## CERTIFICATION

I, Steven Ciambuschini, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation (RI) for the 508 West 24<sup>th</sup> Street Site, (NYC BCP Site No. 11EH-N349M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Steven Ciambuschini

## EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

### Site Location and Current Usage

The Site is located at 508 West 24<sup>th</sup> Street in the Chelsea section in Manhattan, New York and is identified as Block 695, and Lot 44 on the New York City Tax Map. Figure 1 shows the Site location. The Site is ±7,406-square feet and is bounded to the north by West 24<sup>th</sup> Street followed by mixed use commercial/residential buildings, to the east by the Highline Park with underlying vacant land, to the south by mixed use commercial/residential buildings and to the west by a commercial building. A map of the site boundary is shown in Figure 2. The site is currently occupied by a vacant building.

### Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 130-foot tall 10-story mixed use commercial/residential building with one cellar level. The existing building will be demolished as part of redevelopment. The proposed site development will consist of commercial space on the first floor and residential dwellings on floors two through ten. The first floor commercial retail space will occupy approximately 4,865 square-feet (sf), the residential portion of the building (including the lobby space on the first floor) will occupy approximately 42,032 sf (15 residential units) and the cellar will occupy approximately 5,427 sf. The cellar level will be used for building amenities including a tenant storage, a gym area, the building supervisor's office and mechanical rooms. Layout of the proposed site development based on architectural schematics prepared by Goldstein, Hill & West Architects, LLP is presented in Appendix A.

The proposed cellar slab will extend to a depth of approximately 16 to 20-feet b.g.s. over approximately 73% of the subject property to allow for the construction of the cellar level of the proposed redevelopment. A setback area along the eastern, western and southern property boundaries will comprise the remaining 27% of the subject site. All soils located within this setback area will remain; however, they will be covered by the first floor building slab and associated foundation elements, which will be built out to the extents of the site. It's estimated that the site excavation activities will generate ±5,425 tons of material. Drawings showing the proposed excavation extents for the cellar and sub-cellar level are included in Appendix A.

As groundwater was generally encountered 7 to 8-feet b.g.s. it is anticipated that dewatering activities will be required to allow for the excavation to extend to 20-feet b.g.s. These dewatering activities will be minimized by the proposed support of excavation system which is likely to consist of continuous sheeting.

The current zoning designation is commercial district C6-2A, which is a contextual commercial district outside a central business district. Specifically, the C6 zoning indicates that the site is zoned for corporate headquarters, large hotels, entertainment facilities, retail stores and some residential development in mixed-use buildings. The proposed use is consistent with existing zoning for the property.

### **Summary of Past Uses of Site and Areas of Concern**

Langan has prepared a Phase I Environmental Site Assessment of site that is provided in Appendix B. The August 2011 Phase I ESA identified that the site is comprised of a single lot, designated by the New York City Department of Finance as Block 695 Lot 44. Based on Sanborn Map review and New York City Department of Buildings on-line records review, the site is identified as being occupied by two buildings; however, a site inspection confirmed that a single building is located on-site that was constructed circa 1890.

Based on a Sanborn Map review of the site, the 1890 and 1899 Sanborn maps identify the property as a being operated as a millwork. The 1911 Sanborn map identifies the site as a manufacturing building. The site is identified as a fur dyeing facility on the 1930 Sanborn Map and as a furniture warehouse and trailer service station on the 1950 Sanborn Map. The 1976 Sanborn Map shows the subject property operating as lumber storage and a restaurant range repair facility. Use of the property as lumber storage and restaurant range repair was consistent through the 2005 Sanborn Map. The site has been operated as a mobile television production facility for the past 12 years.

The current owner is identified as Highline West 24<sup>th</sup> Street, LLC which purchased the site in December 2011. The subject property was previously owned by Mutual Lumber Company, Inc. from January 1984 until November 1995, when it was sold to Perfect Transport, Inc. which owned the property until 1999 when The Metro Group International purchased the property.

The AOCs identified for this site include:

1. Surrounding Sites – Potential onsite migration of offsite contaminants; and,
2. Onsite Historic Fill

## **Summary of the Work Performed under the Remedial Investigation**

Highline West 24<sup>th</sup> Street, L.L.C. performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed six soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site to estimate groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three soil vapor probes throughout the Site and collected three samples for chemical analysis.

## **Summary of Environmental Findings**

1. Elevation of the property ranges from 6 to 7 feet.
2. Depth to groundwater ranges from 7.5 to 10 feet at the Site.
3. Groundwater flow is generally from east to west beneath the Site.
4. Depth to bedrock is between approximately 39 to 58 feet at the Site.
5. The stratigraphy of the site, from the surface down, consists of 12.5 – 14.5 feet of historic fill underlain by 3 to 5.5 feet of former river bottom deposits underlain by 19 to 38 feet of sand and silt.
6. Soil samples in the RI showed no VOCs or SVOCs above Track 1 SCOs. A variety of VOC's, including mostly BTEX and associated hydrocarbons were detected at trace and low concentrations and mostly at estimated concentrations. TCE and PCE and their decay products were not detected in soil onsite. Very low levels of SVOCs were also identified in soils, mainly PAH compounds and mostly in shallow soil samples. Pesticides and PCBs were not detected in soil samples onsite. Four metals were identified in soils onsite above Track 1 SCOs but below Track 2 Restricted Residential SCOs, including copper (2 samples), mercury (one sample), nickel (2 samples), and zinc (one sample). Lead slightly to marginally exceeded Track 2 Restricted Residential SCOs in two samples (574 mg/kg maximum) while no other sample exceeded Track 1 SCOs. Overall, soil sample findings were unremarkable and did not indicate any source of

contamination onsite. The results were consistent with observations of historical fill in boring samples.

7. Groundwater samples in the RI showed only one VOC (isopropyl benzene at maximum of 5.8 ug/l in an upgradient well, and 5.0 ug/l downgradient) slightly in excess of Part 703.5 Class GA groundwater quality standard (GQS) of 5 ug/l. TCE and PCE and their decay products were not detected in groundwater. Similarly, only one SVOC (fluorene at 5.0 ug/l) was identified at the GQS of 5/ug/l. Two of these exceedances of GQS occurred in the upgradient well in the northeast corner of the site. No PCBs or pesticides were identified in groundwater samples. Only manganese and sodium were identified above GQS in dissolved samples. These results were high and consistent in all wells and suggest region wide influence of brackish water in the shallow aquifer. Overall, groundwater findings are not remarkable and do not indicate an onsite source of contamination. However, a low level of a VOC in the upgradient well suggests a possible offsite source of petroleum compounds to the east of the property. An open petroleum spill is recorded at a gas station in this area. Results also indicate a regional saline influence in groundwater.
8. Soil vapor samples in the RI showed a variety of VOCs detected at relatively low concentrations throughout the property. PCE ranged from 5.8 to 8.8 ug/m<sup>3</sup> in three samples and well below the NYS DOH monitor level of 100 ug/m<sup>3</sup>. TCE was detected at 2.2 ug/m<sup>3</sup> in one of three samples and below the monitor level of 5 ug/m<sup>3</sup>. Other VOCs that were detected were mainly BTEX and associate hydrocarbons that were found at relatively low concentrations (below 100 ug/m<sup>3</sup>) throughout the site. PCE and TCE were not detected in either soil or groundwater and releases are not suggested by past uses of the site. Although no source area was identified onsite, BTEX and associated SVOCs may have an onsite source from trace levels of BTEX observed in soils samples. Upgradient groundwater data suggests that there may be an offsite source of BTEX to the east of the property.
9. Soil/fill samples collected during the RI showed exceedances of Subpart 375-6 Unrestricted Use Objectives (UUOs) for metals in the historic fill material (1-foot to 11-feet bgs) in LB-2, LB-3, and LB-6. Copper, lead, mercury, and zinc were detected in exceedance of the UUOs in LB-2. Nickel was detected in exceedance of the UUOs in LB-3 and LB-6. No exceedances of the UUOs were detected for VOCs, SVOCs, pesticides, or PCBs in any of the soil samples collected.

All exceedances of the UUOs were detected within the historic fill. No exceedances were detected in the samples collected from the native material. No exceedances of

the UUOs were detected for VOCs, SVOCs, PCB, Pesticides or metals in 14 of the 18 samples collected. Isolated lead and mercury exceedances at LB-2 were observed as well as two exceedances of nickel within the fill material.

10. Groundwater samples collected during the RI showed that isopropyl benzene was the only VOC and fluorene was the only SVOC reported in exceedance of the Part 703 Groundwater Quality Standards. These exceedances were only detected in monitoring well MW-3. Total iron, total manganese, dissolved manganese, total sodium, and dissolved sodium were reported in all three wells in exceedance of the Part 703 Groundwater Quality Standards.

Based on the anticipated groundwater flow direction, the presence of VOCs and SVOCs in the groundwater is likely attributable to the documented open spill (Spill No. 9810383) associated with Getty Station #341 located upgradient from the site. Limited detections were identified on the subject property and it is anticipated that these impacts will be remediated as part of the spill closure to be completed by others. The detections of iron, manganese, and sodium are attributable to background conditions.

11. Soil vapor samples collected during the RI showed low levels of BTEX compounds as well as PCE and TCE. Based on the anticipated groundwater flow direction, the presence of BTEX compounds in soil vapor is likely attributable to the documented open spill (Spill No. 9810383) associated with Getty Station #341 located upgradient from the site. It is anticipated that these impacts will be remediated as part of the spill closure. PCE and TCE were not detected in soil or groundwater at the Site, therefore detections in soil vapor are also not attributed to an offsite source.

## REMEDIAL INVESTIGATION REPORT

### 1.0 SITE BACKGROUND

Highline West 24<sup>th</sup> Street, L.L.C. has enrolled in the New York City Brownfield Cleanup Program (NYC BCP) to investigate and remediate a ±0.17-acre site located at 508 West 24<sup>th</sup> Street in the Chelsea section of Manhattan, New York. Mixed commercial/residential use is proposed for the property. The RI work was performed between 14 and 16 December 2011. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

#### 1.1 Site Location and Current Usage

The Site is located at 508 West 24<sup>th</sup> Street in the Chelsea section in Manhattan, New York and is identified as Block 695, and Lot 44 on the New York City Tax Map. Figure 1 shows the Site location. The Site is ±7,406-square feet and is bounded to the north by West 24<sup>th</sup> Street followed by mixed use commercial/residential buildings to the east by the Highline Park, with underlying vacant land to the south followed by mixed use commercial/residential buildings and to the west by a commercial building. A map of the site boundary is shown in Figure 2. The site is currently occupied by a vacant building.

#### 1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 130-foot tall 10-story mixed use commercial/residential building with one cellar level. The current building will be demolished as part of redevelopment. The proposed site development will consist of commercial space on the first floor and residential dwellings on floors two through ten. The first floor commercial retail space will occupy approximately 4,865 square-feet (sf), the residential portion of the building (including the lobby space on the first floor) will occupy approximately 42,032 sf (15 residential units) and the cellar will occupy approximately 5,427 sf. The cellar level will be used for building amenities including a tenant storage, a gym area, the building supervisor's office and mechanical rooms. Layout of the proposed site development based on architectural schematics prepared by Goldstein, Hill & West Architects, LLP is presented in Appendix A.

The proposed cellar slab will extend to a depth of approximately 16 to 20-feet b.g.s. over approximately 73% of the subject property to allow for the construction of the cellar level of the proposed redevelopment. A setback area along the eastern, western and southern property boundaries will comprise the remaining 27% of the subject site. All soils located within this setback area will remain; however, they will be covered by the first floor building slab and associated foundation elements which will be built out to the extents of the site. It's estimated that the site excavation activities will generate  $\pm 5,425$  tons of material. Drawings showing the proposed excavation extents for the cellar and sub-cellar level are included in Appendix A.

As groundwater was generally encountered 7 to 8-feet b.g.s. it is anticipated that dewatering activities will be required to allow for the excavation to extend to 20-feet b.g.s. These dewatering activities will be minimized by the proposed support of excavation system which is likely to consist of continuous sheeting.

The current zoning designation is commercial district C6-2A, which is a contextual commercial district outside a central business district. Specifically, the C6 zoning indicates that the site is zoned for corporate headquarters, large hotels, entertainment facilities, retail stores and some residential development in mixed-use buildings. The proposed use is consistent with existing zoning for the property.

### **1.3 Description of Surrounding Property**

Properties located adjacent to the subject property consist of commercial and manufacturing buildings. According to the information maintained on-line by the New York City Office of Environmental Remediation (NYCOER) Searchable Property Environmental E-Database (SPEED [<https://gis.nyc.gov/moer/speed/>]) there are no schools, hospitals, or daycare centers located within 250- or 500-foot radius of the site. The site is not located in an Economic and Incentive Zone. Tax Block 695 is zoned as commercial. According to the New York City Planning Commission Zoning Map 8B dated 29 December 2009, the subject property and the adjoining properties to the east and west are zoned C6-2A. The adjoining property to the south is zoned C6-3A. Properties across 24<sup>th</sup> Street to the north are zoned M1-5. The subject property and adjoining properties are also zoned as a Special Purpose District. Figure 3 shows the surrounding land usage.

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

Langan has prepared a Phase I Environmental Site Assessment of site that is provided in Appendix B. The August 2011 Phase I ESA identified that the site is comprised of a single lot as identified by the New York City Department of Finance as Block 695 Lot 44. Based on Sanborn Map review and New York City Department of Buildings on-line records review, the site is identified as being occupied by two buildings; however, a site inspection confirmed that a single building is located on-site. The existing onsite building was constructed circa 1890.

Based on a Sanborn Map review of the site, the 1890 and 1899 Sanborn maps identify the property as a being operated as a millwork. The 1911 Sanborn map identifies the site as a manufacturing building. The site is identified as a fur dyeing facility on the 1930 Sanborn Map and as a furniture warehouse and trailer service station on the 1950 Sanborn Map. The 1976 Sanborn Map shows the subject property operating as lumber storage and a restaurant range repair facility. Use of the property as lumber storage and restaurant range repair was consistent through the 2005 Sanborn Map. The site has been operated as a mobile television production facility for the past 12 years.

The current owner is identified as Highline West 24<sup>th</sup> Street, LLC which purchased the site in December 2011. The subject property was previously owned by Mutual Lumber Company, Inc. from January 1984 until November 1995, when it was sold to Perfect Transport, Inc. which owned the property until 1999 when The Metro Group International purchased the property.

### **2.2 Previous Investigations**

The following previous environmental reports were completed for the subject property:

- Phase I Environmental Site Assessment (ESA) Report dated 23 August 2011 prepared for Highline West 24<sup>th</sup> Street, LLC, by Langan.

A Phase I ESA was prepared by Langan on behalf of Highline West 24<sup>th</sup> Street, L.L.C. to identify current or potential environmental concerns and Recognized Environmental Conditions (RECs) at the 0.17-acre proposed development site

consisting of the property at 508 West 24<sup>th</sup> Street, (Block 695 Lot 44). The ESA included a site inspection, review of historical information, completion of a federal/state/local environmental database search, and interviews with local and state agencies to assess current and past site conditions. The ESA was conducted in a manner consistent with industry standard and practice and in accordance with the Standards of the American Society for Testing and Materials (ASTM) E1527-05 Standard Practice for Environmental Site Assessments.

The ESA identified potential impacts from current and historical operations conducted at adjacent and nearby properties involving the use of above ground and underground storage tanks (ASTs and USTs) , and spills as a REC due to the potential for off-site migration of contaminants to impact sub-slab soil and/or groundwater below the subject site.

Copies of the ESA reports are provided in Appendix B.

### **2.3 Site Inspection**

A Langan geologist completed an inspection of the site on 14 December 2011 for the purposes of identifying any additional areas of concern that required investigation. The following is a summary of the conditions observed during this inspection.

The subject property is completely developed with a one-story building with a concrete slab on-grade. The building contains a mezzanine level which was formerly occupied by office space. The eastern portion of the building is wood framed with masonry walls and the western portion of the building has been retrofitted with metal framing due to a fire that reportedly occurred in the building prior to the current ownership. The building is currently vacant and was most recently used for the storing of television production equipment and office space. The floor of the building is painted and appeared to be in fair condition with no evidence of staining observed. Floor drains were observed on the eastern portion of the building floor. No petroleum or hazardous material storage or evidence of staining was identified in the areas of the floor drains. .

According to the owner, the fuel source for the building has been natural gas. The owner also indicated that he had no knowledge of any USTs or ASTs associated with the subject property.

## **2.4 Areas of Concern**

The AOCs identified for this site include:

1. Surrounding Sites – Potential onsite migration of offsite contaminants; and,
2. Onsite Historic Fill

The scope of work for this Remedial Investigation was designed to:

1. Identify the potential presence and extent of impacted soil vapor, soil, and/or groundwater at the site;
2. Determine contaminant(s) of concerns that may be encountered during site redevelopment activities for incorporation into a construction Health and Safety Plan, if necessary; and,
3. Evaluate remediation options for any impacted soil vapor, soil, and/or groundwater in accordance with NYSDEC and NYCOER regulations, if required.

The Phase I Report generated for the site is presented in Appendix B. A map showing areas of concern is presented in Figure 2.

## **3.0 PROJECT MANAGEMENT**

### **3.1 Project Organization**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Steven Ciambuschini. The Project Manager responsible for the daily oversight of the Remedial Investigation activities was Chris McMahon.

### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements and the site specific Health and Safety Plan.

### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

Highline West 24<sup>th</sup> Street, L.L.C. performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Installed six soil borings across the entire project Site, and collected 18 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site to estimate groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three soil vapor probes throughout the Site and collected three samples for chemical analysis.

### **4.1 Geophysical Investigation**

A geophysical investigation was not completed as part of this RIR.

### **4.2 Borings and Monitoring Wells**

#### **Drilling and Soil Logging**

Boring logs were prepared by a Langan geologist and are attached in Appendix C. A map showing the location of soil borings and groundwater monitoring wells is provided as Figure 4.

On 14 and 15 December 2011, six soil borings (LB-1 through LB-6) were completed on-site in order to assess potential off-site impacts, site-wide fill conditions and groundwater conditions. The borings were completed by American Environmental Assessment Corporation (AEA) of Wyandanch, New York, using a track-mounted Geoprobe® 7822DT Direct Push Drilling Rig to 20-feet below the current grade. Groundwater was generally observed to be between 7-feet and 8-feet below the existing grade.

Continuous macrocore samples were collected to the bottom of each boring and soil was classified and visually screened for evidence of contamination. No evidence of petroleum contamination from off-site sources was observed.

Field screening of soil during sample collection for volatile organic compounds (VOCs) using a photo-ionization detector (PID) was completed during the installation of all six test borings. Elevated PID readings were not observed in any of the borings.

### **Groundwater Monitoring Well Construction**

On 14 and 15 December 2011, groundwater monitoring wells were installed by a licensed well driller, AEA, using a Geoprobe® 7822DT Direct Push Drilling Rig and 4-1/4-inch hollow stem augers. Monitoring wells were completed to depths ranging from 11 to 15-feet. Monitoring wells MW-1 and MW-3 were constructed with 5-feet of 2-inch diameter Schedule 40; 0.020-inch slot PVC well screen and the remainder of the well was constructed of 2-inch diameter Schedule 40 PVC Riser. MW-2 was constructed with 10-feet of 2-inch diameter Schedule 40; 0.020-inch slot PVC well screen, with the remainder of the well being constructed of 2-inch diameter Schedule 40 PVC riser. The monitoring wells were finished with flush-mounted protective casings. Following installation, each well was developed by removing a total of five to ten well volumes using a decontaminated submersible pump and surging techniques, or until the groundwater was relatively free of silt.

Monitor well locations are shown in Figure 4.

### **Survey**

As the monitoring wells were installed inside the building, a GPS survey of the wells was not completed.

### **Water Level Measurement**

Groundwater levels were recorded prior to sampling with an oil/water interface probe to determine the potential presence of light non-aqueous phase liquids (LNAPL). No LNAPL or evidence of sheen was observed in any of the monitoring wells.

Field screening of soil during sample collection for VOCs using PID was completed during the installation of all eight test borings. Elevated PID readings were not observed in any of the borings.

### **4.3 Sample Collection and Chemical Analysis**

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

#### **Soil Sampling**

Eighteen soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 3. Figure 4 shows the location of samples collected in this investigation. Laboratories and analytical methods are discussed below.

On 14 and 15 December 2011, six soil borings (LB-1 through LB-6) were completed onsite in order to assess identified AOCs (potential impacts from surrounding sites and historic fill). Three discrete soil samples (2-foot interval) were collected from each boring for laboratory analysis from directly below the bottom of the building floor slab, the middle or bottom of the vadose zone, and from the top of the native material to determine if the native material had been impacted by the overlying fill. In an email dated 14 December 2011 NYCOER approved this deviation from the Phase II Work Plan. Samples for the analysis of VOCs were collected in discrete 6-inch intervals within each 2-foot sample interval. Soil samples were submitted to Accutest Laboratories of Dayton, New Jersey, a New York State Department of Health certified laboratory, for analysis for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCB), and metal analysis.

### Quality Assurance/Quality Control

All sampling devices (macrocores) were properly decontaminated according to NYSDEC and ASTM (ASTM D-5088-90) guidelines prior to each sampling location. This included a thorough soap/water wash to remove solid residues, followed by successive rinses of tap water and distilled/deionized water. Each macrocore was lined with a dedicated acetate liner prior to the collection of each 5-foot long soil sample. Soil samples were then placed in glass jars supplied by the laboratory. Each soil sample was numbered and recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed, and were stored at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession and analysis.

Quality assurance and quality control (field blanks and duplicate) samples were incorporated into the sampling events as required by NYCOER and consisted of one field blank and one duplicate sample. The soil field blank and duplicate samples were analyzed for VOCs, SVOCs, PCBs, pesticides and metals.

### **Groundwater Sampling**

Three groundwater samples were collected for chemical analysis during this RI. Groundwater sample collection data is reported in Table 4. Sampling logs with information on purging and sampling of groundwater monitor wells are included in Appendix C. Figure 4 shows the location of groundwater monitoring wells. Laboratories and analytical methods are discussed below.

In order to assess groundwater conditions on the subject property three groundwater monitoring wells (MW-1 through MW-3) were installed in soil borings LB-1 (MW-1), LB-4 (MW-2) and LB-5 (MW-3).

On 16 December 2011 three groundwater samples were collected for chemical analysis. The wells were sampled via USEPA low-flow sampling methods. Groundwater field parameters, including pH, specific conductivity, dissolved oxygen, oxidation-reduction potential, temperature, and turbidity were measured during low-flow purging activities. Groundwater Field Sampling Logs are provided in Appendix C. Visual observations were made of groundwater samples that were collected using a peristaltic pump and dedicated bailers. No evidence of sheen or free product was observed in any of the monitoring wells.

Groundwater grab samples were collected for analysis for VOCs, SVOCs, pesticide, and PCBs. VOCs samples were collected using dedicated bailer and the remaining samples were collected using dedicated tubing and a peristaltic pump. In addition, filtered and unfiltered groundwater samples were collected for analysis for total metals.

#### Quality Assurance/Quality Control

Collected groundwater samples were placed in containers supplied by the laboratory with the appropriate preservatives. Each groundwater sample was numbered and recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed, and stored at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession and analysis.

Quality assurance (trip blank) and quality control (field blanks and duplicate) samples were incorporated into the sampling events as required by NYCOER and consisted of one field blank, one duplicate sample and one trip blank. The groundwater field blank and duplicate samples were analyzed for VOCs, SVOCs, PCBs, pesticides and metals. The trip blank was analyzed for VOCs only.

#### **Soil Vapor Sampling**

Three soil vapor probes were installed and three soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 4. Soil vapor sample collection data is reported in Table 5. Soil vapor sampling logs are included in Appendix C. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

In order to assess soil gas conditions and evaluate any potential vapor intrusion conditions (pVICs) on the subject property, three temporary soil vapor points (SV-1 through SV-3) were installed in three of the soil borings (LB-2, LB-3, and LB-6) completed as part of the subsurface investigation activities. Soil vapor sampling locations are shown on Figure 4. One of the soil vapor points (SV-1) was placed in the southeastern corner of the site, one was placed in the northeaster side of the site (SV-2, and one was placed in the southern corner of the site (SV-3). Each point was sampled as per NYCOER, NYSDOH, and NYSDEC guidelines and samples were collected in accordance with NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York.

The temporary points were installed on 14 December 2011 by AEA using a track-mounted Geoprobe 7822DT Direct Push Drilling Rig. Soil vapor points were installed approximately six-feet below slab grade and were constructed using six-inch stainless steel double woven screens and Teflon-lined polyethylene tubing. The vapor points were completed using one-foot of No. 0 sand pack; hydrated bentonite was placed above the sand pack to surface grade. Each soil vapor sampling point was tightness tested using the helium tracer gas method and purged at a flow-rate of <200-ml per minute. No evidence of helium breakthrough (i.e., helium concentrations above 5%) was observed in any of the sample locations either before or after sample collection. PID readings for VOCs ranging from 704 ppb (SV-1) to 2,025 ppb (SV-2) were observed during field screening of each location.

#### Quality Assurance/Quality Control

Soil gas samples were laboratory analyzed for VOCs via USEPA TO-15 Method. Samples were collected in laboratory-cleaned and certified evacuated 6-L stainless steel summa canisters with regulators supplied by Accutest Laboratories of Dayton, New Jersey. The regulators were set to collect each sample over a 2-hour sampling period (a flow-rate of <200-ml per minute) as per USEPA/ITRC soil vapor sampling guidance. Each soil gas sample was numbered and recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed, and stored at a maximum room temperature of 30° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

An ambient blank sample was collected for quality assurance and quality control sample was incorporated into the sampling events as required by NYS DOH Final Vapor Intrusion Guidance. The ambient blank was analyzed for TO-15.

#### **Chemical Analysis**

Chemical analytical work presented in this RIR has been performed in the following manner:

| <b>Factor</b>                  | <b>Description</b>   |
|--------------------------------|--|
| Quality Assurance Officer      | The chemical analytical quality assurance is directed by Chris McMahon.  |
| Chemical Analytical Laboratory | Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Accutest Laboratories of Dayton, NJ.  |
| Chemical Analytical Methods    | <p>Soil analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> <li>• VOCs by TO-15 VOC parameters.</li> </ul> |

### **Results of Chemical Analyses**

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2, 3, and 4, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix D.

#### Soil Sample Results

All soil analytical results were compared to the NYSDEC 6 NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives (SCOs). Analytical results

revealed no exceedances of the Unrestricted Use Objectives (UUOs) or Restricted Use Soil Cleanup Objectives (RUSCOs) for VOCs, SVOCs, pesticides, or PCBs in any of the soil samples collected. Additionally, there were no exceedances to the UUOs for VOCs, SVOCs, pesticides, PCBs or metals from the samples collected from the proposed depth of excavation.

With exception of the following, metals were not detected in exceedance of the UUOs in any of the soil samples collected. Nickel was detected within the fill material in exceedance of the UUOs (30 mg/kg) and in exceedance of the Non-Restricted Residential RUSCO (140 mg/kg) in LB-3 and LB-6, respectively. Several metals were detected in historic fill material in LB-2 in exceedance of the UUOs including copper (50 mg/kg), mercury (0.18 mg/kg), and zinc (109 mg/kg). Lead was detected in LB-2 in exceedance of the Non-Restricted Residential RUSCO of 400 mg/kg. No other exceedances of the Unrestricted Use Objectives were detected in any of the remaining soil samples collected.

#### Groundwater Sample Results

Groundwater sample laboratory analytical results are summarized in Table 4. No exceedances of the NYSDEC Part 703 Groundwater Quality Standards (GQS) for pesticides or PCBs were reported in the groundwater samples collected from MW-1, MW-2, and MW-3. No exceedances of the NYSDEC Part 703 GQS for VOCs were detected in the groundwater samples, with exception of isopropyl benzene which was detected above the 5.0 µg/l standard. No exceedances of the NYSDEC Part 703 GQS for SVOCs were detected in MW-1 and MW-2. Fluorene was detected in MW-3 in exceedance of NYSDEC Part 703 GQS of 5 µg/l, respectively. Tentatively Identified Compounds (TICs) were also detected in MW-3 in exceedance of the 5.0 µg/l standard. Exceedances of the NYSDEC Part 703 GQS for metals were detected in all three wells including total iron (300 µg/l), total and dissolved manganese (300 µg/l), and total and dissolved sodium (20,000 µg/l).

#### Soil Gas Results

Several VOCs were detected in soil below the Unrestricted Use Objectives and several VOCs were detected in groundwater samples below NYSDEC Part 703 Groundwater Quality Objectives. The following is a list of VOCs detected in soil:

- Acetone
- Benzene
- Methyl Ethyl Ketone (MEK)

- Carbon Disulfide
- Chloroform
- Ethylbenzene
- Isopropyl Benzene
- Methyl Cyclohexane
- Methylene Chloride
- m,p-Xylene

The following is a list of the VOCs detected in the groundwater samples collected as part of this investigation:

- Cyclohexane
- Isopropyl Benzene
- Methyl Ethyl Ketone (MEK)
- Methyl Tert-Butyl Ether (MTBE)
- Toluene
- o-Xylene

The following list of compounds detected in soil vapor coinciding with the VOCs detected in the soil or groundwater at the site will be considered for the pVIC for the purposes of this report:

- Acetone
- Benzene
- Carbon Disulfide
- Chloroform
- Cyclohexane
- Ethylbenzene
- Methyl Ethyl Ketone (MEK)
- Toluene
- m,p-Xylene
- o-Xylene

Tetrachloroethene (PCE) and trichloroethene (TCE) are also included in the list of parameters sampled in soil gas.

Exceedances of the indoor air quality criteria found in the New York State Department of Health (NYSDOH) 2003 Study of Volatile Chemicals in Air of Fuel

Oil Heated Homes guidance and the United States Environmental Protection Agency 2001 Building Assessment and Survey Evaluation (BASE) Database using Summa Canister Method were detected in all samples for chloroform (2.81  $\mu\text{g}/\text{m}^3$ ), ethylbenzene (6.4  $\mu\text{g}/\text{m}^3$ ), MEK (16  $\mu\text{g}/\text{m}^3$ ), toluene (57  $\mu\text{g}/\text{m}^3$ ), m&p-xylene (22.2  $\mu\text{g}/\text{m}^3$ ), and o-xylene (7.9  $\mu\text{g}/\text{m}^3$ ). Benzene was detected in exceedance of the NYSDOH 2003 guidance and USEPA 2001 BASE Database in SV-2 and SV-3 (13  $\mu\text{g}/\text{m}^3$ ). PCE was detected in exceedance of the NYSDOH 2003 guidance (2.5  $\mu\text{g}/\text{m}^3$ ) in all three samples and TCE was detected in exceedance of the NYSDOH 2003 guidance in SV-3 (2.2  $\mu\text{g}/\text{m}^3$ ). Carbon disulfide was detected in exceedance of the USEPA 2001 BASE Database (4.2  $\mu\text{g}/\text{m}^3$ ) in SV-2 and SV-3.

