears prior to use. Do not remove chemical gloves from the work area if it is visibly contaminated. Chemical gloves may be decontaminated or disposed of according to specified procedures. In some cases, inner disposable chemical gloves (e.g., nitrile) will be required for protection of hands during removal of contaminated gloves.
- e. Select chemical-resistant gloves using manufacturer's hazard-based selection programs or other published guides that identify compatibility of glove material with chemical hazards. Selection must also consider physical requirements of the task with regard to puncture resistance and need for flexibility and dexterity in performing the task.
- f. Review SMS 064 – Hand Safety – for additional information.

#### 5. Foot Protection

- a. Wear appropriate specialized protective footwear in the following environments:

**URS** Safety Management Standard  
**Personal Protective Equipment**

---

- i. Using harmful corrosive substances or processes.
  - ii. Having a high probability of puncture or crushing injuries.
  - iii. Performing regular assembly or disassembly of heavy system components.
  - iv. Working in wet conditions.
  - v. Working in extreme cold.
  - vi. Working around exposed electrical wires or connections.
  - vii. When using hand-operated compactors, snow blowers, pressure washers, or steam cleaners.
  - viii. Other activities or areas as designated by supervisors or safety personnel.
- b. Employees assigned to field projects who are not required to wear specified protective footwear (e.g., steel-toed boots, metatarsal protection, rubber boots, insulated boots, etc.) will wear substantial leather, high-sided work boots. Shoes (leather, canvas, tennis, deck, or other types of material), sandals, high-heeled shoes, etc., are not allowed on field project sites.
- I. Maintain Protective Equipment
- 1. Check PPE for damage, cracks, and wear prior to each use. Replace or repair equipment not found in good condition.
  - 2. Decontaminate non-disposable PPE with appropriate cleaner, as necessary, to prevent degradation of the equipment. Staff will remove any non-impermeable PPE/clothing that becomes contaminated with hazardous substances. These instructions are reiterated in the emergency decontamination procedures in the Health and Safety Plans.
- J. Periodically inspect worksites where employees are using PPE using Attachment 029-2 NA. Regularity of inspections should be determined by the project manager and/or site safety representative.

**HAZARD ASSESSMENT  
CERTIFICATION FORM**

Attachment 029-1 NA

Issue Date: July 2000  
Revision 8: September 2011

Location: \_\_\_\_\_ Job No.: \_\_\_\_\_

Date: \_\_\_\_\_ Assessment conducted by: \_\_\_\_\_

Specific tasks performed at this location: \_\_\_\_\_

*If any of the indicated hazards are present, eliminate the hazard or use the indicated PPE.*

**Overhead Hazards**

- |   |  |   |
|---|--|---|
| 1. Suspended/elevated loads, beams, or objects that could fall or strike head | <input type="checkbox"/> Yes <input type="checkbox"/> No | Hard hat, ANSI Z89, Class G, E or C                               |
| 2. Flying objects that could strike head                                      | <input type="checkbox"/> Yes <input type="checkbox"/> No | Hard hat, ANSI Z89, Class G, E or C                               |
| 3. Energized wires or equipment that could strike head                        | <input type="checkbox"/> Yes <input type="checkbox"/> No | Hard hat, ANZI Z89, Class G or E (dependent on potential voltage) |
| 4. Sharp objects or corners at head level                                     | <input type="checkbox"/> Yes <input type="checkbox"/> No | Hard hat, ANSI Z89, Class G, E or C                               |

**Eye Hazards**

- |  |  |   |
|--|--|---|
| 5. Chemical splashes or irritating mists       | <input type="checkbox"/> Yes <input type="checkbox"/> No | See Supplemental Information A for additional information   |
| 6. Excessive dust                              | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety glasses or goggles   |
| 7. Smoke and/or fumes                          | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety goggles  |
| 8. Welding operations                          | <input type="checkbox"/> Yes <input type="checkbox"/> No | Welding goggles; See Supplemental Information A and B for additional information                      |
| 9. Lasers/optical radiation                    | <input type="checkbox"/> Yes <input type="checkbox"/> No | Have URS HSE Representative assist you in proper selection  |
| 10. Projectiles                                | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety glasses or goggles plus face shield  |
| 11. Sawing, cutting, chipping, and/or grinding | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety glasses or goggles plus face shield; See Supplemental Information A for additional information |

**Face Hazards**

- |   |  |   |
|---|--|---|
| 12. Chemical splashes or irritating mists | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety goggles; See Supplemental Information A for more information; add face shield if irritating or corrosive |
| 13. Welding operations                    | <input type="checkbox"/> Yes <input type="checkbox"/> No | Welding goggles or welding helmet; see Supplemental Information A and B for additional information              |
| 14. Projectiles                           | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety glasses or goggles plus face shield  |

**Hand Hazards**

- |                                  |  |  |
|----------------------------------|--|--|
| 15. Chemical exposure            | <input type="checkbox"/> Yes <input type="checkbox"/> No | Use chemical-resistant gloves specific to hazard; consult MSDS, chemical hazard guide, or HSE Representative |
| 16. Sharp edges, splinters, etc. | <input type="checkbox"/> Yes <input type="checkbox"/> No | Leather or Kevlar gloves   |
| 17. Temperature extremes – heat  | <input type="checkbox"/> Yes <input type="checkbox"/> No | Leather gloves, welder's gloves, hot mill gloves   |

Health, Safety and Environment  
**HAZARD ASSESSMENT  
CERTIFICATION FORM**

Attachment 029-1 NA

Issue Date: July 2000  
Revision 8: September 2011

*If any of the indicated hazards are present, eliminate the hazard or use the indicated PPE.*

- |  |  |   |
|--|--|---|
| 18. Temperature extremes – cold          | <input type="checkbox"/> Yes <input type="checkbox"/> No | Insulated gloves                              |
| 19. Blood, fungus, biological agents     | <input type="checkbox"/> Yes <input type="checkbox"/> No | Nitrile gloves                                |
| 20. Exposure to live electrical currents | <input type="checkbox"/> Yes <input type="checkbox"/> No | Electrical gloves; consult HSE representative |
| 21. Sharp tools, machine parts, etc.     | <input type="checkbox"/> Yes <input type="checkbox"/> No | Leather or Kevlar gloves                      |
| 22. Material handling                    | <input type="checkbox"/> Yes <input type="checkbox"/> No | Leather gloves                                |

**Foot Hazards**

- |   |  |  |
|---|--|--|
| 23. Heavy materials (greater than 50 pounds) handled by employees | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety shoes or boots  |
| 24. Potential to crush whole foot                                 | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety shoes or boots with metatarsal guard  |
| 25. Sharp edges or points (puncture risk)                         | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety shoes or boots  |
| 26. Exposure to electrical hazards                                | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety shoes or boots with:<br><br>Conductive - Protects the wearer in an environment where the accumulation of static electricity on the body is a hazard.<br><br>Static dissipative - Reduces the accumulation of excess static electricity by conducting body charge to ground while maintaining a sufficiently high level of resistance.<br><br>Electrical hazard - Provides a secondary source of protection against accidental contact with live electrical circuits, electrically energized conductors, parts or apparatus, and is manufactured with non-conductive electrical shock resistant soles and heels. |
| 27. Slippery conditions   | <input type="checkbox"/> Yes <input type="checkbox"/> No | Rubber-soled boots or grips  |
| 28. Chemical contamination  | <input type="checkbox"/> Yes <input type="checkbox"/> No | Rubber, PVC, or polyurethane boots or boot covers with puncture and protective toe if task required  |
| 29. Wet conditions  | <input type="checkbox"/> Yes <input type="checkbox"/> No | Rubber boots or boot covers  |
| 30. Construction/demolition                                       | <input type="checkbox"/> Yes <input type="checkbox"/> No | Safety boots with metatarsal guard if foot-crushing hazard exists  |

**Fall Hazards**

- |   |  |                                       |
|---|--|---------------------------------------|
| 31. Elevations above 4 feet (general industry) or 6 feet (construction) without guardrails  | <input type="checkbox"/> Yes <input type="checkbox"/> No | ANSI A-10.14 Type 1 full-body harness |
| 32. Suspended scaffolds, boatswain's chairs, float scaffolds, or suspended staging          | <input type="checkbox"/> Yes <input type="checkbox"/> No | ANSI A-10.14 Type 1 full-body harness |
| 33. Working in trees  | <input type="checkbox"/> Yes <input type="checkbox"/> No | ANSI A-10.14 Type 1 full-body harness |
| 34. Working in vehicle-mounted elevating work platforms (e.g., bucket trucks, aerial lifts) | <input type="checkbox"/> Yes <input type="checkbox"/> No | ANSI A-10.14 Type 1 full-body harness |

Health, Safety and Environment  
**HAZARD ASSESSMENT  
CERTIFICATION FORM**

Attachment 029-1 NA

Issue Date: July 2000  
Revision 8: September 2011

**Water Hazards**

35. Working on or above water where a risk of drowning exist  Yes  No U.S. Coast Guard approved personal floatation device; Type I, II, or III

**Excessive Heat or Flame**

36. Full body chemical protective clothing in temperatures greater than 80 °F  Yes  No Cooling vest
37. Work around molten metal or flame  Yes  No Nomex or heat reflective clothing
38. Welding activities  Yes  No Welding leathers for those areas that are exposed to flame, spark, or molten metal

**Respiratory Hazards**

39. Airborne particulates, gases, vapors, or mists in excess of established exposure limits  Yes  No Refer to SMS 042 or URS HSE Representative for respirator selection guidance

**Excessive Noise**

40. Exposure to noise  Yes  No Ear plugs, muffs or both

**Body and Leg Protection**

41. Chemical exposure  Yes  No Contact URS HSE Representative for assistance in proper selection
42. Using chainsaw, cutting brush  Yes  No Chainsaw chaps
43. Exposure to snakes  Yes  No Snake chaps
44. Exposure to vehicle traffic or heavy equipment  Yes  No See SMS 032 and SMS 029 NA – Supplemental Information C for additional guidance

**I certify that the above inspection was performed to the best of my knowledge and ability, based on the hazards present on: \_\_\_\_\_**

**INSPECTION SHEET**

Attachment 029-2 NA  
  
 Issue Date: July 2000  
 Revision 8: September 2011

Name of Inspector \_\_\_\_\_ Date Inspected \_\_\_\_\_

<b>Hard Hats</b>	
1. The brim or shell does not show signs of exposure and excessive wear, loss of surface gloss, chalking, or flaking.	<input type="checkbox"/> Yes <input type="checkbox"/> No
2. Suspension system in hard hat does not show signs of deterioration, including cracking, tearing, or fraying.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. The brim or shell is not cracked, perforated, or deformed.	<input type="checkbox"/> Yes <input type="checkbox"/> No
4. Employees use hard hats in marked areas.	<input type="checkbox"/> Yes <input type="checkbox"/> No
5. Areas requiring hard hat usage are marked.	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>Safety Shoes</b>	
6. Safety shoes used by employees do not show signs of excessive wear.	<input type="checkbox"/> Yes <input type="checkbox"/> No
7. Areas requiring safety shoes are marked.	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>Work Gloves</b>	
8. Gloves are available and worn when needed.	<input type="checkbox"/> Yes <input type="checkbox"/> No
9. Gloves are appropriate for the task.	<input type="checkbox"/> Yes <input type="checkbox"/> No
10. Gloves do not show signs of excessive wear such as cracks, scrapes, or lacerations, thinning or discoloration, or break-through to the skin.	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>Protective Clothing</b>	
11. Protective clothing (including traffic control apparel) is worn by employees when required.	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>Hearing Protection</b>	
12. Noise hazard areas are posted.	<input type="checkbox"/> Yes <input type="checkbox"/> No
13. Employees are using earplugs or muffs when using noise producing equipment or working in posted noise hazard areas.	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>Safety Glasses</b>	
14. Eye hazard areas are marked or posted.	<input type="checkbox"/> Yes <input type="checkbox"/> No
15. Employees use safety glasses when working in eye hazard areas or working with equipment that produces an eye hazard.	<input type="checkbox"/> Yes <input type="checkbox"/> No
16. Face shields are used when required and worn over safety glasses.	<input type="checkbox"/> Yes <input type="checkbox"/> No

**REMARKS (All "No" answers indicate a hazard which needs to be fixed.)**

APPLICATIONS		
OPERATION	HAZARDS	RECOMMENDED PROTECTORS Bold Type Numbers = Slightly Preferred Protection
ACETYLENE – BURNING ACETYLENE – CUTTING ACETYLENE – WELDING	SPARKS, HARMFUL RAYS, MOLTEN METAL, FLYING PARTICLES	<b>7,8,9</b>
CHEMICAL HANDLING	SPLASH, ACID BRUNS, FUMES	<b>2,10</b> (For severe exposure, add 10 over 2)
CHIPPING	FLYING PARTICLES	<b>1,2,4,5,6,7,8</b>
ELECTRIC (ARC) WELDING	SPARKS, INTENSE RAYS, MOLTEN METAL	<b>9,11</b> (11 in combination with 4,5,6 in tinted lenses, advisable)
FURNACE OPERATIONS	GLARE, HEAT, MOLTEN METAL	<b>7,8,9</b> (For severe exposure, add 10)
GRINDING – LIGHT	FLYING PARTICLES	<b>1,3,4,5,6,10</b>
GRINDING – HEAVY	FLYING PARTICLES	<b>1,3,7,8</b> (For severe exposure, add 10)
LABORATORY	CHEMICAL SPLASH, GLASS BREAKAGE	<b>2</b> (10 when in combination with 4,5,6)
MACHINING	FLYING PARTICLES	<b>1,3,4,5,6,10</b>
MOLTEN METALS	HEAT, GLARE, SPARKS, SPLASH	<b>7,8</b> (10 in combination with 4,5,6 in tinted lenses)
SPOT WELDING	FLYING PARTICLES, SPARKS	<b>1,3,4,5,6,10</b>

Non-side shield spectacles available for limited hazard use requiring only frontal protection.

Health, Safety and Environment  
**WELDING LENS SELECTION**

SMS 029 NA  
Supplemental Information B  
Issue Date: February 2009  
Revision 1: December 2009

Operations	Electrode Size (1/32")	Arc Current	Minimum Protective Shade
Shielded metal arc welding (SMAW)	Less than 3	Less than 60	7
SMAW	3 – 5	60 – 160	8
SMAW	5 – 8	160 – 250	10
SMAW	More than 8	250 – 550	11
Gas metal arc welding and flux cored arc welding		Less than 60	7
Gas metal arc welding and flux cored arc welding		60 - 160	10
Gas metal arc welding and flux cored arc welding		160 – 250	10
Gas metal arc welding and flux cored arc welding		250 - 500	10
Gas tungsten arc welding		Less than 50	8
Gas tungsten arc welding		50 – 150	8
Gas tungsten arc welding		150 - 500	10
Air carbon arc cutting	(light)	Less than 500	10
Air carbon arc cutting	(heavy)	500 – 1000	11
Gas tungsten arc welding		Less than 20	8
Gas tungsten arc welding		20 – 100	8
Gas tungsten arc welding		100 – 400	10
Gas tungsten arc welding		400 – 800	11
Plasma arc cutting	(light)	Less than 300	8
Plasma arc cutting	(medium)	300 – 400	9
Plasma arc cutting	(heavy)	400 -800	10
Torch blazing			3
Torch soldering			2
Carbon arc welding			14
Gas welding			5 – 6
Oxygen cutting			3 - 5

**A. Class 1 Safety Apparel**

1. Class 1 safety apparel provides the minimum amount of required material to differentiate the wearer from the work environment.
2. At a minimum, this shall include 217 square inches (in<sup>2</sup>), or 0.14 square meters (m<sup>2</sup>), of fluorescent yellow-green, orange-red, or red background materials combined with 155 in<sup>2</sup> (0.10 m<sup>2</sup>) retro-reflective material. As an alternative, the apparel can have 310 in<sup>2</sup> (0.20 m<sup>2</sup>) of combined-performance material (i.e., materials that are both retro-reflective and fluorescent).
3. Class 1 safety apparel typically consists of a sleeveless traffic vest with retro-reflective bands no less than 0.98 inches (25 mm) in width.
4. Those occupational activities under which Class 1 safety apparel is typically used:
  - a. Permit full and undivided attention to approaching traffic;
  - b. Provide ample separation of the pedestrian worker from conflicting vehicle traffic; and
  - c. Permit optimum conspicuity in backgrounds that are not complex with vehicle and moving equipment speeds not exceeding 25 miles per hour (mph), or 40 kilometers per hour (kph).
5. Examples of pedestrian workers who could work in these situations may include:
  - a. Workers directing vehicle operators to parking/service locations;
  - b. Workers exposed to the hazards of warehouse equipment traffic;
  - c. Roadside "right-of-way" or sidewalk maintenance workers; and
  - d. Delivery vehicle drivers.

**B. Class 2 Safety Apparel**

1. Class 2 safety apparel provides superior visibility for the wearers by the additional coverage of the torso and is more conspicuous than Class 1.
2. At a minimum, this shall include 775 in<sup>2</sup> (0.50 m<sup>2</sup>) of fluorescent yellow-green, orange-red, or red background materials combined with 201 in<sup>2</sup> (0.13 m<sup>2</sup>) retro-reflective material. Combined-performance materials may not be used without background materials in Class 2.
3. Class 2 safety apparel typically consists of a full-torso sleeveless traffic vest with retro-reflective bands no less than 1.38 inches (35 mm) in width.
4. Those occupational activities under which Class 2 safety apparel is typically used:
  - a. Greater visibility is desired during inclement weather conditions;
  - b. Complex backgrounds are present;
  - c. Employees are performing tasks which divert attention from approaching vehicle traffic;

- d. Work activities take place in close proximity to vehicle traffic; and
  - e. Vehicle and moving equipment speeds exceed 25 mph (40 kph).
5. Examples of pedestrian workers who could work in these situations may include:
- a. Roadway construction workers;
  - b. Utility workers;
  - c. Survey crews;
  - d. Railway workers;
  - e. Forestry workers;
  - f. Parking and/or toll gate personnel;
  - g. Airport baggage handlers/ground crew;
  - h. Emergency response personnel;
  - i. Law enforcement personnel; and
  - j. Accident site investigators.

### **C. Class 3 Safety Apparel**

- 1. Class 3 safety apparel offers greater visibility to the wearer in both complex backgrounds and through a full range of body movements. Visibility is enhanced beyond Class 2 by the enhancement of background and reflective materials to the arms and/or legs.
- 2. At a minimum, this shall include 1240 in<sup>2</sup> (0.80 m<sup>2</sup>) of fluorescent yellow-green, orange-red, or red background materials combined with 310 in<sup>2</sup> (0.20 m<sup>2</sup>) retro-reflective material. Combined-performance materials may not be used without background materials in Class 3.
- 3. Class 3 safety apparel typically consists of a coveralls, jumpsuits, long or short-sleeved jackets, or long-sleeved shirts with retro-reflective bands no less than 1.97 inches (50 mm) in width. A sleeveless garment or vest alone shall not be considered Class 3 apparel.
- 4. Those occupational activities under which Class 3 safety apparel is typically used:
  - a. Workers are exposed to significantly high vehicle speeds and/or reduced sight distances (note that several sources have interpreted the vehicle speed requirements as 50 mph (80 kph) or more);
  - b. The worker and vehicle operator have high task loads, clearly placing the worker in danger; or
  - c. The wearer must be conspicuous through a full range of body motions at a minimum of 1280 feet (390 m) and must be identifiable as a person.
- 5. Examples of pedestrian workers who could work in these situations may include:
  - a. Roadway construction personnel;
  - b. Utility workers;

- c. Survey crews;
- d. Emergency response personnel; and
- e. Flagging crews.

**D. Class E Safety Apparel**

1. Class E apparel includes trousers or shorts which are part of a Class 3 apparel ensemble. Frequently a Class 2 vest is paired with Class E trousers, creating an overall ensemble which meets Class 3 apparel requirements. Class E garments are not intended to be worn without Class 2 or 3 garments.
2. At a minimum, Class E trousers shall have 465 in<sup>2</sup> (0.30 m<sup>2</sup>) of fluorescent yellow-green, orange-red, or red background materials combined with 108 in<sup>2</sup> (0.07 m<sup>2</sup>) retro-reflective material. Retro-reflective material shall encircle each leg (360° of visibility) and be placed not less than 1.97 inches (50 mm) above the bottom leg of the trouser.
3. At a minimum, Class E shorts shall have 465 in<sup>2</sup> (0.30 m<sup>2</sup>) of fluorescent yellow-green, orange-red, or red background materials combined with 108 in<sup>2</sup> (0.07 m<sup>2</sup>) retro-reflective material. Retro-reflective material shall encircle each leg.

**E. Headwear**

1. Headwear is considered an important accessory and compliments the overall visibility of the wearer. High-visibility headwear enhances visibility to the head of a moving worker in daylight and helps define the shape of the human form during nighttime exposures.
2. At a minimum, high-visibility headwear shall have 78 in<sup>2</sup> (0.05 m<sup>2</sup>) of fluorescent yellow-green, orange-red, or red background materials combined with 10 in<sup>2</sup> (0.0065 m<sup>2</sup>) retro-reflective material. As an alternative, the headwear can have 78 in<sup>2</sup> (0.05 m<sup>2</sup>) of combined-performance material.

**URS SAFETY MANAGEMENT STANDARD 030**  
**SANITATION**

# URS SAFETY MANAGEMENT STANDARD

## Sanitation

---

### 1. Applicability

This standard applies to the operations of URS Corporation and its subsidiary companies.

### 2. Purpose and Scope

The purpose of this standard is to provide employees with appropriate personal hygiene facilities, including toilets, wash rooms, and eating facilities, to protect employees from unsanitary conditions.

### 3. Implementation

Implementation of this standard is the responsibility of the URS manager directing activities of the facility or site.

### 4. Requirements

A. Prior to the start of site activities, ensure the availability of adequate toilet and wash facilities. Note: Mobile crews having transportation readily available (within 5 minute travel time) to nearby toilet facilities need not be provided with facilities.

1. Flush toilets will be used where available.
2. For job sites without flush toilets readily available, one of the following must be provided:
  - a. Chemical toilets.
  - b. Combustion toilets.
  - c. Recirculation toilets.
3. Other than construction sites, toilets will be provided for employees of each sex at sites according to the following ratio:

Number of Employees	Minimum # of toilets <sup>(1)</sup>
1 to 15	1
16 to 35	2
36 to 55	3
56 to 80	4
81 to 110	5
111 to 150	6
Over 150	<sup>(2)</sup>

**Notes:**

(1) Where toilet facilities will not be used by women, urinals may be provided instead of the minimum specified.

(2) One (1) additional fixture for each additional 40 employees.

**URS SAFETY MANAGEMENT STANDARD**  
**Sanitation**

---

- B. A means for washing hands must be provided next to or near toilet areas.
- C. For facilities under URS control:
  - 1. Maintain toilets and toilet area in good repair and in a clean and sanitary condition. Refer to SMS 021 – Housekeeping.
  - 2. Provide paper towels and soap or other suitable sanitizing material for washing hands.
  - 3. Construct toilets so that the interior is lighted, by artificial or natural light, adequate ventilation is provided, and all windows and vents are screened.
- D. Maintain availability and cleanliness of drinking (potable) water.
  - 1. Use backflow prevention devices, testing, and administrative controls for all potable water supply branches. Maintain backflow prevention devices in a sanitary condition.
  - 2. Keep water coolers and water dispensers in a sanitary condition and filled only with potable water. Clearly mark potable drinking water containers as “Drinking Water.”
  - 3. Clean and sanitize water containers daily. Tightly close, seal, date, and mark containers as to the contents. Provide containers with a tap, and refill daily.
  - 4. Provide fountain-type dispensers or one-use cups at each water dispenser. Provide a waste receptacle where disposable cups are used.
  - 5. Do not use common drinking cups.
  - 6. Conspicuously post outlets for non-potable water such as water for industrial or firefighting purposes (e.g., Danger – Water Unfit for Drinking, Washing, or Cooking).
  - 7. Laboratory-test drinking water obtained from streams, wells, or other temporary sources in accordance with federal, state, or local regulations, or often enough to ensure it is suitable for consumption. Maintain records of testing reports and results.

**URS SAFETY MANAGEMENT STANDARD**  
**Sanitation**

---

E. Eating Facilities

1. Operate and maintain food dispensing facilities established by URS in compliance with applicable health and sanitation regulations.
2. Ensure that buildings housing these facilities are floored completely, painted, well lighted, heated, ventilated, fly proof, and sanitary. Equip doors and windows with screens.
3. Use microwave ovens for food only.
4. Use refrigerators designated for food storage for food only (i.e., no chemical or samples storage).
5. Prohibit workers from eating and drinking or storing foods and drinks in areas where there is a potential for contamination.
6. Take positive control measures for protection against vermin, insects, and rodents.
7. Provide an ample supply of hot and cold water at all times in mess halls.
8. Clean break rooms /lunchrooms periodically. Refer to SMS 021 – Housekeeping.

F. Washing Facilities

1. Maintained each washing facility in a sanitary condition, and provide adequate water, soap, individual towels of cloth or paper, and covered receptacles for disposal of waste.
2. Provide emergency showers and eyewash facilities as required. Refer to SMS 065 – Injury Management.
3. Provide at least one shower for each 30 employees in construction camps. The use of a common towel is prohibited.

G. Waste Management:

1. Release sanitary sewage into sanitary sewer lines or to other proper disposal channels.
2. Do not dispose of garbage, refuse, or sewage in lakes, reservoirs, rivers, streams, or ditches.

**URS SAFETY MANAGEMENT STANDARD**  
**Sanitation**

---

3. Do not discharge hazardous waste into the sanitary sewer or storm sewer system.
4. Collect garbage and trash daily.
  - a. Provide lids for garbage containers located outside buildings, and keep them closed. Transport garbage offsite at least weekly.
  - b. Remove garbage from the site daily at remote field sites where wild animals are a hazard. Do not let garbage remain on site overnight.

**H. Change Rooms**

Provide heated and ventilated change rooms for changing, hanging, and/or drying clothing for operations subjecting workers to prolonged wetting or contact with hazardous materials.

**I. Sleeping Facilities**

1. Keep temporary sleeping quarters heated, ventilated, lighted, and clean. Screen all doors and windows.
2. Keep clean and sanitary, and periodically disinfect bunkhouses, bedding, and furniture.

**J. Notify property manager of sanitation issues for sites not under URS control.**

**K. Personal Hygiene**

Wash hands and face before eating, drinking, smoking, and using facilities.

**L. Inspect work sites periodically in accordance with Attachment 030-1 NA.**

**5. Documentation Summary**

The following information will be maintained in the project file:

- A. Completed inspection sheets.

**URS SAFETY MANAGEMENT STANDARD**  
**Sanitation**

**Toilets**

1. Are there an adequate number of toilets on site?  Yes  No  NA  
1 to 15 employees = 1 toilet  
16 to 35 employees = 2 toilets  
36 to 55 employees = 3 toilets  
56 to 80 employees = 4 toilets  
81 to 110 employees = 5 toilets
2. Toilets are in clean condition.  Yes  No  NA
3. Toilet paper is provided.  Yes  No  NA
4. Toilet areas are clean and sanitary.  Yes  No  NA

**Hand Washing Facilities**

5. Hand washing facilities are provided near toilets.  Yes  No  NA
6. Paper towels and soap are provided.  Yes  No  NA

**Drinking Water**

7. Drinking water is provided on site.  Yes  No  NA
8. Disposable cups are provided or fountain-type dispenser is provided.  Yes  No  NA
9. Drinking water containers are kept clean and tightly closed or covered.  Yes  No  NA

**Break Rooms**

10. Break rooms or eating areas are kept clean.  Yes  No  NA
11. Microwaves are used for food only.  Yes  No  NA
12. Microwave ovens are kept clean.  Yes  No  NA
13. Refrigerators are kept clean.  Yes  No  NA
14. Refrigerators are used to store food only.  Yes  No  NA

**Vermin**

15. Rats, mice, and other vermin are not living within buildings.  Yes  No  NA
16. Cockroaches and fleas are not thriving within buildings.  Yes  No  NA

**Employee Compliance**

17. Employees only eat/drink in areas free from contamination.  Yes  No  NA
18. Employees wash hands/face prior to eating, drinking, smoking.  Yes  No  NA

**REMARKS:**

---

---

---

**URS SAFETY MANAGEMENT STANDARD 032  
WORK ZONE TRAFFIC CONTROL**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Work Zone Traffic Control**

---

### **1. Applicability**

This standard applies to those activities of URS Corporation and its subsidiary companies involving work performed on roads, highways, and similar areas where motor vehicles may be a hazard, and where URS is responsible for traffic control.

### **2. Purpose and Scope**

This standard is intended to protect personnel from the hazards associated with work performed on or next to highways and roads.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Review the project in the planning phase to determine if any work will be performed on or adjacent to any road that will disrupt normal traffic flow.
- B. Where project operations will be performed on or adjacent to roadways, plan work to interfere as little as possible with traffic, and to provide and maintain ingress and egress for all residences and places of business that may be impacted.
- C. When required by local regulations or when there is a potential to disrupt traffic, a traffic control plan, in detail appropriate to the complexity of the project, must be prepared by a competent person and understood by all responsible parties before activities begin. Any changes in the traffic control plan should be approved by an official trained in safe traffic control practices.
  1. Competent persons are those who are knowledgeable about the fundamental principles of temporary traffic control and the work activities to be performed, and who have the authority to propose and implement corrective measures to eliminate hazardous situations associated with temporary traffic control.
  2. Design traffic control plans to meet requirements set forth in Part 6 of the *Manual on Uniform Traffic Control Devices (MUTCD)*, as well as those rules set by state, county, and cities in which work is

**URS SAFETY MANAGEMENT STANDARD**  
**Work Zone Traffic Control**

---

performed. At a minimum, the plan will include information on the following, as needed:

- a. Pedestrian and worker safety;
  - b. Temporary traffic control elements, including (but not limited to) temporary traffic control zones, advance warning zones, transition areas, activity areas, termination areas, tapers, buffers, detours, etc.;
  - c. Flagger controls, including high-visibility safety apparel, hand-signaling devices, and flagger procedures;
  - d. Temporary traffic control zone devices, including (but not limited to) signs, illuminated/flashing panels, warning devices, channelizing devices, drums, barricades, pavement markings; and
  - e. Temporary traffic control zone activities, including scope of work, duration, location, and portions of the roadway/shoulder affected.
- D. Submit the traffic control plan to the applicable road authority for approval.
- E. A Worksite Traffic Control Supervisor, certified by the American Traffic Safety Services Association (ATSSA) or an equivalent organization will be responsible for initiating, installing, and maintaining all traffic control devices. The Worksite Traffic Control Supervisor will also directly supervise all project flaggers.
1. Certified flaggers must attend an 8-hour work-zone traffic control course as taught by an ATSSA certified instructor (or equivalent).
- F. Execute the traffic control plan developed for the job site.
- G. Require all personnel exposed to the risks of moving roadway traffic or construction equipment to wear hardhats, safety glasses, sleeved shirts, long pants, work boots, and the appropriate class of high-visibility safety apparel. Safety apparel background material must be either fluorescent orange-red or fluorescent yellow-green, with accompanying reflective material of orange, yellow, white, silver, or yellow-green, or fluorescent versions of these colors.

**URS SAFETY MANAGEMENT STANDARD**  
**Work Zone Traffic Control**

---

H. Wear high-visibility clothing as follows:

1. Class 1 safety apparel (as defined by American National Standards Institute/International Safety Equipment Association [ANSI/ISEA]) for activities that permit the worker:
  - a. Full and undivided attention to approaching traffic;
  - b. Ample separation between the worker and vehicle traffic;  
and
  - c. Optimum visibility in uncomplicated backgrounds where vehicle and equipment speeds do not exceed 25 miles per hour (mph) (40 kilometers per hours [kph]).
2. Wear Class 2 safety apparel for activities where:
  - a. Greater visibility is required due to bad weather;
  - b. There are complicated backgrounds;
  - c. Employees are performing tasks that draw their attention away from approaching traffic;
  - d. Vehicle speeds exceed 25 mph (40 kph); and
  - e. Work activities take place closer to the vehicle traffic.
3. Wear class 3 safety apparel for activities where:
  - a. Workers are exposed to higher vehicle speeds (generally 50 mph [80 kph] or more) or reduced sight distances;
  - b. The worker and vehicle operators have a high task load; and
  - c. The worker must be visible through the full range of body motions as a person at a minimum of 1,280 feet (390 meters).
4. Refer to SMS 029 – Personal Protective Equipment, for additional information on high-visibility clothing requirements, including suggested apparel for each class.

- F. Perform inspection and maintenance of the Traffic Control devices using Attachment 032-1 NA daily, or at the beginning of each shift.

## **URS SAFETY MANAGEMENT STANDARD**

### **Work Zone Traffic Control**

---

#### **5. Documentation Summary**

The following information will be maintained in the project file:

- A. Copies of traffic control plans used on site.
- B. Training certificates for Traffic Control Supervisors and flaggers.
- C. Inspection records (Attachment 032-1 NA).

**URS SAFETY MANAGEMENT STANDARD 034  
UTILITY CLEARANCES AND ISOLATION**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Utility Clearances and Isolation**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies where personnel may encounter subsurface or overhead utilities.

### **2. Purpose and Scope**

Many field activities are conducted near aboveground and underground utilities. The primary purpose of this standard is to establish operating requirements that will permit employees to work safely in the vicinity of electrical, natural gas, fuel, water, and other utility systems and installations. The secondary purpose is to prevent economic damage to utility systems from operations associated with project-related activities.

The term *utility clearance* includes the following:

- A. The positive locating of utility systems in or near the work area.
- B. A signed statement by an appropriate representative attesting to the location of underground utilities and/or the positive de-energizing (including lockout) and testing of electrical utilities.

In some cases, utility representatives may deem it appropriate or necessary to use insulating blankets to isolate a power line. This is an acceptable alternative to positive de-energizing; however, only utility representatives can make the determination.

"Contact" with overhead power lines is considered to occur when equipment is closer to power lines than permitted by the criteria in the table in Section 4.C.2.b. (See note for operations in the United Kingdom).

On-site utilities, including emergency shut-off locations, shall be depicted on a utility drawing or plot plan. Emergency shut-off locations shall be verified before work activities commence.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Time for Completion

Complete utility clearances prior to the start of any work in the area of the utility that could feasibly result in contact with or damage to that utility.

## **URS SAFETY MANAGEMENT STANDARD**

### **Utility Clearances and Isolation**

---

#### B. Local Regulations

Research local and state codes and regulations regarding utility locating and isolation requirements. Utility companies and locating services are among the appropriate resources.

#### C. Overhead Power Lines

##### 1. Proximity to Power Lines

No work is to be conducted within 50 feet (15 meters) of overhead power lines without first contacting the utility company to determine the voltage of the system and the height (at the lowest point) of the line has been measured. No aspect of any piece of equipment is to be operated within 50 feet (15 meters) of overhead power lines without first making this determination.

An exclusion zone shall be created at ground level beneath and 50 feet (15 meters) perpendicular to the overhead power lines on each side. This exclusion zone shall be demarcated with visual indicators (e.g., signage, flagging, paint, cones). No equipment shall enter the exclusion zone without approval from URS site management.

##### 2. Operations adjacent to overhead power lines are *prohibited* unless one of the following conditions is satisfied:

- a. Power has been shut off, positive means (such as lockout) have been taken to prevent the lines from being energized, lines have been tested to confirm the outage, and the utility company has provided a signed certification of the outage.
- b. The minimum clearance from energized overhead lines is presented in the following table, or the equipment will be repositioned and blocked so that no part, including cables, can come within the minimum clearances listed in the table.

<b>Minimum Distances from Power Lines</b>	
Nominal System (kilovolt, kV)	Minimum Required Distance
0–50	10 feet (3 meters)
51–100	12 feet (3.6 meters)
101–200	15 feet (4.6 meters)
201–300	20 feet (6.1 meters)
301–500	25 feet (7.6 meters)
501–750	35 feet (10.7 meters)
751–1000	45 feet (13.7 meters)

## **URS SAFETY MANAGEMENT STANDARD**

### **Utility Clearances and Isolation**

---

Note: For operations in the United Kingdom, the specific safe distance is determined by the utility company.

- c. The power line(s) has been isolated through the use of insulating blankets, which have been properly placed by the utility. If insulating blankets are used, the utility will determine the minimum safe operating distance; get this determination in writing with the utility representative's signature.
3. All inquiries regarding electric utilities must be made in writing and a written confirmation of the outage/isolation must be received by the appropriate URS representative prior to the start of the task that may impact the utility.

#### D. Underground Utilities

1. Do not begin subsurface work (e.g., trenching, excavation, drilling, etc.) until a check for underground utilities and similar obstructions has been conducted. The use of as-built drawings must be confirmed with additional geophysical or other surveys. Attachment 034-1 NA may be used to verify all utilities have been located prior to performing subsurface work.
2. Contact utility companies or the state/regional utility protection service at least two (2) working days prior to excavation activities to advise them of the proposed work and to ask them to establish the location of the underground utility installations prior to the start of actual excavation. One Call utility location service is available throughout the United States by calling 811. Where these services are unavailable (e.g., private properties), contract with an independent utility locating service to perform an evaluation of subsurface utilities.
3. Obtain utility clearances for subsurface work on both public and private property. Clearances are to be in writing and signed by the party conducting the clearance.
4. Protect and preserve the markings of approximate locations of facilities until the markings are no longer required for safe and proper excavations. If the markings of utility locations are destroyed or removed before excavation commences or is completed, the URS representative must notify the utility company, utility protection service, or the utility locating service to inform them that the markings have been destroyed.

## **URS SAFETY MANAGEMENT STANDARD**

### **Utility Clearances and Isolation**

---

5. Do not conduct mechanical-assisted subsurface work (e.g., work using a powered drill rig, mechanical excavator, etc.) within five (5) feet (1.5 meters) of a confirmed or suspected utility or other subsurface structure. Confirm minimum distances for mechanical-assisted subsurface work with the utility owner, as distances beyond this five-foot minimum may be required.
6. Nondestructive clearance techniques (e.g., vacuum extraction or other hand clearing means) are required prior to drilling/excavating in higher risk locations, including chemical plants, retail service stations, or other locations with complex underground utility systems.
7. Subsurface work within five feet (1.5 meters) of a confirmed or suspected utility or other subsurface structure must be done by nondestructive clearing techniques to the point where the obstruction is visually located and exposed. Once the obstruction location is confirmed in this manner, mechanical-assisted work may begin.
8. Reference SMS 013 – Excavation Safety for additional information regarding subsurface operations.

#### **E. Utility Strikes**

1. Utility strikes (unplanned contact with utilities resulting in damage to the utility or its protective coating) shall be reported in accordance with SMS 049 – Injury/Illness/Incident Reporting & Notifications.
2. All damaged utilities shall be repaired by a qualified and/or licensed professional.

#### **F. Training**

Conduct a briefing for site employees regarding the hazards associated with working near the utilities and the means by which the operation will maintain a safe working environment. Detail the method used to isolate the utility and the hazards presented by breaching the isolation.

## **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Documents requesting utility clearance.
- B. Documents confirming utility clearance.

**URS SAFETY MANAGEMENT STANDARD**  
**Utility Clearances and Isolation**

---

C. Training/briefing documentation of each isolation.

**6. Resources**

- A. Utility Locating Services (typically under "Utility" in the Yellow Pages)

**URS SAFETY MANAGEMENT STANDARD 042  
RESPIRATORY PROTECTION**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Respiratory Protection**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies that may require the use of respiratory protection, including Immediately Dangerous to Life and Health (IDLH) and emergency conditions. This program also addresses the voluntary use of respirators.

### **2. Purpose and Scope**

The purpose of this standard is to protect those employees performing operations for which exposures cannot be controlled by use of conventional engineering or administrative controls, and prior to establishing a negative air exposure assessment, and to require that respiratory protective equipment is selected, used, maintained, and stored in accordance with acceptable practices. This procedure establishes the minimum standard for respirator training, selection, and use during the performance of all work requiring such protection.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Before assigning hazardous jobs to employees, determine if respirators are required.
  - 1. Assign a project-specific Respiratory Protection Program administrator. This position shall be manned by a competent industrial hygienist or other technically qualified person who knowledgeable of the requirements of the URS and project-specific programs, have appropriate training in the principles and application of respiratory protection, and have the authority to conduct program evaluations.
  - 2. If the potential for respiratory hazards exists for any portion of a job, complete Attachment 042-1 NA – Identifying When A Respirator Is Needed.
  - 3. Contact a local Health, Safety, and Environment (HSE) Manager, Regional or Strategic Business Unit (RBU/SBU) HSE Manager, or URS Certified Industrial Hygienist (CIH) for assistance, as needed, if any of the questions in Attachment 042-1 are checked "yes."

## **URS SAFETY MANAGEMENT STANDARD**

### **Respiratory Protection**

---

4. Follow instructions in Attachment 042-2 NA – Voluntary Use or Respirators – for employees who wish to wear respirators on a voluntary basis when not required to by URS or a regulatory agency.
  5. Follow all the requirements of this standard for employees who wish to voluntarily use tight-fitting (e.g., air purifying) respirators.
  6. Required respirators will be paid for by URS and will be provided without cost to the employee.
  7. Control worker's exposure to air contaminants, where practicable, by engineering or administrative controls, or by substitution of process materials with less-toxic substances. Use respirators only when engineering or administrative controls are not feasible or completely effective.
- B. Select the proper respirator for the job.
1. Contact the appropriate HSE Manager or CIH for assistance in respirator selection for those jobs identified in Attachment 042-1 NA.
  2. Contact the appropriate HSE Manager for follow up if there are any problems implementing the recommendations made.
- C. Require employees who will use respirators to be medically qualified by a project medical consultant (PMC) before fit-testing and assigning them a respirator. The PMC should preferably be an occupational physician; however, the Occupational Safety and Health Administration (OSHA) allows any physician or licensed health care professional (PLHCP) to conduct evaluations of respiratory protection medical forms. The PMC, where required, will determine the physiological and psychological status that is relevant to wearing different types of respirators. The PMC will review all questionnaires and test results and verify in writing that workers are physically and psychologically able to perform work while using respiratory protective devices. These determinations will be made using guidelines established by the PMC.
1. For program details, refer to SMS 024 – Medical Screening and Surveillance.
  2. Require that employees have a current and accurate Medical Surveillance form (Attachment 024-2).
  3. Obtain a copy of the employee's Health Status Medical Report from the Office Health and Safety Representative. The consulting occupational

**URS SAFETY MANAGEMENT STANDARD**  
**Respiratory Protection**

---

physician of the medical service provider following each work-related examination issues the Health Status Medical Report. Employees cannot be assigned respirators unless they are medically cleared for respirator use.

- D. Require respirator users to receive appropriate training.
  - 1. All respirator users must be trained:
    - a. Before they are assigned a respirator.
    - b. Annually thereafter.
    - c. Whenever a new hazard or job is introduced.
    - d. Whenever employees fail to demonstrate proper use or knowledge.
  - 2. Document training in accordance with the requirements of SMS 055 – Training.
  - 3. Training must address, at a minimum, the following:
    - a. Why the respirator is necessary, and what conditions can make the respirator ineffective.
    - b. What the limitations and capabilities of the respirators are.
    - c. How to inspect, put on and remove, and check the seals of the respirator.
    - d. What the respirator maintenance and storage procedures are.
    - e. How to recognize medical signs and symptoms that may limit or prevent effective use of the respirator.
    - f. The engineering and administrative controls being used and the need for respirators.
    - g. The hazards and consequences of improper respirator use.
    - h. How to recognize and handle emergency situations.
- E. Require respirator users to be fit tested.

## **URS SAFETY MANAGEMENT STANDARD**

### **Respiratory Protection**

---

1. Any employee who has been assigned a reusable respirator must be fit tested on an annual basis (no more than 1 year may elapse between fit tests), or when the employee is assigned a respirator of a different make, type, or size from that previously tested.
2. Qualitative or quantitative fit testing can be performed by contract or in-house personnel.
3. Obtain a signed, written copy of the fit-test results. The fit-test results should include:
  - a. Employee's name and employee identification number.
  - b. Respirator brand, model, and size fitted for.
  - c. Date fit tested.
  - d. Method of fit testing used.
  - e. Name and signature of fit tester.
  - f. Manufacturer and serial number of fit-testing apparatus (if used).

A fit test results form is available as Attachment 042-3 NA.

- F. The project-specific Respiratory Protection Program administrator will issue respirators to persons who must wear respirators for protection against harmful atmospheres should be given adequate training to ensure that the correct respirator is issued for each application. This training should include, but not necessarily be limited to, the following:
  1. Establishment of a working knowledge of the specific types of respirators to be issued, their limitations, and the importance of issuing only the respirators for which each user is specifically approved.
  2. Familiarization with the respirator maintenance and repair program in order to be able to identify any respirator that is improperly cleaned or needs repair.
  3. Familiarization with the procedures for respirator issue. Only persons trained to ensure that proper respirators are issued will be permitted to issue respirators to persons needing them.
- G. Where required by Section 2.C of SMS 043 – Personal Monitoring, conduct initial exposure assessments for contaminants of concern. Record collected air-monitoring data. Respiratory protection must be worn until such

**URS SAFETY MANAGEMENT STANDARD**  
**Respiratory Protection**

---

assessments have been conducted, and it is determined that respiratory protection is not warranted.

- H. Provide qualified employees with respirator(s) and adequate amounts of parts and cartridges.
  - 1. Assign employees whose duties require respirators their own respirator for which they have been fit tested.
  - 2. Provide special eyeglass inserts designed for the respirator if an employee must wear eyeglasses with a full-facepiece respirator. Contact lenses may be worn when wearing a full-facepiece respirator.
  - 3. Respirators and cartridges must be approved by the National Institute for Occupational Safety and Health (NIOSH). Military-issue respirators are approved under Military Standard AR 11-34.
- I. Require respirators to be used properly.
  - 1. Prohibit facial hair where the respirator-sealing surface meets the wearer's face.
  - 2. Require employees to perform a positive and negative fit check every time the respirator is put on.
  - 3. Employees will leave the area where respirators are being used:
    - a. Before removing the facepiece for any reason.
    - b. To correct any respirator malfunction.
    - c. To change the respirator and/or respirator cartridges.
    - d. The employee becomes ill (dizziness, nausea, etc.).
    - e. If any of the following is detected:
      - 1. Vapor or gas breakthrough
      - 2. Leakage around the facepiece
      - 3. Increased breathing resistance.
  - 4. Use cartridges with End-of-Service-Life indicators, or determine the respirator cartridge change-out schedule. See Supplemental Information A for guidance.

## **URS SAFETY MANAGEMENT STANDARD**

### **Respiratory Protection**

---

- J. Require respirators to be cleaned and stored properly.
  - 1. Clean and disinfect respirators after each use.
  - 2. Store respirators in a plastic bag or case and in a clean location.
  - 3. Inspect respirators before use and after each cleaning.
  
- K. Address issues associated with special-use respirators (self-contained breathing apparatus; air-supply respirators; emergency escape respirators).
  - 1. Self-Contained Breathing Apparatus  

Inspect self-contained breathing apparatus monthly and after each use in accordance with manufacturer's instructions.
  
  - 2. Air-Supplied Respirators
    - a. Air used for atmosphere-supplying respirators must meet or exceed the requirements for Type 1 – Grade D breathing air. Never use oxygen.
      - 1. A certificate of analysis must accompany bottled air.
      - 2. Compressors used to supply breathing air must:
        - i. Prevent entry of contaminated air into the air supply.
        - ii. Minimize moisture content.
        - iii. Have suitable in-line sorbent beds and filter to provide appropriate air quality.
        - iv. Have a high-carbon-monoxide alarm that sounds at 10 part per million (ppm).
  
    - b. Couplings on air-hose lines must be incompatible with other gas system.
  
  - 3. Emergency Escape Respirators
    - a. Emergency escape respirators intended to be used only for emergency exit. This may include situations where IDLH atmospheres and oxygen-deficient conditions exist. These respirators may be used as stand-alone protection or in conjunction with air-supplied respirators.

**URS SAFETY MANAGEMENT STANDARD**  
**Respiratory Protection**

---

- L. Require follow-up training and medical surveillance to be provided as directed.
  - 1. Provide follow-up physical examinations as directed by the SMS 024-3 NA – Medical Screening and Surveillance Exam Protocol table.
  - 2. Provide follow-up physicals as directed by the Occupational Health Manager.
  - 3. Provide annual refresher training.
  - 4. Provide annual fit testing.
  - 5. Conduct regular evaluations to determine the effectiveness of the program's implementation. This should include interviews with employees regarding such topics as respirator selection, fit, and maintenance.
  
- M. Where required, implement procedures for dealing with entry into areas with IDLH conditions.
  - 1. Ensure at least one employee or attendant is located outside the area with the IDLH atmosphere. This person must be equipped with:
    - a. Pressure demand or other positive pressure self-contained breathing apparatus (SCBA), or a pressure demand or other positive pressure supplied-air respirator with auxiliary SCBA; and either
    - b. Appropriate retrieval equipment to removing the employee within the IDLH atmosphere, or
    - c. Equivalent means of rescue.
  - 2. Maintain communication between the employee(s) in the area with the IDLH environment and the employee(s) or attendant(s) outside the area. Communication may include visual, voice, or signal lines.
  - 3. In an emergency situation, the manager overseeing operations must be notified before employee(s) outside the area with the IDLH atmosphere enter the space.

#### **5. Documentation Summary**

All Respiratory Protection Program documentation must be protected by the Privacy Act of 1974 (PL-93-579), and confidential medical information not required by OSHA may be protected under the Health Insurance Portability Accountability Act of 2003 (HIPAA).

The following information will be maintained in the office/project file by the Project Manager:

1. Identifying When A Respirator Is Needed – Attachment 042-1 NA.
2. Voluntary Use of Respirators – Attachment 042-2 NA.
3. Fit Test Record – Attachment 042-3 NA.
4. Employee Health Status Medical Report, including clearance for respirator use.
5. Employee Respirator Training Records.

Project: \_\_\_\_\_

Answer the questions below for the jobs you are to perform on site. If a 'Yes' response is checked, consult with an HSE Manager or a URS Certified Industrial Hygienist (CIH) to determine if a respirator is truly needed for the job; and if so, the type of respirator needed.

It is important to be aware of the respiratory protection requirements for any chemicals you are exposed to; these can be found on the Material Safety Data Sheets or chemical labels.

Material Used or Process to be Performed	Notes
<b>Abrasive Blasting</b> <ul style="list-style-type: none"><li>Abrasive blasting (with any type of grit or material) will be performed <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li><li>Employee will fill abrasive blasting pots or perform clean-up activities <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li><li>Employee will be in a contained area where abrasive blasting is taking place <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li></ul>	
<b>Acids</b> <ul style="list-style-type: none"><li>Liquid or powder acids will be used in a situation where acid vapors, mists, or dust may be breathed <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li></ul>	
<b>Adhesives</b> <ul style="list-style-type: none"><li>Aerosols-propelled adhesives are to be used in areas where there is insufficient or no local exhaust ventilation <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li><li>Two-part adhesives (mix part one with two, let set, then use) are to be used in areas where there is limited ventilation <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li></ul>	
<b>Alkalis/Bases/Caustics</b> <ul style="list-style-type: none"><li>Powdered alkalis will be used in a situation where an airborne dust may be breathed <input type="checkbox"/> Yes <input type="checkbox"/> No _____</li></ul>

**Instructions: Have the employee that is opting to use a respirator for non-overexposure conditions read this page, and then sign on the bottom of the page. Maintain a copy in the employee's training file.**

Respirators are an effective method of protection against designated hazards when properly selected and worn. Respirator use is encouraged, even when exposures are below the exposure limit, to provide an additional level of comfort and protection for employees. However, if a respirator is used improperly or not kept clean, the respirator itself can become a hazard to the employee.

Sometimes employees may wear respirators to avoid exposures to hazards, even if the amount of the hazardous substance does not exceed the limits set by OSHA standards. If your employer provides respirators for your own voluntary use, or if you provide your own respirator, you need to take certain precautions to be sure that the respirator itself does not pose a hazard.

1. Read and follow all instructions provided by the manufacture on use, maintenance, cleaning, and care, and warnings regarding the respirators limitations.
2. Choose respirators certified for use to protect against the contaminant of concern. NIOSH (the National Institute for Occupational Safety and Health) certifies respirators in the U.S. A label or statement of certification should appear on the respirator or respirator packaging; it will tell you what the respirator is designed for and how it will protect you.
3. Do not wear your respirator into atmospheres containing contaminants against which your respirator is not designed to protect. For example, a respirator designed to filter dust particles will not protect you against gases, vapors, fumes, smoke, or very small solid particles.
4. Keep track of your respirator so that you do not mistakenly use someone else's respirator.
5. If you have any health conditions (asthma; high blood pressure; emphysema; heart disease) that could be aggravated by using a respirator, you should check with your doctor before using one.

<b>URS</b>	<b>Health, Safety and Environment RESPIRATOR STANDARD OPERATING PROCEDURE</b>	Attachment 042-4 NA  Issue Date: July 2000 Revision 5: August 2010
------------	---	---

Job Task Reviewed: \_\_\_\_\_

Date Reviewed: \_\_\_\_\_

Task Review by: \_\_\_\_\_

**ADMINISTRATIVE PROCEDURES**

1. All respirator users must be medically qualified to use respirators.
2. Respirator users must be trained annually in respirator use, and must be fit-tested annually.
3. The respirator will be used only by the person to whom it was issued.
4. Persons using glasses who are required to use a full-face respirator may use contact lenses or eyeglass inserts designed for the respirator.

**GUIDANCE FOR SELECTION OF RESPIRATOR AND CARTRIDGES/FILTERS**

1. Respirators are currently being issued and used for the following job activities:  
\_\_\_\_\_  
\_\_\_\_\_
2. The respirator will be equipped with the following cartridges/filters:  
\_\_\_\_\_
3. Filters are to be changed when the breathing resistance increases.
4. Cartridges are to be changed \_\_\_\_\_ (frequency), or when the contaminant you are protecting yourself from can be smelled or tasted.

**FIT TESTING & FIT CHECKING**

1. Fit testing is required annually. To arrange for fit testing, call your local, project, or regional safety representative or qualified industrial hygienist.
2. Respirator users will “fit check” the respirator every time the respirator is put on:
  - **Negative Check** – Cover filters/cartridges with palms of hands and breath in: leakage should not be detected around the face seal of the respirator. Do not use if leakage is detected.
  - **Positive Check** – Cover the exhalation valve cover with palm of hand and blow out slightly: leakage should not be detected around the respirator seal.
  - **For Air Supply Respirators** – Kink or close off air supply hose and breath in: leakage should not be detected around the face seal of the respirator.

**CLEANING AND MAINTENANCE OF RESPIRATOR**

1. Clean and disinfect respirator after every use.
2. Inspect respirator at the end of work every day in use to ensure parts are not missing. Replace missing parts from stock supply.
3. Store clean respirator in labeled plastic bag out of direct sunlight.
4. Do not alter respirator in any way.

Health, Safety and Environment  
**RESPIRATOR CARTRIDGE  
CHANGE SCHEDULE**

SMS 042 NA  
Supplemental Information A  
Issue Date: February 2009  
Revision 2: August 2010

A cartridge change schedule must be developed for cartridges or canisters used with air purifying respirators that do not have an End of Service Life Indicator (ESLI). The purpose of this is to prevent contaminants from breaking through the respirator's sorbent cartridge(s), and thereby over-exposing employees. NIOSH has approved ESLIs for only four cartridges or canisters (mercury vapor, carbon monoxide, ethylene oxide, and hydrogen sulfide). Historically we have relied on the warning properties (odor, irritation) of a contaminant to dictate cartridge change. OSHA no longer allows this as the sole basis for changing respirator cartridges. In developing a change schedule the following factors should be considered:

- Contaminants
- Concentration
- Frequency of use (continuously or intermittently throughout the shift)
- Temperature and humidity
- Work rate
- The presence of potentially interfering chemicals.

The worst-case conditions should be assumed to avoid early breakthrough. This must be documented in the project health and safety plan or, in the cases of office or labs, in the site specific Respiratory Protection Program.

### **Sources of Help**

OSHA provides assistance in developing respirator cartridge change schedules on its website at [http://www.osha.gov/SLTC/etools/respiratory/change\\_schedule.html](http://www.osha.gov/SLTC/etools/respiratory/change_schedule.html).

Most cartridge manufacturers maintain on-line interactive cartridge service life programs that can be used to evaluate the service life against many contaminants. Typically, these do not evaluate the service life against mixtures (multiple contaminants).

Because of the complexity in evaluating mixtures, OSHA offers the following guidance:

- When the individual compounds in the mixture have similar breakthrough times (i.e., within one order of magnitude), service life of the cartridge should be established assuming the mixture stream behaves as a pure system of the most rapidly migrating component with the shortest breakthrough time (i.e., sum up the concentration of the components).
- Where the individual compounds in the mixture vary by 2 orders of magnitude or greater, the service life may be based on the contaminant with the shortest breakthrough time.

### **Rule of Thumb** (*"The Occupational Environment" - Its Evaluation and Control*)

- If the chemical's boiling point is  $>70$  °C and the concentration is less than 200 ppm, you can expect a service life of 8 hours at a normal work rate.
- Service life is inversely proportional to work rate.
- Reducing concentration by a factor of 10 will increase service life by a factor of 5.
- Humidity above 85% will reduce service life by 50%.

### **OSHA Interpretation**

The OSHA inspection procedures for the respiratory protection standard specifies that where contaminant migration is possible, respirator cartridges/canisters should be changed after each work shift where exposure occurs unless there is objective data to the contrary (description studies) showing the performance in the conditions and schedule of use/non-use found in the workplace.

- A. A hazard analysis of the workplace must be performed before selecting respirators. The analysis must consider inhalation hazards under routine and foreseeable emergency conditions. Other factors to consider when choosing respirators include skin and eye exposure, the effects of heat or cold, use of protective clothing, employee conditioning, and workload.
- B. Respiratory hazards that must be identified include:
1. Oxygen Deficiency
  2. Air Contaminants
  3. Particulates
  4. Toxic Gases

C. Evaluating Exposures

There are several options on how to evaluate exposures:

1. One option is to rely on personal monitoring data of employees. Representative exposure data provided by industry or laboratory studies is acceptable as long as it applies to similar tasks and conditions at the worksite.
2. The professional judgment provided by the Business, RBU, SBU, Office, or Project HSE Manager and/or as recommended by a qualified industrial hygienist or safety professional may be employed for the task.
3. If the exposure cannot be identified or estimated, then the atmosphere is considered immediately dangerous to life or health (IDLH). Atmospheres with levels of oxygen below 19.5% are also defined as IDLH.
4. Trained and qualified technical personnel shall perform assessment of the degree of respiratory hazard through sampling and testing of the work environment. Problems requiring special respiratory protection should be discussed with the Business or Regional HSE Manager or qualified industrial hygienist.
5. The Project HSE Manager shall establish procedures to control respiratory hazards through engineering or administrative controls, product/material substitution, respiratory protective devices, or a combination of these methods.
6. He/she shall also perform annual evaluations of the effectiveness of the project's respiratory protection program. These evaluations shall be documented.
7. The Project HSE Manager shall select and provide adequate respiratory protective devices for use on the project. This selection shall be based upon the specific type of air contaminant(s), the concentration of the contaminants(s) or oxygen deficiency in the work environment.
8. Establish a change schedule for air-purifying respirators based upon objective information or data that will ensure that cartridges are changed before the end of their useful life. OSHA has mandated that reliance on warning properties is no longer valid

- A. A quantitative fit-test provides the most accurate information; qualitative fit testing depends on the respirator wearer's sense of smell and taste (subjective response). OSHA's standard requires fit-testing for any face mask (full or half) designed to have a tight seal along the face, whether it is used in a positive or negative pressure mode, and whether it is disposable or not. If the required fit factor is greater than 100, then a quantitative fit-test must be performed.
- B. Each person will have a qualitative or quantitative fit test when first required to wear a respirator, every 12 months when respirators will be worn thereafter, or as hazards or respiratory needs change.
- C. Each person will have a qualitative or quantitative fit test for each specific make(s) and model(s) of respirator(s) for which the worker may wear.
- D. Under no circumstances shall a worker be allowed to use any respirator if the results of the qualitative fit test indicate that the worker is unable to obtain a satisfactory seal.
- E. The eight exercises required by OSHA under the respiratory protection standard, 29 CFR 1910.134, Appendix A, are as follows (note that these are not required controlled negative pressure (CNP) quantitative fit testing):
1. normal breathing
  2. deep breathing
  3. head side to side
  4. head up and down
  5. talking out loud
  6. grimacing (quantitative only)
  7. bending
  8. normal breathing
- F. Qualitative and quantitative fit testing must be performed in negative pressure mode for all tight fitting respirators, whether the respirator is positive or negative pressure demand.
- G. Qualitative and quantitative fit testing must be conducted according to one of the protocols found in 29 CFR 1910.134, Appendix A.
- H. Employees using respirators when not required under the standard (i.e., dust masks or comfort masks for nuisance type dust without a specified exposure level) must be aware of the potential hazards of using a respirator. See Attachment 042-2 of this standard or Appendix D of 29 CRF 1910.134 for information program requirement.

- A. Physical characteristics, functional capabilities, and performance limitations of various types of respirators shall be considered in the selection process.
- B. Specifics regarding hazard classification, descriptions of respirator types and modes of operation, and the capabilities and limitations of respirators are listed in ANSIZ88.2-1992.
- C. To select the correct respirator, the hazards must first be identified in the workplace and then follow these steps:
  1. Determine if the environment is IDLH.
    - a. All oxygen deficient atmospheres shall be considered IDLH.
    - b. If the employee exposure cannot be reasonably estimated, the atmosphere must be considered IDLH.
  2. Identify the contaminant(s) present in the atmosphere and answer the following questions:
    - a. What is the concentration?
    - b. Are they gaseous or particulate?
    - c. Are the contaminants IDLH?
  3. After completing the above steps select the appropriate respirator for the particular hazard(s).
    - a. IDLH – Provide a full facepiece NIOSH certified pressure demand SCBA with a minimum service life of 30 minutes or a full facepiece pressure demand airline respirator with an auxiliary self-contained air supply.
    - b. Non-IDLH – A respirator must be provided that is appropriate for the contaminant(s) identified.
  4. For protection against gases and vapors, either an atmosphere-supplying respirator or an air-purifying respirator equipped with a NIOSH certified end-of-service-life indicator (ESLI) for the contaminant must be used. In lieu of an ESLI, a change schedule for cartridges based on objective information or data may be used to ensure cartridges are changed before the end of their service life occurs (see Supplemental Information A). In most cases, respirator cartridge manufacturers provide a product specific on-line or CD-ROM based “Service Life Calculator” that allows determination of useful service life of a cartridge based on expected concentration and environmental and work conditions. If neither an ESLI or change schedule is available, a supplied air respirator must be used.
  5. For protection against particulates, an atmosphere-supplying respirator or an air-purifying respirator equipped with a NIOSH-certified high-efficiency particulate air (HEPA) filter under 30 CFR 11 or an air-purifying respirator equipped with a NIOSH certified filter for particulates under 42 CFR 84 must be used.

6. There are three classes of filters under NIOSH (N, R, and P series) with three levels of filter efficiency in each class – 95%, 99%, and 99.97% (classified as 100). All filters can be used regardless of aerosol size. The new filters are classified as follows:
  - a. N – For solid particulates and non-oil aerosols that do not degrade filter performance.
  - b. R – For solid particulates and degrading oil-based aerosols. R filters have “use limitations.”
  - c. P – For solid particulates and degrading oil-based aerosols. P filters generally have no “use limitations” other than those normally associated with particulate filters. The P100 filter is the replacement for the HEPA filter.
- E. Particulate filters are tested with 200 mg of loading but in many cases, these filters may exceed this capacity. Filtration efficiency may actually increase as the filter cake develops on the filter. Increased resistance to breathing or obvious taste or odor in the respirator would be cause to examine, re-evaluate and replace the filter cartridge

**A. Inspection**

Routinely used air-purifying and airline respirators should be checked as follows before and after each use:

1. Examine the facepiece for:
  - a. Excessive dirt.
  - b. Cracks, tears, holes or physical distortions of shape from improper storage.
  - c. Inflexibility of rubber facepiece (stretch and knead to restore flexibility).
  - d. Cracked or badly scratched lenses in full facepieces.
  - e. Incorrectly mounted full facepiece lenses, or broken or missing mounting clips.
  - f. Cracked or broken air-purifying element holder(s), badly worn threads or missing gasket(s) if required.
2. Examine the head straps or head harness for:
  - a. Breaks.
  - b. Loss of elasticity.
  - c. Broken or malfunctioning buckles and attachments.
  - d. Excessively worn serrations on head harness, which might permit slippage (full facepieces only).
3. Examine the exhalation valve for the following after removing its cover:
  - a. Foreign material, such as detergent residue, dust particles or human hair under the valve seat.
  - b. Cracks, tears or distortion in the valve material.
  - c. Improper insertion of the valve body in the facepieces.
  - d. Cracks, breaks or chips in the valve body, particularly in the sealing surface.
  - e. Missing or defective valve cover.
  - f. Improper installation of the valve in the valve body.
4. Examine the air-purifying element for:
  - a. Incorrect cartridge, canister, or filter for the hazard.
  - b. Incorrect installation, loose connections, missing or worn gasket or cross threading in the holder.
  - c. Expired shelf-life date on the cartridge or canister.
  - d. Cracks or dents in the outside case of the filter, cartridge or canister, indicated by the absence of sealing material, tape, foil, etc., over the inlet.
5. If the device has a corrugated breathing tube, examine it for:

- a. Broken or missing and connectors.
  - b. Missing or loose hose clamps.
  - c. Deterioration, determined by stretching the tube and looking for cracks.
6. Examine the harness of a front-or back-mounted gas mask for:
- a. Damage or wear to the canister holder, which may prevent its being held in place.
  - b. Broken harness straps for fastening.

**B. Self Contained Breathing Apparatus (SCBA)**

Follow manufacturer specifications for storage, maintenance and cleaning of SCBA systems.

**C. Manual Cleaning**

A generalized cleaning procedure is typically found in the manufacturer's manual. Read the respirator manual and follow the manufacturer's recommendations.

1. Remove canisters, filters, valves, straps and speaking diaphragms from the facepiece.
2. Wash facepiece and accessories in warm soapy water or a commercially available cleaner, following the manufacturer's instructions. Gently scrub the respirator.
3. Rinse parts thoroughly in clean water.
4. Air dry in a clean place or wipe dry with a lint less cloth.

**D. Machine Cleaning**

Machines may be used to expedite the cleaning, sanitizing, rinsing, and drying of large numbers of respirators. Read the machine-cleaning manual and follow manufacturer's recommendations.

1. Extreme care must be taken to ensure against excessive tumbling and agitation, or exposure to temperatures above those recommended by the manufacturer (normally 120°F maximum), as these conditions are likely to result in damage to the respirators.
2. Ultrasonic cleaners, clothes-washing machines, dishwashers, and clothes dryers have been specially adapted and successfully used for cleaning and drying respirators.

