CERTIFICATION

I, Joel Landes, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the West 125th Street and Lenox Avenue Site, (NYC VCP Site No. 13CVCP091M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Joel B Landes 9/28/12
Qualified Environmental Professional Date

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located on the eastern portion of the city block between 124th Street, 125th Street, Adam C. Powell Boulevard, and Lenox Avenue in the Harlem section of the borough of Manhattan, New York and consists of the following addresses: 281-291 Lenox Avenue (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25, and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39). A Site Location Map is provided in Figure 1. The Site consists of vacant, unpaved land encompassing an approximate area of 32,410 square feet and is bound by West 125th Street and a 10-story shopping center to the north, Lenox Avenue and multi-story residential buildings with ground-level retail space to the east, West 124th Street and multi-story residential buildings to the south, and a vacant lot and one-story retail building to the west. Chain-linked fencing surrounds the Site with a locked gate on West 124th Street. A New York City Transit (NYCT) tunnel for the Number 2 and 3 subway lines is present below Lenox Avenue, directly to the east of the Site. Beyond the adjoining properties, the surrounding area is comprised primarily of multi-story residential and commercial buildings with ground-level retail space and restaurants. A map of the Site boundary is shown in Figure 2.

The Site is an open air lot with approximately 150 ft frontage along West 125th Street, 175 ft frontage along West 124th Street, and 200 ft frontage along Lenox Avenue. The Site is generally flat with el. 26, while the sidewalk elevations fronting the Site on West 125th Street, West 124th Street and Lenox Avenue range between el. 24.60 to el. 26.75.

Summary of Proposed Redevelopment Plan

The planned development consists of a 6-story retail building with a single cellar spanning the entire Site. The depth of the cellar will extend approximately 18 to 21 feet below the existing

Site grade. The foundation design is not yet complete, but is expected to consist of either a mat foundation or spread footings with a pressure slab.

Summary of Past Uses of Site and Areas of Concern

The Site was developed with multi-story residential buildings by 1902. One 5-story and eight 4-story mixed-use buildings occupied the Site (exclusive of Lots 25 through 28 and 140) through 2006. Each of the former buildings contained a basement and a rear yard. The basements contained mechanical rooms and storage areas, ground-level spaces contained lobbies or retail/commercial space, and the upper floors were occupied by residential apartments. A five-story building with a ground-floor automobile repair facility was demolished on Lot 28 in 2002, a two-story residential building was demolished on Lot 27 in 1977, and four-story residential dwellings were demolished on Lots 25, 140, and 26 in 1969. The following Areas of Concern (AOCs) have been identified at the Site:

1. One historical concrete-encased 5,000-gallon fuel oil aboveground storage tank (AST) and one historical concrete-encased 1,500-gallon fuel oil AST located in the basement of the former building on Lot 33 (through 2006).
2. One historical AST located in the basement of the former building on Lot 31 (through 2006).
3. One historical fuel oil underground storage tank (UST) that was removed from Lots 25 and 140 in 2008.
4. A historical dry cleaner located on Lot 32 from 1956 to 1968.
5. A historical automotive repair facility (1978 to 2002) and factory (1927) located on Lot 28.
6. A historical off-site automotive repair and salvage facility located on the adjoining property west of the Site at 117-119 West 124th Street from 1951 to 2003.
7. A historical off-site dry cleaning facility located approximately 120 feet south (cross-gradient) of the Site between 1976 and 2005.
8. An open New York State Department of Environmental Conservation (NYSDEC) spill incident (Spill Number 9800366) located 190 feet west and up-gradient of the Site.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 13 soil borings from which 26 soil samples were collected for chemical analysis to evaluate soil quality;
3. Installed 4 permanent and 4 temporary groundwater monitoring wells throughout the Site to establish groundwater flow direction and collected eight groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed seven soil vapor probes and collected seven vapor samples for chemical analysis.
5. Performed a geophysical survey to identify remnant buried tank structures and associated piping and provide utility clearance for borings.

Summary of Environmental Findings

1. Elevation of the Site ranges from 24.60 to 26.75 feet.
2. Depth to groundwater ranges from approximately 18 to 20 feet below grade surface (ft bgs).
3. Groundwater flow is generally from west to east.
4. Bedrock was not encountered in any of the borings performed at the Site.
5. The stratigraphy of the Site, from the surface down, consists of approximately 13 to 19 feet of historic fill containing varying amounts of gravel, cobbles, and brick fragments, underlain by brown fine- to course-grained native sand.
6. Volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), or polychlorinated biphenyls (PCBs) were not detected in any soil samples at concentrations that exceed either Track 1 Unrestricted Use or Track 2 Restricted Residential Soil Cleanup Objectives (SCOs). The following metals were detected in historic fill at concentrations that exceed their respective Unrestricted Use SCOs: arsenic (maximum of 0.693 to 13.1 milligrams per kilograms [mg/kg]), barium (max. of 428 to 1,290 mg/kg),

copper (max. of 5.56 to 118 mg/kg), lead (max of 464 mg/kg and 650 mg/kg), nickel (4.67 to max of 44.4 mg/kg), and zinc (max of 8.99 to 550 mg/kg). These metals are constituents of historic fill at the Site.

7. PCBs and SVOCs were not detected in groundwater at concentrations that exceed the New York State 6NYCRR Part 703.5 Class GA Groundwater Quality Standards (GQS). Four VOCs were detected at concentrations that exceed their respective Class GA GQS in at least one sample including: benzene (1.9 micrograms per liter [$\mu\text{g/l}$ or ppb] compared to GQS of 1 $\mu\text{g/l}$), chloroform (7.8 to 27 $\mu\text{g/l}$ compared to GQS of 7 $\mu\text{g/l}$), tetrachloroethylene (PCE) (6.7 to 10 $\mu\text{g/l}$ compared to GQS of 5 $\mu\text{g/l}$), and total xylenes (62 $\mu\text{g/l}$ compared to GQS of 5 $\mu\text{g/l}$). A Site source of VOCs in groundwater was not detected in Site soils identified during the RI. The following metals were detected at concentrations that exceed their respective Class GA GQSs in at least one groundwater sample: Metals including iron (430 to 10,800 $\mu\text{g/l}$ compared to GQS of 300 $\mu\text{g/l}$), lead (72 $\mu\text{g/l}$ compared to GQS of 25 $\mu\text{g/l}$), magnesium (352,000 to 644,000 $\mu\text{g/l}$ compared to GQS of 350,000 $\mu\text{g/l}$), manganese (316 to 3,200 $\mu\text{g/l}$ compared to GQS of 300 $\mu\text{g/l}$), and sodium (26,300 to 105,000 $\mu\text{g/l}$ compared to GQS of 20,000 $\mu\text{g/l}$). The source of metals in groundwater appears to be historic fill and/or salt water run-off from the adjacent streets and/or sidewalks.
8. Soil vapor samples identified numerous petroleum related and chlorinated compounds at low to moderate concentrations. VOCs included acetone, chloroform, xylenes, PCE and dichloroethylene. PCE was detected in three vapor samples at 310 $\mu\text{g/m}^3$ and 820 $\mu\text{g/m}^3$. These VOC, PCE, was detected in soil vapor at concentrations that require monitoring and/or mitigation as per Decision Matrix 2 of the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006).

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

125th& Lenox LLC is considering enrollment in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.75-acre site located at 281-291 Lenox Avenue, 107-113 West 124th Street, and 108-110 West 125th Street in the Harlem section of the borough of Manhattan, New York City. Commercial/retail use is proposed for the Site. The RI work was performed between November 8 and November 23, 2010. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 SITE LOCATION AND CURRENT USAGE

The Site is located on the eastern portion of the city block between 124th Street, 125th Street, Adam C. Powell Boulevard, and Lenox Avenue in the Harlem section of the borough of Manhattan, New York and consists of the following addresses: 281-291 Lenox Avenue (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25, and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39). A Site Location Map is provided in Figure 1. The Site consists of vacant, unpaved land encompassing an approximate area of 32,410 square feet and is bound by West 125th Street and a 10-story shopping center to the north, Lenox Avenue and multi-story residential buildings with ground-level retail space to the east, West 124th Street and multi-story residential buildings to the south, and a vacant lot and one-story retail building to the west. Chain-linked fencing with a locked gate on West 124th Street surrounds the Site. A New York City Transit (NYCT) tunnel for the Number 2 and 3 subway lines is present below Lenox Avenue, directly to the east of the site. Beyond the adjoining properties, the surrounding area is comprised primarily of multi-story residential and commercial buildings with ground-level retail space and restaurants. A map of the Site boundary is shown on Figure 2.

The Site is an open air lot with approximately 150 ft of frontage along West 125th Street, 175 ft of frontage along West 124th Street, and 200 ft of frontage along Lenox Avenue. The Site is

generally flat with approximate el. +26 BPMD, while the sidewalk elevations fronting the Site on West 125th Street, West 124th Street and Lenox Avenue range between el. +24.60 to el. +26.75.

1.2 PROPOSED REDEVELOPMENT PLAN

The planned development consists of a 6-story retail building with a single cellar level and will span across the entire Site. The depth of the cellar will extend approximately 18 to 21 feet below the existing site grade. The foundation design is not yet complete, but is expected to extend to the groundwater table and will consist of either a mat foundation or spread footings with a pressure slab. Excavation and foundation construction will involve the removal and off-site disposal of approximately 12,000 tons of material.

The current zoning designation is C6-3 with a C4-4D overlay on the southern portion of the Site. The Site is located within the Special 125th Street District. Development projects within this district must comply with Zoning Resolution, Article IX: Special Purpose Districts, Chapter 7: Special 125th Street District. The proposed Site use is consistent with existing zoning.

The New York City Department of City Planning (NYCDCP) has assigned an E-designation (E-201) to the Site. The E-designations for each lot that comprise the Site are presented in the following table:

Lot (address)	Window Wall Attenuation - Alternative Ventilation	Underground Gasoline Storage Tank Testing Protocol	Air Quality – No. 2 Fuel Oil or Natural Gas Heat and Hot Water	Exhaust Stack Location Limitations
Lot 33 (291 Lenox Avenue)	X	X		
Lot 38 (108 West 125 th Street)	X	X	X	X
Lot 39 (110 West 125 th Street)	X	X	X	X
Lot 32 (289 Lenox Avenue)	X	X	X	X
Lot 31 (287 Lenox Avenue)	X	X	X	X

Lot (address)	Window Wall Attenuation - Alternative Ventilation	Underground Gasoline Storage Tank Testing Protocol	Air Quality – No. 2 Fuel Oil or Natural Gas Heat and Hot Water	Exhaust Stack Location Limitations
Lot 30 (285 Lenox Avenue)	X	X	X	X
Lot 129 (283 Lenox Avenue)	X	X	X	X
Lot 29 (281 Lenox Avenue)	X	X		X
Lot 28 (107 West 124 th Street)	X	X	X	X
Lot 27 (109 West 124 th Street)	X	X	X	X
Lot 25 and 140 (113 West 124 Street)	X	X	X	X
Lot 26 (111 West 124 th Street)	X	X	X	X

1.3 DESCRIPTION OF SURROUNDING PROPERTY

The Site is bordered by West 125th Street and a 10-story shopping center to the north, Lenox Avenue and multi-story residential buildings with ground-level retail space to the east, West 124th Street and multi-story residential buildings to the south, and a vacant lot and one-story retail building to the west. Beyond the adjoining properties, the surrounding area is comprised primarily of multi-story residential and commercial buildings with ground-level retail space and restaurants.

The surrounding neighborhood is generally characterized by multi-story, mixed-use residential, commercial, and retail properties. The major thoroughfares, West 125th Street and Lenox Avenue, are zoned for commercial usage and generally populated with commercial and retail properties with mixed-use residential and commercial buildings. Properties along the numbered side streets are zoned for residential usage and typically contain multi-story residential buildings with ground-floor retail.

NYC OER's Searchable Property Environmental E-Database (SPEED) was utilized to research sensitive environmental receptors within a 500-foot radius of the Site. This evaluation revealed that no sensitive receptors such as schools, hospitals, and day care centers exist within the target radius.

2.0 SITE HISTORY

2.1 PAST USES AND OWNERSHIP

The Site was developed with multi-story residential buildings by 1902. One five-story and eight four-story mixed-use buildings occupied the Site (exclusive of Lots 25 through 28 and 140) through 2006. Each of the former buildings contained a basement and a rear yard. The basements contained mechanical rooms and storage areas, ground-level spaces contained lobbies or retail/commercial space, and the upper floors were occupied by residential apartments. A five-story building with a ground-floor automobile repair facility was demolished on Lot 28 in 2002, a two-story residential building was demolished on Lot 27 in 1977, and four-story residential dwellings were demolished on Lots 25, 140, and 26 in 1969. In addition to residential dwellings, various commercial and retail facilities have been listed at the Site since 1927, including an electronics store (2000 - 2008), produce and other food markets (1927 – 1998), a dry cleaning facility on Lot 32 (1956 – 1968), and an automotive repair facility (1978 – 2002) and factory (1927) on Lot 28.

Based on previous Phase I Environmental Site Assessments (ESA) performed at the Site, a 5,000-gallon fuel oil AST and a 1,500-gallon fuel oil AST were active within the basement of 291 Lenox Avenue (Lot 33) until at least 2002. Both of these ASTs were encased in concrete. An aboveground storage tank (AST) of unknown size was located in the basement of 287 Lenox Avenue (Lot 31) and a vent pipe and fill port was observed at 289 Lenox Avenue (Lot 32) outside of the building, indicating the presence of a fuel oil tank.

The Site buildings have been demolished and no evidence of the tanks is currently present. Documentation pertaining to the closure of the tanks identified above was not available for review.

2.2 PREVIOUS INVESTIGATIONS

Phase I ESA, dated June 13, 2002, prepared by Aaron Wright Technical Services, Inc.

The Phase I ESA was conducted on behalf of Carleton Realty Corp. for a proposed nursing home at the Site. At the time of the Phase I site inspection, the Site contained one five-story and eight four-story mixed-use buildings, each with a basement and a rear yard. An active 5,000

gallon fuel oil AST and an abandoned 1,500-gallon fuel oil AST were observed in the basement of 291 Lenox Avenue (Lot 33). An AST of unknown size was located in the basement of 287 Lenox Avenue (Lot 31). In addition, a vent pipe and fill port indicative of a petroleum storage tank were observed adjacent to the building on Lot 32. Aaron Wright recommended that the tanks be removed and decommissioned according to applicable regulations. Documentation regarding the closure of tanks identified by Aaron Wright was not available.

The report noted that Lots 28 and 32 were occupied by an automotive repair facility and dry cleaning facility in 1980 and 1970, respectively. The report also noted a leaking underground storage tank incident (LTANK) that occurred approximately 300 feet west of the Site at 152 West 124th Street in April 1998.

Tank Closure Report, dated February 2008, prepared by Don Carlo Environmental Services

This report stated that Don Carlo Environmental Services (DCES) removed a 550-gallon No. 2 fuel oil underground storage tank (UST) from 293 Lennox Avenue. The report includes a location map that shows the UST was located in the southwestern corner of the Site along West 124th Street and states that notification of the tank closure was not sent to the NYSDEC – Petroleum Bulk Storage (PBS) Unit because the total tank capacity was less than 1,100 gallons.

Field evidence of contamination (i.e., staining or organic vapor concentrations above background) was not observed in soil around the excavated tank. Five endpoint soil samples were collected from the tank excavation and analyzed for NYSDEC Spill Technology and Remediation Series (STARS) VOCs and SVOCs. The analytical results indicated VOC and SVOC concentrations that were below NYSDEC Technical and Administrative Guidance Memo (TAGM) Recommended Soil Cleanup Objectives (RCOs), with the exception of the SVOC benzo(a)pyrene, which was detected at concentrations above the RSCOs in all five endpoint samples. DCES concluded that no further assessment was needed in the area of the removed UST.

Phase I ESA, dated September 2010, prepared by Langan

Langan conducted the Phase I ESA on behalf of Wharton Properties as part of the due diligence associated with the proposed development project discussed herein. The Subject Property was vacant and surrounded by a chain-link fence at the time of the Phase I ESA. Langan's Phase I ESA identified several on-site recognized environmental conditions (RECs) associated with historical site usage, evidence of a previous environmental investigation (i.e., an abandoned monitoring well on Lot 28), and evidence of historical petroleum bulk storage on the Site. Off-site RECs included historical usage of surrounding properties and an open LTANK incident 190 feet west of the Site at 152 West 124th Street. The results of Langan's Phase I ESA were used to identify the Areas of Concern that are addressed in this RIR.

2.3 SITE INSPECTION

A Site inspection was performed between November 8 and November 12, 2010 by Langan to identify features of environmental significance that define Areas of Concern (AOC). The Site Inspection was performed under the direction of a Qualified Environmental Professional (QEP), Michael Burke, CHMM.

2.4 AREAS OF CONCERN

Areas of Concern generally include areas where existing or former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal. Sanborn fire insurance maps available for this Site were reviewed to identify historical features of environmental significance. The 2010 Phase I ESA Report, including the fire insurance maps, is provided in Appendix A. The following AOCs have been identified:

1. One historical 5,000-gallon fuel oil AST and one historical 1,500-gallon fuel oil AST located in the basement of the former building on Lot 33.
2. One historical AST located in the basement of the former building on Lot 31.

3. One historical fuel oil underground storage tank (UST) that was removed from Lots 25 and 140 in 2008.
4. A historical dry cleaner located on Lot 32 from 1956 to 1968.
5. A historical automotive repair facility (1978 to 2002) and factory (1927) located on Lot 28.
6. A historical off-site automotive repair and salvage facility located on the adjoining property west of the Site at 117-119 West 124th Street from 1951 to 2003.
7. A historical off-site dry cleaning facility located approximately 120 feet south of the Site between 1976 and 2005.
8. An open New York State Department of Environmental Conservation (NYSDEC) spill incident (Spill Number 9800366) located 190 feet west and up-gradient of the Site.

3.0 PROJECT MANAGEMENT

3.1 PROJECT ORGANIZATION

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Michael Burke, CHMM.

3.2 HEALTH AND SAFETY

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. The Health and Safety Plan (HASP) is included in Appendix B.

3.3 MATERIALS MANAGEMENT

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The RI consisted of the following scope of work:

1. Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Geophysical survey to identify remnant buried tank structures and associated piping and provide utility clearance for borings.
3. Installation of 13 soil borings, from which 26 soil samples were collected for chemical analysis to evaluate soil quality;
4. Installation of 4 permanent and 4 temporary groundwater monitoring wells throughout the Site to estimate groundwater flow direction and collection and analysis of 8 groundwater samples to evaluate groundwater quality;
5. Installation of 7 soil vapor probes and collection of 7 samples for chemical analysis;

4.1 GEOPHYSICAL INVESTIGATION

On November 8, 2010, prior to commencement of subsurface work, Nova Geophysical Services (Nova) of Forest Hills, New York, conducted a geophysical investigation under the supervision of a Langan field engineer. The survey included ground penetrating radar (GPR) and electromagnetic conductivity (EM) methods to investigate the presence of underground storage tanks (USTs) and locate buried utilities in the vicinity of each boring location. Borings were relocated as necessary to avoid subsurface utilities and anomalies (other subsurface impediments). Appendix C includes the geophysical work summary and maps. According to Nova, several scattered anomalies were located throughout the surveyed areas, however, none of these anomalies were indicative of USTs.

4.2 BORINGS AND MONITORING WELLS

Drilling and Soil Logging

Boring logs were prepared by a Langan field engineer for all soil samples to document subsurface conditions. Boring logs include a description of the following: soil types and non-soil materials; soil screening results from field instrument measurements, depth to groundwater;

presence of soil mottling; presence of odor, vapors, soil discoloration; and presence of free and/or residual product. Boring logs with this information are attached in Appendix D. A map showing the location of soil borings is provided on Figures 2 and 3. Construction details for soil borings installed during this RI are included in Table 1.