## **5.0 ENVIRONMENTAL EVALUATION**

### **5.1 Geological and Hydrogeological Conditions**

#### **Stratigraphy**

Based on the environmental borings completed during this Remedial Investigation and geotechnical borings also completed by Langan and summarized in Geotechnical Engineering Investigation Report dated 8 February 2012, the subsurface conditions generally consist of successive layers of surficial fill, former river bottom deposits, sand, and silt above rock.

During the Remedial investigation, fill was observed to be present to a depth ranging from 12.5 to 14.5-feet below the top of the existing floor slab. This fill material consisted of brown and orange brown fine to coarse sand with varying proportions of fine to coarse gravel and silt. Small amounts of brick and concrete fragments were also encountered in the fill. The fill layer was underlain by 3 to 5.5-foot-thick native material consisting of former river bottom silt, clay, and fine sand deposits.

#### **Hydrogeology**

Groundwater was observed to be approximately 7 to 8-feet below the current site grade. Based on the proximity of the site to the Hudson River, groundwater flow is expected to be towards the west.

## **5.2 Soil Chemistry**

Data collected during the RI is sufficient to delineate the vertical distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 3. Figure 5 shows the location and posts the values for samples that exceed the 6NYCRR Part 375-6 Soil Cleanup Objectives.

The soil analytical results of this RI documented limited exceedances of Subpart 375-6 Unrestricted Use Objectives for metals in the historic fill material (1-foot to 11-feet bgs) in LB-2, LB-3, and LB-6. Copper (60.7 mg/kg – 105 mg/kg), lead (420 mg/kg – 574 mg/kg), mercury (0.29 mg/kg), and zinc (210 mg/kg) were detected in exceedance of the Subpart 375-6 UUOs in LB-2. Nickel was detected in exceedance of the UUOs in LB-3 (140 mg/kg) and LB-6 (52.5 mg/kg). No exceedances of the UUOs were detected for VOCs, SVOCs, pesticides, or PCBS in any of the soil samples collected.

All exceedances of the UUOs were detected within the historic fill. No exceedances were detected in the samples collected from the native material. No exceedances of the UUOs were detected for VOCs, SVOCs, PCB, Pesticides or metals in 14 of the 18 samples collected. Isolated lead and mercury exceedances at LB-2 were detected along with two exceedances of nickel within the fill material.

As part of the proposed site development, excavation will be completed to a depth of approximately 16 to 20-feet b.g.s. over approximately 73% of the subject property to allow for the construction of the cellar level. A setback area along the eastern, western and southern property boundaries will comprise the remaining 27% of the subject site. Based on the characterization of the fill material that was completed as part of this RI, the material that will remain on-site as part of the foundation setbacks is not impacted above UUOs. Additionally, this setback area will be covered by the first floor building slab and associated foundation elements which will be built out to the extents of the site.

## **5.3 Groundwater Chemistry**

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 4,

exceedances of applicable groundwater standards are shown. Figure 6 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

Isopropyl benzene (5.8 µg/l) was the only VOC and fluorene (5 µg/l) was the only SVOC reported in exceedance of the Part 703 Groundwater Quality Standards at the MW-3 location. Total iron (404 µg/l – 3,600 µg/l), total manganese (1,720 µg/l – 8,800 µg/l), dissolved manganese (1,700 µg/l – 8,700 µg/l), total sodium (146,000 µg/l – 435,000 µg/l), and dissolved sodium (146,000 µg/l – 421,000 µg/l) were reported in all three wells in exceedance of the Part 703 Groundwater Quality Standards.

Based on the anticipated groundwater flow direction, the presence of VOCs and SVOCs in the groundwater is likely attributable to the documented open spill (Spill No. 9810383) associated with Getty Station #341 located upgradient from the site. It is anticipated that these impacts will be remediated as part of the spill closure to be completed by others. The detections of iron, manganese, and sodium are attributable to background conditions.

As the presence of marginally impacted groundwater has been attributed to off-site sources and possible site background conditions, no further investigation of the site groundwater is proposed. As significant site dewatering is anticipated during foundation construction activities, low levels of isopropyl benzene-, and fluorene-impacted groundwater (detected in MW-3) may be encountered. All groundwater that will be discharged to the New York City sewer system will be sampled in conformance with New York City Department of Environmental Protection standards and required constituents prior to any discharges.

#### **5.4 Soil Vapor Chemistry**

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 5. Figure 7 shows the location and posts the values for soil vapor samples with detected concentrations.

For the purposes of this report, the following list of compounds detected in soil vapor will be considered for the potential for a vapor intrusion condition:

- Acetone
- Benzene
- Carbon Disulfide
- Chloroform
- Cyclohexane
- Ethylbenzene
- Methyl Ethyl Ketone (MEK)
- Tetrachloroethene (PCE)
- Toluene
- Trichloroethene (TCE)
- m,p-Xylene
- o-Xylene

Based on the anticipated groundwater flow direction, the presence of BTEX compounds in soil vapor is likely attributable to the documented open spill (Spill No. 9810383) associated with Getty Station #341 located upgradient from the site. It is anticipated that these impacts will be remediated as part of the spill closure. PCE and TCE were not detected in soil or groundwater at the Site; therefore, detections in soil vapor are not attributed to on-site sources of contamination.

Based on the detection of low levels of VOCs that were detected during this Remedial Investigation no further assessment is required.

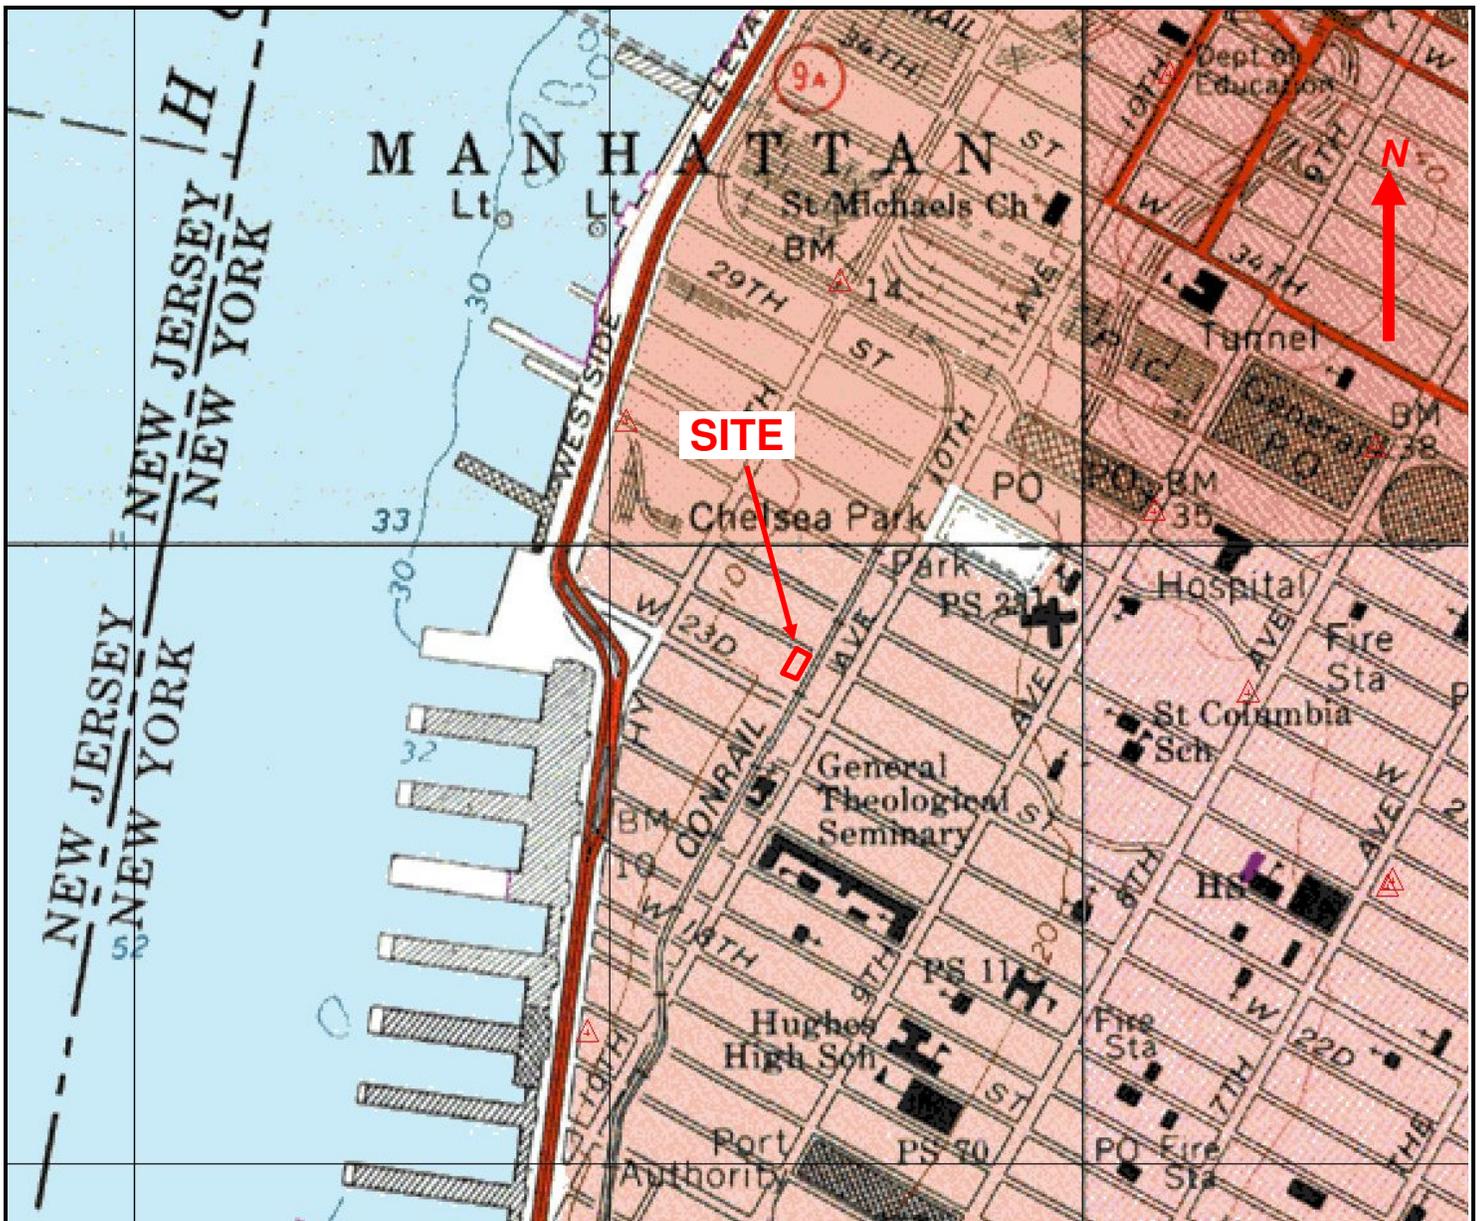

## **5.5 Prior Activity**

Based on an evaluation of historical usage of the site and the data and information collected as part of the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

## **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

NOTES:  
 \* : No criteria established, value is generic criteria  
 \*\*\*Standards exist for additional criteria not listed in this table  
 NYSDEC Groundwater Criteria are a combination of values from Part 703 if the NYS Code and TAGM 4046. Most values are generic screening values, however where contaminant specific criteria have been established they are used in this table  
 ND: Not Detected  
 NA: Contaminant not sampled for  
 J: Estimated Value

KEEP CLEAR FOR  
DOB APPROVAL  
STAMPS

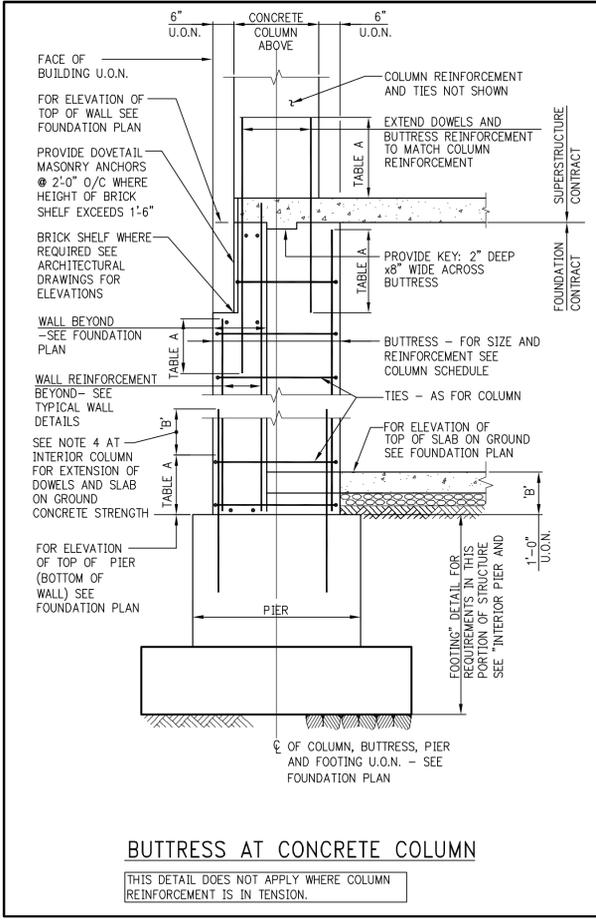

**NOTES:**

- EXCAVATE & PLACE PANELS IN ORDER SHOWN
- MINIMUM CLEAR DISTANCE BETWEEN SIMULT. CUTS TO BE 12'-0"
- CONCRETE FOR UNDERPINNING TO BE CONTROLLED STONE CONCRETE 3000 P.S.I.

**SUGGESTED UNDERPINNING DETAIL**

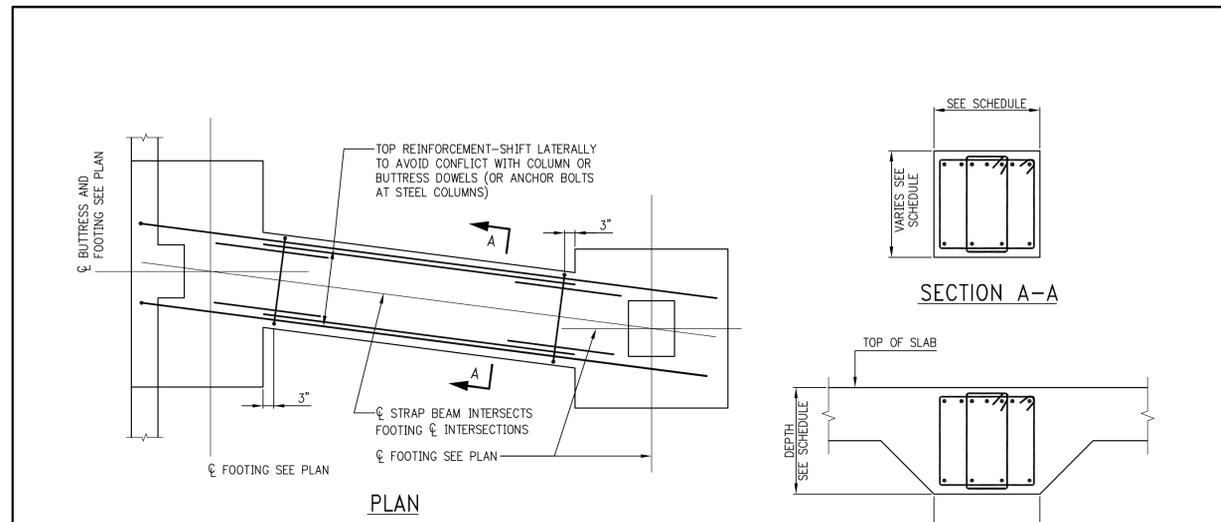

**NOTES:**

- THIS DETAIL IS REPRESENTATIVE OF ONE METHOD OF UNDERPINNING UNDER PARTICULAR CIRCUMSTANCES. THE CONTRACTOR MUST EVALUATE THIS PROJECT AND DETERMINE EXACT METHODS AND PROCEDURES TO BE FOLLOWED.
- CONTRACTOR'S UNDERPINNING DESIGN ENGINEER SHALL BE A REGISTERED PROFESSIONAL ENGINEER IN THE STATE OF NEW YORK AND SHALL REVIEW ALL AVAILABLE BORING DATA AND EXISTING CONDITIONS TO DETERMINE THE NECESSITY OF PRELOADING AND/OR JACKPILING TO PROTECT ADJACENT STRUCTURES PRIOR TO COMMENCEMENT OF UNDERPINNING OPERATIONS.
- THE CONTRACTOR'S PROFESSIONAL ENGINEER SHALL FILE WITH THE BUILDING DEPARTMENT THE SELECTED PROCEDURE.

**BUTRESS AT CONCRETE COLUMN**

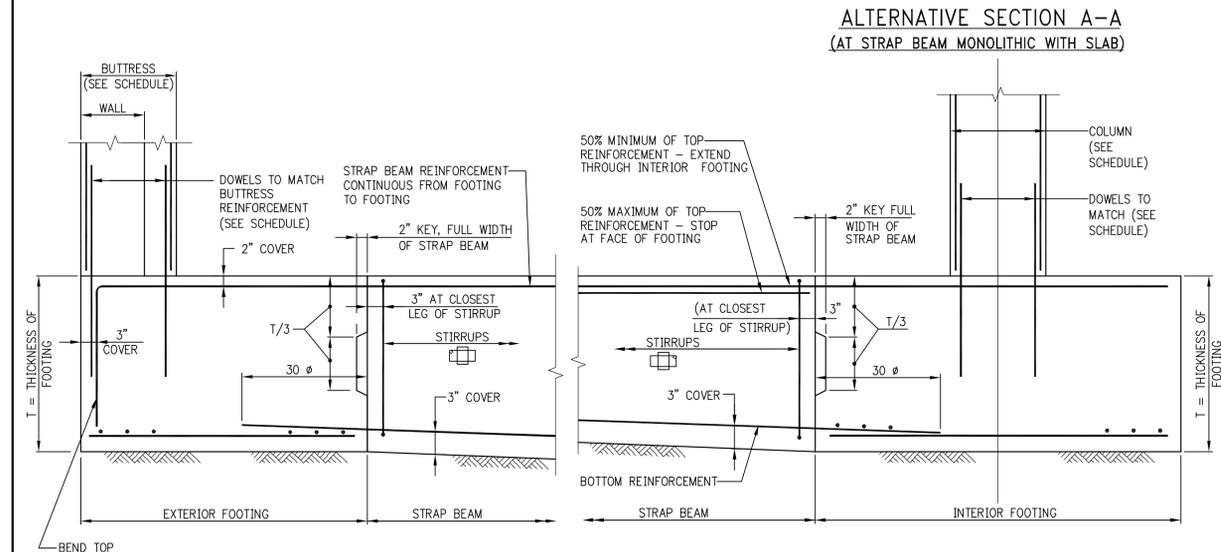

THIS DETAIL DOES NOT APPLY WHERE COLUMN REINFORCEMENT IS IN TENSION.

**STRAP BEAM FOR FOOTINGS ON SOIL OR ROCK**

**NOTE:**  
STRAP BEAM MUST FRAME DIRECTLY TO FOOTINGS.  
STRAP BEAMS MAY NOT FRAME TO PIERS OR BUTRESSES.

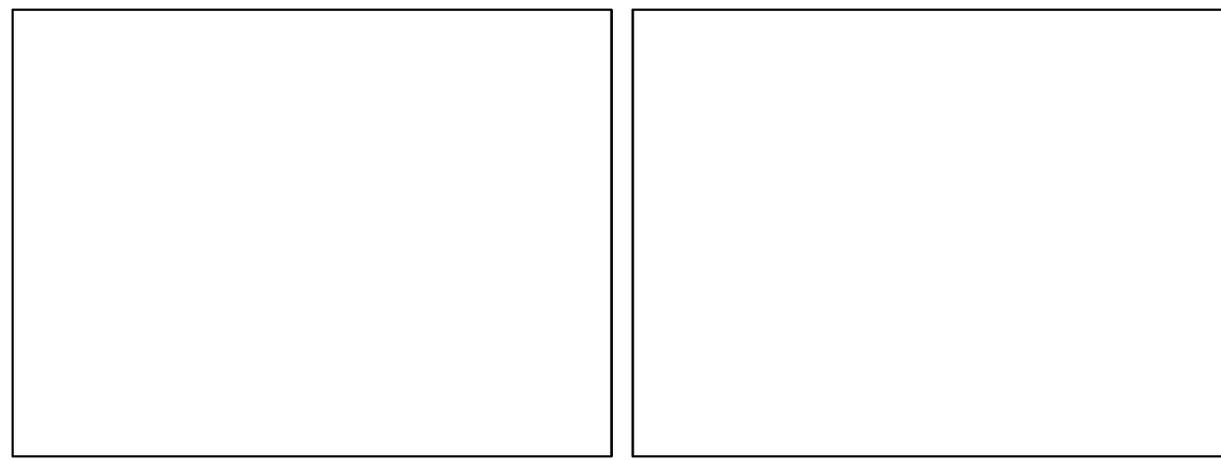

**NOTE:**  
FOR SLAB DETAILS AND WATERPROOFING REQUIREMENTS SEE FOUNDATION PLANS AND DETAILS

**ELEVATION - EXTERIOR FOOTING**

**NOTE:**  
SEE FOUNDATION DRAWINGS FOR STRAP BEAM SIZE, REINFORCEMENT, AND STIRRUPS.

**ELEVATION - INTERIOR FOOTING**

**250 TON COMPRESSION  
DRILLED MINI-CAISSON DETAIL**

**NOTE:**  
ALL CAISSONS TO BE TYPE 1 U.O.N.(\*)

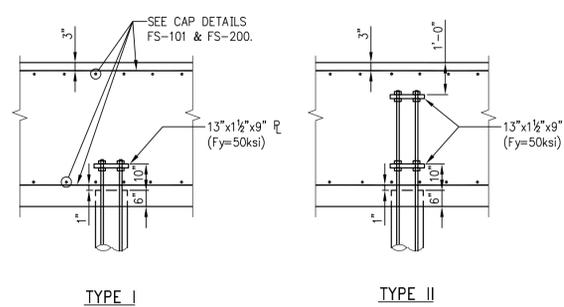

**DRILLED CAISSON INSTALLATION PROCEDURE**

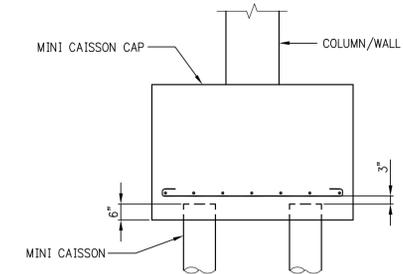

- INSTALL CASING INTO BEDROCK AS SHOWN ON SHEET NO. 1. USE DRILLING FLUIDS OF EITHER CLEAN POTABLE WATER OR COMPRESSED AIR.
- DRILL OPEN HOLE INTO ROCK TO THE DESIGN DEPTH.
- PLACE TREMIE PIPE TO BOTTOM OF ROCK SOCKET AND FLUSH WITH CLEAN WATER UNTIL RETURN IS CLEAR OF DRILL CUTTINGS.
- IMMEDIATELY THEREAFTER, PUMP GROUT THROUGH TREMIE PIPE UNTIL ALL DRILLING FLUID IS DISPLACED AND THE CASING IS FULL OF GROUT TO TOP OF PILE. MAINTAIN TREMIE PIPE AT LEAST 5 FEET BELOW GROUT SURFACE UNTIL CASING IS FILLED WITH GROUT.
- GROUT CONTINUOUSLY WITHOUT INTERRUPTION SO THAT PLACEMENT IS COMPLETED IN A TIME PERIOD LESS THAN THE SETTING TIME OF THE GROUT.
- PLACE ADDITIONAL TREMIE GROUT AS NECESSARY TO DISPLACE DILUTED GROUT AT THE TOP OF THE PILE.
- INSERT REINFORCING BARS WITH CENTRALIZERS (AT THE CONTRACTOR'S OPTION, THE REINFORCING BARS CAN BE INSTALLED PRIOR TO GROUTING).

**MATERIALS:**

- TREMIE GROUT SHALL CONFORM TO ASTM C109 AND HAVE A COMPRESSIVE STRENGTH OF 8000 PSI.
- THE PERMANENT CASING SHALL BE 18" O.D., 0.5" THICK WALL STEEL CASING WITH MINIMUM YIELD STRESS OF 45,000 PSI.
- #20 REINFORCING STEEL SHALL CONFORM TO ASTM SPECIFICATION A615, GRADE 80.
- CENTRALIZERS SHALL BE LOCATED AT BOTTOM OF REINFORCING CAGE AND TO BE SPACED NOT MORE THAN 10 FT. O.C.

**TYPICAL CAISSON ANCHORAGE**

**TYPICAL MINI-CAISSON CAP  
REINFORCEMENT LAYOUT**

**NOTE:**  
ALL MINI CAISSON CAP BOTTOM REINFORCEMENT SHOULD BE HOOKED AS REQUIRED FOR FULL TENSION DEVELOPMENT.

## **EXECUTIVE SUMMARY**

This Phase I Environmental Site Assessment (ESA) was prepared by Langan Engineering and Environmental Services, Inc. on behalf of Highline West 24<sup>th</sup> Street, L.L.C. to identify current or potential environmental concerns and Recognized Environmental Conditions (RECs) at the 0.17-acre proposed development site consisting of the property at 508 West 24<sup>th</sup> Street (Block 695 Lot 44) located in New York, New York. The ESA included a site inspection, review of historical information, completion of a federal/state/local environmental database search, and interviews with local and state agencies to assess current and past site conditions.

The subject property is currently occupied by a one-story commercial building with a mezzanine level that is constructed with a slab on grade. The entire building is currently occupied by Metrovision Production Group, a commercial television production company.

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following RECs and business environmental risks that may impact proposed redevelopment of the site were identified:

### Recognized Environmental Conditions

It is the opinion of the environmental profession that the following represent RECs:

#### Surrounding Sites

Potential impacts from current and historical operations conducted at adjacent and nearby properties involving spills and the use of ASTs, USTs represent an REC due to the potential for off-site migration of contaminants which may impact sub-slab soil and/or groundwater below the subject site. Based on the environmental database review, adjacent properties (Adolph's Trucking Company at 507-511 West 24<sup>th</sup> Street and 523 West 23<sup>rd</sup> Street) have documented releases associated with USTs. Also, surrounding properties (Getty Station #341 at 239 10<sup>th</sup> Avenue, 535 West 23<sup>rd</sup> Street and 215 10<sup>th</sup> Avenue) have open spills with documented groundwater impacts in exceedance of the New York State Department of Environmental Conservation's Groundwater Quality Standards. Based on the number of sites in the vicinity of the subject property and the known groundwater impacts associated with these sites the surrounding properties constitute an REC.

### Business Environmental Risks

It is the opinion of the environmental profession that the following represent business environmental risks:

#### Heating Oil Underground Storage Tanks (USTs)

The subject property was formerly occupied by residential and commercial buildings. Due to the historical use of the subject property and a lack of documentation encountered during completion of this ESA regarding how the previous buildings located on the subject property were heated or whether underground storage tanks used to store heating oil were ever present onsite, it is the opinion of the environmental professional that the potential presence of heating oil USTs beneath the lots or adjacent sidewalks associated with these former buildings represents a business environmental risk. Preparation and implementation of a contingency plan to address the presence of any USTs that may be encountered during site construction activities would adequately address this issue.

#### Historic Urban Fill

Based on the location and urban density of the site area, it is likely that the subject site area contains historic urban fill which is typically characterized by elevated concentrations of poly-aromatic hydrocarbons (PAHs) and metals. The presence of fill will require implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material if the site were to be redeveloped. Additionally, due to the (E)-designation of the subject property, if historic fill is identified during the Phase II Environmental Investigation, completion of a Remedial Action Plan to address the proper handling of the impacted fill material will be required to be submitted to and approved by the New York City Office of Environmental Remediation prior to initiation of site redevelopment activities.

## **1.0 INTRODUCTION**

Langan Engineering & Environmental Services, Inc. (Langan) has completed a Phase I Environmental Site Assessment (ESA) of a ±0.17-acre site located at 508 West 24<sup>th</sup> Street, New York, New York (Figure 1).

This ESA was conducted to identify current or potential environmental concerns and/or Recognized Environmental Conditions (RECs) resulting from past or current activities on the subject property, as well as to evaluate immediately surrounding environs with the potential to impact upon the property. The assessment consisted of a site reconnaissance of all accessible property areas, a review of State and Federal environmental databases as they concern the subject property and surrounding areas, contact with Federal, State and local agencies, a review of Sanborn Fire Insurance Maps of the subject property and surrounding areas, and a review of local/county records.

The ESA was conducted in a manner consistent with industry standard and practice and in accordance with the Standards of the American Society for Testing and Materials (ASTM) E1527-05 Standard Practice for Environmental Site Assessments. Any deviations from this practice are provided in Section 11.0 of this report.

## **2.0 RELIANCE/LIMITATIONS**

This ESA report was prepared for Highline West 24<sup>th</sup> Street, L.L.C., for the proposed development of the 508 West 24<sup>th</sup> Street property and for the objectives of due diligence. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the subject property addressed herein, or by any third party without a written authorization from Langan.

Langan's scope of services, as described in the proposal dated 30 June 2011, was limited to that agreed to with Highline West 24<sup>th</sup> Street, L.L.C. and no other services beyond those explicitly stated are implied. No exploratory borings, sampling of soil, soil vapor, or groundwater, or laboratory analysis were performed by Langan as part of the scope of services.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the subject property. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of Recognized Environmental Conditions (RECs) at the subject property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot “insure” or “certify” that the subject property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary thoroughness and competence of our profession. The user is cautioned that federal, state, and local laws may impose environmental obligations that are beyond the scope of ASTM Practice E 1527-05.

The conclusions, opinions and recommendations provided in this report are based solely on the following activities:

- Visual observations of the subject property and the immediate vicinity at the time of Langan’s site visit;
- Review of relevant available historical information; and,
- Correspondence and/or discussion with personnel knowledgeable about the site.