**E. Disinfection**

1. Disinfection is required when more than one person uses the respirator. Recommended NIOSH disinfection procedures include immersion of the respirator body for two minutes in a 50 ppm chlorine solution (about 2 ml bleach to 1 liter of water). Rinse thoroughly in clean water and dry.
  - a. Immersion times have to be limited to minimize damage to respirators. The solutions can age rubber and rust metal parts. Caution must be

taken to thoroughly rinse the respirator after cleaning and disinfection to prevent dermatitis.

- b. An alternate method is to purchase a commercially prepared solution for disinfection/decontamination and follow the directions recommended by the manufacturer.
2. Each person wearing a respirator shall examine the respirator before use in accordance with the training and instruction provided during fit testing.
3. After cleaning and sanitizing, each respirator shall be examined to determine if it is in proper working condition, if it needs replacement of parts or repairs, or if it should be discarded. Respirator inspection shall include, when applicable, a check for tightness of connections; for the condition of the respiratory inlet covering, head harness, valves, connecting tubes, harness assemblies, filters, cartridges, canisters, end-of-service life indicator, and shelf life date(s), and for the proper function of regulators, alarms, and other warning systems.
4. Each rubber or other elastomeric part shall be inspected for pliability and signs of deterioration. Each air and oxygen cylinder shall be inspected to ensure that it is fully charged according to the manufacturer's instructions.

#### **F. Repair**

Only persons trained in proper respirator assembly and correction of possible respirator malfunctions and defects shall do replacement of parts or repairs. Replacement parts shall be only those designed for the specific respirator being repaired. Reducing or admission valves, regulators, and alarms shall be returned to the manufacturer for repair or adjustment. The valve, regulator, or alarm manufacturer must approve instrumentation for valve, regulator, and alarm adjustments and tests.

#### **G. Storage**

Respirators shall be stored in a convenient, clean and sanitary location. The purpose of good respirator storage is to ensure that the respirators will function properly when used. Respirators shall be stored in a manner that will protect them against dust, sunlight, heat, extreme cold, excessive moisture, or damaging chemicals. Respirators shall be stored to prevent distortion of rubber or other elastomeric parts. This can be done by storing the respirators in hermetically sealed plastic bags, or plastic bags capable of being sealed. Emergency and rescue use respirators that are placed in work areas shall be quickly accessible at all times, and the storage cabinet or container in which they are stored shall be clearly marked.

**URS SAFETY MANAGEMENT STANDARD 043  
PERSONAL MONITORING (INDUSTRIAL HYGIENE)**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Personal Monitoring (Industrial Hygiene)**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies where employees may be exposed to airborne concentrations of hazardous air contaminants potentially exceeding permissible limits. Note that this standard does not cover monitoring for asbestos operations (SMS 008 – Asbestos Operations), hexavalent chromium (SMS 083 – Chromium (VI) Inhalation Exposure Protections), confined spaces (SMS 010 – Confined Space), heat stress (SMS 018 – Heat Stress), or noise (SMS 026 – Noise and Hearing Conservation).

### **2. Purpose and Scope**

The purpose of this standard is to assist and provide guidance to URS personnel who need to conduct personal industrial hygiene monitoring. Monitoring will be conducted to evaluate the exposures of URS employees to concentrations of toxic particulates, fibers, gases, vapors, mists, radionuclides, pathogens, hazardous biological agents, or to oxygen-deficient atmospheres.

Personal monitoring must be conducted under the following conditions:

- A. Where directed by a facility or site-specific health and safety plan.
- B. Where employees are exposed to known or suspected human carcinogens (e.g., beryllium, vinyl chloride, etc.).
- C. Where regulations require "initial exposure assessments" (e.g., lead, asbestos, methylene chloride, hexavalent chromium). The only exception to conducting an "initial exposure assessment" where there is a regulatory requirement to do so is when similar exposure assessments have been conducted under similar site conditions within 1 year prior to the start of work on the current project or site.
- D. When directed by a client or required by contract.
- E. At the direction of a Health, Safety, and Environment (HSE) Manager in response to employee concerns or incidents involving chemical exposure.
- F. Co-sampling during regulatory inspections.
- G. Routine monitoring in compliance with regulatory requirements.

## **URS SAFETY MANAGEMENT STANDARD**

### **Personal Monitoring (Industrial Hygiene)**

---

#### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

#### **4. Requirements**

##### **A. Procedures for Personal Industrial Hygiene Monitoring**

1. Calibrate sampling equipment in accordance with the manufacturer's recommendations and the approved sampling methodology.
2. Collect samples using the most current applicable methodologies established by either the National Institute for Occupational Safety and Health (NIOSH) *Manual of Analytical Methods*, U.S. Department of Labor – Occupational Safety and Health Administration (OSHA) *Sampling and Analytical Methods*, or applicable guidelines for the host country.
3. Select an analytical laboratory accredited by the American Industrial Hygiene Association (AIHA), or equivalent host country certification, licensing, or accreditation, to analyze the personal air samples.

Note: There are several programs under which a laboratory may receive AIHA accreditation. The laboratory must be currently accredited for the specific program, scope category, and field of testing for the analysis that will be performed, not merely hold AIHA accreditation.

4. Require the selected laboratory to use the applicable analytical methodologies and document quality control procedures.
5. Ensure equipment is maintained, serviced, and calibrated in accordance with manufacturer's recommendations.
6. Document personal monitoring activities using the appropriate URS Industrial Hygiene Monitoring Form; require that all laboratory chain-of-custody forms be properly completed; and ensure samples are sealed and secured according to Quality Assurance procedures.

**URS SAFETY MANAGEMENT STANDARD**  
**Personal Monitoring (Industrial Hygiene)**

---

7. Ensure workers are being protected (e.g., engineering controls, respiratory protection, PPE) during the monitoring phase. Determine whether medical surveillance is required.

**B. Evaluation of Personal Monitoring Results**

1. Where feasible, require that a URS Certified Industrial Hygienist (CIH) approved by an HSE Manager evaluate the analytical results.
2. Obtain a written evaluation report from the HSE manager. If exposures exceed the Action Level and/or Permissible Exposure Limit for the air contaminant(s) of concern, a verbal report is to be made to the senior facility, project, or site manager immediately, and the evaluation report will include required corrective actions.
3. Complete evaluation reports within 5 working days of the receipt of the analytical results.

**C. Procedures for Direct-Read Air Monitoring**

1. Direct-read air monitoring instruments are used primarily as screening tools to provide real-time evaluations of hazardous airborne contaminants at a project site.
2. Select an appropriate air monitor for the air contaminant to be measured.
3. Calibrate monitor in accordance with manufacturer's recommendations. Dates of full instrument calibration will be recorded on the direct-read instrument and on any associated calibration data sheets. If full instrument calibrations are not performed daily, then bump tests (exposure to a known concentration of contaminant) will be performed to verify calibration and ensure alarms are working appropriately.
4. Conduct air monitoring using techniques identified by the instrument manufacturer.
5. Ensure equipment is maintained, serviced, and calibrated in accordance with manufacturer's recommendations.
6. Document personal monitoring activities using the appropriate URS Industrial Hygiene Monitoring Form.

**URS SAFETY MANAGEMENT STANDARD**  
**Personal Monitoring (Industrial Hygiene)**

---

7. Ensure workers are being protected (e.g., engineering controls, respiratory protection, PPE) during the monitoring phase. Determine whether medical surveillance is required.
8. Where required by client request or by unique or high hazard areas, individual portable direct-read monitors shall be used.

**D. Evaluation of Personal Monitoring Results**

1. Compare measured results with project-specific Action Levels and/or published Permissible Exposure Limits. If exposures exceed the Action Level and/or Permissible Exposure Limit for the air contaminant(s) of concern, take corrective actions as identified in the site-specific health and safety plan. Where questions exist about the results, contact a CIH approved by an HSE Manager to evaluate the analytical results.

**E. Communication of Sample Results and Evaluation**

1. Provide copies of the evaluation report to the employee(s) monitored and to employees working in the area for which the exposures could be representative, within 5 days of receipt of lab results.
2. Provide a copy of the evaluation report and monitoring data to the manager directing activities of the facility or site for filing purposes.
3. Personal identifiers (e.g., name, address, employee number) or information which could reasonably be used to identify specific employees (e.g., exact age, height, weight, race, sex, date of initial employment, job title), must be removed from analysis reports before access to the exposure data is provided.

**F. Corrective Actions**

Implement required corrective actions immediately. If workers are being exposed above the PEL, respiratory protection should be worn in accordance with SMS 042 – Respiratory Protection. Engineering controls should be used to reduce exposures to the extent possible

**G. Exposure Records**

1. Exposure records include workplace monitoring, biological monitoring, material safety data sheets and chemical inventories. Sampling results, the collection methodology (sampling plan), a

## **URS SAFETY MANAGEMENT STANDARD**

### **Personal Monitoring (Industrial Hygiene)**

---

description of the analytical and mathematical methods used, and a summary of other background data relevant to interpretation of the results obtained, must be retained for at least thirty (30) years.

#### **5. Documentation Summary**

The following documents will be maintained in the project profile:

- A. Calibration data.
- B. Completed IH Monitoring Form(s).
- C. Evaluation Report with sample results (provide copy to affected employee as well).
- D. Relevant prior initial exposure assessments.

**URS SAFETY MANAGEMENT STANDARD 046  
SUBCONTRACTOR HEALTH AND SAFETY REQUIREMENTS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Subcontractor Health and Safety Requirements**

---

### **1. Applicability**

This standard is applicable to subcontractors retained by the Infrastructure & Environment and Federal Services businesses of URS Corporation and its subsidiary companies that perform:

- Intrinsically higher-risk construction-related activities (e.g., drilling, excavation, surveying, demolition, electrical contracting, steel erection etc.).
- Significant building or infrastructure alteration, demolition, and/or repair activities using their own workforce or equipment.
- Activities on hazardous waste sites.
- Activities in government services operations (e.g., aviation repair, vehicle repair, warehousing, facility operations, and maintenance) where the annual cost of the subcontract exceeds \$1,000,000.
- An activity where URS Corporation does not supervise the day-to-day activities and work efforts of subcontractor workers, **and** the subcontractor has a designated Supervisor on the work site.

This procedure is applicable to the operations of subcontractors and sub-subcontractors of any tier.

This procedure does not apply to third-party contractor operations where there is no subcontract relationship between the contractor and URS. Health, Safety, and Environment issues regarding third-party contractor operations are governed by project-specific contracts, and are not covered by this standard.

### **2. Purpose and Scope**

This procedure provides requirements on the pre-evaluation of subcontractor safety programs; contractual risk management; subcontractor safety performance on the job site; and the responsibilities of the Project Manager with respect to subcontractor jobsite safety performance.

Each URS subcontractor must be evaluated at least annually using Attachment 046-1 NA, "Subcontractor Safety Evaluation Form," or equivalent client or URS International Operations form, in order to perform work on any new URS projects.

## **URS SAFETY MANAGEMENT STANDARD**

### **Subcontractor Health and Safety Requirements**

---

#### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

#### **4. Requirements**

A. Pre-qualification of Subcontractor – The Project Manager will complete the following procedures for all subcontractors retained on projects covered by this standard (the PM should also require subcontractors to follow these procedures with respect to pre-qualification of sub-subcontractors of any tier):

1. Request all subcontractor candidates to complete the attached Subcontractor Safety Evaluation Form (Attachment 046-1 NA).
2. Conduct an assessment of each subcontractor's qualifications with respect to the subcontractor health and safety evaluation criteria contained in Attachment 046-2 NA.
3. If the subcontractor does not meet the criteria established in Attachment 046-2 NA, and URS must retain the contractor, the Subcontractor Variance Form (Attachment 046-3 NA) must be completed and approved by a Regional, or Strategic Business Unit (SBU) Health, Safety, and Environment (HSE) Manager.
4. Verify that subcontractors meet the insurance requirements as stated in URS' agreement with the subcontractor, or as approved by URS Legal Counsel or Contracting Manager/Officer.
5. If the subcontractor has been successfully evaluated within the last 12 months, that evaluation may be substituted.
6. For long-term operations, update this evaluation within 12 months of the previous evaluation.

B. Contractual and Risk Management Requirements of Subcontractors

1. Ensure that the subcontractor is contractually bound to comply with applicable client and URS HSE Program requirements.
2. Ensure that subcontractor is contractually bound to develop additional safety procedures for work that is exclusive to their activities on the site, and for which they may have superior knowledge.

## **URS SAFETY MANAGEMENT STANDARD**

### **Subcontractor Health and Safety Requirements**

---

3. Assess compliance of subcontractor's insurance with the URS Corporation subcontract requirements (including, but not limited to, necessary types and amounts of coverage, URS Corporation additional insured endorsement, etc.).
4. Ensure that URS has the right in its subcontract, without liability to URS, to stop the subcontractor's work in the event of any violations of the applicable Health and Safety Plan.

#### C. Subcontractor Safety Representative

1. Require each subcontractor to appoint a Subcontractor Safety Representative (SSR) who:
  - a. Is knowledgeable of the subcontractor's activities.
  - b. Understands the safety requirements of the subcontractor's activities.
  - c. Has the ability to recognize and the authority to correct safety deficiencies and execute a stop work order should an imminent danger arise.
  - d. Has the responsibility for the administration of the subcontractor Health and Safety Program.
  - e. Will serve as the direct contact with URS Corporation regarding resolution of health and safety issues.

#### D. Communication

1. Provide the SSR with information regarding Site Safety Program including but not limited to:
  - a. Client Requirements
  - b. URS HSE Program
  - c. Site Hazard Communication Program
  - d. Site Emergency Action Plan
  - e. Any additional safety information from other contractors or subcontractors working on the site.

## **URS SAFETY MANAGEMENT STANDARD**

### **Subcontractor Health and Safety Requirements**

---

2. Provide the SSR with the name of the URS project or site contact and alternate for addressing site health and safety issues.
3. Require the participation of subcontractors in all Site Safety Briefings.
4. Require subcontractor compliance with all safety directives and/or stop work orders issued by the URS site representatives.
5. Require the subcontractor to notify the URS project or site manager when they will utilize short service employees (i.e., employees with less than six months of experience) to perform on-site activities. The URS project or site manager must approve the use of any short service employees by the subcontractor prior to mobilization. Site management will interact with the short service employee to verify their level of competency.

#### **E. Subcontractor Safety Performance**

1. To the extent reasonable in light of URS' scope of work under the client contract, visit the site and periodically observe subcontractor's operations (i.e., conduct spot checks) to assess whether subcontractor appears to be conducting their operations in accordance with applicable health and safety requirements. Periodically review any required subcontractor health and safety written documentation for compliance with applicable requirements.
2. In the event that unsafe acts or unsafe conditions are observed, immediately stop work, and bring them to the attention of the SSR for resolution.
3. Investigate all injuries/illnesses related to subcontractor operations to identify causes and effect corrective actions.
4. In the event of serious and/or continuing subcontractor breaches of applicable health and safety requirements, contact legal counsel to assess whether formal contractual action is appropriate under the subcontract.
5. Once a job is completed, a subcontractor's safety performance should be reviewed and feedback provided to subcontractor management.

#### **F. Subcontractor Database**

1. A database is available to store Attachment 046-1 NA completed by subcontractors. The database is available to all URS Lotus Notes users.

## **URS SAFETY MANAGEMENT STANDARD**

### **Subcontractor Health and Safety Requirements**

---

2. A RBU or Regional HSE Manager can upload completed Attachment 046-1 NA. Contact your Office HSE Representative or Regional HSE Manager for information on how to access the database.

#### **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Subcontractor Health and Safety Evaluation Form (Attachment 046-1 NA)
- B. Applicable and current Insurance Certificates
- C. Names and telephone numbers of SSR for each subcontractor
- D. Verification of Health and Safety documents transmitted to subcontractors and received from subcontractors
- E. Identified safety deficiencies as applicable for subcontractors and verification of correction of conditions
- F. All other safety related documentation between URS and subcontractor such as training certifications, etc.
- G. Subcontractor safety plan, incident reports, and resolution reports.

#### **6. Resources**

- A. "Occupational Injury and Illness Rates by SIC," Bureau of Labor Statistics, U. S. Department of Labor (<http://www.bls.gov/iif/oshsum.htm>)
- B. Managing Subcontractor Safety, Prepared by The Construction Industry Institute, Safety Task Force, Publication 13-1, The University of Texas at Austin, Austin, Texas, 1991 (<http://www.construction-institute.org/>)
- C. American National Standard Construction and Demolition Operations—Safety and Health Program Requirements for Multi-Employer Projects, ANSI A10.33-1992, National Safety Council, Itasca, Illinois 60143-3201 (<http://www.nsc.org>)

**Health, Safety and Environment**  
**SUBCONTRACTOR SAFETY**  
**EVALUATION FORM**

Attachment 046-1 NA  
 Issue Date: July 1999  
 Revision 8: September 2011

It is the policy of URS to provide a safe and healthful environment for all of its employees through the prevention of occupational injuries and illnesses. As such, URS considers safety as paramount and requests the following information of all subcontractors.

Company Name: _____	Date: _____
Address: _____	Contact Name: _____
_____	Title: _____
City: _____	Telephone: _____
State/Province: _____	Fax: _____
Zip/Postal Code: _____	Email: _____

Type of services performed: \_\_\_\_\_

Has your company previously performed work as a subcontractor to URS?  Yes  No

*If "Yes" explain the nature of the work, project location, and project date, and URS Project Manager and telephone number.*

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

How many years has your organization been in business under your firm's name? \_\_\_\_\_

If applicable, what was your organization's previous name(s)? \_\_\_\_\_

**1. WORKERS' COMPENSATION EXPERIENCE INFORMATION**

*(United States Only)*

Insurance Carrier(s): \_\_\_\_\_

Contact for Insurance Information: \_\_\_\_\_

Title: \_\_\_\_\_ Telephone: \_\_\_\_\_ Fax: \_\_\_\_\_

A. For U.S. operations - List your firm's Interstate Worker Compensation Experience Modification Rate (EMR) for the three most recent years: (Information is available from your workers compensation insurance carrier.)

For international operations - List the applicable performance rating (e.g., NEER Performance Index in Canada) for your company.

**Health, Safety and Environment**  
**SUBCONTRACTOR SAFETY**  
**EVALUATION FORM**

Attachment 046-1 NA  
  
Issue Date: July 1999  
Revision 8: September 2011

<u>Year</u>	<u>EMR Interstate (or international equivalent)</u>
_____	_____
_____	_____
_____	_____

- B. We require verification of your EMR (or international equivalent). Please attach the endorsement page from your policy listing your rating, or have your insurance carrier or broker provide this information on their letterhead.
- C. If your rating exceeds 1.0 for any one or more years above, please explain:

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**2. SAFETY PERFORMANCE**

- A. Please consolidate your firm's injury and illness data for the last 3 years and complete the table below. The information provided must be for your company as a whole, not an individual office location. **For U.S. operations, provide copies of your OSHA 300 and 300A logs for the last 3 years.**

	YEAR	YEAR	YEAR
A. Average Number of Employees			
B. Number of Fatalities			
C. Number of cases that involved days away from work, or cases with job transfer or restriction, or both			
D. Other Recordable Cases – Medical Only (Number of cases without lost or restricted workdays)			
E. Total Recordable Cases			
F. Total hours worked			
G. Total Recordable Incident Rate $\frac{\text{(E above)} \times 200,000}{\text{Employee Hours Worked (Given Year)}}$			
H. Lost Workday Case Incident Rate $\frac{\text{(C above)} \times 200,000}{\text{Employee Hours Worked (Given Year)}}$			

- B. For each fatality, please attach a description of the accident, including cause, lessons learned, actions taken resulting from that fatality, actions taken to prevent future fatalities, and corporate management summary of their actions and attitudes.

Health, Safety and Environment  
**SUBCONTRACTOR SAFETY  
EVALUATION FORM**

Attachment 046-1 NA  
Issue Date: July 1999  
Revision 8: September 2011

- C. Has your company been issued any health and safety related citations/orders from any federal, state, province, or local regulatory agency during the past 3 years?  Yes  No

If "Yes", please explain the nature of the citation/order, classification, and final fine (if applicable) in an attachment to your evaluation form submittal.

### 3. RISK MANAGEMENT / INSURANCE DATA

- A. Are you able to provide URS with insurance certificates naming URS, and if requested, URS' client as an additional insured?  Yes  No
- B. Please provide proof of current Workers' Compensation and Employer's Liability Insurance coverage or proof of exemption. (For U.S. operations, *attach certificate naming URS as Additional Insured*).

### 4. HEALTH AND SAFETY PROGRAM

- A. Does your company maintain a written Health and Safety program?  Yes  No  
*If "Yes," please include a copy of the Table of Contents.*
- B. Is your company capable of preparing safety procedures specific to the work proposed for this project?  Yes  No
- C. Does your firm have a safety officer?  Yes  No  
*If "Yes," please provide name and telephone number.*

Name: \_\_\_\_\_ Telephone: \_\_\_\_\_

- D. Do you hold jobsite safety meetings?
1. How Often?
- Daily  Weekly  Bi-Weekly  Monthly  Less Often, As needed
2. Are the health and safety meetings documented?  Yes  No
- E. Does your firm have the following policies/procedures? *If "Yes," please provide copies of the policies/procedures.*
1. Stop Work?  Yes  No
2. Short Service Employee?  Yes  No
3. Fitness for Duty?  Yes  No
- F. Is a program in place for the reporting and correction of workplace hazards?  Yes  No
- G. Are workers encouraged to intervene when unsafe conditions are observed?  Yes  No

Health, Safety and Environment  
**SUBCONTRACTOR SAFETY  
EVALUATION FORM**

Attachment 046-1 NA  
Issue Date: July 1999  
Revision 8: September 2011

If "No," how are new employees informed of safety policies and procedures and expectations?

---

---

---

C. Do you have additional safety and health training for newly hired or promoted foremen/superintendents?  Yes  No

Topics Covered:

---

---

---

D. Do you maintain a record of all employees' training?  Yes  No

E. Are your employees enrolled in a Defensive Driving Training Program?  Yes  No

If "Yes," describe the training, including the training provider, who receives the training, and course length.

---

---

---

Please provide a copy of training records from a recent HSE training course.

**7. MEDICAL / DRUG TESTING**

A. Does your company have a Drug/Alcohol policy or program?  Yes  No

If "Yes," does your drug and alcohol program include the following:

- Pre-employment testing  Yes  No
- Testing for Cause  Yes  No
- Post-accident testing  Yes  No
- Random testing  Yes  No

B. Does your company have an ongoing medical surveillance program as required by applicable governmental regulations?  Yes  No

Do you conduct medical examinations for:

- Pre-employment  Yes  No

**Health, Safety and Environment**

**THIS PAGE IS TO BE COMPLETED BY URS CORPORATION.**

**Subcontractor Name:** \_\_\_\_\_

**Project or Site Manager Evaluation:**

- Pass  Subcontractor meets the criteria established in Attachment 046-2 NA, and no further action is required.
- Fail  Subcontractor does not meet the criteria established in Attachment 046-2 NA. If a unique business need exists, then a subcontractor variance must be initiated using Attachment 046-3 NA. The variance must be submitted to a Corporate, Regional, or Strategic Business Unit (SBU) HSE Manager for evaluation.

Project or Site Manager Name: \_\_\_\_\_

Signature: \_\_\_\_\_

Date: \_\_\_\_\_

**SUBCONTRACTOR  
EVALUATION CRITERIA**

Prior to engaging a subcontractor on a project, Project Managers are required to ensure that the contractor has an effective safety program, is capable of conducting its operations in a safe manner, and has appropriate insurance coverage. The following criteria shall be followed in determining whether the subcontractor may be used on a URS Corporation project.

Note: Some questions/answers (Sections 4 through 8) from Attachment 046-1 NA are not discussed in the evaluation criteria below. These questions are asked and the answers are intended to help the Project Manager understand the safety culture and/or safety priority of the subcontractor.

**GENERAL INFORMATION**

If subcontractor has performed work for URS previously, check safety performance history with previous URS Corporation Project Manager.

The numbers in this section directly correspond to the questions in Attachment 046-1 NA.

**WORKERS' COMPENSATION EXPERIENCE INFORMATION**

1.A. For any EMR, or international equivalent, listed as greater than 1.0, the contractor has failed the sub-evaluation. Further consideration may not occur without referral to a URS Regional, or Strategic Business Unit (SBU) Health, Safety, and Environment (HSE) Manager in your Region for further assessment.

If all EMRs listed are 1.0 or below, continue with the evaluation.

**SAFETY PERFORMANCE**

2. For any Total Recordable Incident Rate (line G in table) listed as greater than 4.0, the subcontractor has failed the evaluation. Further considerations may not occur without referral to a URS Regional or SBU HSE Manager in your Region for further assessment.

If the Total Recordable Incident Rates are at or below 4.0, continue with the assessment.

2.B. If the contractor has had a fatality, further consideration may not occur without referral to a URS Regional or SBU HSE Manager in your Region.

2.C. In the U.S., determine the subcontractor's citation history at <http://osha.gov/pls/imis/establishment.html>. Query Case Status Open and Closed. Compare the published data to the subcontractor questionnaire. The subcontractor must explain any discrepancies.

For international operations, consult a URS Regional or SBU Manager to evaluate citations/orders a subcontractor has disclosed.

**SUBCONTRACTOR  
EVALUATION CRITERIA**

Look for willful, serious, and repeat violations. If they suggest a problem, request information and refer to a URS Regional or SBU HSE Manager in your Region for further assessment.

**RISK MANAGEMENT/INSURANCE DATA**

- 3.A. The ability to provide Insurance Certificates naming URS Corporation as an additional insured is required. Refer any questions to the URS Legal Department.
- 3.B Proof of Workers' Compensation Insurance (or proof of exemption) is required. Refer any questions to the URS Legal Department.

**HEALTH AND SAFETY PROGRAM**

For Sections 4 through 8, if a subcontractor answers 'No' to any of the questions, the Project Manager needs to consider the type of work the subcontractor will be performing (e.g. HAZWOPER work required medical surveillance exams) to determine if the answer is acceptable.

- 4.A. A "No" answer should be referred to a URS Regional or SBU HSE Manager in your Region for further assessment. For small subcontractors, a 'No' answer may be acceptable with good incident and insurance rate statistics. Generally, some minimal program is expected depending on the breadth and complexity of the work. Contact a URS Regional or SBU HSE Manager in your Region for further assessment if you have any questions or doubts.
- 4.B. It is expected that a subcontractor being hired to perform services on the project site should be the best prepared to address safety issues for their operations, especially when specialty work is being conducted, or for work in which the subcontractor possesses superior knowledge of their operations.

A "No" answer should be referred to a URS Regional or SBU HSE Manager in your Region for further assessment.

**Exception:**

If the subcontractor does not meet the other requirements outlined above, the decision will be that the subcontractor will not be used. However, if a unique business need exists (e.g., subcontractor is a specialty subcontractor), the Project Manager should initiate a Subcontractor Variance (Attachment 046-3 NA). The Subcontractor Variance must be approved by a Regional or SBU HSE Manager.

Health, Safety and Environment  
**SUBCONTRACTOR VARIANCE FORM**

**URS SAFETY MANAGEMENT STANDARD 047  
BIOLOGICAL HAZARDS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Biological Hazards**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies where job activities are performed primarily in outdoor environments.

### **2. Purpose and Scope**

The purpose of this standard is to provide information that will help eliminate or reduce illnesses and injuries transmitted by plants, insects, animals, and pathogenic agents. Although there are many animals and insects that are potentially harmful to humans (e.g., bees, spiders, bears, and rodents), this standard focuses on six common biological hazards: ticks, poison plants, mosquitoes, snakes, Valley Fever, and water-borne pathogenic agents. Refer to SMS 051 – Bloodborne Pathogens for additional information.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. Ticks**

##### **1. Precautionary Measures**

- a. Background information: Ticks do not jump, crawl, or fall onto a person. They are picked up when clothing or hair brushes a leaf or other object the tick is on. Ticks are generally found within 3 feet of the ground. Once picked up, they will crawl until they find a likely site to feed. Often they will find a spot at the back of the knee, near the hairline, behind the ears, or at pressure points where clothing presses against the skin (underwear elastic, belts, neckline). The best way to prevent tick-borne diseases is not to be bitten by a tick. Ticks can carry a number of diseases, including the following:
  - i. *Lyme Disease* is an infection caused by the corkscrew-shaped bacteria *Borrelia burgdorferi* that is transmitted by the bite of deer tick (ixodes) and western black-legged ticks. The disease occurs in the forested areas of North America, Europe, and Asia. Symptoms that occur within 3 to 30 days following a tick bite include: a spreading ‘bulls-eye’ rash, fever, fatigue, headache, and joint and muscle aches. Prompt treatment with antibiotics is essential in order to prevent more serious complications that may occur if left untreated.

**URS SAFETY MANAGEMENT STANDARD**  
**Biological Hazards**

---

- ii. *Rocky Mountain Spotted Fever* is an infection caused by the bacteria *Rickettsia rickettsii*. The disease occurs in North, Central, and South America. Other *Rickettsia* organisms cause disease worldwide (Mediterranean, Japan, Africa, North Asia). Symptoms which occur 2-6 days following a tick bite include: fever, nausea, vomiting, diarrhea, rash, muscle and joint pain. The disease is treated with antibiotics.
- iii. *Babesiosis* is caused by hemoprotozoan parasites of the genus *Babesia*. It is transmitted by the ixodid tick. The geographic distribution is worldwide. Symptoms include fever, chills, fatigue, muscle aches, and an enlarged spleen and liver. The disease is treated with anti-protozoan drugs.
- iv. *Ehrlichiosis* is caused by several bacteria of the genus *Ehrlichiae*. The geographic distribution is global, primarily in temperate regions. Symptoms which occur 5-10 days following a tick bite include fever, headache, fatigue, muscle aches, nausea, vomiting, diarrhea, confusion, and occasionally a rash. The disease is treated with antibiotics.

b. Avoidance of tick habitats

Whenever possible, persons should avoid entering areas that are likely to be infested with ticks, particularly in spring and summer when nymphal ticks feed. Ticks favor a moist, shaded environment, especially which provided by leaf litter and low-lying vegetation in wooded, brushy, or overgrown grassy habitat. Both deer and rodent hosts must be abundant to maintain the life cycle of the tick.

c. Personal Protective Equipment

- i. Wear light colored clothing or white Tyvek® to allow you to see ticks that are crawling on your clothing.
- ii. Tuck your pant legs into your socks or boots, wear high rubber boots, or use tape to close the opening where they meet so that ticks cannot crawl up the inside of your pant legs.
- iii. Wear a hat, and tie back long hair.
- iv. Apply repellents to discourage tick attachment. Repellents containing permethrin can be sprayed on boots and clothing, and will last for several days. Repellents containing DEET (n,n-diethyl-m-toluamide) can be applied to the skin, but will last only a few

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

hours before reapplication is necessary. Apply according to Environmental Protection Agency guidelines to reduce the possibility of toxicity.

#### d. Tick Check

- i. Change clothes when you return from an area where ticks may be located.
- ii. Shower to wash off any loose ticks.
- iii. Check your entire body for ticks. Use a hand held or full-length mirror to view all parts of your body.
- iv. Place clothing worn in tick infested areas into the dryer for at least 30 minutes in order to kill any ticks.

#### 2. Tick Removal

Because it takes several hours of attachment before microorganisms are transmitted from the tick to the host, prompt removal of attached or crawling ticks is an important method of preventing disease. Remember, folklore remedies of tick removal to do not work! Methods such as the use of petroleum jelly or hot matches may actually make matters worse by irritating the tick and stimulating it to release additional saliva or regurgitate gut contents, increasing the chances of transmitting disease.

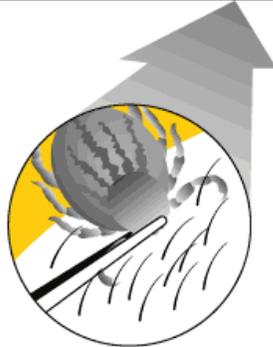

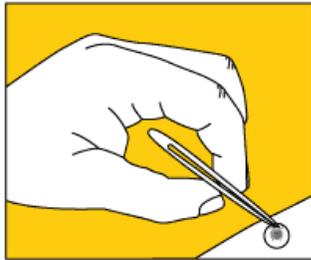

The best method to remove an attached tick is with a set of fine tipped tweezers.

## URS SAFETY MANAGEMENT STANDARD

### Biological Hazards

---

- a. Use fine-tipped tweezers. When possible, avoid removing ticks with bare hands.
- b. Grasp the tick as close to the skin surface as possible and pull upward with steady, even pressure. Do not twist or jerk the tick; this may cause the mouthparts to break off and remain in the skin. If this happens, remove mouthparts with the tweezers.
- c. Do not squeeze, crush, or puncture the body of the tick because its fluids (saliva and gut contents) may contain infectious organisms.
- d. After removing the tick, thoroughly disinfect the bite site and wash your hands with soap and water.
- e. Disinfect the tweezers.
- f. Save the tick for identification in case you become ill. This may help the doctor make an accurate diagnosis. Place the tick in a vial or plastic zip lock bag and put it in the freezer. Write the date of the bite on a piece of paper with a pencil and place it in the bag.

### 3. Medical Follow-Up

In most circumstances, medical treatment of persons who only have a tick bite is not recommended. However, individuals who are bitten by a tick should seek medical attention if any signs and symptoms of tick-borne disease develop over the weeks following the tick bite.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

#### B. Poisonous Plants

##### 1. Background Information

Poison ivy and poison oak plants are the most common cause of allergic contact dermatitis in North America. These poisonous plants can be a hazard for many various outdoor activities at work, home, and play. Skin contact with the oleoresins (urushiol) from these plants can cause an itchy, red, oozing, blistered rash in sensitive individuals. Oil content in the plants is highest in the spring and summer; however, the plants are even hazardous in the winter when they have dropped their leaves. There are three types of exposure:

- a. Direct contact: An initial skin exposure is necessary to “sensitize” the individual. Subsequent contact in a sensitized person will result in a rash appearing within 4 to 48 hours. Approximately 50 to 70 percent of the population is sensitized. Poison plant dermatitis is usually characterized by areas of linear or streaked patches where branches of the plant brushed the skin.
- b. Indirect contact: Skin exposure can happen indirectly. Clothing, shoes, tools, personal protective equipment, and other items can be contaminated with the oils and maintain potency for months.
- c. Airborne smoke contact: Never burn poison plants. Droplets of oil can be carried by smoke and enter the respiratory system, causing a severe internal outbreak.

Poison plant rash is not contagious. Skin contact with blister fluid from an affected individual will not cause dermatitis in another sensitized person. Scratching the rash can only spread it to other parts of your body if the oil is still on your skin. After the oil has been washed off or absorbed by the skin, scratching will not spread the rash.

The most distinctive features of poison ivy and poison oak are their leaves, which are composed of three leaflets each and are green in the summer and red in the fall. Both plants also have greenish-white flowers and berries that grow in clusters. All parts of these plants are toxic.

## **URS** SAFETY MANAGEMENT STANDARD **Biological Hazards**

---

Poison Ivy grows as a small plant, vine, and as a shrub. Leaves always consist of three glossy leaflets.

Poison Oak grows as a shrub or vine. It has three leaflets that resemble oak leaves.

Poison Sumac grows as a woody shrub or small tree from 5 to 25 feet tall. It has 7 to 13 leaves that grow opposite each other with a leaflet at the tip. Poison sumac grows in wet soils, typically in swamps and bogs.

**Poison Sumac**

### 2. Precautionary Measures

- a. The best approach is to learn to identify the plants and avoid them.
- b. Wear long pants and long sleeves, boots, and gloves.
- c. Barrier skin creams may offer some protection if applied before contact.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

- d. Avoid indirect contact with tools, clothing, or other objects that have come into contact with a crushed or broken plant. Don't forget to wash contaminated clothing and clean up contaminated equipment.
- e. If you can wash exposed skin areas within 3 to 5 minutes with cold running water, you may keep the urushiol from penetrating your skin. Proper washing may not be practical in remote areas, but a small wash-up kit with pre-packaged alcohol-based cleansing tissues can be effective.

#### 3. Medical Follow-Up

Home treatment: Calamine lotion and an oatmeal (1 cup to a tub full of water) bath can help relieve itching. To prevent secondary skin infection, scratching is not helpful, and the finger nails should be cut to avoid damage to the skin. Over-the-counter hydrocortisone cream can decrease inflammation and itching; however, read the label and use according to directions.

When to see the doctor: Severe cases may require further treatment. A physician should be seen if the rash appears infected, is on the face or other sensitive body areas, or is too extensive to be easily treated at home.

#### C. Mosquito-Borne Diseases

##### 1. Background Information

- a. Arboviral encephalitis is a viral illness causing inflammation of the brain, and is transmitted to humans by the bite of infected mosquitoes. Globally, there are several strains, including: Eastern equine, Japanese, La Crosse, St. Louis, West Nile, and Western equine encephalitis. Some of the strains have a vaccine. Symptoms of infection are nonspecific and flu-like: fever, headache, and tiredness. Fortunately, only a small proportion of infected people progress to encephalitis. Treatment is supportive, antibiotics are not effective.
- b. Malaria is a serious but preventable disease spread by the bite of an infected anopheline mosquito. It is caused by four species of the parasite *Plasmodium* (*P. falciparum*, *P. vivax*, *P. ovale*, and *P. malariae*). Malaria-risk areas include primarily tropical areas of Central and South America, Africa, India, Southeast Asia, and the Middle East. Symptoms of malaria, which occur 8 days to 1 year after infection, include fever, shaking, chills, headache, muscle ache, tiredness,

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

jaundice, nausea, vomiting, and diarrhea. Malaria can be cured with prescription drugs.

- c. Dengue Fever is a potentially life-threatening viral illness transmitted by the bite of the Aedes mosquito, found primarily in urban areas. The disease is found in most of tropical Asia, the Pacific Islands, Central and South America, and Africa. There are four dengue virus serotypes. Symptoms include sudden onset, high fever, severe headache, joint and muscle pain, rash, nausea, and vomiting. There is no specific treatment and no vaccine.
- d. Yellow Fever is a viral disease transmitted between humans by mosquitoes. It occurs only in Africa and South America. There is a vaccine that confers immunity lasting 10 years or more. Symptoms begin 3 to 6 days after the mosquito bite, and include fever, nausea, vomiting, headache, slow pulse, muscle aches, and restlessness. Treatment is symptomatic.
- e. West Nile virus is a viral disease transmitted by mosquitoes. It occurs in North America, Europe, Africa, west and central Asia, and the Middle East. There is no vaccine for West Nile virus. Symptoms include nausea, vomiting, and diarrhea.

#### 2. Precautionary Measures

- a. Insect Repellent: Use insect repellants that contain DEET. The effect should last about 4 hours. Always use according to label directions. Use only when outdoors, and wash skin after coming indoors. Do not breathe in, swallow, or get into the eyes. Do not put on wounds or broken skin.
- b. Protective Clothing: Wear long-sleeved shirts and long pants, especially from dusk to dawn. Avoid going outdoors during these hours.
- c. Mosquito netting: Travelers who will not be staying in well-screened or air conditioned rooms should use a pyrethroid-containing flying insect spray in living and sleeping areas during evening and nighttime hours. Sleep under mosquito netting (bed nets) that has been sprayed with permethrin.
- d. Malaria prophylaxis medications may be prescribed; however, they do not provide complete protection. The type of medication given depends on the area of travel.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

#### D. Poisonous Snakes

##### 1. Background Information

No single characteristic distinguishes a poisonous snake from a harmless one except the presence of poison fangs and glands. Only in dead specimens can you determine the presence of these fangs and glands without danger. Most poisonous snakes have both neurotoxic and hemotoxic venom; however, one type is dominant and the other is weak.

- a. Hemotoxic venom. The folded-fang snakes (fangs can raise to an erect position) have venoms that affect the circulatory system, destroying blood cells, damaging skin tissues, and causing internal hemorrhaging.
- b. Neurotoxic venom. The fixed-fang snakes (permanently erect fangs) have venoms that affect the nervous system, making the victim unable to breathe.
- c. Poisonous snakes in the Americas: copperhead, coral snake, cottonmouth, and rattlesnake.
- d. Poisonous snakes in Europe: adder, viper.
- e. Poisonous snakes in Africa and Asia: viper, cobra, adder, green mamba.
- f. Poisonous snakes in Australia: copperhead, adder, taipan, tiger snake.

##### 2. Precautionary Measures

Bites occur when you don't hear or see the snake, when you step on them, or when you walk too close to them. Follow these simple rules to reduce the chance of accidental snakebite:

- a. Don't put your hands into dark places, such as rock crevices, heavy brush, or hollow logs, without first investigating.
- b. Don't step over a fallen tree. Step on the log and look to see if there is a snake resting on the other side.
- c. Don't walk through heavy brush or tall grass without looking down. Look where you are walking.
- d. Do not pick up any live snake. If you encounter a snake, walk around the snake, giving it plenty of room. A snake can strike half its length.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

- e. Don't pick up freshly killed snakes without first severing the head. The nervous system may still be active and a dead snake can deliver a bite.

#### 3. Medical Follow-Up

If you are bitten by a snake, the primary goal is to get to a hospital as soon as possible to receive professional medical evaluation, and possible treatment with anti-venom if warranted. Initial first aid should include: Washing the bite with soap and water; immobilizing the bitten area and keeping it lower than the heart. Try to remain calm. If you are unable to reach a hospital within 30 minutes, a bandage, wrapped 2 to 4 inches above the bite, may help slow the venom. The bandage should not cut off blood flow from a vein or artery; make sure the bandage is loose enough that a finger can slip under it.

Research has shown the following to be potentially harmful: DO NOT apply ice, use a tourniquet, or make incisions into the wound.

#### E. Valley Fever

##### 1. Background Information

Valley Fever is an illness that results from exposure to a fungal spore (*Coccidioides immitis*). It is endemic to the San Joaquin Valley in California, as well as areas of the Southwestern U.S., Mexico, and Central and South America, although it has been found in many other areas. It is particularly associated with arid soils that are not cultivated. Exposure is generally by inhalation of spores, though it may also enter through broken skin. Approximately 2 weeks after inhalation exposure, severe weakness and flu-like symptoms develop; severe pneumonia may occur. It may also affect the brain, bones, and joints causing disability, spinal meningitis, or death. Dermal forms of the infection can form disfiguring fungal lesions.

##### 2. Precautionary Measures

Because it is associated with arid soils, personnel should avoid locations and activities that create dust. Persons at risk of exposure include geologists, surveyors, excavators, archaeologists, etc. Dust suppression methods should be employed and the use of particulate respirators should be considered for areas known to harbor the fungus. At one phase of the fungus' life cycle, cottony, spider-web-like growths may be seen on the soil surface. If observed, these growths must not be disturbed, and work should be relocated if possible.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

#### 3. Medical Follow-up

Approximately 60 percent of exposed persons will not have symptoms. Persons that have been in areas associated with Valley Fever should be alert to the development of flu-like symptoms, fatigue, or skin rashes 2 to 4 weeks later. Valley Fever can be treated with anti-fungal medication. Early treatment is critical, as disseminated forms of the disease can result in chronic disease or death.

#### F. Pathogenic organisms

##### 1. Background Information

Employees who perform certain activities, such as disaster response, may be in areas where water-borne pathogens may be present. A partial list of agents includes: E. coli, Hepatitis A, typhoid, and cholera. Chemical hazards and molds and fungus may also be present. Refer to SMS 051– Bloodborne Pathogens for additional information.

##### 2. Precautionary Measures

All work must be performed within the scope of either a Health and Safety Plan or Safe Work Plan that identifies the task hazards, and specifies appropriate controls. A medical exam and/or inoculations may be required. See SMS 024 – Medical Screening and Surveillance, or contact the Occupational Health Manager for assistance.

Where contact with water or wet materials may occur, personnel must use protection such as impervious coveralls, boots/waders, faceshields, etc, as specified in the project Health and Safety Plan or Safe Work Plan. Personnel must protect any areas of broken skin, eyes, nose, and mouth from contact with potentially infectious materials, and practice good personal hygiene before eating, drinking, etc.

##### 3. Medical Follow-up

Medical evaluation and/or an inoculation schedule may be required prior to beginning work. Because early evaluation and treatment is more successful, personnel should be alert to signs and symptoms of possible pathogenic organisms and seek prompt medical evaluation if illness develops or is suspected.

## **URS SAFETY MANAGEMENT STANDARD**

### **Biological Hazards**

---

#### G. Natural disaster relief efforts

1. Natural disaster relief efforts present a variety of hazards, including biological hazards. Biological hazards potentially encountered during relief efforts include mold, sewage-contaminated water, various building materials that may puncture the skin and create various types of infections, and displaced animals and insects. Before work begins, each disaster relief site should be evaluated for the various types of biological hazards that may be encountered. Control measures must be developed to address the biological hazards.

#### **5. Documentation Summary**

Complete and distribute a URS Incident Report form 049-1 for all work-related biological exposure incidents.

**URS SAFETY MANAGEMENT STANDARD 049**  
**INJURY/ILLNESS/INCIDENT REPORTING & NOTIFICATIONS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Injury / Illness / Incident Reporting & Notifications**

---

### **1. Applicability**

This standard applies to the operations of the Infrastructure & Environment and Federal Services businesses of URS Corporation (URS) and its subsidiary companies.

### **2. Purpose and Scope**

The purpose of this standard is to provide guidance for the timely reporting of work-related injuries, illness, and incidents. This procedure also defines incident notification procedures for URS employees. For incidents involving motor vehicles, the reporting and notification requirements of SMS 057 – Vehicle Safety Program – may also apply.

For significant incidents (e.g., fatality, serious injury, injury to members of the public), SMS 066 – Incident Investigation – is also required.

Note that this standard will also be used for investigation of critical injuries as defined by Canadian provincial regulations. See Supplemental Information A for definitions of critical injuries.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

A. Reporting: All employees must immediately notify their appropriate level of management (line, project, and/or office) of a reportable incident. A reportable incident includes the following:

1. An injury or illness to any URS employee or subcontractor, even if the injury does not require medical attention.
2. An injury to a member of the public, or clients, occurring on a URS-controlled work site.
3. Illness resulting from suspected chemical exposure.
4. Chronic or re-occurring conditions such as back pain or cumulative trauma disorders (e.g., carpal tunnel syndrome).
5. Fire, explosion, or flash.

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

6. Any vehicle accidents occurring on site, while traveling to or from client locations, or with any company-owned, rented, or leased vehicle (including personal vehicles used for company business). If the vehicle accident involves injury, complete both 049-1 NA and 057-1 NA. If the vehicle accident does not involve injuries, complete 057-1 NA.
7. Property damage resulting from any URS or subcontractor activity.
8. Structural collapse or potential structural hazards.
9. Unexpected release or imminent release of a hazardous material.
10. Unexpected chemical exposures to workers or the public.
11. A safety-related complaint from the public regarding URS activities.
12. Incidents that could result in adverse public media interest concerning URS or a URS project.
13. Any incident that could or does result in an actual investigation by state, federal, provincial, or local regulatory or law enforcement agencies.
14. Any other significant occurrence that could impact safety, including a near-miss.

Note: A near-miss is defined as an incident having the potential to cause significant injury or property damage as listed above, but did not. Examples of a near-miss include:

- a. A worker steps off a ledge, falls 3 feet (1 meter) to the floor, and is uninjured.
- b. A crane drops a 1,000-pound (454-kilogram) beam during a lift. Nobody is hurt, and no equipment is damaged.
- c. A work crew is conducting a survey along the highway. A vehicle leaves the roadway (driver asleep) and the vehicle enters the survey area at 50 miles per hour (80 kilometers per hour). The vehicle misses an employee by 3 feet (1 meter); the driver recovers control of the vehicle and leaves the area.

B. Actions: The following actions will be taken following a reportable incident:

1. Employees:

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

- a. If necessary, suspend operations and secure and/or evacuate the area.
  - b. Immediately notify your supervisor and/or project manager.
  - c. Contact appropriate emergency services and obtain appropriate medical attention, as required or directed by your supervisor. For additional information, refer to SMS 065 – Injury and Claims Management.
  - d. Record information pertaining to the incident (e.g., time, date, location, name and company of person(s) involved, witnesses, description of event, and actions taken) and initiate Attachment 049-1 NA – Incident Report Form for the appropriate business (i.e., Infrastructure & Environment or Federal Services). (Note: The international operations of the Infrastructure & Environment business will complete an on-line Incident Report instead, using the appropriate Health, Safety, and Environment (HSE) and Quality Improvement database. Federal Services will submit the report in G-SMART.)
  - e. Infrastructure & Environment employees shall submit 049-1 NA to the URS Occupational Health Manager (OHM) within 24 hours of the incident. Federal Services shall enter the incident into G-SMART within 24 hours of the incident.
  - f. Assist with incident investigation as directed by management. Investigations shall be completed within 7 days of an incident.
  - g. Implement corrective actions as directed by management.
  - h. *Do not* discuss the incident with members of the news media or legal representatives (except URS legal counsel or your personal legal advisor) unless directed to do so by URS management.
  - i. *Do not* make statements pertaining to guilt, fault, or liability.
2. Line/Project Management Responsibilities (U.S. and Mexico Operations)
- a. For instances involving employee or subcontractor death or hospitalization, or equipment damage to Company or

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury / Illness / Incident Reporting & Notifications**

---

customer equipment valued at more than \$100,000 (USD), immediately notify by telephone or other direct means URS Operations and the HSE team in the order listed below. If any level of contact is unsuccessful, continue down the list in sequence. After notification has been made, a detailed follow-up, via email, is required.

- i. Appropriate corporate leadership for the affected program up to the Regional Business Unit (RBU) or Strategic Business Unit (SBU) Vice President for the affected Operations.
- ii. The URS OHM.
- iii. Appropriate RBU and SBU HSE Manager for the affected Operation.

Follow-up notification should be made by forwarding Attachment 049-1 NA to the OHM within 24 hours. See Attachment 049-1 NA for methods of distribution. Also, assure copies of the report are distributed as outlined on the form. For the international operations of the Infrastructure & Environment business, this follow-up notification is not required.

Business Vice President/Director of HSE (or designee) will make notification to federal and state authorities as appropriate.

- b. For minor incidents involving only first aid treatment, minor damage to vehicle or equipment, etc., make notifications to a supervisor and OHM immediately and submit Attachment 049-1 NA. See Attachment 049-1 NA for methods of distribution. Also, assure copies of the report are distributed as outlined on the form.
- c. For a near-miss incident, complete an on-line near miss report, using the appropriate Health, Safety, and Environment (HSE) database. If needed, contact the Regional/SBE/SBU HSE Manager to determine which database is appropriate.
- d. Within 7 days of an incident, review circumstances (i.e., who, what, when, where, and how) of the incident with applicable employee(s) to determine apparent causes and to develop recommended corrective actions.

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

- e. Discuss with department or project staff the circumstances surrounding the incident and corrective actions taken.

3. Line/Project Management Responsibilities (Canadian Operations)

- a. If notified of an incident that is a critical injury (see Supplemental Information A for definition), serious accident, or other significant consequence:
  - i. Immediately contact URS Canada Human Resources at (905) 882-4401.
  - ii. Review circumstances (i.e., who, what, when, where, and how) of the incident with applicable employee(s) to determine apparent causes and to develop recommended corrective actions.
  - iii. Follow up notification by completing, signing, and delivering/faxing Attachment 049-1 NA to URS Canada Human Resources within 24 hours.
  - iv. URS Canada Human Resources will make notification to provincial authorities as appropriate.
- b. If notified of an incident that is not a critical injury, nor a serious accident or other significant consequence:
  - i. Review circumstances (i.e., who, what, when, where, and how) of the incident with applicable employee(s) to determine apparent causes and to develop recommended corrective actions.
  - ii. Complete, sign, and deliver/fax Attachment 049-1 NA to URS Canada Human Resources within 24 hours.
  - iii. URS Canada Human Resources will make notification to provincial authorities as appropriate.
- c. If notified of a near-miss incident:
  - i. Review circumstances (i.e., who, what, when, where, and how) of the incident with applicable employee(s) to determine apparent causes and to develop recommended corrective actions.

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

- ii. Complete an on-line near miss report, using the appropriate Health, Safety, and Environment (HSE) database. If needed, contact the Regional/SBE/SBU HSE Manager to determine which database is appropriate.
  - d. Discuss with department or project staff the circumstances surrounding the incident and corrective actions taken.
- 4. Local Office, Project, and/or Certified HSE Representative
  - a. Assist with incident evaluation.
  - b. With management, identify cause(s) of incident and identify corrective actions needed to avoid recurrence.
  - c. Review injury/incident report or the near-miss report for completeness and accuracy. Ensure the reports are distributed properly.
  - d. Ensure notifications are made in a timely manner.
  - e. Ensure that the injured employee is properly counseled/advised as directed by SMS 065 – Injury and Claims Management. Communicate with the OHM.
  - f. Note that “Certified” HSE Representatives are those who have received special training in occupational safety and health and have been certified by the Ontario Workplace Safety and Insurance Board. Certified HSE Representatives should be used at larger Canadian project sites where joint worker/employer safety committees are developed.
- 5. Occupational Health Manager
  - a. Report work-related injuries and illness to workers’ compensation carrier.
  - b. Ensure that the employee’s injury is managed in accordance with SMS 065 – Injury and Claims Management. Provide guidance for the affected office, project, and/or Certified HSE Representative.
- 6. URS Human Resources (Canadian Operations Only)
  - a. Receive incident notifications from staff.

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

- b. For incidents involving critical injuries, serious accidents, or other significant consequences:
  - i. Verbally notify the Office Manager immediately, via cell phone if necessary.
  - ii. Notify the Certified HSE Representatives (management and worker) as soon as possible (where necessary).
  - iii. Notify the OHM as soon as possible. Notification to the OHM should in no case occur later than the end of the work shift.
  - iv. Follow up notification by receiving from staff and forwarding Attachment 049-1 NA to the OHM within 24 hours. Also, assure copies of the report are distributed as outlined on the form.
- c. For minor incidents involving only first aid treatment, minor damage to vehicle of equipment, etc.:
  - i. Notify the OHM as soon as reasonable during normal business hours.
  - ii. Receive from staff and forward Attachment 049-1 NA to the OHM within 24 hours.

Ensure copies of the report are distributed as outlined on the form.

- d. Report work-related injuries and illness to the Workplace Safety and Insurance Board or appropriate workers' compensation carrier and other provincial or federal authorities as appropriate.
- e. Ensure, in conjunction with the Office HSE Representative, that the employee's injury is managed in accordance with SMS 065 – Injury and Claims Management. Provide guidance for the affected Certified or Project HSE Representative.

## 7. Business HSE Management

**URS SAFETY MANAGEMENT STANDARD**  
**Injury / Illness / Incident Reporting & Notifications**

---

- a. Notify URS management of any significant occurrence, including lost-time injuries, deaths, or other serious result or circumstance.
  - b. The OHM will review all reported incidents to determine OSHA reporting and recording requirements with input from the appropriate Business HSE Manager. For a determination of recordability in those infrequent instances where there is not a clear answer, the Business Vice President/Director HSE will make the final determination. All decisions will be based strictly on current U.S. Occupational Safety and Health Administration (OSHA) regulations.
  - c. Official records (including required reports and logs for all reported incidents) will be maintained at one central location by the OHM.
  - d. Where an incident has resulted in an injury or illness and that injury or illness is determined to be recordable in accordance with OSHA recordkeeping requirements, the OHM shall enter pertinent information related to the case into URS' recordkeeping documents no later than seven days after the event.
  - e. Each January, the OHM will prepare and distribute the appropriate government injury/illness reports to each URS establishment. These reports will summarize all required government information for incidents that occurred during the preceding calendar year. Reports, where required by regulation, will be signed by an officer of the company.
8. If an incident occurs on a client-controlled site, Project Management will ensure that appropriate client notifications are made within the required time frames. These notification requirements will be documented in project-specific planning documents.
  9. All notifications to external agencies (e.g., OSHA) will be made by the Business Vice President/Director HSE (or designee) in accordance with regulatory requirements.

**5. Documentation Summary**

**URS SAFETY MANAGEMENT STANDARD**

DISTRIBUTION

**NOTE:** The preferred method of distribution of this report is by e-mail attachment either in Word, or scanned to PDF. Forward URS incident reports to the OHM at [incidentreport@urscorp.com](mailto:incidentreport@urscorp.com). Alternatively, reports may be faxed to 512.419.6413. Initial reports must be submitted to the OHM within 24 hours of incident. More detailed follow-up reports may be submitted later.

**Additional Distribution:**  Program/Client Sector Manager  Regional HSE Manager  Office HSE Representative

Per the Ontario Occupational Health and Safety Act, R.R.O. 1990, Regulation 834, a Critical Injury is defined as an injury of a serious nature that:

- a. Places life in jeopardy;
- b. Produces unconsciousness;
- c. Results in substantial loss of blood;
- d. Involves the fracture of a leg or arm but not a finger or toe;
- e. Involves the amputation of a leg, arm, hand or foot, but not a finger or toe;
- f. Consists of burns to a major portion of the body; or
- g. Causes the loss of sight in an eye.

Per the British Columbia Workers Compensation Act, RSBC 1996, Chapter 492, a Critical Injury is defined as injury of a serious nature that includes the following:

- a. Any incident that kills, causes risk of death, or seriously injures a worker;
- b. Any blasting accident that results in injury, or unusual event involving explosives;
- c. A diving incident that causes death, injury, or decompression sickness requiring treatment;
- d. A major leak or release of a dangerous substance;
- e. A major structural failure or collapse of a structure, equipment, construction support system or excavation; and any serious mishap.

**URS SAFETY MANAGEMENT STANDARD 055**  
**HEALTH, SAFETY AND ENVIRONMENT TRAINING**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Health, Safety, and Environment Training**

---

### **1. Applicability**

This standard applies to the operations of URS Corporation and its subsidiary companies. These are the minimum Health, Safety, and Environment (HSE) compliance training requirements and tracking procedures. Specific geographic entities, business units, and projects may require additional training. These requirements may be dictated by federal/national, state/provincial, or local agencies or by the activities of a specific work group or project team.

### **2. Purpose and Scope**

This standard was developed to assist employees and managers in the identification of training requirements and to define the URS procedures for tracking/documenting this training. It covers environmental, hazardous materials, and health and safety training only. The goals of this standard are to ensure regulatory compliance and to provide employees with the information/training they need to accomplish their work assignments safely; prevent injuries to themselves, coworkers, surrounding communities, and customers; and protect company and/or customer property and the environment.

### **3. Implementation**

- A. The assigned Site/Office Manager is responsible for ensuring compliance with this standard and any additional requirements necessary because of the physical location of the facility and/or the business units in operation at that facility (e.g., laboratories).
- B. The Program/Project Manager is responsible for ensuring project or program-related compliance (e.g., compliance of project/program staff members) with this standard and any additional training necessary because of specific project/program activities.
- C. The HSE Training Coordinator (HTC) is responsible for maintaining a training calendar, filing original records/tests, issuing certificates for business-sponsored training, maintaining and issuing training materials, adding approved courses and course information to the training database, and updating the URS HSE intranet site with course information.

### **4. Requirements**

- A. Employee training requirements are dictated by the work each employee performs (or is expected to perform) and the geographic area(s) where the

**URS SAFETY MANAGEMENT STANDARD**  
**Health, Safety, and Environment Training**

---

- employee performs these activities. In most cases, there is a regulatory driver for specific training.
- B. All new URS employees must be provided an orientation on the URS HSE Program. Details on orientation requirements are provided in SMS 025 – New Employee Health, Safety and Environment Orientation and SMS 078 – Short Service Employee.
  - C. HSE Training Evaluation – Attachment 055-1 NA is a list of the most common courses that may be required, their frequency, and expected participants. This table will be updated as regulatory and company requirements change. These requirements may be necessary due to the individual’s project, site, or office activities, or the location of the facility. The responses to this simple questionnaire dictate what training an individual needs in addition to the basic URS courses. Once these requirements have been identified, each employee is expected to complete the required training as soon as possible and to track his/her progress.
  - D. Training requirements should be re-evaluated at least annually and more frequently if an employee’s assigned duties change significantly.
  - E. To ensure consistency in content and duration and in meeting regulatory and company requirements, URS training materials should be used as the basis for training whenever they are available. Trainers may always elect to supplement the base training materials for these courses with specifics for the program, project, customer, office, or geographic unit.
  - F. For training requiring certification (regulatory or URS-driven), trainers must be Business, Country, Group, Regional Business Unit (RBU), or Strategic Business Unit (SBU) HSE Managers or approved by the Business, Country, Group, RBU, or SBU HSE Manager.
  - G. Training is offered in a variety of formats, including classroom instruction, computer based training (CBT), and on-the-job (OTJ) training. To ensure that training is consistent and that all requirements are being met, external courses (e.g., 40-Hour HAZOPWER), including classroom instruction and CBT, should be evaluated and approved by the Business, Country, Group, RBU, or SBU HSE Manager. Local HSE staff will be able to assist in identifying qualified external vendors as necessary.
  - H. URS staff is expected to be familiar with applicable training requirements. Staff members are expected to track their own progress toward meeting those requirements.

**URS SAFETY MANAGEMENT STANDARD**  
**Health, Safety, and Environment Training**

---

- I. Supervisors and office/location managers are expected to be familiar with the training requirements of staff that report to them.
- J. A sample safety training flow chart is available in Supplemental Information A.

**5. Documentation Summary**

- A. Those courses so denoted in Attachment 055-1 NA or Commonly Required Training will be tracked in a training database.
- B. All training must be documented using a training Attendance Record – Attachment 055-2 NA and Course Agenda. This attendance form requires participants to acknowledge by their signature that they received the training.
- C. Minimum course agenda requirements are as follows:
  - Type of course.
  - Course date.
  - Course location.
  - Topics covered.
  - Length of time covered for each topic.
  - Course duration (start/end times).
  - Instructor(s) name.
- D. For training provided by customers/vendors, training documentation must include the following:
  - Copy of the attendee's course certificate.
  - Course agenda.

In some cases, objective evidence of comprehension is required. This information must be tracked in addition to the course certificate and agenda.

- E. Group, RBU, and SBU HSE Managers will ensure that the course agenda meets regulatory/company requirements. Attendance records will be entered into the HSE training database.

**URS SAFETY MANAGEMENT STANDARD**  
**Health, Safety, and Environment Training**

---

- F. For corporately tracked courses, original attendance sheets, agendas, course evaluations, and any completed tests will be sent to the HTC. These should be filed by course then by date for easy access/auditing.
- G. Locations/projects/programs will maintain records on any project, program, or location- or site-specific training requirements such as fire extinguisher training, project health and safety plan training, and chemical hygiene program (laboratory safety) training. HSE Representatives will also maintain copies of attendance records for courses being tracked corporately.
- H. For courses requiring Business certification, the Vice President of HSE (or designee) or customer/vendor will issue certificates. A copy of the certificate must be provided to the HTC, along with course content information and sign-in sheets (see Item 5.D). For Federal Services employees, a copy of the certificate is to be provided to the appropriate Human Resources Manager for inclusion into the personnel record (Human Resources Management System or HRMS).

Issue Date: November 2000  
Revision 9: September 2011

Name \_\_\_\_\_ Location \_\_\_\_\_ Date \_\_\_\_\_

Course Title	Regulatory	Frequency	Should You Attend?	Check if Required <input checked="" type="checkbox"/>	Comments
Asbestos Inspector	Y	Annual	You perform asbestos sampling tasks.	<input type="checkbox"/>	
Asbestos Planner	Y	Annual	You serve as the project asbestos planner.	<input type="checkbox"/>	
Automated External Defibrillator (AED)	Y	As established by the training provider	You are designated to be an AED user in a URS office or project site.	<input type="checkbox"/>	
Behavior Based Safety	N	Annual	Required for all Infrastructure & Environment employees.	<input type="checkbox"/>	Concepts of behavior based safety, including the observation process (how to do one, who does one, the purpose). Available online through the URS Learning Management System (LMS).
Bloodborne Pathogens	Y	Annual	Required for employees designated as a first aid responder or others who have a potential bloodborne pathogen exposure.	<input type="checkbox"/>	
Cardiac Pulmonary Resuscitation (CPR)	Y	As established by the training provider	Required for 1) employees who are designated as first aid responders, 2) employees who are performing high hazard activities (e.g., potential for falls, suffocation, electrocution, amputation) and medical attention is more than 4 minutes away, or 3) required by client contract.	<input type="checkbox"/>	Acquire training from recognized source (e.g., Red Cross, American Heart).
Confined Space Entry	Y	Once	You perform confined space entry/authorizer/attendant duties (including anyone performing non-entry rescue activities).	<input type="checkbox"/>	
Confined Space Refresher	N	As needed	Recommended if you perform entry activities.	<input type="checkbox"/>	
Confined Space Rescuer	Y	Once	You may have to enter a confined space to perform a rescue.	<input type="checkbox"/>	
Confined Space Entry Awareness	N	As needed	You work with and around confined spaces that may require entry; however, you are not responsible for performing entry/authorizer/attendant duties.	<input type="checkbox"/>	30-minute CSE Awareness module offered online through URS LMS.
Construction Safety (10-hour OSHA Outreach Training)	N	Once	Recommended if you are a Supervisor and/or Safety Officer at Construction Sites	<input type="checkbox"/>	
Construction Safety (30-hour OSHA Outreach Training)	N	Once	Required if you serve as a site safety and health officer on US Army Corps of Engineers (USACE) projects, or other DoD projects which follow the provisions of EM 385-1-1 (USACE Safety and Health Requirements Manual)	<input type="checkbox"/>

Issue Date: November 2000  
Revision 9: September 2011

Course Title	Regulatory	Frequency	Should You Attend?	Check if Required <input checked="" type="checkbox"/>	Comments
Emergency Preparedness Plan	Y	Once	Required for all URS employees.	<input type="checkbox"/>	For office personnel, this information is covered in employee orientation. For field/site personnel, this is covered in project/site safety training.
Ergonomics	N	Once	Recommended for staff who are primarily office employees.	<input type="checkbox"/>	Available online through the URS LMS.
Excavations/Trenching Awareness	Y	Once	You work at sites where excavation/trenching tasks are performed.	<input type="checkbox"/>	Available online through URS LMS.
Excavations/Trenching Competent Person	Y	Once	You are or may be designated as a competent person (educational background and experience may allow for grandfathering).	<input type="checkbox"/>	
Experienced Miner Training	Y	Once, followed by annual refreshers	You meet the US Mine Safety and Health Administration (MSHA) definition of an "Experienced Miner."	<input type="checkbox"/>	See Surface Miner and Underground Miner training for information on annual refreshers.
Fall Prevention/Protection	Y	Once	You supervise tasks or perform tasks at heights (on roofs, scaffolding, ladders, unfinished flooring).	<input type="checkbox"/>	
Field Safety Training (4 hours)	N	Biennial	Required for all Infrastructure & Environment (IE) non-craft employees performing field work who are not in the hazardous waste training program. This training is also required for any IE Project Manager that manage projects where field work is performed.	<input type="checkbox"/>	Specific content will depend on the office and the employees' expected work. When offered as a combination of online modules and classroom instruction, online modules must be completed prior to the classroom portion for participants to receive credit. Both portions (online and classroom) need to be completed within the same calendar year.
Fire Extinguisher	Y	Annual	You may be expected to use fire extinguishers (fixed facilities and project sites).	<input type="checkbox"/>	
First Aid	Y	As established by the training provider	Required for 1) employees who are designated as first aid responders, 2) employees who are performing high hazard activities (e.g., potential for falls, suffocation, electrocution, amputation) and medical attention is more than 4 minutes away, or 3) required by client contract.	<input type="checkbox"/>	Acquire training from recognized source (e.g., Red Cross, American Heart).

