CERTIFICATION

I, Mark E. Robbins, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 1353 Flatbush Avenue Site, (NYC OER Site No. 16EHAZ157K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 1353 Flatbush Avenue in the Flatbush section in Brooklyn, New York and is identified as Block 5227 and Lots 13, 15 and 16 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 9,744-square feet and is bounded by a 2-story mixed-use structure to the north, a 2-story mixed-use structure to the south, East 26th Street to the east, and Flatbush Avenue to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is a vacant lot.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 7-story, mixed-use building with a full basement. The basement and first floor will contain retail space with the 2nd through 7th floors containing 35 residential units. The building footprint will cover 7,837 square feet, 80% of the site. The remaining portion of the site will be used for a rear yard and paved walkways.

The proposed development will involve the excavation of the building footprint to a maximum depth of 14.5 feet below grade. Groundwater is expected at 20 feet below grade at the Site; therefore dewatering is not anticipated during excavation. Approximately 6,313 tons of soil will be excavated and removed from this Site.

Layout of the proposed site development is presented in Figure 3. The current zoning designation is C2-4/R7A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of a Phase I Environmental Site Assessment (ESA) Report prepared by Singer Environmental Group (November 2004) for Lot 16, a Site history was established. According to Sanborn Fire Rate Insurance Maps, the Site was undeveloped from as early as 1907. The 1930 and 1950 maps show Lot 13 as a filling station with five gasoline tanks. By 1969 the tanks are no longer shown and the filling station replaced with 2 commercial buildings. By

1977 one of the commercial buildings is occupied by an auto repair shop and Lot 16 is labeled as parking. This configuration remained until 1992 when the auto repair was replaced by used auto sales.

The AOCs identified for this site include:

1. The historical use of the Site as a filling station, auto repair and auto sales.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Conducted a site-wide geophysical survey to identify buried anomalies indicative of subsurface structures;
3. Installed 6 soil borings across the entire project Site, and collected 12 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed 3 groundwater monitoring wells throughout the Site to establish groundwater flow and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality; and
5. Installed 4 soil vapor probes around Site perimeter and collected 4 samples for chemical analysis.

Summary of Environmental Findings

1. No evidence of USTs was observed at the Site.
2. Elevation of the property ranges from 27.04 to 28.89 feet.
3. Depth to groundwater ranges from 24.20 to 24.81 feet below grade at the Site.
4. Groundwater flow is generally from northeast to southwest beneath the Site.
5. Bedrock was not encountered within 35 feet below grade at the Site.
6. The stratigraphy of the site, from the surface down, consists of 2 feet of brown silty sand, underlain by approximately 2 to 4 feet of light brown sandy clay, underlain by approximately 30 feet of tan coarse-grained sand.

7. Soil/fill samples results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives and Restricted Residential Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed no detectable concentration of PCBs. Three volatile organic compounds (VOCs) including acetone (max. 0.11 milligrams per kilogram [mg/kg]), 1,2,4-trimethylbenzene (max. 4 mg/kg) and methyl ethyl ketone (max. 0.14 mg/kg) were detected in two deep soil samples at concentrations exceeding Unrestricted Use SCOs. Tetrachloroethylene was also detected at 0.026 mg/kg in one deep sample, but below Unrestricted Use SCOs. Several semi-volatile organic compounds (SVOCs) consisting of polycyclic aromatic hydrocarbon (PAH) compounds were detected in three shallow soil samples at concentrations exceeding Restricted Residential Use SCOs, including benz(a)anthracene (max. 110 mg/kg), benzo(a)pyrene (max. 99 mg/kg), benzo(b)fluoranthene (max. 100 mg/kg), benzo(k)fluoranthene (max. 73 mg/kg), chrysene (max. 120 mg/kg), dibenzo(a,h)anthracene (max. 16 mg/kg), fluoranthene (max. 270 mg/kg), indeno(1,2,3-cd)pyrene (max. 65 mg/kg), phenanthrene (max. 190 mg/kg) and pyrene (max. 220 mg/kg). One SVOC, dibenzofuran (max. 11 mg/kg), was detected in two shallow samples at a concentration exceeding Unrestricted Use SCO. The pesticide, 4,4'-DDT (max. 0.011 mg/kg), was detected in two shallow samples and two deep samples at concentrations exceeding Unrestricted Use SCO. Several metals including arsenic (max. 18.6 mg/kg), barium (max. 451 mg/kg), cadmium (max. 3.71 mg/kg), copper (max. 1,380 mg/kg), lead (max. 2,660 mg/kg) and mercury (max. 1.21 mg/kg) were detected in three shallow soil samples at concentrations exceeding Restricted Residential Use SCOs. Nickel (max. 42.9 mg/kg) and zinc (max. 541 mg/kg) were also detected at concentrations exceeding Unrestricted Use SCOs.
8. Groundwater samples results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Groundwater samples collected during the investigations showed no PCBs or pesticides in any sample. Three VOCs were detected above GQS including isopropylbenzene (25 µg/L) and n-propylbenzene (39 µg/L) in MW-2, and chloroform (max. 11 µg/L) in MW-3. Four SVOCs were detected above GQS in MW-3, including benz(a)anthracene (0.03 µg/L), benzo(b)fluoranthrene (0.02 µg/L), benzo(k)fluoranthrene (0.02 µg/L) and chrysene (0.02 µg/L). Several

dissolved metals were identified in groundwater but only manganese (max. 1.1 µg/L) and sodium (max. 143 µg/L) exceeded their respective GQS.

9. Soil vapor results collected during the RI were compared to compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor results collected during the RI showed relatively low-levels of petroleum related VOCs. Total concentrations of petroleum-related VOCs (BTEX) ranged from 12.83 µg/m³ to 38.79 µg/m³. Toluene was the highest detected petroleum-related compound with a concentration of 17.2 µg/m³ in SV-3. Chlorinated VOCs were also detected with tetrachloroethylene (PCE) detected at a maximum of 6.05 µg/m³, 1,1,1-trichloroethane (TCA) detected at 0.383 µg/m³ and trichloroethylene (TCE) detected at a maximum of 0.081 µg/m³. Concentrations for PCE, TCE and carbon tetrachloride were below the monitoring level ranges established within the State DOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Hello Living/Hello Flatbush LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.224-acre site located at 1353 Flatbush Avenue in the Flatbush section of Brooklyn, New York. Mixed-use commercial and residential uses are proposed for the property. The RI work was performed between December 9 and 11, 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 1353 Flatbush Avenue in the Flatbush section in Brooklyn, New York and is identified as Block 5227 and Lots 13, 15 and 16 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 9,744-square feet and is bounded by a 2-story mixed-use structure to the north, a 2-story mixed-use structure to the south, East 26th Street to the east, and Flatbush Avenue to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is a vacant lot.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 7-story, mixed use building with a full basement. The basement and first floor will contain retail space with the 2nd through 7th floors containing 35 residential units. The building footprint will cover 7,837 square feet, 80% of the site. The remaining portion of the site will be used for a rear yard and paved walkways.

The proposed development will involve the excavation of the building footprint to a maximum depth of 14.5 feet below grade. Groundwater is expected at 20 feet below grade at the Site; therefore dewatering is not anticipated during excavation. Approximately 6,313 tons of soil will be excavated and removed from this Site.

Layout of the proposed site development is presented in Figure 3. The current zoning designation is C2-4/R7A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area surrounding the Site consists of a mix of residential and commercial properties. An evaluation of the OER's *SPEED* application indicated that there is one (1) sensitive receptor present within a 500-foot radius of the Subject Property. This sensitive receptor is Kids Etcetera Day Care Center, Inc. located approximately 300 feet northwest of the Site at 1331 Flatbush Avenue. No other sensitive receptors (such as schools, hospitals or day-care facilities) are present within a 500-foot radius of the Site. The surrounding land usages are presented in Figure 4.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of a Phase I Environmental Site Assessment (ESA) Report prepared by Singer Environmental Group (November 2004) for Lot 16, a Site history was established. According to Sanborn Fire Rate Insurance Maps, the Site was undeveloped from as early as 1907. The 1930 and 1950 maps show Lot 13 as a filling station with five gasoline tanks. By 1969 the tanks are no longer shown and the filling station replaced with 2 commercial buildings. By 1977 one of the commercial buildings is occupied by an auto repair shop and Lot 16 is labeled as parking. This configuration remained until 1992 when the auto repair was replaced by used auto sales.

