

Public Comment Period

March 23, 2015
to
April 23, 2015

Where can I view project documents?

Online at:

<http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml>

Internet access to view documents is available at the public library.

The closest location is:

Brooklyn Public Library
Greenpoint Branch
107 Norman Avenue,
Brooklyn, NY 11222

Please call (718) 349-8504 for hours of operation

Whom can I contact for project information?

Alysha Alfieri
Project Manager
NYCOER
100 Gold Street, 2nd Floor
New York, NY 10038
212-341-2073
AAlfieri@dep.nyc.gov

and

Shaminder Chawla
Deputy Director
NYCOER
(212) 442-3007
Schawla@dep.nyc.gov

NYC VCP Cleanup Plan Available for Review and Comment

The New York City Office of Environmental Remediation (OER) provides this Fact Sheet pursuant to New York City's Voluntary Cleanup Program (VCP). An application has been submitted by Stellar Management for enrollment of the property located at 209 and 211-235 McGuinness Boulevard in the Greenpoint section of Brooklyn, New York and identified as Block 2576, Lot 20 and 23 into the VCP. The Remedial Investigation Report (RIR) details the results of an environmental investigation at the site including the nature and extent of contamination. The draft Remedial Action Work Plan (RAWP) proposes remedial actions to address contamination delineated in the RIR.

Public Comments on the RAWP

OER is accepting public comments on the draft RAWP for 30 days until April 23, 2015. The RIR and draft RAWP are available for review at the document repositories identified in the box on the left including a public library branch and through a link to OER's website. Comments should be sent to Mr. Shaminder Chawla via mail or e-mail (see contact information at left).

Site Description

The Site is 33,750 square feet and is currently developed with three commercial buildings and one residential building. The proposed future use of the Site will be a 8-story mixed use commercial and residential building with a full cellar covering used for parking, mechanical room, and storage.

Summary of RIR

The environmental investigation identified several Semi-Volatile Organic Compounds (SVOCs), VOCs, pesticides and metals detected above cleanup guidelines in the soil. Groundwater samples detected three metals above Groundwater Quality Standards. Soil vapor samples showed low levels of petroleum-related compounds.

Summary of the Remedy

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan;
- Implementation of a Community Air Monitoring Plan for particulates and volatile organic carbon (VOCs) compounds;
- Selection of NYSDEC 6NYCRR Part 375 Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Unrestricted Use SCOs. The property will be excavated to a final grade of 11 feet below ground surface for the cellar. Additionally, metals and SVOCs hotspot will be excavated to 16 feet. A total estimated 20,414 tons of soil will be excavated and removed from the property;
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media onsite;
- Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP;

If Track 1 Unrestricted Use cleanup is not achieved, the following construction elements (as part of new development) will be implemented as Engineering and Institutional Controls:

- As part of new development, installation of a vapor barrier/waterproofing system below the concrete slab underneath the building, as well as behind foundation walls of the proposed building;
- As part of new development, construction and maintenance of an engineered composite cover consisting of 12" concrete slab below the footprint of the new building;
- if Track 1 cleanup is not achieved, submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Continued registration with E-designation for the property if Track 1 cleanup is not achieved.

Next Steps

OER will review the draft RAWP and consider all public comments submitted during the comment period before it approves a final RAWP. The approved RAWP will be placed in the public library branch and on OER’s website and a second fact sheet will be issued before remedial work begins.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building.