Course Title	Regulatory	Frequency	Should You Attend?	Check if Required <input checked="" type="checkbox"/>	Comments
H&S Issues for Project Managers	N	Once	Required if you manage projects involving field work.	<input type="checkbox"/>	Offered as part of PM Training. Online courses available through URS LMS include Handling Specific Health and Safety Issues, Planning for Health and Safety, and Project Delivery Aspects of Health and Safety.
Hazard Communication	Y	Initially and if hazards change	Required for anyone who is potentially exposed to/works with hazardous chemicals.	<input type="checkbox"/>	Training must occur before any work with hazardous chemicals. Included (as needed) in HSE Orientation. After the initial training, required updates will typically be handled as part of project-specific HSE training. Refresher training is also available online through the URS LMS.
Hazardous Materials Shipping	Y	Biennial	Required for anyone who packages, labels, transports, completes paperwork for, or offers for shipment, hazardous materials/dangerous goods.	<input type="checkbox"/>	Initial training is approximately 16 hours. 30-minute Hazmat Shipping Awareness class is available online through the URS LMS.
Hazardous Waste Operations (40-hours – U.S.) (24-hours – non U.S.)	Y	Once	Anyone performing work or expected to perform at hazardous waste sites or treatment, storage, and disposal facilities.	<input type="checkbox"/>	See SMS 017. Training must have a 'hands-on' component (i.e., donning/doffing PPE). Any exceptions must be approved by a Regional HSE Manager/Group HSE Director.
Hazardous Waste Operations – Refresher (8 hours)	Y	Annual	(See Hazardous Waste Operations.)	<input type="checkbox"/>	When offered as a combination of online modules and classroom instruction, online modules must be completed prior to the classroom portion for participants to receive credit. Both portions (online and classroom) need to be completed within the same calendar year.
Hazardous Waste Operations – Supervisor (8 hours)	Y	Once	Required for anyone serving as the site supervisor at a hazardous waste site.	<input type="checkbox"/>	When offered as a combination of online modules and classroom instruction, online modules must be completed prior to the classroom portion for participants to receive credit. Both portions (online and classroom) need to be completed within the same calendar year.

Attachment 055-1 NA

Issue Date: November 2000  
Revision 9: September 2011

Course Title	Regulatory	Frequency	Should You Attend?	Check if Required <input checked="" type="checkbox"/>	Comments
Health, Safety, and Environment (HSE) Orientation	Y	Once	Required for all URS employees.	<input type="checkbox"/>	Specific content will depend on the office and the employees' expected work. See SMS 025.
Hearing Conservation	Y	Annual	Employees exposed to noise at or above 85 decibels averaged over an 8-hour day.	<input type="checkbox"/>	Available online through URS LMS.
HSE Representative Training	N	Once; follow-up as needed	Required for anyone assigned to the role of URS HSE Representative.	<input type="checkbox"/>	URS company metrics, training programs, and technical topics to support the HSE Representative position. HSE training for non-HAZWOPER trained personnel, describing OSHA and EPA regulatory requirements.
Injury/Illness Prevention	Y	Once	You are assigned to California offices.	<input type="checkbox"/>	Covered in California office HSE Orientation.
Laboratory Safety	Y	Once	You work in a fixed or mobile wet chemistry lab.	<input type="checkbox"/>	Completed as part of site or project orientation.
Lead Project Designer	Y	Every 3 years	You are a lead project designer.	<input type="checkbox"/>	
Lead Risk Assessor	Y	Every 3 years	You are a project lead risk assessor inspector.	<input type="checkbox"/>	
Lockout/Tagout Awareness – Affected Person	Y	Once; follow-up as required by regulations	You work with and around equipment that may need to be locked out/tagged out. (You are not responsible for applying tags/locks).	<input type="checkbox"/>	Available online through the URS LMS.
Lockout/Tagout – Authorized Person	Y	Once; follow-up as required by regulations	You lock out or tag out machines or equipment in order to perform servicing or maintenance on that machine or equipment.	<input type="checkbox"/>	Specific to individual machines.
Marine Trash and Debris Awareness and Limitation	Y	Annual	You work on contract operations for lessees and/or operators of oil and gas operations in the Gulf of Mexico.	<input type="checkbox"/>	Provided by lessee or operator.
Nuclear Density Gauge Operator	Y	Once	You <u>operate</u> nuclear density gauges.	<input type="checkbox"/>	Troxler or equivalent training.
Nuclear Density Gauge Transporter	Y	Every 3 years	You <u>transport</u> nuclear density gauges.	<input type="checkbox"/>	Hazardous Materials shipping.
Powered Industrial Trucks (Forklifts)	Y	Once	Your job assignments include operating a powered industrial truck (forklift).	<input type="checkbox"/>	Required more frequently if assessments indicate the need.
Radiation Safety Officer	Y	Once	You are designated as a Radiation Safety Officer.	<input type="checkbox"/>	
Respiratory Protection	Y	Annual	Required for any employee who may be required to wear a respirator.	<input type="checkbox"/>	Initial training is approximately 1 hour. Annual refresher training is approximately 0.5 hour. Annual refresher training is available online through the URS LMS.
Self Contained Breathing Apparatus (SCBA)/Cascade Systems	Y	Once	Required for any employee required to wear SCBAs or to operate a supplied air system.	<input type="checkbox"/>	Part of Project HSE training as needed.

**Health, Safety and Environment**

Course Title	Regulatory	Frequency	Should You Attend?	Check if Required <input checked="" type="checkbox"/>	Comments
Shipping Specialist	Y	Once	You are designated as a Shipping Specialist and/or are a Regional/SBU HSE Manager.	<input type="checkbox"/>	Updates are required as regulations change.
Site Safety Training (4 hours)	N	Biennial	Required primarily for Federal Services employees performing tasks at fixed locations (e.g., warehouses, laboratories, vehicle maintenance, aircraft maintenance).	<input type="checkbox"/>	Specific content will depend on the site and the employees' expected work.
Site Supervisor Training	N	Once	Required for all Federal Services Supervisors who are responsible for a site.	<input type="checkbox"/>	
Substance Specific	Y	Once	Any employee potentially exposed to a substance covered by the 29 CFR substance specific regulations. See SMS 050.	<input type="checkbox"/>	Includes lead, asbestos, benzene, etc. Offered as part of project-specific training.
Surface Miner Training – New (24 hours)	Y	Once	You perform work at surface mine sites regulated by MSHA.	<input type="checkbox"/>	Training is conducted by MSHA-approved instructors under MSHA-approved training plan.
Surface Miner Training – Annual Refresher (8 hours)	Y	Annual	You perform work at surface mine sites regulated by MSHA.	<input type="checkbox"/>	Training is conducted by MSHA-approved instructors under MSHA-approved training plan.
Underground Miner Training – New (40 hours)	Y	Once	You perform work in underground mine sites regulated by MSHA.	<input type="checkbox"/>	Training is conducted by MSHA-approved instructors under MSHA-approved training plan.
Underground Miner Training – Annual Refresher (8 hours)	Y	Annual	You perform work in underground mine sites regulated by MSHA.	<input type="checkbox"/>	Training is conducted by MSHA-approved instructors under MSHA-approved training plan.
Vehicle Safety	N	Once	Required for employees who drive on company business.	<input type="checkbox"/>	Authorized Drivers are those individuals permitted to drive URS-owned, -leased, or -rented vehicles, and employees who drive a personal vehicle for work purposes and are reimbursed for mileage. See SMS 057.
Waste Awareness	Y	Annual	You generate, handle, or manage hazardous waste at a fixed facility or field project.	<input type="checkbox"/>	Available online through the URS LMS.
Waste Specialist	Y	Once with Annual Refresher	You are responsible for waste management at a small or large quantity generator facility.	<input type="checkbox"/>	
Welding/Brazing/Cutting	Y		You job duties include these activities.	<input type="checkbox"/>	
Workplace Hazardous Materials Information System (WHMIS)	Y	Annual	You are assigned to a Canadian facility and work with or around hazardous materials.	<input type="checkbox"/>	Canadian Hazard Communications.

This supplement defines and lists the areas within the OSHA Construction Standards where a competent person is required to be part of a particular project activity

A. Definition

A **competent person** is “one who is capable of identifying existing and predictable hazards in the surrounding or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them (Subpart C; 29 CFR 1926.32(f)).”

B. Accident Prevention

“(Accident prevention) programs shall provide for frequent and regular inspections of the job sites, materials, and equipment to be made by **competent persons** designated by the employers (Subpart C: 29 CFR 1926.20(b)(2)).”

C. Ionizing Radiation

“Any activity which involves the use of radioactive materials or X-rays, whether or not under license from the Nuclear Regulatory Commission, shall be performed by **competent persons** specially trained in the proper and safe operation of such equipment. In the case of materials used under Commission license, only persons actually licensed, or **competent persons** under direction and supervision of the licensee, shall perform such work (Subpart D; 29 CFR 1926.53(b)).”

D. Respiratory Protection

“Administrative or engineering controls must first be implemented whenever feasible. When such controls are not feasible to achieve full compliance, protective equipment or other protective measures shall be used to keep the exposure of employees to air contaminants within the limits prescribed in this section. Any equipment and technical measures used for this purpose must first be approved for each particular use by a **competent** industrial hygienist or other technically qualified person (Subpart D; 29 CFR 1926.55(b)).”

E. Lead

“The compliance program shall provide for frequent and regular inspections of job sites, materials, and equipment to be made by a **competent person** (Subpart D; 29 CFR 1926.62(e)(2)(iii)).”

**F. Hearing Protection**

“Ear protective devices inserted in the ear shall be fitted or determined individually by **competent persons** (Subpart E; 29 CFR 1926.101(b)).”

**G. Material Handling**

“Each day before being used, the sling and all fastenings and attachments shall be inspected for damage or defects by a **competent person** designated by the employer (Subpart H; 29 CFR 1926.251(a)(6)).”

**H. Welding, Cutting, and Heating**

“Before welding, cutting, or heating is commenced on any surface covered by a preservative coating whose flammability is not known, a test shall be made by a **competent person** to determine its flammability (Subpart J; 29 CFR 1926.354(a)).”

**I. Assured Equipment Grounding Conductor Program**

“The employer shall designate one or more **competent persons** to implement the program (Subpart K; 29 CFR 1926.404(b)(1)(iii)(B)).”

**J. Scaffolding**

1. “Before the scaffold is used, direct connections shall be evaluated by a **competent person** who shall confirm, based on the evaluation, that the supporting surfaces are capable of supporting the loads to be imposed. In addition, an engineer experienced in such scaffold design shall design masons’ multi-point adjustable suspension scaffold connections (Subpart L; 29 CFR 1926.451(d)(3)(i)).” Note that this passage applies to suspension scaffolds only.
2. “The employer shall have each employee who is involved in erecting, disassembling, moving, operating, repairing, maintaining, or inspecting a scaffold trained by a **competent person** to recognize any hazards associated with the work in question (Subpart L; 29 CFR 1926.454(b)).” Per the standard, the training should include the following topics, as applicable:
  - a. The nature of scaffold hazards;
  - b. The correct procedures for erecting, disassembling, moving, operating, repairing, inspecting, and maintaining the type of scaffold in question;

- c. The design criteria, maximum intended load-carrying capacity and intended use of the scaffold; and
- d. Any other pertinent requirements of 1926 Subpart L.

#### K. Fall Protection

1. "Personal fall arrest systems and components subjected to impact loading shall be immediately removed from service and shall not be used again for employee protection until inspected and determined by a **competent person** to be undamaged and suitable for reuse (Subpart M; 29 CFR 1926.502(d)(19))."
2. Where safety monitoring systems are employed, "the employer shall designate a **competent person** to monitor the safety of other employees and the employer shall ensure that the safety monitor complies with the following requirements (Subpart M: 29 CFR 1926.502(h)(1)):
  - a. The safety monitor shall be competent to recognize fall hazards;
  - b. The safety monitor shall warn the employee when it appears that the employee is unaware of a fall hazard or is acting in an unsafe manner;
  - c. The safety monitor shall be on the same walking/working surface and within visual sighting distance of the employee being monitored;
  - d. The safety monitor shall be close enough to communicate orally with the employee; and
  - e. The safety monitor shall not have other responsibilities which could take the monitor's attention from the monitoring function."
3. "The implementation of the fall protection plan shall be under the supervision of a **competent person** (Subpart M; 29 CFR 1926.502(k)(4))." This section specifically refers to the implementation of fall protection plans on projects where it is infeasible or it creates a greater hazard to use conventional fall protection equipment.
4. "The employer shall assure that a **competent person** qualified in the following areas has trained each employee, as necessary (Subpart M; 29 CFR 1926.503(a)(2))":

- a. The nature of fall hazards in the work area;
- b. The correct procedures for erecting, maintaining, disassembling, and inspecting the fall protection systems to be used;
- c. The use and operation of guardrail systems, personal fall arrest systems, safety net systems, warning line systems, safety monitoring systems, controlled access zones, and other protection to be used;
- d. The role of each employee in the safety monitoring system when this system is used;
- e. The limitations on the use of mechanical equipment during the performance of elevated work;
- f. The correct procedures for the handling and storage of equipment and materials and the erection of overhead protection;
- g. The role of employees in fall protection plans, and
- h. The standards contained in 1926 Subpart M.

#### L. Cranes and Derricks

1. "The employer shall designate a **competent person** who shall inspect all machinery and equipment prior to each use, and during use, to make sure it is in safe operating condition. Any deficiencies shall be repaired, or defective parts replaced, before continued use (Subpart N; 29 CFR 1926.550(a)(5))."
2. "A thorough annual inspection of the hoisting machinery shall be made by a **competent person**, or by a government or private agency recognized by the U.S. Department of Labor. The employer shall maintain a record of the dates and results of inspections for each hoisting machine and piece of equipment (Subpart N; 29 CFR 1926.550(a)(6))."
3. "The personnel platform and suspension system shall be designed by a qualified engineer or a **qualified person competent** in structural design (Subpart N; 29 CFR 1926.550(g)(4)(i)(A))."
4. "A visual inspection of the crane or derrick, rigging, personnel platform, and the crane or derrick base support or ground shall be conducted by

a **competent person** immediately after the trial lift to determine whether the testing has exposed any defect or produced any adverse effect upon any component or structure (Subpart N; 29 CFR 1926.550(g)(5)(iv)).”

5. “At each job site, prior to hoisting employees on the personnel platform, and after any repair or modification, the platform and rigging shall be proof tested to 125 percent of the platform’s rated capacity by holding it in a suspended position for five minutes with the test load evenly distributed on the platform (this may be done concurrently with the trial lift). After proof testing, a **competent person** shall inspect the platform and rigging. Any deficiencies found shall be corrected and another proof test shall be conducted. Personnel hoisting shall not be conducted until the proof testing requirements are satisfied (Subpart N; 29 CFR 1926.550(g)(5)(vi)).”

#### M. Material Hoists, Personnel Hoists and Elevators

“Following assembly and erection of hoists, and before being put in service, an inspection and test of all functions and safety devices shall be made under the supervision of a **competent person**. A similar inspection and test is required following major alteration of an existing installation. All hoists shall be inspected and tested at not more than 3-month intervals. The employer shall prepare a certification record which includes the date the inspection and test of all functions and safety devices was performed; the signature of the person who performed the inspection and test; and a serial number, or other identifier, for the hoist that was inspected and tested. The most recent certification record shall be maintained on file (Subpart N; 29 CFR 1926.552(c)(15)).”

#### N. Excavations

1. “Structural ramps that are used solely by employees as a means of access or egress from excavations shall be designed by a **competent person**. Structural ramps used for access or egress of equipment shall be designed by a **competent person** qualified in structural design, and shall be constructed in accordance with the design (Subpart P; 29 CFR 1926.651(c)(1)(i)).”
2. “If water is controlled or prevented from accumulating by the use of water removal equipment, the water removal equipment and operations shall be monitored by a **competent person** to ensure proper operation (Subpart P; 29 CFR 1926.651(h)(2)).”

3. "If excavation work interrupts the natural drainage of surface water (such as streams), diversion ditches, dikes, or other suitable means shall be used to prevent surface water from entering the excavation and to provide adequate drainage of the area adjacent to the excavation. Excavations subject to runoff from heavy rains will require an inspection by a **competent person** and compliance with paragraphs (h)(1) and (h)(2) of 1926.651 (Subpart P; 29 CFR 1926.651(h)(3))."
4. "Daily inspections of excavations, the adjacent areas, and protective systems shall be made by a **competent person** for evidence of a situation that could result in possible cave-ins, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions. An inspection shall be conducted by the **competent person** prior to the start of work and as needed throughout the shift. Inspections shall also be made after every rainstorm or other hazard-increasing occurrence. These inspections are only required when employee exposure can be reasonably anticipated (Subpart P; 29 CFR 1926.651(k)(1))."
5. "Where the **competent person** finds evidence of a situation that could result in a possible cave-in, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions, exposed employees shall be removed from the hazardous area until the necessary precautions have been taken to ensure their safety (Subpart P; 29 CFR 1926.651(k)(2))."
6. Employees shall be protected from cave-ins except where "excavations are less than 5 feet (1.52 m) in depth and examination of the ground by a **competent person** provides no indication of a potential cave-in (Subpart P; 29 CFR 1926.652(a)(1)(ii))."
7. "When material or equipment that is used for protective systems is damaged, a **competent person** shall examine the material or equipment and evaluate its suitability for continued use. If the **competent person** cannot assure the material or equipment is able to support the intended loads or is otherwise suitable for safe use, then such material or equipment shall be removed from service, and shall be evaluated and approved by a registered professional engineer before being returned to service (Subpart P; 29 CFR 1926.652(d)(3))."
8. "Each soil and rock deposit shall be classified by a **competent person** as Stable Rock, Type A, Type B, or Type C in accordance with the definitions set forth in paragraph (b) of this appendix (1926 Subpart P, Appendix A, (a)(2)(C)(1))."

9. "The classification of the deposits shall be made based on the result of at least one visual and at least one manual analysis. Such analyses shall be conducted by a **competent person** using tests described in paragraph (d) of this appendix, or in other recognized methods of soil classification and testing such as those adopted by the American Society for Testing Materials, or the U.S. Department of Agriculture textural classification system (1926 Subpart P, Appendix A, (a)(2)(C)(2))."
10. "If after classifying a deposit, the properties, factors, or conditions affecting its classification change in any way, the changes shall be evaluated by a **competent person**. The deposit shall be reclassified as necessary to reflect the changed circumstances (1926 Subpart P, Appendix A, (a)(2)(C)(5))."
11. "When surcharge loads from stored material or equipment, operating equipment, or traffic are present, a **competent person** shall determine the degree to which the actual slope must be reduced below the maximum allowable slope, and shall assure that such reduction is achieved (1926 Subpart P, Appendix B, (c)(3)(iii))."

#### O. Lift-Slab Operations

"If leveling is maintained by manual controls, such controls shall be located in a central location and attended by a **competent person** while lifting is in progress. In addition to meeting the definition in 1926.32(f), the **competent person** must be experienced in the lifting operation and with the lifting equipment being used (Subpart Q, 29 CFR 1926.705(i))."

#### P. Steel Erection - Cranes

1. "Cranes being used in steel erection activities shall be visually inspected prior to each shift by a **competent person**; the inspection shall include observation for deficiencies during operation. At a minimum this inspection shall include the following (Subpart R: 29 CFR 1926.753(c)(1)(i)):
  - a. All control mechanisms for maladjustments;
  - b. Control and drive mechanism for excessive wear of components and contamination by lubricants, water or other foreign matter;
  - c. Safety devices, including but not limited to boom angle indicators, boom stops, boom kick out devices, anti-two block devices, and load moment indicators where required;

- d. Air, hydraulic, and other pressurized lines for deterioration or leakage, particularly those which flex in normal operation;
  - e. Hooks and latches for deformation, chemical damage, cracks, or wear;
  - f. Wire rope reeving for compliance with hoisting equipment manufacturer's specifications;
  - g. Electrical apparatus for malfunctioning, signs of excessive deterioration, dirt, or moisture accumulation;
  - h. Hydraulic system for proper fluid level;
  - i. Tires for proper inflation and condition;
  - j. Ground conditions around the hoisting equipment for proper support, including ground settling under and around outriggers, ground water accumulation, or similar conditions;
  - k. The hoisting equipment for level position; and
  - l. The hoisting equipment for level position after each move and setup.”
2. “If any deficiency is identified, an immediate determination shall be made by the **competent person** as to whether the deficiency constitutes a hazard (Subpart R; 29 CFR 1926.753(c)(1)(ii)).”

#### Q. Steel Erection – Structural Steel Assembly

1. “When deemed necessary by a **competent person**, plumbing-up equipment shall be installed in conjunction with the steel erection process to ensure the stability of the structure (Subpart R; 29 CFR 1926.754(d)(1)).”
2. “Plumbing-up equipment shall be removed only with the approval of a **competent person** (Subpart R; 29 CFR 1926.754(d)(3)).”

#### R. Steel Erection – Column Anchorage

“All columns shall be evaluated by a **competent person** to determine whether guying or bracing is needed; if guying or bracing is needed, it shall be installed (Subpart R; 29 CFR 1926.755(a)(4)).”

### S. Steel Erection – Beams and Columns

“A **competent person** shall determine if more than two bolts are necessary to ensure the stability of cantilevered members; if additional bolts are needed, they shall be installed (Subpart R; 29 CFR 1926.756(a)(2)).”

### T. Underground Construction

1. “The employer shall assign a **competent person** who shall perform all air monitoring required by this section (Subpart S; 29 CFR 1926.800(j)(1)(i)(A)).”
2. “Where this paragraph requires monitoring of airborne contaminants ‘as often as necessary,’ the **competent person** shall make a reasonable determination as to which substances to monitor and how frequently to monitor (Subpart S; 29 CFR 1926.800(j)(1)(i)(B)).” The standard indicates the following factors should be considered:
  - a. Location of jobsite: Proximity to fuel tanks, sewers, gas lines, old landfills, coal deposits, and swamps;
  - b. Geology: Geological studies of the jobsite, particularly involving the soil type and its permeability;
  - c. History: Presence of air contaminants in nearby jobsites, changes in levels of substances monitored on the prior shift; and
  - d. Work practices and jobsite conditions: The use of diesel engines, use of explosives, use of fuel gas, volume and flow of ventilation, visible atmospheric conditions, decompression of the atmosphere, welding, cutting and hot work, and employees’ physical reactions to working underground.
3. “When the **competent person** determines, on the basis of air monitoring results or other information, that air contaminants may be present in sufficient quantity to be dangerous to life, the employer shall:
  - a. Prominently post a notice at all entrances to the underground jobsite to inform all entrants of hazardous condition, and
  - b. Ensure that the necessary precautions are taken (Subpart S; 29 CFR 1926.800(j)(1)(iv))”

4. "When ventilation has been reduced to the extent that hazardous levels of methane or flammable gas may have accumulated, a **competent person** shall test all affected areas after ventilation has been restored and shall determine whether the atmosphere is within flammable limits before any power, other than for acceptable equipment, is restored or work is resumed (Subpart S; 29 CFR 1926.800(k)(7))."
5. "A **competent person** shall inspect the roof (back), face, and walls of the work area at the start of each shift and as often as necessary to determine ground stability (Subpart S; 29 CFR 1926.800(o)(3)(i)(A))."
6. "A **competent person** shall determine whether rock bolts meet the necessary torque, and shall determine the testing frequency in light of the bolt system, ground conditions and the distance from vibration sources (Subpart S; 29 CFR 1926.800(o)(3)(iv)(B))."
7. "After blasting operations in shafts, a **competent person** shall determine if the walls, ladders, timbers, blocking, or wedges have loosened. If so, necessary repairs shall be made before employees other than those assigned to make the repairs are allowed in or below the affected areas (Subpart S; 29 CFR 1926.800(o)(4)(iii))."
8. "A **competent person** shall inspect all drilling and associated equipment prior to each use. Equipment defects affecting safety shall be corrected before the equipment is used (Subpart S; 29 CFR 1926.800(q)(1))."
9. "A **competent person** shall inspect haulage equipment before each shift (Subpart S; 29 CFR 1926.800(r)(1)(i))."
10. "A **competent person** shall visually check all hoisting machinery, equipment, anchorages, and hoisting rope at the beginning of each shift and during hoist use, as necessary (Subpart S; 29 CFR 1926.800(t)(3)(xix))."
11. "Each safety device shall be checked by a **competent person** at least weekly during hoist use to ensure suitable operation and safe condition (Subpart S; 29 CFR 1926.800(t)(3)(xx))."

#### U. Compressed Air

1. "There shall be present, at all times, at least one **competent person** designated by and representing the employer, who shall be familiar with this Subpart in all respects, and responsible for full compliance

with these and other applicable subparts (Subpart S; 29 CFR 1926.803(a)(1)).”

2. “At all times there shall be a thoroughly experienced, **competent**, and reliable **person** on duty at the air control valves as a gauge tender who shall regulate the pressure in the working areas. During tunneling operations, one gauge tender may regulate the pressure in not more than two headings provided that the gauge and controls are all in one location. In caisson work, there shall be a gauge tender for each caisson (Subpart S; 29 CFR 1926.803(h)(1)).”

#### V. Demolition – Preparatory Operations

“Prior to permitting employees to start demolition operations, an engineering survey shall be made, by a **competent person**, of the structure to determine the condition of the framing, floors, and walls, and possibility of unplanned collapse of any portion of the structure. Any adjacent structure where employees may be exposed shall also be similarly checked. The employer shall have in writing evidence that such a survey has been performed (Subpart T; 29 CFR 1926.850(a)).”

#### W. Mechanical Demolition

“During demolition, continuing inspections by a **competent person** shall be made as the work progresses to detect hazards resulting from weakened or deteriorated floors, or walls, or loosened material. No employee shall be permitted to work where such hazards exist until they are corrected by shoring, bracing, or other effective means (Subpart T; 29 CFR 1926.859(g)).”

#### X. Blasting and the Use of Explosives

1. Precautions taken to prevent the accidental discharge of electric blasting caps shall include “the prominent display of adequate signs, warning against the use of mobile radio transmitters, on all roads within 1,000 feet of blasting operations. Whenever adherence to the 1,000-foot distance would create an operational handicap, a **competent person** shall be consulted to evaluate the particular situation, and alternative provisions may be made which are adequately designed to prevent any premature firing of electric blasting caps. A description of any such alternatives shall be reduced to writing and shall be certified as meeting the purposes of this subdivision by the **competent person** consulted. The description shall be maintained at the construction site during the duration of the work, and shall be available for inspection by representatives of the Secretary Labor (Subpart U; 29 CFR 1926.900(k)(3)(i)).”

	<p style="text-align: center;">Health, Safety and Environment <b>COMPETENT PERSONS IN CONSTRUCTION</b></p>	<p style="text-align: right;">SMS 055 NA Supplemental Information A Issue Date: August 2010</p>
---	--	---

2. “The blaster shall be knowledgeable and **competent** in the use of each type of blasting method used (Subpart U; 29 CFR 1926.901(e)).”

#### Y. Ladders

1. “Ladders shall be inspected by a **competent person** for visible defects on a periodic basis and after any occurrence that could affect their safe use (Subpart X; 29 CFR 1926.1053(b)).”
2. “The employer shall ensure that each employee has been trained by a **competent person** in the following areas, as applicable:
  - a. The nature of fall hazards in the work area;
  - b. The correct procedures for erecting, maintaining, and disassembling the fall protection systems to be used;
  - c. The proper construction, use, placement, and care in handling of all stairways and ladders;
  - d. The maximum intended load-carrying capacities of ladders used; and
  - e. The standards contained in this subpart (Subpart X; 29 CFR 1926.1060(a)(1)).”

#### Z. Toxic Substances – Asbestos

1. “**Competent person** means, in addition to the definition in 29 CFR 1926.32 (f), one who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure, who has the authority to take prompt corrective measures to eliminate them, as specified in 29 CFR 1926.32(f): in addition, for Class I and Class II work who is specially trained in a training course which meets the criteria of EPA's Model Accreditation Plan (40 CFR 763) for supervisor, or its equivalent and, for Class III and Class IV work, who is trained in a manner consistent with EPA requirements for training of local education agency maintenance and custodial staff as set forth at 40 CFR 763.92 (a)(2).” (Subpart Z; 29 CFR 1926.1101(b))
2. “The **competent** person shall examine worksuits worn by employees at least once per workshift for rips or tears that may occur during performance of work (Subpart Z; 29 CFR 1926.1101(i)(4)(i)).”

3. "On all construction worksites covered by this standard, the employer shall designate a **competent person**, having the qualifications and authorities for ensuring worker safety and health required by Subpart C, General Safety and Health Provisions for Construction (Subpart Z; 29 CFR 1926.1101(o)(1))."
4. "The **competent person** shall make frequent and regular inspections of the job sites, in order to perform the duties set out below in paragraph (o)(3)(i) and (ii) of this section. For Class I jobs, on-site inspections shall be made at least once during each work shift, and at any time at employee request. For Class II, III, and IV jobs, on-site inspections shall be made at intervals sufficient to assess whether conditions have changed, and at any reasonable time at employee request (Subpart Z; 29 CFR 1926.1101(o)(3))."
5. "On all worksites where employees are engaged in Class I or II asbestos work, the **competent person** shall perform or supervise the following duties, as applicable:
  - a. Set up the regulated area, enclosure, or other containment;
  - b. Ensure (by on-site inspection) the integrity of the enclosure;
  - c. Set up procedures to control entry to and exit from the enclosure and/or area;
  - d. Supervise all employee exposure monitoring required by this section and ensure that it is conducted as required by paragraph (f) of this section;
  - e. Ensure that employees working within the enclosure and/or using glove bags wear respirators and protective clothing as required by paragraphs (h) and (i) of this section;
  - f. Ensure through on-site supervision, that employees set up, use, and remove engineering controls, use work practices and personal protective equipment in compliance with all requirements;
  - g. Ensure that employees use the hygiene facilities and observe the decontamination procedures specified in paragraph (j) of this section;

- h. Ensure that through on-site inspection, engineering controls are functioning properly and employees are using proper work practices; and,
  - i. Ensure that notification requirement in paragraph (k) of this section are met (Subpart Z; 29 CFR 1926.1101(o)(3)(i)).”
- 6. “For Class I and II asbestos work the **competent person** shall be trained in all aspects of asbestos removal and handling, including: abatement, installation, removal and handling; the contents of this standard; the identification of asbestos; removal procedures, where appropriate; and other practices for reducing the hazard. Such training shall be obtained in a comprehensive course for supervisors that meets the criteria of EPA’s Model Accreditation Plan (40 CFR part 763, subpart E, Appendix C), such as a course conducted by an EPA-approved or state-approved training provider, certified by EPA or a state, or a course equivalent in stringency, content, and length (Subpart Z; 29 CFR 1926.1101(o)(4)(i)).”
- 7. “For Class III and IV asbestos work, the **competent person** shall be trained in aspects of asbestos handling appropriate for the nature of the work, to include procedures for setting up glove bags and mini-enclosures, practices for reducing asbestos exposures, use of wet methods, the contents of this standard, and the identification of asbestos. Such training shall include successful completion of a course that is consistent with EPA requirements for training of local education agency maintenance and custodial staff as set forth at 40 CFR 763.92(a)(2), or its equivalent in stringency, content and length (Subpart Z; 29 CFR 1926.1101(o)(4)(ii)).”

AA. Toxic Substances – Cadmium

- 1. “**Competent person**, in accordance with 29 CFR 1926.32 (f), means a person designated by the employer to act on the employer’s behalf who is capable of identifying existing and potential cadmium hazards in the workplace and the proper methods to control them in order to protect workers, and has the authority necessary to take prompt corrective measures to eliminate or control such hazards. The duties of a **competent person** include at least the following: Determining prior to the performance of work whether cadmium is present in the workplace; establishing, where necessary, regulated areas and assuring that access to and from those areas is limited to authorized employees; assuring the adequacy of any employee exposure monitoring required by this standard; assuring that all employees exposed to air cadmium levels above the PEL wear appropriate

personal protective equipment and are trained in the use of appropriate methods of exposure control; assuring that proper hygiene facilities are provided and that workers are trained to use those facilities; and assuring that the engineering controls required by this standard are implemented, maintained in proper operating condition, and functioning properly (Subpart Z; 29 CFR 1926.1127(b)).”

2. “Prior to the performance of any construction work where employees may be potentially exposed to cadmium, the employer shall establish the applicability of this standard by determining whether cadmium is present in the workplace and whether there is the possibility that employee exposures will be at or above the action level. The employer shall designate a **competent person** who shall make this determination. Investigation and material testing techniques shall be used, as appropriate, in the determination. Investigation shall include a review of relevant plans, past reports, material safety data sheets, and other available records, and consultations with the property owner and discussions with appropriate individuals and agencies (Subpart Z; 29 CFR 1926.1127(d)(1)(i)).”
3. “Where cadmium has been determined to be present in the workplace, and it has been determined that there is a possibility the employee’s exposure will be at or above the action level, the **competent person** shall identify employees potentially exposed to cadmium at or above the action level (Subpart Z; 29 CFR 1926.1127(d)(1)(ii)).”
4. “The employer also shall institute the exposure monitoring required under paragraphs (d) (2) (i) and (d) (3) of 29 CFR 1926.1127 whenever there has been a change in the raw materials, equipment, personnel, work practices, or finished products that may result in additional employees being exposed to cadmium at or above the action level or in employees already exposed to cadmium at or above the action level being exposed above the PEL, or whenever the employer or **competent person** has any reason to suspect that any other change might result in such further exposure (Subpart Z; 29 CFR 1926.1127(d)(4)).”
5. “A **competent person** shall review the comprehensive compliance program initially and after each change (Subpart Z; 29 CFR 1926.1127(f)(5)(iii)).”

BB. Toxic Substances – 1,2-Dibromo-3-Chloropropane

“Since many of the duties relating to employee protection are dependent on the results of monitoring and measuring procedures, employers should

assure that the evaluation of employee exposures is performed by a **competent** industrial hygienist or other technically qualified **person** (Subpart Z; 29 CFR 1926.1144; makes direct reference to 29 CFR 1910.1044, Appendix B, IV.B).”

CC. Toxic Substances – Acrylonitrile

“Since many of the duties relating to employee exposure are dependent on the results of monitoring and measuring procedures, employers shall assure that the evaluation of employee exposures is performed by a **competent** industrial hygienist or other technically qualified **person** (Subpart Z; 29 CFR 1926.1145; makes direct reference to 29 CFR 1910.1045, Appendix B, IV.B).”

This supplement defines and lists the areas within the OSHA General Industry Standards where a competent person is required to be part of a particular project activity.

A. Powered Platforms, Manlifts, and Vehicle-Mounted Work Platforms

1. “**Competent person** means a person who, because of training and experience, is capable of identifying hazardous or dangerous conditions in powered platform installations and of training employees to identify such conditions (Subpart F; 29 CFR 1910.66(d)).”
2. “Related building supporting structures shall undergo periodic inspection by a **competent person** at intervals not exceeding 12 months (Subpart F; 29 CFR 1910.66(g)(2)(i)).”
3. “All parts of the equipment including control systems shall be inspected, and, where necessary, tested by a **competent person** at intervals specified by the manufacturer/supplier, but not to exceed 12 months, to determine that they are in safe operating condition. Parts subject to wear, such as wire ropes, bearings, gears, and governors shall be inspected and/or tested to determine that they have not worn to such an extent as to affect the safe operation of the installation (Subpart F; 29 CFR 1910.66(g)(2)(ii)).”
4. “A maintenance inspection and, where necessary, a test shall be made of each platform installation every 30 days, or where the work cycle is less than 30 days such inspection and/or test shall be made prior to each work cycle. This inspection and test shall follow procedures recommended by the manufacturer, and shall be made by a **competent person** (Subpart F; 29 CFR 1910.66(g)(3)(i)).”
5. “Inspection of governors and secondary brakes shall be performed by a **competent person** (Subpart F; 29 CFR 1910.66(g)(4(v)).”
6. “Suspension wire rope shall be inspected by a **competent person** for visible defects and gross damage to the rope before every use and after each occurrence which might affect the wire rope's integrity (Subpart F; 29 CFR 1910.66(g)(5)(ii)).”
7. “A thorough inspection of suspension wire ropes in service shall be made once a month. Suspension wire ropes that have been inactive for 30 days or longer shall have a thorough inspection before they are placed into service. These thorough inspections of suspension wire

ropes shall be performed by a **competent person** (Subpart F; 29 CFR 1910.66(g)(5)(iii)).”

8. “Any other condition which the **competent person** determines has significantly affected the integrity of the rope (Subpart F; 29 CFR 1910.66(g)(5)(iv)(J)).”
9. “Training of employees in the operation and inspection of working platforms shall be done by a **competent person** (Subpart F; 29 CFR 1910.66(i)(1)(iii)).”
10. “**“Competent person”** means a person who is capable of identifying hazardous or dangerous conditions in the personal fall arrest system or any component thereof, as well as in their application and use with related equipment (Subpart F; 29 CFR 1910.66 App. C, (I)(b)).”
11. “Personal fall arrest systems or components subjected to impact loading shall be immediately removed from service and shall not be used again for employee protection unless inspected and determined by a **competent person** to be undamaged and suitable for reuse (Subpart F; 29 CFR 1910.66 App. C, (I)(e)(7)).”
12. “**“Comment compatibility considerations.”** Ideally, a personal fall arrest system is designed, tested, and supplied as a complete system. However, it is common practice for lanyards, connectors, lifelines, deceleration devices, body belts and body harnesses to be interchanged since some components wear out before others. The employer and employee should realize that not all components are interchangeable. For instance, a lanyard should not be connected between a body belt (or harness) and a deceleration device of the self-retracting type since this can result in additional free fall for which the system was not designed. Any substitution or change to a personal fall arrest system should be fully evaluated or tested by a **competent person** to determine that it meets the standard, before the modified system is put in use (Subpart F; 29 CFR 1910.66 App. C, (III)(c)).”

## B. Explosives and Blasting Agents

1. “Magazines shall be in the charge of a **competent person** at all times and who shall be held responsible for the enforcement of all safety precautions (Subpart H; 29 CFR 1910.109(c)(5)(viii)).”
2. “Explosives recovered from blasting misfires shall be placed in a separate magazine until **competent personnel** have determined from the manufacturer the method of disposal.

Caps recovered from blasting misfires shall not be reused. Such explosives and caps shall then be disposed of in the manner recommended by the manufacturer (Subpart H; 29 CFR 1910.109(c)(5)(ix)).”

3. “Extinguishers shall be filled and ready for immediate use and located near the driver's seat. Extinguishers shall be examined periodically by a **competent person** (Subpart H; 29 CFR 1910.109(d)(2)(iii)(b)).”
4. “The distances in the table apply to ammonium nitrate that passes the insensitivity test prescribed in the definition of ammonium nitrate fertilizer promulgated by the National Plant Food Institute; and ammonium nitrate failing to pass said test shall be stored at separation distances determined by **competent persons** (Subpart H, 29 CFR 1910.109, Table H-22, Footnote (3)).”
5. “Every warehouse used for the storage of blasting agents shall be under the supervision of a **competent person** (Subpart H, 29 CFR 1910.109(g)(5)(vii)).”

#### C. Helicopters

“Cargo hooks. All electrically operated cargo hooks shall have the electrical activating device so designed and installed as to prevent inadvertent operation. In addition, these cargo hooks shall be equipped with an emergency mechanical control for releasing the load. The employer shall ensure that the hooks are tested prior to each day's operation by a **competent person** to determine that the release functions properly, both electrically and mechanically (Subpart N, 29 CFR 1910.183(d)).”

#### D. Slings

1. “**Inspections.** Each day before being used, the sling and all fastenings and attachments shall be inspected for damage or defects by a **competent person** designated by the employer. Additional inspections shall be performed during sling use, where service conditions warrant. Damaged or defective slings shall be immediately removed from service (Subpart N, 29 CFR 1910.184(d)).”
2. “The thorough inspection of alloy steel chain slings shall be performed by a **competent person** designated by the

employer, and shall include a thorough inspection for wear, defective welds, deformation and increase in length. Where such defects or deterioration are present, the sling shall be immediately removed from service (Subpart N, 29 CFR 1910.184(e)(3)(iii)).”

#### E. Telecommunications

1. “**Support structures.** No employee, or any material or equipment, may be supported or permitted to be supported on any portion of a pole structure, platform, ladder, walkway or other elevated structure or aerial device unless the employer ensures that the support structure is first inspected by a **competent person** and it is determined to be adequately strong, in good working condition and properly secured in place (Subpart R, 29 CFR 1910.268(b)(6)).”
2. “**Tools and personal protective equipment -- Generally.** Personal protective equipment, protective devices and special tools needed for the work of employees shall be provided and the employer shall ensure that they are used by employees. Before each day's use the employer shall ensure that these personal protective devices, tools, and equipment are carefully inspected by a **competent person** to ascertain that they are in good condition (Subpart R, 29 CFR 1910.268(e)).”
3. “**General.** Safety belts and straps shall be provided and the employer shall ensure their use when work is performed at positions more than 4 feet above ground, on poles, and on towers, except as provided in paragraphs (n)(7) and (n)(8) of this section. No safety belts, safety straps or lanyards acquired after July 1, 1975 may be used unless they meet the tests set forth in paragraph (g)(2) of this section. The employer shall ensure that all safety belts and straps are inspected by a **competent person** prior to each day's use to determine that they are in safe working condition (Subpart R, 29 CFR 1910.268(g)(1)).”
4. “The employer shall ensure that pole climbers are inspected by a **competent person** for the following conditions: Fractured or cracked gaffs or leg irons, loose or dull gaffs, broken straps or buckles. If any of these conditions exist, the defect shall be corrected before the climbers are used (Subpart R, 29 CFR 1910.268(g)(3)(ii)).”

5. “The employer shall ensure that no employee nor any material or equipment may be supported or permitted to be supported on any portion of a ladder unless it is first determined, by inspections and checks conducted by a **competent person** that such ladder is adequately strong, in good condition, and properly secured in place, as required in Subpart D of this part and as required in this section (Subpart R, 29 CFR 1910.268(h)(1)).”
6. “The employer shall ensure that visual inspections are made of the equipment by a **competent person** each day the equipment is to be used to ascertain that it is in good condition (Subpart R, 29 CFR 1910.268(j)(1)(i)).”
7. “The employer shall ensure that tests shall be made at the beginning of each shift by a **competent person** to insure the vehicle brakes and operating systems are in proper working condition (Subpart R, 29 CFR 1910.268(j)(1)(ii)).”
8. “The employer shall ensure that the derrick and its associated equipment are inspected by a **competent person** at intervals set by the manufacturer but in no case less than once per year. Records shall be maintained including the dates of inspections, and necessary repairs made, if corrective action was required (Subpart R, 29 CFR 1910.268(j)(4)(iv)(F)).”

**URS SAFETY MANAGEMENT STANDARD 056  
DRILLING SAFETY GUIDELINES**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Drilling Safety Guidelines**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies on projects using truck-mounted or other engine-powered drill rigs. The primary responsibility for drilling safety is with the drilling contractor.

### **2. Purpose and Scope**

The purpose of this standard is to provide an overview for working safely around drilling operations with truck-mounted and other engine-powered drill rigs. The procedure addresses off-road movement of drill rigs, overhead and buried utilities, the use of augers, rotary and core drilling, and other drilling operations and activities. More detailed drilling safety guidelines are provided in the document *Environmental Remediation Drilling Safety Guidelines*.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

Drill rig safety and maintenance is the responsibility of the drill rig operator. Drilling subcontractors must be qualified in accordance with SMS 046 – Subcontractor Health and Safety Requirements.

### **4. Requirements**

#### **A. General Safety Guidelines**

URS technicians, geologists, engineers, or other field staff assigned to oversee drilling operations or collect soil samples will observe the following guidelines:

1. Require a meeting at project startup regarding the drill rig operator's responsibility for rig safety, and any site- and equipment-specific safety requirements.
2. Excluding geoprobe activities, set up any sample tables and general work areas for the URS field staff at a distance of at least the height of the fully extended mast plus 5 feet (1.52 meters), and no less than 30 feet (10 meters) from the rig.
3. URS engineers, technicians, and geologists will not assist the drillers with drilling equipment or supplies, and will not operate the drill rig controls except to activate the emergency shutoff, if needed.

## **URS SAFETY MANAGEMENT STANDARD**

### **Drilling Safety Guidelines**

---

4. Require that all rotary drilling equipment have an emergency shut off/ kill switch. The location of the switch should be reviewed with all field staff.
5. Drilling rigs shall be inspected by the lead driller prior to use daily. Attachment 056-1 NA – Drill Rig Inspection Checklist may be utilized to document the inspection.

#### **B. Movement of Drill Rigs**

1. Before moving a rig, the operator must do the following:
  - a. To the extent practical, walk the planned route of travel and inspect it for depressions, gullies, ruts, and other obstacles.
  - b. Check the brakes of the truck/carrier, especially if the terrain along the route of travel is rough or sloped.
  - c. Discharge all passengers before moving on rough or steep terrain.
  - d. Engage the front axle (on 4x4, 6x6, etc., vehicles) before traversing rough or steep terrain.
2. Driving drill rigs along the sides of hills or embankments should be avoided; however, if side-hill travel becomes necessary, the operator must conservatively evaluate the ability of the rig to remain upright while on the hill or embankment. The possibility must be considered that the presence of drilling tools on the rig may reduce the ability of the rig to remain upright (raises the center of mass of the rig).
3. Logs, ditches, road curbs, and other long and horizontal obstacles should be approached and driven over squarely, not at an angle.
4. When close lateral or overhead clearance is encountered, the driver of the rig should be guided by another person on the ground.
5. Loads on the drill rig and truck must be properly stored while the truck is moving, and the mast must be in the fully lowered position.
6. After the rig has been positioned to begin drilling, all brakes and/or locks must be set before drilling begins. If the rig is positioned on a steep grade and leveling of the ground is impossible or impractical, the wheel of the transport vehicle must be blocked and other means employed of preventing the rig from moving or toppling over.

## **URS SAFETY MANAGEMENT STANDARD**

### **Drilling Safety Guidelines**

---

#### C. Buried and Overhead Utilities

1. The location of overhead and buried utility lines must be determined before drilling begins, and the locations should be noted on boring plans and/or assignment sheets.
2. When overhead power lines are close by, the drill rig mast should not be raised unless the distance between the rig and the nearest power line is at the minimum distance stated in SMS 034 – Utility Clearances and Isolation. The drill rig operator or assistant should walk completely around the rig to make sure that adequate clearance exists.
3. The rig operator should be aware that when the drill rig is positioned near an overhead line, hoist lines and power lines can be moved towards each other by wind. When necessary and approved by the project manager, the utility and/or power lines may be shielded, shut down, or moved by the appropriate personnel.
4. Before performing work, for additional information, please refer to SMS 034 – Utility Clearances and Isolation.

#### D. Clearing the Work Area

1. Before a drill rig is positioned to drill, the area on which the rig is to be positioned must be cleared of removable obstacles and the rig must be leveled if it is sloped. The cleared/leveled area should be large enough to accommodate the rig and supplies.

#### E. Safe Use of Augers

1. Never place hands or fingers under the bottom of an auger flight or drill rods when hoisting the augers or rods over the top of another auger or rod in the ground or other hard surfaces, such as the drill rig platform.
2. Never allow feet to get under the auger or drill rod while they are being hoisted.
3. When the drill is rotating, stay clear of the drill string and other rotating components of the drill rig. Never reach behind or around a rotating auger for any reason.
4. Move auger cuttings away from the auger with a long-handled shovel or spade; never use hands or feet.

## **URS SAFETY MANAGEMENT STANDARD**

### **Drilling Safety Guidelines**

---

5. Never clean an auger attached to the drill rig unless the transmission is in neutral or the engine is off, and the auger has stopped rotating.
6. Do not wear loose clothing or jewelry while working near the drill rig. Long hair must be pulled back to avoid entanglement with moving parts.
7. Hearing protection is required when working near an operating drill rig.

#### F. Rod Separation

1. Do not use manual tools (e.g., pipe wrenches) in combination with rotation of the drill stem. Manual tools are not designed for the load, and may break. The use of such tools creates a significant impact hazard for those in the work area, because they rotate with the drill stem. URS does not permit drillers to use manual tools in combination with a rotating drill stem to break rods. Manual tools may be used if the drill stem is isolated/positively disengaged.
2. Mechanical means of rod separation that are permitted include:
  - a. Opposing hydraulic controls.
  - b. Rod locking devices.
  - c. Hydraulic breakout tools.
  - d. Hydraulic foot clamps.

#### G. Safe Use of Hand Tools

Review SMS 064 – Hand Safety for information regarding hand tools in addition to the guidelines provided below:

1. Use each tool to perform only tasks for which it was originally designed.
2. Repair damaged tools before use, or discard them.
3. Wear safety goggles or glasses when using a hammer or chisel. Nearby co-workers and bystanders are required to wear safety goggles or glasses also, or move away.
4. Clean tools and store them in an orderly manner when they are not in use.

## **URS SAFETY MANAGEMENT STANDARD**

### **Drilling Safety Guidelines**

---

#### H. Safe Use of Wire Line Hoists, Wire Rope, and Hoisting Hardware

1. Whenever wire line hoists, wire rope, or hoisting hardware are used, the safety rules described in Title 29 Code of Federal Regulations (CFR) 1926.552, and guidelines contained in the Wire Rope User's Manual published by the American Iron and Steel Institute, will be followed. The driller will provide written reports (upon request) documenting inspections of equipment.

#### I. Traffic Safety

1. Drilling in streets, parking lots, or other areas of vehicular traffic requires definition of the work zones with cones, warning tape, etc., and compliance with local police requirements. Refer to SMS 032 – Work Zone Traffic Control.

#### J. Fire Safety

1. Fire extinguishers (type ABC) will be kept on or near drill rigs for fighting small fires.
2. If methane or other flammable gases or vapors are suspected in the area, a combustible gas indicator (CGI) will be used to monitor the air near the borehole, with all work to stop at 20 percent of the Lower Explosive Limit (LEL).
3. Work must stop during lightning storms.

#### K. Drilling at Potential MEC/UXO Sites

If the project site is suspected of containing munitions and explosives of concern (MEC) or unexploded ordnance (UXO), the UXO team will conduct a reconnaissance and MEC/UXO avoidance to provide clear access routes to each site before drilling crews enter the area. The following procedures will be implemented:

1. Drilling operations on an MEC/UXO site will not be conducted until a complete plan for the site is prepared and approved by the URS UXO Safety Officer. MEC/UXO avoidance must be conducted during drilling operations on known or suspect MEC/UXO sites. Refer to SMS 039 – Munitions Response/Munitions and Explosives of Concern.
2. The UXO team will identify and distinctly mark the boundaries of a clear approach path for the drilling crews, vehicles, and equipment to enter the site. This path will be, at a minimum, twice the width of the

## **URS SAFETY MANAGEMENT STANDARD**

### **Drilling Safety Guidelines**

---

widest vehicle. No personnel will be allowed outside any marked boundary.

3. If MEC/UXO is encountered on the ground surface, the UXO team will clearly mark the area where it is found, report it to the proper authorities, and divert the approach path around it.
4. The UXO team will conduct an access survey using the appropriate geophysical instrument over the approach path for avoidance of MEC/UXO that may be in the subsurface. If a magnetic anomaly is encountered, it will be assumed to be MEC/UXO, and the approach path will be diverted around the anomaly. UXO personnel only will operate the appropriate geophysical instrument and identify MEC/UXO.
5. An incremental geophysical survey of the drill-hole location(s) will be initially accomplished by the UXO team using a hand auger to install a pilot hole. If MEC/UXO is encountered or an anomaly cannot be positively identified as inert material, Hazardous, Toxic, and Radioactive Waste (HTRW) sampling personnel will select a new drill-hole location.
6. Once the surface of a drilling site has been cleared and a pilot hole established as described above, the drilling contractor will be notified that the site is available for subsurface drilling.
7. Additional guidance for MEC/UXO support during drilling activities is provided in SMS 039 – Munitions Response/Munitions and Explosives of Concern.

#### L. Protective Gear

##### 1. Minimum Protective Gear

At a minimum, items listed below must be worn by all staff working within 30 feet (10 meters) of drilling activities.

- a. Hearing protection.
- b. Hard hat.
- c. Eye protection (safety glasses, goggles, or face-shield).
- d. Safety shoes (steel-toed shoes or boots).

# **URS SAFETY MANAGEMENT STANDARD**

## **Drilling Safety Guidelines**

---

### 2. Other Gear

Items listed below must be worn when conditions warrant their use. Some of the conditions are listed after each item.

- a. Safety Harnesses and Lifelines: Safety harnesses and lifelines must be worn by all persons working on top of an elevated derrick beam or mast. Lifelines should be secured at a position that will allow a person to fall no more than 6 feet (2 meters). OSHA Fall Protection (1926 Subpart M) requirements apply. Refer to SMS 040 – Fall Protection for additional information.
- b. Life Vests: Life vests must be used for work over water. Refer to SMS 027 – Work Over Water for additional information.

### 5. Resources

Health, Safety and Environment  
**DRILL RIG INSPECTION CHECKLIST**

Attachment 056-1 NA  
Issue Date: December 2009

Inspect flights/augers for metal burns. NOTE: Burrs must be filed to flat surface.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Avoid stacking augers; all should lay flat on ground.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Avoid manually lifting/moving augers. Should be lifted/moved with cable lines, or, at a minimum, by two persons.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Drill String</b>	
Drill string should not be bent or have any cracks/fractures.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Drill string connecting pins should not be bent, have any cracks/fractures, or be excessively worn.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Mast</b>	
Mast is free of bends, cracks, or broken sections.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
All mounting hardware (pins, bolts, etc) should be in place.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
No moving of drill rig while mast is in vertical position.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Maintenance/repairs to be performed on mast only in horizontal position.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Hammering Device</b>	
Hammer free of cracks, fatigue, or other signs of excessive wear.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Hammer connections are secure.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Leveling Devices</b>	
Outriggers move in/out and up/down smoothly and freely while using controls on drill rig, with no hydraulics leaks.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Outriggers are extended prior to and whenever the mast is raised off its cradle. Outriggers must maintain pressure to continuously support and stabilize the drill rig (even while unattended).	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Outriggers are properly supported on the ground surface to prevent setting into the soil (use of outrigger support pads).	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Controls</b>	
Controls are intact, properly labeled, have freedom of movement, and have no loose wiring or connections.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Controls are not blocked or locked into an operating position.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Installed lights, signals, gauges, and alarms operate properly.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Lifting Devices</b>	
Slings, chokers, and lifting devices are inspected before using and are in proper working order. NOTE: Damaged units are to be labeled and removed from jobsite.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Shackles/Clevises are in proper working order with pins/screws in place that is to be used while lifting.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Cables and lifting devices are not operated erratically or with a jerking action to overcome resistance.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Hydraulic System</b>	
Hydraulic lines are secure, in good condition with no signs of excessive wear, and not leaking. NOTE: Check while pressurized.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Hydraulic lines are not in a bent or pinched position causing additional fluid restrictions/pressures.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Hydraulic oil reservoir has appropriate amount of oil and not leaking.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Documentation available to confirm that pressure relief valve was checked during shop maintenance activity and noted on maintenance log.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Pump Lines (water, grout, etc)</b>	
Suction/Discharge hoses, pipes, valves, and fittings are secured and not leaking.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
High pressure hoses have a safety chain, cable, or strap at each end to prevent whipping in the event of a failure.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Fire Prevention</b>	
A fire extinguisher of appropriate size is located on drill rig and readily available/accessible for drilling crew (recommended 20 lb).	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A

<b>URS</b>	<b>Health, Safety and Environment</b>	Attachment 056-1 NA
	<b>DRILL RIG INSPECTION CHECKLIST</b>	Issue Date: December 2009

<b>Ladders</b>	
Drill rig has a permanently attached or proper portable ladder to be used for access to drilling platform.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Tracks</b>	
Tracks on rig are not excessively worn and free of any debris or foreign material.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>General</b>	
Drill rig meets regulations for transport on state/federal highways (inspection sticker, license plate, etc.).	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Does the rig size meet job requirements?	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Maintenance log available for previous 3 months to confirm proper maintenance/inspection.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Exhaust</b>	
Exhaust system should be free from defect and routes engine exhaust away from drill rig workers.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Fuels</b>	
Fuel stored in an approved and properly labeled container.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Fuel transfer lines free from signs of excessive wear and not leaking.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
Refueling and transferring of fuel is performed in an approved area with sufficient containment to prevent spillage.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Exclusion/Work Zones</b>	
The exclusion/work zone is centered over the borehole and the radius equal to or greater than the height of the mast (measured from ground level).	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
The exclusion/work zone should be clear of tripping hazards.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Overhead Obstructions</b>	
Except where electrical distribution and transmission lines have been de-energized and visibly grounded, drill rigs will be operated proximate to under, by, or near power lines in accordance with the following: <ul style="list-style-type: none"> <li>• 50 KV or less – minimum clearance of 10 feet</li> <li>• 50 KV or greater – add 0.4 inches for every KV over 50 KV</li> <li>• If voltage is unknown, maintain at least 20 feet of clearance</li> </ul>	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Rig Repairs</b>	
Repairs, when possible, are conducted offsite to reduce the risk of any onsite incidents.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
<b>Specialized PPE</b>	
When working at elevated heights, workers are to wear a fall restraining device attached in a manner to restrict falls to less than six feet.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A
When working in wet/slippery conditions, all workers have a lug-type sole or similar slip resistant sole, on their safety footwear to prevent slipping.	<input type="checkbox"/> Pass <input type="checkbox"/> Fail <input type="checkbox"/> N/A

**URS SAFETY MANAGEMENT STANDARD 059**  
**COLD STRESS**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Cold Stress**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies where field crews are working outdoors in damp and cool (below 50 degrees Fahrenheit [°F] or 10 degrees Celsius [°C]) conditions or anytime temperatures are below 32°F or 0°C.

### **2. Purpose and Scope**

The purpose of this standard is to protect project personnel from hypothermia and frostbite.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Carefully plan work anticipated to be performed in cool or cold conditions. Include costs in project budgets for specialized equipment and supplies needed to complete the field activities.
- B. Monitor weather forecasts immediately prior to entering the field. If possible, schedule heavy work during the warmer parts of the day. Implement a work-warming regimen by taking breaks out of the cold.
- C. Observe and monitor weather conditions such as ambient temperature, wind speed, and precipitation while in the field. If needed, use Supplemental Information B to determine wind chill.
- D. Wearing the right clothing is the most important way to avoid cold stress. The type of fabric also makes a difference. Cotton loses its insulation value when it becomes wet. Wool, on the other hand, retains its insulation even when wet. Adequate insulating dry clothing will be required in air or wind chill temperatures below 40 °F (4.4 °C).
  1. Wear at least 3 layers of clothing to help prevent cold stress. It is important to preserve the air space between the body and the outer layer of clothing to retain body heat.
  2. Wear an outer layer to break the wind and allow some ventilation (e.g., Gortex<sup>®</sup> or nylon).

**URS SAFETY MANAGEMENT STANDARD**  
**Cold Stress**

---

3. Wear a middle layer of down, wool, or similar materials to provide insulation.
  4. Wear an inner layer of cotton or synthetic weave to allow ventilation.
  5. Wear a hat or hardhat liner. Up to 40 percent of body heat can be lost when the head is left exposed.
  6. Wear insulated boots or other insulated footwear, and insulated gloves to help reduce the chance of frostbite.
  7. Keep a change of dry clothing available in case work clothes become wet.
  8. Do not wear tight clothing. Loose clothing allows better ventilation.
  9. Skin should not be left exposed on a continuous basis when air temperature or chill factors are below -17°F (-27°C).
  10. Drink plenty of liquids, avoiding caffeine and alcohol, which are vasoconstrictors. It is easy to become dehydrated in cold weather.
- E. Use the following work practices:
1. Use Supplemental Information C to establish work/rest cycles in cold weather.
  2. Drink plenty of warm liquids. It is easy to become dehydrated in cold weather.
  3. Avoiding caffeine and alcohol. Alcohol will accelerate loss of body heat.
  4. Eat high calorie snacks to help maintain body metabolism.
  5. If possible, heavy work should be scheduled during the warmer parts of the day. Take breaks out of the cold.
  6. Work in pairs to keep an eye on each other and watch for signs of cold stress.
  7. NEVER IGNORE SHIVERING. Persistent or violent shivering is a clear warning that you are on the verge of hypothermia.
  8. Avoid exhaustion.

**URS SAFETY MANAGEMENT STANDARD**  
**Cold Stress**

---

- F. When possible, use the following engineering controls:
1. Provide shelter to escape cold, wind, and precipitation
  2. Provide a source of heat (such as warm packs or portable heaters).
  3. Use insulating materials on equipment handles when temperatures drop below 30°F (-1°C).
- G. Watch for symptoms and signs of hypothermia. Work in pairs to keep an eye on each other and watch for signs of cold stress.
- H. Treat cold stress illness as follows:
1. Hypothermia: Prompt treatment of hypothermia is essential. Once the body temperature drops below 95°F (35°C), the loss of temperature control occurs, and the body can no longer rewarm itself. Initial treatment includes reducing heat loss by moving the individual out of the wind and cold, removing wet clothing, applying external heat (such as a pre-warmed sleeping bag, electric blanket, or body-heat from other workers), and obtaining follow-up medical attention.
  2. Frost Bite: The initial treatment for frostbite includes bringing the individual to a warm location, removing clothing in the affected area, and **if help is delayed**, placing the affected parts in warm (100° to 104°F or 38° to 40°C) water. Do not massage or rub the frostbite area. After the initial treatment, wrap the affected area loosely in sterile gauze and seek medical attention.

For further discussion on Cold Stress treatment, please refer to Supplemental Information A.

I. Hypothermia in Water:

Loss of body heat to the water is a major cause of deaths in boating and working near water incidents. Often the cause of death is listed as drowning; however, the primary cause is often hypothermia. It should also be noted that alcohol lowers the body temperature around 2 to 3 degrees by dilating the blood vessels. Do not drink alcohol around cold water. The following table shows the effects of hypothermia in water:

**URS SAFETY MANAGEMENT STANDARD**  
**Cold Stress**

---

<b>WATER TEMPERATURE</b>	<b>EXHAUSTION</b>	<b>SURVIVAL TIME</b>
32.5°F (0°C)	Under 15 minutes	Under 15 to 45 minutes
32.5 to 40°F (0 to 4°C)	15 to 30 minutes	30 to 90 minutes
40 to 50°F (4 to 10°C)	30 to 60 minutes	1 to 3 hours
50 to 60°F (10 to 16°C)	1 to 2 hours	1 to 6 hours
60 to 70°F (16 to 21°C)	2 to 7 hours	2 to 40 hours
60 to 70°F (16 to 21°C)	3 to 12 hours	3 hours to indefinite
Over 80°F (27°C)	Indefinite	Indefinite

**SOME POINTS TO REMEMBER:**

1. Wear your PFD. Review SMS 027 – Work Over Water, SMS 053 – Marine Safety and Boat Operations and SMS 095 – Barge Operations.
2. If the water is less than 50°F (10°C), wear a wet suit or dry suit for work in water (e.g., wading), or if a significant potential to fall in water exists.
3. While in the water, do not attempt to swim unless to reach nearby safety. Unnecessary swimming increases the rate of body heat loss. Keep your head out of the water. This will increase your survival time.
4. Keep a positive attitude about your rescue. This will increase your chances of survival.
5. If there is more than one person in the water, huddling is recommended.

J. Training

Workers at risk of developing hypothermia or cold-related injury will be trained in:

1. Recognition of the signs and symptoms of cold injury or impending hypothermia;

## **URS SAFETY MANAGEMENT STANDARD**

### **Cold Stress**

---

2. Proper re-warming procedures and appropriate first aid treatment;
3. Proper use of clothing;
4. Proper eating and drinking practices; and
5. Safe work practices appropriate to the work that is to be performed.

#### **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Cold stress training records.

#### **6. Resources**

- A. U.S. Occupational Safety and Health Administration (OSHA) Fact Sheets – [“Protecting Workers in Cold Environments”](#)
- B. [OSHA Publication 3156 – Quick Reference Card](#)
- C. [SMS 027](#) – Work Over Water
- D. [SMS 053](#) – Marine Safety and Boat Operations
- E. [SMS 095](#) – Barge Operations

#### **7. Supplemental Information**

- A. [Signs of, and Treatment for, Cold Stress-Related Illnesses](#)
- B. [Wind Chill Index](#) (units in °F and miles/hour, and units in °C and Kilometers/hour )
- C. [Work/Warm-up Schedule for Outside Workers](#) based on a Four-Hour Shift

**Health, Safety and Environment**  
**SIGNS OF AND TREATMENT FOR COLD  
 STRESS RELATED ILLNESSES**

SMS 059 NA  
 Supplemental Information A  
 Issue Date: February 2009

**Hypothermia:** Hypothermia results when the body loses heat faster than it can be produced. When this situation first occurs, blood vessels in the skin constrict in an attempt to conserve vital internal heat. Hands and feet are first affected. If the body continues to lose heat, involuntary shivers begin. This is the body's way of attempting to produce more heat, and it is usually the first real warning sign of hypothermia. Further heat loss produces speech difficulty, confusion, loss of manual dexterity, collapse, and finally death. Wet clothes or immersion in cold water greatly increases the hypothermia risk. The progressive clinical presentation of hypothermia is described in the table below.

**Frostbite:** Local injury resulting from cold is included in the generic term frostbite. There are several degrees of damage. Frostbite can be categorized into:

- **Frost Nip or Initial Frostbite:** (1st degree frostbite) Characterized by blanching or whitening of skin.
- **Superficial Frostbite:** (2nd degree frostbite) Skin has a waxy or white appearance and is firm to the touch, but tissue beneath is resilient. Blistering and peeling of the frozen skin will follow exposure.
- **Deep Frostbite:** (3rd degree frostbite) Tissues are cold, pale, and solid; extremely serious injury with possible amputation of affected area.

Frostbite can occur without hypothermia when the extremities do not receive sufficient heat. The toes, fingers, cheeks, and ears are the most commonly affected. Frostbite occurs when there is freezing of the fluids around the cells of the affected tissues. The first symptom of frostbite is an uncomfortable sensation of coldness, followed by numbness. There may be tingling, stinging, or cramping. Contact by the skin with tools or other metal objects below 20°F (-7°C) may result in contact frostbite.