The conclusions, opinions and recommendations are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the time of our site visit.

The User is responsible for the review and identification of environmental liens, activity, and use limitations, and for ascertaining reasons for significantly lower purchase property price in accordance with Section 6 of ASTM E 1527-05. A questionnaire covering these above-concerns was provided to Highline West 24<sup>th</sup> Street, L.L.C. and is included as Attachment A. In addition, a similar questionnaire was provided to the Mr. James McGillion as the owner and operator of the subject property, and is included as Attachment B. If any of these above-concerns were uncovered during the course of the Phase I ESA, they are addressed in this report.

The report findings are based in part on information provided by local, county and state officials and environmental databases from Federal and State sources. Langan assumes no responsibility for the accuracy and completeness of this information. Visual

observations discussed in this report represent conditions at the time of the site inspection and may not be representative of the past or future site conditions.

As per ASTM E1527-05, Phase I ESA Report deviations, as well as professional opinions regarding these deviations, are listed in Section 11.0.

In accordance with Section 4.6 of ASTM E 1527-05 and 40 CFR §312.20, a Phase I ESA may be considered valid for one year starting from the commencement date of the assessment listed on the front cover of this report. The formal property acquisition/real estate transaction must take place during this period. However, the following components must be conducted or updated within 180 days (six months) prior to the date of the property acquisition/real estate transaction:

- Interviews with past and present owners, operators and occupants;
- Searches for recorded environmental cleanup liens;
- Review of governmental records;
- Site Reconnaissance of the property and adjoining properties; and,
- The declaration by the Environmental Professional.

### **3.0 SITE DESCRIPTION**

The subject property is designated as Block 695, Lot 44 by the New York City Department of Finance (Figure 2). Based on information provided by James McGillion, the property owner, and review of Sanborn Fire Insurance maps, the existing one-story building previously consisted of two buildings which were combined circa 1985. The building is currently used for storage of television video production equipment with the mezzanine level being occupied by offices. Former owners of the building include the Mutual Lumber Company, Inc and Perfect Transport, Inc.

The subject property is bounded by to the north and west by mixed use commercial art gallery space and residential dwellings, to the east by the Highline Elevated Park with vacant land beneath the structure and to the south by mixed-use commercial residential buildings. The subject property is located within an area of dense commercial development in the Chelsea art district of Manhattan.

The property is currently zoned as a commercial district (C6-2A) according the New York City Department of City Planning zoning map dated 10 January 2011.

#### **4.0 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS**

For the purpose of report completeness and to better understand the subsurface conditions, the geologic conditions in the general area of the subject property are discussed in this section.

The "Geologic Map of New York City and Adjacent Part of New Jersey" by U.S. Geological Survey indicates the bedrock underlying the site is part of the Hartland Formation. The Hartland Formation, is comprised of a dark gray, medium to coarse-grained muscovite-biotite-garnet (mica) schist and gray fine-grained quartz-feldspar granulite with biotite and garnet, with localized concentrations of granite and intrusions of coarse-grained granitic pegmatite. The predominant feature of the Hartland Formation is the parallel alignment of the mineral grains, referred to as schistosity or foliation. The foliation in the Hartland Formation generally dips steeply to the west or the east depending on local conditions of folding, although foliation dipping to other directions or nearly horizontal foliation has been observed.

The subject property is located approximately 1/4-mile west of the Hudson River. The area of the subject property is underlain by fill and glacial deposits that may extend as deep as 80-feet below ground surface (b.g.s.).

Test borings completed in the vicinity of the subject property by Langan in 2008 indicate that subsurface conditions generally consist of a 10 to 13 foot thick layer of miscellaneous fill underlain by successive layers of glacial deposits, and mica schist bedrock. Rock was typically encountered at depths of approximately 28 feet b.g.s. Groundwater was encountered at approximately 11-feet b.g.s.

Based on site/area topography, groundwater flow within the overburden material is anticipated to be to the southwest, towards the Hudson River.

#### **5.0 USER PROVIDED INFORMATION**

A questionnaire was completed by the User and is included in Attachment A. Information obtained from this questionnaire is discussed in the sections below. In addition, documents provided by the User are also discussed in this section.

### **5.1 Title Records**

A Title Search was not provided by the User for this ESA; however, Langan did review title information maintained online by the New York City Department of Finance (NYCDOF). Title records were reviewed from 1969 until present. The current owner is identified as The Metro Group International. The subject property was previously owned by Mutual Lumber Company, Inc from January 1984 until November 1995, when it was sold to Perfect Transport, Inc. which owned the property until 1999 when the current owner purchased the property.

### **5.2 Environmental Liens or Activity and Use Limitations**

Reasonably ascertainable recorded land title records and lien records that are filed under federal, tribal, state, or local law should be reviewed to identify environmental liens or activity and use limitations, if any, that are currently recorded against the property. Any environmental liens or activity and use limitations are required to be reported to the Environmental Professional conducting the ESA per ASTM E1527-05.

No environmental liens or use limitations (engineering or institutional controls) were identified for the subject property in the title report, EDR report, or by the User. Information regarding the 'E'-designation status of the property can be found in Section 8 of this report.

### **5.3 Specialized Knowledge**

Specialized knowledge is defined by ASTM E 1527-05 as *“any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property”*. For example, a User is involved in the same line of business as current or former occupants of the property or adjoining property and has specialized knowledge of the chemicals and processes used in this line of business.

The User did not provide specialized knowledge material to recognized environmental conditions in connection with the property as part of this ESA.

#### **5.4 Valuation Reduction for Environmental Issues**

In a transaction involving the purchase of a parcel of commercial real estate, the User shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated.

No information related to a valuation reduction for environmental issues was provided to Langan.

#### **5.5 Commonly Known Information**

If the user is aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information. This information may include past uses of the property, specific chemicals that were used on site, spills or releases or environmental cleanups that have taken place.

No additional information regarding the environmental condition of the subject site was provided to Langan.

#### **5.6 Documentation Provided by the User**

A Phase I Environmental Site Assessment completed by Roux Associates, Inc. dated 25 August 2006 was provided by the User. The Phase I ESA was completed for Highline Partners, L.L.C., and concluded that no RECs were identified for the subject property. Suspect asbestos containing materials were observed during the site inspection conducted during the ESA. Additionally, the report noted that the soil beneath the building likely consisted of historic urban fill and that offsite contaminant migration from adjoining properties had the potential to adversely impact the subject property.

## **6.0 REVIEW OF PREVIOUS LAND USE**

Historic Sanborn Fire Insurance Maps and City Directory Information were requested from Environmental Data Resources (EDR) of Milford, Connecticut. Provided are descriptions of the materials provided by these resources.

### **6.1 Sanborn Fire Insurance Maps**

Sanborn Fire Insurance Maps of the subject property and surrounding area dated 1890, 1899, 1911, 1930, 1950, 1976, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 were obtained from EDR and reviewed as part of this ESA. Copies of Sanborn Maps are provided in Attachment C.

#### 1890 and 1899 Sanborn Maps

**Subject Property:** The subject property is shown as being comprised of a single three-story building. The 510-512 property is identified on the map as a moulding mill and the third story of the 508 portion of the property is identified as a residential dwelling on the 1890 map, the uses are the same on the 1899 map; however, the two portions are shown as separate buildings.

**Adjoining Properties:** The adjoining property to the west is identified as a piano leg and furniture factory and a cotton mill, the property to the north is identified as a manufacturer of gas fixture electroliers and the properties to the east and identified as mixed use commercial/residential.

#### 1911 Sanborn Map

**Subject Property:** The conditions shown on the 1911 Sanborn Map are similar to those shown on the 1890 and 1899 Sanborn Map with the exception that the property is no longer identified as a millwork manufacturer; however, it is still identified as being used for manufacturing.

**Adjoining Properties:** The property to the northwest of the subject property is identified as a private garage. Four 275-gallon gasoline tanks are identified as being located beneath the sidewalk on the southwestern portion of the building. The property to the northeast of the subject property is identified as a five-story manufacturing building. The property to the east is identified as a three-story residential dwelling with a basement, the properties to the south consist of a

church, rectory and residential dwellings and the properties to the west are identified as manufacturing facilities.

#### 1930 Sanborn Map

Subject Property: Conditions shown on the 1930 Sanborn Map are the similar to those shown on the 1911 Sanborn Map with the exception that the subject property is identified as a fur dyeing facility in the 510-512 building. Additionally, two gas boilers are identified in the southeastern corner of the 510-512 building.

Adjoining Properties: Conditions shown for the properties to the north, and west are similar to those shown in the 1911 Sanborn Map with the exception that the properties to the east are now identified as being an elevated railroad that runs from southeast to northeast, parallel to the subject property.

#### 1950 Sanborn Map

Subject Property: Conditions shown on the 1950 Sanborn Map are similar to those shown on the 1930 Sanborn Map with the exception that the subject property is identified a furniture warehouse in the 510-512 building and a trailer service station on the first floor of the 508 building.

Adjoining Properties: Conditions on the 1950 map are similar to those shown on the 1930 map with the exception that the building to the northwest is identified as a private garage and dairy and the storage tanks that were identified on previous maps are no longer identified. The property to the northeast is identified as a truck parking area, the property to the east is shown as Overhead Tracks of NYCRR and the property to the south is shown as a freight shed and mixed use commercial/residential buildings.

#### 1976, 1979, 1980 and 1982 Sanborn Map

Subject Property: The conditions shown in the 1976, 1979, 1980 and 1982 Sanborn Maps are similar to those shown on the 1950 Sanborn Map with the exception of the 510-512 building being identified as lumber storage and the northern half of the 508 building being identified as restaurant range repair on the first floor.

Adjoining Properties: The conditions shown in the 1976 Sanborn Map are similar to those shown on the 1950 Sanborn Map with the exception that the building to the

northwest is identified as motor freight station, the property to the northeast is identified as an auto repair facility and Adolph's Trucking Company, the property to the east is identified as a NYC Rail Road.

1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996 2001, 2002, 2003, 2004, and 2005 Sanborn Maps

Subject Property: The conditions shown in the 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996 2001, 2002, 2003, 2004, and 2005 Sanborn Maps are similar to the ones observed in the 1982 Sanborn Map with the exception of the 508 and 510-512 buildings being shown as a single building.

Adjoining Property: The conditions shown in the 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996 2001, 2002, 2003, 2004, and 2005 Sanborn Maps are similar to the ones observed in the 1982 Sanborn Map.

## **6.2 City Directory Search**

City directory information was obtained from EDR in an attempt to identify past uses of the subject property and establishments in the surrounding area. As provided in the City Directory Abstract (Attachment D), business directories including city, cross-reference and telephone directories were reviewed spanning approximately five-year intervals. City directories include the site address for the years 1920 through 2006 including 1920, 1923, 1927, 1931, 1934, 1938, 1942, 1947, 1950, 1956, 1958, 1963, 1968, 1973, 1978, 1983, 1988, 1993, 1996, 1998, 2000 and 2006.

The City Directory Report consists primarily of commercial listings including a brewing company, trailer repair company, restaurant range repair company, a lumber company, fur dressing and dye company, office furniture equipment retail and manufacturer, lumber company and the current owner Metrovision Production Services.

Listings over the years for surrounding properties identified businesses of potential concern including: a car wash (1956-present), an auto body shop (1938-1942), a trucking company (1963-1998), printing company (1983-1988) and a gasoline and service station (1938-present). Based on Langan's review of Sanborn Maps, the gasoline station that is currently in operation at 239 10<sup>th</sup> Avenue has operated since 1930. Based on information provide on the NYC Office of Environmental

Remediation (OER) geographical information systems (GIS) database the site which is identified as Getty Service Station #341 – Getty Properties has an open spill (Spill No. 9707190) that was reported in September 1997 and remains open. Groundwater monitoring wells were observed on the former Getty Service Station #341 site and across the street at the 500 West 24<sup>th</sup> Street property during Langan’s site inspection. A detailed discussion of the former Getty Service Station #341 site is provided in Section 7.0.

**7.0 REGULATORY DATABASE SEARCH**

A database search report that identifies sites listed on state and federal databases within the ASTM-required radii was obtained for the property from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. A copy of EDR’s complete report is provided as Attachment E.

The report included the following databases specified by the ASTM Phase I protocol as well as non-ASTM databases (not listed):

| <b>Database</b>   | <b>Search Radius</b> |
|---|----------------------|
| • National Priorities List (NPL)  | 1 mile               |
| • Comprehensive Environmental Response, Compensation and Liability Information System                                   | 0.5 mile             |
| • Resource Conservation and Recovery Information System (RECRIS) Treatment, Storage, and Disposal Facilities (RCRA TSD) | 0.5 mile             |
| • Resource Conservation and Recovery Corrective Action Sites (RCRA COR)   | 1 mile               |
| • RCIS Large and Small Quantity Generators (RCRA GEN)   | 0.25 mile            |
| • Emergency Response Notification System (ERNS) □   | 0.25 mile            |
| • The Facility Index System (FINDS)   | 0.25 mile            |
| • State Hazardous Waste Sites □   | 1 mile               |
| • Regulated State Underground Storage Tank (UST) and Aboveground Storage Tank database (AST)                            | 0.25 mile            |
| • State Leaking Underground Storage Tank (LUST) □   | 0.5 mile             |
| • Brownfield Site Database  | 0.25 mile            |
| • Engineering Controls Sites  | 0.5 mile             |
| • Institutional Controls Sites  | 0.5 mile             |
| • Indian Reservation Database   | 1 mile               |

\* A description of these databases and a complete listing of sites identified on the above-referenced databases is provided in the EDR Report.

Based on the large number of sites identified within one mile of the subject property (635), Langan limited the review of surrounding properties to sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area is appropriate.

Langan evaluated the following to determine whether additional environmental records with respect to these facilities, including the orphan sites, should be reviewed:

- Case status (i.e., whether a No Further Action letter has been issued or a case has been closed);
- Type of database and whether the presence of soil or ground water contamination is known;
- Distance of the site from the subject property; and,
- Whether the site is upgradient or downgradient of the subject property based on local topography and the anticipated easterly groundwater flow direction.

Langan reviewed the information provided using the above criteria and the findings are discussed below.

#### Subject Property

The subject property is listed on the NYCOER (E)-Designation database for the (E)-designation number E-142 that was made effective in June 2005. The site has three (E)-designations, one for hazardous materials, classified as the Underground Storage Tank Testing Protocol and one for noise, classified as Window Wall Attenuation and Alternate Ventilation and one for Air Quality. A detailed discussion of the (E)-designations for the subject property is provided in Section 8.0.

Surrounding Properties

| <b>Database</b> | <b>No. of Sites within 1/8-mile</b> | <b>Adjacent sites (Y/N)</b> | <b>No. of Adjacent Sites</b> |

Adolph's Trucking Company, Inc.

Adolph's Trucking Company, Inc, which is located at 507-511 West 24<sup>th</sup> Street, is listed on the NY UST, NY Hist UST databases and is located adjacent to the subject property to the north. Additionally, the site is identified as a construction site that is listed on the NY LTANKS and RCRA CESQG databases. The site is listed on the NY UST and NY Hist UST databases for three 2000-gallon USTs and seven 550-gallon USTs, which were used to store gasoline and diesel fuel. According to the information provided in the EDR report, the 2000-gallon USTs were closed via removal in March 1999 and February 2005 and via closure in place in March 1999. The 550-gallon USTs were all closed via removal. Two of the 550-gallon USTs were removed in June of 1997, four were reportedly removed in February 2005 and the removal date of the final UST was not identified in the EDR report.

The site is identified on the NY LTANKS database for a tank failure that occurred in February 2005. Based on the information contained in the EDR report, a spill was reported on 16 February 2005 and assigned Spill No. 0412228 for a release that affected soil and groundwater. According to the EDR report the UST responsible for the release was being removed, which is consistent with the documentation provided in the NY UST and NY Hist UST databases, and the spill was closed on 16 March 2005.

The site is also listed on the RCRA-CESQG database with a reported start date of January 2005. Based on this information it is likely that this listing is associated with the removal of the USTs and potentially with the disposal of a small quantity of impacted soil. No violations were identified for the site and based on the above information the site operated numerous USTs that contained gasoline, diesel and used oil that were closed in February 2005. Based on the closure of the spill associated with these USTs it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from this site is moderate to low.

#### Getty Service Station

Getty Service Station (aka Getty #341, Getty Station #341, 239 10<sup>th</sup> Avenue/Manhattan/Getty, and Getty Gas #341), which is located at 239 10<sup>th</sup> Avenue, is listed on the NY LTANKS, NY Hist LTANKS, NY Spills and NY Hist Spills, and is located approximately 248-feet to the east/northeast of the subject property. Additionally, the site is also identified as Luke Oil 24<sup>th</sup> Street and 10<sup>th</sup> Avenue and is listed on the NY Spills database.

Based on the information provided in the EDR report the site is listed in the Spills and Hist Spills databases six times under the various entities identified above and the NY LTANKS and NY Hist LTANKS three times where spills were also reported. The following provides a summary of these spills and their regulatory status:

| <b>Entity Identified</b>                              | <b>Spill Number</b> | <b>Date Reported</b> | <b>Date Closed</b> | <b>Comments</b>   |
|---|---------------------|----------------------|--------------------|---|
| Getty Gas Station                                     | 8806159             | 10/20/1988           | 7/29/1994          | Tank test failure on two 4,000-gallon gasoline tanks where the equipment was unreadable.  |
| 239 10 <sup>th</sup> Avenue/Getty                     | 8806160             | 10/20/1988           | 7/29/1994          | Tank test failure, on two 4,000-gallon gasoline tanks that failed an air pressure test.   |

According to the EDR report case summary provided by the NYSDEC for Spill No. 9810383, in November 2004 the NYSDEC requested that a site investigation workplan be submitted for the site. The preliminary site investigation, completed in April 2005, included the installation of soil borings and seven on-site groundwater monitoring wells. The results of this investigation detected grossly impacted soils and low levels of groundwater contamination both on and off-site. Based on the results of this investigation, a quarterly groundwater sampling program was initiated. Elevated concentrations of benzene, ethyl-benzene, toluene and xylenes (BTEX) and meth-tert-butyl ether (MTBE) were detected in all the wells samples. In May 2006 three off-site wells were proposed and installed and the first round of groundwater sampling from these wells in July 2006 did not detect either BTEX or MTBE. In a workplan dated June 2010, two additional groundwater monitoring wells were proposed and installed.

Groundwater was sampled on 19 June 2009, and elevated BTEX and MTBE were detected at the on-site wells. No further information regarding this site was provided.

Based on the results reported, no off-site impacts were identified for the site; however, the fact that the spill has not been closed and that impacted groundwater is present on the site, it is the opinion of the environmental professional that the potential adverse impacts to the subject property from this site are low to moderate.

#### 521 West 23<sup>rd</sup> Street

The commercial building located at 521-523 West 23<sup>rd</sup> Street, is listed on the NY LTANKS, NY Hist LTANKS, NY UST and NY Hist UST, RCRA NonGen and Finds databases and is located 104-feet to the south/southwest of the subject property.

The site is identified as Mendon Leasing for the address of 523 West 23<sup>rd</sup> Street and is identified on the NY LTANKS and NY Hist LTANKS for a tank tightness failure that was reported on 26 January 1996 and assigned NYSDEC Spill No. 9513588. According to the EDR report case summary provided by the NYSDEC for Spill No. 9513588 the site contained five or six 550-gallon tanks that were tested with water and a visual leak was observed. The tanks were reported to have contained gasoline, and an unknown quantity of which was released this spill is also associated with Spill Nos. 9605688, 9511782, 9808740 and 8605564. It should be noted that Spill Nos. 9605688, 9511782, 9808740 and 8605564 are identified as being associated with 527 West 23<sup>rd</sup> Street, not the 521-523 West 23<sup>rd</sup> Street site. No further information was provided regarding the additional spills; however, according to a review of the NYSDEC Spill Incidents Database Search Details Spill No. 9605688 was closed on 22 September 2008, Spill Nos. 9511782, 9808740 were closed on 27 May 2004, and Spill No. 8605564 was closed on 3 December 1986. According to the EDR report Spill No. 9513588 was closed in August 2005. No further information was provided regarding these tanks and/or the spill associated with them.

The site is identified as a commercial building for the address of 521 West 23<sup>rd</sup> Street and is identified on the NY LTANKS database for a tank tightness failure that was reported on 24 January 2011 and assigned NYSDEC Spill No. 1010869. Based on the information provided in the EDR report the tank is used for the storage of No. 4 fuel-oil, no further information was provided. According to the NYSDEC Spill Incidents Database Search Details Spill No. 1010869 is still open and is associated with the

Petroleum Bulk Storage (PBS) Site No. 2-304158. According to the NYSDEC Bulk Storage Database Search Details the site contains a 5,000-gallon UST that is in service. Based on the information provided and reviewed on the NYSDEC databases it is assumed that the tightness test that failed is for the 5,000-gallon fuel-oil UST.

The site is identified as the Artists' Condominium for the address 521 West 23<sup>rd</sup> Street and is identified on the NY UST and NY Hist UST databases for a 5,000-gallon fuel-oil UST that is registered and identified as PBS Site No. 2-304158. Based on this information this UST is likely the one described above. According to the EDR report, the tank is located on the ground within a secondary containment vault without access.

The site is identified as EMSIG Manufacturing Corporation for the address 521 West 23<sup>rd</sup> Street and is identified on the RCRA-NonGen and FINDS databases. The site is identified on the RCRA-NonGen database due to its being identified as a RCRA-Large Quantity Generator (LQG) on an application completed by EMSIG Manufacturing Corporation in August 1980. The site subsequently filed an application as a Non-Generator in July 1999 and in January 2006, both of these applications verified that EMSIG Manufacturing Corporation is a Non-Generator. Additionally, no violations were identified for the site. The site is likely listed on the FINDS database due to its listing on the RCRA databases.

Based on the above information, the spills associated with the former 550-gallon gasoline USTs have been closed since 2008, and the spill associated with the 5,000-gallon UST at the site remains open. Based on the nature of the spill and the proximity to the subject property it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from the site are moderate.

#### 527 West 23<sup>rd</sup> Street

The site is identified as Tank Failed Mendon Leasing for the address 527 West 23<sup>rd</sup> Street, which is located approximately 104-feet to the south/southwest of the subject property and is identified on the NY LTANKS and NY Hist LTANKS databases. The site was identified on these databases for a tank tightness test failure that was reported on 3 December 1986 and assigned NYSDEC Spill No. 8605564. According to the EDR report, the UST that was used to stored gasoline had been leaking for approximately 5 months and the ground appeared to be saturated near the Hudson River; however the

spill was closed on 3 December 1986. The case summary provided by the NYSDEC in the EDR report also references NYSDEC Spills Nos. 9605688, 9511782 and 9808740.

The site is identified as COSTCO Wholesale Corporation for the address 527 West 23<sup>rd</sup> Street and is identified on the NY UST and NY Hist UST databases for ten 550-gallon USTs that were located on the site. According to the information provided in the EDR report, four of these USTs were used to store diesel fuel and six were used to store leaded gasoline. With exception of one UST that was closed in place on 1 November 1999, all of the USTs were closed via removal on 1 November 1999 and no spill information was provided in the database listing associated with the removal of these USTs.

The site is identified as Mendon Leasing Corporation for the address 527 West 23<sup>rd</sup> Street and is identified on the NY LTANKS and NY Hist LTANKS for a tank tightness test failure that was reported on 18 December 1995 and assigned NYSDEC Spill No. 9511782. According to the information provided in the EDR report the tank tightness tests failed on the four 550-gallon diesel USTs located on the site. These database listings are also identified as being associated with Spill Nos. 9605688, 9808740 and 8605564.

The following is a summary of the NYSDEC case narrative provided in the EDR report for the 527 West 23<sup>rd</sup> Street site:

The site is currently developed with a luxury apartment building with no basement and a treatment system on the first floor. This system is in place to remediate the impacts associated with the above mentioned spills that resulted from the failure of the USTs previously located onsite. The site historically was used for freight transportation and warehouse facilities and was mainly used as a truck rental, fueling and maintenance yard. Hertz car rental company formerly occupied the site and installed six 550-gallon gasoline USTs and a four-pump distribution center, as well as four 550-gallon diesel USTs with a separate dispenser. One 7,500-gallon fuel-oil UST was also installed on the southwestern portion of the former parking garage buildings. In 1994 Mendon Leasing purchased the property and reported four spills (Nos. 9511782 [diesel], 9513588 [gas], 9605688 [gas] and 9808740 [No. 2 fuel-oil]). The site was then sold to COSTCO in 1998 which closed the tanks as identified above. During site investigations completed between 1993 and 2001 the presence of free product was observed in soils and groundwater. In December 1999 and October 2000 all of the USTs were removed from the site and approximately 1,000-tons of contaminated soil were removed and

disposed of off-site. Subsequent investigation identified that BTEX impacts existed within the groundwater following the completion of the excavation and backfilling activities and a SVE system was installed to remove residual volatile organic compounds in the soil and groundwater. The system reportedly operated intermittently for one year and VOC concentrations in the system effluent dropped significantly. Ten groundwater monitoring wells are located on and off-site (including on West 24<sup>th</sup> Street). Based on reported declining contaminant trends in groundwater, and that the remaining low levels of BTEX and MTBE could be attributed to an off-site source, a spill closure report was issued for the site. On 22 January 2007 the NYSDEC issued a letter that denied the closure of the spill, and reiterated that the owner of 535 West 23<sup>rd</sup> Street was still responsible for the remediation of the contamination located beneath their property. Following another round of groundwater sampling at the site and the submittal of a spill closure report that identified VOCs in exceedance of NYSDEC Groundwater Quality Standards, the spill was closed due to the relatively low levels of contamination and the lack of potential exposure for the general public to groundwater.

Based on the information provided above the presence of VOC impacted groundwater exists on the site as result of leaking USTs. Remaining concentrations in groundwater are reportedly low; however, based on proximity of this site to the subject site it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from the site is moderate.

### Spills

Two open spills were identified within 1/8-mile in the interpreted hydraulically upgradient direction. 215 10<sup>th</sup> Avenue is identified as a Exxon 3-2253 (aka Gulf Service Station), which is located approximately 314-feet to the south/southeast of the subject property. Based on groundwater flow direction data provided in the NYSDEC case narratives the location of this site is in the anticipated downgradient to cross-gradient direction of the subject property. The site is identified on the Spills database for a release that was reported on 10 October 2011. According to the NYSDEC case narrative provided in the EDR report, the site was listed on the spills database for a release that was discovered during the removal of five 4,000-gallon gasoline USTs. Impacted soil and groundwater were observed and the site was over-excavated to allow for the removal of impacted soils. In 2007 the site began redevelopment activities which included the removal of contaminated soil and dewatering of the site. According to the NYSDEC summary, approximately 5,700-tons of petroleum impacted soil was

removed from the site and an oxygen release compound (ORC) was added to the open excavations to remediate any residual contamination of un-excavated soils. Over 10-million gallons of groundwater were removed during the dewatering activities and analytical results of samples collected from the dewatering system detected groundwater contamination slightly above NYSDEC Groundwater Quality Standards. Due to residual contamination in soil and groundwater as confirmed by post-excavation sampling and post-remediation groundwater sampling the spill for the site was not closed by the NYSDEC. Quarterly groundwater monitoring reports confirm that VOC contamination still exists at the site and further monitoring is required. Additionally the groundwater flow direction has been characterized as to the south and west, which is downgradient from the subject property.

259 10<sup>th</sup> Avenue is located approximately 361-feet east/northeast of the subject property and is identified on the Spills database for a release that was reported on 24 January 2011. According to the NYSDEC case narrative provided in the EDR report, the site is an abandoned, former wire house with a 10,000-gallon No. 6 fuel-oil UST on-site. Soil borings were completed in the area surrounding the tank and impacts were identified. No further information regarding the environmental investigation was provided. According to the EDR report, the site is (E)-designated and is proposed for redevelopment as a private school.

Based on the nature and proximity of these spills to the subject property, it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from these sites is low.

#### Underground Storage Tanks (USTs)

The following properties are identified in the EDR report as being both within 1/8-mile, and as being in the interpreted hydraulically upgradient direction:

| <b>UST Owner</b>                                  | <b>Address</b>                       | <b>Direction / Distance</b> |
|---|--------------------------------------|-----------------------------|
| Adolph's Trucking Company                         | 507-511 West 24 <sup>th</sup> Street | N / 0.001 mi.               |
| London Terrace Towers – 470 West 24 <sup>th</sup> | 410 West 24 <sup>th</sup> Street     | ENE / 0.045 mi.             |
| 534-548 West 25 <sup>th</sup> Street              | 534-548 West 24 <sup>th</sup> Street | NNE / 0.048 mi.             |
| Getty Service Station #341                        | 239 10 <sup>th</sup> Avenue          | ENE / 0.049 mi.             |
| 245-247 10 <sup>th</sup> Avenue                   | 245-247 10 <sup>th</sup> Avenue      | E 0.049 mi.                 |
| 511 West 25 <sup>th</sup> Street                  | 511 West 25 <sup>th</sup> Street     | NNE / 0.050 mi.             |
| Gulf Service Station                              | 500 West 23 <sup>rd</sup> Street     | SE 0.052 mi.                |
| Chelsea Arts Tower Condominium                    | 543-545 West 25 <sup>th</sup> Street | N / 0.052 mi.               |
| Exxon 3-2253                                      | 215 10 <sup>th</sup> Avenue          | SSE / 0.059 mi.             |
| Chelsea Houses                                    | 431 West 25 <sup>th</sup> Street     | ENE / 0.066 mi.             |
| 513 West 26 <sup>th</sup> Associates              | 533 West 26 <sup>th</sup> Street     | NNE / 0.100 mi.             |
| Guardian Angle                                    | 193 10 <sup>th</sup> Avenue          | S / 0.1005 mi.              |

Of the above identified UST sites, only Adolph's Trucking is adjacent to the subject property and is described in detail above. Additionally, Getty Service Station #341, and Exxon 3-2253 (aka Gulf Service Station) are also described in detail above.