Groundwater Monitoring Well Construction

Four permanent (two-inch diameter) and four temporary (one-inch diameter) polyvinyl chloride (PVC) groundwater monitoring wells were installed during this RI using a Hollow Stem Auger CME 75HT (Hollow Stem Rig) and a Compact Roto Sonic 319 Track Rig (Sonic Rig) to estimate groundwater flow direction and to collect groundwater samples for chemical analysis to evaluate groundwater quality. The four permanent groundwater wells were screened from approximately 15 to 30 ft bgs, and the four temporary groundwater wells were screened from approximately 15 to 25 ft bgs. Monitoring wells were located to investigate each of the AOCs: MW-1, TMW-5 and MW-6 were located the historical UST locations; MW-1 and MW-14 were located down-gradient of the former adjoining auto repair location to the west of the Site; MW-4 was located to investigate the historical dry cleaner location; TMW-7 was located to investigate an off-site petroleum release, and MW-3 was located to investigate an off-site former dry cleaner location south of the Site. A map showing the location of groundwater monitoring wells is provided on Figures 2 and 4.

Survey

A global positioning system (GPS) was used to identify the location of all soil borings and monitoring wells. The location coordinates are included in Table 1.

Water Level Measurement

Static water levels measurements were obtained on November 23, 2010 to determine groundwater elevation and the groundwater flow direction; this data is included in Table 2. Groundwater level data was collected with a Solinst oil-water interface probe.

4.3 SAMPLE COLLECTION AND CHEMICAL ANALYSIS

Sampling performed as part of the field investigation was conducted for all AOCs and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy. A summary of samples collected during this RI for all media is presented on Table 4.

Soil Sampling

26 soil samples were collected from 13 soil borings (SB-1 through SB-13) throughout the Site for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 5. Figures 2 and 3 show the location of samples collected in this investigation. Laboratories and analytical methods are shown below. The borings were completed by Aquifer Drilling and Testing, Inc. (ADT) with a Geoprobe® 6620 Track Rig (Geoprobe® Rig) or a Sonic Rig. Environmental borings were completed to approximately 20 to 30 ft bgs.

Soil samples were collected continuously throughout the depth of each environmental boring. Samples were collected with the Sonic rig using 5-inch diameter by 10-foot long core barrel samples with new, dedicated polyethylene bags. Samples were collected with the Geoprobe® track rig using a 5-foot Macrocore® sample barrel, each with a dedicated acetate liner.

Soil samples retrieved from each boring were visually classified for soil type, color, grain size, and moisture content. Each sample was screened for visual, olfactory, and instrumental evidence of contamination. Instrument screening for the presence of total volatile organic vapors was performed with a hand-held PID equipped with a 10.6 electron volt (eV) lamp, calibrated to a known concentration of isobutylene. Following soil sample collection, all boreholes were backfilled with soil cuttings and/or sand, grouted, and restored with material consistent with the

surroundings. Boring logs documenting these observations are included as Appendix D. Prior to backfilling, select soil borings were converted to temporary or permanent monitoring wells (refer to Groundwater Sampling section). Down-hole drilling equipment was decontaminated between borings with Alconox and water.

Soil samples collected from each completed boring were segregated and prepared for submittal to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory with the appropriate chain-of-custody documentation for analysis. The installation of each of the 13 soil borings involved collecting soil samples at two depth intervals (one shallow soil sample and one deep soil sample). It is anticipated that all material represented by the soil samples will be removed from the Site as part of the excavation and construction activities associated with the redevelopment of the Site.

Each soil sample was collected and placed into pre-cleaned, laboratory-prepared containers. Care was taken to obtain representative soil samples and to fill the sample jars to capacity to minimize loss of volatile constituents. Sample jar threads were wiped clean of soil particles and the jars sealed with Teflon-lined screw closure lids. The sample jars were uniquely labeled to identify the sample number, project name, and the date and time of collection. Soil samples were placed into insulating coolers with ice and submitted under standard chain-of-custody protocol to York Analytical Laboratories, Inc., (York) a NYSDOH ELAP-certified laboratory in Stratford, Connecticut.

Groundwater Sampling

Temporary groundwater monitoring wells TMW-2, TMW-5, TMW-7, and TMW-14 were installed to a total depth of approximately 25 ft bgs. Temporary groundwater monitoring well locations are provided on Figures 2 and 4. Each temporary monitoring well was constructed by inserting dedicated, one-inch diameter PVC well screen and riser into the open borehole. Each well was constructed with a 10-foot screened interval that intersected the observed groundwater table from approximately 15 to 25 ft bgs. The screened interval for each well consisted of 0.020-inch wide slotted PVC casing. One-inch diameter PVC riser was used to complete the well from the top of the screened interval to grade.

Permanent groundwater monitoring wells MW-1, MW-3, MW-4, and MW-6 were installed to a depth of approximately 30 ft bgs. Permanent groundwater monitoring well locations are presented on Figures 2 and 4. Each permanent monitoring well was constructed by inserting new, two-inch diameter PVC well screen and riser into the open borehole. Each well was constructed with a 15-foot screened interval that intersected the observed groundwater table from approximately 15 to 30 ft bgs. Clean filter sand was placed in the annulus between the borehole and the outside of the screen, from the bottom of the boring to about 2-feet above the top of the screen. A 2-foot-thick hydrated bentonite seal was placed above the filter sand. Following installation, the permanent wells were developed using a submersible pump, fitted with dedicated, disposable tubing at a flow rate of generally less than 5 gallons per minute (gpm). Each well was developed such that a minimum of three well volumes were purged and the discharge was free of silt or fine sand.

One groundwater sample was collected from each of the temporary and permanent groundwater wells with a peristaltic pump and dedicated polyethylene tubing. During well purging, the turbidity, pH, temperature, conductivity, reduction oxidation potential, and dissolved oxygen of the groundwater were monitored using a Horiba U-22 water quality meter with a flow-through cell. The groundwater was purged until the water quality parameters were stable and the turbidity was below 100 Nephelometric Turbidity Units (NTU). The monitored parameters were recorded on the groundwater sampling logs provided in Appendix E. Sampling was conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002, and Sampling Guidelines and Protocols, dated March 1991.

Soil Vapor Sampling

Seven soil vapor probes were installed and sampled. Soil vapor sampling locations are provided on Figures 2 and 5. The soil vapor samples in the southern portion of the Site (SV-1, SV-2, and SV-3) were collected from a depth of approximately 6 ft bgs and soil vapor samples from the remainder of the Site were collected from a depth of 18 ft bgs (the anticipated cellar depth). Down-hole drilling equipment was decontaminated between borings with Alconox and water. A soil vapor probe attached to polyethylene tubing was inserted at each soil vapor sample location and the annulus around the probe/tubing was filled with sand to a few inches above the

probe. Bentonite slurry was then applied to the top of the sand pack to grade surface to isolate the sampling points from ambient air. The soil vapor samples were collected into laboratory-supplied, batch certified-clean Summa® canisters that were calibrated for a sampling rate of one hour per sample. Prior to sample collection, the soil vapor was screened with a PID. As a QA/QC measure, helium was introduced as a tracer gas into the sampling chamber at the existing grade to ensure that the soil vapor sampling points were properly sealed and ambient air did not infiltrate the canister. The ambient air sample was collected into a laboratory-supplied, individually certified-clean Summa® canister calibrated for a sampling rate of six hours. Soil vapor sample collection data is reported in Appendix F. The soil vapor investigation was conducted in accordance with the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006.

Quality Assurance and Quality Control (QA/QC)

Quality assurance/quality control (QA/QC) procedures were implemented during field activities and included the following procedures:

- Calibration of field equipment, including PID, on a daily basis;
- Collection of trip blanks and duplicate samples;
- Use of dedicated and disposable field sampling equipment;
- Proper sample handling and preservation;
- Proper sample chain-of-custody documentation; and
- Completion of boring, groundwater, and soil vapor sampling logs.

One trip blank sample was submitted for two of the three groundwater sample shipments and analyzed for VOCs per EPA Method 8260. Duplicate samples were collected at a frequency of approximately one per ten samples to determine whether laboratory artifacts could have potentially influenced the analytical results of the soil and groundwater samples. A sample summary log showing the QA/QC samples collected, parent samples and analyses performed is provided as Table 4.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Michael Burke, CHMM
Chemical Analytical Laboratory	Chemical analytical laboratory used in the RI is NYS ELAP certified and was York Analytical Laboratory.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010B • VOCs by EPA Method 8260B • SVOCs by EPA Method 8270C • PCBs by EPA Method 8082 <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010B • VOCs by EPA Method 8260B • SVOCs by EPA Method 8270C • PCBs by EPA Method 8082 <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 5, 6, and 7, respectively. Laboratory data deliverables for samples evaluated in this RIR are provided in Appendix G.

5.0 ENVIRONMENTAL EVALUATION

5.1 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS

Stratigraphy

Historic urban fill material, predominately consisting of brown fine to course sand with some gravel, brick and silt and light brown medium to fine sand with some silt and trace gravel, brick and wood, was identified beneath the concrete surface cover. The fill layer had an average thickness of 18 feet and ranges from approximately 14 to 20 feet. This fill layer is classified as Historic Urban Fill, as defined in the NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation (dated December 2002). Beneath the fill material was native, brown fine to course sand, ranging from 23 to 29 feet thick, underlain by silty sand, ranging from 5 to 30 feet thick. Geological surface features (e.g., rock outcroppings) were not observed. Soil and bedrock stratigraphy throughout Manhattan typically consists of a layer of historical fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a review of the “Bedrock and Engineering Geologic Maps of New York County and parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey” (Baskerville Map), dated 1994 and prepared by Charles A. Baskerville, the Site is underlain by bedrock of the Inwood Marble and Hartland Formations, which consists of white calcite-dolomite marble and coarse-grained siliceous dolomite. Based on geotechnical investigations conducted by Langan in the vicinity of the Site, bedrock is estimated to be between 100 and 150 feet below surface grade.

Hydrogeology

A table of water level data for all monitoring wells is included in Table 2. The average depth to groundwater is approximately 19.5 ft bgs and the range in depth is 18 to 20 ft bgs. Groundwater flow is from west to east toward the Harlem River. The inferred groundwater flow direction is presented on Figures 2 and 4. Groundwater in the New York City area is not used as a potable water source. Potable water is provided to the Site by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

5.2 SOIL CHEMISTRY

This RI included 13 soil borings that were advanced at the Site. Soil sample results were compared to the NYSDEC Part 375 Track 1 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Use Residential SCO (RURSCOs), and Restricted Use Commercial SCO (RUCSCO). A summary table of data for chemical analyses performed on soil samples is included in Table 5. Analytical results are highlighted where the result exceeds a specific regulatory limit. The raw laboratory analytical reports are provided in Appendix G. A soil sample location and results map that presents a summary of soil results that exceed applicable SCOs is shown in Figure 3. Soil samples were collected at two depth intervals (one shallow soil sample and one deep soil sample) at each of the boring locations. It is anticipated that all material represented by the RI soil samples will be removed from the Site as part of the excavation and construction activities associated with the redevelopment. Laboratory analysis of soil samples collected during the RI indicated the following:

VOCs

- One VOC, acetone, was detected at concentrations marginally exceeding its Unrestricted Use SCO in soil samples collected from borings SB-8 and SB-9. This analyte was also detected in the associated analysis batch blanks; therefore, this compound is considered a laboratory artifact and is not representative of Site conditions. No other VOCs were detected in soil at concentrations that exceed the Unrestricted Use SCOs.

SVOCs and PCBs

- SVOCs and PCBs were not detected in any soil samples at concentrations exceeding their Unrestricted Use SCOs.

Metals

- Metals, including arsenic (0.693 to 13.1 mg/kg), barium (428 to 1,290 mg/kg), copper (5.56 to 118 mg/kg), lead (464 mg/kg and 650 mg/kg), nickel (4.67 to 44.4 mg/kg), and zinc (8.99 to 550 mg/kg) were detected at concentrations exceeding their respective Unrestricted Use SCOs in samples collected from historic fill. It is anticipated that all material represented by soil samples will be removed from the Site as part of the excavation and construction activities associated with the redevelopment of the Site.

- Metals were not detected at concentrations that exceed their respective Unrestricted Use SCOs in any of the soil samples collected from native sand underlying historic fill.

Based on their random occurrence throughout the Site, the metals detected at concentrations greater than the SCOs appear to be a constituent of the heterogeneous historic fill material and are not related to a spill or separate contaminant source.

5.3 GROUNDWATER CHEMISTRY

This RI included the installation of four permanent and four temporary groundwater monitoring wells to estimate groundwater flow direction and to collect groundwater samples for chemical analysis. Groundwater sample results were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). A summary table of data for chemical analyses performed on groundwater samples is included in Table 6. Analytical results are highlighted where the result exceeds a specific regulatory limit or guidance value. The raw laboratory analytical reports are provided in Appendix G. A groundwater sample location and results map that presents a summary of groundwater samples that exceed applicable standards is presented on Figure 4. Laboratory analysis of groundwater samples collected during the RI indicated the following:

VOCs

- VOCs, including benzene (1.9 µg/l compared to GQS of 1 microgram per liter [µg/l]), chloroform (ranging from 7.8 to 27 µg/l compared to GQS of 7 µg/l), PCE (ranging from 6.7 to 10 µg/l compared to GQS of 5 µg/l), and total xylenes (62 µg/l compared to GQS of 5 µg/l) were detected in groundwater at least one monitoring well at concentrations that exceeding their GQS.
- Methylene chloride was also detected at concentrations marginally exceeding its GQS in groundwater samples collected from wells TMW-5 and TMW-7. This compound was also detected in the associated analysis batch blanks; therefore, this compound is considered a laboratory artifact and is not representative of Site conditions.
- A Site source of VOCs in groundwater was not identified during this RI.

SVOCs and PCBs

- SVOCs and PCBs were not detected in groundwater samples at concentrations exceeding their GQSs.

Metals

- Several metals were detected in groundwater at concentrations that exceed their respective GQSs, including iron (ranging from 430 to 10,800 µg/l compared to GQS of 300 µg/l), lead (72 µg/l compared to GQS of 25 µg/l), magnesium (ranging from 352,000 to 644,000 µg/l compared to GQS of 350,000 µg/l), manganese (ranging from 316 to 3,200 µg/l compared to GQS of 300 µg/l), and sodium (ranging from 26,300 to 105,000 µg/l compared to GQS of 20,000 µg/l).
- The source of metals impacts to groundwater appears to be historic fill and/or salt water run-off from adjacent streets and/or sidewalks.

5.4 SOIL VAPOR CHEMISTRY

This RI included the installation and sampling of seven soil vapor probes. Soil vapor sample results were compared to NYSDOH Air Guideline Values (AGVs) and NYSDOH Decision Matrices 1 and 2, and were also compared guidance values from the following databases; NYSDOH 2003 Fuel Oil Upper Fence Values, U.S. Environmental Protection Agency (USEPA) Base Database 90th Percentile Indoor Air Values, and Health Effects Institute (HEI) 2005 95th Percentile Indoor Air Values. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 7. Analytical results are highlighted where the result exceeds a specific regulatory limit or guidance value. The raw laboratory analytical reports are provided in Appendix G.

A review of the sub-surface soil vapor sample results indicates that 7 of the 62 VOCs analyzed using EPA Method TO-15 were detected in at least one of the seven soil vapor samples at concentrations that exceed all of the background comparison criteria and include the following: acetone; chloroform; PCE; *o*-xylene; *p* & *m*-xylenes; styrene; and toluene. One VOC, PCE, was also detected in three samples, SV-4 (310 micrograms per cubic meter [$\mu\text{g}/\text{m}^3$]), SV-5 ($820 \mu\text{g}/\text{m}^3$), and SV-7 ($540 \mu\text{g}/\text{m}^3$), at concentrations greater than its AGV of $100 \mu\text{g}/\text{m}^3$. These PCE concentrations also exceed the minimum action levels for monitoring and/or mitigating soil vapor intrusion, as per the NYSDOH Decision Matrix 2.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 7. Soil vapor sample locations and a summary of results are presented on Figure 5.

5.5 PRIOR ACTIVITY

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this Site.

5.6 IMPEDIMENTS TO REMEDIAL ACTION

There are no known impediments to remedial action at this property.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the findings of this RIR, we conclude the following:

Conclusions

- Groundwater depths at the Site range from 18 to 20 feet bgs and flows east toward the Harlem River;
- The Site is underlain by historic urban fill consisting of brown fine to course sand with some gravel, brick and silt and light brown medium to fine sand with some silt and trace gravel, brick and wood. The fill layer thickness ranges from about 14 to 20 feet bgs and is underlain by native, brown fine to course sand followed by silty sand. Bedrock was not encountered during this RI;
- Six metals (arsenic, barium, copper, lead, nickel, and zinc) were detected in soil samples above NYSDEC Part 375 Unrestricted Use SCOs. These contaminants appear to be constituents of the historic urban fill;
- Groundwater samples contained concentrations of VOCs, including benzene, chloroform, PCE, and total xylenes, above their respective Class GA GQS. A Site source of VOCs was not detected during this RI. The metals iron, lead, magnesium, manganese, and sodium were also detected in groundwater samples at concentrations above their Class GA GQS. The source of metals in groundwater is historic fill and/or salt water run-off;
- The geophysical survey did not reveal anomalies indicative of underground storage tanks at the Site;
- PCE was detected in soil vapor at concentrations greater than its AGV of 100 $\mu\text{g}/\text{m}^3$. These PCE concentrations also exceed the minimum action levels for monitoring and/or mitigating soil vapor intrusion, as per the NYSDOH Decision Matrix 2.