2.2 Previous Investigations

Based on the Phase I ESA, a limited Subsurface Investigation was performed by Associated Environmental Services, LTD. (AES) in August 2005, which revealed the presence of subsurface anomalies consistent with underground storage tanks (USTs). Tank closure activities occurred from April to June 2006 and included the removal of 5 gasoline 550-gallon USTs and 1 fuel oil 300-gallon UST. Due to evidence of soil contamination in the vicinity of the tanks, NYSDEC was notified and Spill Nos. 06-00423 and 06-00910 assigned. Approximately 114.85 tons of contaminated soil was removed from the Site and properly disposed of. Eight (8) end-point samples were collected from the sidewalls and bottom of the 5 gasoline USTs excavation pit and 2 samples from the area of the fuel oil UST. Based on the analytical results of the end-point samples, both spill cases were closed by NYSDEC on July 10, 2006. The Phase I ESA, UST Closure Report and NYSDEC Spill Closure Letter are provided in Appendix A.

2.3 Site Inspection

A site inspection was conducted by Mr. A.J. Infante of Hydro Tech Environmental, Corp. on December 9, 2015. During the site inspection, the property was observed to be vacant, with a portion of the property located on the exterior of the Site's perimeter fencing. This area is currently utilized as parking for adjacent residential structures and is reportedly an easement. The weather was noted as overcast and approximately 50-degrees Fahrenheit.

2.4 Areas of Concern

The AOCs identified for this site include:

1. The historical use of the Site as a filling station, auto repair and auto sales.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Mr. Mark E. Robbins. The Project Geologist is Mr. A.J. Infante.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. All investigatory derived wastes (IDW) generated during the RI were placed in 55-gallon drums and properly disposed of.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Hydro Tech Environmental Corp performed the following scope of work at the Site in December of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Conducted a site-wide geophysical survey to identify buried anomalies indicative of subsurface structures;
3. Installed 6 soil borings across the entire project Site, and collected 12 soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed 3 groundwater monitoring wells throughout the Site to establish groundwater flow and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality; and
5. Installed 4 soil vapor probes around Site perimeter and collected 4 samples for chemical analysis.

Photographs taken during the investigation are provided in Appendix B.

4.1 Geophysical Investigation

A geophysical survey was conducted in all reasonably accessible portions of the property on December 9, 2015. The geophysical survey was performed utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. No subsurface anomalies indicative of underground storage tanks (USTs) or other sizeable subsurface debris were observed.

The geophysical report is provided in Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of 6 soil probes (designated SP-1 through SP-6), 3 groundwater monitoring wells (designated MW-1 through MW-3) and 4 soil vapor probes (designated SV-1 through SV-4) were installed at the Site in accordance with the Phase II Work Plan (Short Form) prepared by Hydro Tech and accepted by the OER during December 2015. Geoprobe direct-push drilling technology was utilized to install soil probes, monitoring wells and soil vapor probes to a

maximum depth of 35 feet below grade. Soil samples were collected utilizing a 5-foot long Macro Core sampler fitted with dedicated acetate liners. The soil was screened and characterized at two-foot intervals. Each Macro Core was cut open and immediately screened with a properly calibrated Photo Ionization Detector (PID) for VOCs, prior to collecting the required samples for laboratory analysis. No PID readings above background concentrations were detected; however, slight visual and olfactory evidence of soil contamination was observed from approximately 12 to 16 feet below grade in soil probe SP-5. A representative soil sample was collected from this interval. Continuous soil samples were collected during soil probe installation.

Boring logs were prepared by a geologist and are attached in Appendix D. A map showing the location of soil borings and monitor wells is shown in Figure 5.

Groundwater Monitoring Well Construction

Three (3) groundwater monitoring wells, designated MW-1 through MW-3, were installed using Geoprobe direct-push drilling technology to a total depth of 35 feet bgs and constructed of 1-inch diameter PVC. The well screens consisted of 0.020-inch slots and extended 15 feet from the bottom of the well to intersect the water table. The remaining portions of the wells consisted of solid riser.

Monitoring well construction logs were prepared by a geologist and are provided in Appendix E. Monitoring well locations are shown in Figure 5.

Soil Vapor

Four (4) soil vapor probes, designated SV-1 through SV-4, were installed to a depth of 20 feet below grade. The soil vapor probes were installed in accordance with the NYSDOH guidance for evaluating soil vapor intrusion dated October 2006. Each soil vapor sampling point consisted of a stainless steel screen, or implant, fitted with dedicated polyethylene tubing. Each of the implants was of 1 ½-inch diameter. Glass beads were poured into the hole to fully encompass the screen implant and the hole was sealed with bentonite and quick dry-lock non-VOC quick set cement. A map showing the locations of soil vapor implants is shown in Figure 5.

Survey

Soil borings, monitoring wells and soil gas sampling locations were located by measuring to permanent site features.

Water Level Measurement

Prior to groundwater purging and sampling of the monitoring wells, the wells were gauged for the presence of Light, Non-Aqueous Phase Liquid (LNAPL) and also monitored to determine the depth to water. The well gauging and monitoring was performed utilizing a Solinst® 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch. Well gauging and monitoring was performed in the wells from the northern portion of the casing top.

LNAPL was not identified in the monitoring wells during the well gauging exercise. Groundwater was encountered between 24.20 feet to 24.81 feet below grade at the Site. Water level data and well is included in Appendix F. A Groundwater Elevation Contour Diagram is provided in Figure 6.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Twelve (12) soil samples were collected for chemical analysis during this RI; these include 6 samples from 0 to 2 feet below grade, 3 samples from 4 to 6 feet below grade and 3 samples from 14.5 to 16.5 feet below grade. Samples were collected utilizing a 5-foot long Macro Core sampler fitted with dedicated acetate liners.

All samples were properly handled and placed into the pre-cleaned, appropriately labeled, laboratory supplied containers. Two (2) trip blank samples were collected and submitted to the laboratory. The samples were placed in a cooler filled with ice and maintained at a maximum of 4 degrees Celsius. All samples were transmitted under proper chain of custody procedures to a

New York State Department of Health ELAP-certified laboratory for confirmatory laboratory analyses. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals. The laboratory did not report any irregularities with respect to their internal Quality Assurance/Quality Control.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 1 through 4. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Three (3) groundwater samples were collected for chemical analysis during this RI. Groundwater samples from the monitoring wells were collected using the low stress (low flow) purging and sampling procedures. The low flow was accomplished with a Solinst Bladder Pump and the continuous flow was monitored with a Horiba U-52 water quality meter until the readings had stabilized.

The water samples were collected in laboratory-supplied jars, properly labeled with the sample number, the date and time of sampling, the analytical requirements, and then placed on ice for the duration of the sampling and transport to the laboratory. A chain of custody form was completed at the time of sampling and maintained until disposition of the samples at the ELAP certified and accredited laboratory. The groundwater samples were analyzed for TCL VOCs, TCL SVOCs, pesticides, PCBs, dissolved and total TAL metals.

Groundwater sample collection data is reported in Tables 5 through 8. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix F. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Four (4) soil vapor probes were installed and 4 soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 9. Soil vapor sampling logs are included in Appendix

G. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Dedicated tubing was used for each soil vapor probe. A soil vapor sample was collected from each vapor probe utilizing a 6 liter pre-cleaned, passivated, evacuated whole air Summa® Canister. In order to insure the integrity of the borehole seal and to verify that ambient air is not inadvertently drawn into the sample, a tracer gas, Helium, was used to enrich the atmosphere in the immediate vicinity of the sampling location. Plastic sheeting was used to keep the tracer gas in contact with the soil vapor probe during the sampling while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-gas Detector). Helium detector readings did not exceed 0 parts per million (ppm) indicating Helium was not detected. Following verification that the surface seal was tight and prior to soil vapor sampling, approximately 0.3 ml of air was purged out of all vapor points utilizing a syringe.

The soil vapor probes were connected to ¼-inch outer diameter inert Teflon-lined polyethylene tubing which extended above ground surface to allow for purging and sampling. The Summa Canisters were calibrated for 6 hours and the soil vapor sampling was run on each canister for the duration of 6 hours. The initial vacuum (inches of mercury) and start time was recorded immediately after opening each Summa Canister. After the sampling was complete, the final vacuum and stop time was recorded. After the soil vapor sampling, each Summa was labeled and sent to a laboratory certified to perform air analysis in New York State and analyzed for VOCs via EPA TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Mark E. Robbins
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Phoenix Environmental Laboratories, Inc.
Chemical Analytical	Soil and groundwater analytical methods:

Methods	<ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters..
---------	---

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1 through 9. Laboratory data deliverables for all soil, groundwater and soil vapor samples evaluated in this RIR are provided in digital form in Appendix H, Appendix I and Appendix J, respectively.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

The Site is located in the south-central portion of Kings County, New York. The elevation of the Site is approximately 28 feet above mean sea level (USGS 7 ½-Minute Brooklyn, New York Quadrangle, 1996).