The property identified as London Terrace Towers, located at 470 24<sup>th</sup> Street which is approximately 237-feet to the east/southeast of the subject property is identified on the FINDS, NY UST, NY AST, NY Hist UST, NY Spills and NY Hist Spills databases. This site is listed on the NY UST and NY AST databases and is identified by the NYSDEC PBS division as Site No. 2-365688 for a closed in-place 16,000-gallon fuel-oil UST and an active 9,000-gallon fuel-oil AST. The site is identified on the NY Hist UST database for the same closed in-place UST. The site is identified on the NY Spills and NY Hist Spills databases for a release of 30-gallons of No. 6 fuel-oil that was reported on 1 November 1990 and was assigned Spill No. 9008416. According to the EDR report the release occurred due to an equipment failure and was closed on 25 May 1995. No further information is provided regarding the clean-up activities. The site is also listed on the NY Spills and NY Hist Spills databases for a release of 5-gallons of fuel-oil that was reported on 22 December 2001 and was assigned Spill No. 0109374. According to the EDR report the release occurred due to an equipment failure and was closed on 26 December 2001. NYSDEC notes that a clean-up crew was on-site; however, no further information is provided regarding the clean-up of this spill.

No open spills or violations were identified for any of the remaining USTs sites. Based on the proximity of these USTs to the subject property and the above identified spills that remain open it is the opinion of the environmental professional that the potential

for adverse environmental impacts to the subject property from the adjacent USTs is moderate.

#### Historic USTs (Hist USTs)

The nine historic USTs that were identified within 1/8-mile in the interpreted upgradient direction of the subject property were closed and no open spills, with exception of Getty Service Station #341 and Exxon 3-2253 (aka Gulf Service Station), were reported. Based on the above information, it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from these sites is moderate.

#### Above Ground Storage Tanks (ASTs)

19 ASTs were identified within 1/8-mile of the subject property, 6 of which were identified in the interpreted hydraulically upgradient direction. With exception of the London Terrace site, which is described in detail above, no reported releases were identified for the 6 upgradient ASTs under any of the databases searched by EDR. Therefore, it is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from these sites is low.

Based on Langan's review of the sites identified above, environmental impacts to the subject property from the remainder of these sites are not anticipated. However, it should be noted that 635 sites were identified in the radius report and the potential exists that these urban sites may have a cumulative impact on regional groundwater quality. It is the opinion of the environmental profession that this represents a business environmental risk.

## **8.0 GOVERNMENT AGENCY RECORDS REVIEW**

Federal, state and local agencies were contacted via written correspondence, telephone interviews and/or personnel interviews regarding records of environmental concerns, violations, and/or permits, or any other potentially environmentally-relevant records on the subject property. In addition, government information that was readily available online on government websites was also reviewed. A listing of agencies/individuals contacted by Langan as part of this ESA is provided in Table 1. Copies of government correspondence are provided in Attachment F.

The NYC (E)-designation Environmental Review Program coordinated a program that identifies properties with special environmental concerns based on documented historical use of hazardous materials, air quality issues and or noise issues. The (E)-designation program that was formerly administered by the NYC Department of Environmental Protection (DEP), is currently administered by the NYC Office of Environmental Remediation (OER). An (E)-designation is a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. (E)-designations are established on the Zoning Map by the Department of City Planning (DCP) and the City Council as a part of a zoning change or action.

The NYC Department of Buildings (NYC DOB) is restricted from issuing building permits for (E)-designated properties until the NYC OER has reviewed information prepared by an environmental professional and made a determination to issue of "Notice-of-No-Objection" or a "Notice-to-Proceed" to the NYCDOB.

Langan reviewed the following information sources to determine if the subject property is listed as an (E)-designated property: NYCDCP Zoning Map 12C dated 27 October 2010 (<http://www.nyc.gov/html/dcp/pdf/zone/map12c.pdf>), CEQR Environmental Designations List dated 29 June 2011 (<http://www.nyc.gov/html/dcp/pdf/zone/appendixc.pdf>), and the NYCOER SPEED (<https://gis.nyc.gov/moer/speed/>).

The subject property is identified as an (E)-designated site based on these resources and is identified as E-92 (Effective Date 9/9/1999) for Underground Storage Tanks Testing Protocol and E-142 (Effective Date 6/23/2005) for Air Quality – HVAC fuel limited to Natural Gas, Underground Gasoline Storage Tanks Testing Protocol and Window Wall Attenuation & Alternate Ventilation. As part of the Technical Memorandum titled Proposed Modifications to Special West Chelsea District Zoning Map and Text Amendments Application at New York City Council (N 050161(A) ZRM) dated 22 June 2005 the subject property was identified as being (E)-designated for Hazardous Materials, Air Quality and Noise. The site is identified (in Table 1) as warranted for a Hazardous Materials (E)-designation due to proximity to the adjacent rail road right of way. Based on the results provided in Table 4 of the Technical Memorandum the site is identified as having a required 35 dBA window-wall attenuation as per the EAS for the Chelsea Rezoning (CEQR No. 99DCP030M). Although not identified in the Technical Memorandum, it is identified in Appendix C of the CEQR Environmental Designations List as being limited to use of natural gas only as a fuel source for HVAC.

Based on the (E)-designations for the site, a Phase II Environmental Investigation (EI) is required prior to any site redevelopment activities to determine if the adjacent rail road right of way, historical use of the subject property or the surrounding properties have had an adverse environmental impact. The Phase II EI Workplan (EIWP) and a site specific Health and Safety Plan must be completed and submitted to the NYCOER for review and approval prior to initiating the investigation activities. Additionally, due to the Window Wall Attenuation and Air Quality (E)-designations on the site, a remedial action plan that details the fuel source that will be used for the property and the units that will be used and their placement as well as the results of the site specific noise survey and suggested window glazing options will need to be submitted to the NYCOER for review and approval.

All of these documents will be required to obtain a "Notice to Proceed" letter from the NYCOER which will allow for earthwork to begin at the subject property as part of the redevelopment activities.

New York State Department of Environmental Conservation (NYSDEC)

Ms. Ruth Earl, the NYSDEC Records Access Officer, was contacted by Langan and written file review requests were submitted for the subject property. In a letter dated 15 July 2011, Ms. Earl indicated that the FOIL request had been forwarded to Dr. Fawzy Abdelsadek of Region 2. In an email dated 20 July 2011 Dr. Abdelsadek responded that no records were available for the subject property.

New York City Department of Environmental Protection (NYC DEP)

Mr. Judah Prero of the NYCDEP Bureau of Legal Affairs was contacted by Langan and a formal file review request was submitted for the subject property. In an email dated 14 July 2011 Mr. Vitaly Weiler, FOIL Liaison, responded that after searching no records were available for the subject property.

New York City Department of Health & Mental Hygiene (NYC DOHMH)

Ms. Rena Bryant, the NYC DOHMH Records Access Officer, was contacted by Langan and a written file review request was submitted for the subject property. In a letter dated 11 July 2011 Ms. Bryant replied that the FOIL request would be forwarded to the Environmental Health Services division. To date, no response has been received by Langan regarding this request. If any additional pertinent information is provided subsequent to issuance of this report, it will be provided as an addendum.

New York City Office of Environmental Coordination (NYC OEC)

Dr. Robert Kulikowski, director of the New York City Mayoral Office of Environmental Coordination, was contacted by Langan and a written file review request was submitted for the subject property. To date, no response has been received by Langan regarding this request. If any additional pertinent information is provided subsequent to issuance of this report, it will be provided as an addendum.

New York City Department of City Planning (NYC DCP)

An electronic version (effective zoning date 12/21/2009) of the NYC Zoning Map for the subject property was downloaded from the NYC DCP website (<http://www.nyc.gov/html/dcp/pdf/zone/map8b.pdf>).

Fire Department of New York City (FDNY)

Information regarding the presence of petroleum or chemical storage tanks was requested from the FDNY. In a letter dated 19 July 2011, FDNY responded that no records exist for the presence of fuel-oil tanks existing or removed, gasoline or diesel tanks existing or removed and no leaking tanks were identified at the subject property.

New York City Department of Buildings (NYC DOB)

Langan completed a limited review of available online records maintained by the NYC DOB. Information regarding the date of building construction was obtained. In addition, alternate address listings and building dimension calculations were obtained. The ownership information listed provided no additional information regarding environmental conditions related to past usage different than represented by review of other historical information sources.

**9.0 SITE RECONNAISSANCE**

Langan conducted an inspection of the site on 28 July 2011. The inspection included a walk-through inspection of the entire site for the purposes of identifying Recognized Environmental Conditions (RECs). Typical RECs may include:

|                      |                 |                            |                |
|----------------------|-----------------|----------------------------|----------------|
| <b>Drum storage</b>  | Dumpsters       | Aboveground storage tanks  | Stained areas  |
| Drains and Sumps     | Wells           | Underground storage tanks  | Pump stations  |
| Waste piles          | Landfills       | Loading and transfer areas | Boiler rooms   |
| Pits, Ponds, Lagoons | <b>Swales</b>   | Process air vents          | Process sinks  |
| Storm sewers         | <b>Trenches</b> | Detention ponds            | PCBs           |
| Impoundments         | Lagoons         | Floor drains and piping    | Transformers   |

Langan was provided access to all portions of the building including the roof; therefore, no limiting conditions were encountered during the site inspection.

A visual inspection of adjoining properties from the subject property line, public rights-of-way or other vantage point (e.g. aerial photography) including a visual inspection where hazardous substances may be or may have been stored, treated, handled or disposed was also conducted.

Limiting conditions encountered during the inspection of adjoining properties were encountered due to the dense urban nature of the surrounding areas which only allowed for limited inspection of the front of the surrounding buildings.

Langan conducted an inspection of the site on 28 July 2011. Photographs of the subject property taken during the site inspection are provided in Attachment G. Langan was accompanied by Mr. McGillion who provided access to onsite buildings and answered questions during the site inspection. According to Mr. McGillion, he has owned the property for the past 11 years. A questionnaire was completed by the property owner/operator/site manager and is included as Attachment B. The inspection included a walk-through inspection of the entire site for the purposes of identifying RECs as detailed below.

The subject property is completely developed with a one-story building with a concrete slab on-grade. The building contains a mezzanine level which is occupied by office space with traditional modern construction techniques. The eastern portion of the building is wood framed with masonry walls, and the western portion of the building has been retrofitted with metal framing due to a fire that occurred in the building prior to the current ownership according to Mr. McGillion. Metro Vision Productions currently operates the site as television production company and the site is used for the storing of television production equipment and office space. The floor of the building is painted and appeared to be in fair

condition with no evidence of staining observed. Floor drains were observed on the eastern portion of the building floor that Mr. McGillion indicated were likely to be directly connected to the sewer. No staining was observed in the vicinity of these floor drains. Small quantities of cleaning materials were observed in the office area and on the first floor; however, no areas of staining were observed in the vicinity of either of these storage area.

Fluorescent lighting containing light ballasts (potential PCB containing equipment) were observed within the building.

According to Mr. McGillion, the fuel source has always been natural gas. He also indicated that he had no knowledge of any USTs or ASTs associated with the subject property.

#### Adjacent Properties

Properties located adjacent to the subject property consist of commercial and residential buildings. Groundwater monitoring wells were observed associated with the 239 10<sup>th</sup> Avenue property, on the 24<sup>th</sup> Street side and across from the site at the 500 West 24<sup>th</sup> Street sidewalk. Additionally, a fuel-oil tank repair and maintenance service vehicle was observed in front of the building located at 521-523 West 23<sup>rd</sup> Street, as was a fill port within the sidewalk in front of this property. No other visual evidence of hazardous material storage, treatment, handling or disposal areas was observed at adjacent properties.

## **10.0 ADDITIONAL ISSUES**

The following items fall outside the scope of ASTM 1527-05, however Langan can and often does provide these services to its clients if specifically requested and included in the proposed scope of work or are issues that may impact current or proposed site use.

### **10.1 Asbestos**

In 1973, use of sprayed on fireproofing on structural building components was prohibited by the EPA. On July 12, 1989, EPA issued a final rule banning most friable asbestos-containing products. The following specific asbestos-containing products remain banned: flooring felt, roll board, and corrugated, commercial, or specialty paper. In addition, the regulation continues to ban the use of asbestos in products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos. Use of asbestos in textured paint and in patching compounds used on wall and ceiling joints was banned in 1977.

The asbestos containing materials assessment was performed on 28 July 2011 by Langan's NYCDEP certified asbestos investigator. During the site visit, suspect materials observed in the building were documented, assessed, quantified and limited samples of several suspect materials were collected.

Asbestos was not detected in the samples analyzed; however, the following materials are assumed to be ACM in lieu of sampling and intrusive inspections.

| <b>ASSUMED ACM *</b>                              | <b>GENERAL LOCATION(S)</b>                           | <b>ESTIMATED QUANTITY</b> |
|---|--|---------------------------|
| Built-up Roofing and Flashing/Mastic Materials*   | Roof   | 8,300 Square feet         |
| Pipe insulation*                                  | May exist concealed within wall and ceiling cavities | 200 Linear feet           |
| Floor material beneath wooden floor under carpet* | Office areas   | 3,700 Square feet         |
| Window lintel flashing/mastic*                    | Perimeter Windows                                    | 50 Square feet            |
| Waterproofing materials under ceramic tiles*      | Rest rooms – 2 <sup>nd</sup> Floor office area       | 100 Square feet           |
| Chimney fire bricks/mortars*                      | Abandoned old chimney behind sheetrock wall          | 300 Square feet           |

## **10.2 Lead-based Paint**

In 1977, the Consumer Product Safety Commission (CPSC) banned the use of lead based paint (LBP) in housing and restricted maximum levels in lead in new residential paint to less than 0.05% by weight. Based on the age of the onsite building, there is a potential that LBP is present in the onsite building. Interior painted surfaces generally appeared to be in good condition, with little paint peeling and cracking. A lead-based paint inspection of the building was not completed.

## **10.3 Radon**

The subject property is located in a Tier 3 Zone as identified by USEPA based on sampling conducted of buildings within the site area. The Tier 3 Zone is considered an area of low radon gas intrusion potential with typically concentrations less than 4 pCi/liter. A radon survey of the existing building was not conducted as part of this ESA. Radon test results from adjacent or surrounding properties are not necessarily indicative of radon conditions on the subject property. As no building specific radon

survey documentation was provided to Langan, no opinion regarding potential risks associated with radon gas exposure can be made.

As per USEPA guidelines, the only way to assess potential radon gas exposure risks is to conduct a radon assessment. In addition, the US EPA recommends that follow-up tests on large buildings should be conducted when major modifications are made either to the building structure or HVAC system or the HVAC system's operation settings.

#### **10.4 Historical and Archaeological Review**

A determination regarding the potential presence of historical landmark buildings and/or archaeologically valuable sites on or near the subject property was not conducted as part of this ESA. This determination is often required to receive state or federal grants, loans, and/or permits.

### **11.0 DEVIATIONS**

This Phase I ESA conforms with ASTM with the following deviations noted:

- Property use was only determined back to 1890, not to first development, as historical property records were not reasonably available;
- Data gaps in excess of 5 years were encountered during the review of historic resources;
- Government agencies that have not responded to record review inquiries are listed above. Additional pertinent information provided to Langan subsequent to the issuance of this report will be provided in an addendum.
- Based on the large number of sites identified within one mile of the subject property (635), Langan limited the review of surrounding properties to sites within 1/8-mile from the subject property.
- An assessment of the current property value versus the proposed sale price of the property was not completed as this information was not provided by the User; and,
- A formal deed search was conducted back to 1969 for the subject property as historical property records were not reasonably available.

It is the opinion of the reviewing Environmental Professional that the above-deficiencies will not detrimentally affect the identification of potential recognized environmental conditions.

This opinion is based on the following factors:

- The site was historically (since late 1800's) and continues to be used for commercial purposes. No industrial use of the site has been documented that would potentially impact soil or groundwater conditions at the site.
- Based on the Sanborn Maps and the City Directory information reviewed, the use of the property is consistent between the 5 year data gaps. Therefore, operations on the site between these data gaps will not detrimentally affect the identification potential RECs.
- Langan limited the database review to sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area (1/8-mile) is appropriate and will not detrimentally affect the identification of potential recognized environmental conditions.

## **12.0 FINDINGS/OPINIONS**

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following historic recognized environmental conditions (HRECs), recognized environmental conditions (RECs), de minimus conditions and business environmental risks that may impact proposed redevelopment of the site were identified:

1. Potential impacts from current and historical operations conducted at adjacent and nearby properties;
2. Potential presence of historic urban fill; and,
3. Potential presence of undocumented historic USTs.

It is the opinion of the environmental professional that Finding 1 may have impacted soils and groundwater on the subject property; therefore, finding 1 represents an REC. It is the opinion of the environmental professional that Findings 2 and 3 may have impacted soil and groundwater on the subject property however as these impacts are common to densely developed urban areas and may only affect site redevelopment activities; these are not considered RECs.

## 13.0 CONCLUSIONS

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following that may impact proposed redevelopment of the site were identified. Langan has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05 of a ±0.17-acre site located at 508 West 24<sup>th</sup> Street, New York, New York, the subject property. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of historic recognized environmental conditions (HRECs), recognized environmental conditions (RECs), de minimus conditions and business environmental risks in connection with the property except for the following.

### Recognized Environmental Conditions

It is the opinion of the environmental profession that the following represent RECs:

#### Surrounding Sites

Potential impacts from current and historical operations conducted at adjacent and nearby properties involving the use of ASTs, USTs and spills represent an REC due to the potential for offsite migration of contaminants to impact sub-slab soil and/or groundwater below the subject site. Based on the environmental database review adjacent properties (Adolph's Trucking Company at 507-511 West 24<sup>th</sup> Street and 523 West 23<sup>rd</sup> Street) have documented releases associated with USTs and surrounding properties (Getty Station #341 at 239 10<sup>th</sup> Avenue, 535 West 23<sup>rd</sup> Street and 215 10<sup>th</sup> Avenue) have open spills with documented groundwater impacts. Based on the number of sites in the vicinity of the subject property and the known groundwater contamination associated with these sites the surrounding properties constitute an REC.

### Business Environmental Risks

It is the opinion of the environmental profession that the following represent business environmental risks:

#### Heating Oil Underground Storage Tanks (USTs)

The site was formerly occupied by residential and commercial buildings. Due to the historical use of the site and a lack of documentation encountered during completion of this ESA regarding how the previous buildings located on the site were heated or whether underground storage tanks used to store heating oil were ever present onsite, it is the

opinion of the environmental professional that the potential presence of heating oil USTs beneath the lots or adjacent sidewalks associated with these former buildings represents a business environmental risk. Preparation and implementation of a contingency plan to address the presence of any USTs that may be encountered during site excavation activities would adequately address this issue.

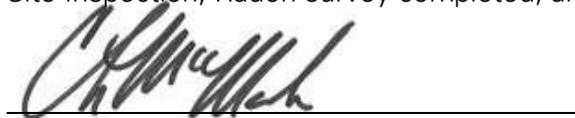

#### Historic Urban Fill

Based on the urban density of the area, it is likely that the subject site area contains historic urban fill which is typically characterized by elevated concentrations of poly-aromatic hydrocarbons (PAHs) and metals. The presence of fill will require implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material if the site were to be redeveloped.

### **14.0 QUALIFICATIONS / CERTIFICATION**

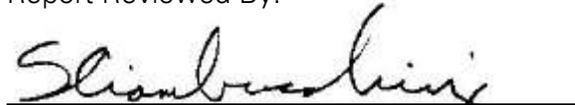

We, the undersigned, declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property as documented in Attachment H. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

**Reason Why Phase I ESA is required:** \_\_\_\_\_

**Site Contact (s):** \_\_\_\_\_

### **Required Information**

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

**(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).**

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.]

| Yes                      | No                       |
|--------------------------|--------------------------|
| <input type="checkbox"/> | <input type="checkbox"/> |

**(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).**

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any activity and use limitations and to report these limitations to the environmental professional conducting a Phase I Environmental Site Assessment.]

| Yes                      | No                       |
|--------------------------|--------------------------|
| <input type="checkbox"/> | <input type="checkbox"/> |

**(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28).** Yes No

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

**(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).** Yes No

- (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.]
- (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
- (c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.

**(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).** Yes No

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property?
- (b.) Do you know of specific chemicals that are present or once were present at the property?
- (c.) Do you know of spills or other chemical releases that have taken place at the property?
- (d.) Do you know of any environmental cleanups that have taken place at the property?

**(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31).** Yes No

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

**SIGNATURE:**

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

## Limited Permission To Make Copies

Langan Engineering (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

### Disclaimer - Copyright and Trademark notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. #### **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

| <u>Year</u> | <u>Source</u>  | <u>TP</u> | <u>Adjoining</u> | <u>Text Abstract</u> | <u>Source Image</u> |

## FINDINGS

### TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

#### Address Researched

508 W 24th St

#### Address Not Identified in Research Source

1996, 1988, 1983, 1934, 1931, 1923, 1920

### ADJOINING PROPERTY: ADDRESSES NOT IDENTIFIED IN RESEARCH SOURCE

The following Adjoining Property addresses were researched for this report, and the addresses were not identified in research source.

#### Address Researched

233 10TH AVE

#### Address Not Identified in Research Source

2006, 2000, 1998, 1996, 1993, 1988, 1983, 1978, 1973, 1968, 1963, 1958, 1956, 1950, 1947, 1942, 1938, 1934, 1931, 1923, 1920

235 10TH AVE

1996, 1950, 1947, 1942, 1934, 1923, 1920

236 10TH AVE

2006, 2000, 1998, 1996, 1993, 1988, 1983, 1978, 1973, 1968, 1963, 1958, 1956, 1950, 1947, 1942, 1938, 1934, 1931, 1923, 1920

238 10TH AVE

2006, 2000, 1998, 1996, 1993, 1988, 1983, 1978, 1973, 1968, 1958, 1956, 1950, 1947, 1942, 1938, 1934, 1931, 1927, 1923, 1920

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

508 W 24TH ST  
NEW YORK, NY 10011

#### COORDINATES

Latitude (North): 40.748500 - 40° 44' 54.6"  
Longitude (West): 74.004600 - 74° 0' 16.6"  
Universal Transverse Mercator: Zone 18  
UTM X (Meters): 584034.9  
UTM Y (Meters): 4511104.0  
Elevation: 11 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 40074-F1 JERSEY CITY, NJ  
Most Recent Revision: 1981

North Map: 40074-G1 WEEHAWKEN, NJ  
Most Recent Revision: 1995

Northeast Map: 40073-G8 CENTRAL PARK, NY  
Most Recent Revision: 1995

East Map: 40073-F8 BROOKLYN, NY  
Most Recent Revision: 1995

### TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

| <u>Site</u>   | <u>Database(s)</u> | <u>EPA ID</u> |
|---|--------------------|---------------|
| LOT 44, TAXBLOCK 695<br>508 WEST 24 STREET<br>MANHATTAN, NY 10011 | NY E DESIGNATION   | N/A           |

## EXECUTIVE SUMMARY

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

#### ***Federal Delisted NPL site list***

Delisted NPL..... National Priority List Deletions

#### ***Federal CERCLIS list***

FEDERAL FACILITY..... Federal Facility Site Information listing

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS..... Corrective Action Report

#### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

#### ***Federal ERNS list***

ERNS..... Emergency Response Notification System

#### ***State- and tribal - equivalent CERCLIS***

NY SHWS..... Inactive Hazardous Waste Disposal Sites in New York State  
NY VAPOR REOPENED..... Vapor Intrusion Legacy Site List

#### ***State and tribal landfill and/or solid waste disposal site lists***

NJ SWF/LF..... Solid Waste Facility Directory

#### ***State and tribal leaking storage tank lists***

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

#### ***State and tribal registered storage tank lists***

NY CBS UST..... Chemical Bulk Storage Database  
NY MOSF UST..... Major Oil Storage Facilities Database  
NY MOSF AST..... Major Oil Storage Facilities Database  
NY MOSF..... Major Oil Storage Facility Site Listing  
INDIAN UST..... Underground Storage Tanks on Indian Land

## EXECUTIVE SUMMARY

FEMA UST..... Underground Storage Tank Listing

### **State and tribal institutional control / engineering control registries**

NJ ENG CONTROLS..... Declaration Environmental Restriction/Deed Notice Sites

NJ INST CONTROL..... Classification Exception Area Sites

NY RES DECL..... Restrictive Declarations Listing

### **State and tribal voluntary cleanup sites**

NJ VCP..... Voluntary Cleanup Program Sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

### **State and tribal Brownfields sites**

NY ERP..... Environmental Restoration Program Listing

NJ BROWNFIELDS..... Brownfields Database

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### **Local Brownfield lists**

US BROWNFIELDS..... A Listing of Brownfields Sites

#### **Local Lists of Landfill / Solid Waste Disposal Sites**

ODI..... Open Dump Inventory

DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations

NY SWTIRE..... Registered Waste Tire Storage & Facility List

NY SWRCY..... Registered Recycling Facility List

NJ SWRCY..... Approved Class B Recycling Facilities

INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands

#### **Local Lists of Hazardous waste / Contaminated Sites**

US CDL..... Clandestine Drug Labs

NY DEL SHWS..... Delisted Registry Sites

US HIST CDL..... National Clandestine Laboratory Register

#### **Local Land Records**

LIENS 2..... CERCLA Lien Information

LUCIS..... Land Use Control Information System

#### **Records of Emergency Release Reports**

HMIRS..... Hazardous Materials Information Reporting System

#### **Other Ascertainable Records**

DOT OPS..... Incident and Accident Data

DOD..... Department of Defense Sites

FUDS..... Formerly Used Defense Sites

UMTRA..... Uranium Mill Tailings Sites

### EDR PROPRIETARY RECORDS

#### ***EDR Proprietary Records***

EDR Historical Auto Stations.. EDR Proprietary Historic Gas Stations  
EDR Historical Cleaners..... EDR Proprietary Historic Dry Cleaners

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/31/2011 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u>              | <u>Direction / Distance</u>    | <u>Map ID</u> | <u>Page</u> |
|-------------------------------|-----------------------------|--------------------------------|---------------|-------------|
| <b>HUDSON RIVER PCBS</b>      | <b>NO STREET APPLICABLE</b> | <b>W 1/4 - 1/2 (0.254 mi.)</b> | <b>0</b>      | <b>12</b>   |

#### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u>              | <u>Direction / Distance</u>    | <u>Map ID</u> | <u>Page</u> |
|-------------------------------|-----------------------------|--------------------------------|---------------|-------------|
| <b>HUDSON RIVER PCBS</b>      | <b>NO STREET APPLICABLE</b> | <b>W 1/4 - 1/2 (0.254 mi.)</b> | <b>0</b>      | <b>12</b>   |

#### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

| <u>Equal/Higher Elevation</u>    | <u>Address</u>           | <u>Direction / Distance</u>      | <u>Map ID</u> | <u>Page</u> |

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 17 RCRA-CESQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 03/16/2011 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 77 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal registered storage tank lists**

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 04/05/2011 has revealed that there are 5 NY TANKS sites within approximately 0.25 miles of the target property.

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the NY AST list, as provided by EDR, and dated 04/05/2011 has revealed that there are 49 NY AST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/24/2011 has revealed that there are 77 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there

## EXECUTIVE SUMMARY

are 42 NY Hist Spills sites within approximately 0.125 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

## EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/11/2011 has revealed that there are 39 RCRA-NonGen sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 12/31/2010 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

### EDR PROPRIETARY RECORDS

#### *EDR Proprietary Records*

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 4 Manufactured Gas Plants sites within approximately 1 mile of the target property.