Recommendations

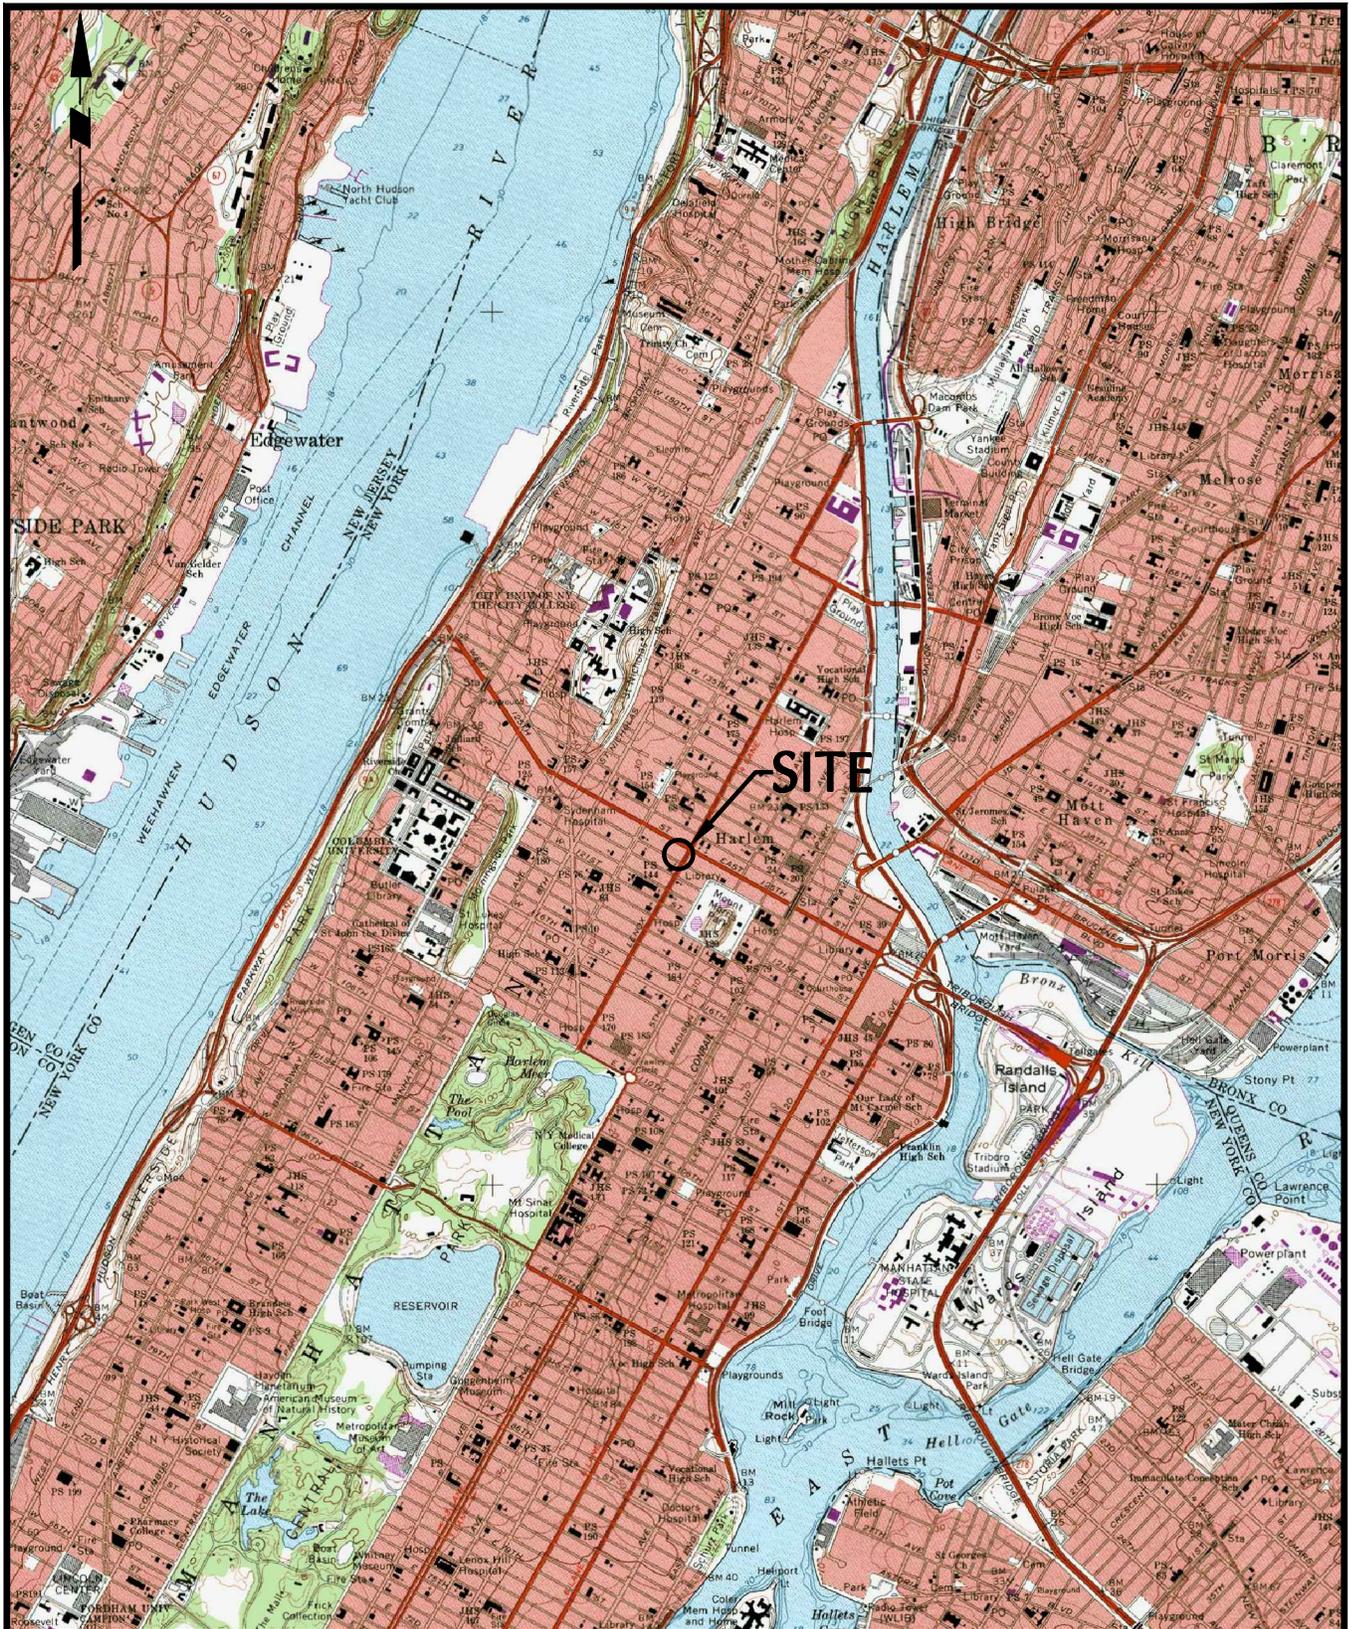

For the Site to be suitable for its intended use as a six-story retail building, Langan recommends the following:

- Excess soil that will be generated during the ± 20 foot excavation that will occur during development of the Site will be considered a regulated solid waste. Soil should be

handled and transported in accordance with applicable local, state and federal regulations to a disposal facility that is permitted to accept this material. This material should be properly characterized prior to transportation to an off-site disposal facility;

- A community air monitoring program (CAMP) should be implemented concurrently with earthwork at the Site;
- Because the excavation will extend into the groundwater table, an active soil vapor venting system is not feasible for this Site. A waterproofing membrane must be incorporated into the foundation design. The waterproofing membrane will also act as a vapor barrier that will mitigate any potential PCE soil vapor intrusion;
- The proposed building will cover the entire Site footprint; however, construction plans have not been finalized. Upon completion of the new construction, if any soil is exposed (i.e., soil is not covered by a paved or other impermeable surface), it should be covered with at least two feet of fill material meeting the Part 375 Unrestricted Use SCOs.

RESULT NOTES AND QUALIFIERS

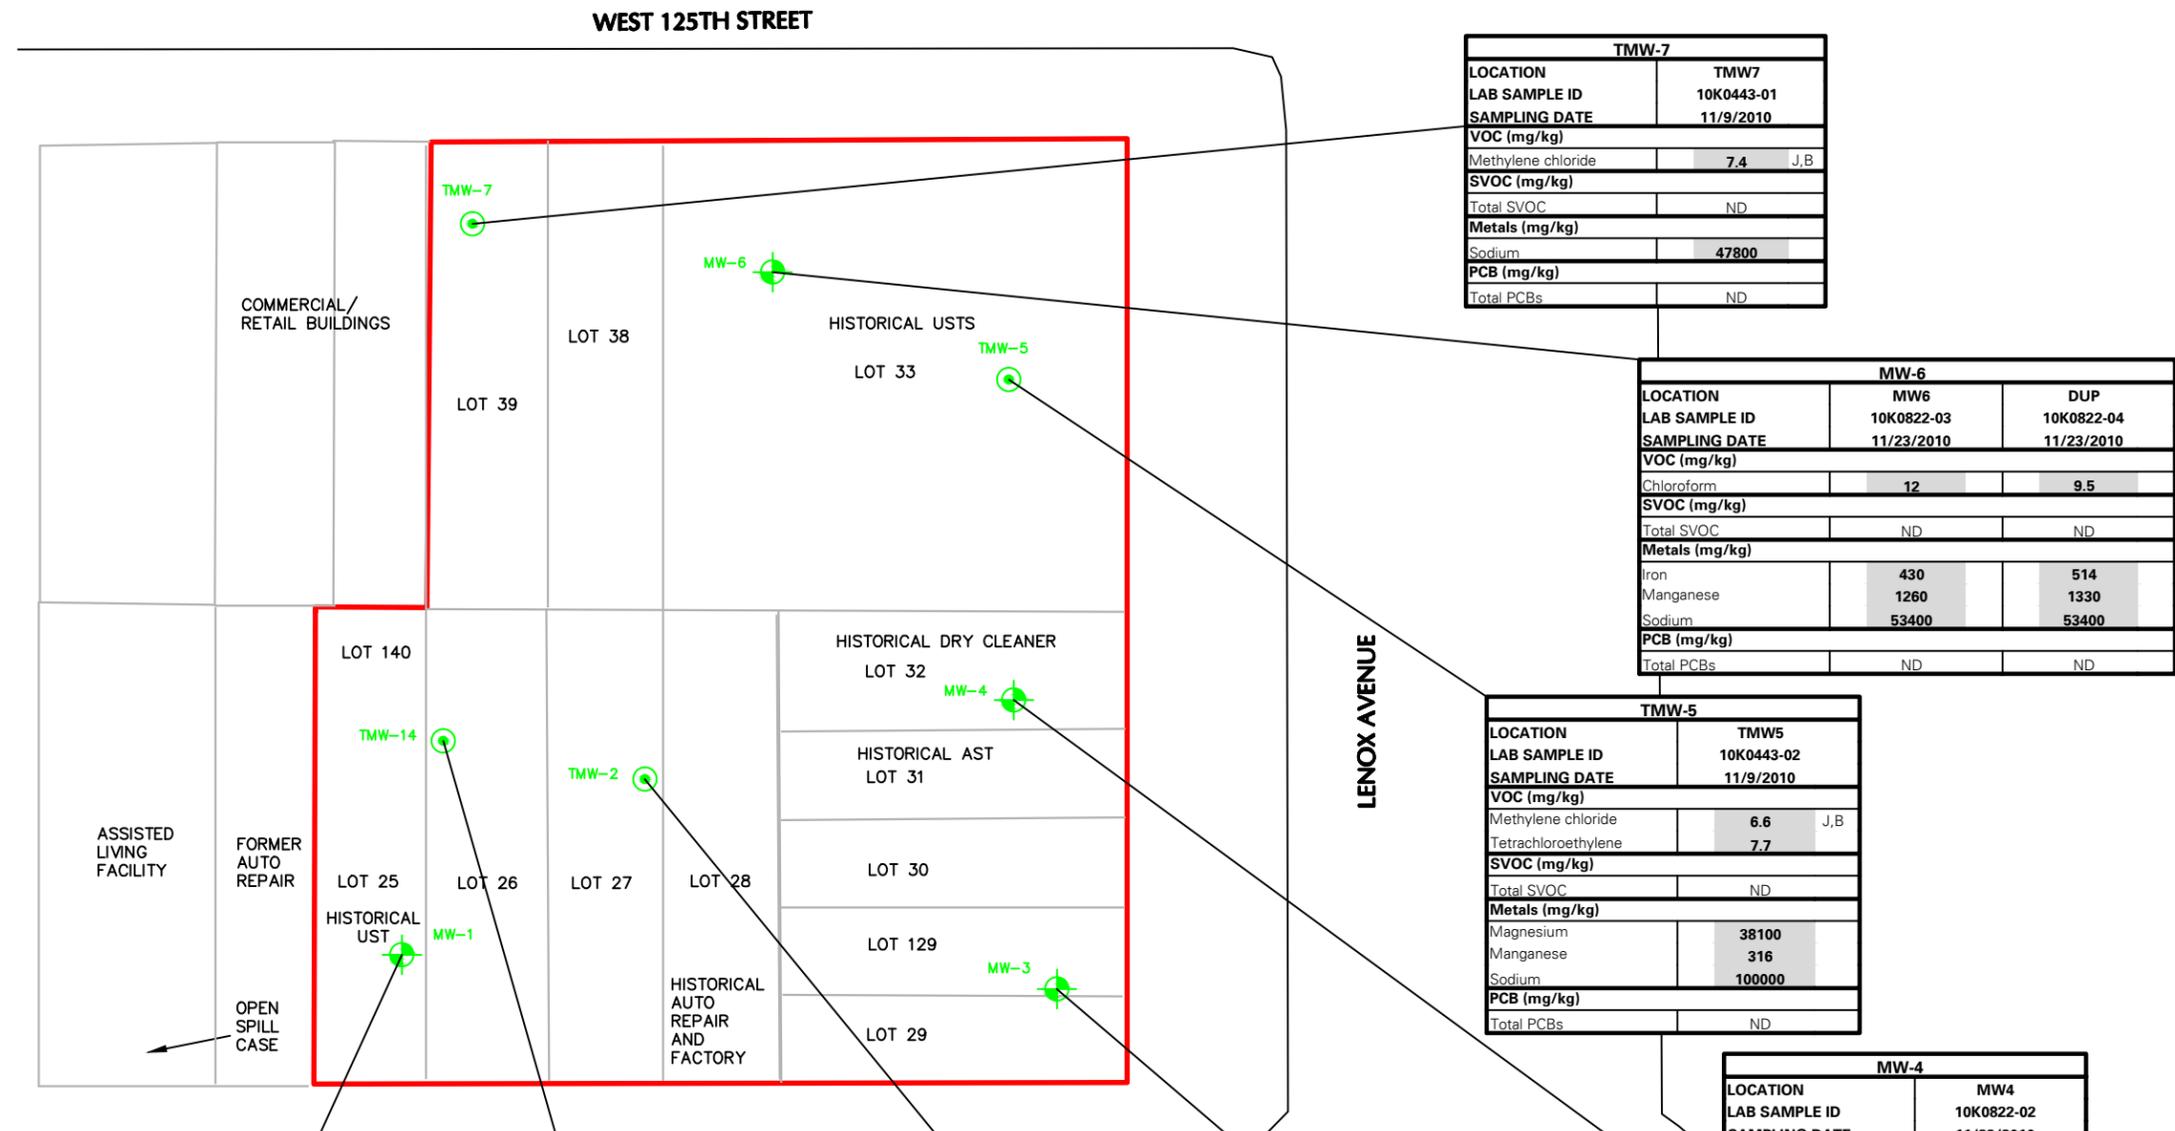

- RESULTS EXCEEDING NEW YORK STATE NYCRR PART 703.5 CLASS GA GROUNDWATER QUALITY STANDARDS ARE HIGHLIGHTED AND IN **BOLD**
- ONLY COMPOUNDS EXCEEDING NYS 6 NYCRR PART 703.5 CLASS GA GQS ARE PRESENTED
- VOC = VOLATILE ORGANIC COMPOUND
- SVOC = SEMIVOLATILE ORGANIC COMPOUND
- PCBs = POLYCHLORINATED BIPHENYLS
- µg/l = MICROGRAMS PER LITER
- NA = NOT ANALYZED
- ND = NOT DETECTED AT OR ABOVE THE REPORTING LIMIT
- NE = NO EXCEEDANCES
- B = ANALYTE FOUND IN THE ANALYSIS BATCH BLANK
- J = ANALYTE DETECTED AT OR ABOVE THE MDL (METHOD DETECTION LIMIT) BUT BELOW THE RL (REPORTING LIMIT)
- DATA IS ESTIMATED
- * THIS INDICATED THAT NO REGULATORY LIMIT HAS BEEN ESTABLISHED FOR THIS ANALYTE

Notes:

1. Soil sample results were compared to New York State Department of Environmental Conservation (NYSDEC) 6 NY Code of Rules and Regulations (NYCRR) PART 375-6 Unrestricted Use Soil Cleanup Objectives (SCOs), Residential Restrictive Use SCOs, and Commercial Restrictive Use SCOs.

2. NYSDEC Part 375 Unrestricted Use SCOs are highlighted.

3. NYSDEC Part 375 Residential Restrictive Use SCOs are in **Bold**.

4. NYSDEC Part 375 Commercial Restrictive Use SCOs are **bolded in italics and red**.

5. PCBs = polychlorinated biphenyls

6. mg/kg = milligrams per kilogram

Qualifiers:

D = Results for a diluted sample.

B = Analyte found in the analysis batch blank

U = Analyte was not detected at or above the reporting limit.

J = Detected above the Method Detection Limit but below the Reporting Limit; therefore, result is an estimated concentration

~ = No regulatory limit has been established for this analyte

Notes:

- Groundwater samples were compared to New York State NYCRR Part 703.5 Class GA Groundwater Quality Standards and Guidance Values.
- Results exceeding NYSDEC AWQS or Guidance Values are highlighted and in **BOLD**.
- With the exception of listed non-detections of PCBs, only detected compounds are presented.
- VOCs: Volatile Organic Compounds
- SVOCs: Semivolatile Organic Compounds
- PCBs: polychlorinated biphenyls
- µg/L = Micrograms per Liter
- NA = Not Analyzed

Qualifiers:

- U=analyte not detected at or above the level indicated
- B=analyte found in the analysis batch blank
- J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
- ND = Not detected at or above the reporting limit
- ~ = this indicates that no regulatory limit has been established for this analyte
- * = Value is a TOGS Guidance Value and not a standard

Notes and Qualifiers

- Results exceeding the New York State Department of Health (NYSDOH) Air Guideline Value (AGV) Exceedances are highlighted and **BOLD**.
- Ambient air sample results are less than all of the following background databases: NYSDOH Fuel Oil 2006; Upper Fence Value, U.S. Environmental Protection Agency (USEPA) Base Database 90th Percentile Indoor Air, and Health Effects Institute (HEI) 2005 95th Percentile Indoor Air
- Results exceeding all background databases are highlighted
- Reportable detection limits exceeding background databases or Guidance Values are italicized
- VOC = Volatile Organic Compound
- ug/m³: micrograms per cubic meter
- U=analyte not detected at or above the level indicated
- B=analyte found in the analysis batch blank
- J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
- D=result is from an analysis that required a dilution
- ~this indicates that no regulatory limit has been established for this analyte

EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, P.C. (Langan) was retained by Wharton Properties (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for an assemblage of properties on the city block located between 124th Street, 125th Street, Adam C. Powell Boulevard, and Lenox Avenue in the Harlem section of the borough of Manhattan, New York. The Subject Property consists of the following addresses: 281-291 Lenox Ave (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25, and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39). A site location map is provided as Figure 1.

The Subject Property is vacant land encompassing an approximate area of 32,410 square feet. Chain-linked fencing surrounds the Subject Property with a locked gate on West 124th Street. The planned redevelopment at the Subject Property includes construction of a 12-story building with one basement level.

This Phase I ESA was conducted in general accordance with the American Society for Testing Materials (ASTM) Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Properties of hazardous substances or petroleum products as defined in ASTM E1527-05 as a recognized environmental condition (REC).

The Phase I ESA identified the following RECs on the Subject Property:

REC 1 - Historical Site Usage

The following historical property uses were identified on the Subject Property:

- A milliner (hat making facility) was located at 297 Lenox Avenue in 1927;
- A tailor/cleaner was located at 291 Lenox Avenue in 1927;
- A dry cleaner was located at 289 Lenox Avenue (Lot 32) from 1956-1968; and
- 107 West 124th Street (Lot 28) was used as a factory in 1927 and an auto repair facility between 1978 and 2002.

Solvents, petroleum products, and/or other chemicals used during operations at these facilities may have adversely impacted soil and groundwater at the Subject Property through leaks or spills.

REC 2 - Evidence of Environmental Investigation

An abandoned temporary monitoring well was observed in the southwestern portion of the Subject Property indicating previous environmental investigation activities at the Subject Property.

REC 3 - Petroleum Bulk Storage

Based on a Phase I ESA prepared by Aaron Wright Technical Services, Inc. (Aaron Wright) in 2002, an active 5,000-gallon fuel oil tank and an abandoned 1,500-gallon fuel tank were observed in the basement of 291 Lenox Avenue (Lot 33). Both of these tanks were above ground and encased in concrete. An aboveground storage tank (AST) of unknown size was located in the basement of 287 Lenox Avenue (Lot 31). Aaron Wright did not have access to 289 Lenox Avenue (Lot 32) during their investigation; however, a vent pipe and fill port were located outside the building, indicating the presence of a fuel oil tank. Aaron Wright recommended that the tanks be removed and decommissioned according to applicable regulations.

The buildings at the Subject Property have been demolished and no evidence of the tanks is currently present; however, documentation pertaining to the closure of the tanks identified by Aaron Wright were not available. Potential leaks from the previously identified petroleum bulk storage tanks may have adversely impacted the soil and groundwater at the Subject Property; historical petroleum bulk storage tanks are considered a REC.

REC 4 – E Designation

Each of the lots that comprise the Subject Property are included on the New York City Department of Environmental Protection (NYCDEP) E Designation list. E-designations may indicate hazardous materials contamination or air and/or noise quality concerns. The inclusion of the Subject Property on the NYCDEP E Designation list is a REC.

The following RECs were identified at surrounding Properties:

REC 1 - Historic Use of Surrounding Properties

The following historical uses of surrounding properties are considered RECs:

- An auto repair and auto junk facility was located at 117-119 West 124th Street, a western adjoining property, between 1951 and 2003. Spills or leaks of petroleum products or solvents used at this facility may have adversely impacted groundwater at the Subject Property.
- A dry cleaner was identified at 275 Lenox Avenue, approximately 120 feet south (cross-gradient) of the Subject Property, between 1976 and 2005. The chlorinated solvent tetrachloroethylene (PERC or PCE) is commonly used during dry cleaning operations. Due to its proximity to the dry cleaner, inadvertent releases of PCE may have adversely impacted groundwater at the Subject Property.