Stratigraphy

The stratigraphy of the site, from the surface down, consists of 2 feet of brown silty sand, underlain by approximately 2 to 4 feet of light brown sandy clay, underlain by approximately 30 feet of tan coarse-grained sand. Drilling did not occur deeper than 35 feet bgs and bedrock was not encountered.

Hydrogeology

Water level data for all monitoring wells is included in Appendix F. The depth to water ranges from 24.20 feet to 24.81 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 6. Groundwater flow is towards the southwest.

5.2 Soil Chemistry

Soil/fill samples collected during the RI show 3 volatile organic compounds (VOCs), acetone (max. 0.11 mg/kg), 1,2,4-trimethylbenzene (max. 4 mg/kg) and methyl ethyl ketone (max. 0.14 mg/kg), exceeding Track 1 Unrestricted Use Soil Cleanup Objectives in two deep samples. VOCs detected but not exceeding Track 1 SCOs include 1,3,5-trimethylbenzene, 2-hexanone, 4-methyl-2-pentanone, ethylbenzene, xylenes, naphthalene and tetrachloroethylene. Semi-volatile organic compounds (SVOCs) consisting of polycyclic aromatic hydrocarbon (PAH) compounds were detected in 3 shallow soil samples at concentrations exceeding Track 2 Restricted Residential Use SCOs, including benzo(a)anthracene (max. 110 mg/kg), benzo(a)pyrene (max. 99 mg/kg), benzo(b)fluoranthene (max. 100 mg/kg), benzo(k)fluoranthene (max. 73 mg/kg), chrysene (max. 120 mg/kg), dibenzo(a,h)anthracene (max. 16 mg/kg), fluoranthene (max. 270 mg/kg), indeno(1,2,3-cd)pyrene (max. 65 mg/kg), phenanthrene (max. 190 mg/kg) and pyrene (max. 220 mg/kg). One SVOC, dibenzofuran (max. 11 mg/kg), was detected in 2 shallow samples exceeding its Track 1 SCO but below its Track 2 Restricted Residential Use SCO. SVOCs detected but not exceeding Track 1 SCOs include 2-methylnaphthalene, acenaphthene, anthracene, benzo(g,h,i)perylene, benzyl butyl phthalate,

carbazole and fluorene. The pesticide, 4,4'-DDT (max. 0.011 mg/kg), was detected in 2 shallow samples and 2 deep samples at concentrations exceeding its Track 1 SCO. Two (2) other pesticides, endrin aldehyde and endrin ketone, were detected but not exceeding Track 1 SCOs. No PCBs were detected in any of the soil/fill samples collected. Metals were detected in all samples. Metals were detected in 3 shallow soil samples at concentrations exceeding Track 2 Restricted Residential Use SCOs, including lead (max. 2,660 mg/kg), arsenic (max. 18.6 mg/kg), barium (max. 451 mg/kg), cadmium (max. 3.71 mg/kg), copper (max. 1,380 mg/kg) and mercury (max. 1.21 mg/kg). Metals were detected in all 6 shallow soil samples and 3 deep soil samples at concentrations exceeding Track 1 SCOs but below their respective Track 2 Restricted Residential Use SCOs, including nickel (max. 42.9 mg/kg) and zinc (max. 541 mg/kg). Aluminum, antimony, beryllium, calcium, chromium, cobalt, iron, magnesium, manganese, potassium, silver, sodium and vanadium were detected at concentrations less than Track 1 SCOs.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 1 through 4. Figures 7 through 10 show the locations and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI show 2 VOCs detected above New York State 6 NYCRR Part 703.5 Groundwater Quality Standards (GQS) in MW-2, including isopropylbenzene (25 µg/L) and n-propylbenzene (39 µg/L), and the VOC, chloroform (11 µg/L), detected of the GQS in MW-3. Chloroform was also detected below the GQS in MW-1. Four (4) SVOCs were detected above the GQS in MW-3, including benzo(a)anthracene (0.03 µg/L), benzo(b)fluoranthrene (0.02 µg/L), benzo(k)fluoranthrene (0.02 µg/L) and chrysene (0.02 µg/L). Other SVOCs detected in groundwater samples below the GQS include naphthalene, phenanthrene and pyrene. No pesticides or PCBs were detected in any of the groundwater samples collected. Dissolved metals manganese (max. 1.1 µg/L) and sodium (max. 143 µg/L) were detected at concentrations above the GQS in all groundwater samples collected. Dissolved metals detected but not at concentrations above the GQS include aluminum, barium, calcium, cobalt, iron, lead, magnesium, nickel, potassium and zinc.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 5 through 8. Exceedances of applicable groundwater standards are shown.

Figures 11 through 13 show the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Soil vapor results collected during the RI show relatively low-level petroleum related and associated derivatives in each sample. The petroleum related compounds range from 0.243 $\mu\text{g}/\text{m}^3$ to 17.2 $\mu\text{g}/\text{m}^3$. Toluene was the highest detected petroleum related compound with a concentration of 17.2 $\mu\text{g}/\text{m}^3$ in SV-3. Chlorinated VOCs were also detected in soil vapor samples and range from 0.048 $\mu\text{g}/\text{m}^3$ to 6.05 $\mu\text{g}/\text{m}^3$. Tetrachloroethylene (PCE) was the highest detected chlorinated VOC with a concentration of 6.05 $\mu\text{g}/\text{m}^3$. PCE and carbon tetrachloride were also detected in the outdoor ambient air sample.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 9.

Figure 14 shows the location and posts the values for soil vapor samples with detected concentrations.