# OVERVIEW MAP - 3118698.2s

Target Property

Sites at elevations higher than or equal to the target property

Sites at elevations lower than the target property

Manufactured Gas Plants

National Priority List Sites

Dept. Defense Sites

Indian Reservations BIA

County Boundary

Power transmission lines

Oil & Gas pipelines

100-year flood zone

500-year flood zone

National Wetland Inventory

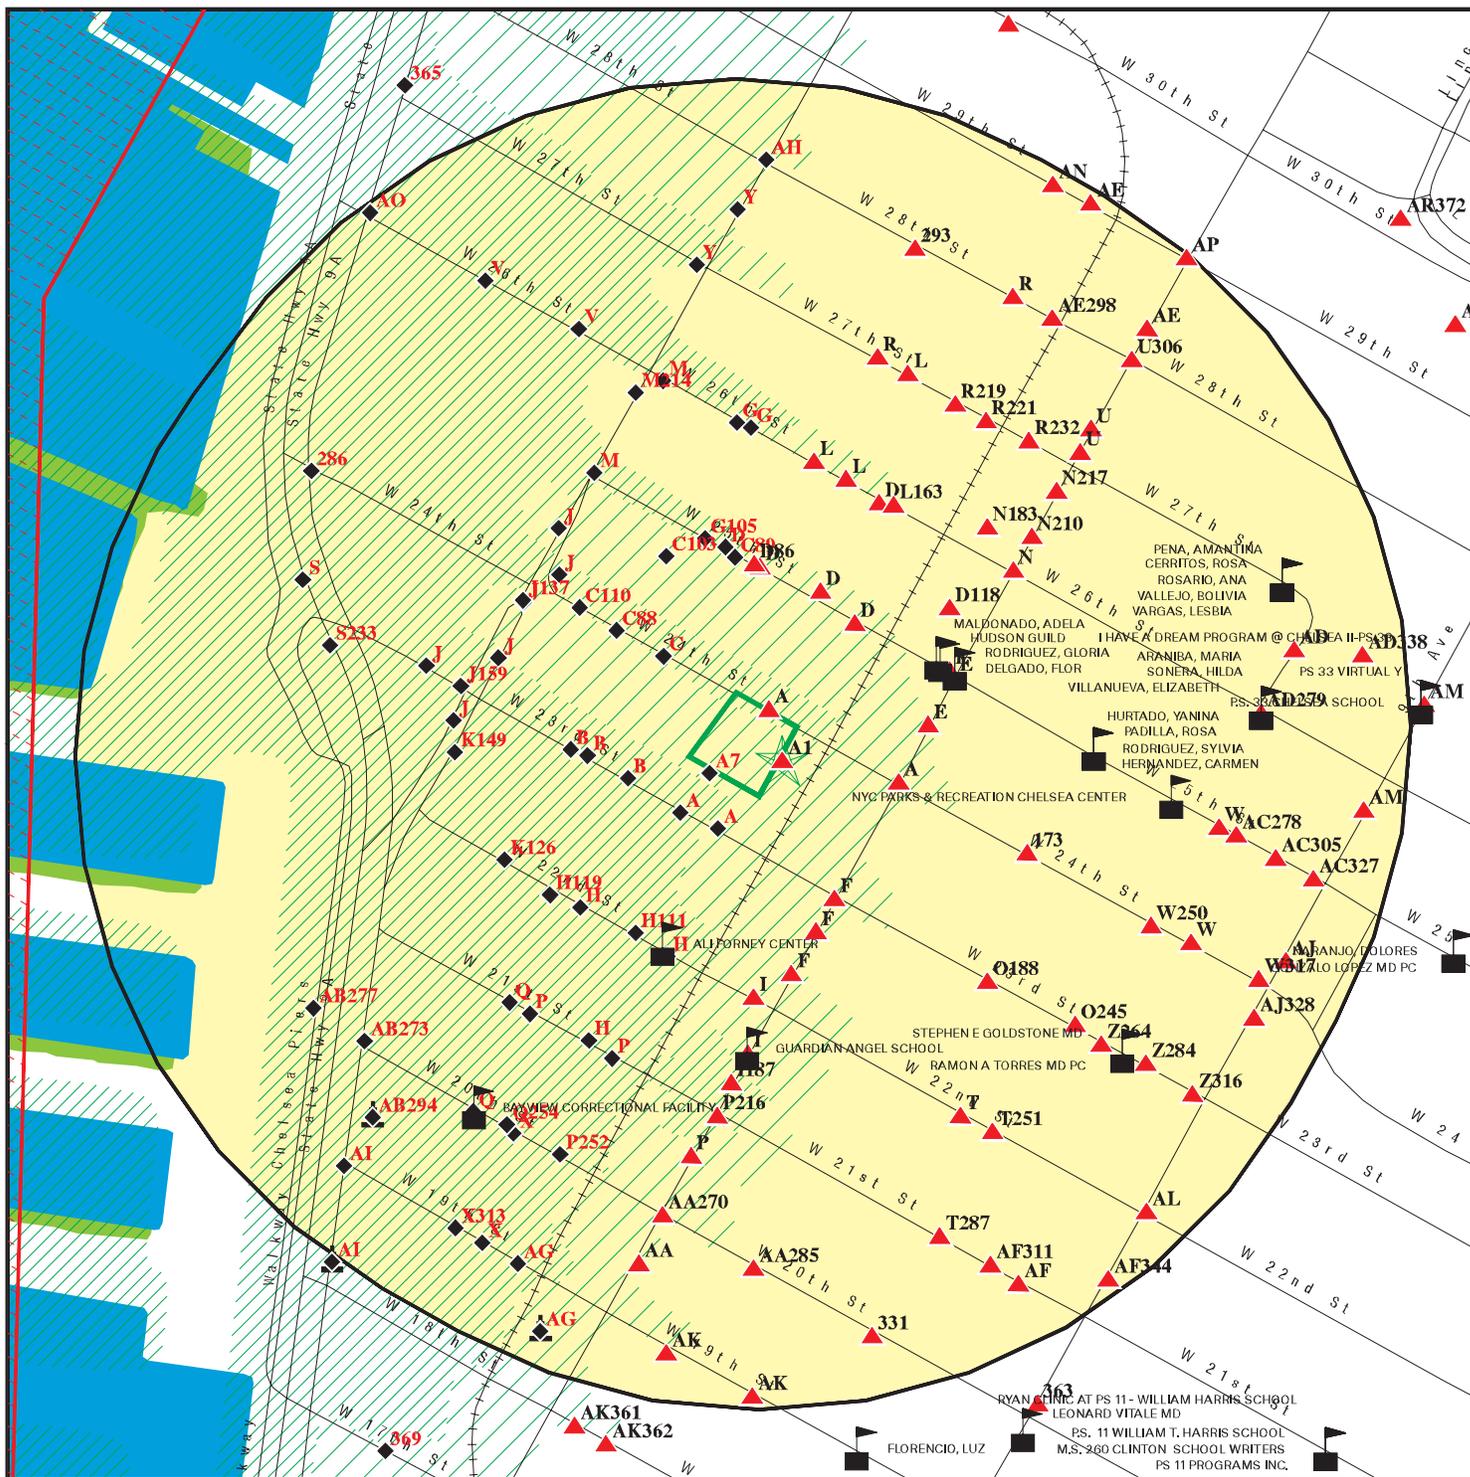

State Wetlands

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam.

**HUDSON RIVER PCBs (Continued)**

**1000384273**

Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future

land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: SEE ALSO 86-05564, 95-11782, 98-08740, 95-13588. 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. 4/19/04 Reassigned from Rommel to K Foley. 5/24/04 Tibbe received voicemail from Curt Schmidt, Fleming Lee Shue (212-675-3225). Replacing AKRF. 5/27/04 Added diesel and #2FO to material spilled to address spills #9808740 and 9511782. Spoke to C. Schmidt. Will set up a site meeting next week. 555 W 23th St(spill #0306399), the Tate building, is adjacent to Mendon property which has a system installed on the first floor (no basement). 6/3/04 Set up meeting with A. Fleming for Monday, 6/7. A. Fleming (office 212-675-3225, cell 917-885-1475). 6/7/04 Met with A. Fleming. System located inside Tate has not been in operation. Arnie needs to look into system manufacturer data to see if they can make changes to the system. Wells haven't been sampled since AKRF lost the job. Will arrange to have wells sampled. 7/15/04 Received call from C. Schmidt, FLS. Wells will be sampled 7/19-7/20. FLS still looking into making changes to existing system. 9/21/04 Spoke with Mohammed Ahmed, Fleming Lee Shue (917-612-6018). He was previously with AKRF. Would like to present all data and propose NFA. He will need to FOIL the file to get AKRF data. 10/13/04 Received summary from FLS proposing closure of site. Background: Site is currently a luxury apartment building with art galleries on the ground floor. The site was historically used for freight transportation and warehouse facilities. The Hudson River is approx 0.25mi to the west. Site was mainly used as a truck rental, fueling and maintenance yard. Hertz formerly occupied the site and built a two-story garage in 1963. Hertz installed six 550gal gas USTs in the adjacent parking area

located along 24th Street. Hertz also installed a gas distribution system with 4 dispensers. In 1965, Hertz installed four additional 550gal diesel USTs and a separate dispenser. One 7500gal heating oil tank was installed in the SW portion of the building. CMCR, LTD acquired the site from Hertz and also used the site as a truck rental/leasing facility. In 1985, the site was leased to Mendon Leasing Corp. Mendon reported four spills, 9511782(diesel), 9513588(gas), 9605688(gas), 9808740(#2FO). Costco Wholesale purchased the site in 1998 in anticipation of zoning that would allow a retail development at the site and closed the fuel and gas tanks in place. In July 2000, the Related Companies purchased the property and built the current apartment building that covers the site. Tank testing: In July 1990, Mendon was issued an NOV from the FDNY for failing to do the 10yr tightness testing on the six gas tanks. In March 1991, Mendon has all the gas and diesel tanks tested. The gas tanks passed but the diesel tank failed. The diesel tank was repaired and passed retest. In 1993, the heating oil tank was tested and passed. In 1995, the diesel tanks were tested again and failed. The contents were emptied in 5/96 and filled with polyurethane foam. In Feb 1997, the gas tanks were also emptied and filled with water. Previous Investigations: Several investigations were conducted between 1993 and 2001. ES Engineering did work on behalf of Greyhound Lines. ERM Northeast did work for DEC. AKRF did work for Costco and Related. Soil and GW has been impacted by on-site releases of petroleum and possibly also off-site sources. Areas within the parking lot on the north side of the former two-story garage building and inside the building, in the vicinity of the heating oil tank, contained free product in soils and GW. Free product in the former parking lot ranged from 0.08 to 1.63'. Free product found inside the former garage building was as thick as 4'. Dissolved-phase VOCs were also detected in GW as high as 5408ppb. No SVOCs were detected. Soil/GW interface is located at approx 8'bgs, flowing west toward Hudson. GW is not tidal. Bedrock approx 63'bgs, sloping S-SW. Remedial Actions: In Dec 1999, four 550gal diesel USTs and six 550gal gas USTs were removed from beneath the open parking lot. The heating oil tank was removed in Oct 2000. Approx 1000 tons of grossly contaminated soils were excavated and disposed of. The free product appeared on the groundwater surface and removed with absorbant pads. The excavations were left open to monitor for free product. No additional free product was observed and excavations were backfilled. No post-ex sampling was completed. The Department issued a letter on 2/12/01 with comments. A remedial workplan consisting of an in-situ remediation for soil and GW using SVE and bioremediation was presented and approved by the Dept. In March-April 2001, six geoprobes were completed. NMW-1 showed total BTEX in GW at 275400ppb, NWM-2 at 156200ppb, and NMW-4 at 1330ppb. Insufficient GW was recovered from NMW-3 and NMW-5. NMW-6 was non-detect. In October 2000, an SVE pilot was performed. An underslab SVE system was designed and installed to remove residual VOCs and to add atmospheric oxygen to allow bioremediation to occur. Air extracted from below the slab was carbon treated before venting to the roof. A vapor barrier was installed beneath the slab. Operation of the system began August 2002 and operated thru August 2003 for 1615hrs. VOCs, carbon dioxide, oxygen and moisture levels were monitored before the input and at the output of the carbon canisters. System inspection and monitoring were conducted daily for the first two weeks and then weekly inspections were made. At startup, VOCs were measured at 20-50ppm. Concentrations

**MENDON LEASING (Continued)**

**S104502055**

dropped from the initiation in August 2002 thru November 2002 when the system was stopped for seven weeks due to equipment problems. Upon restarting the system in Jan 2003, a rebound was measured with VOCs rising to 60ppm. The system was operated for two weeks with a second 4 week idle period(1/7/03-2/25/03). After this rest period, the rebound did not occur. The system operated for a period of four weeks with a continual decrease of VOC concentration. Equipment failure again shut the system down for five weeks(3/27/03-5/1/03). A slight rebound to several ppm occurred when the system restarted. The system continued to operate thru June 2003 with day-long shutdown for maintenance with no rebounds observed. Levels of VOCs in the extracted air in June 2003 were zero. Between July 2003 and July 2004, the SVE system was out of service due to major damage in the main section of the blower. In August 2004, the SVE blower and motor were downsized to a 10HP regenerative blower capable of 200 scfm at 80 inches of water. VOCs were measured two days after startup which detected levels of VOCs in extracted air between 2 and 5ppm, indicating that no significant VOCs are being extracted from beneath the building. A total of 10 MWs exist on site. Four(MW-3, ERM-4, MW-14, MW-15) are currently located on the sidewalk. The other six(NMW-1 to NMW-6) are inside the Tate building. Max total BTEX detected in MW-14 at 1990ppb(7/16/02). Max MTBE detected in NMW-2 at 410ppb(8/8/03). By the concentrations of MTBE detected in upgradient wells, MW-14 and MW-15, there may be an off-site source. (There are two gas stations upgradient at 24th St and 10th Ave.) Concentrations of BTEX have been decreasing in source areas. It appears that removal of grossly contaminated soils and free product at the time of the UST removal in 2001 eliminated the primary source of GW contamination. Groundwater samples to be collected 10/16/04. 11/1/04 Spoke to Mohammed Ahmed, FLS (212-675-3225). Approx 3" of free product(gasoline) was detected in MW-14 (sidegradient of tank field) on 8/17/04. One week later, there was no product detected. Sampled again on 10/14/04, no product detected. He suspects that it is from an off-site source. There is a LukOil Station at 239 10th Avenue (open spills #9810383, 9707190). Oct 2004 monitoring report to be submitted this week. 11/16/04 Received status update (FLS, 11/11/04). GW sampling conducted 10/12-10/13/04. No samples were collected from MW-15 located on the sidewalk of 24th St and NMW-1 located inside the Buia Gallery on 23rd St. MW-15 was backfilled during construction of the Tate Bldg. NMW-1 was inaccessible due to an exhibit. BTEX ranged from ND to 1086ppb(MW-14). MTBE ranged from ND to 130ppb(NMW-2). Off-site sources of contamination may be contributing to site conditions. However, it is not clear that it is not from onsite sources. 12/7/04 Issued letter requiring additional delineation around MW-14 and at former upgradient well location MW-15. Report to be submitted by 3/15/05. 12/20/04 Spoke to M. Ahmed, FLS. Will propose re-installation of upgradient MW-15, one well further upgradient (to confirm possible off-site impacts), and one west of MW-14(sidegradient). 12/29/04 Received proposal from FLS to install three additional MWs. 12/30/04 Issued letter approving workplan. 2/18/05 Received report for the installation of MW-14, 15A and 17. According to the report, there appears to be an off-site source on the northwest portion of property along W24th St. Concentrations of BTEX increased from 1086ppb to 2067ppb in MW-14. Report also states that the LukOil station may be contributing to the MTBE concentrations across the site. 3/15/05 Spoke to Mohammed Ahmed, FLS. Requested two Geoprobos across W 24th St to eliminate the Motor

**MENDON LEASING (Continued)**

**S104502055**

Freight Station and Auto Repair Shop as potential sources. 8/15/05 Spoke to M. Ahmed. A. Fleming spoke to NYSDOH at K. Tang's recommendation. NYSDOH requested subslab and indoor air samples. Results expected next week. FLS proposes to use this data to support closure. Explained that there is still dissolved which remains on the corner of the property. Agreed to wait for results to decide next steps. 11/29/05 Email to A. Fleming and M. Ahmed, FLS, provided comments on the October 17th request for spill closure. Regarding the indoor air and soil gas sampling which was performed, it is unclear if the concentrations detected within the building are due to any background interferences within the building. Directed FLS to conduct a full inventory as directed by the NYSDOH guidance for evaluating soil vapor intrusion. An additional round of indoor air samples must be taken at least 24hrs following the removal of any possible VOC sources. Results will be forwarded to NYSDOH. The Departments will determine further action for vapor mitigation, if required, following review. The groundwater data collected to date has been sporadic with five sampling rounds completed within the last three years. Quarterly groundwater sampling and monthly gauging must be completed and results submitted to the Department. Groundwater direction must be confirmed. The groundwater concentrations at MW-14 were as high as 4340ppb total VOCs in the last sampling round in January and have historically been fluctuating. MW-17, which was recently installed west of MW-14, also had readings of 2777ppb total VOCs. The Department requires additional wells be installed across W 24th street, north of MW-14 and MW-17, and west of MW-17. A proposal to remediate the contamination in this area will be required. It is expected that the additional delineation, groundwater and indoor air sampling results, with scaled site and contour maps, will be submitted by the beginning of February. 4/20/06 Requested update from M. Ahmed of FLS. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 7/06/06 Requested update from A. Flemming of FLS. Mr. Flemming and I spoke about the history of the site. He still believes the impacts to groundwater at wells MW-14 and MW-17 are from off-site contamination (possibly Lukoil site on 10th Ave and 24th Street). These wells are supposedly up-gradient side of the site. I requested Arnie send me the latest data on the site including groundwater sampling and indoor air sampling data. - JAM 7/25/06 Spoke with A. Flemming a number of times. I do not believe a second round of indoor air sampling was conducted, however a vapor barrier is in place. They conducted site-wide groundwater sampling in May 06. Mr. Flemming believes the latest GW results show that off-site sources are contributing to the GW contamination along W24th Street. He will submit a report of the wells that were sampled (not all were sampled because they were inaccessible). I requested that he state his justification for spill closure in the groundwater sampling report. 10/16/06 Received a call from Steve Panter of Fleming Lee Shue (212) 675-3225. He said the report is ready and will be submitted this week. - JAM 11/14/06 Received the report dated October 20, 2006 via email. The report summarizes all the groundwater analytical data since April 2003. FLS makes the argument that off-site sources are contaminating the sidewalk wells. A summary of all the off-site sources is included as well as a two part technical explanation for the difference between groundwater contamination in the sidewalk MWs and on-site MWs. The first part is a "multivariate analysis," and the second is a comparison between Benzene and MTBE. The report is uploaded into edocs. - JAM 11/22/06 Received SVE System

Data and Indoor Air Quality Data Summary Report from FLS. Report uploaded to eDocs. 01/22/07 Issued a letter to Greg Gushee The Related Companies, Inc. 60 Columbus Circle New York, NY 10022 with the NYSDEC's position on the FLS report. Chris Magee in Central Office reviewed the report and based on the material presented he does not concur with FLS' conclusion that off-site sources are contributing to the contamination found in the sidewalk wells. The letter states that The Related Companies, Inc. is responsible to monitor and remediate the site. Groundwater must be gauged and sampled quarterly and based on the results the NYSDEC will determine if a remedial strategy is necessary. The letter is uploaded into edocs. - JAM 8/21/07 Reviewed FLS letter submitted to the DEC on April 13, 2007 in response to DEC comments sent on 1/22/07. FLS believes that contamination found in off-site wells on West 24th Street stems from a different source. I sent the letter to Chris Magee in Central Office for review. - JAM 9/06/07 Sent email to Steve Panter at FLS. The email states that, "the data are inconclusive and do not prove that an off-site source is affecting the groundwater in the monitoring wells in the sidewalk... The Department cannot approve spill closure at this time. A round of groundwater samples should be collected from all wells to obtain up-to-date groundwater quality data. Results should be submitted with appropriate recommendations for further monitoring and/or remedial activities if necessary." - JAM 1/18/08 Received an email from Jim Harrington in Central Office. Steve Panter from FLS contacted Mr. Harrington stating that they will do another round of sampling but he wants assurance that after the next round of GW sampling the spill case will be closed. Mr. Harrington said he will review the spill case and material forwarded by Mr. Panter. Afterwards, he will contact Region 2 staff for further discussion before responding to Mr. Panter. - JAM 9/22/08 Reviewed the Groundwater Sampling Report/Spill Closure Request submitted by Flemming Lee Shue dated May 12, 2008. All on- and off-site monitoring wells were sampled in February 2008. Groundwater monitoring results show no significant change in contaminant levels in any of the on-site or off-site wells. The sidewalk wells continue to show exceedences for VOCs in groundwater (i.e. 748ug/L total VOCs in well MW-14 and 829ug/L total VOCs in MW-16) however, the exposure risk from these contaminants is low. The groundwater monitoring report is uploaded to eDocs. Senior technical staff in Central Office supports closure of this spill without meeting recommended objectives because of the low risk of exposure. This spill case was closed and a NFA letter was issued. NFA uploaded to eDocs. - JAM

Remarks:

CALLER FOUND .7 FEET OF GASOLINE IN A TWO INCH GROUNDWATER MONITORING WELL. LOCATION IS A TRUCK LEASING COMPANY. MARK TIBBE NOTIFIED OF RESULTS. ADDITIONAL MONITORING WELLS TO BE INSTALLED AND SIX TANKS ARE TO BE PULLED.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

|                  | DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE" transfered from sigona to tibbe on 9/26/02. see also 8605848 and 0306399. 3/19/04 (K Foley) Received 12/17/03 Spill Remediation Plan for spill #0306399 from Fleming Lee Shue. Report references tank no. 1, a 500gal #2 fuel oil tank, in the northeast corner of the site (and not related to spill #0306399). The soils beneath the tank were screened with a PID and no volatile were detected. Five post-ex samples were collected for VOC/SVOC. No VOCs detected. Several PAHs detected in all five samples, so further excavation was conducted and five additional post-ex samples were collected and analyzed for TCLP PAHs using the STARs list of analytes. These soil samples had no detectable PAHs. This may indicate that the PAHs are due to asphalt and fill material rather than fuel oil. The final data from the post-ex sampling for this tank will be submitted along with the tank closure report for the other five USTs once the additional excavation can be conducted safely without damaging the adjacent building to the northwest. letter to be sent 3/23/06: Case reassigned to Andersen. |

DER Facility ID: 73241  
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD" 7/16/04. JM Sorge, Inc. (Peter Sorge 908-218-0066) was retained by JANI realty as a consultant. They anticipate additional excavation and will submit an ISR in 6-8 weeks. YK. 11/30/04. J.Krimgold has reviewed the Investigation/Remediation Report dated August 2004 and submitted by Jm Sorge, Inc. All contaminated soil has been removed and disposed. Non.Haz. Manifests inclosed. Post excavation samples show BN contaminants levels slightly in excess of TAGMs levels. However, most likely attributed to the historic fill consisted of construction rubble and ash/cinder material. NFA letter.  
 Remarks: Stan Perelman is the owner of the vacant lot. They were having some excavating done when the discovered soil contamination. Will have someone come to test the soil and will follow up with clean up accordingly. Lot was being prepared to be built on. There was a small amount of material found.

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 DER Facility ID: 252836  
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" ACTIVE SITE. REFERRED FROM 90-00199 SEE FILE. 2/22/2002 - Dr. David Winslow with ATC Associates (212-353-8280) has been working on this site for the last couple of years. ATC submitted a Site Closure Letter (with support documents) on May 18, 2000. DEC held a meeting with Winslow/ATC in Oct 2001 and reviewed several U-Haul sites including this one. There had been excavation on the site and 3 perm. wells have come back clean. DEC requested six additional geoprobe/borings/water grabs which were done in May 2001. Five boring water samples came back with trace levels while GPW-6 had a couple of low level hits. GPW-6 at 12' depth had the following (all in ppb) sec-Butylbenzene = 444 tert-Butylbenzene = 483 Ethylbenzene = 147 1,2,4-Trimethylbenzene = 363 O-Xylene = 165 M&P-Xylenes = 249 BTEX = 585 All SVOC's were ND. After speaking with Peduto and Hale in DEC Albany, it was decided to provide a "No Further Action" letter. Closed This site file is included in DEC Long Island City "U-Haul" master file drawer/box.

DEC Memo:

3/14/03: REASSIGNED FROM ROMMEL TO VOUGHT. 11/20/2003-Vought-See closed spill #'s 9830017 and 0211201 at same location. 11/24/2004: Sent letter to Getty requesting an investigatory work plan and environmental site history. (Harrington) 1/13/2005: Approved SI work plan (installation of four (4) monitoring wells). Harrington 3/24/2005: Project transferred to Vought - Region 2. (Harrington) 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/18/2005 - Feng - Spill#: 98-10383 has been consolidated into this spill#. 10/25/2005 - Feng - Subsurface Investigation Report, dated 5/2/2005. on 4/12-13/2005, Tyree installed 3 off-site monitoring wells in sidewalk adjacent to 10th Ave and 1 in sidewalk adjacent to West 24th St as per the Work Plan approved by Harrington on 1/23/2005. Highly contaminated soil found in B-5(4'-8'), B-6(6'-8'), and B-7(6'-8'). however, groundwater was just slight high contaminated in B-6. 10/25/2005 - Feng - Quarterly Monitoring Report, 5/2005 - 7/2005. 7 monitoring wells onsite. groundwater flows to south at depth of 7.04' to 8.54' below grade. W-1, decreasing, 146ppb BTEX and 37ppb MTBE. W-2, decreasing, 274ppb BTEX and 104ppb MTBE. W-3, decreasing and fluctuating, 1,649ppb BTEX and 461ppb MTBE. W-4, 1,753ppb BTEX and no MTBE. W-5, 9,975ppb BTEX and <46.0ppb MTBE. W-6, 4,718ppb BTEX and 58ppb MTBE. W-7, 18,230ppb BTEX and 16,700ppb MTBE. 11/2/2005 - Feng - Quarterly Monitoring Report, 8/2005 - 10/2005. 7 monitoring wells onsite. groundwater flows to south at depth of 7.21' to 8.71' below grade. W-1, decreasing, 12ppb BTEX and 13ppb MTBE. W-2, decreasing, 7ppb BTEX and 45ppb MTBE. W-3, decreasing and fluctuating, 2,518ppb BTEX and 262ppb MTBE. W-4, decreasing, 1,418ppb BTEX and no MTBE. W-5, increasing, 11,608ppb BTEX and 74ppb MTBE. W-6, 4,336ppb BTEX and MTBE MDL. W-7, sharply decreased, 2,461ppb BTEX and 211ppb MTBE. 11/18/2005 - Feng - STIP sent to Getty Properties with request of 1) wells installation of one (1) downgradient of W-2 and W-7, one (1) east to W-5 and one (1) southeast to W-6. 2) surrounding properties sketch. CC to Tyree and Delta. STIP due 12/19/2005. 2/17/2006 - Feng - on 2/9/2006 Received signed STIP with modified CAP. (RJF) 2/27/2006 - Feng - Quarterly Monitoring Report, 11/2005 - 1/2006. The site is an active Lukoil gasoline station/convenience store. Groundwater flows to south at the depth of 7.06' to 8.87' below grade. 7 monitoring wells onsite. W-1, 254 ppb BTEX, 34 ppb MTBE. W-2, increased and 343 ppb BTEX, increased and 231 ppb MTBE. W-3, decreased and 1,644 ppb BTEX, decreased and 62 ppb MTBE. W-4, decreased and 1,140 ppb BTEX, MTBE ND. W-5, sharply decreased and 5,170 ppb BTEX, MTBE ND. W-6, decreased and 3,328 ppb BTEX, MTBE ND. W-7, decreased and 2,012 ppb BTEX, decreased and 127 ppb MTBE. (RJF) 4/6/2006 - Feng - Stip cancelled due to dropping in concentration. Wait for next quarter monitoring report. (RJF) 5/16/2006 - Feng - WorkPlan submitted by Tyree, dated 5/12/2006. Tyree proposed to install 3 offsite monitoring wells. One locate at sidewalk across West 24th Street (P-8), one at sidewalk across southeast corner (P-9), and one at the sidewalk across 10th Ave (P-10). The wells will be constructed of 2" schedule 40 flush joint PVC having 15' of 0.02" slotted screen and 5' of riser. Each wells will be installed 10' into groundwater. The WorkPlan is approved and approval email sent to Joe Rennie. (RJF) 6/20/2006 - Feng - Subsurface Investigation Report, dated 6/5/2006. Tyree installed 3 offsite monitoring wells, 20 feet 2-inch PVC. Groundwater encountered at approximately 8 feet below grade. Soil and Groundwater samples were collected (Chain of Custody indicated that), but only soil samples analyticals were presented. PID reading = 0 for depth from 0-20'. Slight VOCs and SVOCs detected

in soil but below TAGM 4046. Emailed Joe Rennie for groundwater data. (RJF) 6/28/2006 - Feng - Quarterly Monitoring Report, 2/2006 - 4/2006. The site is active Lukoil gasoline station/convenience store. As of sampling and monitoring on 4/12/2006, groundwater flows to south at the depth of 7.92' to 9.41' bg. 7 monitoring wells onsite. W-1, 75 ppb BTEX, 28 ppb MTBE. W-2, 30 ppb BTEX, 291 ppb MTBE. W-3, increased and 8,520 ppb BTEX (1,280 ppb B, 4,280 ppb T, 770 ppb E, 2,190 ppb X), 57 ppb MTBE. W-4, 2,438 ppb BTEX (25 ppb B, 33 ppb T, 1,000 ppb E, 1,380 ppb X), MTBE ND. W-5, 7,969 ppb BTEX (2,320 ppb B, 119 ppb T, 2,190 ppb E, 3,340 ppb X), 102 ppb MTBE. W-6, 2,423 ppb BTEX (322 ppb B, 31 ppb T, 1,010 ppb E, 1,060 ppb X), 19 ppb MTBE. W-7, increased and 22,780 ppb BTEX (6,310 ppb B, 8,870 ppb T, 1,520 ppb E, 6,080 ppb X), increased and 8,350 ppb MTBE. Stipulation Agreement sent to Getty Properties and cc to Tyree and Delta. STIP due 7/24/2006.(RJF) 8/16/2006 - Feng - Stipulation Agreement executed on 8/10/2006. (RJF) 8/17/2006 - Feng - Quarterly Monitoring Report, 4/2006 - 7/2006, by Tyree. The site is active Lukoil gasoline station/convenience store. Groundwater flows to south at the depth of 7.38' to 8.87' bg. As of sampling on 7/24/2006, 9 monitoring wells. W-1, 57 ppb BTEX, 8 ppb MTBE. W-2, 13 ppb BTEX, 35 ppb MTBE. W-3, 6,862 ppb BTEX (635 ppb B, 3,260 ppb T, 346 ppb E, 2,621 ppb X), 114 ppb MTBE. W-4, 2,047 ppb BTEX, ND MTBE. W-5, 10,968 ppb BTEX (1,440 ppb B, 128 ppb T, 1,940 ppb E, 7,460 ppb X), ND MTBE. W-6, 2,982 ppb BTEX, 23 ppb MTBE. W-7, 24,900 ppb BTEX (6,320 ppb B, 5,590 ppb T, 1,430 ppb E, 11,560 ppb X), 4,700 ppb MTBE. W-8, both ND. W-9, destroyed during sidewalk repair. W-10, both ND. Emailed Rob Szczepanski (Tyree) to approve the delineation of contamination, RAP due 11/17/2006 as per the Stipulation Agreement. (RJF) 10/26/2006 - Feng - The adjacent property will be developed, 245 10th Ave and 502 West 24th Street, E-142-Designation Site of NYCDEP. Called Amy Ma of NYCDEP to inform her about the existing spill in the Getty Station locate 239 10th Ave. (RJF) 11/15/2006 - Feng - Quarterly Monitoring Report, 8/2006 - 10/2006, 10/19/2006, by Tyree. Active Lukoil gasoline station/convenience store. Groundwater sampled and gauged 10/16/2006. 9 monitoring wells. DTW 8.31' to 9.83' bg. Flow direction south. No LNAPL. BTEX range ND to 30,410 ppb (MW-7). MTBE range ND to 3,330 ppb (MW-7). (RJF) 1/18/2007 - Feng - Getty Properties portfolio meeting with Tyree and Delta. DEC staff has informed Tyree and Delta about the site development at the adjacent property, and the dewatering process may affect the contamination plume. Tyree will contact DEP before the preparation of RAP. (RJF) 1/23/2007 - Feng - Email Rob S. (Tyree) the contact person info in DEP and the adjacent project info. (RJF) 6/6/2007 - Feng - Quarterly Monitoring Report, 11/2006 - 1/2007, 2/2007. Groundwater monitored 1/30/2007. 9 monitoring wells. Active gasoline station. DTW 7.94' to 9.47' bg. Flows southerly. LNAPL in W-7 (0.26'). W-1, 185 ppb BTEX, 163 ppb MTBE. W-2, 9 ppb BTEX, 24 ppb MTBE. W-3, 18,410 ppb BTEX, 102 ppb MTBE. W-4, not accessible. W-5, 10,606 ppb BTEX, 33 ppb MTBE. W-6m 1,953 ppb BTEX, 36 ppb MTBE. W-7, 0.26' of LNAPL. W-8, ND. W-9, destroyed. W-10, 3 ppb BTEX, MTBE ND. (RJF) 7/9/2007 - Feng - Quarterly Monitoring Report, 2/2007 - 4/2007, 5/2007. Groundwater sampled 4/30/2007. 9 monitoring wells. DTW 9.06' to 16.76' bg. Flows to south. No LNAPL. W-1, 1,255 ppb BTEX, 129 ppb MTBE. W-2, 1,572 ppb BTEX, 362 ppb MTBE. W-3, Dry. W-4, NA. W-5, dry. W-6, NA. W-7, NA. W-8, ND. W-10, ND. (RJF) 11/7/2007 - Feng - Quarterly Monitoring Report, 5/2007 - 7/2007, 8/2007. Groundwater sampled 7/30/2007. 9 monitoring wells were sampled. DTW 8.11' to 9.27' bg. Flows to south.