REC 2 - Open Leaking Tank (LTANK) Incident at 152 West 124th Street

A tank test failure at this location, approximately 190 feet west (up-gradient) of the Subject Property, was reported to the New York State Department of Environmental Conservation (NYSDEC) on April 7, 1998 (NYSDEC Spill No. 9800366). The spill case is associated with a 2,000-gallon No. 2 fuel oil AST. Additional information was not provided. Aaron Aright stated in their 2002 Phase I ESA that this incident was not a concern; however, the incident remains open and cleanup activities have not met NYSDEC standards. Given its regulatory status, proximity, and up-gradient location relative to the Subject Property, this LTANK incident is considered a REC with respect to the Subject Property.

Asbestos, Lead, and Polychlorinated Biphenyl (PCBs)

Subject Property buildings have been demolished; the presence of asbestos-containing material (ACM), lead-based paint, and/or PCB-containing material is unlikely.

1.0 INTRODUCTION

Langan Engineering and Environmental Services, P.C. (Langan) was retained by Wharton Properties (the "User") to complete a Phase I Environmental Site Assessment (ESA) for an assemblage of properties on the city block located between 124th Street, 125th Street, Adam C. Powell Boulevard, and Lenox Avenue in the Harlem section of the borough of Manhattan, New York. The Subject Property consists of the following addresses: 281-291 Lenox Ave (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25, and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39).

The purpose of this ESA is to identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-05, which states:

"The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

1.1 Scope of the ESA

This ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-05. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-05 are noted in Section 9.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing readily available information and environmental data relating to the Subject Properties; reviewing readily available maps and records maintained by federal, state, and local regulatory agencies; interviewing readily available persons knowledgeable about the Subject Properties; and conducting a site visit. The specific scope of this assessment included the following:

1. A site reconnaissance to inspect on-site conditions and assess the location of the Subject Properties with respect to surrounding property uses and natural surface features. Photographs taken as part of the site reconnaissance are provided in Appendix A.
2. A review of the Owner/Operator/Site-Manager questionnaire. A copy is included as Appendix B.
3. A review of available previous environmental reports for the Subject Property. A copy of the reviewed reports are provided in Appendix C.
4. A review of readily available environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distance. The environmental database report is provided by Environmental Data Resources, Inc. (EDR) and a copy of the report is included in Appendix D.
5. Freedom of Information Act (FOIA) requests were sent to federal, state, and local agencies. Copies of the FOIA requests are included in Appendix E.
6. New York City Department of Buildings (NYCDOB) records and a Planning Commission Zoning Map were reviewed. Available NYCDOB records and the Zoning Map are included in Appendices F and G, respectively.
7. A review of physical characteristics of the Subject Properties through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Properties. Copies are included in Appendices H, I, J, and K, respectively.
9. A review of an Environmental Lien search for the Subject Properties. A copy of the environmental lien search report is included as Appendix L.
10. A review of published radon occurrence maps to evaluate whether the Subject Properties is located in an area with a propensity for elevated radon levels.

1.2 Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for Wharton Properties, for the Subject Property located at 281-291 Lenox Ave (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25 and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39) in Manhattan, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Subject Property addressed herein, or by any third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.2, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-05. Intrusive sampling (i.e. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Properties. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Subject Properties. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot "insure" or "certify" that the Subject Properties are free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-05 and are intended exclusively for the purpose stated herein, at the specified Subject Properties, as it existed at the time of our site visit.

2.0 SITE DESCRIPTION

2.1 Location and Description

The Subject Property consists of 12 lots on Tax Block 1909 , including: 281-291 Lenox Ave (Block 1909, Lots 29, 129, 30, 31, 32, and 33), 107-113 West 124th Street (Block 1909, Lots 28, 27, 26, 25, and 140), and 108-110 West 125th Street (Block 1909, Lots 38 and 39) in Manhattan, New York. Each of the lots are vacant and covered with vegetation, approximately 6 to 12 inches tall, and scattered demolition debris, including brick and concrete fragments. The proposed development of the Subject Property includes a 12-story commercial building with one basement level.

Based on visual observations of the surrounding area during the site reconnaissance, the Subject Property is located in an urban area characterized by multi-story residential and commercial buildings with ground-level retail and restaurants. According to the United States Geological Survey (USGS) Brooklyn Quadrangle 7.5-minute Series Topographic Map, the Subject Property is relatively flat and the surrounding area slopes gently towards the east. Groundwater at the Subject Property is presumed to flow east towards the Harlem River.

2.2 Current Use of the Subject Property

The Subject Property is currently vacant land, but was previously occupied by multi story residential buildings with ground-level commercial space. See Appendix A for site reconnaissance photographs.

2.3 Description of Site Improvements

Buildings at the Subject Property were previously demolished. Site improvements were not observed on the Subject Property during this Phase I ESA.

2.4 Current Use of Adjoining and Surrounding Properties

The Subject Property is bound by West 125th Street and a 10-story shopping center to the north, Lenox Avenue and multi-story residential buildings with ground-level retail space to the east, West 124th Street and multi-story residential buildings to the south, and a vacant lot and a 1-story retail building to the west. Beyond adjoining properties, the surrounding area is comprised primarily of multi-story residential and commercial buildings with ground-level retail space and restaurants.

3.0 USER PROVIDED INFORMATION

3.1 Previous Environmental Reports

Phase I ESA, dated June 13, 2002, prepared by Aaron Wright Technical Services, Inc.

According to the Phase I ESA prepared by Aaron Wright Technical Services, Inc (Aaron Wright), one five-story and eight four-story mixed use buildings, each with a basement and a rear yard, were located at the Subject Property. Basements contained mechanical rooms and storage areas, ground-level spaces were occupied by lobbies or retail/commercial space, and the upper floors were occupied by residential apartments. At the time of Aaron Wright's inspection of the Subject Property on May 30, 2002, an active 5,000 gallon fuel oil aboveground storage tank (AST) and an abandoned 1,500-gallon fuel AST were observed in the basement of 291 Lenox Avenue (Lot 33). Both ASTs were encased in concrete. An AST of unknown size was located in the basement of 287 Lenox Avenue (Lot 31). Aaron Wright did not have access to 289 Lenox Avenue (Lot 32) during their inspection; however, a vent pipe and fill port were located outside the building, indicating the presence of a petroleum bulk storage tank. Aaron Wright recommended that the tanks be removed and decommissioned according to applicable regulations. Documentation regarding the closure of tanks identified by Aaron Wright were not available. Potential leaks from identified tanks may have adversely impacted soil and groundwater at the Subject Property; therefore, the historical tanks are considered a REC.

Aaron Wright noted that 107 West 124th Street (Lot 28) was occupied by an auto repair facility in 1980; however, they concluded that this facility was not a REC because it was located on the first floor of the building with a basement level beneath it and they did not observe evidence of petroleum bulk storage tanks. Based on a review of City Directory listings, 289 Lenox Avenue (Lot 32) was identified as French Dry Cleaners (a first floor establishment) in 1970. Aaron Wright did not gain access to this building during their Site reconnaissance, but they concluded that this facility was not a REC because it was located on the first floor above a basement level. Based on the potential for the former auto repair facility at 107 West 124th Street and the former dry cleaner at 289 Lenox Avenue to impact the soil and groundwater at the Subject Property with solvents and petroleum products through former drainage systems, Langan considers both of these former facilities a REC.

Aaron Wright also noted a leaking under ground storage tank incident (LTANK) that occurred on April 7, 1998 at 152 West 124th Street, approximately 300 feet west of the Subject Property.

They concluded that this incident was not a REC as groundwater was not impacted. This determination appears to be based on information in the EDR report provided to Aaron Wright that stated that impacts to ground water were "not reported." According to the EDR Report provided to Langan to complete this Phase I ESA, this LTANK incident remains open and NYSDEC clean up standards were not met. Based on this site's close proximity to the Subject Property and the current regulatory status, this LTANK incident is considered a REC in relation to the Subject Property.

Tank Closure Report, dated February 2008, prepared by Don Carlo Environmental Services

This Tank Closure Report stated that Don Carlo Environmental Services (DCES) removed a 550-gallon No. 2 fuel oil underground storage tank (UST) from 293 Lennox Avenue. The report includes a location map that shows the UST was actually located in the southwestern corner of the Subject Property along West 124th Street. According to the report, DCES excavated to the top of the tank, cut the top of the tank, and pumped the tank contents into a 55-gallon drum. The tank was then excavated, cut, cleaned, and shipped off-site as scrap metal. The DCEC report did not specify where the 55-gallon drum containing the contents of the removed UST was shipped to. The report stated that notification was not sent to the NYSDEC – Petroleum Bulk Storage (PBS) Unit because the total tank capacity was less than 1,100 gallons.

Soil around the tank was screened for visual signs of a petroleum release and for total organic vapors with a photoionization detector (PID). Stained soil was not documented PID readings of 0.0 parts per million (ppm) were measured. Five endpoint soil samples were collected from the tank excavation and were analyzed for NYSDEC Spill Technology and Remediation Series (STARS) volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Results were below NYSDEC Technical and Administrative Guidance Memo (TAGM) Recommended Soil Cleanup Objectives (RCOs), with the exception of the SVOC benzo (a) pyrene. This SVOC was detected in all five endpoint samples at concentrations ranging from 210 to 310 micrograms per kilogram ($\mu\text{g}/\text{kg}$), which are marginally above the TAGM RSCO of 61 $\mu\text{g}/\text{kg}$. DCES concluded that no further assessment was needed in the area of the removed UST. The marginally elevated concentrations of benzo(a)pyrene relative to the TAGM RSCO in endpoint samples collected by DCES are typical of historic urban fill material and are not considered a REC; however, the absence of documentation reporting proper closure of the ASTs identified by Aaron Wright is considered a REC.

A copy of the previous environmental reports is included in Appendix C on CD.

3.2 Title Records

Langan researched prior ownership records and environmental conditions for the Site at www.propertyshark.com/mason/nyc/index.html. Property shark listed 125th & Lenox LLC as the owner of all Subject Property lots, except for 113 West 124th Street, which is owned by 113 West 124th Street LLC. The following table lists available deed transaction information for the Site.

Document Date	First Party	Second Party
291 Lenox Avenue (Lot 33)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
289 Lenox Avenue (Lot 32)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
287 Lenox Avenue (Lot 31)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
7/31/1985	Commissioner Of Finance	City Of New York
285 Lenox Avenue (Lot 30)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
283 Lenox Avenue (Lot 129)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
281 Lenox Avenue (Lot 29)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
107 W 124th Street (Lot 28)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	

Document Date	First Party	Second Party
109 W 124th Street (Lot 27)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
111 W 124th Street (Lot 26)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
113 W 124th Street (Lots 25 and 140)		
1/7/2004	Lande Realty Corporation	113 West 124TH Street LLC
1989	City Of New York	Lande Realty Corp
1974	Ro-Malik EnterprisesLtd	Harlem Reliance Systems
1974	City Of New York	Ro-Malik Enterprises Ltd
1972	Finance Admstr Cty Of NY	City Of New York
108 W 125th Street (Lot 38)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	
110 W 125th Street (Lot 39)		
7/10/2002	Juneglory Realty Corporation	125TH & Lenox LLC
	Juneglory, Inc.	

The review of ownership information did not indicate RECs at the Site.

3.3 User and Owner/Operator Questionnaire

As per the ASTM E1527-05 guidance, questionnaires were provided to the User/Owner in order to obtain specialized User knowledge. The questionnaires were completed by Andrew Lester, Director of Construction at Wharton Properties. The completed questionnaires did not provide any significant information regarding the Subject Property that would alter the conclusions of this report. The completed questionnaires are provided as Appendix B.

4.0 RECORDS REVIEW

4.1 Environmental Records

Regulatory database information was provided by EDR and is included in Appendix D on a CD. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-05. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the sites identified represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites identified in standard and additional environmental record databases, within the prescribed search radius and appearing in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Site listed	Number of Sites Within Minimum Search Area
USEPA DATABASES			
National Priorities List (NPL) (3/31/2010)	1 Mile Radius	No	0
Delisted NPL (3/31/2010)	1/2 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS No Further Remediation Action Planned (NFRAP) (1/23/2010 and 6/23/2009, respectively)	1/2 Mile Radius	No	0
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (3/25/2010)	1 Mile Radius	No	1
RCRA Treatment, Storage, and Disposal Facilities (TSDF) (2/17/2010)	1/2 Mile Radius	No	0
RCRA Large Quantity Generators (RCRA-LQG) (2/17/2010)	Subject Property and Adjoining	No	0

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Site listed	Number of Sites Within Minimum Search Area
RCRA Small Quantity Generators (RCRA-SQG) (2/17/2010)	Subject Property and Adjoining	No	0
Facility Information System (FINDS) Database (4/14/2010)	Subject Property	No	0
Environmental Response Notification System (ERNS) (12/31/2009)	Subject Property	No	0
Engineering Controls (EC) Sites Lists (12/20/2009)	Subject Property	No	0
Institutional Controls (IC) Sites Lists (12/20/2009)	Subject Property	No	0
NYSDEC DATABASES			
Hazardous Waste Disposal Sites (SHWS) and Delisted SHWS (5/24/2010)	1 Mile Radius	No	1
Hazardous Substance Waste Disposal Site Inventory (HSWDS) (1/1/03)	1/2 Mile Radius	No	0
Solid Waste or Landfill Facilities (SWF/LF) (4/13/2010)	1/2 Mile Radius	No	0
LTANKS (5/24/2010)	1/2 Mile Radius	No	69
SPILLS Information Database (NY SPILLS) (5/24/2010)	1/8 Mile Radius	Yes	23
EC Sites Lists (5/24/2010)	Subject Property	No	0
IC Sites Lists (5/24/2010)	Subject Property	No	0
Voluntary Cleanup Program (VCP) (5/24/2010)	1/2 Mile Radius	No	0
Brownfields (5/24/2010)	1/2 Mile Radius	No	1
Chemical Bulk Storage (CBS) Underground storage tank (UST) and aboveground storage tanks (AST) Databases (1/1/2002)	Subject Property and Adjoining	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases (01/01/2002)	Subject Property and Adjoining	No	0
Registered and Historical Drycleaners (DRYCLEANERS) (3/23/2010)	1/4 Mile Radius (N/A)	No	1

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Site listed	Number of Sites Within Minimum Search Area
Petroleum Bulk Storage Facilities (PBS) UST and AST Databases (4/6/2010)	Subject Property and Adjoining	No	1
EDR (PROPRIETARY) DATABASES			
EDR Former Manufactured Gas Plant (MGP) Sites (N/A)	1 Mile Radius (N/A)	No	1

N/A Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-05.

A description of the databases reviewed is provided in the EDR Report (Appendix C). A summary of sites identified within the prescribed search area is presented below:

4.1.1 Federal Agency Database Findings

RCRA Corrective Action Facilities

RCRA Corrective Action Facilities list (CORRACTS) identifies hazardous waste handlers with RCRA corrective action activity. As per ASTM E1527-05, the approximate minimum search distance required for CORRACTS facilities is within one mile of the Subject Property. The Subject Property was not listed in the RCRA-CORRACTS database; however, one RCRA-CORRACTS facility was identified within the search radius. The identified facility is located more than 4,600 feet from the Subject Property at a topographically cross-gradient location, and is not considered a REC.

Other Federal Databases

No NPL, Delisted NPL, Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal Facilities (TSDF), RCRA Generators, Emergency Response Notification System (ERNS), FINDS, Engineering Controls (EC), or Institutional Controls (IC) sites were listed within their respective minimum search distances as specified by ASTM E1527-05.

4.1.2 State Agency Database Findings

Inactive Hazardous Waste Disposal Sites

New York State maintains a list of Inactive Hazardous Waste Disposal Sites (HSWS). As per ASTM E1527-05, the approximate minimum search distance required for HSWS facilities is within one mile of the Subject Property. The Subject Property was not listed in the HSWS database; however, one HSWS facility was identified within the required search distance. The identified facility is approximately 4,400 feet northeast from the Subject Property at a topographically down-gradient location, and is not considered a REC.

Leaking Underground Storage Tanks Database

The Leaking Storage Tanks (LTANKS) database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The primary causes of the LTANK incidents include tank test failures, tank failures, and tank overfills. As per ASTM E1527-05, the approximate minimum search distance required for LTANK incidents is within ½ mile of the Subject Property. The Subject Property was not listed in the LTANK database; however, 69 LTANKS sites were identified within 1/2 mile of the Subject Property. Of the listed LTANK sites, 68 have been closed, are located topographically cross- or down-gradient from the Subject Property, and/or are located more than 1,900 feet from the Subject Property. Details of an active and topographically up-gradient LTANK site are summarized below:

- **Site Name:** 152 West 124th Street
- **Site Address:** 152 West 124th Street
Spill Number: 9800366
- **Location:** This site is located approximately 190 feet west - northwest and topographically up-gradient relative to the Subject Property.

Details: A tank test failure was reported while testing a 2,000-gallon No. 2 fuel oil AST at this location on April 7, 1998. Additional information was not provided. Aaron Wright stated in their 2002 Phase I ESA that this incident was not a concern; however, the incident remains open and cleanup activities have not met NYSDEC standards. Given its regulatory status, close proximity, and up-gradient location relative to the Subject Property, this LTANK incident is considered a REC.

Spills Database

The Spills database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to NYSDEC. As per ASTM E1527-05, the approximate minimum search distance required for spills is within 1/8-mile of the Subject Property. According to EDR, 23 reported spill incidents were located within 1/8 mile of the Subject Properties. One of the identified spills was listed at 104 West 125th Street, which is located at the Subject Property. This incident occurred on May 3, 2001 in a Con Edison Vault when transformer fluid leaked. The spilled material was contained and cleaned up, subsequently closed on September 9, 2004, and is not considered a REC. The remaining 22 spill incidents reported were each granted closed status by the NYSDEC and are not considered RECs.

Brownfields

The Brownfields list includes any real property where development or re-use may be complicated by the presence or potential presence of hazardous waste, petroleum, or other contaminants. As per ASTM E1527-05, the approximate minimum search distance required for Brownfield sites is within ¼-mile of the Subject Property. The Subject Property was not listed in the Brownfields database. One Brownfield site was identified within ½ mile of the Subject Property; however, this facility is located more than 2,000 feet east, southeast of the Subject Property, at a topographically down-gradient location, and is not considered a REC.

Petroleum Bulk Storage Facilities (PBS) UST and AST Databases

The PBS database is a listing of USTs and ASTs registered with the NYSDEC. The required search radius for PBS facilities is the Subject Property and adjoining properties. Petroleum bulk storage tanks were not identified at the Site; however, according to previous reports by Aaron Wright's and DCES (see Section 3.1) at least 3 ASTs and 1 UST were present. In addition, evidence of an additional tank was observed by Aaron Wright in 2002. Aaron Wright recommended that the identified tanks be decommissioned as per NYSDEC regulation prior to demolition. The buildings at the Subject Property have been demolished and Langan is only aware of closure documentation for the removal of a 550-gallon UST in the southwest corner of the Subject Property in February 2008 by DCES. Historic unregistered petroleum bulk storage tanks at the Subject Property, and the absence of appropriate associated closure documentation, are considered a REC.

One adjoining property was included in the UST database and is described below:

Site Name: Harlem Center

Site Address: 105 West 125th Street

Location: This site adjoins the Subject Property to the north across West 125th Street.

Details: Two 1,000-gallon USTs and one 3,000-gallon UST were closed and removed from this location between 2001 and 2003. Following tank removal, impacted soil was removed and endpoint samples were collected, which were deemed satisfactory by the NYSDEC. As the tanks have been removed and the soil left in place at this facility did not appear to be petroleum-impacted; historical petroleum bulk storage at this adjoining property is not considered a REC.

Registered and Historical Drycleaners

This database includes the listing of all registered dry cleaning facilities. One dry cleaner was identified within one-quarter mile of the Subject Property. The identified dry cleaner is located more than 800 feet south of the Subject Property at a topographically cross-gradient location, and is not considered a REC.