Condition	Signs/Symptoms	Treatment
Hypothermia <b>Mild</b> (98° - 90° F) (36° - 32°C)	<ul style="list-style-type: none"> <li>• shivering</li> <li>• lack of coordination</li> <li>• stumbling, fumbling hands</li> <li>• slurred speech</li> <li>• memory loss</li> <li>• pale, cold skin</li> </ul>	<ul style="list-style-type: none"> <li>• move to warm area</li> <li>• stay active</li> <li>• remove wet clothes and replace with dry clothes or blankets</li> <li>• cover the head</li> <li>• drink warm (not hot) sugary drink</li> </ul>
Hypothermia <b>Moderate</b> (90° - 86° F) (32° - 30°C)	<ul style="list-style-type: none"> <li>• shivering stops</li> <li>• unable to walk or stand</li> <li>• confused and irrational</li> </ul>	<ul style="list-style-type: none"> <li>• All of the above, plus</li> <li>• Call for an ambulance</li> <li>• Cover all extremities completely</li> <li>• Place very warm objects, such as hot packs or water bottles on the victim's head, neck, chest and groin</li> </ul>
Hypothermia <b>Severe</b> (86° - 78° F) (30° - 26°C)	<ul style="list-style-type: none"> <li>• severe muscle stiffness</li> <li>• very sleepy or unconscious</li> <li>• ice cold skin</li> <li>• death</li> </ul>	<ul style="list-style-type: none"> <li>• Call for an ambulance</li> <li>• Treat the victim very gently</li> <li>• Do not attempt to re-warm -- the victim should receive treatment in a hospital</li> </ul>
<b>Frostbite</b>	<ul style="list-style-type: none"> <li>• Cold, tingling, stinging or aching feeling in frostbitten area; numbness</li> <li>• Skin color turns red, then purple, then white or very pale skin, cold to the touch</li> <li>• Blisters in severe cases</li> </ul>	<ul style="list-style-type: none"> <li>• Seek medical attention</li> <li>• Do not rub the area</li> <li>• Wrap in soft cloth</li> <li>• If help is delayed, immerse in warm, not hot, water</li> </ul>
<b>Trench Foot</b>	<ul style="list-style-type: none"> <li>• Tingling, itching or burning sensation</li> <li>• Blisters</li> </ul>	<ul style="list-style-type: none"> <li>• Soak feet in warm water, then wrap with dry cloth bandages</li> <li>• Drink a warm, sugary drink</li> </ul>

**WIND CHILL INDEX**

Estimated wind speed	Actual temperature reading (°F/°C)											
	50/10	40/4	30/-1	20/-7	10/-12	0/-18	-10/-23	-20/-29	-30/-34	-40/-40	-50/-46	-60/-51
(mph/kph)	Equivalent wind chill temperature (°F/°C)

	<b>LOW HAZARD</b> Risk of exposed, dry skin being affected in less than one hour. Awareness of hazard low.				<b>INCREASING HAZARD</b> Danger from freezing of exposed flesh within one minute.				<b>HIGH HAZARD</b> Flesh may freeze within 30seconds.			

Note that wind speeds greater than 40 mph/64 kph have little additional effect.

Information in this table was originally developed by the U.S. Army Research Institute of Environmental Medicine, Natick, MA, and is further adapted from the 2004 *Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices*, published by the ACGIH. The ACGIH publication provides the equivalent table with temperature in degrees Fahrenheit and wind speed in mph.

Equivalent wind chill temperatures identified require dry clothing to maintain core body temperature above 96.8°F (36°C).

**Health, Safety and Environment**  
**WORK / WARM-UP SCHEDULE FOR OUTSIDE WORKERS BASED ON A FOUR-HOUR SHIFT**

SMS 059 NA  
 Supplemental Information C  
 Issue Date: February 2009

How fast a person's body cools in cold weather depends on: air temperature, wind speed, heat of the sun, and work being done. The fingers and toes usually feel cold first. Shivering then sets in. Shivering is the body's way of warning that it needs to be warm-up. |

The Work Warm-Up Schedule shows the warm-up breaks needed for work in cold conditions. It assumes that normal work practice provides for breaks in warm locations every two hours. The schedule provides for additional breaks as the wind velocity at the work site increases and/or the temperature drops. Warm-up breaks should begin when the temperature reaches -15° (-26° C) with winds of 10 mph (16 km/h) or greater. When the work involves riding on an unshielded vehicle or some other activity that generates wind, the number of breaks should be increases appropriately. If effective protection against the wind can be provided by shields or screens, work modifications or measures, then the work warm-up schedule for "No Noticeable Wind" would apply.

The information below applies to any four-hour period. Warm-up breaks are assumed to provide 10 minutes in a warm environment. These guidelines apply to workers wearing dry clothing.

Air Temperature - Sunny Sky		No Noticeable Wind		5 mph Wind		10 mph Wind		15 mph Wind		20 mph Wind	
°C (approx.)	°F (approx.)	Max. work Period	No. of Breaks**	Max. Work Period	No. of Breaks						
-26° to -28°	-15° to -19°	(Norm breaks) 1		(Norm breaks) 1		75 min.	2	55 min.	3	40 min.	4
-29° to -31°	-20° to -24°	(Norm breaks) 1		75 min.	2	55 min.	3	40 min.	4	30 min.	5
-32° to -34°	-25° to -29°	75 min.	2	55 min.	3	40 min.	4	30 min.	5	Non-emergency work should cease	
-35° to -37°	-30° to -34°	55 min.	3	40 min.	4	30 min.	5	Non-emergency work should cease			
-38° to -39°	-35° to -39°	40 min.	4	30 min.	5	Non-emergency work should cease					
-40° to -42°	-40° to -44°	30 min.	5	Non-emergency work should cease							
-43° & below	-45° & below	Non-emergency work should cease		Non-emergency work should cease		Non-emergency work should cease					

Note: All temperatures are approximate.

Apply the schedule one step lower for work with limited physical activity. For example, at -30° F (-35° C) with no noticeable wind, a worker with a job requiring little physical movement should have a maximum work period of 40 minutes with four breaks in a four-hour period.

If reliable weather reports are not available, us the following as a guide to estimate wind velocity:

- A 5 mph (8 km/h) wind will move a light flag
- A 10 mph (16 km/h) wind will fully extend the flag
- A 15 mph (24 km/h)wind will raise a newspaper sheet
- A 20 mph (23 km/h) wind will produce blowing and drifting snow.

Source: Saskatchewan Labour Occupational Health and Safety, January 2000.

**URS SAFETY MANAGEMENT STANDARD 065**  
**INJURY AND CLAIMS MANAGEMENT**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Injury and Claims Management**

---

### **1. Applicability**

This standard applies to all operations of URS Corporation and its subsidiary companies.

### **2. Purpose and Scope**

This standard is designed to ensure that employees receive appropriate, immediate, and high-quality health care services that will minimize disability, promote rapid recovery, and save lives.

### **3. Implementation**

Implementation of this procedure is the responsibility of the manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. Pre-Injury Management**

The following proactive plans and procedures will be in place before an injury or illness occurs.

#### **1. Work Site Evaluation**

Project and office locations will evaluate their location for first aid and medical requirements. The following factors should be considered:

- a. Types of accidents that could reasonably occur.
- b. Location of local clinics and hospitals.
- c. Response time for external emergency services.
- d. If corrosive or hazardous materials are in use.
- e. Any industry specific requirements.
- f. Types of training for employees and first aid responders.
- g. What first aid supplies should be available.

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

#### 2. First Aid Services

##### a. First Aid Responders

There will be a sufficient number (but not less than one) of employees on each shift trained in first aid to provide adequate first response medical care available at the work site if either of these conditions exist:

- i. If life-threatening injuries can reasonably be expected, trained personnel must be available within 3 to 4 minutes. This generally means that community emergency medical services cannot be relied on since their response time is usually greater than 3 minutes.
- ii. If no life-threatening injuries can reasonably be expected, the response time for trained personnel is extended to 15 minutes.

The trained first aid responders should be designated so that the other employees know who they are and how to contact them. The trained responders must have a current first aid certificate and be trained in Bloodborne Pathogens (see SMS 051 – Bloodborne Pathogens).

For certain long-term, heavily staffed, or high hazard projects, URS may opt to establish a first aid station on site. It should be staffed with a person who is a nurse, Emergency Medical Technician (EMT), or Emergency Medical Technician Paramedic (EMT-P) who may practice limited treatment under the direction of a physician.

Where clients provide the services of a first aid station, the project manager will determine the specific services provided and the administrative procedures involved. Employees requiring first aid treatment by a client-provided facility must obtain prior approval from the project manager.

##### b. First Aid Kits

- i. Each site will maintain a first aid kit in accordance with Attachment 024-9 NA – Field First Aid Kit Supply List.
- ii. First aid kits will be maintained in readily accessible locations on each job site. For mobile or vehicle-based operations in remote locations, first aid kits may be necessary in vehicles.

**URS SAFETY MANAGEMENT STANDARD**  
**Injury and Claims Management**

---

- iii. Kits will be inspected prior to being sent to a work location and weekly while in use. Any items not approved for the kit will be removed during inspection.
- iv. At no time will over-the-counter medications such as antacids, aspirin, cold or cough drops, or other sundry items be stored in the kits without the written approval of the URS Occupational Health Nurse or a URS-approved health care professional.

c. Emergency Services

The project Health, Safety, and Environment (HSE) Representative, in conjunction with the project manager, will identify emergency service providers, including ambulance and hospital services. Each location will post a current list of emergency telephone numbers and maps to access local medical emergency providers (SMS 003 – Emergency Preparedness Plans). Advance contact with ambulance services to ensure they are familiar with location, access routes, and hospital locations is advised.

d. Eyewash and Safety Shower Facilities

A corrosive material is a highly reactive substance that causes obvious damage to living tissue. Corrosives act either directly by chemically destroying the part (oxidation) or indirectly by causing inflammation. A hazardous material is any substance or compound (including corrosives) that has the capability of producing adverse effects on the health and safety of humans. Review material safety data sheets for the health effects of compounds being used at the site to determine whether they meet the criteria defined previously.

If corrosive or otherwise hazardous materials are used, eyewash and body flush facilities must be provided. Where possible, these facilities should provide large quantities of clean water. The water source must be pressure controlled and clearly identified. Portable eyewash stations must contain a minimum of 1 gallon of potable water. See Supplemental Information A for additional guidance on eyewash and shower facilities.

e. Identification of Medical Facilities

The field and office location will identify a suitable local clinic, preferably specializing in occupational medicine, to treat nonemergency injuries and illnesses. In addition, a local hospital

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

emergency room will be identified for treatment of life-threatening or after hours injuries. The URS Occupational Health Nurse, the Workers' Compensation Administrator, or the workers' compensation insurance carrier representative should be contacted to provide a listing of recommended medical facilities.

The project HSE Representative should visit the medical facility and meet with the medical provider to establish expectations. Clinics should be conveniently located, clean, professionally staffed, offer multiple services, and be supportive of early return to work practices.

Field/construction projects will make appropriate arrangements with local ambulance/emergency service providers prior to the start of work activities to ensure that appropriate transportation can be provided in the event of an emergency. These arrangements include establishment of an identifiable project address and emergency access point (i.e., location to meet emergency personnel).

The project HSE Representative will communicate the following with the designated hospitals/clinics:

- i. Physical requirements for each trade.
- ii. Policies regarding availability of suitable work for partially disabled employees.
- iii. Procedures for reporting of treatment diagnosis and treatment plans to the company and its workers' compensation insurance carrier.
- iv. Requirements for alcohol and substance abuse testing per company and/or client-required substance abuse policies (as needed).

#### **B. Post-Injury Management**

##### **1. Transportation**

When employees require urgent medical attention as the result of a work-related injury/illness, transportation will be provided to the doctor's office, clinic, or hospital. Employees should not be permitted to drive unless it is safe to do so.

# **URS SAFETY MANAGEMENT STANDARD**

## **Injury and Claims Management**

---

### 2. Emergency Injury/Illness Treatment

In all cases, critical injuries must be immediately referred for professional medical attention. The manner in which the referral is accomplished, and the person responsible for the referral, should be clearly defined in either a project safety plan and/or an office Emergency Preparedness Plan (SMS 003). Critical injuries/illnesses include, but may not be limited to, the following:

- a. Loss of consciousness.
- b. Unexplained chest pain.
- c. Breathing difficulty.
- d. Uncontrolled bleeding.
- e. Fractured bones.
- f. Suspected internal injuries.
- g. Suspected exposure to chemical/biological hazard.
- h. Second or third degree thermal or chemical burns (i.e., blistering).
- i. Electrocution.
- j. Unexplained change in mental state following an injury (may indicate shock or other internal injuries).

### 3. Nonemergency Injury/Illness Treatment

When a work-related incident results in a noncritical injury/illness, the primary objective is to provide appropriate medical services to diagnose and treat the injury/illness. Options available to the employee and project/office management in these situations include the following:

- a. First aid treatment and/or review by a qualified first aid responder.
- b. First aid treatment and/or review by a qualified first aid responder followed by a referral to an occupational health clinic.

Additional support for the employee and managers in these situations can also be obtained from a URS HSE professional.

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

Attachment 065-1 NA – Injury Management Procedures Flow Chart provides a flow chart to assist employees and managers in determining the most appropriate option for obtaining medical services for nonemergency injuries/illnesses.

Note: Some states allow injured workers to choose their own initial medical provider. Employees are to be cautioned that not all medical providers accept workers' compensation insurance and coverage should be verified prior to treatment if an employee lives in a state that permits him/her to elect to see their personal doctor rather than the URS-recommended physician.

#### C. Workers' Compensation Case Management

##### 1. Health and Safety

- a. Occupational Health Nurse/Workers' Compensation Administrator will
  - i. Evaluate and file workers' compensation claims for cases covered by the URS insurance program. Evaluate and provide consultation for injuries occurring in monopolistic states (Ohio, Washington, North Dakota, and Wyoming). Energy & Construction workers' compensation claims are filed by site personnel.
  - ii. Provide date of injury support to employees and supervisors, including monopolistic state claims.
  - iii. Coordinate regular follow-up of all cases, including monopolistic state claims, to ensure effective case management.
  - iv. Offer pre-injury consultation for offices and project sites.
  - v. Provide training and communication regarding the workers' compensation process.
- b. The HSE Representatives will assist with the early return to work program by interfacing with the supervisor and employee to evaluate whether appropriate and safe temporary transitional work is available.
- c. HSE Representatives will
  - i. Provide support to ensure that the requirements of this SMS are in place.

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

- ii. Provide training on this SMS.
- iii. Ensure proper reporting of incidents in accordance with SMS 049 – Injury/Illness/Incident Reporting and Notification.
- iv. Ensure that requirements of this SMS are incorporated into all project health and safety plans.

#### 2. Human Resources

The HR Representatives will forward any external communication (e.g., clinic bills, monopolistic state forms) to the Occupational Health Nurse or Workers' Compensation Administrator upon receipt.

#### 3. Supervisor

The Supervisor (or HR or HSE Representative) will

- a. Sign the Medical Treatment Referral form (Attachment 065-2 NA) prior to the employee leaving the site for medical treatment (this will not be necessary in an emergency). The employee will also be given the Medical Authorization Form (Attachment 065-3 NA) to be signed with copy provided to the employee, health care provider, and Occupational Health Nurse or Workers' Compensation Administrator.
- b. Provide transitional job assignments, with consultation and approval of the office manager, whenever possible to enable an injured worker to return to work (Return to Work Policy Attachment 065-4 NA).  
Transitional employment is defined as temporary modified or light duty work that covers the time from the injury until the release to full duty from the doctor. The return to work hierarchy includes the following:
  - i. Return to own job.
  - ii. Return to own job with accommodations/modifications.
  - iii. Return to another job at URS with or without accommodations/modifications.
  - iv. Placement in alternate jobs through telecommuting or other job assignments determined case by case.
- c. Provide, when requested by the treating physician or insurance carrier, the Description of Employee's Job Duties form (Attachment 065-5 NA).

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

- d. Maintain regular contact with employees who are temporarily disabled (contact at least weekly by phone or email).

#### 4. Employee

The employees will

- a. Report injuries immediately to their supervisors. Employees are encouraged to contact their supervisor and/or the Occupational Health Nurse or Workers' Compensation Administrator prior to seeking any medical services for nonemergency injuries and illnesses.
- b. Review and comply with Attachment 065-6 – Employee's Responsibilities.

#### D. URS will follow the recordability requirements of U.S. Occupational Safety and Health Administration (OSHA) (29 CFR 1904 and 1952) for both U.S. and international operations.

1. For Infrastructure & Environment and Federal Services, the Occupational Health Nurse will maintain OSHA 300 logs for U.S. locations. For Energy & Construction, the Business Group HSE Managers will maintain OSHA 300 logs for U.S. locations. The OSHA 300 logs (with employee names deleted) will be distributed to the U.S. locations each January. Logs will be posted from February 1 to April 30 in a location conspicuous to all employees. The posted log must not be altered, defaced, or covered by any other materials.
2. Sites working under the U.S. Mine Safety and Health Administration (MSHA) recordkeeping requirements will meet MSHA requirements, as well as track injuries using OSHA criteria for use in company HSE statistics.
3. For Infrastructure & Environment and Federal Services, the Occupational Health Nurse will make the initial decision on recordability of an injury/illness. For Energy & Construction, the Business Group HSE Manager will make the decision on recordability of an injury/illness.
4. For Infrastructure & Environment, a recordability review committee will be appointed by the Vice President HSE to review the recordable cases on a monthly basis. The review committee (based on OSHA regulations and information regarding the case) will make the final decision on recordability.

## **URS SAFETY MANAGEMENT STANDARD**

### **Injury and Claims Management**

---

5. The injury/illness statistics (e.g., Total Recordable Incident Rate) will be calculated monthly and reported to URS management.
6. Completed logs of recordable cases, including any regulatory required forms (OSHA 300 logs, incident report forms, etc.) will be retained at least five years following the end of the calendar year these records cover.

#### **5. Documentation**

- A. The following documents will be maintained in the office/project safety file:
  1. Posting of medical services providers and emergency phone numbers.
  2. List of qualified first aid providers.
  3. Documentation of coordination between URS and emergency service providers for field/construction projects.
  4. Completed Injury/Illness/Incident Report Form (Attachment 049-1).
  5. Description of Employee's Job Duties form.
  6. Medical Treatment Referral form.
  7. Medical Authorization Form.
- B. The following documents will be maintained by the HR Representative and copied to the Occupational Health Nurse or Workers' Compensation Administrator.
  1. Physician's First Report of Injury and follow-up reports.
  2. Medical Treatment Referral form.
  3. Medical Authorization Form.
  4. Description of Employee's Job Duties form.

**MEDICAL AUTHORIZATION FORM**

Attachment 065-3 NA  
Issue Date: January 2003  
Revision 5: January 2011

**WORKERS' COMPENSATION  
EMPLOYEE AUTHORIZATION LETTER**

To Whom It May Concern:

I, \_\_\_\_\_, hereby authorize any hospital,  
Please Print Name  
medical practitioner, clinic, other medical or medically related facility, pharmacy,  
or insurance company to furnish to URS Corporation or its subsidiaries or  
representatives (orally or in writing) information with respect to any work-related  
injury or illness, including treatments, consultations, prescriptions, and copies of  
applicable records that may be requested. I also authorize my employer to  
disclose information needed to process my workers' compensation claim.

The information provided to URS Corporation, its subsidiaries, or representatives  
is to be used solely for the administration of my workers' compensation claim.

A photocopy of this authorization is to be considered as valid as the original and  
is effective for the duration of the claim.

- Signed copies to:  Employee  
 Medical Provider  
 URS Occupational Health Nurse/Workers' Compensation Administrator

**Health, Safety, and Environment**  
**RETURN TO WORK POLICY**

Attachment 065-4 NA

Issue Date: January 2003  
Revision 5: January 2011

Our primary goal in safety is the prevention of work-related injuries. When an injury does occur, it is the policy of URS to provide our employees with the best possible recovery program. A major component of any successful recovery program is returning the injured employee to the workforce as soon as medically possible. This type of Early Return Strategy has been shown to dramatically reduce the overall recovery time of injured workers, creating a benefit for the employee, his/her family, coworkers, and the firm.

As part of this policy, Operations; Human Resources; Health, Safety, and Environment; and our workers' compensation insurance carrier will work together with our employees and their treating physician to establish a recovery program that minimizes both the number of cases and total days away from work experienced by our employees. URS operations will accommodate transitional work (i.e., light duty or modified work) requirements for employees recovering from work related injuries, whenever possible. The work limits, as defined by the treating physician, will be strictly adhered to. Modified job assignments will be structured to meet the capacities and therapy needs of the injured employee.

**Health, Safety and Environment**  
**DESCRIPTION OF EMPLOYEE'S JOB DUTIES**

Attachment 065-5 NA

Issue Date: January 2003  
Revision 5: January 2011

Print Name: \_\_\_\_\_

Location: \_\_\_\_\_ Phone: \_\_\_\_\_

Job Title: \_\_\_\_\_ No. Hours/Day: \_\_\_\_\_ No. Days/Week: \_\_\_\_\_

**General Job Description:** \_\_\_\_\_

1. Check the frequency and number of hours a day the activity is performed:

Activity	Frequency		Number of Hours Per Day										
	Continuous	Intermittent	0	1	2	3	4	5	6	7	8	9+	
Sitting	<input type="checkbox"/>												
Walking	<input type="checkbox"/>												
Standing	<input type="checkbox"/>												
Bending	<input type="checkbox"/>												
Squatting	<input type="checkbox"/>												
Climbing	<input type="checkbox"/>												
Kneeling	<input type="checkbox"/>												
Twisting	<input type="checkbox"/>												

2. Hand manipulation required? (If yes, complete 2 a, b, c, d) Yes  No

2a. Simple grasping? Yes  No  Right  Left

2b. Power grasping? Yes  No  Right  Left

2c. Pushing and pulling? Yes  No  Right  Left

2d. Fine manipulation? Yes  No  Right  Left

3. Does the job require reaching at or above shoulder level? Yes  No

4. Does the job require use of the feet to operate foot controls? Yes  No

5. Are there special visual requirements? (Describe) Yes  No

6. Are there special hearing requirements? (Describe) Yes  No

**Health, Safety and Environment**  
**DESCRIPTION OF EMPLOYEE'S JOB DUTIES**

Issue Date: January 2003  
Revision 5: January 2011

7. Lifting and carrying (check weight lifted, frequency, and how far carried):

Weight	Frequency			Distance Carried
	Hourly	Daily	Weekly	
1-10 lbs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
11-25 lbs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
26-40 lbs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
41-60 lbs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
61-75 lbs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

8. Environmental conditions (check yes or no):

- 8a. Work near dust, gas, vapors, or fumes? Yes  No
- 8b. Work in noisy environment? Yes  No
- 8c. Work in extremely hot temperature? Yes  No
- 8d. Work in extremely cold temperature? Yes  No
- 8e. Work at heights? Yes  No
- 8f. Walk on uneven surfaces? Yes  No

9. Equipment operated (check yes or no):

- 9a. Computer and mouse? If yes, hours per day \_\_\_\_\_ Yes  No
- 9b. Drive car, truck, or van? Yes  No
- 9c. Operate forklift or heavy equipment? Yes  No
- 9d. Other (please describe): \_\_\_\_\_

10. Comments:

Employee Signature: \_\_\_\_\_ Date of Hire: \_\_\_\_\_

Date: \_\_\_\_\_

If an employee is injured at work or becomes ill due to a work-related issue, the employee must abide by the following:

1. Employee shall immediately notify their supervisor and HSE representative, even if the employee does not believe that they need medical attention.
2. With the assistance of their supervisor, the employee shall complete SMS 049-1 (in all cases), and SMS 065-3 (Medical Treatment Referral form) if medical attention is needed.
3. If it is perceived that medical attention is needed, an employee will be provided an opportunity for a telephonic consultation with the Occupational Health Nurse (OHN). During that consultation, if it is determined that an employee will need a physician evaluation, the OHN will contact the clinic with the necessary workers' compensation billing information. Unless it is an emergency, all employees are required to obtain approval from their supervisor and OHN. This ensures that URS, the workers' compensation carrier and the clinic are notified appropriately and timely medical treatment can be provided and follow-up given.
4. Provide the Medical Treatment Referral form to the treating physician. If employees are unable to obtain the form prior to being treated (i.e., onset of symptoms during non-work hours, work in remote locations), they must notify their supervisor as soon as possible on the next scheduled workday.
5. If an employee is treated by a physician, the employee is required to inquire if a consent form will need to be signed by the employee in order for medical records to be released to the URS Occupational Health Team. (Some clinics do not accept form SMS 065-3.) The employee will also need a work status form from the physician indicating if the employee can return to work, has restrictions or must be off work.
6. This work status form must be given to the employee's supervisor and/or HSE representative **and** emailed or faxed to URS Occupational Health Team immediately after the physician visit. Contact information for the URS Occupational Health Team is presented below.

<b>Infrastructure &amp; Environment</b>	<b>Federal Services</b>	<b>Energy &amp; Construction</b>

- a. If a physician has indicated that a follow-up appointment is needed or the employee will need to schedule future follow-up appointments, the employee is required to attend the appointment regardless if the employee is feeling better or having no symptoms. There is a reason the physician felt like he/she needed to see the employee for that follow-up visit, and the visit is required to ensure proper recovery.
  - b. If an employee has been put on restrictions or is taken off work, once the employee is cleared to return to work the employee must receive a return to work without restrictions release from the physician. This updated work status report must be given to the employee's supervisor and/or HSE representative immediately. URS cannot return an employee to work without this release.
7. After every medical provider visit (whether the employee is off work/restricted work or is just having a follow-up) the employee is required to contact the URS Occupational Health Team. The employee shall provide an update as to the medical provider visit, plan of care, to ensure that the employee is getting the appropriate care in a timely manner, and to ensure that the physician is being reimbursed accordingly. The employee must also contact their supervisor and/or HSE representative to inform him/her of their work status.
  8. Once the initial information of the employee's injury/illness is received by the URS workers' compensation insurance carrier.
  9. It is likely that the employee will be contacted by the workers' compensation carrier either by letter and/or by phone.
  10. The claims adjuster, telephonic nurse case manager and/or field case manager may ask that the employee to communicate with them after every medical provider appointment as well. This would be in addition to the employee contacting the URS Occupational Health Team.

### **Off-Work or Restricted Work**

It is URS' goal to return an employee back to work as quickly as possible to decrease an employee's healing time (as supported by medical studies that earlier return to work decreases complications), promote wellness, provide support to an employee during the recovery time, and to return the employee to full wage-earning capacity.

1. If an employee is placed off work by a physician for either personal medical reasons or work-related medical reasons, the employee is required to notify Human Resources, their supervisor, HSE representative and the URS Occupational Health Team. Human Resources may have additional requirements. For extended absences, an employee will want to discuss with Human Resources the necessary steps that an employee will need to take to maintain benefits that an employee has signed up for in active status (e.g., insurance premiums for personal medical insurance, short term disability, etc.).

2. For work-related incidents, once the workers' compensation carrier has determined that the case is accepted as a claim, the employee will begin receiving workers' compensation payments. The payments will be paid at approximately 66.67% of the employee's base pay.
3. If an employee must be off work or is given restricted work for injury or illness of any kind, the employee is required to notify their supervisor immediately.
4. If an employee is absent for more than 3 days for personal illness or injury, an employee may be required to provide a physician note indicating the employee's work status and release to return to work. This will need to be provided to Human Resources and the employee's supervisor. For work-related illness or injury a physician's note is required for any absence due to an incident.

**Before an Injury**

- € Identify emergency care service providers.
- € Identify clinic for non-emergency medical care – Occupational Health physicians (give preference to Board-Certified).
- € Post instructions for reporting injuries, medical providers, contact info, and driving directions on safety bulletin board(s).
- € Develop a bank of light-duty positions with descriptions that would accommodate different levels of restrictions.
- € Develop a relationship with the physician and clinic staff (especially Office Manager):
  - Philosophy – most effective treatment, minimize OSHA recordability, minimize impact to employee, light duty always available
  - Visit clinic often to maintain relationship (quarterly)
  - Invite physician to visit site and work areas
  - Provide copies of light-duty position descriptions.
- € Implement first aid treatment program – designate/train first aid responders, keep first aid supplies readily available, etc.
- € Identify who will be responsible for contacting any employees with lost work days.
- € Train employees on program requirements:
  - Immediate reporting as a company mandate
  - Potential delay of treatment for late reporting
  - First aid treatment
  - Advantage for using Company physicians
  - Potential benefit loss and disciplinary action for unauthorized non-emergency treatment
  - Waiting periods for workers' compensation benefits.

**When an injury occurs**

- € CALL 911 (or equivalent) if this is an emergency situation.
- € Provide first aid treatment (e.g., ice, over-the-counter ibuprofen, bandages, a place to rest).
- € Initiate an immediate investigation to ensure work-related written reports (employee and witnesses); review for red flags.
- € Notify the Occupational Health Department (OHD) before non-emergency medical care; do not take to a clinic unless medically necessary.
- € Influence (or control, depending on state law) choice of treating physician.
- € Escort injured employee to and remain through medical treatment.
- € Remind clinic personnel of transitional duty and OSHA-recordable sensitive treatment.
- € Remind injured worker of transitional-duty benefits – part of the team, receive full pay, save their personal leave time.
- € Notify HSE chain-of-command and follow site communication protocol.
- € Coordinate post-incident drug and alcohol screen.
- € Review return-to-work slip before departing facility. Review restrictions; if unreasonable or unclear, discuss with clinic. Seek alternative solutions to lost time if medically feasible.
- € Accommodate any restrictions.
- € Obtain a second opinion if initial provider's diagnosis (especially lost time) is unreasonable; work closely with OHD
- € Require a return-to-work slip following **all** medical visits and provide a copy to the OHD.
- € Ensure the employee makes any follow-up visits or referrals to another provider – need to ensure to close the loop on workers' compensation claims.
- € Maintain regular and personal contact with the employee:
  - Ensure he/she shows up for work the next day
  - If on restrictions, visit regularly to ensure working within restrictions
  - If on lost time, call on a regular basis to check status (minimum weekly).

## **A. Eyewash Equipment**

Plumbed and self-contained eyewash units will meet the following specifications:

1. A controlled flow of flushing liquid will be provided to both eyes simultaneously at a velocity low enough so as to not cause injury to the user.
2. Spray nozzles will be protected from airborne contaminants. The removal of such protection during operation will not require a separate motion by the operator when activating the unit.
3. The eyewash will be designed and installed in such a manner that, once activated, it will not require the use of the operator's hands. The valve controlling the flow from the eyewash will remain open until it is intentionally closed.
4. Units will be constructed in such a manner that they will not corrode in the presence of the flushing fluid.
5. Stored flushing fluids will be protected against airborne contaminants.
6. Eyewash equipment will be capable of delivering flushing fluid to the eyes at a rate of not less than 0.4 gallons per minute (gpm), or 1.5 liters per minute (lpm), for 15 minutes.
7. The unit will be designed to provide sufficient room to allow the eyelids to be held open with the hands while the eyes are in the flushing stream.
8. The valve to open the eyewash flow will be simple to operate and will go from OFF to ON in 1 second or less.
9. The eyewash unit will be assembled and installed in accordance with the manufacturer's instructions.
10. The unit will be in an accessible location that requires no more than 10 seconds to reach. It will be on the same level as the hazard and the path of travel will be free of obstructions. For strong caustics or acids, the eyewash should be immediately adjacent to the hazard.
11. The unit will be located in an area identified with a highly visible sign positioned so that the sign will be visible within the area served by the eyewash. The area around the eyewash will be well lit.
12. The eyewash will deliver tepid flushing fluid.
13. Where the possibility of freezing conditions exists, equipment will be protected from freezing or freeze-protected equipment will be installed.

14. Plumbed eyewash equipment will be activated weekly to verify operation and ensure that flushing fluid is available. Self-contained eyewash equipment will be visually checked regularly to determine whether the flushing fluid needs to be changed or supplemented.
15. All eyewash units will be inspected annually for compliance with the requirements listed in this document.
16. Employees who may be exposed to hazardous materials will be instructed in the location and proper use of emergency eyewash units.

## **B. Shower Equipment**

Plumbed and self-contained shower units will meet the following specifications:

1. A controlled flow of flushing liquid will be provided to both eyes simultaneously at a velocity low enough so as to not cause injury to the user.
2. The shower will be designed and installed in such a manner that, once activated, it will not require the use of the operator's hands. The valve controlling the flow from the eyewash will remain open until it is intentionally closed.
3. Units will be constructed in such a manner that they will not corrode in the presence of the flushing fluid.
4. Stored flushing fluids will be protected against airborne contaminants.
5. Shower equipment will be capable of delivering flushing fluid at a rate of not less than 20 gpm (75.7lpm) for 15 minutes.
6. The valve to open the eyewash flow will be simple to operate and will go from OFF to ON in 1 second or less.
7. The eyewash unit will be assembled and installed in accordance with the manufacturer's instructions.
8. The unit will be in an accessible location that requires no more than 10 seconds to reach. It will be on the same level as the hazard, and the path of travel will be free of obstructions.
9. The unit will be located in an area identified with a highly visible sign positioned so that the sign will be visible within the area served by the shower. The area around the eyewash will be well lit.
10. The shower will deliver tepid flushing fluid.
11. Where the possibility of freezing conditions exists, equipment will be protected from freezing or freeze-protected equipment will be installed.

12. Plumbed shower equipment will be activated weekly to verify operation and ensure that flushing fluid is available. Self-contained shower equipment will be visually checked regularly to determine whether the flushing fluid needs to be changed or supplemented.
13. All eyewash units will be inspected annually for compliance with the requirements listed in this document.
14. Employees who may be exposed to hazardous materials will be instructed in the location and proper use of emergency eyewash units.

### **C. Eye/Face Wash Equipment**

Eye/face wash equipment will meet all the criteria outlined in Section A, except the equipment will be capable of delivering flushing fluid at a rate of not less than 3.0 gpm (11.4 lpm) for 15 minutes.

### **D. Combination Units**

Combination units (eyewash and shower assemblies served by a single source of flushing fluid) will meet all the criteria outlined in Section B.

**URS SAFETY MANAGEMENT STANDARD 069**  
**MANUAL MATERIAL HANDLING**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Manual Material Handling**

---

### **1. Applicability**

This standard applies to URS Corporation and its subsidiary companies where personnel perform manual handling of materials. For this procedure, manual material handling (MMH) is defined as the movement of items by lifting, lowering, pushing, pulling, carrying, holding, or restraining.

### **2. Purpose and Scope**

The purpose of this standard is to prevent common injuries caused by the practice of MMH. Immediate or short-term effects include lacerations, bruises, and muscle fatigue. Long-term effects include chronic pain, frequently in the lower back but also in limb joints and ligaments.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project.

### **4. Requirements**

#### **A. General**

1. Prior to lifting, lowering, pushing, pulling, carrying, holding, or restraining an object of any significant size or weight, employees must evaluate the object and the required task to determine whether they can handle the object safely.
2. If the employee has any doubt about whether he or she can safely move the object alone, the employee should obtain additional manual or mechanical help.
3. Healthy employees with no physician-imposed restrictions should be able to lift and carry a maximum of 50 pounds (23 kilograms) using proper lifting and carrying techniques. Physical and workplace factors may reduce this recommended weight limit (RWL) significantly and should be considered prior to attempting lifts of this magnitude. Examples of physical and workplace factors may include the following:
  - a. Physical size of an object.
  - b. Slippery container surface or poor grip ability.
  - c. Sharp edges.
  - d. Slippery floors or obstacles on the floor.
  - e. Cold or hot objects surfaces.
  - f. Distance and route of travel.

## **URS SAFETY MANAGEMENT STANDARD**

### **Manual Material Handling**

---

4. An employee's personal "safe" MMH capability is defined as the employee's personal capability to manually lift, carry, push, or pull an object alone. This "safe" limit must consider the employee's past experience and training with MMH, health status, and any other personal or environmental characteristics affecting the employee's ability to perform these tasks. An employee's "safe" MMH capability is typically at or below the calculated RWL. In some cases, a trained and physically conditioned employee may exceed the MMH capability limit, but only after a complete hazard review of the task has determined an acceptable risk for minimizing injury.
5. An MMH task that exceeds an employee's personal "safe" MMH capability or RWL should be brought to the attention of the applicable manager or safety supervisor for the project.
6. If, due to a medical or health condition, the employee's physician or the employee has set a personal "safe" MMH capability, then appropriate medical documentation must be provided to the applicable manager to define these limits. The manager and appropriate safety supervisor should evaluate the tasks to which that employee is assigned and recommend a specific course of action to limit the potential for injury. This should include periodic monitoring of the employee and his/her work environment.
7. A recommended RWL can be calculated using the factors described in Supplemental Information A. The weight limit derived from these calculations is considered to be a load that over 99% of men and over 75% of women can safely handle without application of engineering or administrative controls. **Implementation of the calculations in Supplemental Information A should be attempted only with the assistance of a safety professional knowledgeable in the application of these factors. The calculations are intended to determine RWLs for repetitive lifting scenarios rather than occasional lifts.**
8. Prior to any manual lift, it is suggested that the employee warm up his or her muscles and joints using a combination of stretching and flexing.

#### B. Preplanning

1. Where MMH will be a necessary function of the task, the manager and/or safety supervisor should perform a thorough evaluation of the activities to determine ergonomic solutions to reduce or eliminate conditions that can cause or contribute to MMH injuries.

## **URS SAFETY MANAGEMENT STANDARD**

### **Manual Material Handling**

---

2. If a heavy object is to be moved to another location, the safest transport route should be determined prior to the activity.
3. The area around the object and the route over which it will be transported should be checked for slip, trip, and fall hazards. Hazards should be removed prior to initiation of the task.
4. The object to be moved should be inspected for grasping or handling hazards, such as slivers, sharp edges, grease, water, etc. Eliminate or abate any identified hazards where possible. Safe grasping or handling points on the object should be determined. Whenever possible, containers with carrying handles should be used for objects because they increase the manual grip strength for holding the object, thus providing better control and reduced muscle fatigue.
5. The distance to be traveled and the length of time that a grip on the object must be maintained should be considered before moving objects. If the travel distance is greater than 10 feet (3 meters) at maximum RWL, the employee should consider using an alternative method, rather than manually carrying the object.

#### C. Lifting/Lowering Guidelines

1. Reduce or eliminate manual lifting and lowering tasks where possible. Determine whether there are ways to abate the safety and ergonomic hazards associated with manual lifting.
2. The recommended technique for two-handed manual lifting/lowering involves five maneuvers:
  - a. Get a firm footing. Keep your feet apart for a stable base. Put one foot slightly in front of the other.
  - b. Bend your knees. Do not bend at the waist. When grasping the object, a firm grip should be obtained before lifting/lowering.
  - c. Lift/lower with your legs. Lift/lower the load slowly and in a straight line, avoiding sudden movements.
  - d. Keep the load close to the body. Generally, the closer the load is to the body, the less force it exerts on your back.
  - e. Keep your back straight, your head and shoulders up, and your stomach muscles tights. Do not add the weight of your body to the load. Avoid twisting.

## **URS SAFETY MANAGEMENT STANDARD**

### **Manual Material Handling**

---

3. When a turn or change of direction is necessary, the object should be lifted or lowered into a carrying position, then the whole body should be turned with the feet, avoiding any trunk twisting motion.
4. Objects to be lifted to shoulder height should first be lifted to waist height, then rested on a level surface so the grasping position can be changed prior to lifting to a higher level.
5. Employees should never lift a load above their head.

#### **D. Carrying/Holding Guidelines**

1. Manual carrying is an inefficient way of transporting materials in the work place. Where possible, reduce or eliminate manual carrying tasks.
2. Never carry a load above the head.
3. Carry an object close to the body using both hands. One-handed carries are awkward and tend to unbalance the employee.
4. Do not carry objects that are so large they will obstruct visibility.
5. Do not change grips on an object while carrying or holding an object. Rest the object on a secure surface prior to changing grip.
6. If an object is of a size, shape, or mass that it requires two people to carry, use two people of similar size and physique. Two-person lifts should be planned and coordinated before performing the lift. Lift the item in unison.
7. Avoid carrying objects on stairs, particularly where the line of sight may be obstructed or the object can interfere with leg movement. All travel on stairs requires use of a handrail at all times, so only carry objects that can be safely handled with one hand. Always maintain handrail contact when carrying an object up or down stairs.

#### **E. Pushing/Pulling Guidelines**

1. Check the condition of the floor, ground, or other surface prior to pushing or pulling an object across it.
2. Be aware of the "break out" force of the object; this is the force at which a push or pull overcomes the frictional force between the surface and object. Adjust posture to avoid losing balance when this point is reached.
3. Get assistance when moving or guiding a large load.
4. Where possible, always push rather than pull a load.

## **URS SAFETY MANAGEMENT STANDARD**

### **Manual Material Handling**

---

5. Never load the cart or load-carrying device in such a manner that visibility is obstructed in the path of travel.
6. When pushing or pulling an object on an inclined surface, be certain that you can control the load and direction of travel before proceeding. Obtain additional support to control the load if necessary.
7. Never leave carts or loads in an area that will present a hazard to other workers. Make sure carts or transport devices are secured in position before leaving them unattended.

#### F. Workplace Design

1. Store heavy or bulky materials at heights between the knee and shoulder to avoid the need to stretch or bend. Use step stools to access objects above shoulder height.
2. Pack or arrange items to be lifted to avoid shifting of weight in the package. If a box has hand cutouts (e.g., file archive boxes) do not load the box so full that the handles cannot be used for carrying the box.
3. Design work areas to avoid the need to lift, carry, push, or pull heavy or bulky materials for extended distances.
4. Design workplaces with the following in mind:
  - a. Lifts from the floor should be avoided.
  - b. The torso should never twist while handling loads.
  - c. Asymmetrical or unbalanced one-handed lifts should be avoided.
  - d. Loads should not be lifted with sudden movements.
  - e. Loads should not be lifted over obstacles.
  - f. Loads should not be lifted at extended forward or sideways reaches.
  - g. Uncomfortable or static postures should not be necessary throughout the work cycle.
  - h. Environmental factors (e.g., task lighting, dry work surfaces, heat or cold stress) should be considered.

#### G. Training

1. Personnel who may have MMH as part of their duties are required to receive training that includes the following topics:

## **URS SAFETY MANAGEMENT STANDARD**

### **Manual Material Handling**

---

- a. Showing personnel how to avoid unnecessary physical stress and strain during MMH operations.
  - b. Teaching personnel to become aware of what they can comfortably handle without undue strain.
  - c. Instructing personnel on the proper use of equipment.
  - d. Teaching personnel to recognize potential hazards and how to prevent or correct them.
2. This training must be completed prior to an employee being assigned to a task that involves MMH activities.
  3. Assistance with training or training materials is available through the HSE staff.

#### **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Training rosters.
- B. Other proof of completion of MMH training.

#### **6. Resources**

- A. National Institute for Occupational Safety and Health (NIOSH) – Work Practices Guide for Manual Lifting <http://www.cdc.gov/niosh>
- B. Canadian Centre for Occupational Health and Safety <http://www.ccohs.ca/oshanswers/ergonomics/>
- C. Oregon OSHA – Ergonomics of Manual Materials Handling <http://www.cbs.state.or.us/external/osha/pdf/workshops/206w.pdf>
- D. North Carolina Department of Labor – A Guide to Manual Materials Handling and Back Safety <http://www.nclabor.com/osha/etta/indguide/ig26.pdf>

#### **7. Supplemental Information**

- A. [Recommended Weight Limit \(RWL\) Calculations](#)

This lifting equation, developed by the National Institute for Occupational Safety and Health (NIOSH), takes into account the weight of an object plus several other variables in lifting tasks that contribute to the risk of injury. For example, if the situation requires frequent lifts or lifting loads far away from the body, there is an increased risk of injury. Under these conditions, the weight limit would be reduced from a baseline weight or "load constant" (LC) to a recommended weight limit (RWL). A "load constant" (LC) of 23 kg (about 51 pounds) has been established by NIOSH as a load that, under ideal conditions, is safe for 75% of females and 90% of males.

To calculate the RWL, you must first measure or assess several variables related to the lifting task. The six variables that are considered in determining the RWL are:

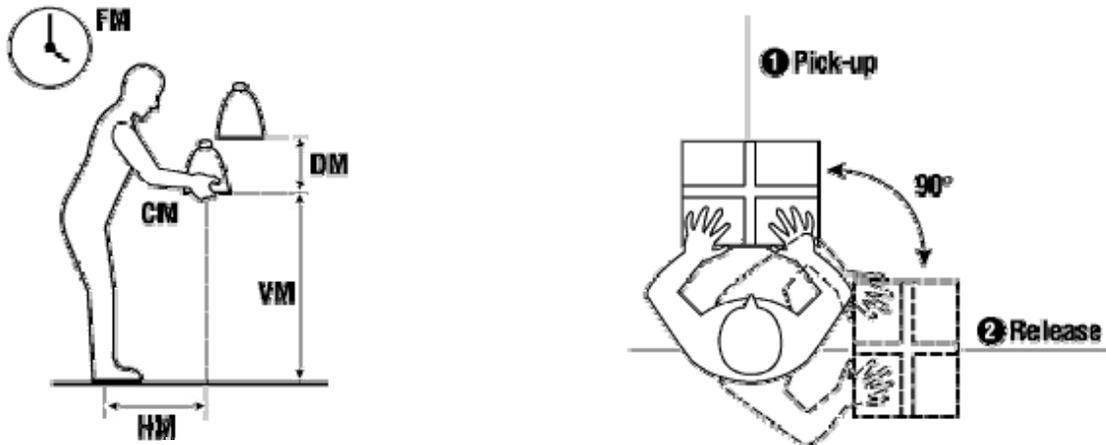

- The horizontal distance (H) the load is lifted (distance of hands from midpoint between ankles),
- The starting height of the hands from the ground (V),
- The vertical distance of lifting (D),
- The time between lifts or frequency of lifting (F),
- The angle of the load in relation to the body (e.g., straight in front of you or off to the side, A), and
- The quality of the grasp or handhold based on the type of handles available (hand-to-load coupling, C).

Each of these variables is then assigned a numerical value (multiplier factor) from look-up charts. The equation includes six multiplier factors to calculate the RWL:

$$RWL = LC \times HM \times VM \times DM \times FM \times AM \times CM$$

Where LC is the load constant (23 kg) and other factors in the equation are:

- HM, the "Horizontal Multiplier" factor,
- VM, the "Vertical Multiplier" factor,
- DM, the "Distance Multiplier" factor,
- FM, the "Frequency Multiplier" factor,
- AM, the "Asymmetric Multiplier" factor, and
- CM, the "Coupling Multiplier" factor.

**Horizontal Multiplier** is the distance the object is from the body. Measure (in centimeters) the distance from in between the person's ankles to their hands when holding the object. Write down this number. Next, look up the number on the accompanying chart and find the matching "multiplier factor". Use this factor in the lifting equation.

**Vertical Multiplier** is measured as the starting point of the lift and is the distance in centimeters of the hands up from the ground. Measure this distance and use the number to determine which value to use on the chart.

**Distance Multiplier** is the number of centimeters the load travels up (or down) from the starting position. Measure this distance and use the number to determine which value to use on the chart.

**Frequency Multiplier** is how often the lift is repeated within a certain time period. You need to determine if the lift is done while standing or stooping, for more or less than one hour (in total time for the shift), and how much time there is for rest between lifts.

**Asymmetric Multiplier** measures if the body must twist or turn during the lift. This measurement is done in degrees (with 360° being one complete circle).

**Coupling Multiplier** determines the "coupling" or type of grasp the person has on the container. It rates the type of handles as good (handles), fair (make-shift cut outs in cardboard boxes) or poor. You also need to know if the lift is done in a standing or stooping position.

When these multipliers are placed into the equation, determine the RWL. If the weight of the object to be lifted exceeds the RWL, the task is considered to be dangerous. Assess the relevant factors which contribute most to the risk (the lower the factor, the more it contributes to the risk) and redesign the handling task.

The lifting equation only applies in certain situations. It does not apply in situations where a person is lifting (or lowering):

- With one hand,
- For over 8 hours,
- While seated or kneeling,
- In a restricted work space,
- Objects that are unstable (such as buckets or containers of liquids),
- While pushing or pulling,
- With wheelbarrows or shovels,
- With high speed motion (faster than about 30 inches/second),
- Extremely hot or cold objects or in extreme temperatures, or
- With poor foot/floor coupling (high risk of a slip or fall).

This equation applies to most workers for:

- Two-handed lifting,
- Comfortable lifting postures, and
- Comfortable environments and non-slip floorings.

### **FACTORS USED IN RWL CALCULATIONS**

Horizontal Multiplier (HM): Horizontal distance (H, in cm) from the midpoint between the ankles to the hands while holding the object.

H = Horizontal Distance (cm)	HM Factor
25 or less	1.00
30	0.83
40	0.63
50	0.50
60	0.42

Vertical Multiplier (VM): The vertical distance (V, in cm) of the hands from the ground at the start of the lift.

V = Starting Height (cm)	VM Factor
0	0.78
30	0.87
50	0.93
70	0.99
100	0.93
150	0.78
175	0.70
>175	0.00

Distance Multiplier (DM): The vertical distance (D, in cm) that the load travels.

D = Lifting Distance (cm)	DM Factor
25 or less	1.00
40	0.97
55	0.90
100	0.87
145	0.85
175	0.85
>175	0.00

Asymmetric Multiplier (AM): The twisting angle (A) of the body while lifting, measured in degrees.

A = Angle (degrees)	AM Factor
90°	0.71
60°	0.81
45°	0.86
30°	0.90
0°	1.00

**Frequency Multiplier (FM):** The frequency (F) of lifts and the duration of lifting (in minutes or seconds) over a work shift.

F = Time Between Lifts	FM Factor			
	Lifting While Standing		Lifting While Stooping	
	One Hour or Less	Over One Hour	One Hour or Less	Over One Hour
5 min	1.00	0.85	1.00	0.85
1 min	0.94	0.75	0.94	0.75
30 sec	0.91	0.65	0.91	0.65
15 sec	0.84	0.45	0.84	0.45
10 sec	0.75	0.27	0.75	0.27
6 sec	0.45	0.13	0.45	-
5 sec	0.37	-	0.37	-

**Coupling Multiplier (CM):** The quality of grasp (or coupling, C) classified as good, fair or poor and depends on the body position (either standing or stooping).

C = Grasp	CM Factor	
	Standing	Stooping
Good (handles)	1.00	1.00
Fair	1.00	0.95
Poor	0.90	0.90

**URS SAFETY MANAGEMENT STANDARD 072**  
**BEHAVIOR BASED SAFETY**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Behavior-Based Safety**

---

### **1. Applicability**

This standard applies to all operations of URS Corporation and its subsidiary companies.

### **2. Purpose and Scope**

The purpose of this standard is to describe the URS approach to implementing our behavior-based safety program.

Behavior-based safety is a process that provides a higher level of safety excellence by promoting proactive involvement, building ownership, and fostering communication that relates to employee safety. A primary concept is that most accidents are due to at-risk behavior, and behavioral changes may be made that significantly reduce accident potential.

### **3. Implementation**

Implementation of this procedure is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

#### **A. Definitions**

1. **At-Risk Behavior:** Individual actions that increase the chance of injury, despite knowledge of the hazard. An example is excessive speed while driving.
2. **Activators:** Items that are intended to produce desired behaviors. URS activators for safety include, but are not limited to, policy statements, safety management standards (SMS), training, safety slogans, posters and signs, health and safety plans, safe work plans, safety meetings, and rules and regulations.
3. **Behaviors:** Visible actions on the part of individuals and can be characterized as safe (following health and safety plans, using work practices that minimize risk, coaching others on safe behavior, having safety as a priority over speed and convenience, etc.), or at-risk.
4. **Consequences:** Result of safe and at-risk behaviors, and can therefore be positive or negative. Examples of consequences include self-approval, reprimand, peer approval, penalty, feedback, inconvenience, and comfort. The most effective consequences are positive, immediate, and certain.

## **URS SAFETY MANAGEMENT STANDARD**

### **Behavior-Based Safety**

---

#### B. Values of Behavior-Based Safety

1. Employees hold safety as a core value.
2. Each employee feels responsible for the safety of their coworkers as well as themselves, and takes action accordingly.
3. Each employee is willing and able to “go beyond the call of duty” on behalf of the safety of others.

#### C. Roles for Safe Behavior

1. Supervisor’s Role:
  - a. Provide clearly defined safety expectations and encourage/reinforce the implementation of safety observations using the SMS 072-1 NA checklist or equivalent.
  - b. Provide consequences for observed behaviors throughout the course of the work shift.
2. Co-Worker Role
  - a. Intervene when observing at-risk behavior.
  - b. Provide positive feedback for safe behavior.
  - c. Volunteer to be observed.

#### C. Identification of At-Risk Behaviors

Observations and review of incident and near miss data will be used by URS Safety Officers to help identify at-risk behavior.

1. Employee observations.
  - a. Observation checklists, either project-specific or Attachment 072-1 NA, will be used as a tool to help identify safe and at-risk behaviors and why the behavior(s) occurred.
  - b. Employees will be instructed on using the checklists.
  - c. Checklists will be included in the site-specific health and safety plan or the safe work plan.
  - d. The checklists will include the expected safe behaviors.

## **URS SAFETY MANAGEMENT STANDARD**

### **Behavior-Based Safety**

---

- e. Peers will complete the checklist for applicable work tasks.
- f. Checklists may change throughout the project to include additional behaviors.

#### **E. Feedback to Employees**

- 1. Observers will immediately provide one-on-one feedback to the observed, noting both safe and at-risk behaviors.
- 2. Observer and observee will discuss the identified barriers to safe behavior, and potential solutions.
- 3. Near-Miss and Incident Reports will be reviewed to identify at-risk behaviors and corrective actions.
- 4. Management and Health, Safety, and Environment staff will verify compliance with this standard.

#### **F. Feedback Follow-up**

- 1. Observation checklists will be collected and discussed at periodic safety meetings.
- 2. The manager will review the trends for at-risk and safe behavior, and report the trends to the employees.
- 3. Project-specific trends are analyzed and areas of additional action are identified.

### **5. Documentation Summary**

The following documentation will be maintained in the project file:

- A. Behavior-Based Safety Checklists.

### **6. Resources**

**URS SAFETY MANAGEMENT STANDARD 084  
LONE WORKER**

---

# **URS SAFETY MANAGEMENT STANDARD**

## **Lone Worker**

---

### **1. Applicability**

This standard is applicable to URS Corporation and its subsidiary companies.

### **2. Purpose and Scope**

The purpose of this standard is to provide a policy for managing lone workers while working at field sites.

Individuals are considered to be “lone workers” when their normal duties require them to work where they cannot be seen or heard by another person; cannot expect a visit from another worker or member of the public during the normal course of their work; and/or where assistance is not readily available.

### **3. Implementation**

Implementation of this standard is the responsibility of the URS manager directing activities of the facility, site, or project location.

### **4. Requirements**

- A. Conduct a hazard assessment to determine:
  - 1. Type or nature of work being conducted by the lone worker;
  - 2. Location of the work;
  - 3. Length of time worker will be working alone;
  - 4. Characteristics of the individual working alone that may increase the risk to that worker (e.g., medical conditions);
  - 5. Hazards of the work location that may increase the risk to that worker (e.g., high crime area); and
  - 6. The working conditions the lone worker may experience (e.g., heat/cold stress, unstable terrain, wild animals).
- B. Prohibit individuals from acting as “lone workers” if work activities involve any of the following:
  - 1. Working from heights greater than 3 feet (1 meter).
  - 2. Confined spaces.

## **URS SAFETY MANAGEMENT STANDARD**

### **Lone Worker**

---

3. Work involving electricity.
4. Work over or near water.
5. Working in an area where there is an increased potential for violence.
6. Work in hazardous areas of mine sites.

#### C. Prepare a Lone Worker Communication Plan.

1. Using Attachment 084-1 NA (or equivalent) – Lone Work Communication Plan, determine the frequency of contact the lone worker will make with the Project Manager or designated alternate (PM).
2. Determine the method of contact that will be made with the lone worker by the PM. If the use of a cell phone is the primary method of contact, cell phone coverage in the area of the work location must be verified prior to work activities beginning.
3. Establish a contingency plan that will address steps to be taken if the lone worker does not contact the PM at the frequency established in Attachment 084-1 NA. The contingency plan should be specific and assign roles and responsibilities.
4. Discuss the communication plan with the lone worker prior to work activities beginning.
5. Both the lone worker and PM must sign Attachment 084-1.
6. A copy of Attachment 084-1 NA will be given to the lone worker prior to work activities beginning. The PM will maintain a copy until the work has been completed. After the work has been completed, Attachment 084-1 NA will be placed in the project safety file.

#### **5. Documentation Summary**

# Material Safety Data Sheet

## Chloroethane

ACC# 89460

### Section 1 - Chemical Product and Company Identification

**MSDS Name:** Chloroethane**Catalog Numbers:** AC404600000, AC404601000, AC404605000**Synonyms:** Ethyl chloride; monchloroethane.**Company Identification:**

Acros Organics N.V.

One Reagent Lane

Fair Lawn, NJ 07410

**For information in North America, call:** 800-ACROS-01**For emergencies in the US, call CHEMTREC:** 800-424-9300

### Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
75-00-3	Ethyl chloride	ca.100	200-830-5

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: colorless gas. Flash Point: -50 deg C.

**Danger!** Extremely flammable liquid and vapor. Vapor may cause flash fire. Possible risks of irreversible effects. May cause eye and skin irritation. May cause respiratory tract irritation. Cancer suspect agent. Dangerous for the environment.

**Target Organs:** Reproductive system.**Potential Health Effects****Eye:** May cause eye irritation.**Skin:** May cause skin irritation.**Ingestion:** May cause irritation of the digestive tract.**Inhalation:** May cause respiratory tract irritation. Vapors may cause dizziness or suffocation.

Inhalation of vapors causes irritation of the mucous membranes.

**Chronic:** Possible risk of irreversible effects.

### Section 4 - First Aid Measures

**Eyes:** Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately.

**Skin:** Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

**Ingestion:** Never give anything by mouth to an unconscious person. Get medical aid. Do NOT

induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

**Inhalation:** Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Treat symptomatically and supportively.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Vapors may form an explosive mixture with air. Vapors can travel to a source of ignition and flash back. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Use water spray to keep fire-exposed containers cool. Extremely flammable liquid and vapor. Containers may explode in the heat of a fire. Will be easily ignited by heat, sparks or flame.

**Extinguishing Media:** For small fires, use dry chemical, carbon dioxide, water spray or alcohol-resistant foam. For large fires, use water spray, fog, or alcohol-resistant foam. Use water spray to cool fire-exposed containers. Water may be ineffective. Use agent most appropriate to extinguish fire. Do NOT use straight streams of water.

**Flash Point:** -50 deg C ( -58.00 deg F)

**Autoignition Temperature:** Not available.

**Explosion Limits, Lower:**Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: 1; Flammability: 4; Instability: 0

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Avoid runoff into storm sewers and ditches which lead to waterways. Clean up spills immediately, observing precautions in the Protective Equipment section. Remove all sources of ignition. Use a spark-proof tool. Provide ventilation. A vapor suppressing foam may be used to reduce vapors.

## Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Ground and bond containers when transferring material. Avoid contact with eyes, skin, and clothing. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Keep container tightly closed. Keep away from heat, sparks and flame. Avoid ingestion and inhalation. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames.

**Storage:** Keep away from heat, sparks, and flame. Keep away from sources of ignition. Keep container closed when not in use. Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances. Refrigerator/flammables.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local explosion-proof ventilation to keep airborne levels to acceptable levels.

**Exposure Limits**

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Ethyl chloride	100 ppm TWA; Skin - potential significant contribution to overall exposure by the cutaneous route	3800 ppm IDLH (10% LEL)	1000 ppm TWA; 2600 mg/m <sup>3</sup> TWA

**OSHA Vacated PELs:** Ethyl chloride: 1000 ppm TWA; 2600 mg/m<sup>3</sup> TWA

**Personal Protective Equipment**

**Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

**Skin:** Wear appropriate protective gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to prevent skin exposure.

**Respirators:** A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

## Section 9 - Physical and Chemical Properties

**Physical State:** Gas

**Appearance:** colorless

**Odor:** pungent odor

**pH:** Not available.

**Vapor Pressure:** Not available.

**Vapor Density:** 2.22

**Evaporation Rate:** Not available.

**Viscosity:** Not available.

**Boiling Point:** 12 - 14 deg C

**Freezing/Melting Point:** Not available.

**Decomposition Temperature:** Not available.

**Solubility:** Not available.

**Specific Gravity/Density:** 9200g/cm<sup>3</sup>

**Molecular Formula:** C<sub>2</sub>H<sub>5</sub>Cl

**Molecular Weight:** 64.51

## Section 10 - Stability and Reactivity

**Chemical Stability:** Stable under normal temperatures and pressures. Forms explosive mixtures with air (flash point -58°F/-50°C).

**Conditions to Avoid:** Incompatible materials, ignition sources, moisture, excess heat, strong oxidants.

**Incompatibilities with Other Materials:** Metals, strong oxidizing agents, plastics, rubber, potassium, sodium.

**Hazardous Decomposition Products:** Hydrogen chloride, carbon monoxide, carbon monoxide, carbon dioxide, phosgene gas.

**Hazardous Polymerization:** Has not been reported

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 75-00-3: KH7525000

**LD50/LC50:**

**CAS#** 75-00-3:

Inhalation, mouse: LC50 = 121300 mg/m<sup>3</sup>/2H;

Inhalation, rat: LC50 = 152 gm/m<sup>3</sup>/2H;

Inhalation, rat: LC50 = 150000 mg/m<sup>3</sup>/2H;

**Carcinogenicity:**

**CAS#** 75-00-3:

- **ACGIH:** A3 - Confirmed Animal Carcinogen with Unknown Relevance to Humans
- **California:** carcinogen, initial date 7/1/90
- **NTP:** Not listed.
- **IARC:** Not listed.

**Epidemiology:** No information found

**Teratogenicity:** No information found

**Reproductive Effects:** No information found

**Mutagenicity:** No information found

**Neurotoxicity:** No information found

**Other Studies:**

## Section 12 - Ecological Information

**Ecotoxicity:** No data available. No information available.

**Environmental:** No information found.

**Physical:** No information found.

**Other:** No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:** None listed.

## Section 14 - Transport Information

	US DOT	Canada TDG
<b>Shipping Name:</b>	Not regulated as a hazardous material	No information available.
<b>Hazard Class:</b>		
<b>UN Number:</b>		
<b>Packing Group:</b>		

## Section 15 - Regulatory Information

### US FEDERAL

#### TSCA

CAS# 75-00-3 is listed on the TSCA inventory.

#### Health & Safety Reporting List

CAS# 75-00-3: Effective 6/1/87, Sunset 6/1/97

#### Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

#### Section 12b

None of the chemicals are listed under TSCA Section 12b.

#### TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

#### CERCLA Hazardous Substances and corresponding RQs

CAS# 75-00-3: 100 lb final RQ; 45.4 kg final RQ

#### SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPO.

#### SARA Codes

CAS # 75-00-3: immediate, delayed, fire, sudden release of pressure.

#### Section 313

Ethyl chloride is not at a high enough concentration to be reportable under Section 313. No chemicals are reportable under Section 313.

#### Clean Air Act:

CAS# 75-00-3 is listed as a hazardous air pollutant (HAP).

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

#### Clean Water Act:

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 75-00-3 is listed as a Priority Pollutant under the Clean Water Act.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

#### OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

#### STATE

CAS# 75-00-3 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

#### California Prop 65

#### The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Ethyl chloride, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 75-00-3: 150 æg/day NSRL

### European/International Regulations

**European Labeling in Accordance with EC Directives****Hazard Symbols:**

XN F+

**Risk Phrases:**

R 12 Extremely flammable.

R 40 Limited evidence of a carcinogenic effect.

R 52/53 Harmful to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

**Safety Phrases:**

S 16 Keep away from sources of ignition - No smoking.

S 33 Take precautionary measures against static discharges.

S 36/37 Wear suitable protective clothing and gloves.

S 37 Wear suitable gloves.

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

S 9 Keep container in a well-ventilated place.

S 28A After contact with skin, wash immediately with plenty of water

S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

**WGK (Water Danger/Protection)**

CAS# 75-00-3: 2

**Canada - DSL/NDSL**

CAS# 75-00-3 is listed on Canada's DSL List.

**Canada - WHMIS**

This product has a WHMIS classification of B1, D2B.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

**Canadian Ingredient Disclosure List**

CAS# 75-00-3 is listed on the Canadian Ingredient Disclosure List.

<b>Section 16 - Additional Information</b>

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/ SYMPTOMS	PREVENTION	FIRST AID/ FIRE FIGHTING
<b>FIRE</b>	Highly flammable. Gives off irritating or toxic fumes (or gases) in a fire.	NO open flames, NO sparks, and NO smoking.	Powder, water spray, foam, carbon dioxide.
<b>EXPLOSION</b>	Vapour/air mixtures are explosive.	Closed system, ventilation, explosion-proof electrical equipment and lighting. Do NOT use compressed air for filling, discharging, or handling.	In case of fire: keep drums, etc., cool by spraying with water.
<b>EXPOSURE</b>		PREVENT GENERATION OF MISTS!	
• <b>INHALATION</b>	Dizziness. Drowsiness. Dullness. Nausea. Unconsciousness.	Ventilation, local exhaust, or breathing protection.	Fresh air, rest. Refer for medical attention.
• <b>SKIN</b>	Dry skin. Roughness.	Protective gloves.	Remove contaminated clothes. Rinse skin with plenty of water or shower.
• <b>EYES</b>	Redness. Pain.	Safety spectacles.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
• <b>INGESTION</b>	Burning sensation (further see Inhalation).	Do not eat, drink, or smoke during work.	Rinse mouth. Refer for medical attention.
SPILLAGE DISPOSAL	STORAGE	PACKAGING & LABELLING	
Collect leaking liquid in sealable containers. Absorb remaining liquid in sand or inert absorbent and remove to safe place. Do NOT wash away into sewer (extra personal protection: self-contained breathing apparatus).	Fireproof. Separated from: see Chemical Dangers. Cool.	F symbol Xn symbol R: 11-22-36/37 S: 16-23 UN Hazard Class: 3 UN Packing Group: II Marine pollutant.

DOT Rpt Qty:100 LBS

## ===== Hazards Identification =====

LD50 LC50 Mixture:ORAL LD50 (RAT/MOUSE): 200 MG/KG  
Routes of Entry: Inhalation:YES Skin:NO Ingestion:YES  
Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
Health Hazards Acute and Chronic:LACHRYMATOR-EYES: SEVERE IRRITATION.  
SKIN: IRRITATION/ALLERGIC REACTIION/SENSITIZATION. INHALATION:  
MUCOUS MEMBRANE IRRITATION. EXPOSURE CAN CAUSE LIVER & KIDNEY

DAMAGE/NERVOUS & CARDIOVASCULAR SYSTEM INJURY/DELAYED ADVERS  
HEALTH EFFECTS. NARCOTIC AT HIGH CONCENTRATIONS.

Explanation of Carcinogenicity:NONE

Effects of Overexposure:IRRITATION.

=====  
First Aid Measures  
=====

First Aid:EYES: FLUSH CONTINUOUSLY W/WATER FOR 15-20 MINS. SKIN: FLUSH  
W/WATER FOR 15-20 MINS. IF NOT BURNED, WASH W/SOAP & WATER.  
INHALATION: REMOVE TO FRESH AIR. GIVE CPR/OXYGEN IF NEEDED. KEEP  
WARM & QUIET. INGESTION: DON'T INDUCE VOMITING/GIVE LIQUIDS IF  
UNCONSCIOUS/CONVULSING. IF VOMITING OCCURS, WATCH CLOSELY FOR ANY  
AIRWAY OBSTRUCTION. OBTAIN MEDICAL ATTENTION IN ALL CASES.

