

## NYC VCP Cleanup Plan Available for Review and Comment

### Public Comment Period

June 9, 2015  
to  
July 9, 2015

### Where can I view project documents?

Online at:

<http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml>

Internet access to view documents is available at the public library.

The closest location is:

Brooklyn Public Library  
Williamsburg Branch  
240 Division Avenue  
Brooklyn, NY 11211

Please call (718) 302-3485 for hours of operation

### Whom can I contact for project information?

Eric Ilijevich  
Project Manager  
NYCOER  
100 Gold Street, 2<sup>nd</sup> Floor  
New York, NY 10038  
212-341-2034

The New York City Office of Environmental Remediation (OER) provides this Fact Sheet pursuant to New York City's Voluntary Cleanup Program (VCP). An application has been submitted by Adam America Real Estate for enrollment of the property located at 304-310 North 7<sup>th</sup> Street in the Williamsburg section of Brooklyn, New York and identified as Block 2331, Lots 9, 10 and 15 into the VCP. The Remedial Investigation Report (RIR) details the results of an environmental investigation at the site including the nature and extent of contamination. The draft Remedial Action Work Plan (RAWP) proposes remedial actions to address contamination delineated in the RIR.

#### Public Comments on the RAWP

OER is accepting public comments on the draft RAWP for 30 days until July 9, 2015. The RIR and draft RAWP are available for review at the document repositories identified in the box on the left including a public library branch and through a link to OER's website. Comments should be sent to Mr. Shaminder Chawla via mail or e-mail (see contact information at left).

#### Site Description

The Site is 13,800 square feet and currently consists of two vacant attached brick and masonry buildings which together occupy the entire footprint of the property. The buildings have been partially demolished with the roof and interior portions removed. The proposed future use of the Site will be a new 7-story slab-on-grade residential apartment building with a rear on-grade courtyard. The building will not have a cellar. The first floor will consist of the residential lobby, three mechanical rooms, two recreational rooms, one residential unit, a stairwell, an elevator and a 5,794 sf parking area. The second through seventh floors will consist of residential apartments.

#### Summary of RIR

The environmental investigation identified historical fill material up to depths of 4 feet. Several Volatile Organic Compounds (VOCs) Semi-Volatile Organic Compounds (SVOCs), and metals are above cleanup guidelines in soil and are above Groundwater Quality Standards. Soil vapor samples showed low levels of petroleum related and chlorinated VOCs but were below the Air Guideline Values monitor level established by the New York State Department of Health.

#### Summary of the Remedy

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan;
- Implementation of a Community Air Monitoring Plan for particulates and volatile organic carbon (VOCs) compounds;
- Establishment of Site-Specific (Track 4) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. The footprint of the new building will be excavated 2 feet below grade for grading purposes and construction of the building's slab on grade. Hotspot areas identified during remedial investigations will be delineated and removed. Approximately 1,554 tons of soil will be excavated and removed from Site.
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media onsite;
- Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs;
- Installation of a vapor barrier system beneath the building slabs and behind foundation walls of the proposed building;
- Construction and maintenance of an engineered composite cover consisting of 6" concrete slab to prevent human exposure to residual soil/fill remaining under the site;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP;
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Continued registration with E-designation for the property.

**Next Steps**

OER will review the draft RAWP and consider all public comments submitted during the comment period before it approves a final RAWP. The approved RAWP will be placed on OER’s website and a second fact sheet will be issued before remedial work begins.

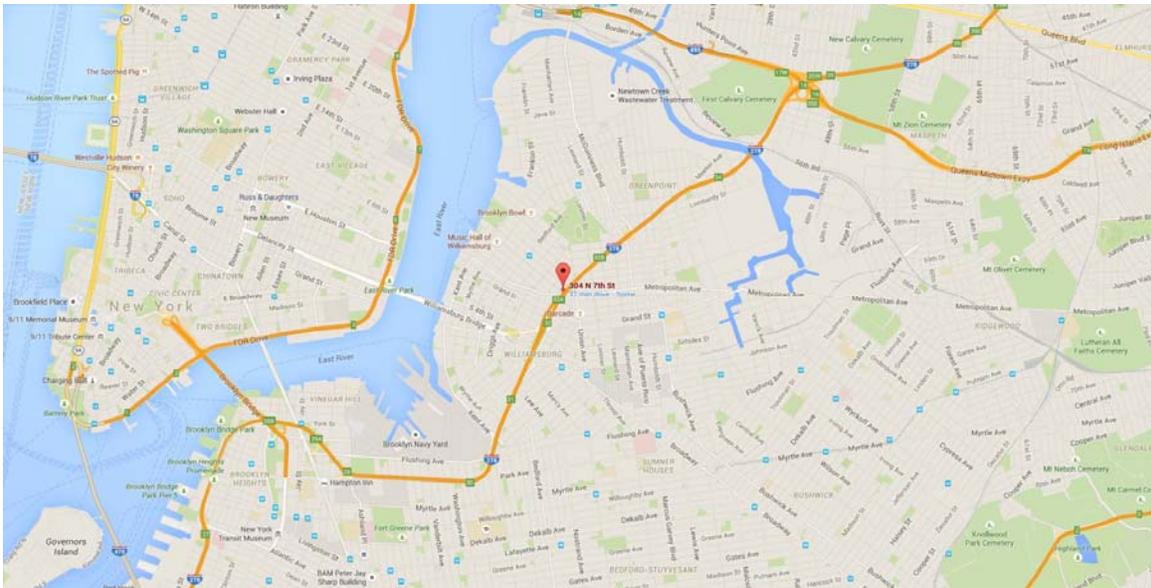

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building.