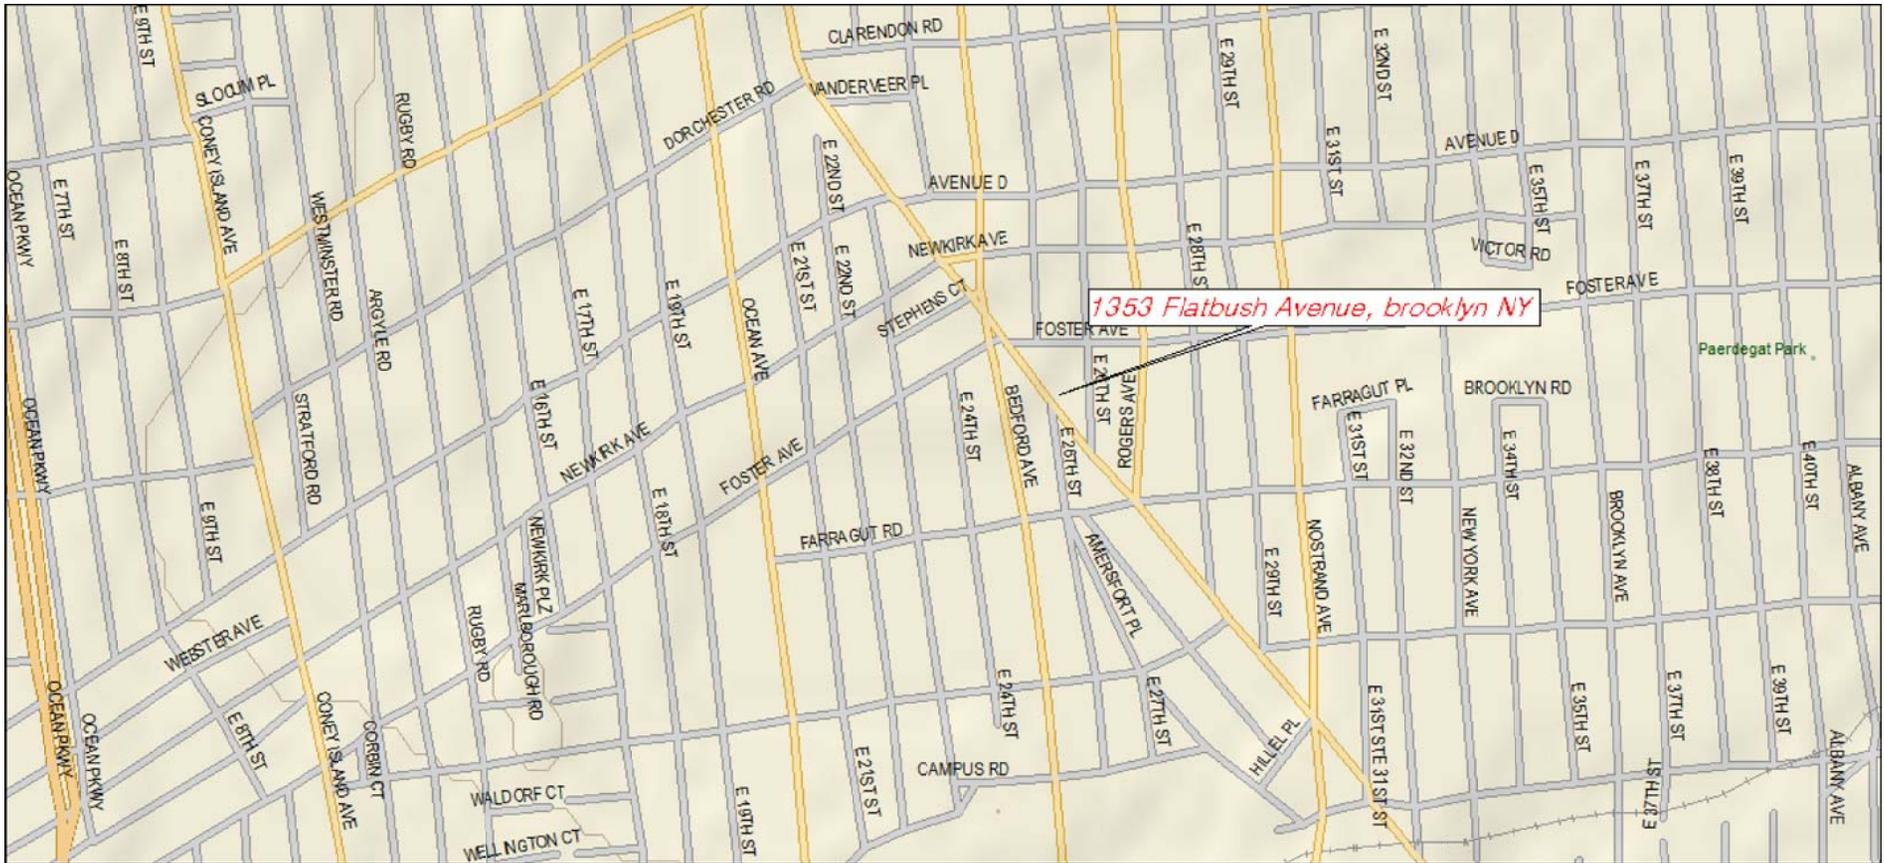

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

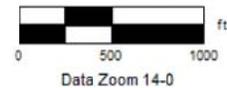

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NOTES:
 Any Regulatory Exceedances are color coded by Regulation
 = sample exceeds NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives
 = sample exceeds NYSDEC Part 375 Restricted Use Soil Cleanup Objectives - Restricted Residential
 Any Regulatory Exceedances are color coded by Regulation
 Q is the Qualifier Column with definitions as follows
 U=analyte not detected at or above the level indicated
 NS=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedences are color coded by Regulation

= sample exceeds NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives

= sample exceeds NYSDEC Part 375 Restricted Use Soil Cleanup Objectives - Restricted Residential

Q is the Qualifier Column with definitions as follows:

U=analyte not detected at or above the level indicated

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

NS=this indicates that no regulatory limit has been established for this analyte

ND=analyte not detected at or above the level indicated

DATE: NOVEMBER 10, 2004

EXECUTIVE SUMMARY

SITE DESCRIPTION

- This property is known as 1353-1355 FLATBUSH AVENUE, Brooklyn, NY, Block 5227, Lot 16.
- This property consists of a one story plus cellar office building and lot containing a used car lot. (Exhibit A)
- Lot Size: 18.25' X 85'.
- This property is zoned for "Vacant Land" use.

Note: The one story office building does not appear on the Building Department Property Profile Overview or the Sanborn History Maps.

ASBESTOS

- **NO** visible and/or friable ACM was noted during this inspection.

Please note: NO core samples were taken during this inspection, in the event of change in present status, eg, demolition, alteration, modification, all suspect materials should be tested and verified free of any ACM.

FUEL OIL STORAGE TANK

- The inactive boiler is gas fired.
- **NO** tank was noted during this inspection.

PCB's

- **NO** PCB's were noted during this inspection.

SITE HISTORY

- In reviewing the history of this building and property, a Sanborn Map Search was conducted and it was determined that this property has been Vacant from the 1900's to the 1960's and Parking/Vacant from the 1970's to the 1990's.
- A Certificate of Occupancy Search was conducted and the following Certificate of Occupancy was found:

Certificate of Occupancy dated October 10, 1949:

"Vacant space for the sale and display of not more than five (5) used cars."

SCOPE OF THIS PHASE I ENVIRONMENTAL SURVEY

To thoroughly inspect all accessible areas and facilities in and around the one story plus cellar building, and lot located at 1353-1355 FLATBUSH AVENUE, BROOKLYN, New York and to assess the environmental status of the subject property. The tasks were conducted via a visual inspection of the site, review of available historical records documenting uses of the property along with persons knowledgeable about the subject property.

This survey assessed any ongoing or former operations, whether current or former operators/leases used or stored chemicals on the premises, if any waste materials arising from operations have been dumped on the premises or if any landfill operations have taken place.

Visual inspection of the immediate vicinity around the premises were also conducted, wherever possible or reasonable, in order to determine whether any sites adjoining the premises are used for heavy manufacturing or the generation, storage, shipping or disposal of hazardous waste, chemical materials or fuel supplies; if there are any underground or suspended transformer, capacitors, etc. Containing PCB's on the subject property or if there are any underground storage tanks.

As part of this environmental survey, inquiry was made with the U.S. Environmental Protection Agency and appropriate State and Local Agencies in order to ascertain the location of any potential, alleged or known hazardous waste sites within a one half mile radius of subject property. The CERCLIS (Comprehensive Emergency Response, Compensation and Liability Information System) is the U.S. EPA's compilation of such alleged, potential or known hazardous waste sites brought to the attention of the U.S. EPA Office of Emergency and Remedial Response which have been, will be or are currently under investigation for suspected or known environmentally hazardous activities, The National Priorities List (NPL) is the U.S. EPA's listing of known of known contaminated sites which have been targeted for clean-up due to the immediate threat posed to human health and/or the environmental integrity of that property as well as its marketability.

If appropriate, inquiry was also made with the US Environmental Protection Agency and appropriate State and Local agencies regarding their acknowledgment that the presence and/or disposal of hazardous or toxic chemicals, if any, are within their guidelines and compliance.

Recommendations, wherever appropriate, have been given as to the action, if any, which should be taken to confirm with the most current guidelines and rules for compliance as set forth by these agencies.

The Phase I Environmental Survey is limited in budget and scope. No sampling, testing or laboratory analysis is conducted unless so noted and the assessment is based on the professional opinion of the Environmental Consultant. The Phase I Environmental Survey is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the subject property.

This report was prepared in accordance with ASTM E-1527-00 protocols for Phase I Environmental Site Assessments.

SURROUNDING AREAS

NORTH	RESIDENTIAL/STORES
SOUTH	AUTO REPAIR, RESIDENTIAL/STORES
WEST	LAUNDROMAT
EAST	PRIVATE GARAGE

CHEMICAL OR HAZARDOUS MATERIAL/WASTE STORAGE

- NO chemical or hazardous material/waste storage was noted during this inspection.

EDR(ENVIRONMENTAL DATA RESOURCES) DATABASE SUMMARY

DATABASE	SEARCH DISTANCE	SITES LISTED
SM. QUANTITY GENERATOR	¼ MILE	8
STATE HAZARDOUS WASTE	1 MILE	1
CORRECTS (CORRECTIVE ACTION)	1 MILE	1
LTANKS (LEAKING TANKS)	½ MILE	42
NY SPILLS	<1/8 MILE	0

These should have no affect on the subject property.

CONCLUSIONS AND RECOMMENDATIONS

NO REC's (Recognized Environmental Conditions) was noted on the subject property.

According to Sanborn History Maps the property adjoining to the south of the subject property was used as gasoline station facilities from the 1930's to the 1950's and auto repair facilities from the 1970's to the 1990's.

In the event in any excavation, a Phase II subsurface probe should be conducted to determine the possible presence of any soil/groundwater contamination.

SURVEY FINDINGS

GENERAL

A Phase I Environmental Survey was conducted in and around the property located at 1353-1355 FLATBUSH AVENUE, BROOKLYN, New York beginning with a visual inspection by an Environmental Consultant in all areas where hazardous or potentially toxic materials or substances might be present. A number of environmental risks were assessed during this investigation, including the presence of asbestos-containing materials, aboveground or underground storage tanks, chemical and/or hazardous waste storage and PCB content in electrical equipment. A Phase I Environmental Assessment does not involve any sampling, testing or laboratory analysis of on-site soil or ground water, unless so noted, and, thus, cannot confirm the nature of subsurface soil or ground water quality on the subject property.

SITE DESCRIPTION

According to the Department of Buildings, the subject property is located at the address known as 1353-1355 FLATBUSH AVENUE, Block 5227, Lot 16, in the Borough of BROOKLYN, New York. The subject property currently has one building on it. The Building located at the subject address is one story plus cellar building and lot containing used cars. (Exhibit A)

Note: The one story office building does not appear on the Building Department Property Profile Overview or the Sanborn History Maps.