=====  
Fire Fighting Measures  
=====

Flash Point:5F

Extinguishing Media:CO2, DRY CHEMICAL POWDER. DON'T USE WATER.

Unusual Fire/Explosion Hazard:FLAMMABLE CHEMICAL. EXPLOSIVE. TENDS TO  
DEVELOP PRESSUE ON STANDING. SENSITIVE TO HEAT & AIR. MAY  
POLYMERIZE UPON STANDING.

=====  
Accidental Release Measures  
=====

Spill Release Procedures:EVACUATE AREA. WEAR APPROPRIATE OSHA  
REGULATED EQUIPMENT. VENTILATE AREA. ABSORB ON VERMICULITE/SIMILAR  
MATERIAL. SWEEP UP & PLACE IN APPROPRIATE CONTAINER/HOLD FOR  
DISPOSAL. WASH CONTAMINATED SURFAC ES TO REMOVE ANY RESIDUES.

=====  
Handling and Storage  
=====

Handling and Storage Precautions:STORE IN A COOL DRY PLACE ONLY  
W/COMPATIBLE CHEMICALS. KEEP TIGHTLY CLOSED. STORE UNDER NITROGEN &  
REFRIGERATION. FOR LABORATORY USE ONLY.

Other Precautions:AVOID CONTACT W/SKIN, EYES & CLOTHING. DON'T BREATH  
VAPORS. CONTACT LENSES SHOULDN'T BE WORN IN THE LABORATORY. ALL  
CHEMICALS SHOULD BE CONSIDERED HAZARDOUS. AVOID DIRECT PHYSICAL  
CONTACT.

=====  
Exposure Controls/Personal Protection  
=====

Respiratory Protection:WEAR APPROPRIATE OSHA/MSHA APPROVED SAFETY  
EQUIPMENT.

Ventilation:CHEMICAL SHOULD BE HANDLED ONLY IN A HOOD.

Eye Protection:EYE SHIELDS

Work Hygienic Practices:REMOVE/LAUNDER CONTAMINATED CLOTHING BEFORE  
REUSE.

Supplemental Safety and Health

=====  
Physical/Chemical Properties  
=====

Boiling Pt:B.P. Text:87.06F

Melt/Freeze Pt:M.P/F.P Text:-188.5F

# Material Safety Data Sheet

## 1,1,1-Trichloroethane

ACC# 14370

### Section 1 - Chemical Product and Company Identification

**MSDS Name:** 1,1,1-Trichloroethane**Catalog Numbers:** AC294930000, AC294930250, AC294932500, AC327940000, AC327940010, AC327942500, S80231, T391-20, T391-4, T398-4**Synonyms:** Methyl chloroform; Methyltrichloromethane; Trichloroethane; Trichloromethylmethane; 1,1,1-TCE.**Company Identification:**Fisher Scientific  
1 Reagent Lane  
Fair Lawn, NJ 07410**For information, call:** 201-796-7100**Emergency Number:** 201-796-7100**For CHEMTREC assistance, call:** 800-424-9300**For International CHEMTREC assistance, call:** 703-527-3887

### Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
71-55-6	1,1,1-Trichloroethane	>96	200-756-3
123-91-1	1,4-Dioxane	2.5	204-661-8
106-88-7	1,2-Butylene oxide	0.47	203-438-2
75-52-5	Nitromethane	0.34	200-876-6

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: colorless liquid.

**Warning!** Causes eye, skin, and respiratory tract irritation. May be harmful if inhaled. May cause central nervous system depression. This is a CFC substance which destroys ozone in the upper atmosphere. Destruction of the ozone layer can lead to increased ultraviolet radiation which, with excess exposure to sunlight, can lead to an increase in skin cancer and eye cataracts.

**Target Organs:** Central nervous system, respiratory system, eyes, skin.

#### Potential Health Effects

**Eye:** Causes mild eye irritation. Vapors may cause eye irritation.

**Skin:** Causes skin irritation. Prolonged or repeated contact may dry/defat the skin and cause irritation. 1,4-Dioxane may cause an allergic skin reaction, and absorption of this substance may cause systemic toxicity. Methyl chloroform is an acknowledged skin irritant in guinea pigs, where a single topical application of 1 ml or repeated contact over 3 days causes edema, erythema, inflammation, and cellular degeneration. There is one case report of allergic contact dermatitis in a worker exposed to 1,1,1-trichloroethane. It is not possible to draw any conclusions from this single

report.

**Ingestion:** Causes gastrointestinal irritation with nausea, vomiting and diarrhea. Low hazard for usual industrial handling. Although there are no case reports of aspiration, it was induced in rats in one study. In addition, based on its physical properties (viscosity and surface tension), it seems likely that 1,1,1-trichloroethane can be aspirated.

**Inhalation:** Inhalation of high concentrations may cause central nervous system effects characterized by nausea, headache, dizziness, unconsciousness and coma. May cause narcotic effects in high concentration. Causes irritation of the mucous membrane and upper respiratory tract. Numerous deaths due to depression of CNS control of respiration and fatal cardiac arrhythmia have been reported from methyl chloroform inhalation (accidental or intentional) in poorly ventilated rooms, pits, tanks, and other small areas (Documentation of the TLV). Cases of intentional abuse of 1,1,1-trichloroethane in substances such as typewriter correction fluid for euphoric symptoms have been documented.

**Chronic:** Prolonged or repeated skin contact may cause defatting and dermatitis. Exposure to high concentrations may cause central nervous system depression. Studies with solvent abusers have established that severe cardiac arrhythmias may result from cardiac sensitization, where the heart has an increased response to circulating epinephrine. In these cases, exposures by far exceeded occupational relevant levels. Liver effects have been observed in some animal studies at high

## Section 4 - First Aid Measures

**Eyes:** In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical aid.

**Skin:** In case of contact, flush skin with plenty of water. Remove contaminated clothing and shoes. Get medical aid if irritation develops and persists. Wash clothing before reuse.

**Ingestion:** Potential for aspiration if swallowed. Get medical aid immediately. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If vomiting occurs naturally, have victim lean forward.

**Inhalation:** If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Alcoholic beverage consumption may enhance the toxic effects of this substance.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Use water spray to keep fire-exposed containers cool. Substance is nonflammable. Vapors may accumulate in confined spaces. Methyl chloroform burns only in excess oxygen or in air if a strong source of ignition is present. No flash point in conventional closed tester; however, vapors in containers can explode if subjected to high energy source.

**Extinguishing Media:** Use extinguishing media most appropriate for the surrounding fire.

**Flash Point:** Not applicable.

**Autoignition Temperature:** 500 deg C ( 932.00 deg F)

**Explosion Limits, Lower:** 7.0 vol %

**Upper:** 16 vol %

**NFPA Rating:** (estimated) Health: 2; Flammability: 1; Instability: 0

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Absorb spill with inert material (e.g. vermiculite, sand or earth), then place in suitable container. Clean up spills immediately, observing precautions in the Protective Equipment section. Provide ventilation. Approach spill from upwind.

## Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid breathing vapor.

**Storage:** Store in a cool, dry, well-ventilated area away from incompatible substances. Do not store in aluminum containers.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

### Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
1,1,1-Trichloroethane	350 ppm TWA; 450 ppm STEL	700 ppm IDLH	350 ppm TWA; 1900 mg/m <sup>3</sup> TWA
1,4-Dioxane	20 ppm TWA; Skin - potential significant contribution to overall exposure by the cutaneous route	500 ppm IDLH	100 ppm TWA; 360 mg/m <sup>3</sup> TWA
1,2-Butylene oxide	none listed	none listed	none listed
Nitromethane	20 ppm TWA	750 ppm IDLH	100 ppm TWA; 250 mg/m <sup>3</sup> TWA

**OSHA Vacated PELs:** 1,1,1-Trichloroethane: 350 ppm TWA; 1900 mg/m<sup>3</sup> TWA 1,4-Dioxane: 25 ppm TWA; 90 mg/m<sup>3</sup> TWA 1,2-Butylene oxide: No OSHA Vacated PELs are listed for this chemical. Nitromethane: 100 ppm TWA; 250 mg/m<sup>3</sup> TWA

### Personal Protective Equipment

**Eyes:** Wear chemical splash goggles.

**Skin:** Wear appropriate protective gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to minimize contact with skin.

**Respirators:** A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

## Section 9 - Physical and Chemical Properties

**Physical State:** Liquid  
**Appearance:** colorless  
**Odor:** Sweet, mild chloroform-like.  
**pH:** Not applicable.  
**Vapor Pressure:** 100 mm Hg @ 20 deg C  
**Vapor Density:** 4.55 (air=1)  
**Evaporation Rate:**1.0 (carbon tetrachloride=1)  
**Viscosity:** 0.86 cP @ 20 deg C  
**Boiling Point:** 74 deg C  
**Freezing/Melting Point:**-33 deg C  
**Decomposition Temperature:**> 260 deg C  
**Solubility:** Insoluble.  
**Specific Gravity/Density:**1.338 (water=1)  
**Molecular Formula:**C2H3Cl3  
**Molecular Weight:**133.38

## Section 10 - Stability and Reactivity

**Chemical Stability:** Because of 1,1,1-TCE's reactivity with magnesium, aluminum, & their alloys, inhibitors (like 1,4-dioxane, 1,3-dioxolane, isobutyl alcohol, or nitroethane) are often added to increase the stability of the solvent & prevent corrosion of metal parts. 1,1,1-Trichloroethane reacts slowly with water to produce hydrochloric acid.

**Conditions to Avoid:** High temperatures, ignition sources, moisture, confined spaces.

**Incompatibilities with Other Materials:** Strong oxidizing agents, strong bases, aluminum, magnesium, chemically active metals.

**Hazardous Decomposition Products:** Hydrogen chloride, chlorine, phosgene, carbon monoxide, carbon dioxide.

**Hazardous Polymerization:** Will not occur.

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 71-55-6: KJ2975000

**CAS#** 123-91-1: JG8225000

**CAS#** 106-88-7: EK3675000

 Oral, mouse: LD50 = 5300 mg/kg;  
 Oral, rabbit: LD50 = 2 gm/kg;  
 Oral, rat: LD50 = 4200 mg/kg;  
 Skin, rabbit: LD50 = 7600 uL/kg;

CAS# 106-88-7:

Draize test, rabbit, eye: 100 mg/24H Moderate;  
 Draize test, rabbit, skin: 500 mg/24H Mild;  
 Inhalation, rat: LC50 = 6300 mg/m<sup>3</sup>/4H;  
 Oral, rat: LD50 = 500 mg/kg;  
 Skin, rabbit: LD50 = 2100 uL/kg;

CAS# 75-52-5:

Oral, mouse: LD50 = 950 mg/kg;  
 Oral, rat: LD50 = 940 mg/kg;

#### **Carcinogenicity:**

CAS# 71-55-6: Not listed by ACGIH, IARC, NTP, or CA Prop 65.

CAS# 123-91-1:

- **ACGIH:** A3 - Confirmed animal carcinogen with unknown relevance to humans
- **California:** carcinogen, initial date 1/1/88
- **NTP:** Suspect carcinogen
- **IARC:** Group 2B carcinogen

CAS# 106-88-7:

- **ACGIH:** Not listed.
- **California:** Not listed.
- **NTP:** Not listed.
- **IARC:** Group 2B carcinogen

CAS# 75-52-5:

- **ACGIH:** A3 - Confirmed animal carcinogen with unknown relevance to humans
- **California:** carcinogen, initial date 5/1/97
- **NTP:** Suspect carcinogen
- **IARC:** Group 2B carcinogen

**Epidemiology:** No information found

**Teratogenicity:** Animal evidence suggests that 1,1,1-TCE is not teratogenic at exposures which are not maternally toxic. Slight fetotoxicity (for example, reduced fetal weight) has been reported at doses which were not maternally toxic.

**Reproductive Effects:** Animal evidence suggests that 1,1,1-TCE does not cause reproductive

effects.

**Mutagenicity:** Evidence from studies using live animals suggests that 1,1,1-trichloroethane is not mutagenic.

**Neurotoxicity:** Some studies using sensitive neurobehavioural tests have shown altered scores for exposed workers. However, whether or not these results indicate nervous system damage is not clear. Other studies with 1,1,1-TCE have not shown any changes.

**Other Studies:**

## Section 12 - Ecological Information

**Ecotoxicity:** Fish: Fathead Minnow: EC50 = 52.9 mg/L; 96 Hr; Flow-through at 25.5°C Fish: Bluegill/Sunfish: LC50 = 72 mg/L; 96 Hr; Static bioassay Fish: Fathead Minnow: LC50 = 52.9 mg/L; 96 Hr; Flow-through at 25.5°C Fish: Sheepshead minnow: LC50 = 53-72 mg/L; 96 Hr; Unspecified Water flea Daphnia: EC50 > 530 mg/L; 48 Hr; Unspecified Releases to surface water will decrease in concn almost entirely due to evaporation. Spills on land will decrease in concentration almost entirely due to volatilization and leaching.

**Environmental:** Releases to air may be transported long distances and partially return to earth in rain. In the troposphere, 1,1,1-trichloroethane will degrade very slowly by photooxidation and also slowly diffuse to the stratosphere where photodegradation will be rapid. This substance has a high potential for oxone depletion.

**Physical:** No information available.

**Other:** No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:**

CAS# 71-55-6: waste number U226.

CAS# 123-91-1: waste number U108.

#### **TSCA Significant New Use Rule**

None of the chemicals in this material have a SNUR under TSCA.

#### **CERCLA Hazardous Substances and corresponding RQs**

CAS# 71-55-6: 1000 lb final RQ; 454 kg final RQ    CAS# 123-91-1: 100 lb final RQ; 45.4 kg final RQ    CAS# 106-88-7: 100 lb final RQ; 45.4 kg final RQ

#### **SARA Section 302 Extremely Hazardous Substances**

None of the chemicals in this product have a TPQ.

#### **SARA Codes**

CAS # 71-55-6: immediate.  
 CAS # 123-91-1: delayed, fire.  
 CAS # 106-88-7: immediate.  
 CAS # 75-52-5: immediate, delayed, fire, reactive.

#### **Section 313**

This material contains 1,1,1-Trichloroethane (CAS# 71-55-6, >96%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

This material contains 1,4-Dioxane (CAS# 123-91-1, 2.5%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

This material contains 1,2-Butylene oxide (CAS# 106-88-7, 0.47%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

#### **Clean Air Act:**

CAS# 71-55-6 is listed as a hazardous air pollutant (HAP).  
 CAS# 123-91-1 is listed as a hazardous air pollutant (HAP).  
 CAS# 106-88-7 is listed as a hazardous air pollutant (HAP).

CAS# 71-55-6 is listed as a Class 1 ozone depletor with an 0.1 ODP; 110 GWP

This material does not contain any Class 2 Ozone depletors.

#### **Clean Water Act:**

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 71-55-6 is listed as a Priority Pollutant under the Clean Water Act. CAS# 71-55-6 is listed as a Toxic Pollutant under the Clean Water Act.

#### **OSHA:**

CAS# 75-52-5 is considered highly hazardous by OSHA.

#### **STATE**

CAS# 71-55-6 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

CAS# 123-91-1 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

CAS# 106-88-7 can be found on the following state right to know lists: New Jersey, Pennsylvania, Minnesota, Massachusetts.

CAS# 75-52-5 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

#### **California Prop 65**

WARNING: This product contains 1,4-Dioxane, a chemical known to the state of California to cause cancer. WARNING: This product contains Nitromethane, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 123-91-1: 30 æg/day NSRL

## European/International Regulations

### European Labeling in Accordance with EC Directives

#### Hazard Symbols:

XN N

#### Risk Phrases:

R 20 Harmful by inhalation.

R 59 Dangerous for the ozone layer.

#### Safety Phrases:

S 24/25 Avoid contact with skin and eyes.

S 59 Refer to manufacturer/supplier for information on recovery/recycling.

S 61 Avoid release to the environment. Refer to special instructions/safety data sheets.

### WGK (Water Danger/Protection)

CAS# 71-55-6: 3

CAS# 123-91-1: 2

CAS# 106-88-7: 3

CAS# 75-52-5: 2

### Canada - DSL/NDSL

CAS# 71-55-6 is listed on Canada's DSL List.

CAS# 123-91-1 is listed on Canada's DSL List.

CAS# 106-88-7 is listed on Canada's DSL List.

CAS# 75-52-5 is listed on Canada's DSL List.

### Canada - WHMIS

This product has a WHMIS classification of D1B, D2B.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

### Canadian Ingredient Disclosure List

CAS# 71-55-6 is listed on the Canadian Ingredient Disclosure List.

CAS# 123-91-1 is listed on the Canadian Ingredient Disclosure List.

CAS# 75-52-5 is listed on the Canadian Ingredient Disclosure List.

## Section 16 - Additional Information

**MSDS Creation Date:** 6/11/1999

**Revision #5 Date:** 3/16/2007

EC # 601-033-00-9

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/ SYMPTOMS	PREVENTION	FIRST AID/ FIRE FIGHTING
<b>FIRE</b>	Combustible.		Water spray, powder. In case of fire in the surroundings: all extinguishing agents allowed.
<b>EXPLOSION</b>	Finely dispersed particles form explosive mixtures in air.	Prevent deposition of dust; closed system, dust explosion-proof electrical equipment and lighting.	
<b>EXPOSURE</b>		AVOID ALL CONTACT!	
• <b>INHALATION</b>		Local exhaust or breathing protection.	Fresh air, rest.
• <b>SKIN</b>		Protective gloves. Protective clothing.	Remove contaminated clothes. Rinse and then wash skin with water and soap.
• <b>EYES</b>		Safety goggles, face shield, or eye protection in combination with breathing protection.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
• <b>INGESTION</b>		Do not eat, drink, or smoke during work. Wash hands before eating.	Rinse mouth.
SPILLAGE DISPOSAL	STORAGE	PACKAGING & LABELLING	
Sweep spilled substance into sealable containers; if appropriate, moisten first to prevent dusting. Carefully collect remainder, then remove to safe place (extra personal protection: complete protective clothing including self-contained breathing apparatus).	Well closed.	T symbol R: 45 S: 53-45

# Material Safety Data Sheet

## Benzo[a]pyrene, 98%

ACC# 37175

### Section 1 - Chemical Product and Company Identification

**MSDS Name:** Benzo[a]pyrene, 98%**Catalog Numbers:** AC105600000, AC105600010, AC105601000, AC377200000, AC377200010, AC377201000 AC377201000**Synonyms:** 3,4-Benzopyrene; 3,4-Benzpyrene; Benzo[def]chrysene.**Company Identification:**

Acros Organics N.V.  
One Reagent Lane  
Fair Lawn, NJ 07410

**For information in North America, call:** 800-ACROS-01**For emergencies in the US, call CHEMTREC:** 800-424-9300

### Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
50-32-8	Benzo[a]pyrene	>96	200-028-5

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: yellow to brown powder.

**Danger!** May cause harm to the unborn child. May impair fertility. May cause eye, skin, and respiratory tract irritation. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. Cancer hazard. May cause allergic skin reaction. May cause heritable genetic damage.

**Target Organs:** Reproductive system, skin.**Potential Health Effects****Eye:** May cause eye irritation.**Skin:** May cause skin irritation. May be harmful if absorbed through the skin. May cause an allergic reaction in certain individuals.**Ingestion:** May cause irritation of the digestive tract. The toxicological properties of this substance have not been fully investigated. May be harmful if swallowed.**Inhalation:** May cause respiratory tract irritation. The toxicological properties of this substance have not been fully investigated. May be harmful if inhaled.**Chronic:** May cause cancer in humans. May cause reproductive and fetal effects. Laboratory experiments have resulted in mutagenic effects.

### Section 4 - First Aid Measures

**Eyes:** Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

**Skin:** Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

**Ingestion:** Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

**Inhalation:** Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Treat symptomatically and supportively.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

**Extinguishing Media:** Use water spray, dry chemical, carbon dioxide, or appropriate foam.

**Flash Point:** Not available.

**Autoignition Temperature:** Not available.

**Explosion Limits, Lower:** Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: 2; Flammability: 0; Instability: 0

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Clean up spills immediately, observing precautions in the Protective Equipment section. Sweep up, then place into a suitable container for disposal. Avoid generating dusty conditions. Provide ventilation.

## Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Use with adequate ventilation. Minimize dust generation and accumulation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and inhalation.

**Storage:** Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate ventilation to keep airborne concentrations low.

### Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs

Benzo[a]pyrene	0.2 mg/m3 TWA (as benzene soluble aerosol) (listed under Coal tar pitches).	0.1 mg/m3 TWA (cyclohexane-extractable fraction) (listed under Coal tar pitches).80 mg/m3 IDLH (listed under Coal tar pitches).	0.2 mg/m3 TWA (as benzene soluble fraction) (listed under Coal tar pitches).
----------------	---	---	--

**OSHA Vacated PELs:** Benzo[a]pyrene: No OSHA Vacated PELs are listed for this chemical.

**Personal Protective Equipment**

**Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

**Skin:** Wear appropriate protective gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to prevent skin exposure.

**Respirators:** A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

## Section 9 - Physical and Chemical Properties

**Physical State:** Powder

**Appearance:** yellow to brown

**Odor:** faint aromatic odor

**pH:** Not available.

**Vapor Pressure:** Not available.

**Vapor Density:** Not available.

**Evaporation Rate:**Not available.

**Viscosity:** Not available.

**Boiling Point:** 495 deg C @ 760 mm Hg

**Freezing/Melting Point:**175 - 179 deg C

**Decomposition Temperature:**Not available.

**Solubility:** 1.60x10<sup>-3</sup> mg/l @25°C

**Specific Gravity/Density:**Not available.

**Molecular Formula:**C<sub>20</sub>H<sub>12</sub>

**Molecular Weight:**252.31

## Section 10 - Stability and Reactivity

**Chemical Stability:** Stable under normal temperatures and pressures.

**Conditions to Avoid:** Dust generation.

**Incompatibilities with Other Materials:** Strong oxidizing agents.

**Hazardous Decomposition Products:** Carbon monoxide, carbon dioxide.

**Hazardous Polymerization:** Has not been reported.

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 50-32-8: DJ3675000

**LD50/LC50:**

Not available.

**Carcinogenicity:**

CAS# 50-32-8:

- **ACGIH:** A2 - Suspected Human Carcinogen
- **California:** carcinogen, initial date 7/1/87
- **NTP:** Suspect carcinogen
- **IARC:** Group 1 carcinogen (listed as Coal tar pitches).

**Epidemiology:** No information found

**Teratogenicity:** No information found

**Reproductive Effects:** Adverse reproductive effects have occurred in experimental animals.

**Mutagenicity:** Mutagenic effects have occurred in humans. Mutagenic effects have occurred in experimental animals.

**Neurotoxicity:** No information found

**Other Studies:**

## Section 12 - Ecological Information

No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:**

CAS# 50-32-8: waste number U022.

## Section 14 - Transport Information

	<b>US DOT</b>	<b>Canada TDG</b>
<b>Shipping Name:</b>	NOT REGULATED FOR DOMESTIC TRANSPORT	ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOL (Benzo{a} pyrene)
<b>Hazard Class:</b>		9
<b>UN Number:</b>		UN3077
<b>Packing Group:</b>		III

## Section 15 - Regulatory Information

**US FEDERAL**

**TSCA**

CAS# 50-32-8 is listed on the TSCA inventory.

**Health & Safety Reporting List**

None of the chemicals are on the Health & Safety Reporting List.

**Chemical Test Rules**

None of the chemicals in this product are under a Chemical Test Rule.

**Section 12b**

None of the chemicals are listed under TSCA Section 12b.

**TSCA Significant New Use Rule**

None of the chemicals in this material have a SNUR under TSCA.

**CERCLA Hazardous Substances and corresponding RQs**

CAS# 50-32-8: 1 lb final RQ; 0.454 kg final RQ

**SARA Section 302 Extremely Hazardous Substances**

None of the chemicals in this product have a TPQ.

**SARA Codes**

CAS # 50-32-8: immediate, delayed.

**Section 313**

This material contains Benzo[a]pyrene (CAS# 50-32-8, >96%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

**Clean Air Act:**

This material does not contain any hazardous air pollutants.

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

**Clean Water Act:**

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 50-32-8 is listed as a Priority Pollutant under the Clean Water Act.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

**OSHA:**

None of the chemicals in this product are considered highly hazardous by OSHA.

**STATE**

CAS# 50-32-8 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

**California Prop 65**

**The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:**

WARNING: This product contains Benzo[a]pyrene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 50-32-8: 0.06 æg/day NSRL

**European/International Regulations**

**European Labeling in Accordance with EC Directives**

**Hazard Symbols:**

T N

**Risk Phrases:**

R 43 May cause sensitization by skin contact.

R 45 May cause cancer.

R 46 May cause heritable genetic damage.

R 60 May impair fertility.

R 61 May cause harm to the unborn child.

R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

**Safety Phrases:**

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

- S 53 Avoid exposure - obtain special instructions before use.
- S 60 This material and its container must be disposed of as hazardous waste.
- S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

**WGK (Water Danger/Protection)**

CAS# 50-32-8: No information available.

**Canada - DSL/NDSL**

CAS# 50-32-8 is listed on Canada's DSL List.

**Canada - WHMIS**

This product has a WHMIS classification of D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

**Canadian Ingredient Disclosure List**

CAS# 50-32-8 is listed on the Canadian Ingredient Disclosure List.

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: very light beige solid.

**Caution!** May cause eye and skin irritation. May cause respiratory tract irritation. May cause cancer in humans.**Target Organs:** Liver, skin.**Potential Health Effects****Eye:** May cause eye irritation.**Skin:** May cause skin irritation.**Ingestion:** May cause gastrointestinal irritation with nausea, vomiting and diarrhea.**Inhalation:** May cause respiratory tract irritation.**Chronic:** May cause cancer according to animal studies.

### Section 4 - First Aid Measures

**Eyes:** Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.**Skin:** Get medical aid. Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.**Ingestion:** Do not induce vomiting. If victim is conscious and alert, give 2-4 cupfuls of milk or water. Never give anything by mouth to an unconscious person. Get medical aid immediately.**Inhalation:** Get medical aid immediately. Remove from exposure and move to fresh air

immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen.

**Notes to Physician:** Treat symptomatically and supportively.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. This material in sufficient quantity and reduced particle size is capable of creating a dust explosion.

**Extinguishing Media:** Use water spray, dry chemical, carbon dioxide, or chemical foam.

**Flash Point:** Not applicable.

**Autoignition Temperature:** Not available.

**Explosion Limits, Lower:** Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: ; Flammability: 1; Instability:

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Vacuum or sweep up material and place into a suitable disposal container. Clean up spills immediately, observing precautions in the Protective Equipment section. Wear a self contained breathing apparatus and appropriate personal protection. (See Exposure Controls, Personal Protection section). Provide ventilation.

## Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Wash thoroughly after handling. Avoid contact with eyes, skin, and clothing. Use only with adequate ventilation. Avoid breathing dust.

**Storage:** Store in a tightly closed container. Store in a cool, dry area away from incompatible substances.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use process enclosure, local exhaust ventilation, or other engineering controls to control airborne levels.

### Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Chrysene	0.2 mg/m <sup>3</sup> TWA (as benzene soluble aerosol) (listed under Coal tar pitches).	0.1 mg/m <sup>3</sup> TWA (cyclohexane-extractable fraction) (listed under Coal tar pitches).80 mg/m <sup>3</sup> IDLH (listed under Coal tar pitches).	0.2 mg/m <sup>3</sup> TWA (benzene soluble fraction) (listed under Coal tar pitches).

**OSHA Vacated PELs:** Chrysene: No OSHA Vacated PELs are listed for this chemical.

**Personal Protective Equipment**

**Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

**Skin:** Wear appropriate protective gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to prevent skin exposure.

**Respirators:** Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

## Section 9 - Physical and Chemical Properties

**Physical State:** Solid

**Appearance:** very light beige

**Odor:** Not available.

**pH:** Not available.

**Vapor Pressure:** Not available.

**Vapor Density:** Not available.

**Evaporation Rate:** Not available.

**Viscosity:** Not available.

**Boiling Point:** 448 deg C @ 760 mm Hg

**Freezing/Melting Point:** 250-255 deg C

**Decomposition Temperature:** Not available.

**Solubility:** insoluble

**Specific Gravity/Density:** Not available.

**Molecular Formula:** C<sub>18</sub>H<sub>12</sub>

**Molecular Weight:** 228.29

## Section 10 - Stability and Reactivity

**Chemical Stability:** Stable under normal temperatures and pressures.

**Conditions to Avoid:** Dust generation.

**Incompatibilities with Other Materials:** Strong oxidizing agents.

**Hazardous Decomposition Products:** Carbon monoxide, carbon dioxide.

**Hazardous Polymerization:** Has not been reported.

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 218-01-9: GC0700000

**LD50/LC50:**

Not available.

**Carcinogenicity:**

CAS# 218-01-9:

- **ACGIH:** A3 - Confirmed Animal Carcinogen with Unknown Relevance to Humans

- **California:** carcinogen, initial date 1/1/90
- **NTP:** Known carcinogen (listed as Coal tar pitches).
- **IARC:** Group 1 carcinogen (listed as Coal tar pitches).

**Epidemiology:** No information found

**Teratogenicity:** No information found

**Reproductive Effects:** No information found

**Mutagenicity:** Chrysene was mutagenic to *S. Typhimurium* in the presence of an exogenous metabolic system.

**Neurotoxicity:** No information found

**Other Studies:**

## Section 12 - Ecological Information

**Ecotoxicity:** Water flea LC50 = 1.9 mg/L; 2 Hr.; Unspecified Fish toxicity : LC50 (96hr) *Neaethes arenacedentata* >1ppm.(Rossi,S.S. et al Marine Pollut. Bull. 1978) Invertebrate toxicity : lethal treshold concentration (24hr) *Daphnia Magna* 0,7æg/l.(\* Newsted,J.L. et al Environ. Toxicol. Chem. 1987) Bioaccumulation : 24hr *Daphnia Magna* log bioconcentration factor 3.7845 (\*)

**Environmental:** Degradation studies : biodegradated by white rot fungus (Proc.Annu.Meet.Am.Wood-Preserv.Assoc.1989) May be utilised by axenic cultures of microorganisms e.g. *Pseudomonas pancimobilis* EPA505, which may have novel degradative systems(Mueller,J.G. et al ppl.Environ.Microbiol.1990; Mueller, J.G. et al Environ.Sci.Technol.1991).

**Physical:** Not found.

**Other:** No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:**

CAS# 218-01-9: waste number U050.

## Section 14 - Transport Information

	US DOT	Canada TDG
<b>Shipping Name:</b>	DOT regulated - small quantity provisions apply (see 49CFR173.4)	No information available.
<b>Hazard Class:</b>		
<b>UN Number:</b>		
<b>Packing Group:</b>		

## Section 15 - Regulatory Information

### US FEDERAL

#### TSCA

CAS# 218-01-9 is listed on the TSCA inventory.

#### Health & Safety Reporting List

None of the chemicals are on the Health & Safety Reporting List.

#### Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

#### Section 12b

None of the chemicals are listed under TSCA Section 12b.

#### TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

#### CERCLA Hazardous Substances and corresponding RQs

CAS# 218-01-9: 100 lb final RQ; 45.4 kg final RQ

#### SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPQ.

#### Section 313

This material contains Chrysene (CAS# 218-01-9, 98%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

#### Clean Air Act:

This material does not contain any hazardous air pollutants.

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

#### Clean Water Act:

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 218-01-9 is listed as a Priority Pollutant under the Clean Water Act.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

#### OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

#### STATE

CAS# 218-01-9 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

#### California Prop 65

#### The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Chrysene, a chemical known to the state of California to cause cancer.

California No Significant Risk Level: CAS# 218-01-9: 0.35 æg/day NSRL (oral)

### European/International Regulations

#### European Labeling in Accordance with EC Directives

#### Hazard Symbols:

T

#### Risk Phrases:

R 45 May cause cancer.

R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

#### Safety Phrases:

S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

- S 53 Avoid exposure - obtain special instructions before use.
- S 60 This material and its container must be disposed of as hazardous waste.
- S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

**WGK (Water Danger/Protection)**

CAS# 218-01-9: No information available.

**Canada - DSL/NDSL**

CAS# 218-01-9 is listed on Canada's DSL List.

**Canada - WHMIS**

This product has a WHMIS classification of D2A.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

**Canadian Ingredient Disclosure List**

CAS# 218-01-9 is listed on the Canadian Ingredient Disclosure List.

<b>Section 16 - Additional Information</b>
--

**MSDS Creation Date:** 6/30/1999

**Revision #5 Date:** 11/20/2008

*The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.*

## SUPELCO INC -- 48574, DIBENZO (A,H) ANTHRACENE 0.1G -- 6810-00N032523

## ===== Product Identification =====

## ===== Composition/Information on Ingredients =====

Ingred Name:DIBENZ A,H ANTHRACENE

CAS:53-70-3

RTECS #:HN2625000

EPA Rpt Qty:1 LB

DOT Rpt Qty:1 LB

## ===== Hazards Identification =====

LD50 LC50 Mixture:NONE SPECIFIED BY MANUFACTURER.

Routes of Entry: Inhalation:YES Skin:NO Ingestion:YES

Reports of Carcinogenicity:NTP:YES IARC:YES OSHA:NO

Health Hazards Acute and Chronic:REPORTED ANIMAL CARCINOGEN.

Explanation of Carcinogenicity:DIBENZ(A,H) ANTHRACENE: GROUP 2A(IARC),  
ANTICIPATED TO BE CARCINOGEN (NTP).

Effects of Overexposure:NONE SPECIFIED BY MANUFACTURER.

Medical Cond Aggravated by Exposure:NONE SPECIFIED BY MANUFACTURER.

## ===== First Aid Measures =====

First Aid:EYES: FLUSH WITH WATER FOR AT LEAST 15 MIN. CONTACT A  
PHYSICIAN. SKIN: FLUSH WITH LARGE VOLUMES OF WATER. CONTACT A  
PHYSICIAN. INHAL: IMMED MOVE TO FRESH AIR. INGEST: CONTACT A  
PHYSICIAN.

## ===== Fire Fighting Measures =====

Lower Limits:1%

Extinguishing Media:WATER, CO2, DRY CHEMICAL.  
Fire Fighting Procedures:WEAR NIOSH/MSHA APPROVED SCBA AND FULL  
PROTECTIVE EQUIPMENT .

===== Accidental Release Measures =====

Spill Release Procedures:SWEEP UP MATERIAL. AVOID GENERATING DUST.  
Neutralizing Agent:NONE SPECIFIED BY MANUFACTURER.

===== Handling and Storage =====

Handling and Storage Precautions:STORE IN SEALED CONTAINER IN COOL, DRY  
LOCATION. AVOID GENERATING DUST.  
Other Precautions:REPORTED CANCER HAZARD. AVOID EYE OR SKIN CONTACT.

===== Exposure Controls/Personal Protection =====

Respiratory Protection:WEAR NIOSH/MSHA APPROVED SCBA.  
Ventilation:USE ONLY IN WELL VENTILATED AREA.  
Protective Gloves:IMPERVIOUS GLOVES .  
Eye Protection:CHEMICAL WORKERS GOGGLES .  
Work Hygienic Practices:NONE SPECIFIED BY MANUFACTURER.  
Supplemental Safety and Health  
NONE SPECIFIED BY MANUFACTURER.

===== Physical/Chemical Properties =====

HCC:T6  
Boiling Pt:B.P. Text:509F,265C  
Vapor Density:9.60  
Spec Gravity:>1(H2O=1)  
Appearance and Odor:OFF-WHITE TO YELLOW-GREEN CRYSTALLINE

===== Stability and Reactivity Data =====

Stability Indicator/Materials to Avoid:YES  
OXIDIZING AGENTS.

===== Disposal Considerations =====

Waste Disposal Methods:COMPLY WITH ALL APPLICABLE FEDERAL, STATE, OR  
LOCAL REGULATIONS.

# NAPHTHALENE

## 1. Product Identification

**Synonyms:** Naphthene; mothballs; tar camphor; naphthaliin; white-tar

**CAS No.:** 91-20-3

**Molecular Weight:** 128.16

**Chemical Formula:** C<sub>10</sub>H<sub>8</sub>

**Product Codes:**

J.T. Baker: 2718

Mallinckrodt: 6348

## 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Naphthalene	91-20-3	90 - 100%	Yes

## 3. Hazards Identification

**Emergency Overview**

-----

**WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. MAY CAUSE ALLERGIC SKIN REACTION. MAY AFFECT LIVER, KIDNEY, BLOOD AND CENTRAL NERVOUS SYSTEM. COMBUSTIBLE.**

**J.T. Baker SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 2 - Moderate  
Flammability Rating: 2 - Moderate  
Reactivity Rating: 0 - None  
Contact Rating: 2 - Moderate  
Lab Protective Equip: GOGGLES; LAB COAT  
Storage Color Code: Red (Flammable)

---

### **Potential Health Effects**

---

#### **Inhalation:**

Inhalation of dust or vapors can cause headache, nausea, vomiting, extensive sweating, and disorientation. The predominant reaction is delayed intravascular hemolysis with symptoms of anemia, fever, jaundice, and kidney or liver damage.

#### **Ingestion:**

Toxic. Can cause headache, profuse perspiration, listlessness, dark urine, nausea, vomiting and disorientation. Intravascular hemolysis may also occur with symptoms similar to those noted for inhalation. Severe cases may produce coma with or without convulsions. Death may result from renal failure.

#### **Skin Contact:**

Can irritate the skin and, on prolonged contact, may cause rashes and allergy. "Sensitized" individuals may suffer a severe dermatitis.

#### **Eye Contact:**

Vapors and solid causes irritation, redness and pain. Very high exposures can damage the nerves of the eye.

#### **Chronic Exposure:**

Has led to cataract formation in eyes. May cause skin allergy.

#### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin, blood or vascular disorders or impaired respiratory function may be more susceptible to the effects of the substance. Particularly susceptible individuals are found in the general population, most commonly in dark skinned races.

---

## **4. First Aid Measures**

#### **Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Call a physician.

#### **Ingestion:**

Give large amounts of water to drink. Never give anything by mouth to an unconscious person. Get medical attention.

**Skin Contact:**

Wash skin with soap or mild detergent and water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Call a physician.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

**Fire:**

Flash point: 87C (189F) CC

Autoignition temperature: 526C (979F)

Combustible. May be ignited by heat, sparks or flame. May burn rapidly with flare-burning effect. Fire may produce irritating or poisonous gases.

**Explosion:**

Explosive limits, volume % in air: lel: 0.9; uel: 5.9. Above flashpoint, vapor-air mixtures are explosive within flammable limits noted above. Closed containers exposed to heat may explode. Contact with strong oxidizers may cause fire or explosion.

**Fire Extinguishing Media:**

Dry chemical, foam, water or carbon dioxide. Foam or direct water spray on molten naphthalene may cause extensive foaming. Molten naphthalene spatters in contact with water; apply water from as far a distance as possible.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Vapors can flow along surfaces to distant ignition source and flash back.

---

## 6. Accidental Release Measures

Remove all sources of ignition. Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Clean up spills in a manner that does not disperse dust into the air. Use non-sparking tools and equipment. Reduce airborne dust and prevent scattering by moistening with water. Pick up spill for recovery or disposal and place in a closed container. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from any source of heat or ignition. Keep away from moisture and oxidizers. Containers of this material may be hazardous when empty since they retain

product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

### **Airborne Exposure Limits:**

- OSHA Permissible Exposure Limit (PEL):  
10 ppm, 50 mg/m<sup>3</sup>.

- ACGIH Threshold Limit Value (TLV):

TWA= 10 ppm, 52 mg/m<sup>3</sup>

STEL= 15 ppm, 79 mg/m<sup>3</sup>.

### **Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

### **Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded, a half-face respirator with an organic vapor cartridge and particulate filter (NIOSH type P95 or R95 filter) may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece respirator with an organic vapor cartridge and particulate filter (NIOSH P100 or R100 filter) may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. Please note that N series filters are not recommended for this material. For emergencies or instances where the exposure levels are not known, use a full-face piece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

### **Skin Protection:**

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

### **Eye Protection:**

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

### **Appearance:**

White crystals.

### **Odor:**

Strong coal tar odor (moth balls).

### **Solubility:**

Insoluble in water.

### **Specific Gravity:**

1.2

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

No information found.

**Boiling Point:**

218C (424F)

**Melting Point:**

80C (176F)

**Vapor Density (Air=1):**

4.4

**Vapor Pressure (mm Hg):**

1 @ 53C (127F)

**Evaporation Rate (BuAc=1):**

&lt; 1

## 10. Stability and Reactivity

**Stability:**

Stable at room temperature in sealed containers. Sublimes appreciably at temperatures above melting point.

**Hazardous Decomposition Products:**

Carbon dioxide and carbon monoxide may form when heated to decomposition.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Strong oxidizers, strong alkalis and strong mineral acids, mixtures of aluminum trichloride and benzoyl chloride. Reacts violently with chromic anhydride. Melted naphthalene will attack some forms of plastics, rubber, and coatings.

**Conditions to Avoid:**

Avoid heat, sparks, flames and other ignition sources and incompatibles.

## 11. Toxicological Information

Oral rat LD50: 490 mg/kg;

Inhalation rat LC50: 340 mg/m<sup>3</sup>, 1 hour;

Skin rabbit LD50: > 20 g/kg;

Irritation data: skin (open Draize) rabbit 495 mg, mild; eye (standard Draize) rabbit 100 mg, mild;

Investigated as a tumorigen, mutagen and reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Naphthalene (91-20-3)	No	No	None

---

## 12. Ecological Information

**Environmental Fate:**

When released into the soil, this material may biodegrade to a moderate extent. When released into the soil, this material is expected to leach into groundwater. When released into the soil, this material is expected to quickly evaporate. When released to water, this material is expected to quickly evaporate. When released into water, this material may biodegrade to a moderate extent. When released into the water, this material is expected to have a half-life between 1 and 10 days. This material may bioaccumulate to some extent. When released into the air, this material is expected to be readily degraded by reaction with photochemically produced hydroxyl radicals. When released into the air, this material is expected to have a half-life of less than 1 day.

**Environmental Toxicity:**

No information found.

---

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

---

## 16. Other Information

**NFPA Ratings:** Health: 2 Flammability: 2 Reactivity: 0

**Label Hazard Warning:**

WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. MAY CAUSE ALLERGIC SKIN

REACTION. MAY AFFECT LIVER, KIDNEY, BLOOD AND CENTRAL NERVOUS SYSTEM. COMBUSTIBLE.

**Label Precautions:**

Avoid contact with eyes, skin and clothing.  
 Avoid prolonged or repeated contact with skin.  
 Avoid breathing dust.  
 Avoid breathing vapor.  
 Keep container closed.  
 Use only with adequate ventilation.  
 Wash thoroughly after handling.  
 Keep away from heat, sparks and flame.

**Label First Aid:**

In all cases call a physician. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Wash clothing before reuse. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. If swallowed, give large amounts of water to drink. Never give anything by mouth to an unconscious person.

**Product Use:**

Laboratory Reagent.

## PHENOL, CRYSTALS

### 1. Product Identification

**Synonyms:** Carbolic acid; Phenic acid; Phenylic acid; Hydroxybenzene; Phenol, fused; Monohydroxybenzene; Phenol, solid  
**CAS No.:** 108-95-2  
**Molecular Weight:** 94.11  
**Chemical Formula:** C<sub>6</sub>H<sub>5</sub>OH  
**Product Codes:**  
 J.T. Baker: 2858, 2862, 4056  
 Mallinckrodt: 0028, 0052, 0273, 0605, H602

### 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Phenol	108-95-2	99 - 100%	Yes

### 3. Hazards Identification

#### Emergency Overview

**POISON! DANGER! MAY BE FATAL IF SWALLOWED, INHALED OR ABSORBED THROUGH SKIN. RAPIDLY ABSORBED THROUGH SKIN. CORROSIVE. CAUSES SEVERE BURNS TO EVERY AREA OF CONTACT. AFFECTS CENTRAL NERVOUS SYSTEM, LIVER AND KIDNEYS. COMBUSTIBLE.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Poison)  
 Flammability Rating: 2 - Moderate  
 Reactivity Rating: 1 - Slight  
 Contact Rating: 4 - Extreme (Corrosive)  
 Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES; CLASS B EXTINGUISHER  
 Storage Color Code: White Stripe (Store Separately)

#### Potential Health Effects

The major hazard of phenol is its ability to penetrate the skin rapidly, particularly when liquid, causing severe injury which can be fatal. Phenol also has a strong corrosive effect on body tissue causing severe chemical burns. Due to its local anesthetizing properties, skin burns may be painless.

#### Inhalation:

Breathing vapor, dust or mist results in digestive disturbances (vomiting, difficulty in swallowing, diarrhea, loss of appetite). Will irritate, possibly burn respiratory tract. Other symptoms listed under ingestion may also occur.

#### Ingestion:

Poison. Symptoms may include burning pain in mouth and throat, abdominal pain, nausea, vomiting, headache, dizziness, muscular weakness, central nervous system effects, increase in heart rate, irregular breathing, coma, and possibly death. Acute exposure is also associated with kidney and liver damage. Ingestion of 1 gram has been lethal to humans.

#### Skin Contact:

Corrosive. Rapidly absorbed through the skin with systemic poisoning effects to follow. Discoloration and severe burns may occur, but may be disguised by a loss in pain sensation.

#### Eye Contact:

Corrosive. Eye burns with redness, pain, blurred vision may occur. May cause severe damage and blindness.

#### Chronic Exposure:

Repeated exposure may cause symptoms described for acute poisoning as well as eye and skin discoloration.

**Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin, eye or central nervous system disorders, or impaired liver, kidney, or pulmonary function may be more susceptible to the effects of this substance.

---

## 4. First Aid Measures

IN CASE OF PHENOL POISONING, start first aid treatment immediately, then get medical attention. People administering first aid should take precautions to avoid contact with phenol. A phenol antidote kit (castor oil or other vegetable oil, polyethylene glycol 300) should be available in any phenol work area. Actions to be taken in case of phenol poisoning should be planned and practiced before beginning work with phenol. Castor oil and or polyethylene glycol can be given by a first responder before medical help arrives.

**Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

**Ingestion:**

If swallowed, immediately administer castor oil or other vegetable oil. Never give anything by mouth to an unconscious person. Be ready to induce vomiting at the advice of physician or poison control center. Castor oil (or vegetable oil) dosage should be between 15 and 30 cc. Get medical attention immediately.

**Skin Contact:**

In case of skin contact, immediately flush skin with large amounts of water while removing contaminated clothing and shoes. As soon as possible, repeatedly apply polyethylene glycol to affected area. Destroy contaminated clothing and shoes. Flush skin with water for at least 30 minutes. It is very important to avoid rubbing or wiping affected parts which would aggravate irritation and cause product dispersion. Continue treatment until the burned area changes color from white to pink. Expect that this can take a long period of time (20 minutes or more). The polyethylene glycol application should be done during transportation to the hospital. If polyethylene glycol is not available, flush with water for at least 30 minutes prior to going to hospital. Get medical attention immediately.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

**Note to Physician:**

Treat ingestion with gastric lavage using 40% aqueous Bacto-Peptone, milk or water until phenolic odor is eliminated. Then give 15 to 50 cc castor or vegetable oil. Debride necrotic skin. Monitor vital signs, fluid status, electrolytes, BUN, renal and hepatic function, and electrocardiogram. Manage sedation, seizures, renal failure, and fluid electrolyte imbalances symptomatically as indicated.

---

## 5. Fire Fighting Measures

**Fire:**

Flash point: 79C (174F) CC

Autoignition temperature: 715C (1319F)

Flammable limits in air % by volume:

lcl: 1.3; ucl: 8.6

Combustible. Contact with strong oxidizers may cause fire.

**Explosion:**

Above flash point, vapor-air mixtures are explosive within flammable limits noted above. Sealed containers may rupture when heated.

**Fire Extinguishing Media:**

Water spray, dry chemical, alcohol foam, or carbon dioxide. Water spray may be used to keep fire exposed containers cool.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Structural firefighter's protective clothing is ineffective for fires involving this material. Stay away from sealed containers.

---

## 6. Accidental Release Measures

Remove all sources of ignition. Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Clean up spills in a manner that does not disperse dust into the air. Use non-sparking tools and equipment. Reduce airborne dust and prevent scattering by moistening with water.

Pick up spill for recovery or disposal and place in a closed container. Do not flush to the sewer. Dry lime or soda ash may be used on spill for neutralization. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container. Store in a cool, dry, ventilated area away from sources of heat or ignition. Protect against physical damage. Store separately from reactive or combustible materials, and out of direct sunlight. Avoid dust formation and control ignition sources. Employ grounding, venting and explosion relief provisions in accord with accepted engineering practices in any process capable of generating dust and/or static electricity. Empty only into inert or non-flammable atmosphere. Emptying contents into a non-inert atmosphere where flammable vapors may be present could cause a flash fire or explosion due to electrostatic discharge. All phenol workers should be properly trained on its hazards and the proper protective measures required. This training should also include emergency actions. All phenol operations should be enclosed to eliminate any potential exposure routes. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

Phenol:

-OSHA Permissible Exposure Limit (PEL):

5 ppm (TWA) (skin)

-ACGIH Threshold Limit Value (TLV):

5 ppm (TWA) (skin)

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded, a full facepiece respirator with organic vapor cartridge and dust/mist filter may be worn up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. WARNING: Air purifying respirators do not protect workers in oxygen-deficient atmospheres.

**Skin Protection:**

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact. Butyl rubber and neoprene are suitable materials for personal protective equipment.

**Eye Protection:**

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

## 9. Physical and Chemical Properties

**Appearance:**

Colorless to light pink crystals.

**Odor:**

Sharp, medicinal, sweet, tarry.

**Solubility:**

1 g/15 ml of water; very soluble in alcohol.

**Specific Gravity:**

1.06 @ 20C/4C

**pH:**

ca. 6.0 Aqueous solution

**% Volatiles by volume @ 21C (70F):**

100

**Boiling Point:**

182C (360F)

**Melting Point:**

43C (109F)

**Vapor Density (Air=1):**

3.2

**Vapor Pressure (mm Hg):**

0.4 @ 20C (68F)

**Evaporation Rate (BuAc=1):**

< 0.01

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage. Heat will contribute to instability.

**Hazardous Decomposition Products:**

Carbon dioxide and carbon monoxide may form when heated to decomposition. Toxic gases and vapors may be released if involved in a fire.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Oxidizers, aluminum chloride and nitrobenzene, calcium hypochlorite, butadiene, halogens, formaldehyde, mineral oxidizing acids, isocyanates, sodium nitrite and many other materials. Hot liquid phenol will attack aluminum, magnesium, lead, and zinc metals.

**Conditions to Avoid:**

Heat, flames, ignition sources and incompatibles.

## 11. Toxicological Information

Oral rat LD50: 317 mg/Kg; skin rabbit LD50:630 mg/kg; inhalation rat LC50: 316 mg/m3; irritation data: skin rabbit, standard Draize, 500 mg/24H severe; eye rabbit, standard Draize 5 mg/30S rinse, mild. Investigated as a tumorigen, mutagen, reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Phenol (108-95-2)	No	No	3

## 12. Ecological Information

**Environmental Fate:**

When released into the soil, this material is expected to readily biodegrade. When released into the soil, this material is not expected to leach into groundwater. When released into the soil, this material may evaporate to a moderate extent. When released into the soil, this material is expected to have a half-life between 1 and 10 days. When released into water, this material is expected to readily biodegrade. When released into water, this material is not expected to evaporate significantly. When released into water, this material is expected to have a half-life between 10 and 30 days. This material has an estimated bioconcentration

factor (BCF) of less than 100. This material is not expected to significantly bioaccumulate. When released into the air, this material is expected to be readily degraded by reaction with photochemically produced hydroxyl radicals. When released into the air, this material may be moderately degraded by photolysis. When released into the air, this material is expected to have a half-life of less than 1 day.

**Environmental Toxicity:**

This material is expected to be toxic to aquatic life. The LC50/96-hour values for fish are between 10 and 100 mg/l.

### 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved incinerator or disposed in a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

### 14. Transport Information

### 16. Other Information

**NFPA Ratings:** Health: 4 Flammability: 2 Reactivity: 0

**Label Hazard Warning:**

POISON! DANGER! MAY BE FATAL IF SWALLOWED, INHALED OR ABSORBED THROUGH SKIN. RAPIDLY ABSORBED THROUGH SKIN. CORROSIVE. CAUSES SEVERE BURNS TO EVERY AREA OF CONTACT. AFFECTS CENTRAL NERVOUS SYSTEM, LIVER AND KIDNEYS. COMBUSTIBLE.

**Label Precautions:**

Do not breathe dust.  
Do not get in eyes, on skin, or on clothing.  
Keep container closed.

Use only with adequate ventilation.  
Wash thoroughly after handling.  
Keep away from heat, sparks and flame.

**Label First Aid:**

IN ALL CASES, GET MEDICAL ATTENTION IMMEDIATELY. KEEP A PHENOL ANTIDOTE KIT in area of product use or storage. Administer castor oil and/or polyethylene glycol per pre-planned directions. If swallowed, immediately administer castor oil or other vegetable oil. Never give anything by mouth to an unconscious person. In case of skin contact, immediately flush skin with large amounts of water while removing contaminated clothing and shoes. As soon as possible, repeatedly apply polyethylene glycol to affected area. Destroy contaminated clothing and shoes. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of eye contact, immediately flush eyes with plenty of water for at least 15 minutes while lifting lower and upper eyelids.

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;  
PROPER GLOVES

Storage Color Code: White (Corrosive)

---

### **Potential Health Effects**

---

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison. The health effects from exposure to diluted forms of this chemical are not well documented. They are expected to be less severe than those for concentrated forms which are referenced in the descriptions below.

#### **Inhalation:**

Corrosive! Inhalation of vapors can cause breathing difficulties and lead to pneumonia and pulmonary edema, which may be fatal. Other symptoms may include coughing, choking, and irritation of the nose, throat, and respiratory tract. Arsenic may cause inflammation of the mucous membranes with cough and foamy sputum, restlessness, dyspnea, cyanosis, and rales. Symptoms like those from ingestion exposure may follow. May cause pulmonary edema.

#### **Ingestion:**

Corrosive! Swallowing nitric acid can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract. Arsenic is highly toxic! May cause burning in esophagus, vomiting, and bloody diarrhea. Symptoms of cold and clammy skin, low blood pressure, weakness, headache, cramps, convulsions, and coma may follow. May cause damage to liver and kidneys. A suspected fetal toxin. Death may occur from circulatory failure. Estimated lethal dose 120 milligrams.

#### **Skin Contact:**

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

#### **Eye Contact:**

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

#### **Chronic Exposure:**

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid. Arsenic on repeated or prolonged skin contact may cause bronzing of the skin, edema, dermatitis, and lesions. Repeated or prolonged inhalation of dust may cause damage to the nasal septum. Chronic exposure from inhalation or ingestion may cause hair and weight loss, a garlic odor

to the breath and perspiration, excessive salivation and perspiration, central nervous system damage, hepatitis, gastrointestinal disturbances, cardiovascular damage, and kidney and liver damage. Arsenic compounds are known human carcinogens and may be teratogenic based on effects in laboratory animals.

**Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

---

## 4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance. First aid procedures given apply to concentrated solutions. Exposures to dilute solutions may not require these extensive first aid procedures.

**Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Ingestion:**

If swallowed, give large quantities of water to drink and get medical attention immediately. Never give anything by mouth to an unconscious person.

**Skin Contact:**

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately. Contaminated work clothes should be laundered by individuals who have been informed of the hazards of exposure to this substance.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

**Note to Physician:**

If emesis is unsuccessful after two doses of Ipecac, consider gastric lavage. Monitor urine arsenic level. Alkalinization of urine may help prevent disposition of red cell breakdown products in renal tubular cells. If acute exposure is significant, maintain high urine output and monitor volume status, preferably with central venous pressure line. Abdominal X-rays should be done routinely for all ingestions. Chelation therapy with BAL, followed by n-penicillamine is recommended, but specific dosing guidelines are not clearly established.

---

## 5. Fire Fighting Measures

**Fire:**

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

**Explosion:**

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive

mixtures with air.

**Fire Extinguishing Media:**

If involved in a fire, use water spray.

**Special Information:**

Increases the flammability of combustible, organic and readily oxidizable materials. In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker NEUTRASORB® acid neutralizers are recommended for spills of this product.

---

## 7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. Wear special protective equipment (Sec. 8) for maintenance break-in or where exposures may exceed established exposure levels. Wash hands, face, forearms and neck when exiting restricted areas. Shower, dispose of outer clothing, change to clean garments at the end of the day. Avoid cross-contamination of street clothes. Wash hands before eating and do not eat, drink, or smoke in workplace. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

2 ppm (TWA)

ACGIH Threshold Limit Value (TLV):

2 ppm (TWA); 4 ppm (STEL)

For Inorganic Arsenic compounds (as As):

- OSHA Permissible Exposure Limit (PEL):

10 ug/m<sup>3</sup> (TWA), 5 ug/m<sup>3</sup>(Action Level), cancer hazard.

- ACGIH Threshold Limit Value (TLV):

0.01 mg/m<sup>3</sup> (TWA), A1, confirmed human carcinogen.

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded, wear a supplied air, full-facepiece respirator, airlined hood, or full-facepiece self-contained breathing apparatus. Canister-type respirators using sorbents are ineffective.

**Skin Protection:**

Rubber or neoprene gloves and additional protection including impervious boots, apron, or coveralls, as needed in areas of unusual exposure to prevent skin contact.

**Eye Protection:**

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

**Other Control Measures:**

Any area where inorganic arsenic is stored, handled, used, etc., must be established as a 'Regulated Area' with controlled access, limited to authorized persons. Containers of inorganic arsenic and Regulated Areas must be labeled to show a CANCER SUSPECT AGENT is present. Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing arsenic or lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (arsenic: 29 CFR 1910.1018; lead: 29 CFR 1910.1025).

---

## 9. Physical and Chemical Properties

**Appearance:**

Clear, colorless liquid.

**Odor:**

Odorless.

**Solubility:**

Infinitely soluble.

**Specific Gravity:**

No information found.

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

> 99

**Boiling Point:**

No information found.

**Melting Point:**

No information found.

**Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

No information found.

**Evaporation Rate (BuAc=1):**

No information found.

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage. Containers may burst when heated.

**Hazardous Decomposition Products:**

When heated to decomposition, emits toxic nitrogen oxides fumes and hydrogen nitrate. Emits toxic fumes of arsenic when heated to decomposition.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

A dangerously powerful oxidizing agent, concentrated nitric acid is incompatible with most substances, especially strong bases, metallic powders, carbides, hydrogen sulfide, turpentine, and combustible organics.

**Conditions to Avoid:**

Heat, incompatibles.

## 11. Toxicological Information

**Toxicological Data:**

For arsenic: oral rat LD50: 763 mg/kg. Investigated as a tumorigen, mutagen, reproductive effector. For Nitric Acid: Investigated as a mutagen and reproductive effector.

**Carcinogenicity:**

For arsenic and inorganic arsenic compounds:

Regulated by OSHA as a carcinogen.

EPA / IRIS classification: Group A - Known human carcinogen.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Arsenic (7440-38-2)	Yes	No	1
Nitric Acid (7697-37-2)	No	No	None
Water (7732-18-5)	No	No	None

## 12. Ecological Information

**Environmental Fate:**

No information found.

**Environmental Toxicity:**

No information found.

---

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

---

## 14. Transport Information

### WARNING:

THIS PRODUCT CONTAINS A CHEMICAL(S) KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER.

**Australian Hazchem Code:** None allocated.

**Poison Schedule:** S6

### WHMIS:

This MSDS has been prepared according to the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all of the information required by the CPR.

## 16. Other Information

**NFPA Ratings:** Health: 3 Flammability: 0 Reactivity: 0

### Label Hazard Warning:

DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL

BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. AFFECTS LIVER, KIDNEYS, LUNGS AND TEETH. CANCER HAZARD. CONTAINS INORGANIC ARSENIC WHICH CAN CAUSE CANCER. Risk of cancer depends on duration and level of exposure.

**Label Precautions:**

- Do not get in eyes, on skin, or on clothing.
- Do not breathe vapor or mist.
- Use only with adequate ventilation.
- Wash thoroughly after handling.
- Keep container closed.

**Label First Aid:**

In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. If swallowed, give large amounts of water to drink. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In all cases get medical attention immediately.

**Product Use:**

Laboratory Reagent.

**Revision Information:**

No Changes.

# BARIUM ACETATE

## 1. Product Identification

**Synonyms:** Barium diacetate; acetic acid, barium salt

**CAS No.:** 543-80-6

**Molecular Weight:** 255.43

**Chemical Formula:** Ba(CH<sub>3</sub>COO)<sub>2</sub>

**Product Codes:**

J.T. Baker: 0942, 0943

Mallinckrodt: 3716

## 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Barium Acetate	543-80-6	99 - 100%	Yes

## 3. Hazards Identification

**Emergency Overview**

-----

**DANGER! MAY BE FATAL IF SWALLOWED. HARMFUL IF INHALED.  
CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 3 - Severe (Poison)

Flammability Rating: 1 - Slight

Reactivity Rating: 0 - None

Contact Rating: 2 - Moderate

Lab Protective Equip: GOGGLES; LAB COAT; VENT HOOD; PROPER GLOVES

Storage Color Code: Blue (Health)

---

### **Potential Health Effects**

---

#### **Inhalation:**

May cause irritation to the nose, throat, and respiratory tract. Symptoms may include sore throat, coughing, and shortness of breath. Systemic poisoning may occur in sensitive individuals with symptoms similar to those of ingestion.

#### **Ingestion:**

May cause tightness of the muscles of the face and neck, vomiting, diarrhea, abdominal pain, muscular tremors, anxiety, weakness, labored breathing, cardiac irregularity, convulsions, and death from cardiac and respiratory failure. Estimated lethal dose lies between 1 to 15 grams. Death may occur within hours or up to a few days. May cause kidney damage.

#### **Skin Contact:**

May cause irritation with redness and pain.

#### **Eye Contact:**

May cause irritation, redness and pain.

#### **Chronic Exposure:**

No information found.

#### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin and nervous system disorders or impaired respiratory or kidney function may be more susceptible to the effects of this substance.

---

## **4. First Aid Measures**

#### **Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

#### **Ingestion:**

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

#### **Skin Contact:**

Immediately flush skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting upper and lower eyelids occasionally. Get medical attention.

**Note to Physician:**

Precipitate ingested soluble barium compounds as benign insoluble barium sulfate using an Epsom (MgSO<sub>4</sub>) or a Glauber's (Na<sub>2</sub>SO<sub>4</sub>) salt solution. Dilute copiously with water or milk. Evacuate via nasogastric aspiration or induction of emesis. Monitor electrolytes, especially potassium (treat for hypokalemia), electrocardiogram and rhythm, and acid/base status. Induce brisk diuresis. Calcium gluconate may be helpful for muscle spasms. Provide oxygen by nasal cannula or mask and other supportive treatment for symptoms as clinically indicated.

---

## 5. Fire Fighting Measures

**Fire:**

Not considered to be a fire hazard.

**Explosion:**

Not considered to be an explosion hazard.

**Fire Extinguishing Media:**

Use any means suitable for extinguishing surrounding fire.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Keep unnecessary and unprotected people away from area of spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Pick up and place in a suitable container for reclamation or disposal, using a method that does not generate dust.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

### **Airborne Exposure Limits:**

For Soluble Barium Compounds:

OSHA Permissible Exposure Limit (PEL):

0.5 mg (Ba)/m<sup>3</sup>

ACGIH Threshold Limit Value (TLV):

0.5 mg (Ba)/m<sup>3</sup> A4 - not classifiable as a human carcinogen

### **Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

### **Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded and engineering controls are not feasible, a full facepiece particulate respirator (NIOSH type N100 filters) may be worn for up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

### **Skin Protection:**

Wear protective gloves and clean body-covering clothing.

### **Eye Protection:**

Use chemical safety goggles. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

### **Appearance:**

White crystals.

### **Odor:**

Slight acetic acid odor.

### **Solubility:**

1 g/1.5 ml water

### **Density:**

2.47

### **pH:**

No information found.

### **% Volatiles by volume @ 21C (70F):**

0

### **Boiling Point:**

Not applicable.

### **Melting Point:**

No information found.

### **Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

No information found.

**Evaporation Rate (BuAc=1):**

No information found.

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage.

**Hazardous Decomposition Products:**

May produce acrid smoke and irritating fumes when heated to decomposition.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

No incompatibility data found.

**Conditions to Avoid:**

Heat and incompatibles.

## 11. Toxicological Information

Oral rat LD50: 921 mg/kg

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Barium Acetate (543-80-6)	No	No	None

## 12. Ecological Information

**Environmental Fate:**

This material may bioaccumulate to some extent.

**Environmental Toxicity:**

No information found.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste facility. Although not a listed RCRA hazardous waste, this material

may exhibit one or more characteristics of a hazardous waste and require appropriate analysis to determine specific disposal requirements. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

### Domestic (Land, D.O.T.)

# Material Safety Data Sheet

## Cadmium metal, granular

ACC# 03720

### Section 1 - Chemical Product and Company Identification

**MSDS Name:** Cadmium metal, granular**Catalog Numbers:** 61213-5000, C3-500**Synonyms:** None.**Company Identification:**

Fisher Scientific  
1 Reagent Lane  
Fair Lawn, NJ 07410

**For information, call:** 201-796-7100**Emergency Number:** 201-796-7100**For CHEMTREC assistance, call:** 800-424-9300**For International CHEMTREC assistance, call:** 703-527-3887

### Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
7440-43-9	Cadmium	100	231-152-8

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: silver white granules.

**Danger!** Flammable solid. May be fatal if inhaled. Harmful if swallowed. Causes eye, skin, and respiratory tract irritation. Contains cadmium. Cancer hazard. Avoid creating dust. Can cause lung and kidney disease. Inhalation of fumes may cause metal-fume fever. Air sensitive. May cause reproductive and fetal effects.

**Target Organs:** Blood, kidneys, liver, lungs, skeletal structures, prostate.

#### Potential Health Effects

**Eye:** Causes eye irritation.**Skin:** Causes skin irritation.**Ingestion:** Harmful if swallowed. May cause gastrointestinal irritation with nausea, vomiting and diarrhea. Ingestion may produce fluid loss, acute renal failure, and cardiopulmonary depression.**Inhalation:** May be fatal if inhaled. Inhalation of fumes may cause metal fume fever, which is characterized by flu-like symptoms with metallic taste, fever, chills, cough, weakness, chest pain, muscle pain and increased white blood cell count. Damage may be delayed. May cause nausea, vomiting, abdominal pain, diarrhea, chest tightness, weakness, and delayed pulmonary edema. In humans inhalation causes proteinuria, an excess of protein in the urine.**Chronic:** May cause respiratory tract cancer. Repeated inhalation may cause chronic bronchitis. Chronic inhalation may cause nasal septum ulceration and perforation. Cadmium and compounds may cause lung, liver and kidney damage and lung and prostate cancer in humans. May cause loss of smell, emphysema, anemia, bone demineralization, and lung fibrosis. The primary target organ

for chronic cadmium disease is clearly the kidney.