GETTY GAS #341 (Continued)

S104503705

No LNAPL. BTEX range ND to 5,980 ppb. MTBE range ND to 393 ppb. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. Tyree will sample for one more quarter to evaluate the site condition after the dewatering process at the adjacent site. Need to sample MW-4. RAP to be submitted by 2/2008. (RJF) 1/28/2008 - Feng - Quarterly Monitoring Report, 8/2007 - 10/2007, 11/2007. Active Lukoil gasoline station/convenience store. Groundwater gauged and sampled 10/23/2007. 9 monitoring wells. DTW 10.05' to 16.37' bg. Flows to south. No LNAPL. BTEX range ND to 5,131 ppb (W-6). MTBE range ND to 252 ppb (W-3). (RJF) 3/19/2008 - Feng - eDoc Quarterly Monitoring Report 1Q2008. (RJF) 3/20/2008 - Feng - Email to Tyree and Delta for RAP status. (RJF) 3/24/2008 - Feng - Quarterly Monitoring Report, 11/2007 - 1/2008, 2/2008. Active Lukoil gasoline station/convenience store. Groundwater was gauged and sampled 1/14/2008. 9 monitoring wells. No DTW available due to water probe broke onsite. Flows to south. No LNAPL. BTEX range ND to 4,203 ppb (W-1). MTBE range ND to 412 ppb (W-2). (RJF) 7/11/2008 - 2Q2008, 2/2008 - 4/2008, 5/2008. Active Lukoil gasoline station/convenience store. Groundwater was gauged and sampled 4/25/2008. 9 monitoring wells. DTW 9.65' to 11.58' bg. Flows to south. No LNAPL. BTEX range ND to 10,765 ppb (W-3). MTBE range ND to 191 ppb (W-3). email Tyree for RAP status. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Delta and Tyree. The dewatering that started 4/2007 was stoped 2/2008. MW-4 was not sampled because storage box was on top of that. Wait to see the rebound before the delineation. Possible monitoring wells will be installed between the service building and the tank. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Delta and Tyree. Review 2Q2009 quarterly for possbile delineation. (RJF) 3/18/2009 - Quarterly Monitoring Report, 5/2008 - 7/2008, 8/2008, by Tyree. Active Lukoil gasoline station convenience store. Groundwater was gauged and sampled 7/22/2008. 9 monitoring wells. NO LNAPL. DTW 9.21' to 10.67' bg. Flows to south. BTEX range ND to 7,530 ppb (W-3). MTBE range ND to 165 ppb (W-3). (RJF) 5/6/2009 - Quarterly Monitoring Report, 8/2008 - 10/2008, 11/2008, by Tyree. Active Lukoil gasoline station convenience store. Groundwater was gauged and sampled 10/30/2008. 10 monitoring wells. NO LNAPL. DTW 8.11' to 9.66' bg. flows to south. BTEX range ND to 20,856 ppb (W-7). MTBE range ND to 192 ppb (W-7). (RJF) 11/6/2009 - 2Q2009, 4/2009-6/2009, 9/2009, pdf, by Tyree. Active Lukoil gasoline station convenience store. 12 monitoring wells. Groundwater was gauged 4/24/2009, 5/29/2009, 6/19/2009 and 7/9/2009. NO LNAPL. DTW 8.11' to 9.66' bg. Flows to south. Groundwater was sampled 6/19/2009. BTEX range ND to 11,198 ppb (W-7). MTBE range ND to 274 ppb (W-2). (RJF) 7/9/2010 - Reviewed Investigation Work Plan, dated 6/3/2010, by Tyree. Tyree proposes 2 wells W-11 and W-12 in west of W-7 and north of W-7. Work Plan is approved. Report due 10/2010.

Remarks: A LEAK IN THE REMOTE FILL. SOIL WAS REMOVED AND LEAK WAS REPAIRED. ORIGINAL SPILL ASSIGNED TO O'DOWD.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" 8/16/2000 Sangesland went to the site. Building was closed, but the contractor was in his truck out front. Several 550's were pulled from the floor (interior) of what was a garage space in the building. There was long term contamination from the piping and fill lines. Contractor said quite a bit of soil was going to be removed. Sangesland repeated the requirement for endpoint samples. Contractor was given the Spill number and the address to send the tank closure report to. 9/13/2000 Long Island Analytical Laboratories Inc. (631-472-3400) submitted a 4 page report dated Sept 7, 2000 which says: "...LIAL was retained to conduct a limited subsurface investigation with respect to the removal of five-550 gallon fuel oil tanks that were recently registered and removed by Arlen Contracting...." "... following scope of work is submitted to your dept. for review and comment ..." "...Aug 25,2000 LIAL conducted subsurface investigation to delineate the contamination. the area in question is contained in the western portion of the building ....." "... 8 Geoprobe soil borings to the groundwater / soil interface (approx 10 feet) were done....." "... analytical date indicates that an area approx 45 ft long (running north to south) and 25 feet wide (east-west) is contaminated with virgin fuel oil. The contamination layer appears to be limited to a band approx. 4 feet thick starting at four feet below grade and continuing to the groundwater...." "...Since the tanks that have been removed were along a load bearing wall, excavation must be done in small segments in order to protect the building...." "...Upon completion of the removal of the contaminated soil endpoint samples will be collected and analyzed for 8021/8270. Letter is signed: Michael Veraldi Laboratory Director 9/13/2000 Sangesland called LIAL and said the digout to clean endpoints with a follow up confirmation report would be acceptable..... NYSDEC will require 2 wells in the event future treatment is necessary. 10/10/2000 LIAL sent in a report which shows 6 end point samples were taken at the site (2 bottom - 4 sidewall) all samples were non detect for EPA 8021/8270. 10/17/2000 Since 5 -

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" PBS 2-317888 - shows several tanks abandoned in place. a/k/a 507 West 24th St 2 - 2,000 gal diesel tanks abandoned several years ago. Soil borings done around these tanks show trace levels of contamination. All below TAGM. Sangesland asked Mr Taylor of Laurel Envir. to send in a report and if the numbers are below TAGM, the case will be closed out. 12/17/2003 Laurel Envir. sent in a report with soil sample results showing all contaminants below TAGM. Spill Closed

Remarks: In February of 2000 did a tank test, and found no levels of anything reportable. Spoke to DEC recently and they stated he needed to call spill hotline, to obtain a spill #. to close out.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY" Con Ed e2mis #149429: 07/22/03 18:50 hrs M Milano # 68073 of Manhattan FOD reported to N Muldoon # 18723 that at 18:00 hrs in TM 3063 located at N/S W 23 St 27 feet E/O 10TH Ave discovered approx 50 gallons oil on top of 100 gallons of water. FOD was there to check a smoking transformer. The source and cause of the spill are unknown. Possible transformer leak. A sewer connection, concrete sump and any substantial cracks could not be verified. No sump running. An over 50 tanker has been ordered for 23:00 hrs along with an I&A crew to evaluate the spill. UPDATE 07/22/03 23:30 Lab Sequence Number: 03-06065-001, <1ppm PCB 7/23/03 Partial cleanup was completed at 05:15 hrs. The tanker removed 35 gallons of oil and water mixed. The flush truck removed all solid debris. Spill tag # 36372 was left in place. The final cleanup will be completed when the unit is drained and removed. 8/30/03 cleanup was complete @ 09:00 hrs. All debris and liquid was removed by the Vactor Truck. The structure was double washed with slix and all PPE will be disposed of properly. Supervisor V. Mirance confirmed that the transformer was removed at the time of the final cleanup.  
Remarks: spill is contained within the vault #tm3063 and is sitting on 100 gallons of water. Test samples have been taken for PCB and ID. Con Ed Ref # 149429. A Transformer was involved unknown if the leak is from the transformer

DEC Memo: According to Mohammed Ahmed, the property owner is: Jack Guttman Bass Associates 141 Fifth Ave, Penthouse NY NY 10010 Fax copy to Fleming - Fax #212-675-3224 10.17.05-Sharif// I sent a stipulation with corrective action plan. The Corrective Action Plan requires delineation of groundwater contamination offsite and dewatering discharge contamination. 11.18.05 Sharif//Property Owner's lawyer Larry Schnapt,(212)756-2205 Called me to say his client is not going to sign the stipulation since it waives his right to claim cost of remediation to Spill Fund, instead he will send a statement about their agreement to remediate the groundwater contamination if it exists. 12/20/05-Sharif// Case was transferred to Koon Tang for reassignment with files. 12/20/05-Sun//The Case was reassigned to June Feng. 12/28/2005 - Feng - File reviewed by Feng and summarized site history : 1) The site will be constructed as multistory commercial structure w/ basement. 2) Groundwater encountered at 8' below grade, so basement will below water table. 3) Removed a crushed 550-gallon UST during excavation beginning construction, no sign of contamination was seen. 4) Dewatering system was installed, soil removal was found to have petroleum odor and sheen. 5) Soil was sampled. Soil contamination was found beginning at 8' bg to 16' bg. Soil samples taken from the four quadrant at depth of 12-16 feet below grade. 6) Soil were excavated to 11.5' bg after dewatering. Total of 1,218.71 tons of soil was excavated (reached the excavation limit). Endpoint samples were taken. 7) ORC applied in southwestern covered with gravel and poured with concrete. 8) Foundation was poured and basement was built. 9) A 47.24 mil high density polyethylene vapor barrier (Preprufe 300R waterproof system) was installed between the mud-slab and the basement slab. Items need to be addressed: 1) Groundwater sampling. WT @ 8' and soil was found to be contaminated from 8' to 16'. Soil excavation only to 11.5'. If contamination was found in groundwater, treatment will be required. 2) Indoor air sampling. Vapor barrier was not extended to the walls below grade, so indoor air samples will be needed upon completion of the structure. 12/30/2005 - Feng - Contacted the consultant, Chris De Carlo (Fleming Lee Shue), and will submitted all the requested

information, included groundwater samples result, construction detail and vapor mitigation effort design. (RJF) 2/16/2006 - Feng - Reviewed the supporting documents and construction drawings. Vapor barrier designed was provided. Extension to install groundwater monitoring wells in June 2006 is approved. Letter to Bass Associates and CC to Fleming Lee Shue and Schulte Roth & Zabel (lawyer). 10/4/2006 - Feng - Called Chris DeCarlo. Fleming Lee Shue has submitted a proposal to the owner and never get approved. The consultant for this site may have been changed and Fleming Lee Shue might be the consultant next round. Called Jack Guttman at the number Chris DeCarlo provided and the number has been changed. Email to Lawrence Schnapf and asked him to contact Jack Guttman for the status of the groundwater samples. (RJF) 10/10/2006 - Feng - Site visit and met with Mohamed Ahmed (Fleming Lee Shue). Groundwater flows in a direction to Hudson River. No upgradient well will be installed due to the underground utilities. One downgradient well will be installed. Sidewalk permit letter sent to Fleming Lee Shue. (RJF) 5/29/2007 - Feng - Subsurface Investigation Report, dated 12/20/2006, submitted by Fleming Lee Shue. On 11/22/2006, soil boring was advanced to 20 feet bg. No PID reading and soil sample was not taken. DTW 9 feet. On 11/29/2006, groundwater sample taken. Analyticals show low contamination, 13.7 ppb MTBE. 2nd Quarterly Groundwater Sampling report, 3/19/2007. Groundwater sampled on 2/16/2007. No product. Analyticals show 14.9 ppb MTBE and some trace of SVOCs. Fleming Lee Shue will keep monitoring. (RJF) 7/24/2007 - Feng - Spoke with M. Ahmed (Fleming Lee Shue), quarterly report will be sent out within this week. (RJF) 8/21/2007 - Feng - Quarterly Groundwater Sampling Report #3, 7/25/2007, by Fleming Lee Shue. Groundwater sampled collected 6/13/2007. No product. No exceedance found. (RJF) Discussed with DEC J. Sun. Spill closed for: 1) Impacted soil was excavated down to 8 feet and endpoint samples show some minor SVOCs exceedance. 2) Application of 1,500 lbs of ORC at the basement excavation to remediate the groundwater. 3) Installation of a 47.24 mil of vapor barrier to prevent the vapor intrusion into the building. 4) Low/ND downgradient groundwater sample indicates no offsite impact. NFA issued. (RJF)

Remarks: during soil searching found contaminated soil;

contamination and a copy of the analytical report from the Phase 2 soil boring/groundwater investigation. 09/11/06-Vought-Spill transferred from Vought to DEC Tang as per Tang due to groundwater contamination. 9/12/06-Kann-Consultant does not have analytical results yet, they are expected in one week. Free product was in one well in the suspected tank area. 9/27/06 - Kann - Letter went out to RP requesting investigative results. 10/6/06 - Kann - Spoke with A. Leung of Yu&Associates. The report will be submitted on Tuesday 10/10. No free product was found in the well. The consultant will be recommending additional investigative work. 11/28/06 - Kann - Phase II was submitted in October 2006 and recommendations for investigation were provided. The Department sent a letter on October 20, 2006 approving the proposed summarized plan for additional work, and required a Work Plan be submitted. The work plan was submitted on November 15 and was approved by the Department on 11/28. 3/22/07: J Kann - RAWP includes tank removal, soil excavation and ORC. The RAWP was approved provided the tank excavation remain open for at least a month, confirmatory sampling be performed, submitted to the Department and approved prior to backfilling. 6/26/07: J.Kann - granted a 90 day extension as requested by RP due to contractor delays. Report therefore due by September 26, 2007. 9/6/07: J.Kann - spoke with consultant (A. Leung of Yu Associates 201-791-0075). A Leung had a question about using shoring. INformed A. Leung that it is the consultants responsibility to ensure the structural stability of adjacent structures and that if gross contamination exists, shoring may need to be considered to remove contaminated soils. 03/06/08: J.Kann - met with A.Leung of Yu Associates. A. Leung will prepare letter outlining constraints regarding the excavation of the UST at the site. They will recommend decommissioning the UST in place to eliminate the risk of compromising the adjacent building. 04/22/08 - J.Kann - site visit. Excavation work was on-going around the potential location of the oil water seperator. Contaminated soils were encountered and odors were present. The soils were stockpiled and tarped. Clean fill will be brought to the site to fill the excavation. A request for modification of the RAWP was submitted on March 25. Verbal approval of the approach was provided. A letter will be prepared indicating that since complete source removal was not performed, an SSDS should be installed for the new building. 05/02/08- J.Kann - Approval of Modification to RAWP sent via email (can be found in edocs). 05/22/08 - J.Kann - reviewed letter indicating that the foundation was modified to not include a basement, that foundation work will commence in mid-June and will not effect remedial activities and that an SSDS will be installed for the site (letter in edocs). Sent email to YU Associates confirming review of letter. 06/06/08 - J.Kann - spoke with Anish of Yu Associates. Endpoints from an excavation in the southeastern portion of the building revealed some elevated SVOCs (PAHs). No VOCs were detected. Anish indicated that the highest level was 7.8 ppm of benxo(b)flouranthene. The site will be capped as a part of constuction. 09/22/08 - J.Kann - reviewed Yu Assosociates letter of August 12. Discussed their findings and determined the following: an SSDS must be installed at the site. According to Yu, excavation on-site has been completed to the max amount allowable due to structural constraints. Shallow excavation will be completed as a part of construction. Additional endpoints of soil samples will not be needed for this phase of excavation (they will just need to perform necessary sampling for waste characterization and disposal).

Remarks: The building will be constructed with a vapor barrier and SSDS. REgen ox has been applied and some sampling performed (see edocs). A well will be installed in the sidewalk along 24th street immediately north of the tank location. 1/28/10: J.Kann - spoke to consultant A. Leung on 12/8/09. A. Leung indicated that no work had been done on the site recently to his knowledge. Will need to contact the owner to notify them that additional follow up work is needed. The owners information (provided by consultant) is Rev. Danny Mun Sang Suk Rev.New Millennium United Methodist Church 202-20 45th Avenue=0A Bayside, New York 11361 United States of America (718) 631-9191 ( Work ) (718) 224-3525 ( Home ) (917) 415-6760 ( Cell ) 02/02/2010 Project transferred from Section C to Section B for managment. Nees project manager to be assigned. V. Brevdo

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DER Facility ID: 317601  
 DEC Memo: 10.11.05 SR//Sharif spoke with Bill Simmons, they are removing five 4000 tanks and found contamination. Apparently, there are no holes in tank.I suggested to dig out as much as possible and take end point sample, send result to DEC. If problem is major i.e., ground water affected, needs long term remediation, then it goes to Koon Tang. 01/26/05 Sharif//Rec'd UST cosure report prepeared by ECS. Five 4000 gallon gasoline single-wall USTs and associated piping were removed. Ground water was encountered during excavation at 6 to 7 feet below grade. Petroleum-impacted soils were encountered within UST grave and beneath former dispenser islands. Dewatering activities were performed in UST grave area to remove impacted soil to 13 ft below ground. Twenty-three post excavation soil samples out of 44 had VOC concentrations above TAGM. Level of remaining soil contamination below groundwater level warrants delineation of groundwater contamination and may require additional long-term remedial efforts. Case has been transferred to Koon Tang for reassignment. 02/03/06: Spill transferred from S. Rahman to J. Kolleeny. Spoke with Bill Simmons of ECS; site had wells put in years ago after soil contam was

found, but was closed by J. Rommel of DEC after BTEX levels in GW showed decreasing trend and sensitive receptor survey showed no SR's (see spill 9912838). Cumberland Farms sold site, but retain responsibility for env'tal investigation and cleanup. Current owner plans to develop site with 15-story residential building, involving further excavation of soil and possibly dewatering. Owner's consultant is currently doing Phase II investigation and preparing a report. ECS will forward this report, when available, to DEC with their recommendations for further action. - J. Kolleeny 04/06/06: Spoke with Bill Simmons of ECS, he sent an email on 3/30/06 with outline of draft RAP and attached data tables and site plans from upcoming Phase II report being prepared by Impact Env'tal. ECS's draft remedial plan involves soil excavation during site re-development activities, plus mitigation measures like sealing basement of planned residential building with moisture barrier (basement likely to extend into water table, 6-8 feet bg). ECS is pushing RP to do more, rather than less, soil excavation to remove as much potential source material as possible and help GW quality improve. I agreed with this, and suggested applying ORC to open excavation. I also stated that plume is not delineated and add'l wells are needed, plus after soil excavation there will likely be need for follow-up GW monitoring. GW data from Impact, collected in Jan. '06, showed worst GW along southeastern and northwestern edges of site. I also suggested that another round of GW sampling be conducted soon, approx. 3 mos. (one quarter) after last round. Bill Simmons agreed with these suggestions/statements and indicated that RAP would be submitted in several weeks. - J. Kolleeny 07/26/06: Reviewed Remedial Action Plan (received April 24, 2006), plus diagrams I requested from Bill Simmons of ECS, sent by email on 7/26/06, showing site with historic soil sampling locations, excavated areas, and proposed post-remedial monitoring wells (in eDocs Image Folder). RAP involves excavation of petroleum-contaminated soil encountered during site re-development, de-watering during construction activities, post-excavation soil sampling, and application of ORC to open excavation. In addition, ECS proposes quarterly GW monitoring of existing wells prior to re-development, and installation of 5 new wells (existing wells will be destroyed during construction) for post-remediation monitoring. I sent approval letter (by email and hard copy to Angela Pimental of CFI and Bill Simmons) requesting two more post-remediation monitoring wells, stating that number and locations of post-remediation wells may need to be adjusted based on results of post-ex soil samples, and asking that soil screening and sampling be performed during installation of post-remediation wells. - J. Kolleeny 06/14/07: Spoke with Bill Simmons of ECS, mentioned that approved RAP included implementing quarterly GW monitoring prior to site remediation by excavation, asked if any quarterly monitoring has been done. He indicated that current owner/developer has been unwilling to undertake sampling, and it's unclear which consultant (ECS, Langan or other), should be doing it (site remediation apparently not being done by CFI). I said DEC was being cooperative by allowing remediation to be linked with site re-development, but that it's not acceptable for all work on spill case to be stalled. Bill said he is attending big meeting regarding project today and will bring up this issue, also said excavation is projected to start in late July; I said in that case it's even more important that baseline GW sampling be performed. He agreed and said he would mention this at meeting and

**FORMER EXXON STATION (Continued)**

**S107415886**

let me know result. I said if RP is not cooperative, he should give me contact info and I will pursue them directly. - J. Kolleeny  
06/19/07: Sent email to Bill Simmons of ECS to follow up on 6/14/07 conversation: "We spoke last week about site, where quarterly GW monitoring is to be done while awaiting implementation of approved RAP. You mentioned you were going to meet with parties involved and would bring this up. Can you let me know outcome of meeting? Has anyone agreed to do GW monitoring? Please let me know." Got email from Bill saying: "Owner & developers allowed us access, went to Site on June 15, found 2 wells in vicinity of former USTs on northern and NE portions of Site. We sampled them, should have results next week." I reviewed DEC notes and RAP, sent back reply: "Thanks for sampling wells. However, I looked back over my notes and RAP and have some concerns. Worst contamination has historically been in well MW-4, which doesn't exist anymore. When sampled by Impact Env'tal in Jan. '06, well had > 35,000 ppb total VOCs! Other well which had significant contam was MW-5, east of former tanks/dispensers, which also doesn't exist anymore. GW flow direction at site has varied, but has at times been to south and/or east. This warrants further delin to evaluate potential off-site migration. When I reviewed/approved RAP in July '06, I thought remedial action would be implemented in near future, and that post-remed mon wells would be installed to evaluate residual GW contam. However, given that nothing has been done for almost a year, I don't think sampling of 2 existing wells on north and NE portions of site is sufficient to determine baseline, pre-remediation GW conditions. I think it's important to install minimum of 2 new wells, either along SE and eastern boundaries of site (in sidewalk along 10th Ave.), or across street to south and SE." Got reply from Bill: "Site is currently under development. Plans, to begin next week and continue thru Oct., include install'n of sheet piling, install'n of dewatering treatment system that will operate for 2-3 months, potentially removing millions of gals of water, excavation of petroleum-impacted soil, collection of post-ex soil samples, and mixing of ORC in excavation. RAP details what is to occur at site after development and includes install'n of post-remed mon wells to evaluate potential off-site plume and effects RAP and construction activities have on GW. We were told last year that plans were moving quickly and also thought project would have started several months ago if not late last year. DEP is also involved with reviewing/approving all documents due to Site having E-Designation. Further, access to sidewalks around site will be blocked for construction. Due to logistics involved with installing wells at this time in project (i.e.: lack of access, construction traffic) and certain destruction of any wells installed due to construction and RAP activities that will be performed (i.e.: removal of millions of gals of water, soil excavation and ORC mixing) that will have significant positive effect on subsurface conditions at site, we do not believe install'n of monitoring wells at this time is feasible or warranted. Add'lly, historical GW data (Nov.'00 thru May'04) & data from Jan.'06 sampling event provide adequate baseline info for evaluating pre- & post-remedial impacts. I've attached results of 2 GW samples collected in March '07 for waste characteriz'n data for dewatering and DEP discharge permit criteria by Langan Engrg & Env'tal Svcs on behalf of developer plus Site Plan showing location of samples [in eDocs]. We look forward to discussing further, hear your comments." I reviewed GW waste charact. sample data, wrote back: "Thanks for waste charact. GW data. Your arguments are reasonable &

persuasive; I withdraw request for install'n of addt'l delin wells at this time. As you stated, post-remed wells will have to be installed to evaluate on- & off-site subsurface conditions after remediation and development at site. Please send lab results of 2 wells ECS recently sampled when available, and let me know when soil excavation and de-watering activities have been scheduled; I'd like to come to site to observe." - J. Kolleeny 06/22/07: Received/reviewed copy of Langan Engrg Supplemental Site Invest Rpt dated 6/19/07, and on 6/21/07 sent email to Bill Simmons of ECS: "Yesterday I received copy of a Supplemental Site Invest Rpt dated 6/19/07, prepared by Langan Engrg & Env'tl Svcs, addressed to Gary Heath of NYCDEP. This rpt has caused me some concern. Rpt summarizes excavation of 10 test pits across site in March '07, with collection of soil samples. Rpt concludes that there is widespread soil contam at site, but mainly below 8 feet bgs. GW was encountered in test pits, but no free product or sheen was observed. Based on these observations, Langan suggests that removal of contam soil from much of site, in accordance with approved remedial plan, will require unnecessary removal of upper 8 feet of relatively uncontaminated fill material, and that since planned site building will only have small cellar and will have on-grade slab over rest of site, with vapor barrier & sub-slab depressuriz'n system, excavation of contam soil should only be performed in proposed cellar area and petroleum-impacted soil identified elsewhere on site should be left in place. Langan's recommendation seems to be based on premise that only relevant concern posed by petroleum contam is its potential impact on building occupants via vapor intrusion. In fact, there is significant GW contaminant plume beneath site (which may extend off-site) which must be addressed under NYS Env'tl Conserv Law. Based on most recent GW data available to me (Jan. '06), very high levels of GW contam were found outside of planned cellar area (former well MW-4). GW contam at site must be addressed to resolve open spill 0508226. Best way to accomplish this, in light of fact that site is undergoing redevelopment, is to excavate as much contam soil as possible, since soil contam acts as source material for GW contam. This was recognized by ECS in April '06 Remedial Action Plan, which stated "ECS proposes performance of exploratory test pits...Any petroleum-impacted soil that is discovered will be excavated and disposed of off-site. This remedial action will remove source areas and ultimately improve GW quality." RAP further proposed application of ORC to open excavation(s), to enhance biodegradation processes which reduce dissolved petroleum contam. DEC has approved April '06 RAP; any change in remedial plan must be submitted to NYSDEC in writing and approved by DEC. This may require collection and submission of up-to-date GW quality data to support revised remedial proposal. Again, I express my concern over Langan's suggestion that soil known to be petroleum contaminated be left in place at site, which contradicts RAP. Please let me know your thoughts on this." - JK 06/27/07: Received call from Bill Simmons of ECS, discussing recent Langan Engrng rpt and my email of 6/22/07. I stated that either impacted soil in southern areas of site (i.e., outside of planned cellar area) must be excavated, or alternative remedial plan must be proposed, which may require addt'l supporting data. Bill sent email summarizing conversation, with attached results for GW samples collected 6/15/07 from two wells in north, NE portions of site. Results (in eDocs) showed no petroleum-related compounds detected. Bill's email stated: "Please find attached analytical results of GW

**FORMER EXXON STATION (Continued)**

**S107415886**

sampling of wells MW-7 and MW-8 on 6/15/07. Data indicate no VOCs besides chloroform. As follow-up to our phone conversation this a.m. regarding your email: I will discuss with all parties involved need for soil excavation to remove source of GW contam and further migration off site, specifically in vicinity of former well MW-4 located on SE part of site, of which most recent data collected in Jan. '06 by Impact Env'tl indicated total VOCs at 36,901 ppb. We specifically discussed Grids 7, 13, 14, 15, 19 & 20 (per Langan Engrg Site Plan in Suppl'l Site Invest Rpt dated 6/19/07) with depths from 5 fbg to minimally 10 fbg. Note that excavation of southern parts of Grids 7, 13 & 19 will be limited due to presence of abutting building and its structural integrity. If soil excavation is not performed, Revised RAP will be required with new GW data from SE, southern and eastern parts of site with proposal of alternative remedial methods to treat identified soil impact. I will keep you updated on progress." - J. Kolleeny 06/29/07: Received email from Bill Simmons of ECS: "We are all in process of determining best strategy for excavation of petroleum-impacted soils in grids discussed along southern and eastern portions of Site. Developer has involved a structural engineering firm to provide geotechnical input specifically about abutting building to south and structural integrity concerns of getting too close to building without likely collapse. We request that you visit property to meet with certain people so an on-site discussion and meeting can better relate all site concerns. I have cc'd Joel Landes of Langan Engineering as he will be heading this issue." I was unable to attend site meeting on July 11, 2007. - J. Kolleeny 07/12/07: Received email from Bill Simmons: "I want to provide you with update and status on project site meeting we had on Wednesday July 11. We determined that excavation of petroleum-impacted soils up to 10-12 feet in Grids along southern portions of Site(7,13 and 19) can be completed safely by coming no closer than 10 feet to building benching out 5 feet and using a 1 to 1 slope. As for eastern sidewalk portion (Grids 20, 21 and 22), we can likely get closer to sidewalk property border using a 1 to 1 slope. We will also excavate soils where we see impact in Grids 14 and 15 in addition to already proposed cellar area. ORC will be placed in all completed excavation areas. We anticipate this work will begin week of July 23." - JK 08/02/07: On 7/31/07, received letter from Bill Simmons of ECS dated 7/30/07 (in eDocs), informing DEC of progress at site and addressing my recent concerns. Letter restates comments in his 7/12/07 email regarding depth of excav in various grids with sloping reqmnts to protect struct integrity of abutting bldg, says excavation is expected to begin week of 8/6/07. - JK 01/02/08: Sent email to Bill Simmons of ECS requesting remediation update: "I was going through my spills and noticed I haven't had an update on this case since August. Can you send an update on progress of soil excavation? Has de-watering been performed, or application of ORC to excavation? Has end-point soil sampling been performed, and if so, are any lab results available? I think it would be advisable to have DEC review end-point sampling data prior to backfilling excavation. Also, has any additional GW sampling been done? I remind you that RAP I approved for Cumberland Farms - who are, to my knowledge, Responsible Party for this spill - included quarterly GW monitoring prior to remediation. If CFI no longer considers themselves responsible for addressing this spill (which would be news to me), please let me know right away. I re-read my notes on this site, including comments in an email from you which gave impression

**FORMER EXXON STATION (Continued)**

**S107415886**

that there may be more than one RAP for site. In other words, I sense that some parties involved (i.e., Langan) are operating under RAP that was not submitted to, reviewed and approved by DEC. If property owner and/or responsible party wish to achieve closure of this spill, we all need to be on same page." Got email reply from Bill: "Project is progressing. We are all operating under same RAP so I do not know what you are referring to. Impact Environmental operates dewatering system for CFI and developer and performs daily on-site Health & Safety Monitoring per DEP requirements. Langan is not doing anything except overseeing that things are being performed per all requirements on behalf of developer. 1. From Aug. 27 - Sept. 22, 2007, 1,213.71 tons of soil were removed from GRIDS 7, 10, 11, 13, 14, 15, 19 & 20, up to 12'-13' feet below grade. ORC was added to GRIDS 7, 13, 14, 19 and 20 - See Attached Plan. Post-Ex data from these GRIDS is attached in Table [in eDocs]. 2. Dewatering system was started on 12/12/07. Soil excavation within cellar area down to 15'-17' feet in GRIDS 10, 11, 12, 16, 17, 18, 22, 23 & 24 began on 12/19/07, and is on-going. 3. As we discussed in June '07 it was not possible to do any GW monitoring prior to soil excavation other than what I sent you on 6/19/07, because all wells had been destroyed. 4. I expect cellar soil excavation, post-excavation sampling and ORC application to be completed in next few weeks, but lagging construction for sidewalls for sidewalks will determine this schedule." I sent email to Bill: "Thanks for update and soil data. I'm glad end-points look pretty good so far. I guess I got impression there may be more than one remedial plan (besides April '06 ECS plan I approved) because in my notes I've written that Langan mentioned installation of a vapor barrier and sub-slab depressurization system. I recall that RAP I approved mentioned installation of moisture barrier, with presumption that there would be basement extending into water table, and only mentioned passive sub-slab venting system as a possibility. I thought maybe Langan had submitted a more detailed proposal for sub-slab system to NYCDEP because of e-designation - I know they've been submitting reports to DEP and I'm not sure if I'm copied on all of them. Do you have any sampling data for de-watering discharge? I know this is regulated by DEP, not DEC, but I figured if you have data, it could provide some clue as to GW conditions at site." and sent another email: "P.S. to my last email, you're right that we discussed GW sampling in June and agreed GW sampling is not possible because wells are destroyed (your item #3 below). Please let me know when you think it might be possible to begin installing some perimeter wells to do follow-up GW monitoring - can this be done once excavation, dewatering, and sidewalk construction are completed, or will it have to wait until site re-development (i.e., new building) is fully complete?" Bill wrote back: "Wells will not be able to be installed until after development likely - utilities have been moved and sidewalk will be closed until then, and there are site trailers on sidewalks etc..." Then Bill sent another email with attachments, stating: "I want us all to be clear on all of this. DEP did require installation of vapor barrier and sub-slab depressurization system for building due to e-designation and Langan did previously submit plans to DEP which were approved for developer. I thought you were referring to RAP for Soil and GW issues only. Documents are attached for SSDS and waterproofing. I will forward anything else I can find from Langan regarding this. As for de-watering - I have not seen any data but I can and will request this from Impact - which I will receive eventually anyways in their discharge report/documentation."