SITE HISTORY

In reviewing the history of this building and property, a Sanborn Map Search was conducted and it was determined that this property has been Vacant from the 1900's to the 1960's and Parking/Vacant from the 1970's to the 1990's.

A Certificate of Occupancy Search was conducted and the following Certificate of Occupancy was found:

Certificate of Occupancy dated October 10, 1949:

“Vacant space for the sale and display of not more than five (5) used cars.”

1353-1355 FLATBUSH AVENUE
 BROOKLYN, N.Y.
 Survey Findings
 Page 2

A Sanborn site history "mapping and geographic" search was conducted for a 100 year span and 18 maps were provided (see documentation).

ENVIRONMENTAL ASSESSMENT

A visual inspection and interview at the subject property took place on November 1, 2004, by Mr. Shemon Singer, who was accompanied by the building owner, Basirat.

ASBESTOS CONTAINING MATERIALS (ACM)

Asbestos is the generic name for a group of naturally occurring hydrated mineral silicates that are characterized by fibers or bundles of fine single crystal fibers. The New York City Department of Environmental Protection defines asbestos containing materials as "any material which contains more than one percent asbestos by weight." Asbestos materials were used for many years in a variety of ways in building construction due to its excellent acoustic insulating and thermal barrier properties. The durability of asbestos fibers and their small size and fibrous shape make asbestos an unusual environmental contaminant. Water infiltration, contact during routine maintenance and age are major factors breaking down asbestos containing materials and creating exposure problems.

NO VISIBLE AND/OR FRIABLE ACM WAS NOTED DURING THIS INSPECTION.

Please note: NO core samples were taken during this inspection, in the event of change in present status, eg, demolition, alteration, modification, all suspect materials should tested and verified free of any ACM.

**1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Survey Findings
Page 4**

Rooms/areas/facilities in the cellar, and first floor areas and lot areas were inspected as part of this survey.

Cellar

Electric Meters, Storage, Oil Boiler - No ACM.

First Floor

Office - 1'X1' Floor Tile, Sheetrock. Electric Heat.

Lot

Used Cars - Concrete, Asphalt, Vegetation.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Survey Findings
Page 5

CHEMICAL OR HAZARDOUS MATERIAL/WASTE STORAGE

The rooms/areas/facilities that were inspected as part of this Phase I environmental survey; **NO** storage or use of pesticides were found at the subject property. **NO** distressed vegetation was noted during this inspection.

PRESENCE OF PCBs IN TRANSFORMERS AND OTHER ELECTRICAL EQUIPMENT

An inspection was conducted at the subject property and in the immediate vicinity for the presence of any underground, surface or suspended transformers and visible power supply sources. Oil-containing transformers are known to frequently contain PCBs (Polychlorinated biphenyl's). PCBs are contained in older transformers and other electrical equipment and have the potential for serious health risks. The level of PCB content in such transformers and electrical equipment is regulated by the U.S. Environmental Protection Agency, Regulations 40 CFR Part 761. Upon visual inspection, **NO** suspended transformers power supply sources were identified. Contact with Con Edison has nevertheless been made to determine definitely if any equipment owned and/or maintained by Con Edison located on or in the immediate vicinity of the subject property contain PCB's.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Survey Findings
Page 6

FUEL OIL STORAGE TANKS

The New York State Department of Environmental Conservation regulates the storage and handling of petroleum storage facilities. Aboveground and Underground storage tanks storing petroleum can, if not properly installed and maintained, cause serious environmental problems. Including contamination of a water supply. In an effort to prevent leaks and spills, the Petroleum Bulk Storage Law (Article 17, Title 10 of the Environmental Conservation Law) requires the DEC to develop and enforce a State Code for the storage and handling of petroleum. The resulting regulations are Parts 612, 613 and 614. Any facility with a stationary tank combined capacity exceeding 1,100 gallons must be registered with the New York State Department of Environmental Conservation.

- The inactive boiler is gas fired.
- NO tank was noted during this inspection.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Survey Findings
Page 7

RCRA - RESOURCE CONSERVATION AND RECOVERY ACT

RCRA was enacted in 1976 to address the problem of disposing solid waste, hazardous waste, underground storage tanks and medical waste. Subtitle C of the Act establishes a program to manage and regulate hazardous wastes. The objective of the subtitle C program is to ensure that hazardous waste is handled in a manner that protects human health and the environment. Under RCRA, there are three categories of hazardous waste generators: Large quantity generators (LQG), small quantity generators (SQG), and conditionally exempt small quantity generators. LQG are defined as those facilities that generate either 1,000 or more kilograms per month of hazardous waste or 1 kg or more of acutely hazardous waste per month.

LQG and SQG are subject to regulations contained in 40 CFR Part 262: Obtaining and EPA ID number, preparing the waste for transportation, follow storage requirements, manifesting of hazardous waste and record keeping.

This site is NOT listed on the RCRIS and FINDS Databases.

According to EDR Radius Map Search, 1 CORRACTS (Corrective Action) site is located 1/2 to 1 mile radius of the subject property.

According to EDR Radius Map Search, 8 Sm. Quantity Generators are located <1/8 to 1/4 mile radius of the subject property.

These should have NO affect on the subject property.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Survey Findings
Page 8

ADDITIONAL OBSERVATION

An inspection of the immediate vicinity around the subject property was also conducted as part of this Phase I Environmental Assessment.

In addition to the visual inspection, contact was made with the U.S. Environmental Protection Agency regarding the presence of any known, alleged or potential hazardous waste sites located in the immediate vicinity of the subject property which have been brought to the attention of the U.S. EPA Office of Emergency & Remedial Response and included in the Comprehensive Environmental Response, Compensation & Liability Information System (CERCLIS). Based on reports, **NO** such property has been identified as such (see documentation).

A review of the N.Y.S. D.E.C. Inactive Hazardous Waste Disposal Report was conducted. According to their records, **NO** sites have been identified on or near the subject property.

According to EDR Radius Map Search, 1 State Hazardous Waste site is located <1/8 to 1/4 mile radius of the subject property.

This should have NO affect on the subject property.

A radon test was **NOT** conducted at the subject property. Elevated radon levels create a potential health risk, The U.S. EPA and the Center for Disease Control have used a continuous exposure level of 4 pCi/L as a guidance level at or above which further testing and/or remedial action are indicated. There were no records or other evidence that radon testing has been performed at the subject property.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.

Recommendations

Page 1

RECOMMENDATIONS

The following are recommendations based on the Phase I Environmental Survey conducted at the property located at 1353-1355 FLATBUSH AVENUE, BROOKLYN, New York.

On November 1, 2004, a Phase I Environmental Assessment of the above-mentioned property were conducted in accordance with the generally accepted assessment protocol. The Phase I environmental assessment relied primarily on visual observation made during inspection and review of available historical documents as they relate to current and past usages of the subject property. Additionally, the immediate vicinity of the subject property was inspected in order to ascertain the likelihood of toxic or hazardous substances or other agents to be present at surrounding locations which might adversely affect the subject site.

As part of the asbestos section of this survey, an inspection of all the aforementioned areas were conducted:

Construction materials on the exterior and interior of the building were also inspected for possible asbestos content.

Within each of these rooms/areas/facilities, piping insulation (e.g. on hot and cold water supply piping), if any, was checked at exposed locations for possible asbestos content.

NO VISIBLE AND/OR FRIABLE ACM WAS NOTED DURING THIS INSPECTION.

Please note: NO core samples were taken during this inspection, in the event of change in present status, eg, demolition, alteration, modification, all suspect materials should be tested and verified free of any ACM.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.

Recommendations

Page 2

THE FOLLOWING ARE FINDINGS AND RECOMMENDATIONS MADE BY THE SINGER ENVIRONMENTAL CONSULTANT:

THERE IS NO EVIDENCE THAT THIS SITE HAS BEEN USED FOR HEAVY MANUFACTURING, USE AND/OR STORAGE OF CHEMICALS OR FUEL SUPPLIES.

THE SITE TO THE SOUTH OF THE SUBJECT PROPERTY HAS BEEN USED AS A FORMER GASOLINE STATION AND CURRENT AUTO REPAIR.

SEE SITE HISTORY, CONCLUSIONS AND RECOMMENDATIONS.

UPON VISUAL INSPECTION, NO SUSPENDED OR SURFACE TRANSFORMERS WERE IDENTIFIED ON OR IN THE IMMEDIATE VICINITY OF THE SUBJECT PROPERTY.

Contact was made with Con Edison on January 1996 to ascertain whether or not any equipment owned and/or maintained by Con Edison is present in the immediate vicinity of the subject property and , if so, if any contain PCBs. Information provided to Singer Environmental has been that among transformers which have not been tested and determined to contain a quantity of PCBs (designated in ppms (parts per million), public utility companies are permitted to continue operation without restriction. However, if a problem were to arise as a result of a release of dielectric fluid from these transformers, the utility assumes responsibility to adequately mitigate the situation.