## Section 4 - First Aid Measures

**Eyes:** Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

**Skin:** Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

**Ingestion:** Do not induce vomiting. If victim is conscious and alert, give 2-4 cupfuls of milk or water. Never give anything by mouth to an unconscious person. Get medical aid immediately.

**Inhalation:** POISON material. If inhaled, get medical aid immediately. Remove victim to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Attempt rescue only after notifying at least one other person of the emergency and putting into effect established emergency procedures. Do not become a casualty yourself.

**Notes to Physician:** Administration of calcium disodium EDTA may be useful in acute poisoning with its use at the discretion of qualified medical personnel. Persons with kidney disease, chronic respiratory disease, liver disease, or skin disease may be at increased risk from exposure to this substance.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Material can spontaneously ignite (pyrophoric) when exposed to air at normal or slightly elevated temperatures. Dust can be an explosion hazard when exposed to heat or flame. Flammable solid. May burn rapidly with flare burning effect. May re-ignite after fire is extinguished. Dangerous fire hazard in the form of dust when exposed to heat or flame.

**Extinguishing Media:** Use dry sand, graphite powder, dry sodium chloride-based extinguishers.

**Flash Point:** Not available.

**Autoignition Temperature:** Not available.

**Explosion Limits, Lower:** Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: 4; Flammability: 2; Instability: 1

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Vacuum or sweep up material and place into a suitable disposal container. Avoid generating dusty conditions. Remove all sources of ignition. Use a spark-proof tool. Provide ventilation. Place under an inert atmosphere.

## Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Minimize dust generation and accumulation. Use spark-proof tools

and explosion proof equipment. Avoid contact with skin and eyes. Do not breathe dust, mist, or vapor. Empty containers retain product residue, (liquid and/or vapor), and can be dangerous. Keep away from heat, sparks and flame. Do not ingest or inhale. Handle under an inert atmosphere. Store protected from air. Use only in a chemical fume hood. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose empty containers to heat, sparks or open flames.

**Storage:** Keep away from heat and flame. Keep away from sources of ignition. Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances. Do not expose to air. Store under an inert atmosphere.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Use explosion-proof ventilation equipment. Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use only under a chemical fume hood. See 29CFR 1910.1027 for regulations applying to all occupational exposures to cadmium and cadmium compounds, in all forms.

### Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs
Cadmium	0.01 mg/m <sup>3</sup> TWA; 0.002 mg/m <sup>3</sup> TWA (respirable fraction)	9 mg/m <sup>3</sup> IDLH (dust)	5 æg/m <sup>3</sup> TWA; 0.1 mg/m <sup>3</sup> TWA (fume, applies to any operations or sectors for which the Cadmium standard is stayed or otherwise not in effect); 0.2 mg/m <sup>3</sup> TWA (dust, applies to any operations or sectors for which the Cadmium standard is stayed or otherwise not in effect); 0.3 mg/m <sup>3</sup> Ceiling (fume, applies to any operations or sectors for which the Cadmium standard is stayed or otherwise not in effect); 0.6 mg/m <sup>3</sup> Ceiling (dust, applies to any operations or sectors for which the Cadmium standard is stayed or otherwise not in effect); 2.5 æg/m <sup>3</sup> Action Level; 5 æg/m <sup>3</sup> TWA (Do not eat, drink or chew tobacco or gum or apply cosmetics in regulated areas. Carcinogen - dust can cause lung and kidney disease. See 29 CFR 1910.1027)

**OSHA Vacated PELs:** Cadmium: No OSHA Vacated PELs are listed for this chemical.

### Personal Protective Equipment

**Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

**Skin:** Wear appropriate protective gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to prevent skin exposure.

**Respirators:** A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

## Section 9 - Physical and Chemical Properties

**Physical State:** Granules  
**Appearance:** silver white  
**Odor:** odorless  
**pH:** Not available.  
**Vapor Pressure:** Not applicable.  
**Vapor Density:** Not available.  
**Evaporation Rate:** Not applicable.  
**Viscosity:** Not applicable.  
**Boiling Point:** 765 deg C @ 760 mmHg  
**Freezing/Melting Point:** 321 deg C  
**Decomposition Temperature:** Not available.  
**Solubility:** Insoluble.  
**Specific Gravity/Density:** 8.64 @ 25°C  
**Molecular Formula:** Cd  
**Molecular Weight:** 112.40

## Section 10 - Stability and Reactivity

**Chemical Stability:** Oxidizes when exposed to air. Easily tarnishes in moist air. Powder or liquid is pyrophoric. Contact with acid liberates gas.

**Conditions to Avoid:** Ignition sources, dust generation, excess heat, prolonged exposure to air.

**Incompatibilities with Other Materials:** Strong oxidizing agents, acids, sulfur, zinc, selenium, tellurium.

**Hazardous Decomposition Products:** Toxic cadmium oxide fumes.

**Hazardous Polymerization:** Has not been reported.

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 7440-43-9: EU9800000

**LD50/LC50:**

CAS# 7440-43-9:

Inhalation, rat: LC50 = 25 mg/m<sup>3</sup>/30M;

Oral, mouse: LD50 = 890 mg/kg;

Oral, rat: LD50 = 2330 mg/kg;

**Carcinogenicity:**

CAS# 7440-43-9:

- **ACGIH:** A2 - Suspected Human Carcinogen

- **California:** carcinogen, initial date 10/1/87
- **NTP:** Known carcinogen
- **IARC:** Group 1 carcinogen

**Epidemiology:** Occupational exposure to cadmium has been implicated in a significant increase in prostate and respiratory tract cancer. There is evidence of a significant excess of respiratory cancer deaths among a cohort of cadmium production workers, and concluded that cadmium and its compounds are potential carcinogens.

**Teratogenicity:** Oral, rat: TDLo = 155 mg/kg (male 13 week(s) pre-mating and female 13 week (s) pre-mating - 3 week(s) after conception) Effects on Newborn - growth statistics (e.g.%, reduced weight gain) and Effects on Newborn - behavioral.; Oral, rat: TDLo = 23 mg/kg (female 1-22 day(s) after conception) Specific Developmental Abnormalities - blood and lymphatic systems (including spleen and marrow).; Oral, mouse: TDLo = 1700 mg/kg (female 8-12 day(s) after conception) Effects on Newborn - viability index (e.g., # alive at day 4 per # born alive) and Effects on Newborn - growth statis

**Reproductive Effects:** Oral, rat: TDLo = 21500 ug/kg (multigenerations) Fertility - pre-implantation mortality (e.g. reduction in number of implants per female; total number of implants per corpora lutea).; Intraperitoneal, rat: TDLo = 1124 ug/kg (male 1 day(s) pre-mating) Paternal Effects - spermatogenesis (incl. genetic material, sperm morphology, motility, and count).

**Mutagenicity:** Micronucleus Test: Mouse, Embryo = 6 umol/L.; Cytogenetic Analysis: Hamster, Ovary = 1 umol/L.

**Neurotoxicity:** No information found

**Other Studies:**

## Section 12 - Ecological Information

**Ecotoxicity:** Fish: Rainbow trout: TLm = 30 ppm; 24 Hr; Hard water Fish: Striped bass: LC50 = 0.001 ppm; 24-48 Hr; Static bioassay Fish: Fathead Minnow: TL50 = 7.2 ppm; 96 Hr; Unspecified Fish: Bluegill/Sunfish: LCO = 0.08 ppm; 96 Hr; Static bioassay (Hard water) No data available.

**Environmental:** Cadmium can enter the air from natural sources.

**Physical:** No information available.

**Other:** No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:** None listed.

## Section 14 - Transport Information

	US DOT	Canada TDG
<b>Shipping Name:</b>	TOXIC SOLIDS, FLAMMABLE, ORGANIC, N.O.S.	Toxic Solid, Flammable, Organic, N.O.S. (CADMIUM METAL)

<b>Hazard Class:</b>	6.1	6.1
<b>UN Number:</b>	UN2930	UN2930
<b>Packing Group:</b>	I	I

## Section 15 - Regulatory Information

### US FEDERAL

#### TSCA

CAS# 7440-43-9 is listed on the TSCA inventory.

#### Health & Safety Reporting List

None of the chemicals are on the Health & Safety Reporting List.

#### Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

#### Section 12b

None of the chemicals are listed under TSCA Section 12b.

#### TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

#### CERCLA Hazardous Substances and corresponding RQs

CAS# 7440-43-9: 10 lb final RQ (no reporting of releases of this hazardous substance is required)

#### SARA Section 302 Extremely Hazardous Substances

None of the chemicals in this product have a TPQ.

#### SARA Codes

CAS # 7440-43-9: immediate, delayed, fire.

#### Section 313

This material contains Cadmium (CAS# 7440-43-9, 100%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

#### Clean Air Act:

CAS# 7440-43-9 (listed as Cadmium compounds) is listed as a hazardous air pollutant (HAP).

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

#### Clean Water Act:

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

CAS# 7440-43-9 is listed as a Priority Pollutant under the Clean Water Act. CAS# 7440-43-9 is listed as a Toxic Pollutant under the Clean Water Act.

#### OSHA:

None of the chemicals in this product are considered highly hazardous by OSHA.

#### STATE

CAS# 7440-43-9 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

#### California Prop 65

#### The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:

WARNING: This product contains Cadmium, a chemical known to the state of California to cause cancer. WARNING: This product contains Cadmium, a chemical known to the state of California to cause male reproductive toxicity.

California No Significant Risk Level: CAS# 7440-43-9: 0.05 æg/day NSRL (inhalation)

### European/International Regulations

#### European Labeling in Accordance with EC Directives

**Hazard Symbols:**

T+ F

**Risk Phrases:**

- R 11 Highly flammable.
- R 25 Toxic if swallowed.
- R 26 Very toxic by inhalation.
- R 45 May cause cancer.

**Safety Phrases:**

- S 36/37/39 Wear suitable protective clothing, gloves and eye/face protection.
- S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).
- S 53 Avoid exposure - obtain special instructions before use.

**WGK (Water Danger/Protection)**

CAS# 7440-43-9: No information available.

**Canada - DSL/NDSL**

CAS# 7440-43-9 is listed on Canada's DSL List.

**Canada - WHMIS**

This product has a WHMIS classification of D1A, B4.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

**Canadian Ingredient Disclosure List**

CAS# 7440-43-9 is listed on the Canadian Ingredient Disclosure List.

<b>Section 16 - Additional Information</b>
--

**MSDS Creation Date:** 6/28/1999**Revision #7 Date:** 2/13/2008

*The information above is believed to be accurate and represents the best information currently available to us. However, we make no warranty of merchantability or any other warranty, express or implied, with respect to such information, and we assume no liability resulting from its use. Users should make their own investigations to determine the suitability of the information for their particular purposes. In no event shall Fisher be liable for any claims, losses, or damages of any third party or for lost profits or any special, indirect, incidental, consequential or exemplary damages, howsoever arising, even if Fisher has been advised of the possibility of such damages.*

## CALCIUM, 1,000 ug/ml or 10,000 ug/ml

### 1. Product Identification

**Synonyms:** None

**CAS No.:** Not applicable to mixtures.

**Molecular Weight:** Not applicable to mixtures.

**Chemical Formula:** CaCO<sub>3</sub> and HNO<sub>3</sub> in H<sub>2</sub>O

**Product Codes:** 5710, 5724, 6448

### 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Calcium Carbonate	471-34-1	0.1 - 3%	Yes
Nitric Acid	7697-37-2	< 4%	Yes
Water	7732-18-5	> 93%	No

### 3. Hazards Identification

#### Emergency Overview

**DANGER! CORROSIVE. LIQUID AND MIST CAUSE SEVERE BURNS TO ALL BODY TISSUE. MAY BE FATAL IF SWALLOWED OR INHALED. VAPOR IRRITATING TO EYES AND RESPIRATORY TRACT. INHALATION MAY CAUSE LUNG AND TOOTH DAMAGE.**

**J.T. Baker SAF-T-DATA<sup>™</sup>** Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Life)

Flammability Rating: 0 - None

Reactivity Rating: 1 - Slight

Contact Rating: 3 - Severe (Corrosive)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: White (Corrosive)

## Potential Health Effects

---

Nitric acid is extremely hazardous; it is corrosive, reactive, an oxidizer, and a poison.

### **Inhalation:**

Corrosive! Inhalation of vapors can cause breathing difficulties and lead to pneumonia and pulmonary edema, which may be fatal. Other symptoms may include coughing, choking, and irritation of the nose, throat, and respiratory tract.

### **Ingestion:**

Corrosive! Swallowing nitric acid can cause immediate pain and burns of the mouth, throat, esophagus and gastrointestinal tract.

### **Skin Contact:**

Corrosive! Can cause redness, pain, and severe skin burns. Concentrated solutions cause deep ulcers and stain skin a yellow or yellow-brown color.

### **Eye Contact:**

Corrosive! Vapors are irritating and may cause damage to the eyes. Contact may cause severe burns and permanent eye damage.

### **Chronic Exposure:**

Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid.

### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin disorders, eye disease, or cardiopulmonary diseases may be more susceptible to the effects of this substance.

---

## 4. First Aid Measures

Immediate first aid treatment reduces the health effects of this substance.

### **Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

### **Ingestion:**

If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. Get medical attention immediately.

### **Skin Contact:**

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

### **Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

### **Fire:**

Not combustible, but concentrated material is a strong oxidizer and its heat of reaction with reducing agents or combustibles may cause ignition.

### **Explosion:**

Concentrated material reacts explosively with combustible organic or readily oxidizable materials such as: alcohols, turpentine, charcoal, organic refuse, metal powder, hydrogen sulfide, etc. Reacts with most metals to release hydrogen gas which can form explosive mixtures with air.

### **Fire Extinguishing Media:**

If involved in a fire, use water spray.

**Special Information:**

Increases the flammability of combustible, organic and readily oxidizable materials. In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Neutralize with alkaline material (soda ash, lime), then absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker NEUTRASORB® acid neutralizers are recommended for spills of this product.

---

## 7. Handling and Storage

Store in a cool, dry, ventilated storage area with acid resistant floors and good drainage. Protect from physical damage. Keep out of direct sunlight and away from heat, water, and incompatible materials. Do not wash out container and use it for other purposes. When diluting, the acid should always be added slowly to water and in small amounts. Never use hot water and never add water to the acid. Water added to acid can cause uncontrolled boiling and splashing. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

For Nitric Acid:

OSHA Permissible Exposure Limit (PEL):

2 ppm (TWA)

ACGIH Threshold Limit Value (TLV):

2 ppm (TWA); 4 ppm (STEL)

-OSHA Permissible Exposure Limit (PEL):

15 mg/m<sup>3</sup> total dust, 5 mg/m<sup>3</sup> respirable dust for calcium carbonate

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded and engineering controls are not feasible, wear a supplied air, full-facepiece respirator, airtight hood, or full-facepiece self-contained breathing apparatus. Breathing air quality must meet the requirements of the OSHA respiratory protection standard (29CFR1910.134). Canister-type respirators using sorbents are ineffective.

**Skin Protection:**

Rubber or neoprene gloves and additional protection including impervious boots, apron, or coveralls, as needed in areas of unusual exposure to prevent skin contact.

**Eye Protection:**

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

**Appearance:**

Clear colorless liquid.

**Odor:**

Odorless.

**Solubility:**

Completely soluble in water.

**Specific Gravity:**

No information found.

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

> 95

**Boiling Point:**

No information found.

**Melting Point:**

No information found.

**Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

No information found.

**Evaporation Rate (BuAc=1):**

No information found.

---

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage.

**Hazardous Decomposition Products:**

When heated to decomposition, emits toxic nitrogen oxides fumes and hydrogen nitrate. Caustic fumes of calcium oxide may form when heated to decomposition.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

A dangerously powerful oxidizing agent, concentrated nitric acid is incompatible with most substances, especially strong bases, metallic powders, carbides, hydrogen sulfide, turpentine, and combustible organics.

**Conditions to Avoid:**

Heat, incompatibles.

---

## 11. Toxicological Information

For Nitric Acid: Investigated as a mutagen and reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Calcium Carbonate (471-34-1)	No	No	None
Nitric Acid (7697-37-2)	No	No	None
Water (7732-18-5)	No	No	None

---

## 12. Ecological Information

**Environmental Fate:**

No information found.

**Environmental Toxicity:**

No information found.

---

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved incinerator or disposed in a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

---

## 14. Transport Information

**Domestic (Land, D.O.T.)**

# COPPER METAL

## 1. Product Identification

**Synonyms:** C.I. 77400; Arwood Copper

**CAS No.:** 7440-50-8

**Molecular Weight:** 63.546

**Chemical Formula:** Cu

**Product Codes:**

J.T. Baker: 1714, 1720, 1732, 1736

Mallinckrodt: 1733, 4649

## 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Copper	7440-50-8	90 - 100%	Yes

## 3. Hazards Identification

**Emergency Overview**

-----

**WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS THE LIVER AND KIDNEYS. CHRONIC EXPOSURE MAY CAUSE TISSUE DAMAGE.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 3 - Severe (Life)

Flammability Rating: 1 - Slight

Reactivity Rating: 2 - Moderate

Contact Rating: 1 - Slight

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;  
PROPER GLOVES

Storage Color Code: Green (General Storage)

---

### **Potential Health Effects**

---

#### **Inhalation:**

Inhalation of dusts and fumes of metallic copper causes irritation of the upper respiratory tract, congestion of nasal mucous membranes, ulceration and perforation of the nasal septum, and pharyngeal congestion. Inhalation of copper fumes may give rise to metal fume fever (high temperature, metallic taste, nausea, coughing, general weakness, muscle aches, and exhaustion).

#### **Ingestion:**

Copper ingestion causes nausea, vomiting, abdominal pain, metallic taste, and diarrhea. Ingestion of large doses may cause stomach and intestine ulceration, jaundice, and kidney and liver damage.

#### **Skin Contact:**

Causes irritation to skin. Symptoms include redness, itching, and pain. Exposure to copper dust may cause a greenish-black skin discoloration.

#### **Eye Contact:**

Small copper particles in the eyes may cause irritation, discoloration, and damage.

#### **Chronic Exposure:**

Prolonged or repeated exposure to copper can discolor skin and hair and irritate the skin; may cause mild dermatitis, runny nose, and irritation of the mucous membranes. Repeated ingestion may damage the liver and kidneys. Repeated inhalation can cause chronic respiratory disease.

#### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin disorders or impaired liver, kidney, or pulmonary function or pre-existing Wilson's disease may be more susceptible to the effects of this material.

---

## **4. First Aid Measures**

#### **Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

#### **Ingestion:**

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person.

**Skin Contact:**

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

**Fire:**

Not considered to be a fire hazard since the bulk solid does not burn, but very finely divided particles (ultra-fine powder) may burn in air.

**Explosion:**

Not considered to be an explosion hazard. Reactions with incompatibles may pose an explosion hazard. Liquid copper explodes on contact with water. High concentrations of finely divided copper particles in the air may present an explosion hazard.

**Fire Extinguishing Media:**

Use any means suitable for extinguishing surrounding fire.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Avoid exposure to air and moisture. Isolate from incompatible substances. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

### Airborne Exposure Limits:

Copper Dust and Mists, as Cu:

- OSHA Permissible Exposure Limit (PEL) -

1 mg/m<sup>3</sup> (TWA)

- ACGIH Threshold Limit Value (TLV) -

1 mg/m<sup>3</sup> (TWA)

Copper Fume:

- OSHA Permissible Exposure Limit (PEL) -

0.1 mg/m<sup>3</sup> (TWA)

- ACGIH Threshold Limit Value (TLV) -

0.2 mg/m<sup>3</sup> (TWA)

### Ventilation System:

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

### Personal Respirators (NIOSH Approved):

If the exposure limit is exceeded and engineering controls are not feasible, a full facepiece particulate respirator (NIOSH type N100 filters) may be worn for up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

### Skin Protection:

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

### Eye Protection:

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

### Appearance:

Reddish, metallic solid.

### Odor:

Odorless.

### Solubility:

Insoluble in water.

### Density:

8.94

### pH:

No information found.

**% Volatiles by volume @ 21C (70F):**

0

**Boiling Point:**

2595C (4703F)

**Melting Point:**

1083C (1981F)

**Vapor Density (Air=1):**

Not applicable.

**Vapor Pressure (mm Hg):**

1 @ 1628C (2962F)

**Evaporation Rate (BuAc=1):**

No information found.

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage. Copper becomes dull when exposed to air; on exposure to moist air it gradually converts to the carbonate. On long standing, a white, highly explosive peroxide deposit may form.

**Hazardous Decomposition Products:**

No information found.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Copper is incompatible with oxidizers, alkalis, acetylene, chlorine plus oxygen difluoride, phosphorus, nitric acid, potassium peroxide, 1-bromo-2-propyne, sulfur plus chlorates. Reacts violently with ammonium nitrate, bromates, iodates, chlorates, ethylene oxide, hydrozoic acid, potassium oxide, dimethyl sulfoxide plus trichloroacetic acid, hydrogen peroxide, sodium peroxide, sodium azide, sulfuric acid, hydrogen sulfide plus air, and lead azide. A potentially explosive reaction occurs with acetylenic compounds. Copper ignites on contact with chlorine, fluorine (above 121C), chlorine trifluoride, and hydrazinum nitrate (above 70C). An incandescent reaction occurs with potassium dioxide.

**Conditions to Avoid:**

Incompatibles and prolonged exposure to air and moisture.

## 11. Toxicological Information

No LD50/LC50 information found relating to normal routes of occupational exposure. Investigated as a tumorigen and a reproductive effector.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Copper (7440-50-8)	No	No	None

## 12. Ecological Information

**Environmental Fate:**

No information found.

**Environmental Toxicity:**

No information found.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste disposal facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

Not regulated.

## 15. Regulatory Information

## 16. Other Information

**NFPA Ratings:** Health: **2** Flammability: **0** Reactivity: **0**

**Label Hazard Warning:**

WARNING! HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS THE LIVER AND KIDNEYS. CHRONIC EXPOSURE MAY CAUSE TISSUE DAMAGE.

**Label Precautions:**

Avoid contact with eyes, skin and clothing.

Wash thoroughly after handling.

Avoid breathing dust or vapors.

Keep container closed.

Use only with adequate ventilation.

**Label First Aid:**

If swallowed, induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Wash clothing before reuse. In all cases, get medical attention.

**Product Use:**

Laboratory Reagent.

## LEAD METAL

### 1. Product Identification

**Synonyms:** Granular lead, pigment metal; C.I. 77575

**CAS No.:** 7439-92-1

**Molecular Weight:** 207.19

**Chemical Formula:** Pb

**Product Codes:**

J.T. Baker: 2256, 2266

Mallinckrodt: 5668

### 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Lead	7439-92-1	95 - 100%	Yes

### 3. Hazards Identification

**Emergency Overview**

-----

**POISON! DANGER! MAY BE FATAL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. NEUROTOXIN. AFFECTS THE GUM TISSUE, CENTRAL NERVOUS SYSTEM, KIDNEYS, BLOOD AND REPRODUCTIVE SYSTEM. POSSIBLE CANCER HAZARD. MAY CAUSE CANCER BASED ON ANIMAL DATA. Risk of cancer depends on duration and level of exposure.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 3 - Severe (Cancer Causing)

Flammability Rating: 3 - Severe (Flammable)

Reactivity Rating: 1 - Slight

Contact Rating: 2 - Moderate (Life)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: Red (Flammable)

---

### **Potential Health Effects**

---

#### **Inhalation:**

Lead can be absorbed through the respiratory system. Local irritation of bronchia and lungs can occur and, in cases of acute exposure, symptoms such as metallic taste, chest and abdominal pain, and increased lead blood levels may follow. See also Ingestion.

#### **Ingestion:**

**POISON!** The symptoms of lead poisoning include abdominal pain and spasms, nausea, vomiting, headache. Acute poisoning can lead to muscle weakness, "lead line" on the gums, metallic taste, definite loss of appetite, insomnia, dizziness, high lead levels in blood and urine with shock, coma and death in extreme cases.

#### **Skin Contact:**

Lead and lead compounds may be absorbed through the skin on prolonged exposure; the symptoms of lead poisoning described for ingestion exposure may occur. Contact over short periods may cause local irritation, redness and pain.

#### **Eye Contact:**

Absorption can occur through eye tissues but the more common hazards are local irritation or abrasion.

#### **Chronic Exposure:**

Lead is a cumulative poison and exposure even to small amounts can raise the body's content to toxic levels. The symptoms of chronic exposure are like those of ingestion poisoning; restlessness, irritability, visual disturbances, hypertension and gray facial color may also be noted.

#### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing kidney, nerve or circulatory disorders or with skin or eye problems may be more susceptible to the effects of this substance.

---

## 4. First Aid Measures

**Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Ingestion:**

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention.

**Skin Contact:**

Immediately flush skin with plenty of soap and water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

**Fire:**

Not considered to be a fire hazard. Powder/dust is flammable when heated or exposed to flame.

**Explosion:**

Not considered to be an explosion hazard.

**Fire Extinguishing Media:**

Use any means suitable for extinguishing surrounding fire. Do not allow water runoff to enter sewers or waterways.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Can produce toxic lead fumes at elevated temperatures and also react with oxidizing materials.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Sweep up and containerize for reclamation or disposal. Vacuuming or wet sweeping may be used to avoid dust dispersal. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from incompatible substances. Areas in which exposure to lead metal or lead compounds may occur should be identified by signs or appropriate means, and access to the area should be limited to authorized persons. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

### **Airborne Exposure Limits:**

For lead, metal and inorganic dusts and fumes, as Pb:

-OSHA Permissible Exposure Limit (PEL): 0.05 mg/m<sup>3</sup> (TWA)

For lead, elemental and inorganic compounds, as Pb:

-ACGIH Threshold Limit Value (TLV): 0.05 mg/m<sup>3</sup> (TWA), A3 animal carcinogen

ACGIH Biological Exposure Indices (BEI): 30 ug/100ml, notation B (see actual Indices for more information).

For lead, inorganic:

-NIOSH Recommended Exposure Limit (REL): 0.1 mg/m<sup>3</sup> (TWA)

### **Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

### **Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded and engineering controls are not feasible, a half-face high efficiency particulate respirator (NIOSH type N100 filter) may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece high efficiency particulate respirator (NIOSH type N100 filter) may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

### **Skin Protection:**

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

### **Eye Protection:**

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

### **Other Control Measures:**

Eating, drinking, and smoking should not be permitted in areas where solids or liquids containing lead compounds are handled, processed, or stored. See OSHA substance-specific standard for more information on personal protective equipment, engineering and work practice controls, medical surveillance, record keeping, and reporting requirements. (29 CFR 1910.1025).

---

## 9. Physical and Chemical Properties

**Appearance:**

Small, white to blue-gray metallic shot or granules.

**Odor:**

Odorless.

**Solubility:**

Insoluble in water.

**Density:**

11.34

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

0

**Boiling Point:**

1740C (3164F)

**Melting Point:**

327.5C (622F)

**Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

1.77 @ 1000C (1832F)

**Evaporation Rate (BuAc=1):**

No information found.

---

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage.

**Hazardous Decomposition Products:**

Does not decompose but toxic lead or lead oxide fumes may form at elevated temperatures.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Ammonium nitrate, chlorine trifluoride, hydrogen peroxide, sodium azide, zirconium, disodium acetylide, sodium acetylide and oxidants.

**Conditions to Avoid:**

Heat, flames, ignition sources and incompatibles.

---

## 11. Toxicological Information

**Toxicological Data:**

Investigated as a tumorigen, mutagen, reproductive effector.

**Reproductive Toxicity:**

Lead and other smelter emissions are human reproductive hazards. (Chemical Council on Environmental Quality; Chemical Hazards to Human Reproduction, 1981).

**Carcinogenicity:**

EPA / IRIS classification: Group B2 - Probable human carcinogen, sufficient animal evidence.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Lead (7439-92-1)	No	No	2B

## 12. Ecological Information

**Environmental Fate:**

When released into the soil, this material is not expected to leach into groundwater. This material may bioaccumulate to some extent.

**Environmental Toxicity:**

No information found.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste facility. Although not a listed RCRA hazardous waste, this material may exhibit one or more characteristics of a hazardous waste and require appropriate analysis to determine specific disposal requirements. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

## Material Safety Data Sheet

### Magnesium sulfate anhydrous MSDS

#### Section 1: Chemical Product and Company Identification

**Product Name:** Magnesium sulfate anhydrous

**Catalog Codes:** SLM2992, SLM2227

**CAS#:** 7487-88-9

**RTECS:** OM4500000

**TSCA:** TSCA 8(b) inventory: Magnesium sulfate anhydrous

**CI#:** Not available.

**Synonym:**

**Chemical Formula:** MgSO<sub>4</sub>

**Contact Information:**

**Sciencelab.com, Inc.**

14025 Smith Rd.

Houston, Texas 77396

US Sales: **1-800-901-7247**

International Sales: **1-281-441-4400**

Order Online: [ScienceLab.com](http://ScienceLab.com)

**CHEMTREC (24HR Emergency Telephone), call:**

1-800-424-9300

**International CHEMTREC, call:** 1-703-527-3887

**For non-emergency assistance, call:** 1-281-441-4400

#### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
Magnesium sulfate anhydrous	7487-88-9	100

**Toxicological Data on Ingredients:** Not applicable.

#### Section 3: Hazards Identification

**Potential Acute Health Effects:**

Hazardous in case of ingestion. Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of inhalation.

**Potential Chronic Health Effects:**

CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available.

DEVELOPMENTAL TOXICITY: Not available. Repeated or prolonged exposure is not known to aggravate medical condition.

#### Section 4: First Aid Measures

**Eye Contact:** Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used.

**Skin Contact:**

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cold water may be used.

Cover the irritated skin with an emollient. If irritation persists, seek medical attention.

**Serious Skin Contact:** Not available.

**Inhalation:** Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

**Serious Inhalation:** Not available.

**Ingestion:**

Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

**Serious Ingestion:** Not available.

### Section 5: Fire and Explosion Data

**Flammability of the Product:** Non-flammable.

**Auto-Ignition Temperature:** Not applicable.

**Flash Points:** Not applicable.

**Flammable Limits:** Not applicable.

**Products of Combustion:** Not available.

**Fire Hazards in Presence of Various Substances:** Not applicable.

**Explosion Hazards in Presence of Various Substances:**

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:** Not applicable.

**Special Remarks on Fire Hazards:** Not available.

**Special Remarks on Explosion Hazards:** Not available.

### Section 6: Accidental Release Measures

**Small Spill:**

Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

**Large Spill:**

Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system.

### Section 7: Handling and Storage

**Precautions:** No specific safety phrase has been found applicable for this product.

**Storage:**

No specific storage is required. Use shelves or cabinets sturdy enough to bear the weight of the chemicals. Be sure that it is not necessary to strain to reach materials, and that shelves are not overloaded.

### Section 8: Exposure Controls/Personal Protection

**Engineering Controls:**

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

**Personal Protection:** Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

**Personal Protection in Case of a Large Spill:**

Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

**Exposure Limits:** Not available.

### Section 9: Physical and Chemical Properties

**Physical state and appearance:** Solid.

**Odor:** Not available.

**Taste:** Not available.

**Molecular Weight:** 120.38 g/mole

**Color:** Not available.

**pH (1% soln/water):** Not available.

**Boiling Point:** Not available.

**Melting Point:** Not available.

**Critical Temperature:** Not available.

**Specific Gravity:** Not available.

**Vapor Pressure:** Not applicable.

**Vapor Density:** Not available.

**Volatility:** Not available.

**Odor Threshold:** Not available.

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** See solubility in water.

**Solubility:** Easily soluble in cold water.

### Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Not available.

**Incompatibility with various substances:** Not available.

**Corrosivity:** Non-corrosive in presence of glass.

**Special Remarks on Reactivity:** Not available.

**Special Remarks on Corrosivity:** Not available.

**Polymerization:** No.

### Section 11: Toxicological Information

**Routes of Entry:** Ingestion.

**Toxicity to Animals:**

LD50: Not available. LC50: Not available.

**Chronic Effects on Humans:** Not available.

**Other Toxic Effects on Humans:**

Hazardous in case of ingestion. Slightly hazardous in case of skin contact (irritant), of inhalation.

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** Human: passes through the placenta, excreted in maternal milk.

**Special Remarks on other Toxic Effects on Humans:** Not available.

### Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are more toxic.

**Special Remarks on the Products of Biodegradation:** Not available.

### Section 13: Disposal Considerations

**Waste Disposal:**

### Section 14: Transport Information

**DOT Classification:** Not a DOT controlled material (United States).

**Identification:** Not applicable.

**Special Provisions for Transport:** Not applicable.

### Section 15: Other Regulatory Information

**Federal and State Regulations:** TSCA 8(b) inventory: Magnesium sulfate anhydrous

**Other Regulations:** Not available..

**Other Classifications:**

**WHMIS (Canada):** Not controlled under WHMIS (Canada).

**DSCL (EEC):**

This product is not classified according to the EU regulations.

**HMIS (U.S.A.):**

**Health Hazard:** 1

**Fire Hazard:** 0

**Reactivity:** 0

**Personal Protection:** E

**National Fire Protection Association (U.S.A.):**

**Health:** 1

**Flammability:** 0

**Reactivity:** 0

**Specific hazard:**

**Protective Equipment:**

Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Safety glasses.

## Section 16: Other Information

**References:** Not available.

**Other Special Considerations:** Not available.

# MERCURY

## 1. Product Identification

**Synonyms:** Quicksilver; hydrargyrum; Liquid Silver

**CAS No.:** 7439-97-6

**Molecular Weight:** 200.59

**Chemical Formula:** Hg

**Product Codes:**

J.T. Baker: 2564, 2567, 2569

Mallinckrodt: 1278, 1280, 1288

## 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Mercury	7439-97-6	90 - 100%	Yes

## 3. Hazards Identification

**Emergency Overview**

-----

**DANGER! CORROSIVE. CAUSES BURNS TO SKIN, EYES, AND RESPIRATORY TRACT. MAY BE FATAL IF SWALLOWED OR INHALED. HARMFUL IF ABSORBED THROUGH SKIN. AFFECTS THE KIDNEYS AND CENTRAL NERVOUS SYSTEM. MAY CAUSE ALLERGIC SKIN REACTION.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 4 - Extreme (Life)

Flammability Rating: 0 - None

Reactivity Rating: 1 - Slight

Contact Rating: 3 - Severe (Corrosive)

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD; PROPER GLOVES

Storage Color Code: White (Corrosive)

---

### **Potential Health Effects**

---

#### **Inhalation:**

Mercury vapor is highly toxic via this route. Causes severe respiratory tract damage. Symptoms include sore throat, coughing, pain, tightness in chest, breathing difficulties, shortness of breath, headache, muscle weakness, anorexia, gastrointestinal disturbance, ringing in the ear, liver changes, fever, bronchitis and pneumonitis. Can be absorbed through inhalation with symptoms similar to ingestion.

#### **Ingestion:**

May cause burning of the mouth and pharynx, abdominal pain, vomiting, corrosive ulceration, bloody diarrhea. May be followed by a rapid and weak pulse, shallow breathing, paleness, exhaustion, tremors and collapse. Delayed death may occur from renal failure. Gastrointestinal uptake of mercury is less than 5% but its ability to penetrate tissues presents some hazard. Initial symptoms may be thirst, possible abdominal discomfort.

#### **Skin Contact:**

Causes irritation and burns to skin. Symptoms include redness and pain. May cause skin allergy and sensitization. Can be absorbed through the skin with symptoms to parallel ingestion.

#### **Eye Contact:**

Causes irritation and burns to eyes. Symptoms include redness, pain, blurred vision; may cause serious and permanent eye damage.

#### **Chronic Exposure:**

Chronic exposure through any route can produce central nervous system damage. May cause muscle tremors, personality and behavior changes, memory loss, metallic taste, loosening of the teeth, digestive disorders, skin rashes, brain damage and kidney damage. Can cause skin allergies and accumulate in the body. Repeated skin contact can cause the skin to turn gray in color. A suspected reproductive hazard; may damage the developing fetus and decrease fertility in males and females.

#### **Aggravation of Pre-existing Conditions:**

Persons with nervous disorders, or impaired kidney or respiratory function, or a history of allergies or a known sensitization to mercury may be more susceptible to the effects of the substance.

## 4. First Aid Measures

**Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

**Ingestion:**

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

**Skin Contact:**

Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention immediately. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

**Fire:**

Not considered to be a fire hazard.

**Explosion:**

Not considered to be an explosion hazard.

**Fire Extinguishing Media:**

Use any means suitable for extinguishing surrounding fire. Do not allow water runoff to enter sewers or waterways.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode. Undergoes hazardous reactions in the presence of heat and sparks or ignition. Smoke may contain toxic mercury or mercuric oxide. Smoke may contain toxic mercury or mercuric oxide.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Clean-up personnel require protective clothing and respiratory protection from vapor.

Spills: Pick up and place in a suitable container for reclamation or disposal in a method that does not generate misting. Sprinkle area with sulfur or calcium polysulfide to suppress mercury. Do not flush to sewer. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker CINNASORB® and RESISORB® are recommended for spills of this product.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from any source of heat or ignition. Do not use or store on porous work surfaces (wood, unsealed concrete, etc.). Follow strict hygiene practices. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

### **Airborne Exposure Limits:**

- OSHA Acceptable Ceiling Concentration:

mercury and mercury compounds: 0.1 mg/m<sup>3</sup> (TWA), skin

- ACGIH Threshold Limit Value (TLV):

inorganic and metallic mercury, as Hg: 0.025 mg/m<sup>3</sup> (TWA) skin, A4 Not classifiable as a human carcinogen.

- ACGIH Biological Exposure Indices:

total inorganic mercury in urine (preshift): 35 ug/g creatinine;

total inorganic mercury in blood (end of shift): 15 ug/l.

### **Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

### **Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded and engineering controls are not feasible, a half-face respirator with a mercury vapor or chlorine gas cartridge may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece respirator with a mercury vapor or chlorine gas cartridge may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. For emergencies or instances where the exposure levels are not known, use a full-face piece positive-pressure, air-supplied respirator.

**WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

### **Skin Protection:**

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

### **Eye Protection:**

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

**Appearance:**

Silver-white, heavy, mobile, liquid metal.

**Odor:**

Odorless.

**Solubility:**

Insoluble in water.

**Density:**

13.55

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

100

**Boiling Point:**

356.7C (675F)

**Melting Point:**

-38.87C (-38F)

**Vapor Density (Air=1):**

7.0

**Vapor Pressure (mm Hg):**

0.0018 @ 25C (77F)

**Evaporation Rate (BuAc=1):**

4

---

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage.

**Hazardous Decomposition Products:**

At high temperatures, vaporizes to form extremely toxic fumes.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Acetylenes, ammonia, ethylene oxide, chlorine dioxide, azides, metal oxides, methyl silane, lithium, rubidium, oxygen, strong oxidants, metal carbonyls.

**Conditions to Avoid:**

Heat, flames, ignition sources, metal surfaces and incompatibles.

---

## 11. Toxicological Information

**Toxicological Data:**

Investigated as a tumorigen, mutagen, reproductive effector.

**Reproductive Toxicity:**

All forms of mercury can cross the placenta to the fetus, but most of what is known has

been learned from experimental animals. See Chronic Health Hazards.

**Carcinogenicity:**

EPA / IRIS classification: Group D1 - Not classifiable as a human carcinogen.

Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Mercury (7439-97-6)	No	No	3

## 12. Ecological Information

**Environmental Fate:**

This material has an experimentally-determined bioconcentration factor (BCF) of greater than 100. This material is expected to significantly bioaccumulate.

**Environmental Toxicity:**

This material is expected to be toxic to aquatic life. The LC50/96-hour values for fish are less than 1 mg/l.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

**Domestic (Land, D.O.T.)**

**Proper Shipping Name:** RQ, MERCURY

**Hazard Class:** 8

**UN/NA:** UN2809

## Selenium

### 1. Product Identification

**Synonyms:** Elemental Selenium; Selen; C.I. 77805  
**CAS No.:** 7782-49-2  
**Molecular Weight:** 78.96  
**Chemical Formula:** Se  
**Product Codes:** 3395

### 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Selenium	7782-49-2	90 - 100%	Yes

### 3. Hazards Identification

#### Emergency Overview

**WARNING! CAUSES SEVERE IRRITATION TO EYES, SKIN AND RESPIRATORY TRACT. HARMFUL IF SWALLOWED OR INHALED. AFFECTS LIVER, KIDNEYS, BLOOD, SPLEEN.**

**J.T. Baker SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

Health Rating: 3 - Severe (Life)  
 Flammability Rating: 0 - None  
 Reactivity Rating: 1 - Slight  
 Contact Rating: 2 - Moderate  
 Lab Protective Equip: GOGGLES; LAB COAT; PROPER GLOVES  
 Storage Color Code: Blue (Health)

#### Potential Health Effects

##### Inhalation:

Severe irritant to the respiratory system. Soreness, coughing, labored breathing are symptoms which may subside and return. Lung edema may occur in acute cases. Cases with flu-like symptoms resembling metal fume fever within 24 hours of exposure have been reported.

##### Ingestion:

May cause severe irritation to the mouth and throat. Gastrointestinal disturbances may be expected with nausea, abdominal pain, and vomiting.

##### Skin Contact:

Causes severe irritation. Symptoms include redness, itching and pain.

##### Eye Contact:

May cause severe irritation, redness, pain.

##### Chronic Exposure:

Chronic exposure may cause odor of garlic on breath, fatigue, irritability, respiratory tract irritation, gastrointestinal irritation, metallic taste, and allergic eye reaction. Based on animal studies, may cause blood, liver, kidney and spleen effects.

##### Aggravation of Pre-existing Conditions:

Person with a history of asthma, allergies, or known sensitization to selenium, or with a history of other chronic respiratory disease, gastrointestinal disturbances, disorders of the liver or kidneys, or recurrent dermatitis would be expected to be at increased risk from exposure.

### 4. First Aid Measures

**Inhalation:**

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Ingestion:**

Do NOT induce vomiting. Give large amounts of water. Never give anything by mouth to an unconscious person. Get medical attention.

**Skin Contact:**

Immediately flush skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## 5. Fire Fighting Measures

**Fire:**

Not considered to be a fire hazard.

**Explosion:**

Not considered to be an explosion hazard.

**Fire Extinguishing Media:**

Use any means suitable for extinguishing surrounding fire.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Keep unnecessary and unprotected people away from area of spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Pick up and place in a suitable container for reclamation or disposal, using a method that does not generate dust. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Isolate from incompatible substances. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

-OSHA Permissible Exposure Limit (PEL):  
0.2 mg/m<sup>3</sup>, Selenium Compounds, as Se

-ACGIH Threshold Limit Value (TLV):

0.2 mg/m<sup>3</sup>, Selenium & Compounds, as Se

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded, a half-face dust/mist respirator may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece dust/mist respirator may be worn up to 50 times the exposure limit, or the maximum use concentration specified by the appropriate regulatory agency, or respirator supplier, whichever is lowest. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. WARNING: Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

**Skin Protection:**

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

**Eye Protection:**

Use chemical safety goggles and/or full face shield where dusting or splashing of solutions is possible. Maintain eye wash fountain and quick-drench facilities in work area.

Health Rating: 2 - Moderate (Cancer)

Flammability Rating: 2 - Moderate

Reactivity Rating: 2 - Moderate

Contact Rating: 1 - Slight

Lab Protective Equip: GOGGLES & SHIELD; LAB COAT & APRON; VENT HOOD;  
PROPER GLOVES

Storage Color Code: Green (General Storage)

-----

### **Potential Health Effects**

-----

#### **Inhalation:**

No adverse effects expected but dust may cause mechanical irritation. The effects may be expected to resemble those of inhaling an inert dust; possible difficulty in breathing, sneezing, coughing. When heated, the fumes are highly toxic and may cause fume fever.

#### **Ingestion:**

Extremely large oral dosages may produce gastrointestinal disturbances, due both to mechanical effects and the possibility of reaction with gastric juice to produce zinc chloride. Pain, stomach cramps and nausea could occur in aggravated cases.

#### **Skin Contact:**

May cause irritation.

#### **Eye Contact:**

May cause irritation.

#### **Chronic Exposure:**

No adverse health effects expected.

#### **Aggravation of Pre-existing Conditions:**

Persons with pre-existing skin disorders or impaired respiratory function may be more susceptible to the effects of the substance.

---

## **4. First Aid Measures**

#### **Inhalation:**

Remove to fresh air. Get medical attention for any breathing difficulty.

#### **Ingestion:**

Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person.

#### **Skin Contact:**

Wipe off excess material from skin then immediately flush skin with plenty of water for at

least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

**Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting upper and lower eyelids occasionally. Get medical attention if irritation persists.

---

## 5. Fire Fighting Measures

**Fire:**

Autoignition temperature: ca. 460C (ca. 860F)

The listed autoignition temperature is for Zinc powder (layer); dust cloud is ca. 680C (1255F). Zinc powder is not pyrophoric but will burn in air at elevated temperatures. Bulk dust in damp state may heat spontaneously and ignite on exposure to air. Releases flammable hydrogen gas upon contact with acids or alkali hydroxides. Contact with strong oxidizers may cause fire.

**Explosion:**

Fine dust dispersed in air in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard.

**Fire Extinguishing Media:**

Smother with a suitable dry powder (sodium chloride, magnesium oxide, Met-L-X).

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Remove all sources of ignition and provide mild ventilation in area of spill. Substance may be pyrophoric and self-ignite. Clean-up personnel require protective clothing, goggles and dust/mist respirators. Sweep or vacuum up the spill in a manner that does not disperse zinc powder in the air and place the zinc in a closed container for recovery or disposal.

US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

---

## 7. Handling and Storage

Keep in a tightly closed container. Protect from physical damage. Store in a cool, dry, ventilated area away from sources of heat, moisture and incompatibilities. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

None for Zinc metal.

-OSHA Permissible Exposure Limit (PEL):

10 mg/m<sup>3</sup> (TWA), for zinc oxide fume

-ACGIH Threshold Limit Value (TLV):

10 mg/m<sup>3</sup> (TWA), Inhalable fraction, A4 Not classifiable as a human carcinogen for zinc oxide.

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

If the exposure limit is exceeded and engineering controls are not feasible, a full facepiece particulate respirator (NIOSH type N100 filters) may be worn for up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-facepiece positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

**Skin Protection:**

Wear protective gloves and clean body-covering clothing.

**Eye Protection:**

Use chemical safety goggles. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

**Appearance:**

Gray-blue granular or shiny, irregular lumps.

**Odor:**

Odorless.

**Solubility:**

Insoluble in water.

**Specific Gravity:**

7.14

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

0

**Boiling Point:**

907C (1665F)

**Melting Point:**

419C (786F)

**Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

1 @ 487C (909F)

**Evaporation Rate (BuAc=1):**

No information found.

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage. Moist zinc dust can react exothermically and ignite spontaneously in air.

**Hazardous Decomposition Products:**

Hydrogen in moist air, zinc oxide with oxygen at high temperature. Zinc metal, when melted, produces zinc vapor which oxidizes and condenses in air to form zinc fume.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

Zinc powder can react violently with water, sulfur and halogens. Dangerous or potentially dangerous with strong oxidizing agents, lower molecular weight chlorinated hydrocarbons, strong acids and alkalis.

**Conditions to Avoid:**

Heat, flames, ignition sources and incompatibles.

## 11. Toxicological Information

Zinc: Irritation skin, human: 300 ug/3D-I mild; investigated as a mutagen.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category
	Known	Anticipated	
Zinc (7440-66-6)	No	No	None
Lead (7439-92-1)	No	No	2B

## 12. Ecological Information

**Environmental Fate:**

No information found.

**Environmental Toxicity:**

Freshwater Algae:96 Hr EC50 Selenastrum capricornutum: 30 3g/L

Freshwater Fish:96 Hr LC50 Pimephales promelas: 6.4 mg/L

Water Flea Data: 72 Hr EC50 water flea: 5 3g/L

Dangerous to the environment. Very toxic to aquatic organisms; may cause long term adverse effects in the aquatic environment.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

Not regulated.

**WARNING:**

THIS PRODUCT CONTAINS CHEMICALS KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER AND BIRTH DEFECTS OR OTHER REPRODUCTIVE HARM.

**Australian Hazchem Code:** None allocated.

**Poison Schedule:** S6

**WHMIS:**

This MSDS has been prepared according to the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all of the information required by the CPR.

---

## 16. Other Information

**NFPA Ratings:** Health: 1 Flammability: 1 Reactivity: 1 Other: **Water reactive**

**Label Hazard Warning:**

WARNING! HARMFUL IF SWALLOWED OR INHALED. MAY CAUSE IRRITATION TO SKIN, EYES, AND RESPIRATORY TRACT. MAY FORM COMBUSTIBLE DUST CONCENTRATIONS IN AIR. WATER REACTIVE. MAY AFFECT THE GUM TISSUE, CENTRAL NERVOUS SYSTEM, KIDNEYS, BLOOD AND REPRODUCTIVE SYSTEM (lead component).

**Label Precautions:**

Avoid breathing dust.  
Avoid contact with eyes, skin and clothing.  
Keep away from heat and flame.  
Keep container closed.  
Use with adequate ventilation.  
Wash thoroughly after handling.

**Label First Aid:**

If swallowed, induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. Get medical attention for any breathing difficulty. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. Get medical attention if irritation develops or persists.

**Product Use:**

Laboratory Reagent.

## DIELDRIN

ICSC: 0787

DIELDRIN

HEOD

1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro,endo,exo-1,4:5,8-dimethanonaphthalene

C<sub>12</sub>H<sub>8</sub>Cl<sub>6</sub>O

Molecular mass: 381

CAS # 60-57-1

RTECS # IO1750000

ICSC # 0787

UN # 2761

EC # 602-049-00-9

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/ SYMPTOMS	PREVENTION	FIRST AID/ FIRE FIGHTING
<b>FIRE</b>	Not combustible. Liquid formulations containing organic solvents may be flammable.		In case of fire in the surroundings: all extinguishing agents allowed.
<b>EXPLOSION</b>	Explosion hazard will depend on the solvent used or on the characteristics of the dust.		
<b>EXPOSURE</b>		PREVENT DISPERSION OF DUST! STRICT HYGIENE! AVOID EXPOSURE OF (PREGNANT) WOMEN!	
• <b>INHALATION</b>	(see Ingestion).	Ventilation (not if powder).	Fresh air, rest. Refer for medical attention.
• <b>SKIN</b>	MAY BE ABSORBED! See Ingestion.	Protective gloves. Rubber boots.	Remove contaminated clothes. Rinse and then wash skin with water and soap.
• <b>EYES</b>	Redness.	Safety goggles or face shield.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
• <b>INGESTION</b>	Convulsions. Dizziness. Headache. Nausea. Vomiting. Weakness.	Do not eat, drink, or smoke during work.	Do NOT induce vomiting. Rest. Refer for medical attention.
SPILLAGE DISPOSAL	STORAGE	PACKAGING & LABELLING	
Sweep spilled substance into sealable containers. Carefully collect remainder, then remove to safe place. Do NOT let this chemical enter the environment (extra personal protection: complete protective clothing including self-contained breathing apparatus).	Separated from food and feedstuffs. Cool. Dry.	Do not transport with food and feedstuffs. T+ symbol R: 25-27-40-48 S: 22-36/37-45 UN Hazard Class: 6.1 UN Packing Group: I	

Marine pollutant.

# International Chemical Safety Cards

**DIELDRIIN****ICSC: 0787**

<b>I M P O R T A N T  D A T A</b>	<b>PHYSICAL STATE; APPEARANCE:</b> COLOURLESS CRYSTALS.	<b>ROUTES OF EXPOSURE:</b> The substance can be absorbed into the body through the skin and by ingestion.
	<b>PHYSICAL DANGERS:</b>  <b>CHEMICAL DANGERS:</b> The substance decomposes on heating producing toxic and corrosive fumes (chlorine fumes, hydrogen chloride). Reacts with oxidants, concentrated mineral acids, acid acatalysts, metals (copper, iron). Attacks metal due to the slow formation of hydrogen chloride in storage.	<b>INHALATION RISK:</b> Evaporation at 20°C is negligible; a harmful concentration of airborne particles can, however, be reached quickly on spraying.
	<b>OCCUPATIONAL EXPOSURE LIMITS (OELs):</b> TLV (as TWA): ppm; 0.25 mg/m <sup>3</sup> (skin) (ACGIH 1991-1992).	<b>EFFECTS OF SHORT-TERM EXPOSURE:</b> The substance may cause effects on the central nervous system, resulting in convulsions. Medical observation is indicated.
		<b>EFFECTS OF LONG-TERM OR REPEATED EXPOSURE:</b> The substance may be found in the human placenta.
<b>PHYSICAL PROPERTIES</b>	Melting point: 175-176°C Relative density (water = 1): 1.62 Solubility in water: None	Vapour pressure, Pa at 20°C: 0.0004 Octanol/water partition coefficient as log Pow: 6.2
<b>ENVIRONMENTAL DATA</b>	Dieldrin persists in the environment: 50% disappear after 4 to 7 years. This substance may be hazardous to the environment; special attention should be given to birds and water organisms. In the food chain important to humans, bioaccumulation takes place, specifically in aquatic organisms.	
<b>NOTES</b>		
Technical dieldrin (95%) consists of light tan flakes with a mild odour. Carrier solvents used in commercial formulations may change physical and toxicological properties. Do NOT take working clothes home. The recommendations on this Card also apply to ICSC # 0774 (aldrin). Alvit, Octalox, Quintox, Illoxol, Panoram D-31, Dieldrite, Dorytox, Compound 497 are trade names.		
Transport Emergency Card: TEC (R)-61G53b

=====

First Aid:AN ANTIDOTE IS A SUBSTANCE INTENDED TO COUNTERACT EFT OF  
POIS. IF SHOULD BE ADMIN ONLY BY MD/EMER PERS. MD ADVICE CAN BE  
OBTAINED FROM POIS CNTRL CNTR. SKIN: FLUSH CONTINUOUSLY W/WATER FOR  
AT LEAST 15 -20 MINS. SKIN: FLUSH W/WATER FOR 15-20MINS. IF NO  
BURNS HAVE OCCURRED-USE SOAP & WATER CLEANSE SKIN. INHAL: REMOVE  
PATIENT TO FRESH AIR. ADMIN O\*2 IF PATIENT IS HAVING DFCLTY BRTHG.  
IF (SUPDAT)

=====  
Fire Fighting Measures  
=====

Extinguishing Media:CARBON DIOXIDE, DRY CHEMICAL POWDER OR SPRAY. NO  
EXPLOSION LIMITS ARE AVAILABLE FOR THIS COMPOUND.

Fire Fighting Procedures:WEAR NIOSH/MSHA APPROVED SCBA & FULL  
PROTECTIVE EQUIPMENT.

Unusual Fire/Explosion Hazard:NONE SPECIFIED BY MANUFACTURER.

=====  
Accidental Release Measures  
=====

Spill Release Procedures:EVAC AREA. WEAR APPROP OSHA REG EQUIP. VENT  
AREA. SWEEP UP & PLACE IN AN APPROPRIATE CONTAINER. HOLD FOR  
DISPOSAL. WASH CONTAMINATED SURFACES TO REMOVE ANY RESIDUES.

Neutralizing Agent:NONE SPECIFIED BY MANUFACTURER.

=====  
Handling and Storage  
=====

Handling and Storage Precautions:KEEP TIGHTLY CLOSED. STORE IN COOL DRY  
PLACE. STORE ONLY WITH COMPATIBLE CHEMICALS.

Other Precautions:AVOID CONTACT W/SKIN, EYES & CLTHG. DO NOT BREATH  
VAPORS. THIS PRODUCT FURNISHED FOR LABORATORY USE ONLY! OUR  
PRODUCTS MAY NOT BE USED AS DRUGS, COSMETICS, AGRICULTURAL OR  
PESTICIDAL PRODUCTS, FOOD AD DITIVES/HOUSEHOLD CHEMICALS.

=====  
Exposure Controls/Personal Protection  
=====

Respiratory Protection:USE NIOSH/MSHA APPROVED RESPIRATOR APPROPRIATE FOR EXPOSURE OF CONCERN.

Ventilation:THIS CHEMICAL SHOULD BE HANDLED ONLY IN A HOOD.

Protective Gloves:IMPERVIOUS GLOVES.

Eye Protection:ANSI APPRVD CHEM WORKERS GOGGS.

Other Protective Equipment:EMERGENCY EYEWASH & DELUGE SHOWER MEETING ANSI DESIGN CRITERIA.

Work Hygienic Practices:NONE SPECIFIED BY MANUFACTURER.

Supplemental Safety and Health

FIRST AID PROC: PATIENT HAS STOPPED BREATHING ADMIN ARTF RESP. IF PATIENT IS IN CARDIAC ARREST ADMIN CPR. CONTINUE LIFE SUPPORTING MEASURES UNTIL MED ASSIST HAS ARRIVED. REMOVE & WASH CONTAMD CLTHG. I F PATIENT IS EXHIBITING SIGNS OF SHOCK - KEEP WARM & QUIET. CONT POIS CNTRL CNTR IMMED IF NEC. INDUCE VOMITING(ING 3)

## ALCONOX®

### 1. Product Identification

**Synonyms:** Proprietary blend of sodium linear alkylaryl sulfonate, alcohol sulfate, phosphates, and carbonates.

**CAS No.:** Not applicable.

**Molecular Weight:** Not applicable to mixtures.

**Chemical Formula:** Not applicable to mixtures.

**Product Codes:** A461

### 2. Composition/Information on Ingredients

Ingredient	CAS No	Percent	Hazardous
Alconox® proprietary detergent mixture	N/A	90 - 100%	Yes

### 3. Hazards Identification

Emergency Overview

**CAUTION! MAY BE HARMFUL IF SWALLOWED OR INHALED. MAY CAUSE IRRITATION TO EYES AND RESPIRATORY TRACT.**

**SAF-T-DATA<sup>(tm)</sup>** Ratings (Provided here for your convenience)

---

Health Rating: 1 - Slight

Flammability Rating: 0 - None

Reactivity Rating: 0 - None

Contact Rating: 2 - Moderate

Lab Protective Equip: GOGGLES; LAB COAT; PROPER GLOVES

Storage Color Code: Green (General Storage)

---

### **Potential Health Effects**

---

#### **Inhalation:**

May cause irritation to the respiratory tract. Symptoms may include coughing and shortness of breath.

#### **Ingestion:**

May cause irritation to the gastrointestinal tract. Symptoms may include nausea, vomiting and diarrhea.

#### **Skin Contact:**

No adverse effects expected.

#### **Eye Contact:**

May cause irritation, redness and pain.

#### **Chronic Exposure:**

No information found.

#### **Aggravation of Pre-existing Conditions:**

No information found.

---

## **4. First Aid Measures**

#### **Inhalation:**

Remove to fresh air. Get medical attention for any breathing difficulty.

#### **Ingestion:**

If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. Get medical attention.

#### **Skin Contact:**

Wash exposed area with soap and water. Get medical advice if irritation develops.

#### **Eye Contact:**

Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention immediately.

---

## **5. Fire Fighting Measures**

**Fire:**

Not expected to be a fire hazard.

**Explosion:**

No information found.

**Fire Extinguishing Media:**

Dry chemical, foam, water or carbon dioxide.

**Special Information:**

In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

---

## 6. Accidental Release Measures

Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Spills: Pick up and place in a suitable container for reclamation or disposal, using a method that does not generate dust. When mixed with water, material foams profusely. Small amounts of residue may be flushed to sewer with plenty of water.

---

## 7. Handling and Storage

Keep in a tightly closed container, stored in a cool, dry, ventilated area. Protect against physical damage. Moisture may cause material to cake. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

---

## 8. Exposure Controls/Personal Protection

**Airborne Exposure Limits:**

None established.

**Ventilation System:**

A system of local and/or general exhaust is recommended to keep employee exposures as low as possible. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

**Personal Respirators (NIOSH Approved):**

For conditions of use where exposure to dust or mist is apparent and engineering controls are not feasible, a particulate respirator (NIOSH type N95 or better filters) may be worn. If oil particles (e.g. lubricants, cutting fluids, glycerine, etc.) are present, use a NIOSH type R or P filter. For emergencies or instances where the exposure levels are not known, use a full-face positive-pressure, air-supplied respirator. **WARNING:** Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

**Skin Protection:**

Wear protective gloves and clean body-covering clothing.

**Eye Protection:**

Use chemical safety goggles. Maintain eye wash fountain and quick-drench facilities in work area.

---

## 9. Physical and Chemical Properties

**Appearance:**

White powder interspersed with cream colored flakes.

**Odor:**

No information found.

**Solubility:**

Moderate (1-10%)

**Specific Gravity:**

No information found.

**pH:**

No information found.

**% Volatiles by volume @ 21C (70F):**

0

**Boiling Point:**

No information found.

**Melting Point:**

No information found.

**Vapor Density (Air=1):**

No information found.

**Vapor Pressure (mm Hg):**

No information found.

**Evaporation Rate (BuAc=1):**

No information found.

---

## 10. Stability and Reactivity

**Stability:**

Stable under ordinary conditions of use and storage.

**Hazardous Decomposition Products:**

Carbon dioxide and carbon monoxide may form when heated to decomposition.

**Hazardous Polymerization:**

Will not occur.

**Incompatibilities:**

No information found.

**Conditions to Avoid:**

No information found.

---

## 11. Toxicological Information

No LD50/LC50 information found relating to normal routes of occupational exposure.

-----\Cancer Lists\-----			
Ingredient	---NTP Carcinogen---		IARC Category

## 12. Ecological Information

### Environmental Fate:

This product is biodegradable.

### Environmental Toxicity:

No information found.

## 13. Disposal Considerations

Whatever cannot be saved for recovery or recycling should be managed in an appropriate and approved waste disposal facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

## 14. Transport Information

Not regulated.

**WHMIS:**

This MSDS has been prepared according to the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all of the information required by the CPR.

## 16. Other Information

**NFPA Ratings:** Health: **0** Flammability: **0** Reactivity: **0**

**Label Hazard Warning:**

CAUTION! MAY BE HARMFUL IF SWALLOWED OR INHALED. MAY CAUSE IRRITATION TO EYES AND RESPIRATORY TRACT.

**Label Precautions:**

Avoid contact with eyes.  
 Keep container closed.  
 Use with adequate ventilation.  
 Avoid breathing dust.  
 Wash thoroughly after handling.

**Label First Aid:**

If swallowed, DO NOT INDUCE VOMITING. Give large quantities of water. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of eye contact, immediately flush eyes with plenty of water for at least 15 minutes. In all cases, get medical attention.

**Product Use:**

Laboratory Reagent.

**Revision Information:**

No Changes.

## ===== Hazards Identification =====

LD50 LC50 Mixture:ACUTE ORAL LD50 (HUMAN) IS 1500 MG/KG  
 Routes of Entry: Inhalation:YES Skin:YES Ingestion:YES  
 Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
 Health Hazards Acute and Chronic:ACUTE: INGESTION:ABDOMINAL DISCOMFORT  
 OR PAIN, NAUSEA, CENTRAL NERVOUS SYSTEM DEPRESSION. SEVERE KIDNEY  
 AND LIVER DAMAGE FROM LARGE AMOUNTS; MAY BE FATAL.  
 INHALATION:IRRITATION OF THE NOSE AND THROAT. EYE:DISCOMFORT WITH  
 TRANSIENT CONJUNCTIVITIS. CHRONIC: INHALATION OF MIST MAY PRODUCE  
 SIGNS OF CNS DISTURBANCES.  
 Explanation of Carcinogenicity:NONE OF THE COMPOUNDS IN THIS PRODUCT IS

LISTED BY IARC, NTP, OR OSHA AS A CARCINOGEN.

Effects of Overexposure:MAY CAUSE DIZZINESS, MALAISE, LUMBAR PAIN, UREMIA, AND CENTRAL NERVOUS SYSTEM DEPRESSION. MAY CAUSE EYE, SKIN & RESPIRATORY TRACT IRRITATION.

Medical Cond Aggravated by Exposure:PERSONS WITH A HISTORY OF KIDNEY OR LIVER DISORDERS MAYBE AT INCREASED RISK FROM EXPOSURE.

===== First Aid Measures =====

First Aid:INHALATION: REMOVE TO FRESH AIR. CALL A PHYSICIAN IF DISCOMFORT PERSISTS. EYE: IMMEDIATELY FLUSH EYES WITH PLENTY OF WATER FOR 15 MINUTES. CALL A PHYSICIAN. SKIN: WASH WITH PLENTY OF SOAP & WATER. REM OVE CONTAMINATED CLOTHING/SHOES. INGESTION: IF CONSCIOUS, GIVE 2 GLASSES OF WATER TO DRINK AND INDUCE VOMITING WITH IPECAC SYRUP-NOTHING BY MOUTH IF UNCONSCIOUS. CALL A PHYSICIAN IMMEDIATELY.

===== Fire Fighting Measures =====

Flash Point Method:COC

Flash Point:250F,121C

Lower Limits:1.6

Upper Limits:10.8

Extinguishing Media:USE CARBON DIOXIDE, FOAM, OR DRY CHEMICAL. WATER MAY BE INEEFFECTIVE.

Fire Fighting Procedures:FIRE FIGHTERS SHOULD USE NIOSH APPROVED SCBA & FULL PROTECTIVE EQUIPMENT WHEN FIGHTING CHEMICAL FIRE. USE WATER SPRAY TO COOL NEARBY CONTAINERS EXPOSED TO FIRE.

Unusual Fire/Explosion Hazard:FIRE OR EXCESSIVE HEAT MAY CAUSE PRODUCTION OF HAZARDOUS DECOMPOSITION PRODUCTS. HEATED VAPORS MAY CAUSE FLASH BACK.

===== Accidental Release Measures =====

Spill Release Procedures:SMALL SPILL: WIPE/SOAK UP WITH PAPER TOWEL OR INERT ABSORBENT. PUT IN DISPOSAL CONTAINER. FLUSH RESIDUE WITH WATER. LARGE SPILL: VENTILATE AREA. IF POSSIBLE, STOP LEAK. DIKE TO RETAIN RUN OFF. VACUUM UP FREE LIQUID. FLUSH RESIDUE WITH WATER.

Neutralizing Agent:NONE SPECIFIED BY MANUFACTURER. WATER DILUTION RECOMMENDED.

===== Handling and Storage =====

Handling and Storage Precautions:STORE IN A COOL, DRY, WELL VENTILATED AREA. KEEP CONTAINERS TIGHTLY CLOSED WHEN NOT IN USE. PROTECT CONTAINERS FROM PHYSICAL DAMAGE.

Other Precautions:DO NOT TAKE INTERNALLY. DO NOT BREATHE MIST. AVOID PROLONGED OR REPEATED BREATHING OF VAPOR. AVOID CONTACT WITH EYES. USE WITH ADEQUATE VENTILATION. WASH THOROUGHLY AFTER HANDLING. FOR INDUSTRIAL USE ONLY.

===== Exposure Controls/Personal Protection =====

Respiratory Protection:IF VENTILATION DOES NOT MAINTAIN INHALATION EXPOSURES BELOW PEL(TLV), USE NIOSH/MSHA APPROVED ORGANIC VAPOR CARTRIDGE AND DUST/MIST PRE-FILTER RESPIRATORS AS PER CURRENT 29 CFR 1910.134, INSTRUCTIONS/ WARNINGS AND NIOSH-RESPIRATOR SELECTION.