**FORMER EXXON STATION (Continued)**

**S107415886**

Attachments (in eDocs) were specs, product info & site plans for waterproofing, vapor barrier and sub-slab depressurization system, plus NYCDEP approval letter of same, and DEP Notice To Proceed letter. I sent another email to Bill: "I had a chance to look more closely at post-excavation soil data (I didn't initially see there were multiple sheets to Excel file), and noticed there was one sample that had some significant exceedances of TAGM 4046 recommended cleanup objectives - GRID 13 Eastbase 12'-13' sample. Is excavation still open in area where this sample was collected, and would it be feasible to dig a little more soil out in this area?" - J. Kolleeny 01/03/08: Received email reply from Bill Simmons of ECS to my 1/2/08 query about excavating add'l contam soil: "Could not dig any further or deeper in that area. Abutting building structure began to be compromised with sidewall cave-ins exposing foundation which was original brick, and GW was not helping - they had to backfill immediately after sample was collected and ORC was added. This is only very small area (less than 5x5 feet) of this sample that exceeded and we dosed it with ORC extremely well." Also, received emails from Bill with attached documents: an 8/1/07 letter rpt from Langan Engrg to NYCDEP, modifying and providing details of their earlier conceptual proposal for waterproofing/vapor barrier system for planned site building, and 12/6/06 letter rpt by Langan to DEP, serving as an addendum to ECS's April '06 RAP; Langan's addendum provides info regarding: (1) capping open areas of site with clean fill/top soil, (2) providing construction health & safety plan, (3) vapor barrier, and (4) active sub-slab venting system. Both Langan documents are in eDocs. I sent email to Bill Simmons: "Thanks for providing these documents. I'm satisfied that remediation of subsurf petroleum contam at site is being performed in accordance with April '06 Remedial Action Plan by ECS which I reviewed & approved. Issues addressed in various documents Langan submitted to NYCDEP, including waterproof membrane, vapor barrier, sub-slab depressuriz'n system, and capping of open areas of site with 2 feet of certified clean fill material, are issues that I do get involved with at some of my sites. In most of those cases, I also request involvement of NYS Dept. of Health in reviewing & commenting on such plans. However, in this case, since NYCDEP is taking such an active oversight role because of property's e-designation, I do not feel need to be directly involved in reviewing and evaluating various engineering controls and vapor mitigation measures planned for site, or to request involvement of NYSDOH. Nevertheless, I would appreciate being copied on correspondence regarding such issues between Langan and DEP." - J. Kolleeny 03/16/09: Sent email to Bill Simmons of ECS: "I don't think I've heard anything about this site in long while. Can you provide an update?" Bill sent reply: "No envt'l or construction work has been done at Site since Oct.'08, we think developer has some financial issue which has put project on hold. We have occasionally tried to contact them for their plans, but no response yet. However, here is an envt'l RAP summary so far: We believe that all petroleum-impacted soil excavation has been completed that has generated approx 5,555 tons of soil for off-site recycling -unless developer plans to excavate other areas of site in future and it is discovered - but remaining plans we know of now only consist of removal of top 4 feet of urban fill to be replaced. > 100 post-excavation soils samples were collected from completed excavation areas for lab analysis. ORC (Chemical treatment) in base limits of soil excavation has also been completed. Over 10 million gals of GW were de-watered, treated and

**FORMER EXXON STATION (Continued)**

**S107415886**

discharged until system was shut down last week of Aug.'08. GW samples collected just prior to shutting down system on 8/27/08 from INFLUENT before bag filters had 6 VOCs at low levels but still above DEC standards (7 ppb toluene, 6.7 ppb ethylbenzene, 30 ppb xylenes, 11.3 ppb MtBE, 11.5 ppb 1,2,4-Trimethylbenzene, and 5.2 ppb 1,3,5-Trimethylbenzene) and sample collected after bag filters only had MtBE at 10.6 ppb (DEC standard of 10 ppb). Moisture/chemical barrier was installed in basement part of bldg, which has been constructed and formed to grade. Once development resumes, we will know timetable for install'n of off-site post-construction GW monitoring wells and sampling program. Let me know if you have any other questions." I sent back reply: "Thanks for update. Will rpt be coming at some point summarizing work done to date, with end-pt soil sample results, details on amount of ORC applied to excavation, and recommendations for install'n of wells and post-remedial GW monitoring?" - J. Kolleeny 09/10/09: On 9/9/09, received email from Bill Simmons of ECS: "There is some action with this site. Developers are working on selling assets to new developer and they want to push forward install'n of wells in sidewalks soon, before any more work begins in future. To do so, driller (Zebra) need letter to DOT from NYSDEC authorizing access under Spill # to do this work in sidewalks of 10th Ave and 23rd Ave [Street]. Can you provide one asap? We want to try and install 2 wells in each sidewalk (total of 4) but this will be determined once utilities are located and access is available to those locations. We will also install 2 on-site along downgradient western boundary since building is not up yet." I sent sidewalk opening permit request letter (in eDocs) to Bill, cc to Chris Johnson of Cumberland Farms. - J. Kolleeny 12/14/09: Reviewed Remedial Action Plan Closure Rpt by ECS, dated 11/4/09 (parts in eDocs). Rpt summarizes all site invest & remed performed (including excavation of > 5,700 tons of soil, dewatering, and application of RegenOx & ORC Advanced), and presents results of post-remed soil & GW sampling that shows residual contaminant in several areas of site. Based on substantial remedial work done to remove contaminant materials from site and fact that post-remed samples show decreased levels of contaminant compared with pre-remed samples, ECS recommended spill closure. I sent letter (in eDocs) to Chris Johnson of CFI, cc to Bill Simmons of ECS, saying DEC cannot close spill yet, because of need to monitor residual contaminant. I asked for quarterly GW monitoring, install'n of one new well NW of most contaminant well (MW-2) when site conditions permit, surveying of wells to determine up-to-date GW flow direction, submission of quarterly monitoring reports. Also said if contaminant levels stay elevated, site may need additional remediation. Changed priority ranking to P2, since site is in monitoring phase. - J. Kolleeny 02/09/10: Reviewed Groundwater Monitoring Report & Work Plan by ECS, dated 2/5/10 (in eDocs). Rpt presents results of Jan. 2010 GW sampling of 6 on-site wells and work plan for install'n of additional well as I requested in 12/14/09 letter. GW results show total VOCs in worst well MW-2 decreased from 2,434 ug/L in Oct.'09 to 99 ug/L in Jan. 2010; 2nd worst well "City MW-6" had 522 ug/L in Jan. 2010, down slightly from 550 ug/L tVOCs in Oct.'09. Work plan proposes new well in sidewalk along W. 23rd St. (west of SW corner of W. 23rd St. & 10th Ave.). I sent approval letter (in eDocs) to Chris Johnson of CFI, cc to Bill Simmons of ECS, saying new and existing wells should be surveyed to determine up-to-date GW flow direction. - J. Kolleeny 02/10/10: Received email from Bill Simmons of ECS: "New wrinkle to discuss. DOT plans to install an elevator to High Tran that abuts

**FORMER EXXON STATION (Continued)**

**S107415886**

Site to west. Elevator will be installed in sidewalk along West 23rd St in NW portion of sidewalk. Attached is their plan [in eDocs] depicting where they plan on digging etc., which is to start week of Feb. 22. Our monitoring well MW-1 and their well CITY-MW-6 are in this area and will likely be destroyed but I'll find out next week. Newly proposed well MW-7 is east of this area and should be ok. I'll be meeting with them next week to discuss their plan including likelihood that if they dig to 15'-17' they will find petroleum-impacted soil since we only excavated up to these edges. We will plan on being there to cooperate management of this and collect closure samples. My question is this: We have to survey wells to get GW flow. These are options: 1. Survey all 6 wells before this works starts and use gauging data to get flow direction now. However, 2 wells will be destroyed in next few weeks so we will not have any more data from them and do not know if we will be able to install any replacement wells in this area. 2. Wait until this work is done, then install MW-7 and survey 5 existing wells. Maybe we will know once elevator project is done if any replacement wells can go in this zone and we could install it and survey it also. Please advise. I wrote back: "I prefer option 2 - wait until DOT finishes installing elevator, then install MW-7 and see if it's possible to install one replacement well for 2 destroyed wells (since well "CITY-MW-6" had moderately elevated contamination), and survey wells at that point. Thanks for keeping me posted." - J. Kolleeny 05/03/10: Reviewed GW Mon Update Rpt dated 4/28/10, by ECS (in eDocs). Rpt summarizes March 2010 post-remediation GW sampling event. Worst well, MW-2, had total VOCs of 558.5 ug/L, up from 99 ug/L in Jan. 2010 (but down from 2,395 ug/L in Oct.'09). Well City MW-6 had tVOCs of 39 ug/L, down from 349 ug/L in Jan. 2010; well MW-3 had 67 ug/L tVOCs, about same as 59 ug/L in Jan. 2010. Wells MW-1, MW-4 & MW-5 were ND for VOCs. Rpt states that DOT sidewalk elevator project is anticipated to start in May 2010. Future Work section of rpt states that ECS will notify DEC when DOT provides start date for elevator work, and will be on-site during soil excavation to collect post-ex samples; once DOT work is complete, ECS will install well I requested near NE corner of W. 23rd St & 10th Ave., and if applicable, replacement well in elevator area. These events and data from next qtrly GW event will be in next rpt. - JK 06/15/10: On 6/14/10, received email from Bill Simmons of ECS: "An update: Due to ongoing delay on start of elevator sidewalk project ("any day now" for past 3 months) we plan to install proposed monitoring well MW-7 in sidewalk on June 16. On May 27, 2010 a construction crew discovered an abandoned 250 gal oil tank during pile cap excavation on SW portion of Site. Tank was partly filled with soil & concrete, was removed from ground and is currently stored at site covered in plastic tarp; it will be removed soon, as access to this area is now blocked. We collected soil samples from beneath tank that field-screened at Zero and submitted some samples for lab analysis. This will be summarized in next rpt." On 6/15/10 I replied: "Thanks for update, glad you're proceeding with install'n of MW-7, and thanks for taking necessary steps with discovered 250-gallon tank. Keep me posted on progress." - JK 11/10/10: Reviewed GW Mon Update Rpt by ECS, dated 8/18/10, rcvd at DEC on 9/7/10 (in eDocs). Rpt summarizes install'n of add'l well MW-7 in sidewalk along W. 23rd St. north of MW-2, as requested by DEC, in June 2010, and sampling of wells MW-1, MW-2, MW-3, CITY MW-6 and MW-7, also in June 2010. Worst well was CITY MW-6, with 660 ug/L total VOCs. In June & July 2010, 483 tons of soil was excavated/removed from site for

construction. Rpt states, for Future Work, that DEC will be notified when High Line Park elevator sidewalk construction project will start; once project is completed, need for replacement wells will be evaluated. - JK 12/10/10: Sent email to Bill Simmons of ECS: "Any update on Highline Park elevator constructn project? Has any GW monitoring been performed since June 2010 event, which was summarized in update rpt dated 8/18/10?" Bill wrote back: "City began elevator project ~Aug. 23 by installing shoring in 44'x20' area in sidewalk. Between then and Sept. 7 they removed soil - 22 trucks, which equates to somewhere around 550-650 tons or so removed from surface to 17 ft deep. They dewatered and treated via carbon from around Sept. 7 through sometime around end of Oct. or early Nov., reportedly at around at least 8,500/GPD. June 2010 GW sampling event was last. All site wells have been destroyed, even wells in east sidewalk along 10th Ave. Building is going up and taking up every inch of space they have to street edges. We were on-site during portions of this work but no post-ex soil samples could be collected due to shoring walls and base at 17' was all mud. We are trying to get any soil disposal manifests and dewatering backup, but I can't promise. I will at least try to get specifics #'s on any of tonnage and gallons if I can." I sent back response: "Thanks for update. Do you know if City did any sampling of untreated and/or treated dewatering water, and if so, if it's possible to get hold of any of sampling results?" He wrote back: "That is what we are looking to get. They told us prior to installing dewatering pump and setting up system that they were planning on collecting an influent untreated sample and they were discharging to sewer so they must have been sampling that according to whatever permit they had - but they have not provided us any info. I will try again and let you know - they are very evasive." - JK

Remarks:

Caller reports removing five 4000 gallon tanks. There is contamination at the site. Caller reports no holes in the tanks. Cumberland Farms will be contacting a company for cleanup. Contractor on the site removing the tanks is: Tyree Orginazation Roland Fisher 631.300.6753.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department

DEC Remarks: Saccacio - According to Ed Malone, the guage on burner broke. Oil went into sump pit but the water level in the pit never got low enough to pump any of the product. He said he checked the check valves of the sump pump line and they were clean. Healso said that the boiler room was cleaned by his crew. They vac ed the free product and washed the rest of the boiler room w/ Bio-Solve. Spill will be closed pending a site visit.

Remark: APPROX 100 GAL SPILLED WHICH HAS BEEN CONTAINED IN THE BOILER ROOM-SPILL CREW ON SITE FOR CLEAN UP.

DEC Memo:

Rec'd report of investigation, will review it shortly.(sr) 10/27/08  
The site had a 5,000 gal UST closed in place in 1990. Petroleum like substance was found during a geotechnical investigation in september 2008. Sample results showed the characteristics of diesel fuel and No.2 fuel oils with an estimated age of 19.8. Langan proposed for delineation of contamination via ten soil borings and four temporary monitoring wells installation on site. The plan is approved verbally to Langan(Sue Bianchetti).Phase I and Work Plan in file cabinet.(sr) 01/12/09 Rec'd investigation summary report prepared by Langan Engineering. The site is presently occupied by a four story building.A 5,000 gallon UST was closed in place in 1990.A total of 18 soil borings were installed at the site.Ground water was encountered at 6-7 ft bgs.Six ground water samples were taken from seven of the wells.VOCs were not detected in soil/ground water samples. PAHs were detected in soil and ground water. A free petroleum product sample was collected from EB-4/GW-3.Results of the finger print analysis of the free product from EB-4/GW-3 confirms that a spill of fuel oil exists in that area.EB-4/GW-3 is located directly downgradient and adjacent to the test pit that contained oil during the original geotechnical study.Though analyticals were below applicable standards for soil samples, petroleum odors and/or staining were noted in the soil samples from few borings.Free product was encountered in five wells.Langan recommends that a RAP and CHASP be prepared to address proposed remediation work at the site.(sr) 05/07/09 Spoke with Susan Bianchetti of Langan Engineering today. RAP has been prepared, currently under review by the client,will be forwarded to DEC in two weeks for approval.(sr) 05/27/10 Hydro Tech performed site assessment. GPR survey identified one anomaly to the east of the boiler room.Free product plume was identified to the southwestern portion of the site. Four monitoring wells(MW-2 to MW-5) contained free product.Product thickness ranged from 0.01 ft to 0.26 ft.No dissolve VOCs or SVOCs were detected in ground water samples. Two test pits were installed at the site to confirm the anomaly. No UST or pipings were found in the test pit.No petroleum related contamination identified within the test pit.Ten soil probes were installed at the site.Five of the soil samples were converted into monitoring wells. Site specific ground water flow direction was determined to be toward west.MWs containing free product were not sampled.No free product found in MW-1.Enhanced Fluid Recovery(EFR) on a weekly basis is proposed.(sr) 08/10/10 EFR event was conducted on July 23, 2010. Eight monitoring wells on site.No free product was observed in MW-1, MW-6, MW-7 & MW-8. Free product observed in MW-2, MW-3,MW-4 and MW-5.(sr) 01/20/11 Vacuum recovery of free product was

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" 1/13/2000 Rep from Whitman Companies called requesting a "partial no further action required" letter from the DEC. In the loading dock area (site of former gas tanks) they removed 500 tons of soil, Installed ORC powder in open pit area, installed a pipe system for future potential SVE system, and are now ready to put back clean fill and install a new concrete floor In the rear area (heating oil tank area) - soil was removed, endpoints taken (Whitman says a few soil samples just over limits and well sample found to be clean) Sangesland requested a letter which says: 1)no further action on rear heating oil tank area and 2)no more soil to be removed from the loading dock gasoline contamination area. 1/19/2000 Site apparently was NOT clean... Whitman now requests well testing every 6 months and

report submittals once per year. Sangesland sent a letter to Whitman. It says no more digging required, but DEC requires: Testing of wells #2, 3, 4, & 5 every 6 months with a submittal to this office due April and Oct of each year. Next round of sampling will include both BTEX and MTBE. If MTBE is very low or ND, then only BTEX will be required. This frequency of sampling will be required until a close out of the site is approved. In order for a final close out to be approved, a site close out report will be prepared including a full round of GW testing for all STARS and MTBE. 2/22/2000 DEC received a monitoring report. MW #3 shows product in the well. 9/13/2004 Sangesland spoke with Todd Gerber of Whitman companies. Per the Whitman site report dated August 1, 2003 There are 3 wells with exceedences (history of free product in 2002). Sangesland sent a letter requesting one more round of sampling of 3 wells. If the wells have no free product and the desolved phase material is low, the DEC will consider a closeout of this case. 3/21/2006 Sangesland received another closure request from Whitman Companies. GW contamination level in one of the wells is still 2,233 ppb for BTEX. Other wells are also above TAGM. This is a persistant long term problem that needs to be addressed by the DEC Remediation Group. Spill Case has been transferred from Sangesland to Koon Tang for reassignment. 5/16/06 - Spoke to Mr. Todd Gerber, asked him to submit a sensitive receptors survey before closure can be considered. There is still residual BTEX in GW at about 2 ppm range. - KST 6/16/06 - received Sensitive Receptor Survey. No sensitive receptor will be likely impacted by the residual dissolved phase VOCs. SOURCE removal was implemented and most contaminated soil has been excavated. Over 2 to 3 years of GW samples were collected on a quarterly and semiannual basis. GW conatmination has been decreasing over the 8 rounds of sampling events. Spill closed - KST

Remarks:

CALLER STATES THAT SOIL CONTAMINATION WAS FOUND DURING TESTING IN REFERENCE TO A SHARE TRANSACTION. ENVIRONMENTAL COMPANY IS REMEDIATING THE PROBLEM.

insulatum to prevent environmental impact. No other cleanup actions taken at this time. Pending Crew availability Cleanup set for 15:00 on 10/10. Lab Sequence Number: 04-08211-001 - PCBs < 1 ppm 10/10/04 20:45 J.Velez#27098, Underground supervisor notified the control center on 10/10/04 at 20:30hrs. that the cleanup in M43095 was completed. This was a final cleanup. There were three barrels of solids removed and approx.150 gallons of water and oil mixed removed via tanker from M43095. The method used to clean was double washed with slix. The yellow environmental tag #41241 was removed from M43095. The source of the spill, a blown 3w1w joint has not been repaired yet, but J.Velez#27098 reports that the joint is empty and he stuffed it with rags and wrapped it up in plastic and taped it until the joint can be removed and replaced. The cleanup was completed on 10/10/04 at 20:20hrs. Lab Sequence Number: 04-08212-001 - analysis indicates the presence of a lubricating grease.

Remarks: INSULATUM - PETROLIUM SUBSTANCE. ALL CONTAINED TO THE MANHOLE. e2MIS # 155771.

DEC Memo: e2mis no 154483 Valenzuela saw that there was 3 qts of an unknown brown substance mixed with 50 gallons of water. He states that this is in front of an Auto repair garage. He will take 4 samples 1-for pcb,1-for ID & 1-for flash point & for ethylene glychol (antifreeze). The cleanup will be pending lab results. Lab Sequence Number: 04-05780-001: Analysis indicates the presence of a substance similar to a lubricating oil. Lab Sequence Number: 04-05779-001: PCBs < 1 ppm Lab Sequence Number: 04-05792-001: Flash Point, PMCC > 140 deg F Lab Sequence Number: 04-05793-001: Ethylene Glycol 1080 ppm JULY 29, 2004 @08:48 Doug from Clean Harbors completed sb 33073. They had a concern about the service box. The service box sits in front of a taxi stand. When taxis pull up, they fill their vehicles up with anti-freeze and spills it onto the ground,in which, seeps back into the service box. Clean harbors doesn't want us to think,that they half cleaned the service box. Clean -up time 08:30.

Remarks: SAMPLES HAVE BEEN TAKEN. REF #154483. POSSIBLE THIRD PARTY SPILL. Updated 7/23/04 by Kevin: Tests came back and is determined to be lubricating oil.

DEC Memo: 7/18/05 refered to Ray Sojaka from Hess. Scott Reichinger 7/22/05  
Received fax from Ray Sojaka. Called back and asked for receipt of  
disposal of soil, copy of work order. Scott Reichinger Prior to Sept,  
2004 data translation this spill Lead\_DEC Field was "DEMEO" Actual  
spill was much larger. Total failure of a 7500 gal tank in the  
building basement DeMeo responded Transferred to CO ("screichi") - no  
notes 11/16/06 - Austin - Reassigned to Rahman for followup/review -  
end 10/07/09 CSL was sent to (via facsimile also) ONBAR LLC C/O ABS  
Partners Real Estate, LLC 200 Park Avenue South, 10th Floor New York,  
NY 10003 Attn: Viorica R Lazaroaie(sr) 10/26/09 Rec'd letter response  
from ACE-ATLAS that indicates an inspection was performed and oil  
staining observed in the previous tank room, which will be  
cleaned. Soil borings will be performed and a report will follow with  
investigation findings.(sr) 11/13/09 Rec'd closure request. Rite Way  
Tank Maintenance cleaned up the oil stain from the old tank room. No  
borings were performed in the tank room as the floor concrete was  
about 10" thick. Soil sample was taken from boiler room, outside of  
the tank room. No subsurface contamination found above TAGM. Case  
closed.(sr)  
Remarks: cleanup pending. a contractor will do the cleanup. customer service  
has been notified to contact someone.

possible third party since the service box is directly in front of a vehicle service garage. According to Mr. Chintalan cars from the garage are parked adjacent to the vented service box cover. There are burnouts in the structure, CO (carbon monoxide) is present, but there is no visible smoke. Cleanup is pending lab results. Lab Sequence Number: 04-06136-001 - Analysis indicates the presence of a substance similar to a lubricating oil. Lab Sequence Number: 04-06135-001 - PCBs < 1 ppm Lab Sequence Number: 04-06137-001 - Ethylene Glycol 2340 ppm Update: 8/25/04 @ 16:55 hrs. Manhattan Environmental Desk made arrangements with Clean Harbors to clean this service box on Friday 8/27/04 at 08:00 hrs. F.Romano reports that at 13:00 hrs that clean up has been complete by Clean Harbors Slix was used and was washed twice, spill tag remains E/V desk will make arrangements for removal of same. Update: Aug 27,2004 @ 17:59 hrs, P.Sinclair 12747,Flush dept was at this location to remove yelow spill tag and reports that at this time that tag # 01041 is not in this manhole at this time. Update: 9/01/04 The following is details of the cleanup taken from an e-mail dated 9/1/04 @ 09:49 hrs. from Doug Hoffman of Clean Harbors to R. Pellegrino: "On Friday August 27, 2004h Clean Harbors Environmental Services Inc cleaned service box 33073, Incident #154685. 1. The clean up was completed at 22:15 on August 27, 2004. 2. No liquid was removed from the structure 3. 1 Cubic yard of antifreeze and oil debris (solid) was removed from the structure into a Cusco 4. The structure as double washed and rinsed and scrubbed clean using brushes 5. 5 gallons of Citra-clean was used in cleaning the structure 6. The site was cleaned up to a onsite Con Ed representative approval 7. The site was in front of a taxi garage and during the cleanup many taxis filled their coolant system spilling antifreeze on the ground causing it to run into the service box. they beleive the spill may have come from a vehicle that was parked over the cover.they think the material spilled was antifreeze.no smoke,fire,sewers,or waterways affected.clean up is pending lab results

 DEC Memo: 02/21/06-Hiralkumar Patel. From Property Shark, owner of the property: Filiberto Properties, Inc. 40-54 61st Street Queens NY 11377 From Reverse Phone Directory, name of property: CC Auto Diagnostic Center 198 11th Ave Manhattan, NY 10011 (212) 352-2211 Tried Mohamed's number, but no body is answering and there is no voicemail settings. Called at CC Auto diagnostic center, spoke with Mr. Mike, manager at property. as per him, there is no UST at location. 02/23/06-Hirakumar Patel. Spoke with Mohamed at Fleming Lee Shue. the number on report for Mohamed was wrong, correct number is 212-675-3225 and FAX is (212) 675-3224. as per Mohamed, they are doing soil investigation for E-Designated site. during investigation,

they found 2 location on eastern side of property, which is up gradient, are contaminated. they checked on down side on west, but there is no contamination. Mohamed has taken out samples for lab analysis on 19th Feb. and waiting to get results. once he get results, he will send us Investigation Report with site plan, sampling locations etc. by 10th March 2006. As per Mohamed, this property doesn't have tank, but the property on east side of location has UST, whose fill port and vent pipe are 10-15 ft away from this property. he thinks that this contamination is from next door property. Next door property address is 552 West 24th Street. From Property Shark, owner of next door property: 552 West 24th. Associates Inc., B J Auto Master Incorporated 552 West 24th Street New York NY 10011 From the Photographs on Property Shark, phone number at property is (212) 929-0077. Spoke with Joe Nasair, property manager at next door property. this property has 150 gal gasoline tank. 4/4/06- DEC Piper spoke w/ mohamed at FL&S. As per him, he will send a report in a week or so. Afterwards, if it is determined that contamination is from neighboring prop. then a CSL letter will be issued. 4/21/06- DEC Piper spoke w/ Mohamed after reviewing RIP. As per report there are slight exceedances of Benzene and SVOCs in Soil as well as elevated levels of metals in both soil and gw. There are plans to construct a building though a basement has not been determined. If a basement is to be planned, the entire site will be excavated, if not select areas will be remediated. 6/29-06- DEC Pipereview RAWP. As per report, they will excavate to gw the NW area where soil contamination was present. The other area of the site will be excavated 2' bgs for new foundation, The excavation will be left open to ensure free phase product does not seep into excavation, If not ORC will be placed on gw interface and a vapor barrier will be installed. Afterwards 2 monitoring wells downgradient on sidewalk will be installed and will be sampled/ monitored on a quarterly basis for water quality for two years. 9/11/06 - Site reassigned from Piper to J.Kann - J.Kann 2/22/07 - J.Kann - contacted Mohamed Ahmed (212-675-3225) and requested update. He said that piles are being driven at the site now, and that ground work will commence in April (this is when contaminated soils will be removed and ORC applied. He will provide me at least one week's notice prior to remedial work commencing. 8/28/07 - J.Kann - recved Remedial Action Report from Fleming Lee Shue. Spoke with Mohamed Ahmed and told him that he was supposed to contact me when work was going to commence and that I did not receive notice. He said that it was his mistake. The report is under review. 3/17/08 - J.Kann - spoke with Mohamed in January 2008 and he informed me that monitoring wells will be installed on February 5, 2008. He emailed me in October 2007 with a revised figure indicating the location of monitoring wells. The locations were acceptable. The following email was sent today "The Department has reviewed your Remedial Action Report (RAR) prepared for the referenced site and dated August 22, 2007. The Department was not informed when excavation work was being performed at the site and was therefore not able to observe such activities. When performing any investigative/remedial work the DEC Lead must be given a minimum of 72 hours notice. Results of the post-excavation sampling show minor VOC exceedances. It is the Department's understanding that the building was constructed prior to the submittal of the RAR to the DEC. The report states that the building was constructed with an "active sub-slab depressurization system" and a vapor barrier. However, documentation supporting the SSDS was not included in the

report. Please clarify this statement and/or submit documents showing where the SSDS was installed, including as built plans. The locations of the proposed monitoring wells are acceptable. The Department was notified prior to their installation and it is our understanding that well installation was completed on February 5, 2008. Tables included in the RAR referenced the TAGM 4046 RSCOs. The numbers that should be referenced are Consolidated TAGM 4046 and STARS and can be found at <http://www.dec.ny.gov/regulations/2390.html> Please resubmit the tables." 5/14/09: J.Kann - Spill Closure request received on March 20, 2009 and under review. 8/21/09: J.Kann - Closure Report reviewed. Quarterly sampling show three rounds of minimal exceedence of benzene and MTBE in upgradient well only. Groundwater not used for drinking. NFA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL" JOE LOCKWOOD AT SITE WANTS CALL BACK TO DISCUSS NEXT MOVE. HE WANTS TO CONTINUE WORKING. PLEASE CALL HIM AT SITE 212 330-4909. The contamination was reportedly discovered while excavating the piping for upgrading of PBS piping. DEC (sigona) spoke with Joe Lockwood several times regarding the cleanup. Requested that Apex collect soil samples every 25-50 feet along the piping system, and if possible install groundwater monitoring wells to determine the actual extent of contamination at the site. DEC (Sigona) called Joe Lockwood for an update on 5/7/99, left message. DEC (Sigona) inspected May 20th, 1999 at 2:30 P.M. met on-site w/Richard Papesca, USPS & John Hornak, Allstate Power Vac Replacing all 4K UST 10 years old w/new double wall FRP, with leak detection & new pipes. Cleaned all vaults pea gravel was removed and disposed. They will install new pump run outside concrete vault. Installing 3-4" MW's along pipe run outside vault. Installing new concrete pad. Area above tanks, piping and island under large canopy - roof. Originally, plan was to upgrade piping. Found the tanks were 10 years old, but did not meet all of the standards, decided to replace tanks. DEC Sigona spoke to Nick DeCarlo (212)330-3107 USPS Environmental Compliance, 421 8th Avenue, NY,NY 10199 Rm 5013 on August 28, 2001, indicated that MWs were installed in June 2001, and results of groundwater testing would be submitted to DEC with recommendations for closure of spill. On Sept 20, 2001, DEC Sigona received report from Apex Environmental, dated Sept 17, 2001. 4/12/04-Vought-Spill transferred from Sigona to Rommel as per Rommel. 9/16/2005 - Jacob- Base on report from Apex environmental, the depth to groundwater was measured using an electronic water level indicator. Depth for groundwater was 7.23'for MW-1, 8.72'for MW-2, and 8.56'for MW-3.Result for water analysis are on file.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008  
Waste name: LEAD

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005  
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility Has Received Notices of Violations:

Regulation violated: FR - 40 cfr 280  
Area of violation: Generators - General  
Date violation determined: 09/15/1999  
Date achieved compliance: 09/15/1999  
Violation lead agency: EPA  
Enforcement action: Not reported  
Enforcement action date: Not reported  
Enf. disposition status: Not reported  
Enf. disp. status date: Not reported

**FINDS:**

Registry ID: 110006517929

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Remarks: individuals. Sawyer will perform site visit. 11/06/03 1403 Hrs - Sawyer - Visited the site on the above date and witness the secondary containment of the hydraulic lifts. Each hydraulic lift contains approximately 110 gallons of hydraulic oil. John Shemack of US Postal Vehicle Maintenance showed me the ruptured lifts, the secondary containment and the lock out- tag out area to make sure the lift could not be use until everything is repaired. Cleanup was done in house. Closed.  
 A HYDRAULIC TO A VEHICLE LIFT RUPTURED SPILLING OIL INTO THE SECONDARY CEMENT CONTAINMENT AREA - CLEAN UP HAS NOT BEEN STARTED YET

DEC Memo: 01/20/09- Zhune spoke to Ian Johnson (201) 951-6440. He said spill went to a 11" trench. The trench has sand. Broke side Environmental is coming thursday to remove the contamination. soil samples will be taking. 03/34/09- Zhune. Lagan Engineering & Environmental Services Inc. faxed the letter report enclosing photographs and soil disposal manifest. Lagan confirm that remediation spill in phase 2 and phase 3 trench was completed in accordance with NYSDEC requirements. The cleanedup of the phase 2 was completed on January 23,2009 and the phase 3 trench was completed on February 3, 2009. spill Closed.