**1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Recommendations
Page 3**

RADON

While radon has not been identified by the New York State Health Department as a major problem in the boroughs of New York City, the problem is site-specific and the potential health risk should be assessed.

SOIL & GROUNDWATER

The nature of subsurface soil and ground water at the subject property cannot be confirmed, given the limited budget and scope of this Phase I Environmental Survey.

NO REC's (Recognized Environmental Conditions) was noted on the subject property.

According to Sanborn History Maps the property adjoining to the south of the subject property was used as gasoline station facilities from the 1930's to the 1950's and auto repair facilities from the 1970's to the 1990's.

In the event in any excavation, a Phase II subsurface probe should be conducted to determine the possible presence of any soil/groundwater contamination.

**1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Recommendations
Page 4**

ASBESTOS

According to the Environmental Protection Agency and included in the publication #EPA 560/5-85-024 "Guidance for Controlling Asbestos Containing Materials (ACM) in Buildings " asbestos containing materials are found in three forms: (1) Sprayed or troweled on ceilings and walls and structural steel; (2) in insulation around hot and cold piping, ducts, boilers and tanks; and (3) in a non-friable state in products such as ceilings and floor tiles. Wallboards and outside in materials such as shingles and roofing materials. In general, ACM in the first two categories is of greatest concern, especially if it is friable, causing the materials to release fibers into the air.

ACM are believed to be present on the roof in tars, felts and papers used in roof coatings. These materials are "non-friable" in their present state. In the event of change in present status e.g. demolition, these materials should be tested and verified of any ACM.

Ceiling and floor tile which may contain asbestos are not required to be removed due to their non-friable state.

1353-1355 FLATBUSH AVENUE
BROOKLYN, N.Y.
Recommendations
Page 5

FUEL OIL STORAGE TANKS

- The inactive boiler is gas fired.
- **NO** tank was noted during this inspection.

DEPARTMENT OF BUILDINGS

According to the Department of Buildings "Property Profile Overview" dated 11/02/04, **NO** DOB or ECB violation is "open" at this time.

LTANKS (LEAKING TANKS)

According to an EDR Radius Map search, **42** LTANKS sites were identified <1/8 to 1/2 mile of the subject property.

These should have **NO** affect on the subject property.

N.Y SPILLS

According to an EDR Radius Map search, **0** spill sites were identified <1/8 mile radius of the subject property.

RE: F.O.I.A. Request

To Whom It May Concern:

Please provide any information on the premises located at the following address as soon as possible.

This is a Freedom of Information Request for the premises referenced above. We would like information concerning Underground Storage Tanks, site contamination, air emissions, drinking water quality, hazardous waste materials, spills and leaks and any other Environmental concerns that would affect the property.

**RE: 515 WEST 46TH STREET, NEW YORK, NY
453 WEST 46TH STREET, NEW YORK, NY
123 WEST 15TH STREET, NEW YORK, NY
450 UNION STREET, BROOKLYN, NY
626-632 FLATBUSH AVENUE, BROOKLYN, NY
1353-1355 FLATBUSH AVENUE, BROOKLYN, NY**

Our FAX number is (718) 437-0082. Thank you very much.

Sincerely,

Erica Hogan

DEPARTMENT OF HOUSING AND BUILDINGS

EMJ BOROUGH OF Brooklyn, CITY OF NEW YORK

No.

Date

OCT 10 1949

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C.26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~ altered ~~existing~~ building premises located at 1553 Flatbush Avenue, E/S, 148'-7 3/4" S. of Foster Avenue

Block 5227 Lot 10

conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646 of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

Maximum Alt. 789/47 Construction classification-- Vacant Land

Occupancy classification-- Five (5) Used Cars Height -- stories, -- feet.

Date of completion-- Const.- 9/27/49 Located in Business Use District.

Area Pl. - None Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here).

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED			USE
		MALE	FEMALE	TOTAL	
					Use Vacant Space (16'-5 1/2" x 54') for the Sale and Display of not more than five (5) Used Cars.
					Total - As Stated Above.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2004 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
<i>R A LEATHER FINISH CO INC</i>	<i>812 E 43 ST</i>	<i>1/2 - 1 E</i>	<i>75</i>	<i>100</i>

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 08/10/2004 has revealed that there are 8 RCRIS-SQG sites within approximately 0.25 miles of the target property.

1.0 INTRODUCTION

Associated Environmental Services, Ltd. (AES) was retained to conduct the tank closure activities for the subject site located at 1357 Flatbush Avenue, Brooklyn, New York. The tank closure activities were conducted from April through June 2006. The following report summarizes the tank closure activities.

1.1 Site Background

The subject site is an irregular shaped parcel, which is improved with a one (1) story automobile repair building. A Phase I Environmental site Assessment (ESA) report was prepared for the subject site by Singer Environmental Group, LTD. The findings of the Phase I ESA revealed that the site was utilized as a gasoline filling station from the 1930s to the 1950s.

Based upon the findings of the Phase I ESA, it was determined that a Limited Subsurface Investigation would be conducted at the subject site. AES was retained to perform a Limited Subsurface Investigation at the site in August 2005. The scope of work entailed a magnetometer survey and subsurface soil sampling. The results of the magnetometer survey revealed the presence of subsurface anomalies which were consistent with possible underground storage tanks (USTs). A total of four (4) soil borings were installed at the site. Please note that due to accessibility restrictions, the borings were not able to be installed in the immediate area of the suspect USTs. Representative soil samples were collected continuously from ground surface to the soil/water interface which was determined to be approximately twenty-two (22) feet below grade. The soil samples collected from twenty (20) to twenty-two (22) feet below grade were submitted for laboratory analysis. The analytical data for the soil samples revealed that there were no contaminants present at concentrations which exceeded the respective New York State Department of Environmental Conservation (NYSDEC) Recommended Soil Cleanup Objectives (RSCOs). Based upon the findings of the magnetometer survey it was determined that the USTs would be excavated and removed from the site.

2.0 SITE DESCRIPTION

2.1 Site Location

The subject site is located at 1357 Flatbush Avenue, Brooklyn, New York. The site is located on the east side of Flatbush Avenue. The site can be accessed via one (1) curb cut along Flatbush Avenue. The subject site is an irregular shaped parcel of land which measures approximately 4,000 square feet. The site is identified on the tax maps as Block 5227 and Lot 13.

2.2 Site Improvements

The subject site is improved with a one (1) story automobile repair building, with no basement. The subject building measures approximately 1,000 square feet. The subject building is currently vacant. There was evidence of five (5) vent lines noted along the north side of the subject building. In addition, there was evidence of five (5) former remote fill ports noted along the west (front) side of the subject property. The remainder of the site is improved with driveways and parking areas as well as pedestrian sidewalks.

The site is located in a highly developed residential and retail neighborhood. The subject site was noted to be in poor condition. The relevant site features are depicted on Figure 1.0 – Site Diagram.

2.3 Hydrogeologic Setting

The surface topography at the site was noted to be relatively level throughout. The regional topographic gradient is sloped downward to the Southwest.

The subsurface lithology at the site consisted of a brown coarse grain sand with pebbles. Groundwater is located at approximately twenty-two (22) feet below grade. Fresh groundwater originates in the form of precipitation. This precipitation will infiltrate into the subsurface and act as the recharge mechanism for replenishing water. Groundwater beneath the site is classified as GA, as per the New York State Department of Environmental Conservation (NYSDEC) "Water Quality Regulations - Surface Water and Groundwater Classifications and Standards".

3.0 TANK CLOSURE ACTIVITIES

The tank closure activities were conducted at the subject site from April through June 2006. The following sections summarize the work conducted, the field observations and data collected, laboratory analytical data, as well as any other pertinent site information which may have been obtained during the performance of the closure activities. Photographs were taken to document the field activities and are included with this report as Appendix C.

3.1 Tank Removal

A Track Excavator was utilized at the site for the purpose of removing any underground storage tanks (USTs) which were present at the site, specifically in the vicinity of the subsurface anomalies. It was determined that there was five (5) – 550 gallon gasoline USTs and one (1) – 300 gallon fuel oil UST present at the site. The gasoline USTs were noted to be encased in concrete.

A vacuum truck was utilized to remove a total of approximately 3,705 gallons of gasoline/water from the tanks and the tank vault. The liquid was transported offsite by AB Oil Service LTD. The NYSDEC transporter identification number for AB Oil Service LTD is 1A-002. A copy of the waste manifest for the liquids is included with this report as Appendix A.