Other State Databases

No Solid Waste Facilities or Landfill (SWF/LF), Hazardous Substance Waste Disposal (HSWDS), Voluntary Cleanup Program (VCP), EC, IC, Chemical Bulk Storage (CBS) UST and AST, or Major Oil Storage Facilities (MOSF) UST and AST were listed within their respective minimum search distances as specified by ASTM E1527-05.

4.1.3 Other Database Findings

Manufactured Gas Plant (MGP) Sites

The Manufactured Gas Plant (MGP) Sites database is a proprietary database that includes records of manufactured coal gas plants compiled by EDR. One MGP site was identified within a one-mile radius of the Subject Property. This facility is located approximately 4,800 feet from the Subject Property and is not considered a REC.

E-Designated sites

The New York City Department of Environmental Protection (NYCDEP) maintains a list of E-designated sites. E-designations may indicate hazardous materials contamination or air and/or noise quality concerns. Each of the Subject Property lots were identified with E-designations. The below table presents a summary of the E-designation associated with each Subject Property lot:

Lot (address)	Window Wall Attenuation - Alternative Ventilation	Underground Gasoline Storage Tank Testing Protocol	Air Quality – No. 2 Fuel Oil or Natural Gas Heat and Hot Water	Exhaust Stack Location Limitations
Lot 33 (291 Lenox Avenue)	X	X		
Lot 38 (108 West 125-Street)	X	X	X	X
Lot 39 (110 West 125-Street)	X	X	X	X
Lot 32 (289 Lenox Avenue)	X	X	X	X
Lot 31 (287 Lenox Avenue)	X	X	X	X
Lot 30 (285 Lenox Avenue)	X	X	X	X
Lot 129 (283 Lenox Avenue)	X	X	X	X
Lot 29 (281 Lenox Avenue)	X	X		X
Lot 28 (107 West 124-Street)	X	X	X	X
Lot 27 (109 West 124-Street)	X	X	X	X

Lot (address)	Window Wall Attenuation - Alternative Ventilation	Underground Gasoline Storage Tank Testing Protocol	Air Quality – No. 2 Fuel Oil or Natural Gas Heat and Hot Water	Exhaust Stack Location Limitations
Lot 25 and 140 (113 West 124 Street)	X	X	X	X
Lot 26 (111 West 124 Street)	X	X	X	X

Each of the above listed E-designations was listed in category E-201 and issued in April, 2008. The listing of lots that comprise the Subject Property on the NYCDEP E Designation list is considered a REC.

4.1.4 Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC; and
- USEPA, Region 2.

FOIA requests were sent on July 26, 2010. In a response from the NYCDEP dated August 6, 2010, the NYCDEP stated that they found no relevant records pertaining to the Subject Property. As of the date of this report, no other FOIA response have been received. Should any future responses alter the conclusions provided within this report, we will issue modified conclusions as an addendum to this report. Copies of the FOIA requests are included in Appendix E.

NYCDOB

Langan conducted a records search through the NYCDOB online query system on August 10, 2010. The Subject Property was listed with several "E" designations, which are described in more detail in section 4.1.2 above. Below is a summary of the information available on the NYCDOB web site regarding the Subject Property:

Lot 33 (291 Lenox Avenue)

Lot 33 (291 Lenox Avenue) is classified as "V1-vacant land" with 3 buildings previously located on the lot. A certificate of occupancy (CO), dated April 9, 1964, for this lot indicated a boiler room/storage area in the basement, stores on the ground level, and apartments on floors 2 – 4. A commercial low pressure boiler was previously located on the lot.

Lot 38 (108 West 125th Street)

Lot 38 (108 West 125th Street) is classified as "V1-vacant land." One building was previously located on this lot, which currently has a Stop Work Order associated with it for "demolition-unsafe/illegal/mechanical demo," issued on October 3, 2008. CO and boiler records were not found.

Lot 39 (110 West 125th Street)

Lot 39 (110 West 125th Street) was classified as "V1-vacant land" with one building previously located on the Lot. A Stop Work Order was issued for the Lot on October 3, 2008 for "demolition-unsafe/illegal/mechanical demo." CO and boiler records were not found.

Lot 32 (289 Lenox Avenue)

Lot 32 (289 Lenox Avenue) was classified as "V1-vacant land" with one building previously located on the Lot. A CO, dated January 14, 1949, indicated storage in the basement and stores on the ground-level. Boiler records were not found.

Lot 31 (287 Lenox Avenue)

Lot 31 (287 Lenox Avenue) was classified as "V1-vacant land" with one building previously located on the Lot. A CO, dated January 20, 1948, indicated storage in the basement and a store on the ground-level. Boiler records were not found.

Lot 30 (285 Lenox Avenue)

Lot 30 (285 Lenox Avenue) was classified as "V1-vacant land" with one building previously located on the Lot. CO and boiler records were not found.

Lot 129 (283 Lenox Avenue)

Lot 129 (283 Lenox Avenue) was classified as "V1-vacant land" with one building previously located on the Lot. CO and boiler records were not found.

Lot 29 (281 Lenox Avenue)

Lot 29 (281 Lenox Avenue) was classified as "V1-vacant land" with one building previously located on the Lot. A multi-unit low-pressure boiler was listed in the basement of the former building. There are no structures currently located at the Subject Property; however, the Subject Property is incorrectly associated with an active boiler by the NYCDOB. CO documents were not available.

Lot 28 (107 West 124th Street)

Lot 28 (107 West 124th Street) was classified as "V1-vacant land" with one building previously located on the Lot. A CO dated April 13, 1927 indicated a laundry facility in the basement and ground-level and a factory on floors 2 - 5. A second CO, dated December 22, 1930, indicated a storage area and boiler room in the basement, a 5-car auto garage on the ground-level, and storage facilities on floors 2 – 5. Boiler records were not found.

Lot 27 (109 West 124th Street)

Lot 27 (109 West 124th Street) was classified as "V1-vacant land" with no indications of previous structures.

Lot 26 (111 West 124th Street)

Lot 26 (111 West 124th Street) was classified as "V1-vacant land" with no indications of previous structures.

Lot 25 and Lot 140 (113 West 124th Street)

Lot 25 (113 West 124th Street) was classified as "V1-vacant land" with no indications of previous structures. Lot 140 was not listed on the on the NYCDOB website.

Each of Subject Property lots are included in the special 125th Street District and were identified as E-restricted for hazmat/noise/air. No outstanding Environmental Control Board violations were listed for the Subject Property. Historical use of Lot 28 as a factory is considered a REC as solvents, petroleum products, other chemicals used at this facility may have adversely impacted soil and groundwater at the Subject Property through leaks or spills. In addition, the inclusion of lots that comprise the Subject Property on the NYCDEP E Designation list is considered a REC. Copies of the available NYCDOB records are provided in Appendix F.

Zoning Department

According to the New York City Planning Commission Zoning Map 6a, the Subject Property is located in a C6-3 commercial district with a C4-4D overlay on the southern portion of the Subject Property. According to the zoning map, the Subject Property is E-designated within category E-201 by the NYCDEP. E-designations associated with the Subject Property are discussed in detail in section 4.1.2 above. The subject Property is located within the Special 125th Street District. Development projects within this district should comply with Zoning Resolution, Article IX: Special Purpose Districts, Chapter 7: Special 125th Street District. A copy of the zoning map and resolution is provided in Appendix F.

4.2 Physical Setting Sources

4.2.1 Topography

Based on the USGS Brooklyn Quadrangle Topographic Maps (7.5-minute series), the elevation of the Subject Property is approximately 25 feet above mean sea level (MSL). The topography of the Subject Property is generally flat, and the surrounding area slopes gently towards the east.

4.2.2 Geology

Geological surface features (e.g., rock outcroppings) were not observed on the Site. Soil and bedrock stratigraphy throughout Manhattan typically consists of a layer of historical fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a review of the "Bedrock and Engineering Geologic Maps of New York County and parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" (Baskerville Map), dated 1994 and prepared by Charles A. Baskerville, the Site is underlain by

bedrock of the Inwood Marble and Hartland Formations, which consists of white calcite-dolomite marble and coarse-grained siliceous dolomite. Based on geotechnical investigations conducted by Langan in the vicinity of the Site, bedrock at the Site is estimated to be between 100 and 150 feet below surface grade.

4.2.3 Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

Based geotechnical investigations performed by Langan in the vicinity of the Subject Property, groundwater at the Subject Property is expected to be between 20 and 25 feet bgs. Groundwater is presumed to flow east toward the Harlem River. Except for parts of Jamaica, Queens, groundwater in the New York City area is not used as a potable water source. Potable water is provided to the Subject Property by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

4.3 Historical Use Information

Langan reviewed available historic resources (including aerial photographs, Sanborn and topographic maps, and city directories) dated 1902 to 2006. Findings of the reviews are presented below.

4.3.1 Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1954, 1966, 1975, 1984, 1994, and 2006. Copies of aerial photographs are included in Appendix H. Pertinent findings are summarized in the below table:

HISTORICAL AERIAL PHOTOGRAPH SUMMARY	
YEAR	COMMENTS

HISTORICAL AERIAL PHOTOGRAPH SUMMARY	
YEAR	COMMENTS
1954	<p>Subject Property: The Subject Property is improved with several multi-story buildings.</p> <p>Surrounding Area: The surrounding area is a fully developed urban area comprised of multi-story residential and commercial buildings. Two parks are located approximately 500 feet southeast and 1,800 west of the Subject Property.</p>
1966	<p>Subject Property: The Subject Property is relatively unchanged from the previous aerial photograph</p> <p>Surrounding Area: The surrounding area is primarily unchanged from the previous photo, except that some of the smaller residential properties in the area have been redeveloped as larger commercial buildings.</p>
1975	<p>Subject Property: The Subject Property is relatively unchanged from the previous aerial photograph.</p> <p>Surrounding Area: Surrounding properties appear primarily the same except for the redevelopment of the block immediately north of the Subject Property, including the demolition of several buildings leaving vacant land, and the construction of a high-rise building.</p>
1984	<p>Subject Property: The southwestern portion of the Subject Property now appears vacant. The remainder of the property appears primarily unchanged.</p> <p>Surrounding Area: Surrounding properties appear primarily unchanged from the previous photo.</p>
1994	Details of the Subject Property and surrounding area are indiscernible due to the poor quality of the photo.
2006	<p>Subject Property: The Subject Property is relatively unchanged from the 1984 photograph.</p> <p>Surrounding Area: Surrounding properties appear primarily unchanged from the 1984 photograph, except that the northern adjoining property across West 125th Street has been redeveloped as a large commercial building.</p>

Langan's review of the aerial photographs did not identify RECs at the Subject Property or any of the surrounding properties.

4.3.2 Sanborn Fire Insurance Maps

Langan reviewed Sanborn Maps for the Subject Property for the years 1902, 1912, 1951, 1976, 1978, 1980, 1985, 1986, 1988, 1989, 1991-1996, and 2001-2005. Sanborn Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Copies of the maps are provided in Appendix I. A summary of the Sanborn Maps is presented the table below.

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1902	<p>Subject Property: The Subject Property is occupied by 16 3-to 4-story residential buildings and four 1-story sheds and/or garages.</p> <p>Surrounding Area: The surrounding properties are mostly developed with multi-story residential buildings, hotels, social clubs, storage facilities, schools, and commercial businesses.</p>
1912	<p>Subject Property: The Subject Property is occupied by 13 2-to 5-story residential buildings, each with a basement. Buildings along 125th Street and Lenox Avenue have ground-level retail stores.</p> <p>Surrounding Area: Surrounding properties are primarily occupied by residential buildings, offices, stores, hotels, a department store, bakeries, warehouses, schools, carpenters, and furniture and upholstery stores. A subway station is shown at the intersection of 125th Street and Lenox Avenue. A sign painting facility and an iron works facility were located at 119 and 123 West 124th Street, respectively.</p>
1951	<p>Subject Property: The Subject Property is relatively unchanged, except that the 5-story building at 107 West 124th Street is now used for furniture storage and a 1-story building of unspecified use is located on Lot 140.</p> <p>Surrounding Area: Surrounding properties are primarily occupied by residential buildings, offices, stores, churches, laundry facilities, warehouses, storage facilities, commercial businesses, and social clubs. An auto repair facility was located at 119 West 124th Street, approximately 25 feet west of the Subject Property.</p>
1976	<p>Subject Property: The Subject Property appears the same as the 1951 map, except that the buildings at 109 and 113 West 124th Street and on Lot 140 were demolished and the lots are now vacant. Use is no longer specified for the building at 107 West 124th Street.</p> <p>Surrounding Area: Surrounding properties appear primarily the same as in the 1951 Sanborn map except that several properties on the block bound by West 125th and West 126th Street and Lenox and Seventh Avenues were demolished and redeveloped as a parking facility and state offices. A dry cleaner is now located at 275 Lenox Avenue, and an auto junk facility is now located at 117 West 124th Street, adjacent to the auto repair shop at 119 West 124th Street.</p>
1978 and 1980	<p>Subject Property: The Subject Property is relatively unchanged except that an auto repair facility is located on the 1st floor of the building at 107 West 124th Street and the building at 111 West 124th Street has been demolished, leaving 109-113 West 124th Street vacant.</p> <p>Surrounding Area: Surrounding properties are primarily unchanged from the 1976 Sanborn map, except that the northern adjoining properties appear vacant in 1980.</p>
1985, 1986, 1988, 1989, 1991-1996, and 2001-2002	<p>Subject Property: The Subject Property is relatively unchanged, except for commercial use indicated at 110 West 125th Street.</p> <p>Surrounding Area: Surrounding properties are primarily unchanged from the</p>

SANBORN MAP SUMMARY	
YEAR	COMMENTS
	1980 Sanborn map.
2003- 2005	Subject Property: The Subject Property is relatively unchanged, except that the 5-story building with an auto repair facility at 107 West 124 th Street has been demolished leaving the lot vacant. Surrounding Area: Surrounding properties are primarily unchanged from the 2002 Sanborn map, except that the auto repair facility and auto junk yard at 117-119 West 124 th Street are no longer present.

Langan's Sanborn Map review revealed the Subject Property was developed with multi-story residential buildings with basements as early as 1902. Ground-level stores or commercial businesses were located in the buildings along 125th Street and Lenox Avenue. An auto repair facility was located on the first floor of the building at 107 West 124th Street from 1978-2002. Leaks or Spills of petroleum products or solvents used during operations at the auto repair facility at the Subject Property may have adversely impacted the soil and groundwater at the Subject Property.

According to the Sanborn Map review, surrounding properties were primarily occupied by residential buildings (some with ground-level stores), offices, parking facilities, garages, hotels, schools, churches, and other commercial buildings. The following RECs were identified on surrounding properties:

- An iron works facility was located at 123 West 124th Street, approximately 75 feet west of the Subject Property, in 1912. In addition, a sign painting facility was located at 119 West 24th Street, approximately 25 feet from the Subject Property in 1912. Spills or leaks of petroleum products used at these facilities may have impacted groundwater at the Subject Property.
- An auto repair/auto junk yard was located at 117-119 West 124th Street, which adjoins the Subject Property to the west, between 1951 and 2003. Spills or leaks of petroleum products or solvents used at this facility may have adversely impacted groundwater at the Subject Property.
- A dry cleaner was identified at 275 Lenox Avenue, approximately 120 feet south of the Subject Property, between 1976 and 2005. The chlorinated solvent tetrachloroethylene (PERC or PCE) is commonly used during dry cleaning operations. Due to the proximity

of the dry cleaner to the Subject Property, inadvertent releases of PCE may have adversely impacted groundwater at the Subject Property.

4.3.3 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject Property for the years 1897, 1947, 1966, 1979, and 1995. Copies of the topographic maps are provided in Appendix J. Pertinent findings are summarized in the flowing table.

HISTORICAL USGS TOPOGRAPHIC QUADRANGLE MAP SUMMARY	
YEAR	COMMENTS
1897	<p>Subject Property: The Subject Property is located on a block that appears to be fully developed with buildings.</p> <p>Surrounding Area: The area surrounding the Subject Property is a fully developed street grid. A park is located approximately 550 feet southeast of the Subject Property and the Harlem River is located approximately 3,000 feet to the east.</p>
1947	<p>Subject Property: The Subject Property appears relatively unchanged. Elevation is the Site is between 20 and 40 feet above mean sea level (msl).</p> <p>Surrounding Area: The surrounding properties appear relatively unchanged, except that the park to the southeast of the Site is identified as Mount Morris Park and Morning Side Park and Columbia University are shown approximately three and five blocks west of the Subject Property, respectively.</p>
1966, 1979, and 1995	<p>Subject Property: The Subject Property appears relatively unchanged, except that the elevation is now shown as approximately 25 feet above msl, indicating that the area was resurveyed.</p> <p>Surrounding Area: The surrounding properties appear relatively unchanged, except several schools and churches are noted throughout the surrounding areas.</p>

Langan's review of historical topographic maps identified that the Subject Property and surrounding area have been developed since at least 1897. No RECs were identified relative to the Subject Property.

4.3.4 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1920 through 2006. A copy of the City Directory Abstract is provided in Appendix K. A summary of the City Directory Abstract is presented in the following table.

CITY DIRECTORY SUMMARY		
YEAR	LISTED ADDRESS	OCCUPANT(S)
1920	Subject Property	Subject Property was not listed.
	Surrounding Properties	Surrounding Properties were not listed
1923	Subject Property	Subject Property was not listed.
	Surrounding Properties	Surrounding Properties were not listed
1927	Subject Property	Subject Property was listed as residences, a meat market, detective agency, bakery, cigar store, window cleaners, a pub, a real estate office, Citizens Liberty League, Dentists office and Dental Lab, Kalkulator Sam Millinery (hat making facility) (297 Lenox Avenue), a fur shop, and a knitting store.
	Surrounding Properties	Surrounding Properties were listed as residences, stores, a dental lab, restaurants, and other commercial businesses.
1931	Subject Property	The Subject Property was listed as residences.
	Surrounding Properties	Surrounding properties were listed as residences.
1938	Subject Property	The Subject Property was listed as a meat market and a pharmacy.
	Surrounding Properties	Surrounding properties were listed as residences.
1942	Subject Property	The Subject Property was listed as a pharmacy.
	Surrounding Properties	Surrounding properties were not listed.
1956	Subject Property	The Subject Property was listed as residences and Cola French Dry Cleaners (289 Lenox Avenue).
	Surrounding Properties	Surrounding properties were listed as residences and a lounge.
1958	Subject Property	The Subject Property included residences, Cola French Dry Cleaners (289 Lenox Avenue), United Tailoring and Cleaning Company (291 Lenox Avenue), and a restaurant/lounge.
	Surrounding Properties	Surrounding properties were listed as residences, offices, and a lounge.
1963	Subject Property	The Subject Property listings included residences, Cola French Dry Cleaners (289 Lenox Avenue), stationary store, and a restaurant.
	Surrounding	Surrounding properties were listed as residences, offices,

CITY DIRECTORY SUMMARY		
YEAR	LISTED ADDRESS	OCCUPANT(S)
	Properties	stores, restaurants, and Stanley's Cleaning and Dyeing (286 Lenox Avenue).
1968	Subject Property	The Subject Property listings included residences, a supermarket, snack bar, Josh French Dry Cleaners (289 Lenox Avenue), Puff by Pinkie, and an insurance company.
	Surrounding Properties	Surrounding properties were listed as residences, upholsterer, Stanley's Cleaning and Dyeing (286 Lenox Avenue), and offices.
1973	Subject Property	The Subject Property listings included residences, Allied Custom Hatters, Triple Variety Corp, Powder Puff by Pinkie, an insurance company, and a real estate office.
	Surrounding Properties	Surrounding properties included residences, Harlem Stationary and Printing, Inc (286 Lenox Ave), and offices.
1978	Subject Property	The Subject Property listings included residences, a produce market, real estate office, and Powder Puff by Marion.
	Surrounding Properties	Surrounding properties were listed as residences, a lounge, and offices.
1983	Subject Property	Subject Property listings included residences, medical and commercial offices, produce market, barber shop, real estate office, and Powder Puff by Marion.
	Surrounding Properties	Surrounding properties were listed as residences, stores, offices, a lounge, and music/video production companies.
1988	Subject Property	Subject Property listings included residences, RAJA Food Corp, produce market, barber shop, and Powder Puff by Marion.
	Surrounding Properties	Surrounding properties listings included residences, stores, offices, a lounge, and music/video production companies.
1993	Subject Property	Subject Property was listed as RAJA Food Corp, produce market, barber shop, and Powder Puff by Marion.
	Surrounding Properties	Surrounding properties were listed as residences, stores, offices, a restaurant, and a lounge.
1998	Subject Property	Subject Property listings included AA Lenox Ave, National Development and Research Institute, produce market, and Powder Puff by Marion.
	Surrounding Properties	Surrounding properties were listed as residences, stores, offices, restaurants, and a lounge.
2000	Subject Property	Subject Property listings included Powder Puff Marion, International Development and Research, a residence, and an electronics store.
	Surrounding Properties	Surrounding properties were listed as residences, an emergency towing company, offices, stores, and a lounge.
2006	Subject Property	The Subject Property was listed as an electronics store.

