## NYC VCP Cleanup Plan Remedial Activities to Begin

The New York City Office of Environmental Remediation (OER) is providing this Fact Sheet pursuant to the New York City Voluntary Cleanup Program (VCP). OER has approved the Remedial Action Work Plan (RAWP) submitted by Fulton Hill Corner LLC for 1035 Fulton Street in Brooklyn, New York. The remedial work will begin in May 2014. The RAWP can be reviewed electronically or in person at the document repositories identified in the box at the left.

### Site Description

The Site is 6,438 square feet and is made up of four different lots which are currently uncapped and undeveloped. The proposed future use of the site consists of redeveloping the site with a 7-story mixed use building, with a cellar, which will occupy the entire site.

### Summary of the Remedy

The remedial action for 1035 Fulton Street will entail soil excavation and the installation of a composite cover system, and vapor barrier. If Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs) are not achieved, institutional controls and site management will also be required.

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and implementation of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan;
- Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds;
- Establishment of Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 1 Unrestricted Use SCOs. For development purposes, the entire property will be excavated to a depth of 11 feet;
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities;
- Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs;
- As part of development, installation of a vapor barrier below the basement concrete slab and behind the foundation walls of the proposed building;
- As part of development, construction and maintenance of an engineered composite cover consisting of a 6 inch thick concrete basement slab;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP;
- If Track 1 is not achieved, submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance, monitoring, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Submission of a RAR that describes the remedial activities certifies that the remedial requirements have been achieved and lists any changes from the RAWP.

For more information visit:  
[www.nyc.gov/oer](http://www.nyc.gov/oer)

Cleanup activities are scheduled to begin in May 2014 and are expected to be completed by July 2013. Construction of the building foundation, as well as the installation of the vapor barrier is expected to be completed in six months.

**Next Steps:** After the enrollee completes the remedial work, a RAR will be prepared and submitted to OER. The RAR will describe the cleanup activities and certify that all cleanup requirements were met. Once the RAR is approved, OER will issue a Notice of Completion, a City liability release, and a New York City Green Property Certificate. OER will then issue a fact sheet announcing the completion of the remedial action and identify all engineering and institutional controls (if required) to be used at the Site.