The concrete encasement was broken up and removed from the subsurface. As the track excavator removed the subsurface soil in the vicinity of the USTs representative grab samples were continually collected for field inspection. The grab samples were visually inspected for possible evidence of contamination. In addition, the samples were field screened with a photo-ionization detector (PID) for the presence of volatile organic compounds (VOCs). Any soils which exhibited visual evidence of contamination and/or elevated PID field screening readings were deemed to be contaminated. Any contaminated soil was stockpiled on-site for future disposal. Any non-contaminated soil remained on-site for use as backfill. The gasoline and fuel oil USTs were removed and braced on the ground for inspection. There was no evidence of deterioration such as holes or pitting noted in any of the USTs. There was evidence of contamination such as petroleum odors and staining noted in the soil surrounding the gasoline USTs. It appears that the contamination is related to a historical failure of the UST piping system. The New York State Department of Environmental Conservation (NYSDEC) was notified and spill no. 06-00423 was assigned to the site. The impacted soil was excavated and stockpiled on-site for future disposal. At the time of the removal activities it was estimated that approximately eighty-eight (88) cubic yards of contaminated soil had been excavated and stockpiled for disposal. The soil was covered with poly sheeting and secured. The six (6) USTs were loaded onto trailers and transported off-site for disposal at a licensed scrap metal facility.

3.2 Contaminated Soil Removal

A representative sample of the contaminated soil was collected for waste characterization purposes. The sample analysis indicated that the soil could be disposed of as a solid non-hazardous waste.

The contaminated soil was loaded onto trailers and transported off site for disposal. The contaminated soil was disposed of at Clean Earth of Carteret, Inc., 24 Middlesex Avenue, Carteret, New Jersey 07008. Based upon the weight tickets it was determined that a total of 114.85 tons of contaminated soil was removed from the site and properly disposed of at Clean Earth of Carteret, Inc. Copies of the waste manifests and weight tickets are included with this report as Appendix A.

3.3 End-Point Sampling

As per the requirements of the New York State Department of Environmental Conservation (NYSDEC) representative end-point soil samples were collected from the sidewalls and bottom of the excavation pit. There was no field evidence of contamination noted in any of the end-point soil samples which were collected.

In order to characterize the nature of the subsurface in the vicinity of the five (5) gasoline USTs it was determined that eight (8) soil samples would be submitted for laboratory analysis. A total of two (2) soil samples were submitted for analysis from the area of the fuel oil UST. The end-point sampling locations are depicted on Figure 2.0 – End-Point Sample Locations.

The end-point soil samples were submitted for analysis of volatile organic compounds (VOCs) utilizing EPA Method 8021 (STARS) and for semi-volatile organic compounds (SVOCs) utilizing EPA Method 8270 (STARS). The samples were immediately stored on ice and delivered to a New York State Department of Health (NYSDOH) certified laboratory for analysis. The laboratory chosen for this investigation was Long Island Analytical Laboratories Inc., which is located in Holbrook, Long Island, New York. The NYSDOH Environmental Laboratory Approval Program (ELAP) certification number for the laboratory is 11693.

The analytical results for the soil samples were compared to the Recommended Soil Cleanup Objectives (RSCOs) listed in the NYSDEC New York State Department of Environmental Conservation (NYSDEC) Division Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046: Determination of Soil Cleanup Objectives and Cleanup Levels.

The analytical results for the eight (8) end-point soil samples from the area of the five (5) gasoline USTs revealed that there were no VOCs detected at concentrations which exceeded the respective NYSDEC RSCOs. There were concentrations of SVOCs detected above the NYSDEC RSCOs in all of the samples, with the exception of the east sidewall and bottom-east samples.

The analytical results for the two (2) end-point samples collected from the fuel oil UST revealed that there were no VOCs or SVOCs detected at concentrations which exceeded the respective NYSDEC RSCOs.

The analytical results for the soil samples collected are summarized in Table 1 and Table 2. Complete laboratory analytical reports and chain of custody forms are included with this report as Appendix B.

TABLE 1
Soil Analytical Data - End-Point Samples
EPA Method 8021 (STARS) - Volatile Organic Compounds (VOCs)

ANALYTICAL PARAMETERS	NYSDEC RSCOs	West Wall	East Wall	North-east Wall	North-west Wall	South-east Wall

3. Total SVOCs not to exceed 500,000 ppb.

4.0 CONCLUSIONS & RECOMMENDATIONS

4.1 Tank Closure Activities

The tank closure activities were conducted at the subject site from April through June 2006. The scope of work entailed the removal of five (5) – 550 gallon gasoline underground storage tanks (USTs) and one (1) – 300 gallon fuel oil UST present at the site. The gasoline USTs were noted to be encased in concrete.

A vacuum truck was utilized to remove a total of approximately 3,705 gallons of gasoline/water from the tanks and the tank vault. The liquid was transported offsite by AB Oil Service, LTD. A Track Excavator was utilized to remove the USTs. The gasoline and fuel oil USTs were removed and braced on the ground for inspection. There was no evidence of deterioration such as holes or pitting noted in any of the USTs. There was evidence of contamination such as petroleum odors and staining noted in the soil surrounding the gasoline USTs. It appears that the contamination is related to a historical failure of the UST piping system. The New York State Department of Environmental Conservation (NYSDEC) was notified and spill no. 06-00423 was assigned to the site. The impacted soil was excavated and stockpiled on-site for future disposal. The six (6) USTs were loaded onto trailers and transported off-site for disposal at a licensed scrap metal facility. A total of 114.85 tons of contaminated soil was loaded onto trailers and transported off site for disposal. The contaminated soil was disposed of at Clean Earth of Carteret, Inc.

In order to characterize the nature of the subsurface in the vicinity of the five (5) gasoline USTs it was determined that eight (8) soil samples would be submitted for laboratory analysis. A total of two (2) soil samples were submitted for analysis from the area of the fuel oil UST. The analytical results for the eight (8) end-point soil samples from the area of the five (5) gasoline USTs revealed that there were no volatile organic compounds (VOCs) detected at concentrations which exceeded the respective NYSDEC Recommended Soil Cleanup Objectives (RSCOs). There were concentrations of semi-volatile organic compounds (SVOCs) detected above the NYSDEC RSCOs in all of the samples, with the exception of the east sidewall and bottom-east samples. The analytical results for the two (2) end-point samples collected from the fuel oil UST revealed that there were no VOCs or SVOCs detected at concentrations which exceeded the respective NYSDEC RSCOs.

It should be noted that the contaminated soil was excavated to the greatest extent possible. Any limitations of the excavation area were due to the size of the subject property and access problems with the adjacent property.

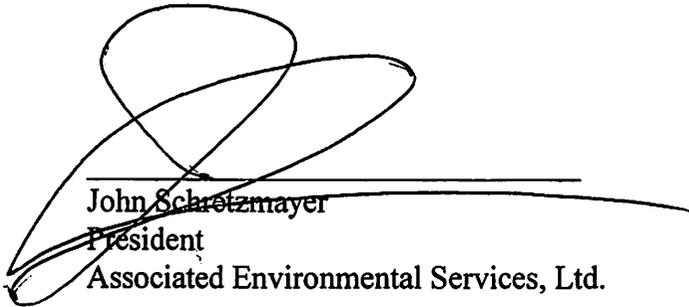

A copy of the Tank Closure Report is being forwarded for review to Mr. Hiralkumar Patel, Environmental Engineer for the NYSDEC. The NYSDEC will make all final determinations regarding any further investigative and/or remedial actions that may be warranted.

Should you have any questions please do not hesitate to call. Thank you for your time in this matter.

**Re.: Spill at 1353 Flatbush Ave
Brooklyn, NY
Spill Case #: 0600423 & 0600910**

Project Manager: Hiralkumar Patel

Dear Mr. Isreali,

Based on the submitted documentation provided to date, no further investigation or response will be required concerning this site, with regard to the spill number referenced above. The New York State DEC spill cases **0600423** and **0600910** have been inactivated.

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

- I. The off-site migration of petroleum contaminants that was not addressed by this evaluation.
- II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval.
- III. Information received, in whole or part, after the Department's approval for inactivation, which indicates that inactivation decision and/or corrective action is not sufficiently protective of human health for the reasonably anticipated use of the site.
- IV. Fraud in obtaining this approval for inactivation.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future property transactions, refinancing, etc. The Department's files regarding this release may not be maintained indefinitely.

Sincerely,

Hiralkumar Patel
Environmental Engineer
Spill Prevention & Response Programs

Re: GPR Survey - 1353 Flatbush Avenue, Brooklyn NY
Hydro Tech Job No. 150298

Dear Mr. Nikolov:

Hydro Tech Environmental, Corp. has performed a Ground Penetrating Radar (GPR) survey at the above referenced Site. The GPR survey was conducted to investigate all available portions of the property for the presence of underground storage tanks.