Ventilation:MECHANICAL (GENERAL) ROOM VENTILATION IS ADEQUATE IF USE IS ENCLOSED. LOCAL EXHAUST IS NEEDED IF VENTED INTO WORK AREA.

Protective Gloves:NEOPRENE, NITRILE, PVC OR NATURAL RUBBER

Eye Protection:SAFETY GOGGLES WITH OPTIONAL FACE SHIELD

Other Protective Equipment:EYE WASH STATION AND SAFETY SHOWER.

INDUSTRIAL-TYPE WORK CLOTHING AND APRON AS REQUIRED.

Work Hygienic Practices:OBSERVE GOOD PERSONAL HYGIENE PRACTICES AND RECOMMENDED PROCEDURES. DO NOT WEAR CONTAMINATED CLOTHING OR FOOTWEAR.

Supplemental Safety and Health

DO NOT TAKE INTERNALLY. DO NOT GET ON SKIN OR IN EYES. AVOID PROLONGED OR REPEATED BREATHING OF VAPOR. DO NOT BREATHE MISTS. WASH THOROUGHLY AFTER HANDLING AND BEFORE EATING OR DRINKING OR SMOKING OR USING REST ROOM.

===== Physical/Chemical Properties =====

HCC:N1

Boiling Pt:B.P. Text:330F,166C

Vapor Pres:0.06 @20C

Vapor Density:2.1 AIR=1

Spec Gravity:1.108

Solubility in Water:COMPLETE

Appearance and Odor:CLEAR GREEN LIQUID - SLIGHT ODOR

Percent Volatiles by Volume:NEG.

===== Stability and Reactivity Data =====

Stability Indicator/Materials to Avoid:YES

STRONG OXIDIZING AGENTS

Stability Condition to Avoid:HIGH TEMPERATURES, SPARKS, AND OPEN FLAMES

Hazardous Decomposition Products:CARBON MONOXIDE AND CARBON DIOXIDE

===== Disposal Considerations =====

Waste Disposal Methods:DISPOSAL SHOULD BE MADE BY INCINERATION IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL LAWS AND REGULATIONS. AT VERY LOW CONCENTRATIONS IN WATER, DISPOSE OF THIS MATERIAL IN A BIOLOGICAL WASTE WATER TREATMENT PLANT.

# Material Safety Data Sheet

## Bentonite

ACC# 02585

### Section 1 - Chemical Product and Company Identification

**MSDS Name:** Bentonite**Catalog Numbers:** B235-500**Synonyms:** Bentonite magma; Southern bentonite; tixoton; VOLCLAY bentonite; Wilkinitite.**Company Identification:**

Fisher Scientific  
1 Reagent Lane  
Fair Lawn, NJ 07410

**For information, call:** 201-796-7100**Emergency Number:** 201-796-7100**For CHEMTREC assistance, call:** 800-424-9300**For International CHEMTREC assistance, call:** 703-527-3887

### Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS/ELINCS
1302-78-9	BENTONITE	100	215-108-5

### Section 3 - Hazards Identification

#### EMERGENCY OVERVIEW

Appearance: cream to gray brown powder.

**Warning!** Causes eye, skin, and respiratory tract irritation. May cause cancer based on animal studies. Hygroscopic (absorbs moisture from the air). The toxicological properties of this material have not been fully investigated.

**Target Organs:** Respiratory system, eyes, skin.

#### Potential Health Effects

**Eye:** Causes eye irritation. May cause chemical conjunctivitis.

**Skin:** Causes skin irritation.

**Ingestion:** Ingestion of large amounts may cause gastrointestinal irritation. The toxicological properties of this substance have not been fully investigated.

**Inhalation:** Causes respiratory tract irritation. The toxicological properties of this substance have not been fully investigated. When inhaled as a dust or fume, may cause benign pneumoconiosis. Can produce delayed pulmonary edema.

**Chronic:** May cause cancer according to animal studies. Effects may be delayed. Chronic inhalation may cause lung changes, chest pain, breath shortness, and bronchitis.

### Section 4 - First Aid Measures

**Eyes:** Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

**Skin:** Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse.

**Ingestion:** Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

**Inhalation:** Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Treat symptomatically and supportively.

## Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

**Extinguishing Media:** Use water spray, dry chemical, carbon dioxide, or appropriate foam.

**Flash Point:** Not applicable.

**Autoignition Temperature:** Not applicable.

**Explosion Limits, Lower:** Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: 2; Flammability: 0; Instability: 0

## Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Vacuum or sweep up material and place into a suitable disposal container. Clean up spills immediately, observing precautions in the Protective Equipment section. Avoid generating dusty conditions. Provide ventilation.

## Section 7 - Handling and Storage

**Handling:** Use with adequate ventilation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and inhalation. Wash clothing before reuse.

**Storage:** Store in a cool, dry place. Store in a tightly closed container. Store protected from moisture.

## Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate ventilation to keep airborne concentrations low.

### Exposure Limits

Chemical Name	ACGIH	NIOSH	OSHA - Final PELs

BENTONITE

none listed

none listed

none listed

**OSHA Vacated PELs:** BENTONITE: No OSHA Vacated PELs are listed for this chemical.

**Personal Protective Equipment**

**Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

**Skin:** Wear appropriate gloves to prevent skin exposure.

**Clothing:** Wear appropriate protective clothing to minimize contact with skin.

**Respirators:** Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if exposure limits are exceeded or if irritation or other symptoms are experienced.

## Section 9 - Physical and Chemical Properties

**Physical State:** Powder

**Appearance:** cream to gray brown

**Odor:** odorless

**pH:** Not available.

**Vapor Pressure:** Not available.

**Vapor Density:** Not available.

**Evaporation Rate:**Not applicable.

**Viscosity:** Not available.

**Boiling Point:** Not available.

**Freezing/Melting Point:**Not available.

**Decomposition Temperature:**Not available.

**Solubility:** Insoluble in water.

**Specific Gravity/Density:**Not available.

**Molecular Formula:**Not applicable.

**Molecular Weight:**Not available.

## Section 10 - Stability and Reactivity

**Chemical Stability:** Stable under normal temperatures and pressures. Hygroscopic: absorbs moisture or water from the air.

**Conditions to Avoid:** Incompatible materials, excess heat, exposure to moist air or water.

**Incompatibilities with Other Materials:** Moisture, Increase volume significantly when water is added..

**Hazardous Decomposition Products:** Exposure to moist air or water.

**Hazardous Polymerization:** Has not been reported.

## Section 11 - Toxicological Information

**RTECS#:**

**CAS#** 1302-78-9: CT9450000

**LD50/LC50:**

Not available.

**Carcinogenicity:**

CAS# 1302-78-9: Not listed by ACGIH, IARC, NTP, or CA Prop 65.

**Epidemiology:** No information found  
Effects of Bentonite in workers in processing plant experienced a very high incidence of bronchial asthma, (25%) in workers examined. This was attributed to the irritating action of the bentonite dust on the bronchial epithelium.

**Teratogenicity:** No information found

**Reproductive Effects:** No information found

**Mutagenicity:** No information found

**Neurotoxicity:** No information found

**Other Studies:**

## Section 12 - Ecological Information

No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.

**RCRA P-Series:** None listed.

**RCRA U-Series:** None listed.

## Section 14 - Transport Information

	US DOT	Canada TDG
<b>Shipping Name:</b>	Not regulated as a hazardous material	No information available.
<b>Hazard Class:</b>		
<b>UN Number:</b>		
<b>Packing Group:</b>		

## Section 15 - Regulatory Information

### US FEDERAL

#### TSCA

CAS# 1302-78-9 is listed on the TSCA inventory.

#### Health & Safety Reporting List

None of the chemicals are on the Health & Safety Reporting List.

#### Chemical Test Rules

None of the chemicals in this product are under a Chemical Test Rule.

#### Section 12b

None of the chemicals are listed under TSCA Section 12b.

#### TSCA Significant New Use Rule

None of the chemicals in this material have a SNUR under TSCA.

#### CERCLA Hazardous Substances and corresponding RQs

None of the chemicals in this material have an RQ.

**SARA Section 302 Extremely Hazardous Substances**

None of the chemicals in this product have a TPQ.

**Section 313** No chemicals are reportable under Section 313.

**Clean Air Act:**

This material does not contain any hazardous air pollutants.

This material does not contain any Class 1 Ozone depletors.

This material does not contain any Class 2 Ozone depletors.

**Clean Water Act:**

None of the chemicals in this product are listed as Hazardous Substances under the CWA.

None of the chemicals in this product are listed as Priority Pollutants under the CWA.

None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

**OSHA:**

None of the chemicals in this product are considered highly hazardous by OSHA.

**STATE**

CAS# 1302-78-9 is not present on state lists from CA, PA, MN, MA, FL, or NJ.

**California Prop 65**

California No Significant Risk Level: None of the chemicals in this product are listed.

**European/International Regulations**

**European Labeling in Accordance with EC Directives**

**Hazard Symbols:**

XI

**Risk Phrases:**

R 36/37/38 Irritating to eyes, respiratory system and skin.

**Safety Phrases:**

S 24/25 Avoid contact with skin and eyes.

**WGK (Water Danger/Protection)**

CAS# 1302-78-9: No information available.

**Canada - DSL/NDSL**

CAS# 1302-78-9 is listed on Canada's DSL List.

**Canada - WHMIS**

This product has a WHMIS classification of D2B.

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

**Canadian Ingredient Disclosure List**

**Section 16 - Additional Information**

**MSDS Creation Date:** 12/12/1997

**Revision #8 Date:** 6/13/2008

*The information above is believed to be accurate and represents the best information currently available to us. TARGET ORGAN:NERV SYS.SIGNS & SYMPS OF CNS EFTS MAY INCL HDCH, DIZZ, LOSS OF APPETITE, WEAK & (SUPDAT)

Medical Cond Aggravated by Exposure:NONE SPECIFIED BY MANUFACTURER.

===== First Aid Measures =====

First Aid:EYES:FLUSH IMMED W/FRESH WATER FOR AT LST 15 MINS WHILE HOLDING LIDS OPEN. REMOVE CONT LENSES IF WORN. IF IRRIT PERSISTS, SEE MD. SKIN:WASH THORO W/SOAP & WATER. REMOVE & WASH CONTAM CLTHG. INHAL:MOVE TO FRESH AIR. IF ANY EFTS CONTINUE, SEE MD. INGEST:GIVE WATER/MILK TO DRINK & TELEPHONE FOR MED ADVICE. DO NOT MAKE PERS VOMIT UNLESS DIRECTED TO DO SO BY MED PERS. IF MED ADVICE CANNOT BE (ING 17)

===== Fire Fighting Measures =====

Flash Point Method:PMCC

Flash Point:<-49F,<-45C

Lower Limits:1.4%

Upper Limits:7.6%

Extinguishing Media:FIRE FIGHTING FOAM:ALCOHOL RESISTANT TYPE (AR). AFFF, CO\*2, DRY CHEMICAL.

Fire Fighting Procedures:USE NIOSH APPROVED SCBA & FULL PROTECTIVE EQUIPMENT .

Unusual Fire/Explosion Hazard:EXTREME FIRE HAZ. LIQ VERY QUICKLY EVAPS, EVEN AT LOW TEMPS & FORMS VAP (FUMES) WHICH CAN CATCH FIRE & BURN W/EXPLO VIOLENCE. INVISIBLE VAP SPREADS (SUPP DATA)

===== Accidental Release Measures =====

Spill Release Procedures:ELIM ALL SOURCES OF IGNIT. CLEAN UP SPILLS IMMED, OBSERVING PRECS IN PROT EQUIP SECTION. MATL IS CONSIDERED TO BE WATER POLLUTANT & RELS SHOULD BE PREVENTED FROM CONTAM SOIL & WATER & FROM ENTERING DR AINAGE & SEWER SYS. U.S.A. REGS REQ (ING 19)

Neutralizing Agent:NONE SPECIFIED BY MANUFACTURER.

===== Handling and Storage =====

Handling and Storage Precautions:USE ONLY AS MOTOR FUEL. DO NOT USE FOR CLEANING, PRESS APPLIANCE FUEL/ANY OTHER SUCH USE. USE ONLY IN WELL VENTED AREA. KEEP OUT OF REACH OF CHILDREN.

Other Precautions:DO NOT USE/STORE NEAR FLAME, SPKS/HOT SURFS. KEEP CNTNR CLSD. DO NOT TRANSFER LIQ TO UNLABELED CNTNR. DO NOT WELD, HEAT/DRILL CNTNR. REPLACE CAP/BUNG. EMPTIED CNTNR STILL CNTNS HAZ/EXPLO VAP/LIQ. READ & OBSERVE ALL PRECS ON PROD LABEL.

===== Exposure Controls/Personal Protection =====

Respiratory Protection:NO SPECIAL PROTECTION IS NORMALLY REQUIRED. HOWEVER, IF OPERATING CONDITIONS CREATE AIRBORNE CONCENTRATIONS WHICH EXCEED RECOMMENDED EXPOSURE STANDARDS, USE OF A NIOSH APPROVED RESPIRATOR IS REQUIRED.

Ventilation:USE ONLY IN WELL VENTILATED AREAS.

Protective Gloves:IMPERVIOUS GLOVES .  
Eye Protection:ANSI APPROVED CHEM WORKERS GOGGS .  
Other Protective Equipment:ANSI APPROVED EYE WASH FOUNTAIN & DELUGE  
SHOWER . CONTACT CAN BE MINIMIZED BY WEARING PROTECTIVE CLOTHING.  
Work Hygienic Practices:NONE SPECIFIED BY MANUFACTURER.  
Supplemental Safety and Health  
EXPLO HAZ:EASILY & CAN BE SET ON FIRE BY MANY SOURCES SUCH AS PILOT  
LIGHTS, WELDING EQUIP & ELEC MOTORS & SWITCHES. EXPLAN OF  
CARCIN:CARCIN. OSHA REGULATED:29 CFR 1910.1028. HUMAN:MYELOID  
LEUKEMIA, HO DGKINS DISEASE, LYMPHOMA. EFTS OF OVEREXP:LOSS OF  
COORD. SUBSTANCE CAN DIRECTLY ENTER LUNGS IF IT IS SWALLOWED (ING  
11)

===== Physical/Chemical Properties =====

Boiling Pt:B.P. Text:>77F,>25C  
Vapor Pres:5-15 @100F  
Vapor Density:3-4  
Spec Gravity:0.7-0.8  
Solubility in Water:INSOLUBLE  
Appearance and Odor:ORANGE TO BRONZE LIQUID.  
Percent Volatiles by Volume:>99

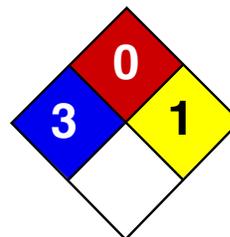

===== Stability and Reactivity Data =====

Stability Indicator/Materials to Avoid:YES  
MAY REACT W/STRONG OXIDIZING AGENTS, SUCH AS CHLORATES, NITRATES,  
PEROXIDES, ETC.  
Stability Condition to Avoid:NEVER SIPHON GASOLINE BY MOUTH.  
Hazardous Decomposition Products:NORMAL COMBUSTION FORMS CARBON DIOXIDE  
& WATER VAPOR; INCOMPLETE COMBUSTION CAN PRODUCE CARBON MONOXIDE.

===== Disposal Considerations =====

Waste Disposal Methods:DISP MUST BE I/A/W FED, STATE & LOC REGS . CLEAN  
UP SM SPILLS USING APPROP TECHNIQUES SUCH AS SORBENT MATLS/PUMPING.  
WHERE FEASIBLE & APPROP, REMOVE CONTAM SOIL. FOLLOW PRESCRIBED  
PROCS FOR REPO RTING & RESPONDING TO LGR RELS. PLACE (ING 21)

## Material Safety Data Sheet

### Hydrochloric acid MSDS

#### Section 1: Chemical Product and Company Identification

**Product Name:** Hydrochloric acid

**Catalog Codes:** SLH1462, SLH3154

**CAS#:** Mixture.

**RTECS:** MW4025000

**TSCA:** TSCA 8(b) inventory: Hydrochloric acid

**CI#:** Not applicable.

**Synonym:** Hydrochloric Acid; Muriatic Acid

**Chemical Name:** Not applicable.

**Chemical Formula:** Not applicable.

**Contact Information:**

**Sciencelab.com, Inc.**

14025 Smith Rd.

Houston, Texas 77396

US Sales: **1-800-901-7247**

International Sales: **1-281-441-4400**

Order Online: [ScienceLab.com](http://ScienceLab.com)

**CHEMTREC (24HR Emergency Telephone), call:**

1-800-424-9300

**International CHEMTREC, call:** 1-703-527-3887

**For non-emergency assistance, call:** 1-281-441-4400

#### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
Hydrogen chloride	7647-01-0	20-38
Water	7732-18-5	62-80

**Toxicological Data on Ingredients:** Hydrogen chloride: GAS (LC50): Acute: 4701 ppm 0.5 hours [Rat].

#### Section 3: Hazards Identification

**Potential Acute Health Effects:**

Very hazardous in case of skin contact (corrosive, irritant, permeator), of eye contact (irritant, corrosive), of ingestion, . Slightly hazardous in case of inhalation (lung sensitizer). Non-corrosive for lungs. Liquid or spray mist may produce tissue damage particularly on mucous membranes of eyes, mouth and respiratory tract. Skin contact may produce burns. Inhalation of the spray mist may produce severe irritation of respiratory tract, characterized by coughing, choking, or shortness of breath. Severe over-exposure can result in death. Inflammation of the eye is characterized by redness, watering, and itching. Skin inflammation is characterized by itching, scaling, reddening, or, occasionally, blistering.

**Potential Chronic Health Effects:**

Slightly hazardous in case of skin contact (sensitizer). **CARCINOGENIC EFFECTS:** Classified 3 (Not classifiable for human.) by IARC [Hydrochloric acid]. **MUTAGENIC EFFECTS:** Not available. **TERATOGENIC EFFECTS:** Not available. **DEVELOPMENTAL TOXICITY:** Not available. The substance may be toxic to kidneys, liver, mucous membranes, upper respiratory tract, skin, eyes, Circulatory System, teeth. Repeated or prolonged exposure to the substance can produce target

organs damage. Repeated or prolonged contact with spray mist may produce chronic eye irritation and severe skin irritation. Repeated or prolonged exposure to spray mist may produce respiratory tract irritation leading to frequent attacks of bronchial infection. Repeated exposure to a highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

#### Section 4: First Aid Measures

**Eye Contact:**

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. Get medical attention immediately.

**Skin Contact:**

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Cover the irritated skin with an emollient. Cold water may be used. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

**Serious Skin Contact:**

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

**Inhalation:**

If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

**Serious Inhalation:**

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. **WARNING:** It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

**Ingestion:**

If swallowed, do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

**Serious Ingestion:** Not available.

#### Section 5: Fire and Explosion Data

**Flammability of the Product:** Non-flammable.

**Auto-Ignition Temperature:** Not applicable.

**Flash Points:** Not applicable.

**Flammable Limits:** Not applicable.

**Products of Combustion:** Not available.

**Fire Hazards in Presence of Various Substances:** of metals

**Explosion Hazards in Presence of Various Substances:** Non-explosive in presence of open flames and sparks, of shocks.

**Fire Fighting Media and Instructions:** Not applicable.

**Special Remarks on Fire Hazards:**

Non combustible. Calcium carbide reacts with hydrogen chloride gas with incandescence. Uranium phosphide reacts with hydrochloric acid to release spontaneously flammable phosphine. Rubidium acetylene carbides burns with slightly warm hydrochloric acid. Lithium silicide in contact with hydrogen chloride becomes incandescent. When dilute hydrochloric acid is used, gas spontaneously flammable in air is evolved. Magnesium boride treated with concentrated hydrochloric acid produces spontaneously flammable gas. Cesium acetylene carbide burns hydrogen chloride gas. Cesium carbide ignites in contact with hydrochloric acid unless acid is dilute. Reacts with most metals to produce flammable Hydrogen gas.

**Special Remarks on Explosion Hazards:**

Hydrogen chloride in contact with the following can cause an explosion, ignition on contact, or other violent/vigorous reaction: Acetic anhydride AgClO + CCl4 Alcohols + hydrogen cyanide, Aluminum Aluminum-titanium alloys (with HCl vapor), 2-Amino ethanol, Ammonium hydroxide, Calcium carbide Ca3P2 Chlorine + dinitroanilines (evolves gas), Chlorosulfonic acid Cesium carbide Cesium acetylene carbide, 1,1-Difluoroethylene Ethylene diamine Ethylene imine, Fluorine, HClO4 Hexalithium disilicide H2SO4 Metal acetylides or carbides, Magnesium boride, Mercuric sulfate, Oleum, Potassium permanganate, beta-Propiolactone Propylene oxide Rubidium carbide, Rubidium, acetylene carbide Sodium (with aqueous HCl), Sodium hydroxide Sodium tetraselenium, Sulfonic acid, Tetraselenium tetranitride, U3P4 , Vinyl acetate. Silver perchlorate with carbon tetrachloride in the presence of hydrochloric acid produces trichloromethyl perchlorate which detonates at 40 deg. C.

## Section 6: Accidental Release Measures

### Small Spill:

Dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container. If necessary: Neutralize the residue with a dilute solution of sodium carbonate.

### Large Spill:

Corrosive liquid. Poisonous liquid. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material. Do not get water inside container. Do not touch spilled material. Use water spray curtain to divert vapor drift. Use water spray to reduce vapors. Prevent entry into sewers, basements or confined areas; dike if needed. Call for assistance on disposal. Neutralize the residue with a dilute solution of sodium carbonate. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

## Section 7: Handling and Storage

### Precautions:

Keep locked up.. Keep container dry. Do not ingest. Do not breathe gas/fumes/ vapor/spray. Never add water to this product. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as oxidizing agents, organic materials, metals, alkalis, moisture. May corrode metallic surfaces. Store in a metallic or coated fiberboard drum using a strong polyethylene inner package.

**Storage:** Keep container tightly closed. Keep container in a cool, well-ventilated area.

## Section 8: Exposure Controls/Personal Protection

### Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

### Personal Protection:

Face shield. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves. Boots.

### Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

### Exposure Limits:

CEIL: 5 (ppm) from OSHA (PEL) [United States] CEIL: 7 (mg/m3) from OSHA (PEL) [United States] CEIL: 5 from NIOSH CEIL: 7 (mg/m3) from NIOSH TWA: 1 STEL: 5 (ppm) [United Kingdom (UK)] TWA: 2 STEL: 8 (mg/m3) [United Kingdom (UK)] Consult local authorities for acceptable exposure limits.

## Section 9: Physical and Chemical Properties

**Physical state and appearance:** Liquid.

**Odor:** Pungent. Irritating (Strong.)

**Taste:** Not available.

**Molecular Weight:** Not applicable.

**Color:** Colorless to light yellow.

**pH (1% soln/water):** Acidic.

**Boiling Point:**

108.58 C @ 760 mm Hg (for 20.22% HCl in water) 83 C @ 760 mm Hg (for 31% HCl in water) 50.5 C (for 37% HCl in water)

**Melting Point:**

-62.25°C (-80°F) (20.69% HCl in water) -46.2 C (31.24% HCl in water) -25.4 C (39.17% HCl in water)

**Critical Temperature:** Not available.

**Specific Gravity:**

1.1- 1.19 (Water = 1) 1.10 (20%and 22% HCl solutions) 1.12 (24% HCl solution) 1.15 (29.57% HCl solution) 1.16 (32% HCl solution) 1.19 (37% and 38%HCl solutions)

**Vapor Pressure:** 16 kPa (@ 20°C) average

**Vapor Density:** 1.267 (Air = 1)

**Volatility:** Not available.

**Odor Threshold:** 0.25 to 10 ppm

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** See solubility in water, diethyl ether.

**Solubility:** Soluble in cold water, hot water, diethyl ether.

## Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Incompatible materials, water

**Incompatibility with various substances:**

Highly reactive with metals. Reactive with oxidizing agents, organic materials, alkalis, water.

**Corrosivity:**

Extremely corrosive in presence of aluminum, of copper, of stainless steel(304), of stainless steel(316). Non-corrosive in presence of glass.

**Special Remarks on Reactivity:**

Reacts with water especially when water is added to the product. Absorption of gaseous hydrogen chloride on mercuric sulfate becomes violent @ 125 deg. C. Sodium reacts very violently with gaseous hydrogen chloride. Calcium phosphide and hydrochloric acid undergo very energetic reaction. It reacts with oxidizers releasing chlorine gas. Incompatible with, alkali metals, carbides, borides, metal oxides, vinyl acetate, acetylides, sulphides, phosphides, cyanides, carbonates. Reacts with most metals to produce flammable Hydrogen gas. Reacts violently (moderate reaction with heat of evolution) with water especially when water is added to the product. Isolate hydrogen chloride from heat, direct sunlight, alkalies (reacts vigorously), organic materials, and oxidizers (especially nitric acid and chlorates), amines, metals, copper and alloys (e.g. brass), hydroxides, zinc (galvanized materials), lithium silicide (incandescence), sulfuric acid(increase in temperature and pressure) Hydrogen chloride gas is emitted when this product is in contact with sulfuric acid. Adsorption of Hydrochloric Acid onto silicon dioxide results in exothermic reaction. Hydrogen chloride causes aldehydes and epoxides to violently polymerize. Hydrogen chloride or Hydrochloric Acid in contact with the following can cause explosion or ignition on contact or

**Special Remarks on Corrosivity:**

Highly corrosive. Incompatible with copper and copper alloys. It attacks nearly all metals (mercury, gold, platinum, tantalum, silver, and certain alloys are exceptions). It is one of the most corrosive of the nonoxidizing acids in contact with copper alloys. No corrosivity data on zinc, steel. Severe Corrosive effect on brass and bronze

**Polymerization:** Will not occur.

## Section 11: Toxicological Information

**Routes of Entry:** Absorbed through skin. Dermal contact. Eye contact. Inhalation.

**Toxicity to Animals:**

Acute oral toxicity (LD50): 900 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 1108 ppm, 1 hours [Mouse]. Acute toxicity of the vapor (LC50): 3124 ppm, 1 hours [Rat].

**Chronic Effects on Humans:**

CARCINOGENIC EFFECTS: Classified 3 (Not classifiable for human.) by IARC [Hydrochloric acid]. May cause damage to the following organs: kidneys, liver, mucous membranes, upper respiratory tract, skin, eyes, Circulatory System, teeth.

**Other Toxic Effects on Humans:**

Very hazardous in case of skin contact (corrosive, irritant, permeator), of ingestion, . Hazardous in case of eye contact (corrosive), of inhalation (lung corrosive).

**Special Remarks on Toxicity to Animals:**

Lowest Published Lethal Doses (LDL/LCL) LDL [Man] -Route: Oral; 2857 ug/kg LCL [Human] - Route: Inhalation; Dose: 1300 ppm/30M LCL [Rabbit] - Route: Inhalation; Dose: 4413 ppm/30M

**Special Remarks on Chronic Effects on Humans:**

May cause adverse reproductive effects (fetotoxicity). May affect genetic material.

**Special Remarks on other Toxic Effects on Humans:**

Acute Potential Health Effects: Skin: Corrosive. Causes severe skin irritation and burns. Eyes: Corrosive. Causes severe eye irritation/conjunctivitis, burns, corneal necrosis. Inhalation: May be fatal if inhaled. Material is extremely destructive to tissue of the mucous membranes and upper respiratory tract. Inhalation of hydrochloric acid fumes produces nose, throat, and laryngeal burning, and irritation, pain and inflammation, coughing, sneezing, choking sensation, hoarseness, laryngeal spasms, upper respiratory tract edema, chest pains, as well as headache, and palpitations. Inhalation of high concentrations can result in corrosive burns, necrosis of bronchial epithelium, constriction of the larynx and bronchi, nasospetal perforation, glottal closure, occur, particularly if exposure is prolonged. May affect the liver. Ingestion: May be fatal if swallowed. Causes irritation and burning, ulceration, or perforation of the gastrointestinal tract and resultant peritonitis, gastric hemorrhage and infection. Can also cause nausea, vomiting (with "coffee ground" emesis), diarrhea, thirst, difficulty swallowing, salivation, chills, fever, uneasiness, shock, strictures and stenosis (esophageal, gastric, pyloric). May affect behavior (excitement), the cardiovascular system (weak rapid pulse, tachycardia), respiration (shallow respiration), and urinary system (kidneys- renal failure, nephritis). Acute exposure via inhalation or ingestion can also cause erosion of tooth enamel. Chronic Potential Health Effects: dyspnea, bronchitis. Chemical pneumonitis and pulmonary edema can also

## Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are less toxic than the product itself.

**Special Remarks on the Products of Biodegradation:** Not available.

## Section 13: Disposal Considerations

**Waste Disposal:**

Waste must be disposed of in accordance with federal, state and local environmental control regulations.

## Section 14: Transport Information

**DOT Classification:** Class 8: Corrosive material

**Identification:** : Hydrochloric acid, solution UNNA: 1789 PG: II

**Special Provisions for Transport:** Not available.

## Section 15: Other Regulatory Information

### Federal and State Regulations:

Connecticut hazardous material survey.: Hydrochloric acid Illinois toxic substances disclosure to employee act: Hydrochloric acid Illinois chemical safety act: Hydrochloric acid New York release reporting list: Hydrochloric acid Rhode Island RTK hazardous substances: Hydrochloric acid Pennsylvania RTK: Hydrochloric acid Minnesota: Hydrochloric acid Massachusetts RTK: Hydrochloric acid Massachusetts spill list: Hydrochloric acid New Jersey: Hydrochloric acid New Jersey spill list: Hydrochloric acid Louisiana RTK reporting list: Hydrochloric acid Louisiana spill reporting: Hydrochloric acid California Director's List of Hazardous Substances: Hydrochloric acid TSCA 8(b) inventory: Hydrochloric acid TSCA 4(a) proposed test rules: Hydrochloric acid SARA 302/304/311/312 extremely hazardous substances: Hydrochloric acid SARA 313 toxic chemical notification and release reporting: Hydrochloric acid CERCLA: Hazardous substances.: Hydrochloric acid: 5000 lbs. (2268 kg)

### Other Regulations:

OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

### Other Classifications:

#### WHMIS (Canada):

CLASS D-2A: Material causing other toxic effects (VERY TOXIC). CLASS E: Corrosive liquid.

#### DSCL (EEC):

R34- Causes burns. R37- Irritating to respiratory system. S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S45- In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

#### HMIS (U.S.A.):

**Health Hazard:** 3

**Fire Hazard:** 0

**Reactivity:** 1

**Personal Protection:**

#### National Fire Protection Association (U.S.A.):

**Health:** 3

**Flammability:** 0

**Reactivity:** 1

**Specific hazard:**

#### Protective Equipment:

Gloves. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Face shield.

ICSC # 1027  
UN # 1055  
EC # 601-012-00-4

TYPES OF HAZARD/ EXPOSURE	ACUTE HAZARDS/ SYMPTOMS	PREVENTION	FIRST AID/ FIRE FIGHTING
<b>FIRE</b>	Extremely flammable.	NO open flames, NO sparks, and NO smoking. NO contact with oxidizing materials.	Shut off supply; if not possible and no risk to surroundings, let the fire burn itself out; in other cases extinguish with sand, powder, carbon dioxide.
<b>EXPLOSION</b>	Gas/air mixtures are explosive. Risk of fire and explosion on contact with oxidants, halogens (see Chemical Dangers).	Closed system, ventilation, explosion-proof electrical equipment and lighting. Prevent build-up of electrostatic charges (e.g., by grounding). Use non-sparking handtools.	In case of fire: keep drums, etc., cool by spraying with water. Combat fire from a sheltered position.
<b>EXPOSURE</b>			
• <b>INHALATION</b>	Dizziness. Drowsiness. Dullness. Nausea. Unconsciousness. Vomiting.	Closed system and ventilation.	Fresh air, rest. Artificial respiration if indicated. Refer for medical attention.
• <b>SKIN</b>	ON CONTACT WITH LIQUID: FROSTBITE.	Cold-insulating gloves.	ON FROSTBITE: rinse with plenty of water, do NOT remove clothes. Refer for medical attention.
• <b>EYES</b>	Frostbite.	Face shield or eye protection in combination with breathing protection.	First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to a doctor.
• <b>INGESTION</b>			
SPILLAGE DISPOSAL	STORAGE	PACKAGING & LABELLING	
Evacuate danger area! Consult an expert! Ventilation. Remove all sources of ignition. Do NOT wash away into sewer. NEVER direct water jet on liquid (extra personal protection: self-	Fireproof. ## SECTION III

## HEALTH INFORMATION

THE HEALTH EFFECTS NOTED BELOW ARE CONSISTENT WITH REQUIREMENTS UNDER THE OSHA HAZARD COMMUNICATION STANDARD (29 CFR 1910.1200).

EYE CONTACT: LUBRICATING BASE OILS ARE GENERALLY CONSIDERED NO MORE THAN MINIMALLY IRRITATING TO THE EYES.

SKIN CONTACT: LUBRICATING BASE OILS ARE GENERALLY CONSIDERED NO MORE THAN MILDLY IRRITATING TO THE SKIN. PROLONGED OR REPEATED CONTACT MAY CAUSE VARIOUS SKIN DISORDERS SUCH AS DERMATITIS, FOLLICULITIS OR OIL ACNE.

INHALATION: INHALATION OF VAPORS (GENERATED AT HIGH TEMPERATURES ONLY) OR OIL MIST OF THIS PRODUCT MAY RESULT IN MILD IRRITATION TO THE NOSE, THROAT AND RESPIRATORY TRACT.

INGESTION: LUBRICATING BASE OILS ARE GENERALLY CONSIDERED NO MORE THAN SLIGHTLY TOXIC IF SWALLOWED.

SIGNS AND SYMPTOMS: IRRITATION AS NOTED ABOVE.

AGGRAVATED MEDICAL CONDITIONS:

PREEXISTING SKIN AND RESPIRATORY DISORDERS MAY BE AGGRAVATED BY EXPOSURE TO

THIS PRODUCT.

OTHER HEALTH EFFECTS:

THIS PRODUCT AND ITS COMPONENTS ARE NOT CLASSIFIED AS CARCINOGENS BY INTERNATIONAL AGENCY FOR RESEARCH ON CANCER (IARC), NATIONAL TOXICOLOGY PROGRAM (NTP) OR OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA). THE INTERNATIONAL AGENCY FOR RESEARCH ON CANCER HAS DETERMINED THAT THERE IS SUFFICIENT EVIDENCE FOR THE CARCINOGENICITY IN EXPERIMENTAL ANIMALS OF USED MOTOR OILS. HANDLING PROCEDURES AND SAFETY PRECAUTIONS IN THE MSDS SHOULD BE FOLLOWED TO MINIMIZE EMPLOYEE'S EXPOSURE.

P	5 MG/M3*		5 MG/M3*	10 MG/M3*	

\*OIL MIST, MINERAL

---

SECTION V EMERGENCY AND FIRST AID PROCEDURES

---

EYE CONTACT: FLUSH EYES WITH PLENTY OF WATER FOR 15 MINUTES WHILE HOLDING EYELIDS OPEN. GET MEDICAL ATTENTION.

SKIN CONTACT: REMOVE CONTAMINATED CLOTHING/SHOES AND WIPE EXCESS FROM SKIN. FLUSH SKIN WITH WATER. FOLLOW BY WASHING WITH SOAP AND WATER. IF IRRITATION OCCURS, GET MEDICAL ATTENTION. DO NOT REUSE CLOTHING UNTIL CLEANED.

INHALATION: REMOVE VICTIM TO FRESH AIR AND PROVIDE OXYGEN IF BREATHING IS DIFFICULT. GET MEDICAL ATTENTION.

INGESTION: DO NOT INDUCE VOMITING. IF VOMITING OCCURS SPONTANEOUSLY, KEEP HEAD BELOW HIPS TO PREVENT ASPIRATION OF LIQUID INTO THE LUNGS. GET MEDICAL ATTENTION.\*

NOTE TO PHYSICIAN: \*IF MORE THAN 2.0 ML PER KG HAS BEEN INGESTED AND VOMITING HAS NOT OCCURRED, EMESIS SHOULD BE INDUCED WITH SUPERVISION. KEEP VICTIM'S HEAD BELOW HIPS TO PREVENT ASPIRATION. IF SYMPTOMS SUCH AS LOSS OF GAG REFLEX, CONVULSIONS OR UNCONSCIOUSNESS OCCUR BEFORE EMESIS, GASTRIC LAVAGE USING A CUFFED ENDOTRACHEAL TUBE SHOULD BE CONSIDERED.

---

PHYS/CHEM PROPERTIES: SEE ABOVE FOR DETAILS		

---

SECTION VIII FIRE AND EXPLOSION HAZARDS

---

FLASH POINT AND METHOD: 415 DEG. F. (PMCC)

FLAMMABLE LIMITS/PERCENT VOLUME IN AIR: LOWER: N/AV HIGHER: N/AV

EXTINGUISHING MEDIA:

USE WATER FOG, FOAM, DRY CHEMICAL OR CO<sub>2</sub>. DO NOT USE A DIRECT STREAM OF WATER. PRODUCT WILL FLOAT AND CAN BE REIGNITED ON SURFACE OF WATER.

SPECIAL FIRE FIGHTING PROCEDURES AND PRECAUTIONS:

MATERIAL WILL NOT BURN UNLESS PREHEATED. DO NOT ENTER CONFINED FIRE SPACE WITHOUT FULL BUNKER GEAR (HELMET WITH FACE SHIELD, BUNKER COATS, GLOVES AND RUBBER BOOTS), INCLUDING A POSITIVE PRESSURE NIOSH APPROVED SELF-CONTAINED BREATHING APPARATUS. COOL FIRE EXPOSED CONTAINERS WITH WATER.

UNUSUAL FIRE AND EXPLOSION HAZARDS:

NONE IDENTIFIED

---

SECTION IX

REACTIVITY

---

STABILITY: STABLE HAZARDOUS POLYMERIZATION WILL NOT OCCUR  
CONDITIONS AND MATERIALS TO AVOID:

AVOID HEAT, FLAME AND CONTACT WITH STRONG OXIDIZING AGENTS.

HAZARDOUS DECOMPOSITION PRODUCTS:

THERMAL DECOMPOSITION PRODUCTS ARE HIGHLY DEPENDENT ON THE COMBUSTION CONDITIONS. A COMPLEX MIXTURE OF AIRBORNE SOLID, LIQUID, PARTICULATES AND GASES WILL EVOLVE WHEN THIS MATERIAL UNDERGOES PYROLYSIS OR COMBUSTION. CARBON MONOXIDE AND OTHER UNIDENTIFIED ORGANIC COMPOUNDS MAY BE FORMED UPON COMBUSTION.

---

SECTION X

EMPLOYEE PROTECTION

---

RESPIRATORY PROTECTION:

IF EXPOSURE MAY OR DOES EXCEED OCCUPATIONAL EXPOSURE LIMITS (SEC. IV) USE A NIOSH-APPROVED RESPIRATOR TO PREVENT OVEREXPOSURE. IN ACCORD WITH 29 CFR 1910.134 USE EITHER AN ATMOSPHERE-SUPPLYING RESPIRATOR OR AN AIR-PURIFYING RESPIRATOR FOR ORGANIC VAPORS AND PARTICULATES.

PROTECTIVE CLOTHING

AVOID PROLONGED OR REPEATED CONTACT WITH SKIN. WEAR GLOVES AND OTHER CLOTHING AS REQUIRED TO MINIMIZE CONTACT. AVOID CONTACT WITH EYES. WEAR SAFETY GLASSES OR GOGGLES AS APPROPRIATE. TEST DATA FROM PUBLISHED LITERATURE AND/OR GLOVE AND CLOTHING MANUFACTURERS INDICATE THE BEST PROTECTION IS PROVIDED BY NITRILE GLOVES.

ADDITIONAL PROTECTIVE MEASURES:

NONE IDENTIFIED

---

SECTION XI

ENVIRONMENTAL PROTECTION

---

SPILL OR LEAK PROCEDURES:

MAY BURN ALTHOUGH NOT READILY IGNITABLE. USE CAUTIOUS JUDGMENT WHEN CLEANING UP LARGE SPILLS. \*\*\* LARGE SPILLS \*\*\* WEAR RESPIRATOR AND PROTECTIVE CLOTHING AS APPROPRIATE. SHUT OFF SOURCE OF LEAK IF SAFE TO DO SO. DIKE AND CONTAIN. REMOVE WITH VACUUM TRUCKS OR PUMP TO STORAGE/SALVAGE VESSELS. SOAK UP RESIDUE WITH AN ABSORBENT SUCH AS CLAY, SAND OR OTHER SUITABLE MATERIAL; DISPOSE OF PROPERLY. FLUSH AREA WITH WATER TO REMOVE TRACE RESIDUE. \*\*\* SMALL SPILLS \*\*\* TAKE UP WITH AN ABSORBENT MATERIAL AND DISPOSE OF PROPERLY.

---

SECTION XII

SPECIAL PRECAUTIONS

---

STORE IN A COOL, DRY PLACE WITH ADEQUATE VENTILATION. KEEP AWAY FROM OPEN FLAMES AND HIGH TEMPERATURES. WASH WITH SOAP AND WATER BEFORE EATING, DRINKING, SMOKING, APPLYING COSMETICS, OR USING TOILET FACILITIES. LAUNDRY CONTAMINATED CLOTHING BEFORE REUSE. CONTAMINATED LEATHER ARTICLES INCLUDING SHOES CANNOT BE DECONTAMINATED AND SHOULD BE DESTROYED TO PREVENT REUSE.

---

SECTION XIII

TRANSPORTATION REQUIREMENTS

---

DEPARTMENT OF TRANSPORTATION CLASSIFICATION:

NOT HAZARDOUS BY D.O.T. REGULATIONS.

DOT PROPER SHIPPING NAME: NOT APPLICABLE

OTHER REQUIREMENTS: NOT APPLICABLE

---

SECTION XIV

OTHER REGULATORY CONTROLS

---

THIS PRODUCT IS LISTED ON THE EPA/TSCA INVENTORY OF CHEMICAL SUBSTANCES. PROTECTION OF STRATOSPHERIC OZONE (PURSUANT TO SECTION 611 OF THE CLEAN AIR ACT AMENDMENTS OF 1990): PER 40 CFR PART 82, THIS PRODUCT DOES NOT CONTAIN NOR WAS IT DIRECTLY MANUFACTURED WITH ANY CLASS I OR CLASS II OZONE DEPLETING SUBSTANCES.

IN ACCORDANCE WITH SARA TITLE III, SECTION 313, THE ATTACHED ENVIRONMENTAL DATA SHEET (EDS) SHOULD ALWAYS BE COPIED AND SENT WITH THE MSDS.

---

SECTION XV

STATE REGULATORY INFORMATION

---

THE FOLLOWING CHEMICALS ARE SPECIFICALLY LISTED BY INDIVIDUAL STATES; OTHER PRODUCT SPECIFIC HEALTH AND SAFETY DATA IN OTHER SECTIONS OF THE MSDS MAY ALSO BE APPLICABLE FOR STATE REQUIREMENTS. FOR DETAILS ON YOUR REGULATORY REQUIREMENTS YOU SHOULD CONTACT THE APPROPRIATE AGENCY IN YOUR STATE.

PRODUCT CODE: 50019

SECTION I PRODUCT COMPOSITION

NO.	COMPOSITION	CAS	PERCENT
P	SH/CG4 HEAVY DUTY MOTOR OIL 15W-40	MIXTURE	100
1	HYDROTREATED HEAVY PARAFFINIC DISTILLATE	64742-54-7	40-95
2	SOLVENT DEWAXED, HEAVY PARAFFINIC DISTIL LATE	64742-65-7	0-55
3	HYDROTREATED RESIDUAL OIL	64742-57-0	5-15
4	HYDROTREATED SPENT LUBRICATING OIL	64742-58-1	5-10
5	SOLVENT DEWAXED RESIDUAL OILS	64742-62-7	5-10
6	ADDITIVES CONTAINING	MIXTURE	2-3
6A	ZINC COMPOUND		1-2

SECTION II SARA TITLE III INFORMATION

NO.	EHS RQ (*1)	EHS TPQ (*2)	SEC-313 (*3)	313 CATEGORY (*4)	311/312 CATEGORY (*5)
6A			YES	ZINC COMPOUND	

- \*1 = REPORTABLE QUANTITY OF EXTREMELY HAZARDOUS SUBSTANCE, SEC 302  
 \*2 = THRESHOLD PLANNING QUANTITY, EXTREMELY HAZARDOUS SUBSTANCE, SEC 302  
 \*3 = TOXIC CHEMICAL, SEC 313  
 \*4 = CATEGORY AS REQUIRED BY SEC 313 (40 CFR 372.65 C), MUST BE USED ON TOXIC RELEASE INVENTORY FORM  
 \*5 = CATEGORY (FOR AGGREGATE REPORTING REQUIREMENTS UNDER SARA 311, 312)  
 HEALTH: H-1 = IMMEDIATE (ACUTE) HEALTH HAZARD  
 H-2 = DELAYED (CHRONIC) HEALTH HAZARD  
 PHYSICAL: P-3 = FIRE HAZARD  
 P-4 = SUDDEN RELEASE OF PRESSURE HAZARD  
 P-5 = REACTIVE HAZARD

SECTION III ENVIRONMENTAL RELEASE INFORMATION

THIS PRODUCT IS COVERED BY EPA'S COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION AND LIABILITY ACT (CERCLA) PETROLEUM EXCLUSION. THEREFORE, RELEASES TO AIR, LAND, OR WATER ARE NOT REPORTABLE UNDER CERCLA ("SUPERFUND"). HOWEVER, UNDER SECTION 311 OF EPA'S CLEAN WATER ACT (CWA), THIS PRODUCT IS CONSIDERED AN OIL. AS SUCH, SPILLS INTO OR LEADING TO SURFACE WATERS THAT CAUSE A SHEEN MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER, 800-424-8802.

THIS PRODUCT IS AN OIL UNDER 49 CFR (DOT) PART 130. IF SHIPPED BY RAIL OR HIGHWAY IN A TANK WITH A CAPACITY OF 3,500 GALLONS OR MORE, IT IS SUBJECT TO THE REQUIREMENTS OF PART 130. MIXTURE SOLUTIONS IN WHICH THIS PRODUCT IS PRESENT AT 10% OR MORE MAY ALSO BE SUBJECT TO THIS RULE.

SECTION IV RCRA INFORMATION

IF THIS PRODUCT BECOMES A WASTE, IT WOULD NOT BE A HAZARDOUS WASTE BY RCRA CRITERIA (40 CFR 261). PLACE IN AN APPROPRIATE DISPOSAL FACILITY IN

## COMPLIANCE WITH LOCAL REGULATIONS.

---

THE INFORMATION CONTAINED IN THIS DATA SHEET IS BASED ON THE DATA AVAILABLE TO US AT THIS TIME, AND IS BELIEVED TO BE ACCURATE BASED UPON THAT DATA. IT IS PROVIDED INDEPENDENTLY OF ANY SALE OF THE PRODUCT, FOR PURPOSE OF HAZARD COMMUNICATION. IT IS NOT INTENDED TO CONSTITUTE PRODUCT PERFORMANCE INFORMATION, AND NO EXPRESS OR IMPLIED WARRANTY OF ANY KIND IS MADE WITH RESPECT TO THE PRODUCT, UNDERLYING DATA OR THE INFORMATION CONTAINED HEREIN. YOU ARE URGED TO OBTAIN DATA SHEETS FOR ALL PRODUCTS YOU BUY, PROCESS, USE OR DISTRIBUTE, AND ARE ENCOURAGED TO ADVISE THOSE WHO MAY COME IN CONTACT WITH SUCH PRODUCTS OF THE INFORMATION CONTAINED HEREIN.

TO DETERMINE THE APPLICABILITY OR EFFECT OF ANY LAW OR REGULATION WITH RESPECT TO THE PRODUCT, YOU SHOULD CONSULT WITH YOUR LEGAL ADVISOR OR THE APPROPRIATE GOVERNMENT AGENCY. WE WILL NOT PROVIDE ADVICE ON SUCH MATTERS, OR BE RESPONSIBLE FOR ANY INJURY FROM THE USE OF THE PRODUCT DESCRIBED HEREIN. THE UNDERLYING DATA, AND THE INFORMATION PROVIDED HEREIN AS A RESULT OF THAT DATA, IS THE PROPERTY OF EQUIVA SERVICES, LLC AND IS NOT TO BE THE SUBJECT OF SALE OR EXCHANGE WITHOUT THE EXPRESS WRITTEN CONSENT OF EQUIVA SERVICES, LLC.

## Material Safety Data Sheet

### Nitric acid, 65% MSDS

#### Section 1: Chemical Product and Company Identification

**Product Name:** Nitric acid, 65%

**Catalog Codes:** SLN2161

**CAS#:** Mixture.

**RTECS:** Not applicable.

**TSCA:** TSCA 8(b) inventory: Water; Nitric acid, fuming

**CI#:** Not applicable.

**Synonym:** Nitric Acid, 65%

**Chemical Name:** Not applicable.

**Chemical Formula:** Not applicable.

**Contact Information:**

**Sciencelab.com, Inc.**

14025 Smith Rd.

Houston, Texas 77396

US Sales: **1-800-901-7247**

International Sales: **1-281-441-4400**

Order Online: [ScienceLab.com](http://ScienceLab.com)

**CHEMTREC (24HR Emergency Telephone), call:**

1-800-424-9300

**International CHEMTREC, call:** 1-703-527-3887

**For non-emergency assistance, call:** 1-281-441-4400

#### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
Water	7732-18-5	35
Nitric acid, fuming	7697-37-2	65

**Toxicological Data on Ingredients:** Nitric acid, fuming: VAPOR (LC50): Acute: 244 ppm 0.5 hours [Rat]. 344 ppm 0.5 hours [Rat].

#### Section 3: Hazards Identification

**Potential Acute Health Effects:**

Very hazardous in case of skin contact (corrosive, irritant, permeator), of eye contact (irritant, corrosive), of ingestion, . Slightly hazardous in case of inhalation (lung sensitizer). Liquid or spray mist may produce tissue damage particularly on mucous membranes of eyes, mouth and respiratory tract. Skin contact may produce burns. Inhalation of the spray mist may produce severe irritation of respiratory tract, characterized by coughing, choking, or shortness of breath. Prolonged exposure may result in skin burns and ulcerations. Over-exposure by inhalation may cause respiratory irritation. Severe over-exposure can result in death. Inflammation of the eye is characterized by redness, watering, and itching. Skin inflammation is characterized by itching, scaling, reddening, or, occasionally, blistering.

**Potential Chronic Health Effects:**

CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to lungs, mucous membranes, upper respiratory

tract, skin, eyes, teeth. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated or prolonged contact with spray mist may produce chronic eye irritation and severe skin irritation. Repeated or prolonged exposure to spray mist may produce respiratory tract irritation leading to frequent attacks of bronchial infection.

#### Section 4: First Aid Measures

**Eye Contact:**

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. Get medical attention immediately.

**Skin Contact:**

In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Cover the irritated skin with an emollient. Cold water may be used. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

**Serious Skin Contact:**

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

**Inhalation:**

If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

**Serious Inhalation:**

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. **WARNING:** It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

**Ingestion:**

If swallowed, do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

**Serious Ingestion:** Not available.

#### Section 5: Fire and Explosion Data

**Flammability of the Product:** Non-flammable.

**Auto-Ignition Temperature:** Not applicable.

**Flash Points:** Not applicable.

**Flammable Limits:** Not applicable.

**Products of Combustion:** Not available.

**Fire Hazards in Presence of Various Substances:** of combustible materials

**Explosion Hazards in Presence of Various Substances:**

Explosive in presence of reducing materials, of organic materials, of metals, of alkalis. Non-explosive in presence of open flames and sparks, of shocks.

**Fire Fighting Media and Instructions:** Not applicable.

**Special Remarks on Fire Hazards:**

Flammable in presence of cellulose or other combustible materials. Phosphine, hydrogen sulfide, selenide all ignite when fuming nitric acid is dripped into gas. (Nitric Acid, fuming)

**Special Remarks on Explosion Hazards:**

Reacts explosively with metallic powders, carbides, cyanides, sulfides, alkalies and turpentine. Can react explosively with many reducing agents. Arsine, phosphine, tetraborane all oxidized explosively in presence of nitric acid. Cesium and rubidium

acetylides explode in contact with nitric acid. Explosive reaction with Nitric Acid + Nitrobenzene + water. Detonation with Nitric Acid + 4-Methylcyclohexane. (Nitric acid, fuming)

## Section 6: Accidental Release Measures

### Small Spill:

Dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container. If necessary: Neutralize the residue with a dilute solution of sodium carbonate.

### Large Spill:

Corrosive liquid. Oxidizing material. Poisonous liquid. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material. Do not get water inside container. Avoid contact with a combustible material (wood, paper, oil, clothing...). Keep substance damp using water spray. Do not touch spilled material. Use water spray curtain to divert vapor drift. Use water spray to reduce vapors. Prevent entry into sewers, basements or confined areas; dike if needed. Call for assistance on disposal. Neutralize the residue with a dilute solution of sodium carbonate. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

## Section 7: Handling and Storage

### Precautions:

Keep locked up.. Keep container dry. Keep away from heat. Keep away from sources of ignition. Keep away from combustible material.. Do not ingest. Do not breathe gas/fumes/ vapor/spray. Never add water to this product. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as reducing agents, combustible materials, organic materials, metals, acids, alkalis, moisture. May corrode metallic surfaces. Store in a metallic or coated fiberboard drum using a strong polyethylene inner package.

### Storage:

Keep container tightly closed. Keep container in a cool, well-ventilated area. Separate from acids, alkalies, reducing agents and combustibles. See NFPA 43A, Code for the Storage of Liquid and Solid Oxidizers. Do not store above 23°C (73.4°F).

## Section 8: Exposure Controls/Personal Protection

### Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

### Personal Protection:

Face shield. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves. Boots.

### Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

### Exposure Limits:

TWA: 2 STEL: 4 (ppm) from ACGIH (TLV) [United States] TWA: 2 STEL: 4 from OSHA (PEL) [United States] Consult local authorities for acceptable exposure limits.

## Section 9: Physical and Chemical Properties

**Physical state and appearance:** Liquid.

**Odor:** Acrid. Disagreeable and choking. (Strong.)

**Taste:** Not available.

**Molecular Weight:** Not applicable.

**Color:** Colorless to light yellow.

**pH (1% soln/water):** Acidic.

**Boiling Point:** 121°C (249.8°F)

**Melting Point:** -41.6°C (-42.9°F)

**Critical Temperature:** Not available.

**Specific Gravity:** 1.408 (Water = 1)

**Vapor Pressure:** 6 kPa (@ 20°C)

**Vapor Density:** 2.5 (Air = 1)

**Volatility:** Not available.

**Odor Threshold:** 0.29 ppm

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** See solubility in water, diethyl ether.

**Solubility:**

Easily soluble in cold water, hot water. Soluble in diethyl ether.

## Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Incompatible materials

**Incompatibility with various substances:**

Highly reactive with alkalis. Reactive with reducing agents, combustible materials, organic materials, metals, acids.

**Corrosivity:**

Extremely corrosive in presence of aluminum, of copper. Non-corrosive in presence of glass, of stainless steel(304), of stainless steel(316), of brass.

**Special Remarks on Reactivity:**

A strong oxidizer. Reacts violently with alcohol, organic material, turpene, charcoal. Violent reaction with Nitric acid + Acetone and Sulfuric acid. Nitric Acid will react with water or steam to produce heat and toxic, corrosive and flammable vapors. (Nitric acid, fuming)

**Special Remarks on Corrosivity:**

In presence of traces of oxides, it attacks all base metals except aluminum and special chromium steels. It will attack some forms of plastics, rubber, and coatings. No corrosive effect on bronze. No corrosivity data for zinc, and steel

**Polymerization:** Will not occur.

## Section 11: Toxicological Information

**Routes of Entry:** Absorbed through skin. Dermal contact. Eye contact. Inhalation. Ingestion.

**Toxicity to Animals:**

LD50: Not available. LC50: Not available.

**Chronic Effects on Humans:**

Contains material which may cause damage to the following organs: lungs, mucous membranes, upper respiratory tract, skin, eyes, teeth.

**Other Toxic Effects on Humans:**

Extremely hazardous in case of inhalation (lung corrosive). Very hazardous in case of skin contact (corrosive, irritant, permeator), of eye contact (corrosive), of ingestion, .

**Special Remarks on Toxicity to Animals:** LDL - Lowest Published Lethal Dose [Human] - Route: Oral; Dose: 430 mg/kg (Nitric acid, fuming)

**Special Remarks on Chronic Effects on Humans:**

May cause adverse reproductive effects (effects on newborn and fetotoxicity) based on animal data. (Nitric acid, fuming)

**Special Remarks on other Toxic Effects on Humans:**

Acute Potential Health Effects: Skin: Severely irritates skin. Causes skin burns and may cause deep and penetrating ulcers of the skin with a characteristic yellow to brownish discoloration. May be fatal if absorbed through skin. Eyes: Severely irritates eyes. Causes eye burns. May cause irreversible eye injury. Ingestion: May be fatal if swallowed. Causes serious gastrointestinal tract irritation or burns with nausea, vomiting, severe abdominal pain, and possible "coffee grounds" appearance of the vomitus . May cause perforation of the digestive tract. Inhalation: May be fatal if inhaled. Vapor is extremely hazardous. Vapor may cause nitrous gas poisoning. Effects may be delayed. May cause irritation of the mucous membranes and respiratory tract with burning pain in the nose and throat, coughing, sneezing, wheezing, shortness of breath and pulmonary edema. Other symptoms may include nausea, and vomiting. Chronic Potential Health Effects: Repeated inhalation may produce changes in pulmonary function and/or chronic bronchitis. It may also affect behavior (headache, dizziness, drowsiness, muscle contraction or spasticity, weakness, loss of coordinaton, mental confusion), and urinary system (kidney faillure, decreased urinary output after several hours of

## Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are less toxic than the product itself.

**Special Remarks on the Products of Biodegradation:** Not available.

## Section 13: Disposal Considerations

**Waste Disposal:**

Waste must be disposed of in accordance with federal, state and local environmental control regulations.

## Section 14: Transport Information

**DOT Classification:** Class 8: Corrosive material

**Identification:** : Nitric acid UNNA: 2031 PG: II

**Special Provisions for Transport:** Marine Pollutant

## Section 15: Other Regulatory Information

**Federal and State Regulations:**

New York release reporting list: Nitric acid, fuming Rhode Island RTK hazardous substances: Nitric acid, fuming Pennsylvania RTK: Nitric acid, fuming Florida: Nitric acid, fuming Minnesota: Nitric acid, fuming Massachusetts RTK: Nitric acid, fuming

New Jersey: Nitric acid, fuming TSCA 8(b) inventory: Water; Nitric acid, fuming SARA 302/304/311/312 extremely hazardous substances: Nitric acid, fuming SARA 313 toxic chemical notification and release reporting: Nitric acid, fuming 65% CERCLA: Hazardous substances.: Nitric acid, fuming: 1000 lbs. (453.6 kg);

**Other Regulations:** OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

**Other Classifications:**

**WHMIS (Canada):**

CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC). CLASS E: Corrosive liquid.

**DSCL (EEC):**

R8- Contact with combustible material may cause fire. R35- Causes severe burns. S23- Do not breathe gas/fumes/vapour/spray [\*\*\*] S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S36- Wear suitable protective clothing. S45- In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

**HMIS (U.S.A.):**

**Health Hazard:** 3

**Fire Hazard:** 0

**Reactivity:** 0

**Personal Protection:**

**National Fire Protection Association (U.S.A.):**

**Health:** 4

**Flammability:** 0

**Reactivity:** 0

**Specific hazard:**

**Protective Equipment:**

Gloves. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Face shield.

## ===== Composition/Information on Ingredients =====

Ingred Name:NITROGEN  
CAS:7727-37-9  
RTECS #:QW9700000  
Fraction by Wt: >99%  
Other REC Limits:NONE RECOMMENDED  
ACGIH TLV:ASPHYXIAN; 9596

## ===== Hazards Identification =====

LD50 LC50 Mixture:NOT RELEVANT  
Routes of Entry: Inhalation:YES Skin:NO Ingestion:NO  
Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
Health Hazards Acute and Chronic:TARGET ORGANS:LUNGS. ACUTE- NITROGEN  
IS NONTOXIC BUT MAY PRODUCE SUFFOCATION BY DISPLACING OXYGEN. THIS  
PRODUCT IS A GAS. CANNOT BE SWALLOWED. CHRONIC- NONE.  
Explanation of Carcinogenicity:NONE  
Effects of Overexposure:DIZZINESS, RAPID RESPIRATION, MUSCULAR  
INCOORDINATION, WEAKENED SPEECH LEADING TO THE INABILITY TO UTTER  
SOUNDS, RAPID REDUCTION IN THE ABILITY TO PERFORM MOVEMENTS,  
REDUCED CONSCIOUSNESS OF SURROUNDING, FATIGUE, NAUSEA, VOMITING,  
UNCONSCIOUSNESS AND DEATH  
Medical Cond Aggravated by Exposure:NONE

## ===== First Aid Measures =====

First Aid:PROMPT MEDICAL ATTENTION IS MANDATORY IN ALL CASES OF

OVEREXPOSURE. RESCUE PERSONNEL SHOULD WEAR SELF-CONTAINED BREATHING APPARATUS. INHALED:REMOVE TO FRESH AIR. PROVIDE OXYGEN/CPR IF NEEDED. SKIN:NON E. EYES:NONE. ORAL:NONE.

===== Fire Fighting Measures =====

Flash Point:NONE  
Lower Limits:NOT RELEVANT  
Upper Limits:NOT RELEVANT  
Extinguishing Media:USE WATER FOG, CARBON DIOXIDE, FOAM, OR DRY CHEMICAL FOR SURROUNDING FIRE. NITROGEN CANNOT CATCH FIRE.  
Fire Fighting Procedures:WEAR SELF CONTAINED BREATHING APPARATUS. IMMEDIATELY DELUGE CONTAINERS WITH WATER SPRAY FROM MAXIMUM DISTANCE UNTIL COOL, THEN MOVE CONTAINERS AWAY IF NO RISK.  
Unusual Fire/Explosion Hazard:CYLINDERS MAY RUPTURE DUE TO HEAT OF FIRE. NO PART OF CYLINDER SHOULD BE SUBJECTED TO A TEMPERATURE HIGHER THAN 52C ( 125F).

===== Accidental Release Measures =====

Spill Release Procedures:USE APPROPRIATE PROTECTIVE EQUIPMENT. VENTILATE AREA. REMOVE LEAKING CYLINDER TO EXHAUST HOOD OR SAFE OUTDOOR AREA. SHUT OFF SOURCE OF LEAK IF POSSIBLE. REMOVE HEAT SOURCES.  
Neutralizing Agent:NOT RELEVANT

===== Handling and Storage =====

Handling and Storage Precautions:STORE IN COOL, DRY, VENTILATED AREA. KEEP OUT OF REACH OF SMALL CHILDREN. STORE UPRIGHT AND FIRMLY SECURED  
Other Precautions:WASH HANDS AFTER HANDLING. NEVER CARRY A COMPRESSED GAS CYLINDER IN AN ENCLOSED SPACE SUCH AS A CAR TRUNK, VAN OR STATION VAGON. USE ONLY IN WELL VENTILATED AREA. DO NOT DRAG, SLIDE OR ROLL CYLINDERS. USE A SUITABLE HAND TRUCK TO MOVE THEM.

===== Exposure Controls/Personal Protection =====

Respiratory Protection:NONE NORMALLY REQUIRED. IN EMERGENCIES, WEAR A NIOSH-APPROVED POSITIVE PRESSURE AIR LINE WITH MASK OR SELF-CONTAINED BREATHING APPARATUS.  
Ventilation:LOCAL EXHAUST  
Protective Gloves:ANY MATERIAL WHEN HANDLING CYLINDERS  
Eye Protection:SAFETY GLASSES/GOGGLES RECOMMENDED  
Other Protective Equipment:SAFETY SHOES  
Work Hygienic Practices:OBSERVE GOOD INDUSTRIAL HYGIENE PRACTICES AND RECOMMENDED PROCEDURES.  
Supplemental Safety and Health

===== Physical/Chemical Properties =====

HCC:G3  
NRC/State Lic Num:NOT RELEVANT

## ===== Hazards Identification =====

Routes of Entry: Inhalation:YES Skin:YES Ingestion:NO  
Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
Health Hazards Acute and Chronic:EYES/SKIN: DUST CAN CAUSE  
INFLAMMATION OF THE CORNEA, IRRITATION & ALKALI BURNS. INHALATION:  
IRRITATION TO NASAL PASSAGES, PULMONARY DISEASES, PNEUMONOCOCONIOSIS

& SILICOSIS.

Explanation of Carcinogenicity:NONE

Effects of Overexposure:EYES/SKIN: DUST CAN CAUSE INFLAMMATION OF THE CORNEA, IRRITATION, ALKALI BURNS, & ALLERGIC DERMATITIS.

INHALATION: IRRITATION TO NASAL PASSAGES, PULMONARY DISEASES, PNEUMONOCOCONIOSIS & SILICOSIS.

Medical Cond Aggravated by Exposure:RESPIRATORY DISORDERS/DISEASES, DERMATITIS, OTHER SKIN DISORDERS, & HYPERSENSITIVE.

=====  
First Aid Measures  
=====

First Aid:EYES: FLUSH W/PLENTY OF WATER FOR AT LEAST 15 MINS. SKIN: WASH W/SOAP & WATER. INHALATION: REMOVE TO FRESH AIR. GIVE CPR OR OXYGEN IF NEEDED. OBTAIN MEDICAL ATTENTION IN ALL CASES.

=====  
Fire Fighting Measures  
=====

Flash Point:WILL NOT IGNITE

Unusual Fire/Explosion Hazard:CONTACT W/STRONG ACIDS MAY PRODUCE A VIOLENT, EXOTHERMIC REACTION & MAY EVOLVE TOXIC GASES OR VAPORS, DEPENDING UPON THE ACID INVOLVED.

=====  
Accidental Release Measures  
=====

Spill Release Procedures:CLEAN-UP OF SPILLS MAY REQUIRE PERSONAL PROTECTION EQUIPMENT.

=====  
Handling and Storage  
=====

Handling and Storage Precautions:STORE AWAY FROM STRONG ACIDS.

UNINTENTIONAL CONTACT W/WATER SHOULD BE AVOIDED TO PRESERVE PRODUCT. MATERIAL IS HIGHLY ALKALINE.

Other Precautions:AVOID CONTACT W/SKIN, EYES & CLOTHING.

=====  
Exposure Controls/Personal Protection  
=====

Respiratory Protection:USE NIOSH/MSHA APPROVED FOR PROTECTION AGAINST SILICA & NUISANCE DUSTS.

Ventilation:PROVIDE MECHANICAL/LOCAL EXHAUST VENTILATION TO KEEP <TLV.

Protective Gloves:RUBBER, PVC, NEOPRENE, IMPERVIOUS

Eye Protection:GOGGLES

Other Protective Equipment:RUBBER HIGH TOP BOOTS, BARRIER CREAMS, ARM SLEEVES & APRON

Work Hygienic Practices:WASH THOROUGHLY AFTER HANDLING.