CITY DIRECTORY SUMMARY		
YEAR	LISTED ADDRESS	OCCUPANT(S)
	Surrounding Properties	Surrounding properties were listed as residences, restaurants, offices, stores, and a lounge.

Based on the available occupant listings, the Subject Property has been used for residential and commercial purposes. The following RECs were identified on the Subject Property:

- A dry cleaner was located at 289 Lenox Avenue from 1956-1968 and a tailor/cleaner was located at 291 Lenox Avenue in 1927. Spills or leaks of the solvent PCE or other chemicals used at these facilities may have adversely impacted the soil and groundwater at the Subject Property.
- A milliner was located at 297 Lenox Avenue in 1927. Dyes or pigments containing solvents used at this facility may have adversely impacted soil at groundwater at the Subject Property though leaks or spills.

Surrounding properties were listed primarily as residences, offices, stores, restaurants, a lounge, a cleaning/dyeing facility, and a printing facility. The cleaning/dyeing facility and printing facility identified were located across Lenox Avenue from the Subject Property at topographically down-gradient locations. Based on a review of the city directories, RECs were not identified at surrounding properties in relation to the Subject Property.

4.3.5 Environmental Lien Search

Langan contracted EDR to conduct an Environmental Lien search for the Subject Property. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no Environmental Liens or other Activity and Use Limitations (AUL) associated with the Subject Property. A copy of the Environmental Lien Search is provided in Appendix L.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to the adjacent and surrounding properties.

The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures. A description of the observed adjacent and surrounding properties is provided in Section 2.2.

5.1.1 Date and Time of Inspections

The site inspection was conducted by Ms. Jennifer Armstrong of Langan at 11:00 am on August 2, 2010. The weather at the time of the inspection was sunny and approximately 80°F. Ms. Armstrong was unaccompanied during the Site Reconnaissance.

5.2 General Site Setting and Reconnaissance Observations

Buildings, Other Structures, Foundations

There are no buildings or other improvements at the Subject Property. Scattered demolition debris, i.e. bricks and concrete, were scattered across the ground surface of the Subject Property. An abandoned temporary monitoring well, indicative of previous environmental investigation, was observed in the southwest portion of the Subject Property. The surface of the subject property is mostly covered with vegetation, approximately 6 - 12 inches in height, thus limiting visibility of the ground surface.

Two concrete-filled cellar entrances were observed on the southern sidewalk of 125th Street between Lots 33 and 38. An electrical vault is located on the western sidewalk of Lenox Avenue, midblock between West 124th and West 125th Street. The No. 2 and 3 subway line runs north-south below Lenox Avenue, immediately east of the Subject Property.

Pits, Ponds, Lagoons

Langan did not observe pits, ponds, or lagoons on the Subject Property.

Pools of Liquid

Langan did not observe any pools of liquid or standing water on the Subject Property.

Storm Drains, Wells, and Cisterns

Langan did not observe storm drains, wells, or cisterns at the Subject Property.

Polychlorinated Biphenyl (PCB) Transformers and Suspect Equipment

Langan did not observe transformers or other suspect PCB-containing materials at the Subject Property.

Storage Containers and Drums

Storage containers and drums were not observed at the Subject Property.

Air Emissions or Wastewater Discharges

Sources of air emissions or wastewater discharges were not observed at the Subject Property.

Sumps

Sumps were not observed at the Subject Property.

USTs or ASTs

Evidence of USTs/ASTs or associated fill ports and vents was not observed at the Subject Property.

Monitoring Wells or Remedial Activities

An abandoned temporary monitoring well was observed in the southwest portion of the subject Property indicating previous environmental investigation.

Stained or Discolored Soils

Evidence of stained or discolored soils was not observed at the Subject Property.

Leachate or Seeps

Leachate or seeps were not observed at the Subject Property.

Site Reconnaissance Conclusions

Based on the observed conditions associated with the site reconnaissance, an abandoned monitoring well in the southwestern portion of the Subject Property, indicating previous environmental investigation and potentially impacted groundwater, is considered a REC.

6.0 INTERVIEWS

6.1 Site Owner

The Site owner was not interviewed as part of this Phase I ESA.

6.2 Owners/Tenants of Adjacent Properties

Owners/tenants of adjacent properties were not available to be interviewed at the time of the site reconnaissance.

7.0 ADDITIONAL SERVICES

7.1 Radon

According to the USEPA Map of Radon Zones, the Borough of Manhattan has a low radon potential (less than 2 picocuries per liter [pCi/L]). The Map of Radon Zones has been compiled as a general guideline and does not necessarily reflect radon concentrations at specific localities. The USEPA recommends that actions be taken to minimize radon exposure when the radon potential in living areas exceeds 4 pCi/L. The NYSDOH has estimated that 0.9% of living areas and 4% of basements of homes in Manhattan have radon concentrations above 4 pCi/L. Based on the available information, elevated concentrations of radon in indoor air at the Subject Property are unlikely.

7.2 Asbestos-Containing Material, Lead-Based Paint, and Polychlorinated Biphenyls

All of the buildings at the Subject Property were previously demolished. The presence of asbestos-containing material (ACM), lead-based paint (LBP) and/or PCB-containing material is unlikely.

8.0 DEVIATIONS AND DATA GAPS

8.1 Deviations

Langan has performed a Phase I ESA of the Subject Properties utilizing a standard of good commercial and customary practice that is consistent with the ASTM E1527-05 and the 40 Code of Federal Regulations (CFR) Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

8.2 Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E 1527-05, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without data gaps.

9.0 FINDINGS AND OPINIONS

This Phase I ESA was conducted in general accordance with the ASTM Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-05 as a REC.

The Phase I ESA identified the following RECs on the Subject Property:

REC 1 - Historical Site Usage

The following historical property uses were identified on the Subject Property:

- A milliner (hat making facility) was located at 297 Lenox Avenue in 1927;
- 107 West 124th Street (Lot 28) was used as a factory in 1927 and an auto repair facility between 1978 and 2002;
- A dry cleaner was located at 289 Lenox Avenue (Lot 32) from 1956-1968; and
- A tailor/cleaner was located at 291 Lenox Avenue in 1927.

Solvents, petroleum products, and/or other chemicals used during operations at these facilities may have adversely impacted soil and groundwater at the Subject Property through leaks or spills.

REC 2 - Evidence of Environmental Investigation

An abandoned temporary monitoring well was observed in the southwestern portion of the Subject Property indicating previous environmental investigation.

Based on a Phase I ESA prepared by Aaron Wright Technical Services, Inc. (Aaron Wright) in 2002, an active 5,000-gallon fuel oil tank and an abandoned 1,500-gallon fuel tank were observed in the basement of 291 Lenox Avenue (Lot 33). Both of these tanks were above ground and encased in concrete. An aboveground storage tank (AST) of unknown size was located in the basement of 287 Lenox Avenue (Lot 31). Aaron Wright did not have access to 289 Lenox Avenue (Lot 32) during their investigation; however, a vent pipe and fill port were located outside the building, indicating the presence of a fuel oil tank. Aaron Wright

recommended that the tanks be removed and decommissioned according to applicable regulations.

The buildings at the Subject Property have been demolished and no evidence of the tanks is currently present; however, documentation pertaining to the closure of the tanks identified by Aaron Wright were not available. Potential leaks from the previously identified petroleum bulk storage tanks may have adversely impacted the soil and groundwater at the Subject Property; historical petroleum bulk storage tanks are considered a REC.

REC 4 – E Designation

Each of the lots that comprise the Subject Property are included on the New York City Department of Environmental Protection (NYCDEP) E Designation list. E-designations may indicate hazardous materials contamination or air and/or noise quality concerns. The inclusion of the Subject Property on the NYCDEP E Designation list is a REC.

The following RECs were identified at surrounding Properties:

REC 1 - Historic Use of Surrounding Properties

The following historical uses of surrounding properties are considered RECs:

- An auto repair and auto junk facility was located at 117-119 West 124th Street, a western adjoining property, between 1951 and 2003. Spills or leaks of petroleum products or solvents used at this facility may have adversely impacted groundwater at the Subject Property.
- A dry cleaner was identified at 275 Lenox Avenue, approximately 120 feet south of the Subject Property, between 1976 and 2005. The chlorinated solvent tetrachloroethylene (PERC or PCE) is commonly used during dry cleaning operations. Due to the proximity of the dry cleaner to the Subject Property, inadvertent releases of PCE may have adversely impacted groundwater at the Subject Property.

REC 2 - Open Leaking Tank Incident at 152 West 124th Street

A tank test failure at this location, approximately 190 feet west (up-gradient) of the Subject Property, was reported to the New York State Department of Environmental Conservation

(NYSDEC) on April 7, 1998 (NYSDEC Spill No. 9800366). The spill case is associated with a 2,000-gallon No. 2 fuel oil AST. Additional information was not provided. Aaron Aright stated in their 2002 Phase I ESA that this incident was not a concern; however, the incident remains open and cleanup activities have not met NYSDEC standards. Given its regulatory status, proximity, and up-gradient location relative to the Subject Property, this LTANK incident is considered a REC with respect to the Subject Property.

Asbestos, Lead, and Polychlorinated Biphenyl (PCBs)

Subject Property buildings have been demolished; the presence of asbestos-containing material (ACM), lead-based paint, and/or PCB-containing material is unlikely.

11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

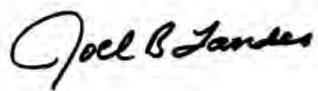

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312.10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Properties. They have developed and performed the AAs in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix M.

APPENDIX B

ASTM PRACTICE E 1527-05: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering and Environmental Services Inc.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

General Information

User/Client Name (s): 125TH + LENDX LLC.

Property Name: 125TH + LENDX LLC.

Address: 500 FIFTH AVENUE 54 FL

NEW YORK NY 10110

Property Type: LAND

Type of Property Transaction:

- Purchase of property
- Financing of property
- Sale of property
- Ground Lease
- Build to Suit Lease
- Other CONSTRUCTION

Reason Why Phase I ESA is required: _____

Site Contact (s): ANDREW LESTER

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AA Final Rule which discusses that item.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Yes No

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.]

(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Yes No

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any activity and use limitations and to report these limitations to the environmental professional conducting a Phase I Environmental Site Assessment.]

(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28). Yes No

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes No

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Yes No

- (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.] Yes No
- (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Yes No
- (c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.

(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30). Yes No

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property? Yes No
- (b.) Do you know of specific chemicals that are present or once were present at the property? Yes No
- (c.) Do you know of spills or other chemical releases that have taken place at the property? Yes No
- (d.) Do you know of any environmental cleanups that have taken place at the property? Yes No

(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31). Yes No

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes No

SIGNATURE:

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

Executive Summary

On January 15, 2008, Don Carlo Environmental Services, Inc. (DCES) was retained by Mr. Andrew Lester D.b.a. 125 & Lenox LLC C/O Wharton Realty to perform tank closure procedures at 293 Lenox Avenue, New York, NY 10027.

The tank closure was performed in order to remove one (1) 550-gallon #2 fuel oil Underground Storage Tank (UST) and associated piping from the subject property. All work was performed in accordance with NYSDEC Petroleum Bulk Storage regulations (6 NYCRR Part 612 & 613) and with other appropriate regulations as promulgated by FDNY under Title 3 of the R.C.N.Y. Section 21-02. The subsurface investigation procedures were conducted in accordance with the recommendations of the ASTM Practice 1503 and NYSDEC Spill Prevention Operations Technology Series Memo #14 (SPOTS #14).

Work performed involved:

- Excavation of the tank was conducted in order to expose the entire tank top.
- After the top of the tank was excavated, the tank was cut in order to access the remaining products (tank bottoms) within the tank.
- The remaining tank bottoms were removed and the interior tank walls were scrape cleaned. One (1) NYCDOT Approved 55-gallon drum was used to contain the tank bottoms.
- Visual inspection was also conducted on the interior walls of the tank for holes; no holes were observed.
- The UST and associated piping were removed from the subject property and disposed of as scrap metal.
- Onsite field screening of the excavated soil and within the tank grave was conducted visually and by using a Toxi RAE Photoionization Detector (PID) model PGM-30.
- Collection of endpoint soil samples (EP-1 through EP-5) from within the tank grave for analysis using EPA Test Methods STARS 8021 for Volatile Organic Compounds (VOCs) and 8270 Semi-Volatile Organic Compounds (SVOCs).
- The previous tank grave was backfilled with clean fill materials.

Conclusion/Recommendations

Analysis of the end point soil samples identified marginal exceeding levels of Benzo(a)Pyrene in all five (5) samples analyzed. Soil samples analyzed as compared with NYSDEC TAGM-4046 Recommended Soil Cleanup Objectives (RSCOs).

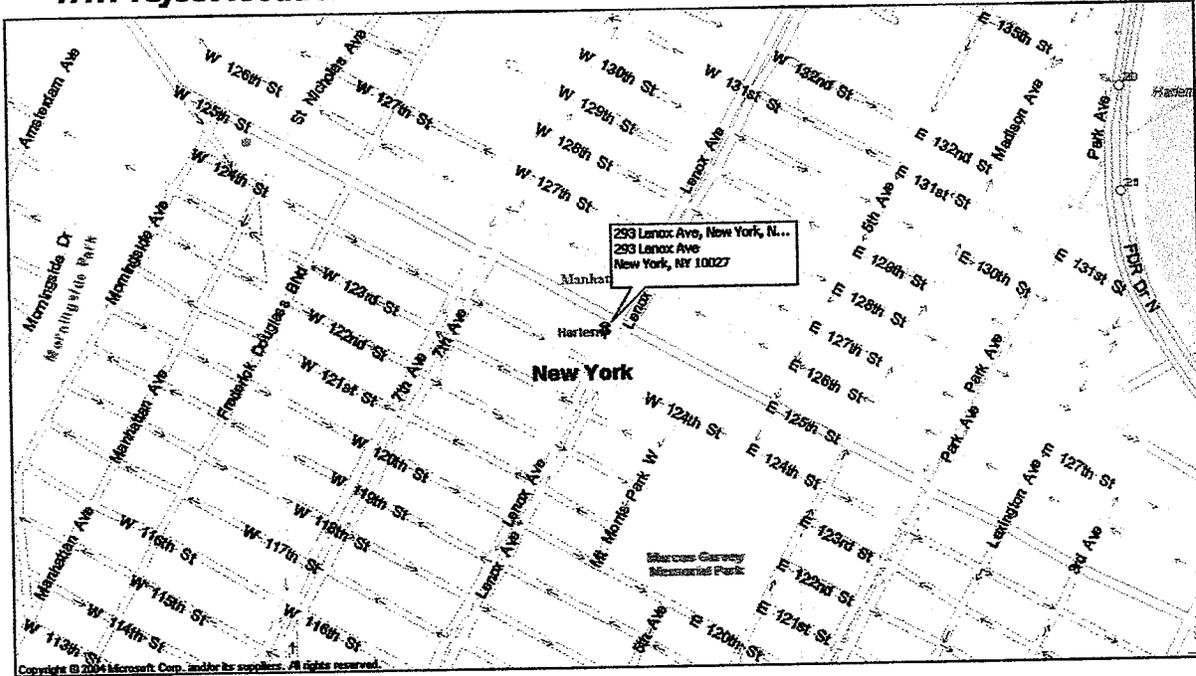

It is DCES's opinion that the contaminants identified came from the historic fill materials used to backfill the tank in place. The fill materials identified were gravel, brick, coal and coarse sand. DCES has concluded that no further assessment needed for the previous tank grave at the subject property.

Theodore Yen, P.E.
Don Carlo Environmental Services, Inc.

1. General Information

1.1. Project location

293 Lenox Avenue, New York, NY 10027

1.2. Responsible Parties

Owner	125 & Lenox LLC C/O Wharton Realty 500 Fifth Avenue, 54 th Floor New York, NY 10110	Mr. Andrew Lester (212) 573-9001
Tank Contractor	Don Carlo Environmental Services, Inc. 1225 Atlantic Avenue Brooklyn, New York, 11216	Mr. Romeo Santos (718) 857-3100
Environmental Consultant	Don Carlo Environmental Services, Inc. 1225 Atlantic Avenue Brooklyn, New York, 11216	Mr. Theodore Yen (718) 857-3100

1.3. Tank Information

PBS#	Tank #	Capacity and Product Type	Location
2-607337	01	550-gal. #2 Fuel Oil UST	East of the subject property.

**293 Lenox Avenue
New York, NY 10027**

1.4. Regulatory Authorities

Agency	Law	Contact
NYS Department of Environmental Conservation	Petroleum Bulk Storage Regulations	Mr. Nick Lombardo (718) 482-7305
New York City Fire Department	Title 3, R.C.N.Y. Section 21-02	Metrotech Center (718) 999-1635

1.5. Scope of work

The Scope of Work Conducted at the subject property consists of the removal of one (1) 550-gallon #2 fuel oil UST.

- Excavation to expose the tank top was conducted in order to expose the entire tank top.
- The top of the tank was cut in order to access the remaining products within the tank. The remaining products in the tank were removed and contained into a New York City Department of Transportation (NYCDOT) Approved 55-gallon drum.
- Removal and disposal of the UST and associated piping.
- Collection of endpoint soil samples from within the previous tank grave.
- Laboratory analysis of five (5) soil samples using EPA Test Methods STARS 8021 for Volatile Organic Compounds (VOCs) and 8270 for Semi-Volatile Organic Compounds (SVOCs).
- Submittal of tank closure report.

2. Tank Removal Procedures

Procedures, as listed, refer to the removal of two (2) gasoline USTs (1/2,000-gal. & 1/550-gal.) from the subject property.

2.1. Petroleum Bulk Storage Registration/Deregistration

No notification with the NYSDEC - PBS Unit was filed; the tank capacity was less than eleven hundred gallons (1,100-gallons) for the facility.

2.2. Tank Excavation

The top of the UST was excavated in order to expose the entire tank top.

2.3. Tank Cleaning

The top of the tank was cut to allow entry and the tank was entered using confined space entry. The remaining product (tank bottom sludge) within the tank was removed. All products removed from within the tank were contained into one (1) NYCDOT approved 55-gallon drum.

2.4. Tank Removal and Disposal

The UST and associated piping were cut into pieces using oxyacetylene torch cutting process. All cut pieces were removed from the subject property and disposed of as scrap metal.

2.5. Onsite Field Screening

During excavation to uncover and remove the tank, onsite field screening included visual observation for petroleum staining and odors of soil were conducted. A Toxi RAE Photoionization Detector (PID) model PGM-30 was also used to screen general soil condition surrounding and beneath the tank. No staining of petroleum contamination was noticed.

3. Subsurface Investigation

3.1. Sampling locations

DCES conducted onsite field screening and collection of five (5) soil samples (EP-1 through EP-5) from within four (4) walls and bottom of the previous tank grave. Each soil sample collected was field screened for visual staining of petroleum and by using a Photoionization Detector (PID).

3.2. Onsite PID Field Screening – Head Space Analysis

A Photoionization Detector (PID) was used to screen general soil conditions during endpoint soil sampling. All soil samples collected were placed in glass jars until the containers were half-full. The contents were then shaken vigorously; the PID probe was then inserted into the container and readings taken.

All end point soil samples collected were field screened and logged with a zero PPM (0:00 PPM) PID reading.

With a zero PID reading, dry soil samples were labeled, logged on a Chain of Custody and submitted to York Analytical Laboratories, Inc. in Stratford, CT for analysis.