Remarks: Caller states a vehicle lift failure caused oil to go into a concrete trench. Cleanup will be taking place. No resources affected.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Facility is not located on Indian land. Additional information is not known.  
Classification: Conditionally Exempt Small Quantity Generator  
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name: JANNOCK LTD  
Owner/operator address: 40 KING ST W  
TORONTO ONTARIO M5H322, NY 99999  
Owner/operator country: US  
Owner/operator telephone: (416) 364-5911  
Legal status: Private  
Owner/Operator Type: Operator  
Owner/Op start date: Not reported  
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is

used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Only soil samples collected. Site appears to be contaminated with gasoline (BTEX & MTBE) from a neighboring gas station. Groundwater is approx 4ft deep. This building does NOT have any petroleum tanks. Owner is trying to convert the space into an art gallery. Gallery owner will not come into the space until the problem is solved Soil borings were done through the floor of a building. Some BTEX and MTBE was found in the borings. Consultant plans on doing additional soil borings & groundwater testing (4 ft to GW) Environmental Enigneer has been hired to work on the project: Nicholas Canonico - Nova Consulting 516-352-3233 266 Jericho Tpk. Floral Park NY 11001 cell 516-244-4069 Nearest gasoline source appears to be a former gas station on the corner located on a lot with the following addresses: 285, 287, 289, 291 & 293 Tenth Ave. There are NO PBS permits for any of these addresses. There is an open spill at 291 10th Ave - #8701549 - DEC contact Joe Sun. - Sangesland 10/22/04 Rommel, received call from Nick, location formerly used for cab storage and maintenance. Aboveground Waste oil tank formerly on site. Additional investigation

DEC Memo: 02/17/09-Hiralkumar Patel. spoke with Ms. Umana (at 7:15 PM on 02/16/09). Petro service man went for routiune service at the site and noticed stain on surface near foundation wall. no active leak observed. suspecting leak from fill line. 02/19/08-Hiralkumar Patel. visited site. met Nancy Weper (212-675-5862), tenant who occupies first floor and basement. tank is located in sub-basement. Ms. Weper complained about petroleum odors from sub-basement. inspected sub-basement. found no petroleum odors. found stain on foundation wall where fill line enters into sub-basement. no petroleum smell at stain also. no leak from tank. Ms. Weper mentioned that Petro guy smelled petroleum at stain on foundation wall. 02/20/09-Hiralkumar Patel. spoke with Ms. Weper (at 2:40 PM). Ms. Weper mentioned that Petro is at the site doing line repair. spoke with Prem Ramchandani, building owner. he mentioned that leak was found in fill line near foundation wall area and Petro is correcting problem. Mr. Ramchandani doesn't know whether Petro replacing entire fill line or putting new fill line at different location. Mr. Ramchandani will ask Petro to call with answer.  DEC Memo: 10/7/05-Vought-As per DEC Sangesland (Duty Desk Officer). Great Bear Auto Repair. PBS records show two waste oil USTs (300 gal and 275-gallon). Caller says one of the auto repair bays (near the restroom) has a metal cement plate over a vault area which the owner has dumped waste oil illegally. The caller is associated with someone who was recently fired from his job at Great Bear. Sangesland forwarded this site to DLE for inspection/enforcement. ECO Michael Jordan assigned to the case. 11/7/05-Vought-DEC Austin received anonymous call on 11/4/05 from callers acquaintance who "worked for New York State" but would not leave name or contact info but wanted

an update on the spill. Vought called ECO Jordan and spoke to him and he will perform site visit today and contact Vought with results. 11/17/2005 Sangesland - anonymous caller called again asking for an update on the spill case. 12/1/05-Vought-Site visit performed including DEC Vought, DEC Piper as per DEC Austin. No metal cement plates or concrete patches in bay next to bathroom. Concrete is unbroken. As per onsite mechanic (David) as waste oil tank was located in bay 15 years ago and was abandoned in place. Vought spoke to tenant (Moe Givner 646-721-0642)and he has been tenant for only three years. As per Moe, owner's address is: 26-10 Corporation Park-It Management 250 West 26th Street New York, NY 10001 Vought spoke with DEC Austin and instructed to check on PBS registration of tank. PBS registration requirements effective as of 1/14/95 and since UST was abandoned 15 years ago it is not required to be registered. Further investigation not warranted as per DEC Austin due to anecdotal nature of information. Spill closed as per Austin.

Remarks: BURIED 200 GALLONS PLUS UNDER A DYNO METER, RIGHT SIDE OF PROPERTY NEAR BATHROOM: IT IS FLAMMABLE COVER IT WITH METAL AND THEN CEMENT:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 178260  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL" Formerly assigned to Tomasello 4/10/2002 - Someone from Penske Truck Leasing called looking for a closure letter on this site. Sangesland spoke to him. DeMeo was on duty for the day, therefore it was assigned to DeMeo. Sangesland suggested the rep from Penske should send a copy of the original closure report to DeMeo along with a request for closure. 8/29/03 TJD Work plan approved. 12/9/03 TJD Transferred Demeo >>> Rommel. 1/7/04 Reviewed 12/31/03 report from GES proposing 5 additional delineation wells. Spoke to Tony Dellaria, GES, verbally approved additional well locations with the addition of one well downgradient of MW4. Letter to Penske, Route 10, Green Hills, PO Box 7635 Redding PA 19603-7635 Rommel 3/8/04 Spoke to Debra Kaplan, GES. Wells are scheduled for 3/22/04. Rommel. >>> 05/13/04 10:46AM >>> Ms. Rommel, Attached please find the Subsurface Investigation Report for the above-referenced site. The hard copy of the report was sent to you today. If you have any questions, please feel free to call Anthony Dellaria at (631) 420-5095. Thank you. >>> Jennifer Rommel 05/13/04 03:43PM >>> DEC approves the work proposed in the Subsurface Investigation Report dated 5/13/04. At the end of the three months of HIT events, please submit an evaluation of the need for a permanent recovery system. 5/17/04 Received summary, 4 mw installed. Total 8 wells. Product in MW1 and MW4 - quarterly bailing recommended. Rommel 10/14/04 Reassigned from Rommel to Sun. 10/31/04 File Update by Sun: - On 11/22/04, Sun sent a letter to Richard Saut of Penske requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 12/10/04 for signing the Stipulation Agreement. The Stipulation Agreement was signed by Penske on 12/10/04 and implemented by the Department on 12/27/04. -On 12/21/04, Sun sent a letter to Richard Saut of Penske informing him

that the Department has approved the Remedial Action Plan (RAP)/HypeAir Work Plan prepared by his Consultant, Groundwater & Environmental Service (GES) for the subject site; specifically two in-situ chemical oxidation events at the site via "HypeAir" air and Hydrogen peroxide injection system. The Department requires that due to the proximity of existing utility corridors, temperature, pH, pressure, oxidation-redox potential (ORP), conductivity and dissolved oxygen (DO) shall be monitored on all the monitoring wells. Any potential accumulation of vapors during the injection activities shall be avoided. (Sun) 02/21/06: Sun received 4th Quarter 2005 Site Status Update Report. Review of this report is pending. (Sun) 02/27/06: The Department approves the GES's request for two (2) additional injection events to be completed in April and May 2006; specifically two in-situ chemical oxidation (Chem-Ox) events at the above referenced site utilizing a hydrogen peroxide, ozone, and persulfate injection system (HypeAir). (Sun) 07/23/07-Sun: On 07/23/07 the Department approves the GES's request for performing enhanced product recovery through the injection of surfactant into MW-5. The Department also approves a series of high intensity targeted (HIT) remediation events using high vacuum extraction at monitoring wells MW-3, MW-4, and MW-5 to reduce residual hydrocarbons impacts on-site for 8-hour events for approximately four (4) months. (Sun) 08/09/07-Sun: On 7/18/07 Joe Sun of DEC was informed by Kevin Heaphy of Parson Brinckerhoff America (PB) that the MTA will be using this site (Lot 60) and the adjacent Fed Ex lot for a mocking pit to build the initial shaft for Tunnel boring machine to be used for the No. 7 subway extension project. In general, the site is slated to be used as a staging area for the project. A meeting was held on 8/9/07 to discuss project among all the key parties, including DEC, MTA, NYCT, Developer, Parson Brinckerhoff (PB), Penske, property owner (Michael Silvermintz) and Penske's consultant, GES. The meeting concluded that PB will first review the GES's investigation and remediation reports and then will discuss with GES and MTA project team to assess if other viable remedial action plans (RAP) can be implemented to expedite the cleanup process. Any new proposed RAP will be submitted to DEC for review and approval. (Sun) 08/23/07-Sun: Sun received 2nd Quarter 2007 Site Status Update Report. Based on laboratory analytical results, a 64% reduction of dissolved benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations has been observed on and off-site since initiating hydrogen peroxide and ozone injections at the site. (Sun) 08/30/07: Sun received the following email from Heather Cloud of GES "Joe, Penske and GES submitted all historical documents to Kevin Heaphy for his review. He reviewed the documents and we had a follow up call with him and the MTA this past Monday (8/27). During the call, Kevin brought up a suggestion of relocating the wells off-site or installing remote access points in the sidewalk. As discussed at the NYSDEC meeting, we told Kevin that that locating the wells offsite was not an option, and installing remote access points in the sidewalk could not be sufficient for our liquid level measurements and groundwater sampling activities. Additionally, there is a high pressure gas main in the sidewalk, so we would not be able to drill safely in this area. They did not have any additional suggestions or ideas beyond relocating the wells. (Sun) Since they did not have any additional suggestions, it was decided that GES is going to proceed with our approved work plan. We are actually scheduled to conduct our surfactant injection on September 5 and the high vacuum extraction

events on the 6th and 7th. Once we get the data back from the first event, we will evaluate the effectiveness and move forward from there." (Sun) 11/19/07-Sun: Sun received the following email from Heather Cloud of GES, "Hi Joe, We conducted the Surfactant Injection at MW-5 on September 5, 2007 followed by a high vacuum extraction event on September 7, 2007 to remove and recover residual product at MW-5. Since conducting the injection event, we have not seen any product at MW-5. Groundwater data at MW-5 prior to the injection (July 3, 2007) was 489 ppb BTEX (144 ppb benzene). Following the injection (October 12, 2007), groundwater data at MW-5 was 87 ppb BTEX (66 ppb benzene). Since the injection event, we have conducted 2 high vacuum extraction events on MW-3 and MW-4. These events were completed in September and October. Between the 2 high vacuum extraction events, we have recovered 5 pounds of mass and 1,300 gallons of water. We were at the site today and are at the site tomorrow to complete our 3rd high vacuum extraction event on MW-3, MW-4, and MW-5. The 3rd QTR Site Status Update Report is currently being reviewed by the client, so you should have it shortly." (Sun) 02/15/08-Sun: DEc received the following email from Andrew Cullen of Penske, "All, After much review, we have come to the conclusion that we will make an attempt to meet the requirements of the contractor and complete the necessary remediation work required by the NY DEC on two Saturday's per month. However, I need all the parties to understand that our agreement specifically states we need 2 to 3 days per month to perform the necessary remediation. Limiting us to only two days per month may cause the remedial efforts to go past our original estimates. Moreover, MTA also agreed to reimburse Penske for "any premium costs associated with work that must be scheduled outside of normal working hours (i.e. Monday to Friday 8:00am to 5:00pm)". If at any time we find the contractor is not cooperating, our remedial efforts will require more than 2 days per month, or any invoices for premium costs or damage by the contractor are not paid in accordance with our agreement, we will alert the appropriate parties. I do not anticipate this happening, but given the events that have lead us to this point, I feel compelled to remind everyone of the terms and conditions of our agreement." (Sun) 03/04/08-Sun: Sun sent the following email to all the parties involved, "Penske may have to conduct remedial efforts more often than 2-3 days a month if project demands. The required frequency and nature of remedial efforts will depend on results of on-going remediation to be received in future. If current extraction method does not produce acceptable (to the NYSDEC) results, DEC reserves its rights to require Penske to undertake more aggressive remedial efforts. NYSDEC is not a party to any of the agreements between Penske and MTA, and reserves all rights under the existing Laws and Regulations." (Sun) 03/25/08-Sun: Sun received the 4th Quarter 2007 Site Status Update Report. (Sun) 07/03/08-Sun: Sun received from Heather Cloud of GES on the current site status: We are currently conducting quarterly groundwater monitoring and sampling. Our next groundwater sampling event is scheduled for this month. - Based upon the recent groundwater data, we are not seeing a reduction in the BTEX concentrations. See attached groundwater analytical tables. Therefore, the high vacuum extraction events don't appear to be overly effective at this time. We are currently evaluating alternate options to address the dissolved phase impacts. We are looking at potentially injecting sodium percarbonate or other potential oxidizers. The total BTEX concentrations are primarily comprised of benzene. We have seen great

success in reducing benzene levels with sodium percarbonate at other sites. Also, this type of technology is not intrusive at all. With the MTA project going on, we are limited with the technologies that we can go with. - The 1st QTR QMR is currently being reviewed by Penske. You should have this report within the next week or so. (Sun) 8/4/08 - Carlson: Case reassigned to Carlson. Reviewed 1st Quarterly 2008 report. Wells sampled on 1/3/08. Maximum BTEX concentration 5,425 ppb (MW3), maximum MTBE concentration 64 ppb (MW3). Report notes that VEFR is not effective. Sent letter requiring submission of a new RAP and additional delineation by 9/12/08. 9/11/08 - Carlson: Approved extension to 11/14/08 for submission of a new RAP. Scheduled site visit for 9/25/08 to discuss potential locations for an additional delineation well. 9/30/08 - Carlson: Performed site visit on 9/25/08. Met with Heather Cloud of GES, Richard Saut of Penske, Charles Stives of Liro Engineering, as well as representatives from MTA and NYCT. Five monitoring/remediation wells have been destroyed during recent activities. A location was identified for the installation of an additional monitoring well. RAP due 11/14/08. 10/6/08 - Carlson: Reviewed update report dated 9/23/08. Wells sampled on 4/26/08. Maximum BTEX concentration 3,537 ppb (MW3). They are pilot testing sodium percarbonate. 3/20/09 - Carlson: Reviewed Site Status Report dated 2/25/09. Delineation well discussed during 9/30/08 site visit was not installed. Destroyed wells were not replaced. Sodium percarbonate solution was injected into MW-1, MW-2, and MW-4 on 9/20/08. Wells were sampled on 10/25/08. Decreased concentrations were found in MW1 and MW2, but BTEX increased in MW4. Spoke to Heather Cloud at GES. She will submit workplan. Received Remediation and Delineation Work Plan dated 2/10/09. 4/16/09 - Carlson: Meeting held with Penske. Mark requested the addition of another boring. 4/23/09 - Carlson: Meeting held MTA. Access to most of the site not possible for 1 year because the TBM is in operation. Access to the sidewalk can be arranged. MTA will submit a construction timeline. 5/4/09 - Carlson: Received phone message from Sal McCabe - construction timeline will be submitted. 5/7/09: Received update report. Received email from Christopher Ward - mw5 has been located and will be abandoned (under future muck bin). 5/15/09 - Carlson: Received email. MW5 will be abandoned tomorrow. 7/1/09 - Carlson: Received cc of penske access request to sample wells on 7/25 7/2/09 - Carlson: Paul matthews of mta responded - requested sampling be delayed for one month. 7/2/09 - Carlson: I replied saying one month delay is ok. Construction timeline was not submitted as requested at the last meeting. 7/6/09 - Carlson: Received cc of penske access request to sample wells on 8/22/09. 9/18/09 - Carlson: Left voice message for Chris Ward to followup on case status. 11/5/09 - Carlson: Received cc of letter requesting access from MTA to sampling wells. Left voice message for Chris Ward to see if they were given access - need to get phone number for MTA contact Paul Matthews. 11/10/09 - Carlson: GES received access from MTA to sample wells. 2/12/2010: Received cc of letter from GES to MTA - access requested to sample wells on 2/20/2010. Spoke to Chris Ward. Update report will be submitted. 5/26/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010. 6/25/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010. Left message for MTA Philip McGrade to followup on status of construction. 6/29/10 - Carlson: Spoke to Paul Matthews at MTA (212-616-4462). TBM is still in operation 5 days/wk 24hr/day. No construction on weekends when GES samples wells. Remedial work on

Remarks: Saturdays would be very difficult due to access on site. Project completion scheduled for 2013. 7/27/2010 - Carlson: Meeting held with Penske on 7/27. NYSDEC to organize meeting with MTA to discuss access/remedial plan. 8/24/2010 - Carlson: Meeting held with MTA and Penske on 8/24. Penske to reinstall wells on a weekend. Wells to be covered with roadplates. Contractor will remove roadplates prior to remedial activity at the site. Penske/MTA/NYSDEC to perform site visit to confirm locations of new wells. 9/22/2010 - Carlson: Site meeting held to discuss well installation locations and procedures. GES will prepared updated site plan. 3-11-11. - Breen: Consultant, GES, sent in Site Status Update Report on CD today. Heather Cloud is Operations Manager. Sarken Dressler is the Staff Hydrogeologist. Report for 9610811 is on the same CD.  
CALLER RESPONDED TO ABOVE LOCATION TO REMOVE FUEL TANKS. UPON REMOVAL SOME SOIL CONTAMINATION DISCOVERED. TANKS REMOVED AND SOIL EXCAVATION IN PROGRESS. NO CALL BACK REQUESTED.

**FINDS:**

Registry ID: 110004496769

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DER Facility ID: 272412  
 DEC Memo: 11/30/05- DEC Piper/ Vought performed site inspection. As per adjacent neighbor, tank was overfilled and oil spilled onto soil and into his building. Upon inspection, no contaminated soil/ odors were observed. Minor spill.

Remarks: Oil co. made a delivery back in Jan. they threw sand on it and left it there. The material has run into the building next door, through the front door. It came out of the garden, down the steps and into the building.

Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number. 12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday. 1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested. 1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contact info with instructions to send/fax any files he had regarding this spill number. 1/19/05 - Obligado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week. 3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 and 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertinent information. 5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring investigation and collection of gw sample from below line where leak occurred. 5/16/06 - Obligado - Delivery confirmation on 5/13/06 6/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusats at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greatest contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw sampling points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethylbenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dillner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dillner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmation of Stip Agreement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting

**TIME WARNER CABLE (Continued)**

**U003074535**

with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks in front of 521 and 510 w. 21st street to do ground water sampling and gauging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanly, Jessica said I should expect a report by May 31 and UST excavation in June. 5/9/07 - Obligado - Received a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations. 5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map. 5/18/07 - Obligado - Received a progress reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street facillity by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report. 7/19/07 - Obligado - Reviewed documents entitled "Investigation Summary Report", dated February 27, 2007, "Update on CAP's Milestone and Monitoring Well Survey Report", dated June 11, 2007, and "Monitoring Well Survey and Tidal Study", dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007. 1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high

**TIME WARNER CABLE (Continued)**

**U003074535**

concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan. 7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner attorney), Tradewinds Contractors, and Abbas Family. During removal of USTs Brian Falvey visited the site for a PBS inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewalk. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any USt. From the 550 USt they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewalk of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for

gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : "We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday." 1/28/08 - Obligado - Email update from Woodel - "LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent "source zone" above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday." 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasoline UST excavation had MTBE above TAGM. The waste oil UST excavation indicated residual SVOCs and chromium typical of urban fill throughout the city. Test pits TP1 and TP2 were excavated and 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of the buildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4" diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx and 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of sampling will be completed March 10, 2008. Review 1Q08 Monitoring Report - 5 wells were gauged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summer of 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of RegenOx not yet apparent. Max MTBE at 48,000 ug/L.

According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningful data. SEnt letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: GUY ROBERTS  
Contact Phone: (646) 217-2441  
DEC Region: 2  
DER Facility ID: 301153  
DEC Memo: "Found old PBS for the site Five 550 gal gasoline UST's were closed/removed on 10/1/97 No other PBS at this address (sometimes a site has more than one address?) CSL sent to: Chelsea Operating Inc 521 West 21 Street New York, NY 10011 Attn: Guy Roberts 11.08.05 Sharif- David from Delta Environmental called to say he believes the high SVOC level in the soil is because of the former 550 gal UST's those were removed couple of years ago. He has the site assesment report and will send it to DEC. Remedial work might be needed depending on the level of contamination. 11/23/05 - David Greffenius, 914-765-8172 called. Working on this case, need a PM to work with. - KST 11/29/05 - Obligado - Spill transferred from Tang to Obligado. Called David Greffenius, left message. 11/29/05 - Obligado - Received phone call from Tanya (917)257-7707, tenant on second floor who just signed a lease on the garage on the first floor. Plans to do construction to turn the garage into an art gallery. 1st floor is 10,000 square feet of space and 1/2 of it is already a gallery leased by a different tenant, Tanya wants to do construction on other half. Plans to pour concrete floor. Owner is Guy Roberts (above). 11/29/05 - Obligado - review PBS records. PBS #2-601593 - 5 550 gallon gasoliine USTS removed in 1997. 1 1500 gallon #4 fuel oil UST abandoned in place on 11/9/05. Site was formally of trucking/transportation/fleet operation garage called Chelsea Operating Inc. Removed tanks were single wall steel with no leak detection. 11/30/05 - Obligado - spoke to D. Greffenius. He said he will send the reports related to this site. Geoprobe boroiings were conducted in september, resulting in the spill number being called in. Delta plans to conduct more borings next week. David inquired about 510 w.21st street. INformed him that the spill was related to fuel oil release. 11/30/05 - Obligado - received analytical results from soil borings performed by Protest on 9/30/05. Total of seven samples collected from 4 boring locations. Soil borings at N2 (8-10') show 3500 ppb benzene, 52300 ppb toluene, 26000 ppb ethylbenzene, 52300 ppb xylenes, 42000 ppb MTBE; at S6 (4-8') show 13000 ppb benzene, 170000 ppb toluene, 140000 ppb ethylbenzene, 840000 ppb xylenes, 12000 ppb MTBE; at SE1 (8-10') show 740 ppb benzene, 8500 ppb xylenes, 850 ppb MTBE; at NE4 (4-8') show 540 ppb benzene, 2200 ppb xylenes, 660 ppb MTBE. 12/1/05 - Obligado - Call D.Greffinius, left message. Call Tanya, left message. 12/1/05 - Obligado - Received call from Tanya. Informed her that additional investigation is needed due to very high concentrations of soil contamination. Advise her not to proceed with any construction on the lower level before investigation is completed. 12/1/05 - Obligado - Received call from Tanya. Said she plans to install vapor barrier under slab. 12/2/05 - Obligado - Called D. Greffinius, left message. 12/8/05 - Obligado - PPhone conversation with D. Greffinius. Soil and ground water investigation conducted on 12/6/05. 5 borings, product encountered in 3 of the gw samplin locations. Delta plans to put in a vent well beneath the foundation that will attach to a blower in the boiler room. Also plans to put a well in the sidewalk for monitoring and possible future VAC events to recover product. Approve of tentative plans. Delta will submit a report with findings. 12/12/05 - Obligado - phone call from Adam Sax, contractor wanting information about vapor barriers. Said will get back to him. 12/14/05 - Obligado -

called back Adam Sax, left message with some vapor barrier brands, and that the DEC would like to see a vapor barrier with at least 20 ml thickness. 12/19/05 - Obligado - voice mail from Greffinius (12/15). Describes site meeting between Delta and Earthtek regarding venting system. Will install piezometers to measure vacuum influence. Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/28/05 - Obligado - site meeting with D. Greffinius. Installed two temporary wells to remove product from beneath the building foundation. Approximately 20 gallons of product have been removed. Installed a vent well which will be attached to a blower in the boiler room to vent soil vapor. The boiler room was flooded with water (~18 inches) due to a malfunction with sump system. Plumbers came to site to pump out water. Once all water is pumped out, Delta will return to site next day to connect the vent well to a blower in the boiler room. DEC require two 4" wells to be installed in sidewalk which will be used for EFR to remove additional product. 12/29/05 - Obligado - faxed sidewalk permit letter to Delta. Completed vent well installation and piping to boiler room. Received phone call from Delta. He will fax results of Delta's investigation. 1/3/05 - Obligado - received phone call from Tanya. Told her I was working with Delta to determine if anything else needs to be done beneath foundation. When area is ready for construction will send a letter. Received soil and ground water analyticals from Delta investigation: GW results in ppb: MW sidewalk-benzene 1540, ethylbenzene 453, toluene 80.6, xylene 590, MTBE 3530 sb5 - benzene 11.2, ethylbenzene 65.2, toluene 5.6, xylene 180, MTBE 39.5 sb1 - benzene 992, toluene 43.6, ethylbenzene 410, xylene 225, MTBE 2440 Soil results in ppb: SB5 (7.5-8) - no exceedences SB5 (2.4-4) - no exceedences SB4 (7.5) - benzene 78, MTBE 384, xylene 4960 sb4 (3.5) - no exceedences sb3 (1.5-2) - benzene 339 sb2 (7.5) - benzene 3870, ethylbenzene 8750, toluene 1040, xylene 13500 sb2 (3.5) - benzene 119, xylene 1360, MTBE 287 sb1 (7.5) - benzene 95.5, MTBE 1790, xylene 1350 SB1 (3.5) - MTBE 1080 Received phone call from Tanya, requested Soil Analyticals so she could give to vapor barrier company to develop appropriate vapor barrier. Faxed her soil analyticals. 1/5/05 - Obligado - Conference call with D. Greffinius and Gordon Hinshalwood at Delta. Decide to go ahead with plan to install VEFR/Monitoring wells in sidewalk to pull product from under building. Will give Tanya go ahead to install vapor barrier and floor. Emailed approval letter to Tanya and Dave, will send hard copy in mail to Tanya and Guy. 1/6/05 - Obligado - Call from Ben Mollina, will be doing construction work at site. Wanted to know if building is ready for construction. Said ok to go ahead. 2/16/06 - Obligado - PHone call from D. Greffinius, said vapor barrier installation begins today, he will be there to oversee and take photos. 3/28/06 - Obligado - Spoke with D.Greffinius. He has been visiting site to oversee vapor barrier installation. He has sampled new wells in sidewalk. He will send a RAP by the end of this week. 3/5/06 - Obligado - Spoke with D. Greffinius, he will fax diagram for sub slab system. Also said he will send RAP. Inquired about Vac Truck vs EFR trailer for recovery events. Also about permitting requirements. Told him I would get back to him. 3/6/06 - Obligado - Called D. Greffinius to inquire about RAP, left message. 4/26/06 - Obligado - Spoke with D. Greffinius. He will turn on sub-slab ventilation system. 5/4/06 - Obligado - Sent STIP agreement to Guy Roberts, ccd D. Greffinius. Due date 5/25/06. 5/23/06 - Obligado - spoke to attorney for Guy Roberts. Wanted to alter Stip agreement to reflect the fact that some work has