## ===== Composition/Information on Ingredients =====

Ingred Name:WEIGHT PER GALLON IN POUNDS: 6.597

RTECS #:9999999WG

Ingred Name:KEROSENE (PETROLEUM), HYDROTREATED; PETROLEUM DISTILLATE,  
HYDROTREATED , (MINERAL SPIRITS)

CAS:64742-47-8

RTECS #:OA5504000

Fraction by Wt: 4.50%

Ingred Name:PERMETHRIN

CAS:52645-53-1

RTECS #:GZ1255000

Fraction by Wt: 0.50%

ACGIH TLV:NOT EST.

Ingred Name:STODDARD SOLVENT (PETROLEUM DISTILLATE), MINERAL SPIRITS

CAS:8052-41-3

RTECS #:WJ8925000

Fraction by Wt: 5.50%

Other REC Limits:350 MG/CUM

OSHA PEL:500 PPM

ACGIH TLV:100 PPM; 9293

## ===== Hazards Identification =====

LD50 LC50 Mixture:LD50 ORAL (RAT): >5 G/KG

Routes of Entry: Inhalation:NO Skin:NO Ingestion:NO

Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
Health Hazards Acute and Chronic:SLIGHT IRRITANT TO EYES.  
Explanation of Carcinogenicity:NONE

=====  
First Aid Measures  
=====

First Aid:INGESTION: CONTACT A PHYSICIAN OR POISON CONTROL CENTER.  
EYES: FLUSH W/PLENTY OF WATER. SKIN: WASH W/SOAP & WATER.  
INHALATION: REMOVE TO FRESH AIR. OBTAIN MEDICAL ATTENTION IN ALL  
CASES.

=====  
Fire Fighting Measures  
=====

Flash Point Method:TCC  
Flash Point:>200F  
Extinguishing Media:FOAM, CO2, DRY CHEMICAL & WATER FOG.

=====  
Accidental Release Measures  
=====

Spill Release Procedures:SOAK UP W/ABSORBENT MATERIAL SUCH AS SAND,  
SAWDUST, EARTH, FULLER'S EARTH ETC. DISPOSE OF W/CHEMICAL WASTE.

=====  
Handling and Storage  
=====

Handling and Storage Precautions:CONTENTS UNDER PRESSURE. DON'T STORE  
NEAR HEAT OR OPEN FLAME. DON'T PUNCTURE OR INCINERATE CONTAINER.  
AVOID CONTACT W/FACE, EYES, & SKIN.  
Other Precautions:EXPOSURE TO TEMPERATURES >130F MAY CAUSE BURSTING.  
DON'T CONTAMINATE WATER, FOOD, OR FEED BY STORAGE OR DISPOSAL.  
PRODUCT SHOULD NOT BE APPLIED TO CLOTHING WHILE IT IS BEING WORN.  
AVOID BREATHING VAPO RS OR SPRAY MIST. SEE SUPP

=====  
Exposure Controls/Personal Protection  
=====

Ventilation:NORMAL (MECHANICAL) EXHAUST  
Protective Gloves:RUBBER OR IMPERVIOUS  
Eye Protection:SAFETY GLASSES OR GOGGLES  
Work Hygienic Practices:REMOVE/LAUNDER CONTAMINATED CLOTHING BEFORE  
REUSE. WASH THOUROUGHLY AFTER HANDLING & BEFORE EATING OR SMOKING.  
Supplemental Safety and Health  
PRECAUTIONS CONT.: UNDER NO CIRCUMSTANCES SHOULD BARE SKIN/CLOTHING ON  
THE BODY BE TREATED. DON'T ALLOW CONTACT W/TREATED SURFACES UNTIL  
SPRAY HAS DRIED. DON'T ALLOW SPRAY TO CONTACT FOOD/WATER SUPPLI ES.  
DON'T ALLOW USE BY SMALL CHILDREN WITHOUT CLOSE ADULT SUPERVIOSION.

=====  
Physical/Chemical Properties  
=====

Spec Gravity:0.792  
Solubility in Water:MISICIBLE  
Appearance and Odor:MILKY WHITE PRESSURIZED LIQUID W/MILD MOTHBALL-LIKE  
ODOR.  
Percent Volatiles by Volume:>40

=====  
Stability and Reactivity Data  
=====

Stability Indicator/Materials to Avoid:YES  
STRONG OXIDIZING AGENTS  
Stability Condition to Avoid:HEAT OR OPEN FLAME

=====  
Disposal Considerations  
=====

Waste Disposal Methods:DISPOSE OF IN ACCORDANCE W/LOCAL, STATE, & FEDERAL REGULATIONS. CONTAINER DISPOSAL: REPLACE CAP, WRAP CONTAINER IN SEVERAL LAYERS OF NEWSPAPER. DISCARD IN TRASH. DON'T INCINERATE OR PUNCTURE.

## ===== Composition/Information on Ingredients =====

Ingred Name:SODIUM PHOSPHATE, TRIBASIC (SARA III)  
 CAS:10101-89-0  
 RTECS #:TC9575000  
 Fraction by Wt: 100%  
 Other REC Limits:NONE SPECIFIED  
 EPA Rpt Qty:5000 LBS  
 DOT Rpt Qty:5000 LBS

## ===== Hazards Identification =====

LD50 LC50 Mixture:ORAL RAT LD50 IS 7400 MG/KG  
 Routes of Entry: Inhalation:NO Skin:YES Ingestion:YES  
 Reports of Carcinogenicity:NTP:NO IARC:NO OSHA:NO  
 Health Hazards Acute and Chronic:SODIUM PHOSPHATE IS SEVERLY IRRITATING  
 TO BODY TISSUES, ESPECIALLY MOIST ONES SUCH AS THE MUCOUS  
 MEMBRANES. DUSTS WILL IRRITATE THE UPPER RESPIRATORY TRACT CAUSING  
 COUGHING.  
 Explanation of Carcinogenicity:SODIUM PHOSPHATE IS NOT LISTED AS A  
 CARCINOGEN BY IARC, NTP, OR OSHA.  
 Effects of Overexposure:EYE:SEVERE IRRITATION. SKIN:IRRITATION,

POSSIBLE DERMATITIS. INHALED;RESPIRATORY  
IRRITATION, COUGHING, CHOKING, LARGE QUANTITIES MAY BE TOXIC.  
INGESTED:IRRITATION, BURNS OF MOUTH & THROAT. WILL PRODUCE NA  
USEA, VOMITING, DIARRHEA.

Medical Cond Aggravated by Exposure:NONE GIVEN BY MANUFACTURER.

=====  
===== First Aid Measures =====

First Aid:EYE:FLUSH W/WATER 15 MIN, HOLD LIDS OPEN. SKIN:REMOVE  
CONTAMINATED CLOTHING AND LAUNDRER BEFORE REUSE. WASH WITH SOAP &  
WATER. INHALED:REMOVE TO FRESH AIR. RESTORE BREATHING AS NEEDED.  
INGESTED:GIVE 2 LARGE GLASSES OF MILK OR WATER AND IMMEDIATELY  
INDUCE VOMITING. GIVE NOTHING BY MOUTH IF UNCONSCIOUS. GET  
IMMEDIATE MEDICAL CARE.

=====  
===== Fire Fighting Measures =====

Flash Point:NON-FLAMMABLE

Extinguishing Media:PRODUCT IS NON FLAMMABLE. EXTINGUISH FIRE WITH  
MEDIA APPROPRIATE FOR SOURCE OF FIRE.

Fire Fighting Procedures:FIRE FIGHTERS SHOULD USE NIOSH APPROVED SCBA &  
FULL PROTECTIVE EQUIPMENT WHEN FIGHTING CHEMICAL FIRE. USE WATER  
SPRAY TO COOL NEARBY CONTAINERS EXPOSED TO FIRE.

Unusual Fire/Explosion Hazard:FIRE OR EXCESSIVE HEAT MAY CAUSE  
PRODUCTION OF HAZARDOUS DECOMPOSITION PRODUCTS.

=====  
===== Accidental Release Measures =====

Spill Release Procedures:SWEEP,VACUUM OR OTHERWISE COLLECT, BEING  
CAREFUL NOT TO RAISE DUST. THEN FLUSH AREA WITH WATER.

Neutralizing Agent:NONE

=====  
===== Handling and Storage =====

Handling and Storage Precautions:STORE IN A COOL, DRY AREA, PROTECTED  
FROM MOISTURE. KEEP TIGHTLY CLOSED.

Other Precautions:NONE

=====  
===== Exposure Controls/Personal Protection =====

Respiratory Protection:RESPIRATOR WILL NOT NORMALLY BE NECESSARY. USE  
NIOSH/MSHA APPROVED AIR SUPPLIED RESPIRATOR OR RESPIRATOR FOR  
DUST/MIST IF EXPOSURE IS ABOVE THE TLV/PEL. SEE 29 CFR 1910.134 FOR  
REGULATIONS PERTAINING TO RESPIRATOR USE.

Ventilation:NORMAL ROOM VENTILATION IS SUFFICIENT. SUPPLEMENT WITH  
LOCAL EXHAUST IF PEL/TLV IS EXCEEDED.

Protective Gloves:RUBBER,VINYL OR OTHER IMPERVIOUS

Eye Protection:SAFETY GLASSES OR SPLASH GOGGLES

Other Protective Equipment:SAFETY SHOWER AND EYE WASH STATION, WORK  
CLOTHING TO PROTECT AGAINST SKIN CONTACT.

Work Hygienic Practices:USE GOOD CHEMICAL HYGIENE PRACTICE. AVOID  
UNNECESSARY CONTACT.

Supplemental Safety and Health

MANUFACTURER'S MSDS NO. 00004079-005.001

=====  
===== Physical/Chemical Properties =====

HCC:B3

Spec Gravity:1.620 @ 68F

pH:12

Appearance and Odor:WHITE CRYSTALLINE POWDER.

===== Stability and Reactivity Data =====

Stability Indicator/Materials to Avoid:YES  
STRONG ACIDS, IRON AND OTHER HEAVY METALS.  
Stability Condition to Avoid:HEAT  
Hazardous Decomposition Products:OXIDES OF PHOSPHORUS

===== Disposal Considerations =====

Waste Disposal Methods:DISPOSE I/A/W ALL FEDERAL, STATE AND LOCAL  
REGULATIONS. MANUFACTURER MAKES NO SUGGESTION OF DISPOSAL METHOD.

# Job Safety and Health

## It's the law!

# OSHA

Occupational Safety  
and Health Administration  
U.S. Department of Labor

### EMPLOYEES:

- You have the right to notify your employer or OSHA about workplace hazards. You may ask OSHA to keep your name confidential.
- You have the right to request an OSHA inspection if you believe that there are unsafe and unhealthful conditions in your workplace. You or your representative may participate in that inspection.
- You can file a complaint with OSHA within 30 days of retaliation or discrimination by your employer for making safety and health complaints or for exercising your rights under the *OSH Act*.
- You have the right to see OSHA citations issued to your employer. Your employer must post the citations at or near the place of the alleged violations.
- Your employer must correct workplace hazards by the date indicated on the citation and must certify that these hazards have been reduced or eliminated.
- You have the right to copies of your medical records and records of your exposures to toxic and harmful substances or conditions.
- Your employer must post this notice in your workplace.
- You must comply with all occupational safety and health standards issued under the *OSH Act* that apply to your own actions and conduct on the job.

### EMPLOYERS:

- You must furnish your employees a place of employment free from recognized hazards.
- You must comply with the occupational safety and health standards issued under the *OSH Act*.

This free poster available from OSHA –  
*The Best Resource for Safety and Health*

Free assistance in identifying and correcting hazards or complying with standards is available to employers, without citation or penalty, through OSHA-supported consultation programs in each state.

DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

### 1 Purpose

The purpose of this procedure is to prevent releases when possible and to ensure that all incidents that result in spills of petroleum, hazardous substances, wastewater/sewage or other pollutants are properly reported, both within DEP and to appropriate regulatory agencies. In an emergency, facility Emergency Action/Response Plans or Contingency Plans are the primary reference for immediate action. Actions necessary to protect life and health are the first priority in any emergency.

### 2 Scope

This procedure applies to all releases of petroleum, hazardous substances, wastewater/sewage or other pollutants on DEP property or at field work locations, whether or not caused by DEP activities or those of its contractors. This procedure does not apply to transportation accidents or other releases caused by third parties unrelated to DEP water or wastewater operations in New York City or its watersheds, although DEP may respond to these incidents as part of its water supply protection and City Hazmat technical support roles. This procedure also does not apply to routine self-reporting required under established permits.

### 3 Responsibilities

The following responsibilities generally apply throughout DEP, although Bureaus and individual facilities may develop more detailed Manuals and Emergency Plans that can deviate from these responsibilities. This is acceptable as long as responsibilities are clearly assigned:

**Employee:** It is the responsibility of all employees to prevent releases when possible and to immediately report any release of petroleum, a hazardous substance, wastewater/sewage or other pollutant, as described in the procedure below.

**Responsible Manager:** The highest ranking manager or supervisor within each DEP Bureau at each facility (or whose employees perform field operations outside of fixed facilities) is the "**Responsible Manager**" for that Bureau/Office's operation. The **Responsible Manager** must make the necessary calls to Division/Bureau management and Division/Bureau EH&S staff for assistance and must cooperate in reporting and investigation.

NEW YORK CITY

DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

**Contract Supervisor:** The senior staff person overseeing a remediation project will be referred to as the “*Contract Supervisor*.” *Contract Supervisor* has many definitions, depending on the Contract and/or managing Bureau:

- For contracts managed by BEDC Design, the *Contract Supervisor* is the Lead Project Engineer;
- For contracts managed by BEDC Construction, the *Contract Supervisor* is the DEP Resident Engineer, or the DEP employee directly responsible for overseeing the consultant Resident Engineer when a Construction Manager (CM) is responsible for resident engineering;
- For contracts managed by various BWS divisions, the *Contract Supervisor* is the Director of the Division who hired the Contractor or his/her designee (e.g., Project Manager); and
- For contracts managed by BWSO, the *Contract Supervisor* is the BWSO Manager (Director, Chief, Deputy Chief, etc.) responsible for managing and overseeing the contract or his/her designee (e.g., Project Manager).

**National Response Center:** The National Response Center (NRC) maintains a 24 hour per day, 7 day a week, 365 day a year Operations Call Center where all information is received via a toll-free number, entered directly into an on-line data base system, and electronically disseminated as part of the National Response System.

NRC is the single contact point for reporting all pollution incidents. It acts as a national 911 service for environmental incidents. Calling the toll-free number fulfills nearly all federal requirements for reporting oil and chemical spills, spills of nuclear material, chemical and biological warfare agents, train derailments, and pipeline spills.

The following are examples of incidents that warrant a call to the NRC:

Oil Spills: The responsible party shall notify the NRC as soon as he becomes aware of an oil spill from a vessel or facility operating *in or along U.S. navigable waters*.

Chemical Spills: The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) requires that all spills of hazardous substances (including radionuclides) exceeding reportable quantities, be reported by the responsible party to the NRC.

NEW YORK CITY

DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

Transportation Accidents: Transportation accidents involving hazardous materials, including radioactive substances, must be reported to the NRC immediately by the carrier when, as a direct result of the materials: a person is killed; a person receives injuries requiring hospitalization; property damage exceeds \$50,000; or fire, breakage, or spillage of an etiologic agent occurs.

#### 4 Spill Prevention

A large portion of DEP spills are a result of improperly maintained or damaged equipment. Equipment includes, but is not limited to, vehicles, construction equipment, pumps, meters, storage tanks, etc. **Responsible Managers** must prevent spills within their respective facility/work group by employing the following measures, where/when applicable:

- Utilizing checklists to conduct pre-use inspections of equipment;
- Emphasizing proper materials handling and container storage inspection practices;
- Using manufacturer recommended Maintenance Procedures (MPs) to develop in-house MPs for certain types of equipment or activities where there is no adequate preventive maintenance (PM) schedule in place. If neither exists, the facility shall develop equipment-specific MPs;
- Using breakaway or quick disconnect hoses and/or absorbent drip pads during product or fuel transfer and dispensing activities;
- Ensuring the proper labeling of valves and ports transferring or receiving chemical or petroleum products;
- Installing secondary containment devices (e.g., drip pans) on equipment;
- Scheduling replacement of damaged or old equipment; and
- Utilizing any other appropriate spill prevention measures.

The following sections describe the specific procedures to be followed for handling spills that occur within the Bureau of Water Supply (BWS), Bureau of Water & Sewer Operations (BWSO), Bureau of Wastewater Treatment (BWT), and Bureau of Engineering Design & Construction (BEDC).

## 5 Bureau of Water Supply (BWS) - Protocol for Reporting Spills/Releases

### 5.1 Initial Notification

Upon discovery of a spill/release, any DEP Employee or DEP Contractor (the "Discoverer") who becomes aware of any spill/release of a petroleum product, sewage and/or wastewater, hazardous substance, or other pollutant that occurs on DEP property or may potentially impact the DEP watershed/water supply shall:

- Immediately notify Supervisors/Co-workers, if they are or may be in IMMEDIATE DANGER;
- If medical attention is required, contact Emergency 911;
- **Immediately contact their respective Supervisor and *EH&S staff member* on duty to determine if the spill is at or above the NYSDEC *reportable quantity*; AND**
- **Immediately call the BWS DEP Police Croton Command Center (CCC) at 888-426-7433\* and provide as much of the information below as possible:**
  - Location of incident;
  - Time of incident;
  - Material released;
  - Status of staff (injuries, if any);
  - Name, position, and contact information of "discoverer";
  - Duration and estimated quantity of material released; and
  - Estimated impact to the environment and site weather conditions; AND
  - Whether or not the spill is at or above the NYSDEC *reportable quantity* and requires that DEP Police call NYSDEC for a Spill Number – **There is a 2-hour time limit to make this determination and contact NYSDEC.**
- **Except for:**

*Incidental releases of hazardous substances or petroleum.* These are releases of small quantities, such as a few ounces, that result from equipment maintenance, repair or leakage, which have impacted only an impervious surface. Only releases which are contained and collected before reaching the environment (land or waters of the State of New York) would fall under this definition.

**\*BWS personnel working IN CITY:** BWS personnel working IN CITY (i.e., DWQC personnel based in Queens, New York) are directed to **call the BWSO EHS On-Call phone number (646-879-3315) instead of the Croton Command Center** as indicated above.

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

**BWS Wastewater Treatment Plant Operators:** In addition to the aforementioned notification requirements, ALL BWS Wastewater Treatment Plant (WWTP) Operators must report all wastewater/sewage releases as directed by the facility's respective State Pollutant Discharge Elimination Systems (SPDES) permit(s) to NYSDEC directly as mandated by **6 NYCRR Subpart 750-2.7 Incident Reporting**. These reporting requirements may include, but not be limited to, Anticipated Non-Compliance, 2-Hour Oral reporting of By-pass, Upset or Other Incident, 24-Hour Oral reporting of Bypass, Upset or Other Incident, 5 Day Written Incident Report and any additional reporting as required under the facility-specific issued SPDES Permit.

### **5.2 Role of BWS DEP Police Croton Command Center (CCC)**

Upon notification of a spill/release by the Discoverer or participating Division ***EH&S staff member***, **AND NO LATER THAN 2-HOURS FROM INITIAL DISCOVERY**, the CCC is responsible for:

- Contacting NYSDEC, if the spill is at or above the NYSDEC *reportable quantity*, to relay spill/release information provided by the Discoverer or participating ***EH&S staff member*** and obtaining a Spill Number (IF issued by NYSDEC);
- If needed, dispatching BWS HazMat, Engineering (for spills of sewage and/or wastewater), BWS DEP Police, and/or any additional local authorities for emergency response; and
- If required, contacting the National Response Center (NRC) at (800) 424-8802.

### **5.3 Environmental Release Investigation – PART 1 of the ERR**

For all spills/releases (except “incidental” releases), and after contacting the CCC [or the BWSO EHS On-Call phone number (646-879-3315) if working IN CITY], the Discoverer and/or participating Division ***EH&S staff member*** must:

- Complete PART 1 of the Environmental Release Report (ERR – Attachment A) **no later than 48 hours from initial discovery**, and fax to Bureau EH&S at (914) 773-4530; the CCC [or the 24-hour DEP On-Call phone number if working IN CITY] shall provide the assigned Spill Number (IF provided by NYSDEC), to be included in PART 1 of the ERR.

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

#### **5.4 Environmental Release Investigation**

After the initial notifications and any necessary emergency response efforts are completed, the participating Division *EH&S staff member* (with assistance from the Discoverer, if necessary) shall conduct the necessary investigation to properly complete applicable sections of PARTs 2 and 3 of the ERR. PARTs 2 and 3 of the ERR shall be completed no later than six (6) days after discovery of the spill/release, unless outstanding circumstances warrant additional time for investigation (i.e., sampling/remediation event). These Sections also applies to spills or releases of wastewater and/or sewage at BWS WWTPs.

#### **5.5 Communicating Corrective Actions**

When the investigation is complete, the participating Division *EH&S staff member* shall inform his/her respective *Division Director* of any spill prevention recommendations that require follow-up. It is the responsibility of the affected *Division Director* (or designee) to ensure that all recommendations are properly resolved and documented in the ERR. Whenever a recommendation is not or cannot be implemented, a written explanation shall be documented in PART 3 of the ERR (or attached to ERR). The ERR will not be "closed" until all recommendations are resolved and documented.

#### **5.6 ERR Closure**

The affected *Division Director* (or designee) and the Bureau E, H & S Director (or designee) shall periodically check the status of completion of all spill prevention recommendations until they are properly resolved and documented in the ERR, within six (6) days of initial spill/release discovery, unless outstanding circumstances warrant additional time for investigation (i.e., sampling/remediation event). Final and/or Closed ERRs shall then be transmitted to *Bureau EH&S (fax to 914-773-4530)* for tracking purposes.

#### **5.7 Recordkeeping**

Copies of all closed ERRs shall be maintained by *Division EH&S* and *Bureau EH&S* for a minimum of five (5) years. Records of any training provided to fulfill any recommendations shall also be maintained by *Division EH&S* for a minimum of five (5) years.

& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

## 6 Bureau of Water and Sewer Operations (BWSO) - Protocol for Reporting Spills/Releases

### 6.1 Initial Notification – Part 1 of the ERR

Any Employee or contractor who becomes aware of a release of petroleum, hazardous substance or other pollutant shall immediately notify:

- Supervisors/Co-workers, if they are or may be in IMMEDIATE DANGER.
- **Emergency (911)** IF the incident CLEARLY REQUIRES EMERGENCY RESPONDERS (because it presents obvious danger to employees or the public); If employee doesn't have access to a phone, notify a facility Supervisor.
- The **Responsible Manager** or highest ranking Supervisor on duty, REGARDLESS OF THE SIZE OF THE RELEASE or whether it is inside a containment area.

Upon being notified of a release, the facility Responsible Manager or highest ranking Supervisor on duty for the operation must immediately notify BWSO Bureau EHS staff verbally either during regular business hours (9:00 am to 5:00 pm Monday through Friday) or the on-call Bureau EHS representative (via the 24-hour On-Call phone number 1-646-879-3248) and the Emergency Communications Center (212-689-1620) after business hours for all spills, **except:**

*Incidental releases of hazardous substances or petroleum.* These are releases of small quantities, such as a few ounces, that result from equipment maintenance, repair or leakage, which have impacted only an impervious surface. As addressed in BWSO spill training, only releases which are contained and collected before reaching the environment would fall under this definition. This exception (incidental releases of hazardous substances and petroleum) only applies to immediate notification of BWSO Bureau EHS. The spill is still logged and tracked by the facility for report to Bureau EHS in a facility monthly incidental spill log. If there is any uncertainty about a spill falling into this category, then Bureau EHS must be contacted immediately.

For all other spill incidents, the initial notification **MUST BE MADE VERBALLY TO AN EHS STAFF MEMBER** in order to guarantee that there will be a timely response to the spill. A voice mail, e-mail or fax is **NOT** acceptable as an initial notification. Notification can be

made to any BWSO EHS staff member, an Environmental or Health and Safety representative or the 24 hour On-Call representative. BWSO Bureau EHS maintains and distributes to its facilities an "EHS Contact List," which provides a list of all EHS employees and their contact numbers, for 24/7 support for releases or other emergencies.

Within **24 HOURS** of initial spill notification to Bureau EHS, the facility **Responsible Manager** must also provide Bureau EHS with Part 1 of the DEP Environmental Release Report (ERR - **Attachment A**) with as much of the information as is available, especially material released, quantity, and where the material was released.

## 6.2 Bureau EHS Assistance

The BWSO Bureau EHS staff is responsible for providing technical support to the facility to assess the release and, in most incidents, for notifying the appropriate regulatory agency, when required; for preparing and submitting written reports to NYSDEC (1-800-457-7362) and for leading incident investigations, should they be required.

Bureau EHS Staff will:

- Assess the release and assist the facility in release reporting (e.g., estimating the quantity of release) and cleanup.
- **DETERMINE IF REPORTABLE** (to outside agencies).
- If the release is reportable, **REPORT THE RELEASE** as soon as possible [within 2 hours] to the New York State Department of Environmental Conservation (NYSDEC) and, if situation warrants, "immediately" to the National Response Center (NRC). Be sure to get the NYSDEC and NRC spill numbers.
- If warranted, **ACTIVATE** emergency clean-up contractor's response teams to assist in the response and spill clean-up. BWSO Bureau EHS representatives will be on-site to supervise and direct the contractor's remediation efforts.

## 6.3 Environmental Release Investigation – Part 2 of the EER

After the initial notifications and any necessary emergency response are completed, Part 2 of the DEP ERR will be completed. As with Part 1, Part 2 can be completed by the **Responsible Manager** with as much information as available and must be submitted to Bureau EHS within 24 hours. The Bureau EHS Group and Facility EHS Liaison will assist in determining any contributing causes and potential corrective actions to prevent recurrence. This investigation

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

by EHS should be initiated as soon as possible and no later than 48 hours after the discovery of the spill. The Deputy Commissioner, Director, and Bureau EHS Director shall be informed of all recommendations arising from the investigation. All recommendations will then be assigned by the *Director* to the appropriate staff (e.g., operations, maintenance, engineering, or contract personnel) for prompt follow-up.

**6.4 Closeout of Spill Cases – PART 3 of the ERR**

The Bureau EHS staff will periodically check the status of all open spill cases and implementation of any spill prevention recommendations until they are all properly resolved. When all actions regarding a spill have been completed, Part 3 of the ERR will be completed, with a copy of the report stored in Bureau EHS files and the affected facility files.

**6.5 Communicating Results**

All Contractor Representative(s) and DEP employees will be advised of any actions or new operating instructions resulting from the spill incident that may affect them as soon as they are to be implemented. The immediate Supervisor will review the incident investigation results and recommendations with all affected personnel during the next scheduled Safety Meeting. In addition, incident investigation findings will be communicated to all contract employees if relevant to their job tasks. All facility and contract personnel informed of investigation results must sign and date an attendance sheet.

**6.6 Recordkeeping**

Copies of all ERRs shall be maintained by Bureau EHS for a minimum of 5 years. Records (i.e., sign-in sheets and attached summaries) of any training program provided to fulfill spill prevention recommendations shall also be maintained by EHS for a minimum of 5 years.

## 7 Bureau of Wastewater Treatment (BWT) - Protocol for Reporting Spills/Releases

### 7.1 Initial Notification

Any Employee who becomes aware of a release of petroleum, hazardous substance or other pollutants at a BWT facility shall immediately notify:

- Supervisors/Co-workers IF they may be or are in IMMEDIATE DANGER.
- **911** IF the incident CLEARLY REQUIRES EMERGENCY RESPONDERS (because it presents obvious danger to employees or the public).
- The **Responsible Manager** or highest ranking Supervisor on duty, REGARDLESS OF THE SIZE OF THE RELEASE or whether it is inside a containment area.

Upon being notified of a release, the facility **Responsible Manager** or highest ranking Supervisor on duty for the operation will immediately refer to the BWT Emergency Procedures Manual for guidance AND notify Bureau EHS staff during regular business hours (6:30 am to 4:00 pm Monday through Friday) or, when after business hours, the on-call Bureau EHS representative directly, for all releases. Bureau EHS will review the incident with the **Responsible Manager** and notify NYSDEC.

Additionally, Bureau EHS will notify the DEP 24 Hour Call Center (212-689-1520) for all releases, **except**:

***Incidental releases of hazardous substances.*** Releases of small quantities that result from equipment maintenance, repair or leakage, or occur when disconnecting lines after deliveries. [Note: All such releases must be contained and collected before reaching the environment].

***Minor releases of petroleum.*** Releases that are less than five gallons AND contained on a non-permeable surface AND are cleaned up within 2 hours.

Make sure to provide Bureau EHS and DEP 24 Hour Call Center with as much of the information on Part 1 of the DEP Environmental Release Report (ERR - **Attachment A**) as is already available, especially material released, quantity, and where the material was released.

Wastewater/sewage releases at BWT Facilities are to be reported as required in the BWT Emergency Procedures Manual, as indicated by the facility's State Pollutant Discharge

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

Elimination System (SPDES) permit(s), as mandated by **6 NYCRR Subpart 750-2.7 Incident Reporting**. These reporting requirements may include, but are not limited to, Anticipated Non-Compliance, 2-Hour Oral Reporting of By-pass, Upset or Other Incident, 24-Hour Oral Reporting of Bypass, Upset or Other Incident, 5-Day Written Incident Report and any/all Additional Reporting as required by the facility-specific SPDES Permit.

**Supervisors** may be required to follow additional, internal DEP notification protocols and are directed to refer to their Emergency Procedures Manual.

## 7.2 Bureau EHS Assistance/Reporting

The Bureau EHS staff is responsible for providing technical support to the facility to assess the releases, for notifying the appropriate regulatory agencies when required (NYSDEC (1-800-457-7362) and NRC (800-424-8802)), and for participating in incident investigations, if necessary. Bureau EHS will maintain an "EHS On-call List" that provides a list of employees with contact numbers for 24/7 support for releases or other emergencies.

Bureau EHS Staff will:

- Assess the release and assist the facility in release reporting (e.g., estimating the quantity of release) and clean-up.
- Determine if DEP 24 Hour Call Center has been notified. If it is determined that the DEP 24 Hour Call Center should be notified and the facility has not yet done so, the Bureau EHS Staff will notify them.
- If the Bureau HazMat and/or emergency clean-up contractors have not already been mobilized, determine if they should be mobilized to assist in the response and **ACTIVATE RESPONSE TEAMS** if necessary.
- **DETERMINE IF REPORTABLE** (to outside agencies).
- If the release is reportable, **REPORT THE RELEASE** within 2 hours to NYSDEC and "immediately" to the NRC. Be sure to get the NYSDEC and NRC spill numbers.

## 7.3 Environmental Release Investigation – Part 2 of the ERR

When called for, or at the direction of the Bureau's EHS Representative, an incident investigation team will be established to investigate the incident. After the initial notifications and any necessary emergency response are completed, the incident will be investigated and Part 2 of the DEP ERR will be completed. The Bureau EHS Group and Facility EHS Liaison

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

will assist in determining any contributing causes and potential corrective actions to prevent recurrence.

The investigation should be initiated as soon as possible and no later than 48 hours after the incident. Part 2 of the ERR should be completed as soon as possible, and no later than 6 days after the release so that it can be used by Bureau EHS Group for written spill reporting.

#### **7.4 Closeout of Spill Cases – PART 3 of the ERR**

The Bureau EHS staff will periodically check the status of all open spill cases and implementation of any spill prevention recommendations until they are all properly resolved. When all actions regarding a spill have been completed, Part 3 of the ERR will be completed, with a copy of the report stored in Bureau EHS files and the affected facility's files.

#### **7.5 Communicating Results**

All Contractor Representative(s) and DEP employees will be advised of any actions or new operating instructions that may affect them as soon as they are to be implemented. The immediate Supervisor will review the incident investigation results and recommendations with all affected personnel during the next scheduled Safety Meeting. In addition, incident investigation findings will be communicated to all contract employees if relevant to their job tasks. All facility and contract personnel informed of investigation results must sign and date an attendance sheet.

#### **7.6 Recordkeeping**

Copies of all ERR forms shall be maintained by Bureau EHS for a minimum of 5 years. Records (i.e., sign-in sheets and attached summaries) of any training program provided to fulfill spill prevention recommendations shall also be maintained by EHS for a minimum of 5 years.

## 8 Bureau of Engineering, Design and Construction (BEDC) - Protocol for Reporting Spills/Releases

### 8.1 At Bureau of Water Supply (BWS) Sites

Upon discovery of a spill/release, **AND NO LATER THAN 2 HOURS FROM INITIAL DISCOVERY**, any DEP Employee or DEP Contractor (the "Discoverer") who becomes aware of **any** spill/release of a petroleum product, sewage and/or wastewater, hazardous substance, or other pollutant that occurs on DEP property or may potentially impact the DEP watershed/water supply shall:

- Immediately notify Supervisors/Co-workers, if they are or may be in IMMEDIATE DANGER;
- **If medical attention is required, contact Emergency 911;**
- Contact the **Contract Supervisor** or Designee (e.g., Resident Engineer) and provide as much of the information below as possible:
  - Location of incident;
  - Time of incident;
  - Material released;
  - Status of staff (injuries, if any);
  - Name, position, and contact information of "discoverer";
  - Duration and estimated quantity of material released; and
  - Estimated impact to the environment and site weather conditions.

The **Contract Supervisor** shall continue as follows:

- Call the **BWS DEP Police Croton Command Center (CCC) at 888-426-7433**; inform the CCC that the appropriate notifications (including the call to NYSDEC) are being handled by BEDC personnel;
- Call the Safety Consultant's 24 hour hotline;
- Call the Facility Responsible Manager and BWS Bureau EHS (914-773-4418);
- In coordination with the Safety Consultant's on-call representative and Bureau EHS (BEDC), determine if the Spill/Release is reportable to NYSDEC and NRC (if applicable);
- Call NYSDEC spill hotline at 800-457-7362 (and NRC, if applicable) and obtain spill number(s); if reportable, NYSDEC must be notified **NO LATER THAN 2 HOURS FROM THE INITIAL DISCOVERY**;

NEW YORK CITY

DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting  
& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

- In coordination with the “Discoverer” and BWS Bureau EHS, **complete PART 1 of the Environmental Release Report (ERR – Attachment A) as soon as possible** and fax to BWS **Bureau EHS** at (914) 773-4530;
- E-mail PART 1 of the ERR to the contact list below:
  - To: Deputy Commissioner of BEDC
  - Cc: Commissioner; First Deputy Commissioner; Chief of Staff; General Counsel; Press Office; Office of EHS Compliance; Human Resources; DEP Police; BEDC Directors; Appropriate BEDC Division Chiefs; Bureau EHS Representative; Safety Consultant;
- Fax PART 1 of the ERR to the *DEP Division of Emergency Response and Technical Assessment* at 718-595-4690 if hazardous materials are involved.

**Notes:**

- Refer to BEDC’s latest *Spill/Release Notification Protocol* for names and contact information.
- The **Contract Supervisor** may delegate the above tasks to the consultant Resident Engineer if she/he is not present on the job site.
- All spills/releases must be reported at facilities with BEDC-managed contracts, regardless of reportable quantities.

**8.2 All other Sites (Non-BWS Sites)**

Upon discovery of a spill/release, **AND NO LATER THAN 2 HOURS FROM INITIAL DISCOVERY**, any DEP Employee or DEP Contractor (the “Discoverer”) who becomes aware of any spill/release of a petroleum product, sewage and/or wastewater, hazardous substance, or other pollutant that occurs on DEP property or may potentially impact the DEP water supply shall:

- Immediately notify Supervisors/Co-workers, if they are or may be in IMMEDIATE DANGER;
- **If medical attention is required, contact Emergency 911;**
- Contact the **Contract Supervisor or Designee (e.g., Resident Engineer)** and provide as much of the information below as possible:
  - Location of incident;
  - Time of incident;
  - Material released;

NEW YORK CITY

DEPARTMENT OF ENVIRONMENTAL PROTECTION

- Status of staff (injuries, if any);
- Name, position, and contact information of “discoverer”;
- Duration and estimated quantity of material released; and
- Estimated impact to the environment and site weather conditions.

The **Contract Supervisor** will continue as follows:

- Call the Safety Consultant’s 24 hour hotline;
- Call the Facility Responsible Manager;
- In coordination with the Safety Consultant’s on-call representative and Bureau EHS (BEDC), determine if the Spill/Release is reportable to NYSDEC and NRC;
- If reportable, call NYSDEC spill hotline at 800-457-7362 and NRC and obtain spill number(s). NYSDEC must be notified **NO LATER THAN 2 HOURS FROM the INITIAL DISCOVERY**;
- If hazardous materials are involved and spill incident warrants it, call DEP Division of Emergency Response and Technical Assessment at 718-595-4646;
- In coordination with the “Discoverer” and facility Responsible Manager, **complete PART 1 of the ERR as soon as possible**;
- E-mail PART 1 of the ERR to the contact list below:
  - To: Deputy Commissioner of BEDC
  - Cc: Commissioner; First Deputy Commissioner; Chief of Staff; General Counsel; Press Office; Office of EHS Compliance; Human Resources; DEP Police; BEDC Directors; Appropriate BEDC Division Chiefs; Bureau EHS Representative; Safety Consultant;
- Fax PART 1 of the ERR to the *DEP Division of Emergency Response and Technical Assessment* at 718-595-4690 if hazardous materials are involved.

**Notes:**

- Refer to BEDC’s latest *Spill/Release Notification Protocol* for names and contact information.
- The **Contract Supervisor** may delegate the above tasks to the consultant Resident Engineer if she/he is not present on the job site.
- All spills/releases must be reported at facilities with BEDC-managed contracts, regardless of reportable quantities.

### **8.3 Environmental Release Investigation – PART 2 of the ERR**

If required, form an investigation team in accordance with the Spill Prevention and Spill Reporting Policy. The *Contract Supervisor*, Host Bureau, Bureau EHS and/or their representatives and the contractor responsible for the Spill/Release shall be included as part of the investigation

When the clean-up operation is completed, complete the remainder of the ERR. Make sure that all members of the investigation team agree and sign the ERR.

### **8.4 Closeout of Spill Cases – PART 3 of the ERR**

If applicable, in coordination with Bureau EHS, contact NYSDEC and request the closure of the spill number. Indicate spill number closure date on page 3 of the ERR.

Submit the completed form to Bureau EHS for review and Close-Out. Bureau EHS will provide a copy of the closed-out report to the *Contract Supervisor* (e.g., Resident Engineer), the Host Bureau's Responsible Manager and EHS group, Office of Environmental Health and Safety Compliance (OEHSC) and Division of Emergency Response and Technical Assessment.

### **8.5 Communicating Corrective Actions**

Once the investigation is complete, the *Contract Supervisor* shall inform their respective Division Director and Division EHS personnel of all spill prevention recommendations, if any, that require follow-up. It is the responsibility of the Division Director (or designee) to ensure that all recommendations are properly resolved and documented in the ERR. Whenever a recommendation is not or cannot be implemented, a written explanation shall be documented in PART 3 of the ERR (or attached to ERR). The ERR will not be "closed" until all recommendations are resolved and documented.

### **8.6 Recordkeeping**

Copies of all closed ERR forms shall be maintained by Division EHS for a minimum of 5 years. Records of any training provided to fulfill any spill prevention recommendations in PART 2 of the ERR shall also be maintained by Division EH&S for a minimum of 5 years.

& Investigation**

Revision: \_\_\_\_\_ 2

Effective Date: 03/29/06

**9 FLEET Maintenance Personnel (Bureau of Human Resources and Administration; HRA) - Protocol for Reporting Spills/Releases**

**9.1 FLEET Maintenance Personnel working Upstate (within BWS Boundaries)**

FLEET Maintenance personnel working within the boundaries of the Bureau of Water Supply are directed to report spills/release as directed by Sections 5.1 and 5.3. The **FLEET Maintenance Supervisor** is responsible for conducting the necessary investigation required to complete PART 2 of the Environmental Release Report (ERR – Attachment A), communicating corrective actions with **BWS Bureau EH&S**, and providing copies of the closed ERR (ERR PARTs 1 through 3) to **BWS Bureau EH&S** (fax to: 914-773-4530). ERRs are to be closed no later than six (6) days after discovery of the spill/release, unless outstanding circumstances warrant additional time for investigation (i.e., sampling/remediation event). Copies of all closed ERR forms shall be maintained by **FLEET Maintenance EH&S** and **BWS Bureau EH&S** for a minimum of five (5) years.

**9.2 FLEET Maintenance Personnel working In-City**

FLEET Maintenance personnel working In-City (within the boundaries of the five NYC boroughs) are directed to report all spills/release as directed by Section 6.1, except minor releases of petroleum. *Minor releases of petroleum* are defined as releases/spills that are: (1) less than five gallons; (2) contained on a non-permeable surface; and (3) are cleaned up within two hours.

The **FLEET Maintenance Supervisor** is responsible for conducting the necessary investigation required to complete PART 2 of the ERR, and implementing corrective actions for proper ERR closure (PART 3 of the ERR). ERRs are to be closed no later than six (6) days after discovery of the spill/release, unless outstanding circumstances warrant additional time for investigation (i.e., sampling/remediation event). Copies of all closed ERR forms (ERR PARTs 1 though 3) shall be maintained by **FLEET Maintenance EH&S** for a minimum of five (5) years.

**DEFINITIONS USED FOR ROOT CAUSE AND CONTRIBUTING FACTORS**

1. Procedures may include, but are not limited to, Policies, procedures, work instructions and plans. Types of procedures may include Environmental, Health & Safety, Administrative, Operating or Maintenance. A Procedural Root Cause or Contributing Factor can be attributed to an incident if:
  - procedures that could have prevented the incident from occurring have not been written.
  - procedures are in place, however, they did not consider the situation in which the incident occurred or contained errors
  - procedures were drafted, but not approved.
  - Procedures exist, but are not typically followed or enforced

A Procedural Root Cause or Contributing Factor does not include conditions in which training was not performed or was inadequate.
2. A Training Root Cause or Contributing Factor can be attributed to an incident if:
  - training that could have reasonably prevented the incident was not provided.
  - training was significantly late
  - training did not address the tasks assigned to the position.
  - training was performed, but not checked to ensure the person understood (e.g. passing a test or observed for proficiency)
3. A Process Design and Controls Root Cause or Contributing Factor can be attributed to an incident if:
  - The process was not designed to address normal operating conditions
  - Insufficient safeguards were in place ( this does not include if safeguards were by-passed)
  - The process does not have controls to manage design parameters, such as level or pressure
4. An Inspection and Preventive Maintenance Root Cause or Contributing Factor can be attributed to an incident if inspection and preventive maintenance were not in accordance with applicable procedures, manufacturer's recommendations, government standards and industry standards and are adequate for the service conditions. If Preventive Maintenance procedures do not exist, it is considered a Procedural Root Cause.
5. An Equipment, Materials or Change Root Cause or Contributing Factor can be attributed to an incident if:
  - the equipment, parts, and materials procured were not as initially specified,
  - the equipment, parts and materials were defective
  - the equipment, parts and materials did not meet or exceeded the applicable specifications.
  - the process has been changed from its design (excluding changes approved by Engineering).
6. A Human Action Root Cause or Contributing Factor can be attributed to an incident if personnel actions, activities and decisions were in accordance with procedures, training and expected workplace standards. This includes both errors and willfully not following standards.
7. An External Root Cause or Contributing Factor can be attributed to an incident if external items, such as weather or third parties (excluding contractors) did not cause or contribute to the incident.
8. An Other Root Cause or Contributing Factor can be attributed to an incident if the incident has not been satisfactorily classified in one or more of the above categories. The Other cause must be identified.

 Effective Date: 3/31/06

**PART 2 - INVESTIGATION/REPORT** (To Be Completed By The Investigator or Team)

**Date Investigation Started:** \_\_\_\_\_ **Time Started:** \_\_\_\_\_ **AM / PM**

**DESCRIPTION OF INCIDENT**

*Provide a summary of the incident, material Spilled, contaminate found, personnel involved (name/title), etc. What, when, where, who, how, and why. Describe operations being conducted. **Fact ONLY.** Avoid speculation.*

Continued - see attached

**CONTRIBUTING FACTORS**

*List and explain all factors potentially contributing to the incident. Consider procedures, training, equipment, communications, human factors, environment or any other factors that contributed to the occurrence or severity.*

Continued - see attached

**Root Cause & Contributing Factors:**

- Procedures                       Training                       Process Design and Controls                       Inspection and Prevent Maint  
 Equipment, Materials or Changes                       Human Action                       External  
 Other: Explanation

**CLEANUP**

*Describe who cleaned up, when, how, and any verification/testing.*

Continued - see attached

**CORRECTIVE ACTIONS**

*List each recommendation to prevent reoccurrence. Complete first 3 columns for Investigation and the last 2 columns after implementation (all recommendations must be resolved to close out the case).*

Description of Corrective Action and Intent	Assigned to	Target Date	Date Resolved	Resolution/ Comments

**CONCLUSIONS**

*Summarize investigation conclusions below.*

**INVESTIGATION TEAM**

*The incident investigation team members who sign below have reviewed and agree with the conclusions of this Spill investigation report.*

Name	Signature	Title/Affiliation	Date

**REPORTS SUBMITTED:**

*Written reports must be sent to DEP Hazmat within 7 days, DEC within 14 days and NRC as soon as possible for Spills above their respective RQs.*

Sent by EHS Rep.: \_\_\_\_\_ Dates:  DEP  DEC  NRC

**PART 3 - CLOSEOUT (To Be Completed By The Investigation Team)**

**CLOSEOUT**

*I {Division Director/\_\_\_\_\_} have determined that all of the Corrective Actions listed above have been completed or otherwise addressed as indicated above. {transmit final closeout copy to Bureau/Office EHS}*

Name: \_\_\_\_\_ Signature: \_\_\_\_\_ Date: \_\_\_\_\_

**DEFINITIONS USED FOR ROOT CAUSE AND CONTRIBUTING FACTORS**

1. Procedures may include, but are not limited to, Policies, procedures, work instructions and plans. Types of procedures may include Environmental, Health & Safety, Administrative, Operating or Maintenance. A Procedural Root Cause or Contributing Factor can be attributed to an incident if:
  - procedures that could have prevented the incident from occurring have not been written.
  - procedures are in place, however, they did not consider the situation in which the incident occurred or contained errors
  - procedures were drafted, but not approved.
  - Procedures exist, but are not typically followed or enforced

A Procedural Root Cause or Contributing Factor does not include conditions in which training was not performed or was inadequate.
2. A Training Root Cause or Contributing Factor can be attributed to an incident if:
  - training that could have reasonably prevented the incident was not provided.
  - training was significantly late
  - training did not address the tasks assigned to the position.
  - training was performed, but not checked to ensure the person understood (e.g. passing a test or observed for proficiency)
3. A Process Design and Controls Root Cause or Contributing Factor can be attributed to an incident if:
  - The process was not designed to address normal operating conditions
  - Insufficient safeguards were in place ( this does not include if safeguards were by-passed)
  - The process does not have controls to manage design parameters, such as level or pressure
4. An Inspection and Preventive Maintenance Root Cause or Contributing Factor can be attributed to an incident if inspection and preventive maintenance were not in accordance with applicable procedures, manufacturer's recommendations, government standards and industry standards and are adequate for the service conditions. If Preventive Maintenance procedures do not exist, it is considered a Procedural Root Cause.
5. An Equipment, Materials or Change Root Cause or Contributing Factor can be attributed to an incident if:
  - the equipment, parts, and materials procured were not as initially specified,
  - the equipment, parts and materials were defective
  - the equipment, parts and materials did not meet or exceeded the applicable specifications.
  - the process has been changed from its design (excluding changes approved by Engineering).
6. A Human Action Root Cause or Contributing Factor can be attributed to an incident if personnel actions, activities and decisions were in accordance with procedures, training and expected workplace standards. This includes both errors and willfully not following standards.
7. An External Root Cause or Contributing Factor can be attributed to an incident if external items, such as weather or third parties (excluding contractors) did not cause or contribute to the incident.
8. An Other Root Cause or Contributing Factor can be attributed to an incident if the incident has not been satisfactorily classified in one or more of the above categories. The Other cause must be identified.

**ENVIRONMENTAL SPILL REPORTING GUIDELINES**

**A. In-City NYC DEP Reporting**

A Spill in one of the five boroughs of New York City requires that reports be made first to DEP “Hazmat” (Division of Emergency Response & Technical Assessment) before reports to state and federal authorities. A spill is “reportable whenever the quantity spilled exceeds the NYC “Spill Bill” Reportable Quantity (RQ), which is often lower than the corresponding State/Federal RQ. Refer to the “DEP Spill Bill” for specific reporting requirements.

Telephone notification is required as soon as possible. Written notification shall be made to the NYCDEP within one week of the spill by certified mail to the following address:

Department of Environmental Protection  
Division of Emergency Response & Technical Assessment  
96-05 Horace Harding Expressway  
Corona, NY 11368  
New York, New York 10007  
ATTN: Hazardous Substances  
Emergency Response Officer

The completed DEP internal Environmental Spill Report and Incident Investigation Report (if any injuries) contains the information needed for the required written report. Additional written reporting requirements, including weekly written status reports for longer term remediation, may be included in Departmental orders issued pursuant to §24-608 and 24-610 of the Administrative Code.

**B. Federal Reporting**

The Nation Response Center (NRC) maintains a 24 hour per day, 7 day a week, 365 day a year Operations Center where all information is received via the toll-free number, entered directly into an on-line data base system, and electronically disseminated as part of the National Response System.

NRC is the single contact point for reporting all pollution incidents. It acts as a national 911 service for environmental incidents. Calling the toll-free number fulfills nearly all federal requirements for reporting oil and chemical spills, spills of nuclear material, chemical and biological warfare agents, train derailments, and pipeline spills.

Once contacted, the NRC Duty Officer will guide the caller through a detailed series of questions to gather as much information as possible concerning the spill. The information is immediately entered into the Incident Reporting Information System (IRIS) and based on several pre-established criteria including material involved, mode of transportation, injuries, damage, and fatalities, select federal agency notification will take place within 15 minutes of receipt. When any of the following incidents occur, the NRC should immediately be contacted by the responsible party via the toll free number.

## **Reporting Requirements:**

### **Oil Spills**

The responsible party shall notify the National Response Center as soon as knowledgeable of an oil spill from a vessel or facility operating:

- ◆ In or along U.S. navigable waters;
- ◆ On the Outer Continental Shelf;
- ◆ In a deepwater port; or
- ◆ From a vessel transporting oil from the Outer Continental Shelf.

In practice, “in or along navigable waters” has been broadly interpreted as any location that could potentially drain to a waterway (i.e., just about everywhere).

### **Chemical Spills**

The Comprehensive Environmental Response, Compensation, and Liability Act requires that all spills of hazardous substances (including radionuclides) exceeding reportable quantities, be reported by the responsible party to the National Response Center. Title 40 of the Code of Federal Regulations Part 302 promulgates reportable quantities and reporting criteria. All the Extremely Hazardous Chemicals (EHS) which overlap with the CERCLA listed chemicals table (40 CFR Part 302.4) should be reported to NRC as well as to the LEPC and SERC.

### **Transportation Accidents**

Transportation accidents involving hazardous materials, including radioactive substances, must be reported to the National Response Center immediately by the carrier when, as a direct result of the materials:

- ◆ A person is killed;
- ◆ A person receives injuries requiring hospitalization;
- ◆ Property damage exceeds \$50,000; or
- ◆ Fire, breakage, or spillage of an etiologic agent occurs.

### **Liquid Pipeline Spills**

The responsible party must call the National Response Center when a pipeline system failure spills a hazardous liquid or carbon dioxide that causes any of the following:

- ◆ An explosion or fire;
- ◆ An escape to the atmosphere of more than five barrels a day of highly volatile liquid or carbon dioxide;
- ◆ A death or injury;
- ◆ Property damage exceeding \$50,000;
- ◆ Pollution of any body of water; or

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting and  
Investigation  
Attachment C**

Revision: 0  
Effective Date: 03/08/05

- ◆ An incident deemed significant by the operator.

**Gas Pipeline Spills**

Spills of any toxic, corrosive or flammable gas, liquefied natural gas (LNG) or gas from an LNG facility must be reported to the National Response Center by the responsible party when:

- ◆ A death or injury involving patient hospitalization occurs;
- ◆ More than \$50,000 damage occurs (including cost of lost gas)
- ◆ The Spill results in the emergency shutdown of an LNG facility; or
- ◆ An incident is deemed significant by the operator.

**Other Spills**

Discharges from a hazardous waste treatment or storage facility must be reported by the *Responsible Manager* at the facility. Abandoned dump or waste sites should be reported by anyone having knowledge of such a site.

**Incidents Involving Terrorism Or Possible Terrorist Activity**

Any incident related to terrorism or possible terrorist activity requires telephonic notification to the National Response Center. **DO NOT SEND AN ON-LINE REPORT!** This would include bombings, bomb threats, suspicious letters or packages, and incidents related to the intentional spill of chemical/biological/radio active agents. NRC watch standers have been trained to ask specific questions for such reports and will immediately pass the information to the proper agencies for response.

**1.1.1 State Reporting**

The Bureau of Spill Prevention and Response (BSPR) is responsible for the implementation of the New York State Department of Environmental Conservation's (DEC) oil spill cleanup and prevention programs. It is required that any spill or discharge of any quantity of oil or petroleum be reported to the DEC within 2 hours unless they meet all of the following criteria:

- ◆ The spill is known to be less than 5 gallons;
- ◆ The spill is contained and under the control of the spiller;
- ◆ The spill has not and will not reach the State's water or any land; and
- ◆ The spill is cleaned up within 2 hours of discovery.

NEW YORK CITY  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

Policies and Procedures Manual

Environmental, Health & Safety

Volume 2

**Spill Prevention, Environmental Release Reporting and  
Investigation  
Attachment C**

Revision: 0  
Effective Date: 03/08/05

Spill of a hazardous substance shall be reported to the DEC within 2 hours when:

- ◆ Quantity is greater than reportable quantity; or
- ◆ Spill results, or may reasonably be expected to result, in a fire with potential off-site impacts; or
- ◆ Spill causes, or may reasonably be expected to cause, an explosion; or
- ◆ Spill causes, or may reasonably be expected to cause, a contravention of air quality standards; or
- ◆ Spill results, or may reasonably be expected to result, in vapors, dust and/or gases that may cause illness or injury to persons, not including persons in a building at the facility where a Spill originates; or
- ◆ Runoff from fire control or dilution waters may cause or contribute to a exceeding water quality standards.

A spill or overflow of a reportable quantity of a hazardous substance to a secondary containment system does not have to be reported within 2 hours if all the following conditions are met:

- ◆ The secondary containment system meets the requirements of NYCRR sections 599.9 and 599.17 (standards for new or modified hazardous substance storage facilities);
- ◆ There is control over the spill or overflow, and it is completely contained within 24 hours; and
- ◆ The total volume of the spill or overflow is recovered or accounted for.

In the event that the spill or overflow is not completely contained within 24 hours, or its total volume is not accounted for within that time, such spill or overflow must be reported within 24 hours of its occurrence. If the secondary containment system does not prevent a reportable quantity of the hazardous substance from reaching the environment, the spill or overflow must be reported at the time the substance reaches the environment, but in no event later than 24 hours from the time of the spill or overflow.

A Reportable Quantity (RQ) is defined in 40 CFR Part 302, 40 CFR Part 355, or 6 NYCRR Part 597. If the RQ for the spilled substance is unknown, assume the RQ has been exceeded and report the spill accordingly.

1.1.2 Internal Reporting

Following an incident that resulted in a Spill of oil or other hazardous substance, notify management as defined in the procedure.

**SPILL PREVENTION, ENVIRONMENTAL RELEASE REPORTING AND  
INVESTIGATION**

**ATTACHMENT D**

**ENVIRONMENTAL RELEASE INVESTIGATION GUIDELINES**

## GUIDELINES FOR INVESTIGATING CATEGORY III ENVIRONMENTAL INCIDENTS

### A. Initial Data Collection

1. **Survey the Scene:** The incident investigation team will first consult with the emergency responders to determine whether the incident has been stabilized and that there is no remaining imminent danger. Once the emergency responders assess the scene for danger and determine that the incident has been safely mitigated, the incident investigation team will survey the scene and determine the following:
  - Who was involved;
  - What happened to lead to the release;
  - What systems or operations were affected; and
  - When did the actions or steps happen?
2. **Identify Witnesses:** The incident investigation team will identify witnesses to the incident. Each witness will be asked not to discuss the accident with anyone until he/she has been interviewed by the incident investigation team. However, each witness will be asked to immediately prepare a written account of what they experienced.
3. **Secure the Scene:** The incident scene will be secured by the incident investigation team in order to preserve evidence. Any items (e.g., damaged equipment and spill samples) that might help to explain what happened should be left untouched. Coordinate with and defer to police and/or fire investigators before collecting evidence. Disturbing the scene of a police or fire investigation may be a criminal offense.
4. **Collect and Preserve Evidence:** Based upon the nature of the incident and the requirements of outside investigation agencies, the incident investigation team will photograph and/or videotape the area. This includes the point of initiation and the entire affected area. The incident investigation team will collect evidence that contributed to the cause of the accident and is subject to change (e.g., dust, etc.) and document where the evidence was found. Then they will record (e.g., photograph and take notes) the relative locations of people, parts, and materials (i.e., note the positions of valves, switches, and any controls). Finally, they will collect any written documents that may aid the investigation, such as written instructions, container labels, operator logs, and training records. The date and time must be noted on all photographs.
5. **Interview Witnesses:** The incident investigation team will record statements from the operators, persons near the accident, witnesses, and emergency response personnel. Questions should relate to the events leading up to the accident including time of day, weather conditions, what happened, why it happened, and any suggestive corrective actions that should be taken to prevent reoccurrence. The date and time of all interviews must be recorded in interview notes.

Volume 2

**Spill Prevention, Environmental Release Reporting and  
Investigation  
Attachment D**

Revision: 0  
Effective Date: 03/08/05

**B. Incident Analysis**

The technique to be used in analyzing a serious incident will be cause and effect analysis. This technique requires that all incident investigation team members review the evidence and then meet as a group to determine root causes of the incident. The facts derived from a review of the evidence will be evaluated in relationship to four categories from which problems may arise. The four categories are the following:

Methods (procedures and practices).

Materials.

Machines.

Manpower (personnel).

Thomas Thomann, PE  
Wayne, New Jersey

DWG NO & DATE: (sheet 1 & 2) dated Nov 7, 2011

Dear Sir:

The above applicant recently submitted drawings of proposed building construction at the above location for our review and approval. The drawings listed above have been reviewed only for possible adverse effects on existing New York City Transit facilities resulting from the proposed building construction.

The drawings listed above are  Approved  Approved Except As Noted

**Subject To:**

- All work being performed in accordance with the approved drawings.
- The building plans meeting the Department of Buildings approval in all other respects.
- The construction materials being used for this project, the testing of materials and the inspection of the work meeting the requirements of the Department of Buildings.
- NYCT review will be required for any revisions to this proposed construction or for the use of cranes for construction in this vicinity.

Two copies of each of the above listed drawings, imprinted with the New York City Transit approval stamp dated Dec 1, 2011 were transmitted to the applicant for submission to your Department for a building permit.

*This letter does not constitute certification by the NYCT pursuant to the Zoning Resolution of the City of New York as to any matter, including, but not limited to, matters arising under Section 95-041 thereof.*

Yours truly,

Examiner: Fabrizi Sharabieim

- NOTES:**
1. THE EXISTENCE OF ANY COVENANTS, RESTRICTIONS, EASEMENTS AND/OR RIGHTS OF WAY OF RECORD, IF ANY, ARE NOT SHOWN OR ADDRESSED.
  2. SUBSURFACE AND ENVIRONMENTAL CONDITIONS WERE NOT EXAMINED OR CONSIDERED AS PART OF THIS SURVEY.
  3. THE OFFSETS OR DIMENSIONS SHOWN FROM THE STRUCTURES TO THE PROPERTY LINES ARE FOR A SPECIFIC PURPOSE AND USE AND THEREFORE ARE NOT INTENDED TO GUIDE IN THE ERECTION OF FENCES, RETAINING WALLS, POOLS, PATIOS, PLANTING AREAS, ADDITIONS TO BUILDINGS OR ANY OTHER CONSTRUCTION.
  4. DUE TO INACCESSIBILITY, ADDITIONAL STRUCTURES, IMPROVEMENTS AND/OR POSSESSION, IF ANY, ARE NOT SHOWN.
  5. LOT AREA = 35,741 SQ. FT. OR 0.8205 ACRES.
  6. THE LOCATIONS OF UNDERGROUND UTILITIES SHOWN ARE BASED ON VISIBLE ABOVE GROUND STRUCTURES, MARKOUT BY OTHERS, AND A ARCHITECTURAL SURVEY BY FEHRINGER SURVEYING, P.C DATED SEPTEMBER 19, 2005. LOCATIONS OF UNDERGROUND UTILITIES/STRUCTURES MAY VARY FROM LOCATIONS SHOWN HEREON. ADDITIONAL BURIED UTILITIES AND STRUCTURES MAY BE ENCOUNTERED.
  7. ELEVATIONS SHOWN HEREON REFER TO BROOKLYN HIGHWAY DATUM.

RE: Project: 544 Union Ave.  
Pace Project No.: 10180974

Dear Robert Wolff:

Enclosed are the analytical results for sample(s) received by the laboratory on January 19, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

## QUALIFIERS

Project: 544 Union Ave.

Pace Project No.: 10180974

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

### ANALYTE QUALIFIERS

- |    |   |
|----|---|
| CH | The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.   |
| L1 | Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.  |
| L3 | Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias. |
| SS | This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.              |

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

### **Metals Analysis:**

The Matrix Spike for batch 11679 had recoveries outside QC limits. However, since the associated Method Blank and Laboratory Control Sample were within control, no corrective action was necessary. Also, the RPD between the QC sample and the Method Replicate is outside QC limits. The MS/MSD RPD is outside the QC limits. The RPD criteria were met between the LCS/LCS Method Replicate. In addition, the serial dilution is outside QC limits, suggesting matrix interference.

The RPD between the QC sample and the Method Replicate is outside QC limits for batch 11715. The MS/MSD RPD is outside the QC limits. The RPD criteria were met between the LCS/LCS Method Replicate.

The Matrix Spike for batch 11678 had recoveries outside QC limits. However, since the associated Method Blank and Laboratory Control Sample were within control, no corrective action was necessary.

The Matrix Spike and the Matrix Spike Duplicate for batch 11681 had recoveries outside QC limits. However, since the associated Method Blank and Laboratory Control Sample were within control, no corrective action was necessary. Also, the serial dilution is outside QC limits, suggesting matrix interference.

### **TCLP Metals Analysis:**

Per client request sample AC63081-047 for Mercury was tumbled outside the hold time.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

## **Reporting Limit Definitions**

## HCV Reporting Limit Definitions/Data Qualifiers

### REPORTING DEFINITIONS

DF = Dilution Factor

MDL = Method Detection Limit

RL\* = Reporting Limit

ND = Not Detected

RT = Retention Time

NA = Not Applicable

*\*Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

### DATA QUALIFIERS

- B- Indicates analyte was present in the Method Blank and sample.
- d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.
- E- Indicates the concentration exceeded the upper calibration range of the instrument.
- J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

-----

Bob,

I have activated the samples below for the requested parameters on one week turnaround time with results due on 12/21.

Thanks and please let me know if you need anything else.  
Ben

From: Wolff, Robert [mailto:robert.wolff@urs.com]  
Sent: Wednesday, December 14, 2011 11:54 AM  
To: bRao@hampton-clarke.com  
Subject: RE: 1120830\_111213164601 544 Union Ave Preliminary Results

Ben, please run additional totals analyses (Hg, Pb and As) on the following contingency samples (12' to 14')

B-1, AC63111-037  
B-3, AC63081-005  
B-12, AC63111-021  
B-13, AC63111-008  
B-14, AC63081-032  
B-15, AC63111-004  
B-16, AC63081-047  
B-17, AC63111-012  
B-19, AC63081-037

Also, run an additional TCLP for Lead on B-1 (12' to 14'), AC63111-037

-----

Ben, if you have enough soil volume, I'd like to add a few more TCLPs:

For lead:

B-1 (4-6)  
B-1 (8-10)  
B-1 (10-12)

And, for Arsenic:

-----

Bob,

I have activated the samples below for TCLP analysis on 1 week TAT. Results should be available on 1/18/12. We will note the TCLP Hg hold time in the non-conformance.

Thanks and please let me know if you need anything else.  
Ben

Ben, go ahead and analyze anyway...just note that it exceeded the hold time.

Thanks, Bob

Subject: RE: 544 Union Ave

Hi Bob,

We checked the volume and we do have enough to perform TCLP on the samples below. I'll activate.

The sample requested for TCLP mercury below, B-16 (12-14) is past hold for TCLP Mercury. Should we proceed with it past hold or should we only analyze for TCLP Arsenic and Pb. TCLP Mercury needed to be tumbled within 28 days. Other metals is 6 months.

Thanks.  
Ben

# PROJECT MODIFICATIONS

**Client:** URS-NYC

**HCV Project #:** 1120730

**Project:** 544 Union Ave

---

Ben, the client would like to run a few more TCLPs (if you have enough sample volume) for the following samples:

B-2 (8' to 10') for lead - AC63111-039

B-14 (4' to 6') for lead - AC63081-028

B-15 (10' to 12') for arsenic and lead - AC63111-003

B-16 (12' to 14') for mercury, arsenic and lead - AC63081-047

Please provide the quickest TAT possible.

Also you will be receiving four groundwater samples on Monday.

Finally, please issue the final report for the December samples.

Thanks, Bob

Above activated on 1 week TAT. BR 1/11/12.

## CONDITION UPON RECEIPT

Batch Number AC63081

Entered By: Ricardo

Date Entered 12/7/2011 7:07:00 PM

---

- 1 Yes Is there a corresponding COC included with the samples?
- 2 Yes Are the samples in a container such as a cooler or Ice chest?
- 3 Yes Are the COC seals intact?
- 4 Yes Please specify the Temperature inside the container (in degC)  
2.8C
- 5 Yes Are the samples refrigerated (where required)/have they arrived on ice?
- 6 Yes Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
- 7 Yes Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
- 8 Yes Are all of the sample labels or numbers legible? If no specify:
- 9 Yes Do the contents match the COC? If no, specify
- 10 Yes Is there enough sample sent for the analyses listed on the COC? If no, specify:
- 11 YES Are samples preserved correctly?
- 12 Yes Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
- 13 NA Other comments ...Specify
- 14 NA Corrective actions (Specify item number and corrective action taken).

Comments: \_\_\_\_\_  
 \_\_\_\_\_

### Flag Codes:

U or ND - Indicates Compound was not found above the detection/reporting limit  
 P - ICP-AES  
 CV -ColdVapor  
 MS - ICP-MS

## Form1 Inorganic Analysis Data Sheet

Sample ID: AC63081-038  
 Client Id: B-20 4-6  
 Matrix: SOIL  
 Level: LOW