3.3. Analysis

Five (5) soil samples (EP-1 through EP-5) were collected and submitted with proper Chain of Custody to York Analytical Laboratories for analysis on February 5, 2008. The five (5) soil samples were analyzed under EPA Test Methods STARS 8021 for Volatile Organic Compounds (VOCs) and 8270 for Semi-Volatile Organic Compounds (SVOCs).

Analysis of the five (5) soil samples identified one (1) marginally exceeding contaminant, Benzo(a)Pyrene, in all five (5) soil samples. Soil analytical results were compared with NYSDEC TAGM-4046 Recommended Soil Cleanup Objectives (RSCOs).

4. Interim Recommendations

4.1. *Extended Sampling and Analysis*

N/A

5. Site Assessment

5.1. General Land Use

The subject property is currently a vacant lot with no activities. A chain link fence borders the subject property on three (3) sides.

5.2. Soil Profiles

Soils within the excavation were primarily mixed materials coarse sand, gravel and miscellaneous fill (brick and coal).

5.3. Wells

The municipality supplies potable water in the area. No groundwater monitoring wells were identified within the subject property.

6. Conclusions and Recommendations

One (1) previously used #2 fuel oil Underground Storage Tank (UST) was removed from the subject property and disposed of legally as scrap metal. The tank remaining product was removed and contained into a NYCDOT Approved 55-gallon drum.

Subsurface soils within the excavated pit were field screened and endpoint soil samples were collected and analyzed. Analysis of the five (5) endpoint soil samples identified one (1) marginal exceeding contaminant in all five (5) samples. Soil analytical results were compared with the NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives (RSCOs).

DCES has completed the above scope of work as per the NYSDEC and FDNY's protocols, and recommends that no further assessment is needed for the previous tank area at the subject property.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 02/06/08. The project was identified as your project "293 Lenox Ave., NY, NY".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

Notes for York Project No. 08020141

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This MDL is the REPORTING LIMIT and is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

Re: Ground Penetrating Radar (GPR)
Location: 293 Lenox Avenue, New York, NY

Dear Sir:

This letter serves as a findings report for the Ground Penetrating Radar (GPR) survey performed on the above reference property, herein identified as the subject property. The GPR field survey was performed on January 14, 2008, and over target portions of the planimetric surface of the subject property to locate underground storage tanks (UST) that may currently exist.

The GPR used by the subject property was a Geophysical Survey System, Inc.(GSSI) SIR (Surface Interface Radar) System-2 with a 250MHZ antenna. A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 50 kHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronic amplifies the trigger pulse into the bipolar pulse that is radiated to the subsurface. The transmitter pulses vary in shape and frequency according to the transducer used. In the subsurface soil, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit are represented as color graphic images for interpolation. The SIR System-2 is capable of transmitting electromagnetic energy in the frequency range of the 16MHz to 2000MHz.

A qualified operator used knowledge of the subsurface soil composition to calibrate the SIR System-2 to site specific conditions. Factor settings such as range, gain, number of gain points and scans per units, were modified to yield the most accurate data to describe the surface conditions.

The operator specified a coordinated system on the planimetric surface of the site to map subsurface dielectric anomalies detected on the premises. The property was surveyed by hand –towing a 250 MHz GPR antenna in rough five-foot pattern. Where a dielectric anomaly was found, a more spatially specific coordinated system was designed over the area to determine its size, shape and orientation. The data collected during the survey was reviewed by the operator and compared against past experience, technical judgment and prior site knowledge to classify the anomalies.

Findings:

On January 14, 2008, DCES performed a Ground Penetrating Radar (GPR) survey on the open lot locations of the subject property. The Ground Penetrating Radar Survey detected hyperbolic subsurface anomalies that was consistent with underground storage tanks. Site assessment were also conducted by a DCES technician for connected lines (vent of fill). No vent lines were present and no fill lines were presernt on site. One visible underground storage was found partially excavated at the northeastern portion of property. (See attached figure.)

Recommendations:

DCES recomends no further assessment or survey needed to rule out buried materials and/or anomaly at the site.

The GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. DCES does not accept reponsibility for survey limitations due to inherent technological limitations or site specific conditions. However made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey describe above does not represent a full utility clearance survey, and dose not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

Please contact me if you have any questions or comments regarding this matter.

Sincerely,

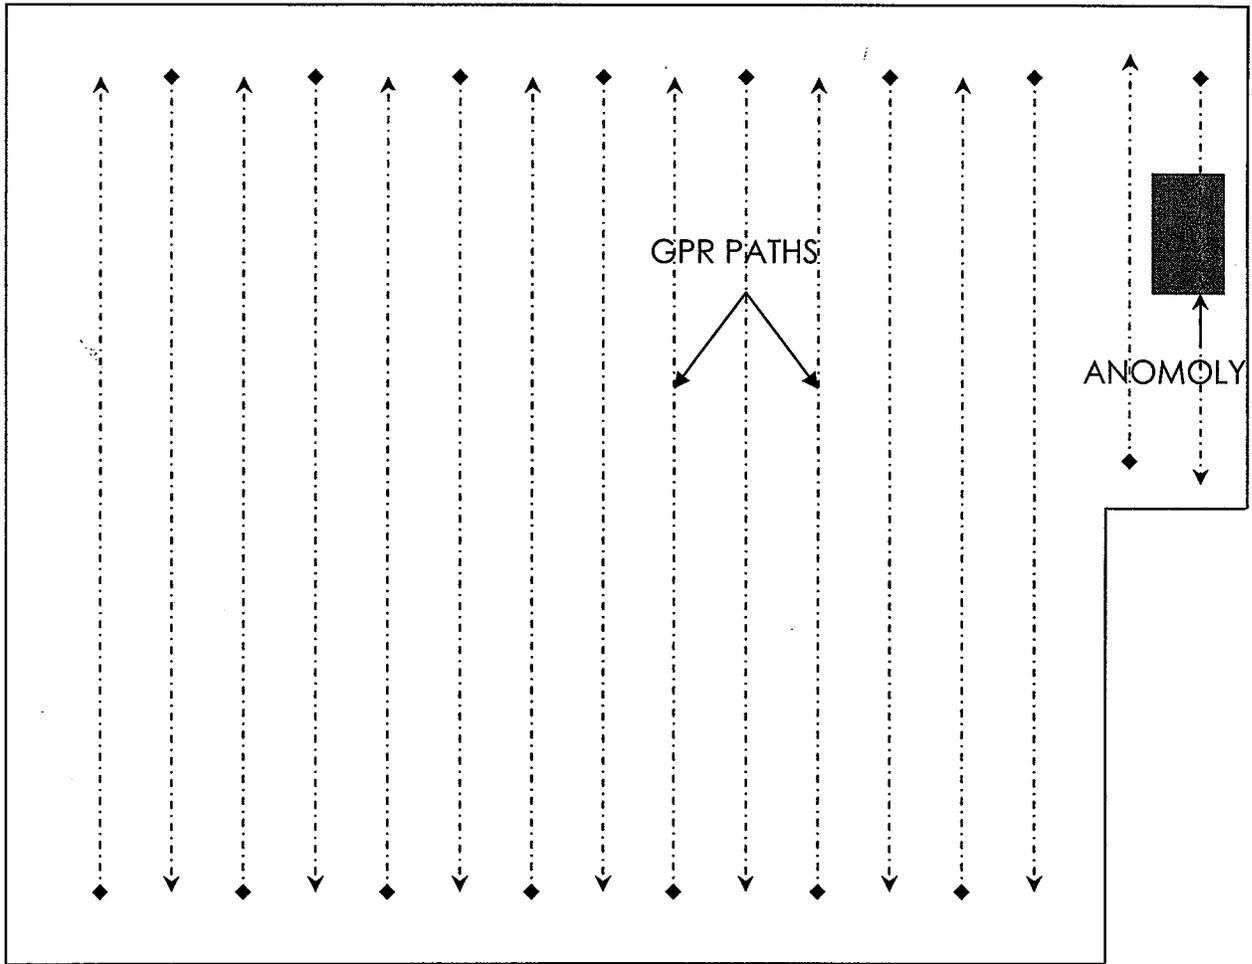

Robert Ocasio

AFFIDAVIT

STATE OF NEW YORK)

ss.:

COUNTY OF KINGS)

I, Romeo L. Santos, Jr., being duly sworn, depose and say that my place of business is located at 1225 Atlantic Avenue, Brooklyn, New York 11216.

That I hold License No. 62697339 (W 16) – expiration date – 02/27/10, for NYCFD to Install, Test, and Repair Oil Tanks (buried or above ground).

That on February 5th 2008, I supervised the legal removal of one (1) 550-gallon, #2 fuel oil, Underground Storage Tank (UST).

The tank was pumped out, cleaned, purged, rendered gas free, cut and removed from the subject property. All piping lines were disconnected, drained, cleaned, purged, removed and disposed of accordingly. The tank was removed properly and disposed of as scrap metal.

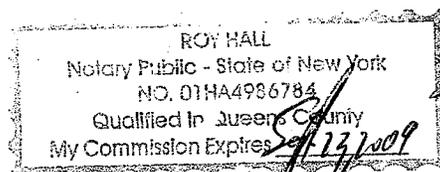

This Affidavit is issued to attest the proper tank removal procedure conducted by a Licensed New York City Fire Department Underground Tank Installer and in accordance with (Title 3 R.C. N.Y. Section 21-02).

Aaron & Wright Project No. M020179A.JM

Dear Mr. Tawil:

Aaron & Wright Technical Services Incorporated (Aaron & Wright) has completed a Phase I Environmental Site Assessment (ESA) of the above-referenced property. The report was conducted in accordance with American Society for Testing and Materials (ASTM) guidelines E 1527-00, Standard & Poor's *Environmental Criteria*, the Client's scope of work and generally accepted industry standards.

The investigation was conducted on behalf of and for the exclusive use of Carleton Realty Corp. (Client), solely for use in an environmental evaluation of the subject property. This report and findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party, in whole or in part without prior written consent of Aaron & Wright. However, Aaron & Wright acknowledges and agrees that the report may be conveyed to and relied upon by the Client, Lender, and the title insurer associated with the refinancing and/or property transfer of the subject property.

We hope you find the report complete and informative. Please do not hesitate to contact us if you have any questions or if we can be of further service to you.

Sincerely,

AARON & WRIGHT TECHNICAL SERVICES INCORPORATED

1.0 EXECUTIVE SUMMARY

1.1 Property Description

Property Name: Proposed Nursing Home

Property Address: 281-297 Lenox Avenue, 107-111 West 124th Street, and 108-110 West 125th Street

City /State/Zip Code: New York, New York 10027

Property Usage: Residential with ground floor commercial/retail units

Narrative Description: The subject property consists of one 5-story and eight 4-story mixed-use buildings, each with basements and rear yard areas. The eight 4-story buildings each have ground floor commercial units. The majority of the buildings were constructed prior to 1902. The buildings are of wood and concrete-frame construction with load-bearing concrete masonry and concrete exterior walls. The first floors consist of the lobbies and ground floor retail/commercial units. The upper floors contain residential units. Mechanical and storage areas are located in the basements. With the exception of 291-297 Lenox Avenue (which is currently partially occupied), the second through fourth floors of the buildings were unoccupied, boarded up, and were not accessed. Additional site improvements include poured concrete slab sidewalks in the front of the buildings.

It should be noted that 291-297 Lenox Avenue (one building) is also known as 100-106 West 125th Street, and that 281 Lenox Avenue is also known as 101-105 West 124th Street. The breakdown of the 11 parcels is as follows: 107 West 124th Street: a 5-story vacant building, which was locked and is structurally unsound (Aaron & Wright did not gain access to any interior areas of this building.); 109-111 West 124th Street: two adjacent and undeveloped, unpaved lots; 281 Lenox Avenue: a 4-story residential building with a basement and a vacant ground floor commercial unit (formerly a nail salon); 283 Lenox Avenue: a 4-story residential building with a basement and a vacant ground floor commercial unit (formerly a Jamaican grocery store); 285 Lenox Avenue: a 4-story residential building with a basement and a vacant ground floor commercial unit (formerly a "NARDI" office); 289 Lenox Avenue: a 4-story residential building with a basement and a vacant ground floor commercial unit (formerly a check cashing establishment); 291-297 Lenox Avenue: a 4-story residential building with a basement and six active ground floor commercial units (including a shoe repair shop, two men's clothing stores, a seafood restaurant, a record store, and a women's clothing store); 108 West 125th Street: a 4-story residential building with a basement and a ground floor women's hosiery shop; and 110 West 125th Street: a 4-story residential building with a basement and a ground floor jewelry and beeper store.

1.2 Project Summary

HAZARD	ACCEPTABLE	O&M RECOMMENDED	ROUTINE SOLUTION	ADDITIONAL STUDY	ESTIMATED COST*
Property History	X				
Database Review	X				
Visual Observations	X				
USTs and ASTs			X		See below (1)
PCBs	X				
Asbestos			X		See below (2)
Radon	X				
Lead-Based Paint			X		See below (3)
Drinking Water	X				

* Costs depicted, if any, are estimates for investigations and/or program development, and do not constitute a quote to provide services. Additional costs may be incurred as a result of the completion of the recommended activities.

- (1) Decommission and remove all fuel oil tanks on-site
- (2) Conduct asbestos surveys of the buildings on-site
- (3) Take precautions for lead-based paint while demolishing buildings on-site

1.3 Recommendations & Discussion

Aaron & Wright did not find evidence indicating prior use of the subject property or activity at neighboring properties that would indicate the likelihood of environmental impairment to the subject property. In addition, Aaron & Wright did not observe visual evidence of hazardous-material contamination, indications of improper hazardous material storage or disposal, or identify significant recognized environmental concerns relating to polychlorinated biphenyls (PCBs), radon, or drinking water at the subject property.

Aaron & Wright identified an active 5,000-gallon fuel oil tank completely encased in concrete in the basement boiler room of 291 Lenox Avenue. In addition, the following abandoned fuel oil tanks were identified on-site: one 1,500-gallon fuel oil tank completely encased in concrete in the basement of 291 Lenox Avenue, and one AST of unknown size in the basement of 287 Lenox Avenue. In addition, a fuel oil fill cap and vent pipe were identified in front of 289 Lenox Avenue. However, access was not gained to any interior areas of this building. Therefore, Aaron & Wright was unable to inspect for potential tanks in this area. Given that the buildings on-site are slated for demolition, Aaron & Wright recommends that these tanks be decommissioned and removed in accordance with all federal, state, and local regulations. In addition, Aaron & Wright recommends that care be taken in the development of the subject property. In the event that additional aboveground fuel oil tanks are discovered during interior demolition, the ASTs should be decommissioned and removed in accordance with all local, state, and federal regulations. If USTs are discovered during future site excavations, the USTs should be removed in accordance with all federal, state, and local regulations.

Small amounts of suspect friable aircell pipe insulation with cementitious pipe fitting insulation in poor condition was identified in the basements of the following buildings: 291 Lenox Avenue (approximately 20 SF pipe elbows only); 281 Lenox Avenue (approximately 20 LF aircell insulation); 108 West 125th Street (approximately 20 LF); and 110 West 125th Street (approximately 35 LF). In addition, approximately 200 SF of suspect friable cementitious boiler insulation in poor condition was identified in the 291 Lenox Avenue basement. Also, suspect friable 12"x12", 2'x2', and 2'x4' drop ceiling tiles were observed throughout the ground floor commercial units. Lastly, suspect non-friable 9"x9" and 12"x12" vinyl floor tiles, vinyl sheet flooring, and wallboard and joint compound were observed throughout the buildings.

Given the ages of the buildings on-site (prior to 1902), it is possible that painted surfaces contain lead. It is Aaron & Wright's understanding that the buildings will be demolished.

Given that the buildings are slated for demolition, comprehensive asbestos and lead-based paint (LBP) surveys of the each of the buildings should be conducted in compliance with NESHAP and New York City Building Department regulations before initiating such destructive activities. The surveys should include an assessment of all subject building materials, including those in areas which are normally inaccessible.

Any ACM removed from the subject property should be removed in accordance with all applicable federal, state and local regulations. The procedure should be performed in a safe and controlled manner by a qualified asbestos/lead abatement contractor. The contractor should use prudent techniques recognized as industry standards. Any removed asbestos or LBP should be disposed of in an approved and legal manner.

Based on the scope of work performed, it is Aaron & Wright's professional opinion that no recognized environmental concerns were identified at the subject property, except as noted above, that would warrant further environmental study at this time.

2.0 PURPOSE, SCOPE AND LIMITATIONS

2.1 Purpose

Aaron & Wright was retained to conduct a Phase I Environmental Site Assessment of the subject property to assist in the underwriting of a proposed mortgage loan of the real property. The assessment was designed to provide an objective, independent, professional opinion of the potential environmental risks, if any, associated with the subject property. The purpose of this environmental assessment was to identify recognized environmental conditions at the subject property. "Recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not pose a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

2.2 Scope of Work

The assessment was conducted in accordance with American Society for Testing and Materials (ASTM) *Standard Guide for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E 1527-00, *Standard & Poor's Environmental Criteria*, the scope of work provided by the Client, and generally accepted industry standards.

The specific scope of work included the following:

Environmental Setting - Efforts were made to determine the environmental setting of the subject property with respect to topography, surface water bodies, flood plain, wetlands, soil type, depth to groundwater and direction of groundwater flow. "Wetlands" is a general term used to describe a variety of ecosystems, which may include prairie potholes, marshes, fens, bogs, wet meadows and swamps. It is not part of this assessment to conduct a formal wetland determination utilizing the defined criteria, but to determine if additional work should be considered based on Aaron & Wright's observations.

Prior Use History Review - Attempts were made to identify the prior usage of the property back to the earlier of the property's first developed use or 1940, using as many sources that were both reasonably ascertainable and likely to be useful. Standard historical sources include any or all of the following: aerial photographs, historical maps, tax information, land title records, topographic maps, local street directories, building department records, zoning/land use records, prior reports and interviews with local agencies.

Environmental Database Review - Reasonably ascertainable environmental databases were reviewed to determine whether the subject property or any neighboring properties were suspected of having or known to have environmental concerns likely to adversely impact the subject property. The databases reviewed and the radii chosen are based on the ASTM standard and Client's scope of work.

Property Reconnaissance - A property reconnaissance, consisting of a visual inspection of the subject property and neighboring properties as observable from the subject property, was conducted to identify recognized environmental conditions associated with the subject property, to the extent not obstructed by bodies of water, adjacent buildings or other obstacles. Potential recognized environmental concerns include, but are not limited to, areas of staining, stressed vegetation, pits, ponds, lagoons, drains, sumps, dry wells and septic systems.

It is important to note the scope of this investigation is limited to a visual inspection to identify areas of potential concern to the real property and a review of readily accessible government databases. The inspection does not include a regulatory compliance audit of the facility. There are detailed regulations concerning the proper use, storage and disposal of hazardous and regulated material. These regulations include, but are not limited to, permitting, paper keeping and manifesting requirements, as well as community and employee right-to-know laws.

UST and AST Search - Attempts were made to identify any ASTs containing hazardous or regulated materials, and to identify visual indications of USTs, such as fill and vent pipes, or volume gauges. In addition to the visual inspection, state database of facilities with registered USTs were reviewed, and the property contact and local regulatory officials were interviewed regarding any knowledge of ASTs or USTs.

PCB Search - An attempt was made to identify electrical or hydraulic equipment known to or likely to contain PCBs, identify the condition of such equipment and to determine the ownership of the equipment. Per ASTM guidelines, fluorescent light ballasts likely to contain PCBs are not addressed due to the limited quantity of PCB materials contained.