SITE DETAILS

The Site is located at 1353 Flatbush Avenue in the Flatbush section of Brooklyn, New York and is identified as Block 5227 and Lots 13, 15 and 16 on the New York City Tax Map. The Site is 9,744 square feet in area and is bounded by Flatbush Avenue to the west, East 26th Street to the east, a 2-story mixed use building to the north and 2-story mixed use building to the south. A map of the site boundary is shown in **Figure 1**. Currently, the Site is a vacant lot.

DESCRIPTION OF FIELDWORK

The GPR survey was performed on December 9th, 2015 utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. Prior to the commencement of the survey, a visual inspection of the property was performed to identify specific areas where USTs could be present.

The GPR takes one "scan" per set unit. The number of scans per unit is based upon the estimated sizes of targets. Based upon the typical size of a UST, the GPR was set to run at 50 scans per foot. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is then graphically displayed on the Control Unit, which are then interpreted by the GPR operator the time of the survey. Additional interpretations are then conducted in the office utilizing specialized computer software.

GPR RESULTS

No anomalies indicative of an underground structure was identified during this survey. **Attachment #1** provides scans from the GPR Survey Machine.

Mr. Nikolov

EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

Observations were made of the subject property and/or of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Any GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. **Hydro Tech Environmental, Corp.** does not accept responsibility for survey limitations due to inherent technological limitations or site specific conditions, however, made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey described above does not represent a full utility clearance survey, and does not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

APPENDIX H

Tuesday, December 22, 2015

Attn: Mr. AJ Infante
HydroTech Environmental Corp.
15 Ocean Avenue, 2nd Floor
Brooklyn, NY 11225

Project ID: 150299-1353 FLATBUSH AVE.
Sample ID#s: BK35576 - BK35589

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phyllis Shiller

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

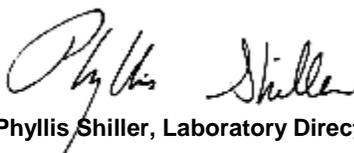

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

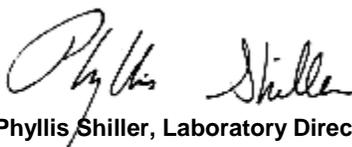

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

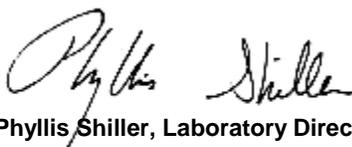

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

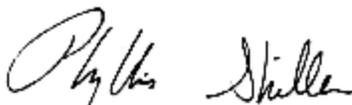

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

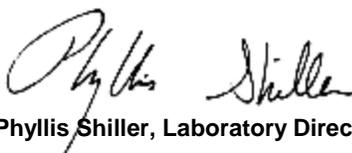

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

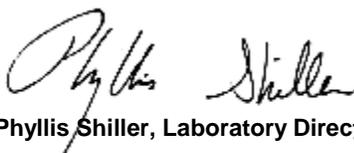

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatiles analysis.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

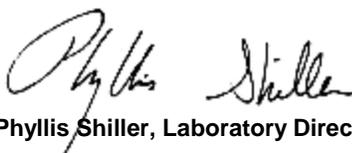

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

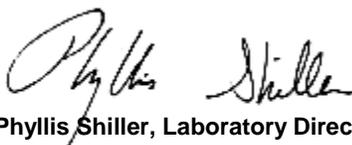

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Analysis Report
 December 22, 2015

FOR: Attn: Mr. AJ Infante
 HydroTech Environmental Corp.
 15 Ocean Avenue, 2nd Floor
 Brooklyn, NY 11225

Sample Information

Matrix: SOIL
 Location Code: HYDROBRO
 Rush Request: Standard
 P.O.#: 6130

Custody Information

Collected by:
 Received by: LB
 Analyzed by: see "By" below

Date

12/10/15
 12/10/15

Time

11:40
 16:13

Laboratory Data

SDG ID: GBK35576
 Phoenix ID: BK35587

Project ID: 150299-1353 FLATBUSH AVE.
 Client ID: SP-6 4-6 FT

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference
Aluminum	6770	50	mg/Kg	10	12/11/15	EK	SW6010C
Antimony	< 3.4	3.4	mg/Kg	1	12/11/15	EK	SW6010C
Arsenic	2.7	0.7	mg/Kg	1	12/11/15	EK	SW6010C
Barium	25.2	0.34	mg/Kg	1	12/11/15	EK	SW6010C
Beryllium	0.42	0.27	mg/Kg	1	12/11/15	EK	SW6010C

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

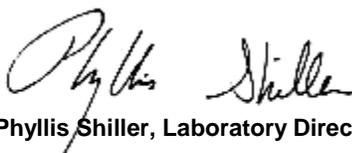

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.

m = This parameter is outside laboratory MS/MSD specified recovery limits.

r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

- RPD - Relative Percent Difference
- LCS - Laboratory Control Sample
- LCSD - Laboratory Control Sample Duplicate
- MS - Matrix Spike
- MS Dup - Matrix Spike Duplicate
- NC - No Criteria
- Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

APPENDIX I

Monday, December 21, 2015

Attn: Mr. AJ Infante
HydroTech Environmental Corp.
15 Ocean Avenue, 2nd Floor
Brooklyn, NY 11225

Project ID: 150299-1353 FLATBUSH AVE.
Sample ID#s: BK38736 - BK38741

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phyllis Shiller

SDG Comments

December 21, 2015

SDG I.D.: GBK38736

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

Toxaphene is reported to the lowest possible reporting level. The NY TOGS criteria for this compound can not be achieved.

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/ECD method 504 or 8011 to achieve this criteria.

8081 Pesticides:

Toxaphene is reported to the lowest possible reporting level. The NY TOGS criteria for this compound can not be achieved.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit
 QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

B

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

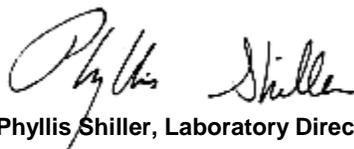

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

B

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit
QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

B

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit
 QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

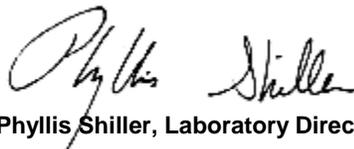

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.

m = This parameter is outside laboratory MS/MSD specified recovery limits.

r = This parameter is outside laboratory RPD specified recovery limits.

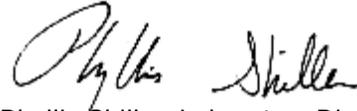

QA/QC Data

SDG I.D.: GBK38736

Parameter	Blank	Blk RL	LCS %	LCSD %	LCS RPD	MS %	MSD %	MS RPD	% Rec Limits	% RPD Limits
-----------	-------	-----------	----------	-----------	------------	---------	----------	-----------	--------------------	--------------------

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

- RPD - Relative Percent Difference
- LCS - Laboratory Control Sample
- LCSD - Laboratory Control Sample Duplicate
- MS - Matrix Spike
- MS Dup - Matrix Spike Duplicate
- NC - No Criteria
- Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Draft Progress Report

December 17, 2015

FOR: Attn: HydroTech Environmental Corp.
 77 Arkay Drive
 Hauppauge, NY 11788

Sample Information

Matrix: AIR
 Location Code: HYDROTEK
 Rush Request: 72 Hour
 P.O.#: 6133
 Canister Id: 469

Custody Information

Collected by: AJI
 Received by: LB
 Analyzed by: see "By" below

Date Time
 12/11/15 12:34
 12/14/15 15:15

Project ID: 150298
 Client ID: SV-1

Laboratory Data

SDG ID: GBK38731
 Phoenix ID: BK38735

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

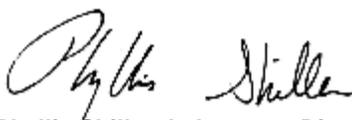

Comments:

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

PLEASE NOTE: THIS PROGRESS REPORT IS CONSIDERED PRELIMINARY DATA. THE RESULTS ENTERED HAVE NOT BEEN EXAMINED BY OUR QA/QC DEPARTMENT.

Phyllis Shiller, Laboratory Director

Sample Criteria Exceedences Report

GBK38731 - HYDROTEK

Criteria: None

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units
--------	-------	-----------------	----------	--------	----	----------	----------------	-------------------

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Muslima Ward Air Samples
Importance: High

Andrew,

The Summa canisters for the air samples from the above Project, that we received yesterday, are all still under a high vacuum. The reason for this is the regulators were requested at a six hour sampling interval but the samples were collected over a four hour duration. So what we can do is added purified compressed gas to the summa's which will lower the vacuum but will dilute the samples. The dilution factor will be around 5, which will increase all of the reporting limits by a factor of 5. Meaning we will not get the low level reporting limits. So would you like us to proceed or cancel the analysis?