Preliminary ACM Evaluation - Efforts were made to identify the presence of the most obvious and common ACM. The potential for the presence of friable ACM was evaluated based on the age of the improvements, dates of renovation and other relevant information. Appendix G of the USEPA Guidance Document: *Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials* (the Green Book) was used as a guide in identifying suspect materials. Materials listed in the Green Book, which were installed prior to 1989, are suspected of containing asbestos. However, it should be noted that asbestos may still be utilized in some non-friable products, such as sheet vinyl flooring, vinyl floor tiles, floor tile mastic, asbestos-cement board and roofing materials, as these materials may still be manufactured and installed in the United States. The level of the preliminary evaluation performed was not designed to comply with the survey requirements of the Asbestos Hazard Emergency Response Act (AHERA), 40 Code of Federal Regulations (CFR) Part 763, National Emission Standard for Hazardous Air Pollutants (NESHAP) 40 CFR 61, Occupational Safety and Health Administration (OSHA) 29 CFR Part 1926.1101, or other local, state or federal regulations, but has been conducted per accepted industry practices to satisfy the scope of work of the rating agencies and/or lenders. Samples collected, if any, will be analyzed for the presence of asbestos by a National Voluntary Lab Accreditation Program (NVLAP) accredited laboratory using polarized light microscopy and dispersion staining. Any testing results obtained are for the personal use of the Client only.

Preliminary Radon Review - The potential for elevated radon to exist within the subject buildings and to pose a significant concern was evaluated based on regional potential for radon, the usage of the subject buildings, and the type of construction and mechanical systems present.

Preliminary LBP Evaluation - The potential for the presence of LBP at the property and the potential to pose a significant concern was evaluated based on the age of the improvements, dates of renovation and the current and proposed uses of the property. Paint applied prior to 1978 is assumed to be LBP. Lead may also be found in materials other than painted surfaces, such as bathtub and ceramic tile glazing and vinyl mini-blinds. Such items are not included in this preliminary LBP evaluation. This evaluation was not designed or intended to comply with the survey requirements as outlined in the HUD regulations, or other local, state or federal regulations, but was conducted per accepted industry practices to satisfy the scope of work of the client, rating agencies and/or lender. Samples collected, if any, will be analyzed using the Flame Atomic Absorption Spectrophotometry method. Any testing results obtained are for the personal use of the Client only.

Preliminary Drinking Water Evaluation - The potential for elevated lead and other contaminants in the drinking water supply were evaluated. The evaluation consisted of determining the source of the potable water supply and the results of any sampling or compliance data generated for the water supply. Any testing results obtained are for the personal use of the Client only.

Photographs representative of Aaron & Wright's observations are included in Appendix 1. In addition to visual observations, Aaron & Wright relied on the sources and contacted the individuals listed in Appendix 2. If and when applicable, additional forms and checklists required by the Client are also included in the appendices.

2.3 Limitations

Aaron & Wright has performed the services and prepared this report in accordance with generally accepted consulting practices, and makes no other warranties, either expressed or implied, as to the character and nature of such services or product.

Aaron & Wright, its officers, and its employees, have no present or contemplated interest in the property. Our employment and compensation for preparing this report are not contingent upon our observations or conclusions.

Information in this report, concerning equipment operation, condition of spaces and concealed areas not observed or viewable and for the disclosure of known problems, if any, is from sources deemed to be reliable, including, but not limited to property managers and maintenance personnel; however, no representation or warranty is made as to the accuracy thereof.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. This study is designed to reduce but not eliminate uncertainty regarding the existence of such conditions in a manner that recognizes reasonable limits of time and cost. Based on the scope of work, Aaron & Wright cannot warrant subsurface conditions.

2.4 Property Access and Non-Access Disclosure

Inspector: Jeremy Mushlin
A copy of the inspector's qualifications is included in Appendix 3.

Date of Inspection: May 30, 2002

Weather Conditions: Sunny and approximately 78 degrees

Property Questionnaire Sent to: Mr. Eliot Tawil Carleton Realty Corp., Purchaser of the subject property
Mr. Tawil did not return a completed questionnaire to Aaron & Wright. A copy of the blank questionnaire is provided in Appendix 4.

Property Contact: Mr. Eliot Tawil Carleton Realty Corp., Purchaser of the subject property

Property Escort: Mr. Dominic Monera Engineer for the subject property for the past 15 years

Areas Accessed: All areas of the property were accessed, with the exception of the areas noted below.

Inaccessible Areas: With the exception of the western stairwell and roof of 291 Lenox Avenue, no areas above the ground floor of any of the buildings on-site were accessed. However, Aaron & Wright was able to gain access to the ground floor retail units and basements of all of the buildings on-site, with the exception of 289 Lenox Avenue, which was locked, and Aaron & Wright's site contact did not have a key to this area. In addition, Aaron & Wright did not gain access to any areas of the interior of 107 West 124th Street, as this building was boarded up and structurally unsound. Therefore, Aaron & Wright was unable to make determinations of potential environmental conditions in these areas.

Property Diagram: A property diagram is provided in Appendix 5.

Legal Description:

Aaron & Wright was not provided a legal description of the subject property. However, the subject property is known as Block 1909, Lots 26, 27, 28, 29, 129, 30, 31, 32, 33, 38, and 39 for tax purposes. The breakdown of addresses and lots numbers is provided in the building department records in Appendix 6.

3.0 PROPERTY DESCRIPTION

3.1 Property Description

Property Size:	Approximately 30,000 SF
	Source: Sanborn map
Property Usage:	Residential with ground floor commercial/retail units
Number of Buildings:	Nine buildings and two undeveloped lots
Date of Construction:	Prior to 1902
	Source: Sanborn map

3.2 Utilities and Service Providers

Electricity:	Consolidated Edison of New York (ConEd)
Gas:	Consolidated Edison of New York (ConEd)
Potable Water:	City of New York
Sanitary Sewer:	City of New York
Storm Water:	City of New York
Solid Waste:	Contracted as needed
Pest Control:	Contracted as needed
HVAC Maintenance:	Contracted as needed
Fire/Security :	Contracted as needed
Roof Maintenance:	Contracted as needed

3.3 Neighboring Properties

North:	Multiple-story residential buildings, some with ground-floor retail units, including a restaurant
West:	Single- and multiple-story residential and commercial buildings, some with ground-floor retail units, including a clothing store
South:	Multiple-story residential buildings, some with ground-floor retail units, including a liquor store
East:	Single- and multiple-story residential and commercial buildings, some with ground-floor retail units, including a restaurant

4.0 ENVIRONMENTAL SETTING

Aaron & Wright has attempted to determine the general environmental setting of the subject property. Information regarding topography, surface water, geology and hydrology are used to evaluate the likelihood of hazardous substances or petroleum products migrating onto the subject property, or within or from the subject property, into groundwater or soil.

4.1 Topography

USGS Topographic Map: Central Park, New York - New Jersey
A copy of the topographic map is included in Appendix 5.

Property Elevation: Approximately 30 feet above sea level

Topography: The subject property and surrounding area are relatively flat.

4.2 Surface Water Bodies

On-Site Water Bodies: There are no surface water bodies on or bordering the subject property.

Nearest Surface Water Body: The East River is located approximately one mile to the east of the subject property.

Flood Plain Designation: Zone X - Areas outside of both the 100 and 500-year floodplains
Source: FEMA map reproduced on the TransAmerica Flood Hazard Certification (Flood Insights) website - no panel number available

Indications of Wetlands: Aaron & Wright did not observe any water bodies or vegetation indicative of wetlands on the subject property. The subject property is covered with the buildings and concrete. It is unlikely that portions of the subject property would be classified as wetlands.

4.3 Geology and Hydrology

Soil Type: The site is characterized by its location within the geological period known as Cretaceous, Tertiary, and Pleistocene, consisting of gravels, sands, and clays, according to the Geologic Map of New York, 1989, published by the Geological Survey, New York State Museum. The surficial soils at the subject property are classified as the Urban Land complex. The Urban Land complex indicates that more than 100 percent of the predominant native soil type has been disturbed and covered with an impervious layer consisting of buildings, sidewalks, streets and other structures.

Estimated Depth to Groundwater: Unknown

Anticipated Flow Direction: To the east, towards the East River

Basis of Flow Direction:

Based on the USEPA Ground Water Handbook, Vol.1 Ground Water and Contamination, September 1990, the water table typically conforms to surface topography. This means the direction of flow for shallow groundwater is generally from higher elevations to lower elevations. Localized flow direction may vary as a result of tide, rainfall, development, geologic characteristics, nearby surface water bodies, underground utilities such as storm drains, septic systems and sewers, or other influences such as the presence of high volume wells.

4.4 Environmental Summary/Conclusions

Findings:

Based on a review of the topographic map, no special hazards, such as sink holes, oil and gas wells, gravel pits, landfills or pipelines were indicated on the subject or adjacent properties. No concerns related to surface water bodies, flood plains or wetlands were noted.

Recommendations:

No further study or action is recommended.

5.0 PRIOR USE HISTORY

The objective of consulting historical sources is to develop a history of the previous uses of the subject property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the subject property. Copies of prior use support documentation, when available, are included in Appendix 6.

5.1 Interviews/Records

Aaron & Wright attempted to obtain, contact or interview the sources of information listed below in order to determine the prior use history of the subject property and identify historical or existing recognized environmental conditions, if any, at the subject or adjacent properties.

Source: Property Questionnaire

Pertinent Information: Aaron & Wright sent Mr. Tawil a property questionnaire requesting information about the subject property, past and current operations, historical uses and any known environmental concerns including asbestos, radon, lead-based paint, underground and aboveground storage tanks, PCBs and spills or release of regulated or hazardous materials. A completed copy of the questionnaire was not returned to Aaron & Wright.

Source: Mr. Eliot Tawil Carleton Realty Corp., Purchaser of the subject property

Pertinent Information: Mr. Tawil was unaware of the construction dates of the buildings on-site. Mr. Tawil stated that the residential portions of the property are currently unoccupied. He added that all of the buildings on-site are slated for demolition. Moreover, he was unaware of any previous or current environmental concerns related to the subject property.

Source: Mr. Dominic Monera Engineer for the subject property for the past 15 years

Pertinent Information: Mr. Monera was unaware of the construction dates of the buildings on-site. Mr. Monera stated that the buildings on-site were previously heated by fuel oil, and that fuel oil tanks are currently located on-site. Mr. Monera was unaware of any previous or current environmental concerns related to the subject property.

Source: Walk-In New York City Department of Buildings

Pertinent Information: Aaron and Wright requested information pertaining to Certificates of Occupancy (COs), dates of construction and any previous developments or use of the subject property. Permits for minor alterations and violations for the buildings on-site are listed on the Property Profile Overviews (PPOs), which was reviewed at the New York City Building Department. No environmentally significant records were identified. Copies of the PPOs are provided in Appendix 6. Several COs for the subject property, dating from 1933 to 1959, were listed on the PPOs.

The building department was unable to provide any additional information regarding the prior use history of the subject property.

Source: Walk-in New York City Fire Department

Pertinent Information: Aaron & Wright requested information pertaining to any records any aboveground or underground storage tanks, hazardous materials, spills, leaks, or other similar circumstances that could be of environmental concern. No records of buried tanks were listed with the New York City Fire Department. Copies of the Fire Department records request forms are provided in Appendix 2.

Source: Walk-in New York City Health Department

Pertinent Information: Aaron & Wright requested information regarding citizen complaints and/or investigations on the use, handling, release, or discharge of solid or liquid wastes, hazardous materials, and any other circumstances of environmental concern for the subject property. The health department was unable to provide any information regarding circumstances of environmental concern for the subject property, as these records are not filed with the New York City Health Department.

Source: Walk-in New York City Zoning Department

Pertinent Information: The zoning department was unable to provide any information regarding the prior use history of the subject property.

5.2 Previous Reports

Aaron & Wright was not provided with any previous reports for the subject property.

5.3 Historical Maps

A number of publishers formerly produced maps that showed the location and use of structures on a property at a given point in time. These maps were widely available for areas that were significantly developed during the late 1800s through the 1950s, though coverage exists for some areas through the 1970s. Aaron & Wright had Environmental Data Resources, Inc., (EDR) review its collection of historical maps for any available maps of the subject property. The EDR collection is the largest and most extensive private collection of prior-use maps in the United States and includes Sanborn Fire Insurance Maps, Manufacturers Mutual Fire Insurance Maps, Nirenstein Real Estate Atlases, as well as maps published by William G. Baist, Hopkins, Rascher, Bracy, Scarlett and Scarlett, Bromley and Hexamer.

The following historical maps were obtained and reviewed (copies of the maps are provided in Appendix 6):

Date: 1902 Map Type: Sanborn Fire Insurance Map

Subject Property: The following buildings are depicted on-site:
107 West 124th Street: A 2-story dwelling
109 West 124th Street: A 2-story dwelling
111 West 124th Street: A 4-story dwelling
(The following buildings are assumed to be the same buildings identified during Aaron & Wright's site inspection):
281 Lenox Avenue: A 4-story dwelling
283 Lenox Avenue: A 4-story dwelling
285 Lenox Avenue: A 4-story dwelling
287 Lenox Avenue: A 3-story dwelling
289 Lenox Avenue: A 3-story dwelling
291-297 Lenox Avenue: A 4-story dwelling
108 West 125th Street: A 4-story dwelling
110 West 125th Street: A 4-story dwelling

Adjacent Prop.: Adjacent properties consist of multiple-story dwellings.

Date: 1912 Map Type: Sanborn Fire Insurance Map

Subject Property: The following buildings are depicted on-site:
107 West 124th Street: A 5-story dwelling (assumed to be the building identified during Aaron & Wright's site inspection)
109 West 124th Street: Same as 1902
111 West 124th Street: Same as 1902
281 Lenox Avenue: Same as 1902 (with a ground floor store)
283 Lenox Avenue: Same as 1902 (with a ground floor store)
285 Lenox Avenue: Same as 1902 (with a ground floor store)
287 Lenox Avenue: Same as 1902 (with a ground floor store)
289 Lenox Avenue: Same as 1902 (with a ground floor store)
291-297 Lenox Avenue: Same as 1902 (with a ground floor store)
108 West 125th Street: Same as 1902 (with a ground floor store)
110 West 125th Street: Same as 1902 (with a ground floor store)

Adjacent Prop.: Similar to 1902

Date: 1945 Map Type: Sanborn Fire Insurance Map

Subject Property: Same as 1912, with 107 West 124th Street labeled "Furniture Storage"

Adjacent Prop.: Similar to 1912

Date: 1980 Map Type: Sanborn Fire Insurance Map

Subject Property: Same as 1945, with the exception of 109 and 111 West 124th Street consisting of undeveloped lots, and 107 West 124th Street labeled "Auto Repair 1st [floor]"

Adjacent Prop.: Similar to 1945

The ground floor of 107 West 124th Street is listed as being occupied by an auto repair facility on the 1980 Sanborn map. This area currently consists of a boarded up, vacant building with a basement. Aaron & Wright did not gain access to this building during the site inspection. Given that this previous facility was located on the ground floor of the building with a basement situated below, and that no evidence of underground storage tanks were identified for this address, this listing is not an issue of concern.

5.4 Aerial Photographs/Topographic Maps

The following topographic map was reviewed:

Date: 1995 Scale: 1"=2,000'
Source: United States Geological Survey
Subject Property: The subject property is shown to be in an area of general urban development where only landmark buildings are depicted; therefore, no site-specific information was available from the topographic map.
Adj. Properties: Adjacent properties are shown to be in an area of general urban development where only landmark buildings are depicted; therefore, no site-specific information was available from the topographic map.

5.5 City Directories

City directories identify the name of the individual or company located at a given address. Aaron & Wright attempted to find city directories at the following location:

New York Public Library

(212) 661-7220

The following city directories were identified and reviewed:

Date: 1930 Title: New York City Address Directory
Subject Property: Commercial and residential listings
Adj. Property: Commercial and residential listings
Date: 1940 Title: New York City Address Directory
Subject Property: Commercial and residential listings
Adj. Property: Commercial and residential listings
Date: 1950 Title: New York City Address Directory
Subject Property: Commercial and residential listings
Adj. Property: Commercial and residential listings

Date: 1960 Title: New York City Address Directory
Subject Property: Commercial and residential listings
Adj. Property: Commercial and residential listings

Date: 1970 Title: New York City Address Directory
Subject Property: Commercial and residential listings, including French Dry Cleaners at 289 Lenox Avenue
Adj. Property: Commercial and residential listings

289 Lenox Avenue is listed on the 1970 New York City Telephone-Address directory as having a ground-floor dry cleaning establishment. This dry cleaner is not listed on the 1945 or 1980 Sanborn Fire Insurance maps, and was last occupied by a check cashing establishment. This building contains a basement which extends beneath the retail space which contained the former dry cleaners. Aaron & Wright did not gain access to this building during the site inspection. However, given the identified presence of a basement, the urban nature of the surrounding area, and that no indications or reports of leaks, spills, or the mishandling or improper disposal of chemicals were identified by Aaron & Wright, this previous dry cleaning facility is not expected to pose an environmental concern to the subject property.

5.6 Chain of Title

A chain of title was not provided by the Client, nor was one readily available for Aaron & Wright's review. Based on the historical data reviewed and the limited information typically provided in a chain of title, it is Aaron & Wright's opinion that a chain of title would not have provided any significant additional information.

5.7 Historical Summary/Conclusions

Findings: The majority of subject property was improved with the current improvements prior to 1902. The surrounding area has been developed as early as 1902, and has consisted primarily of residential buildings with ground floor stores.

Actions: Based on the information provided above, it is Aaron & Wright's professional opinion that the intent of the scope of work for prior use history has been met, and no prior usage of the subject property or adjacent properties were identified that would be considered a recognized environmental concern or indicate the need for additional study.

6.0 ENVIRONMENTAL DATABASE REVIEW

The purpose of the environmental database review is to obtain and review records that will help identify activities at the subject property or surrounding properties likely to environmentally impact the subject property. The database information was obtained through EDR. Because of the density of the highly-developed urban setting in which the subject property is located, Aaron & Wright has reduced the approximate minimum search distances of certain databases provided below, in accordance with ASTM E1527-00, 7.1.2.1. The Federal NPL site list and Federal RCRA TSD list are never reduced. A detailed description of the databases reviewed and a listing of all sites identified are provided in Appendix 7. The plotting of the sites in the EDR database is done through geo-coding and the locations provided are approximations. Aaron & Wright attempted to visually verify the distances to sites located in close proximity to the subject property.

DATABASE	RADIUS (In miles)	NUMBER OF SITES
National Priority List (NPL) and Proposed NPL	1.0	None
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)	0.25	None
CERCLIS-No Further Remedial Action Planned (NFRAP)	0.125	None
Resource Conservation and Recovery Act Corrective Actions (CORRACTS)	1.0	1
Resource Conservation and Recovery Act Treatment, Storage and Disposal Facilities (RCRIS-TSD)	0.50	None
Resource Conservation and Recovery Information System Large Quantity Generators (RCRIS Lg. Quan. Gen.), and Small Quantity Generators (RCRIS Sm. Quan. Gen.) Includes Violations and Enforcement actions (RCRA Viol)	0.125	2
Emergency Notification Response System (ERNS)	0.125	None
Supplemental Federal ASTM databases, includes Facility Index System (FINDS), Toxic Release Inventory Database (TRIS), and Resource Conservation and Recovery Act Administrative Action Tracking System (RAATS)	0.125 or as listed	3
State Hazardous Waste Sites (State equivalent of CERCLIS and NPL)	0.25	None
State Solid Waste Facilities/Landfill Database (SWF/LF)	0.25	None
Leaking Underground Storage Tanks (LUST)	0.50	46
Underground Storage Tanks (UST)	0.125	4
Supplemental State ASTM databases, includes Aboveground Storage Tanks (AST) and State Spill Lists (SPILLS)	0.125	9

*TP = Target Property

Anticipated Groundwater Flow Direction: To the east, towards the East River

The groundwater flow direction is used to determine whether sites are located up-, cross- or down-gradient of the subject property, which provides an indication of their potential to impact the subject property.

6.1 Subject Property

Databases identified on: None

Comment: N/A

6.2 NPL, CERCLIS & NFRAP Sites

The National Priority List (NPL) is the USEPA database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List contains sites which are either proposed to be on the NPL, and sites which are in the screening and assessment phase for possible inclusion on the NPL. No Further Remedial Action Planned (NFRAP) sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

No NPL, CERCLIS, or NFRAP sites were identified within the study radii.

6.3 RCRA Facilities

Regulated hazardous waste activity is tracked under the Resource Conservation and Recovery Act (RCRA). Facilities that treat, store or dispose of hazardous waste are listed in the RCRA TSD database. Facilities that generate hazardous wastes are listed in the GNRTR database. This database includes facilities that generate at least 1,000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste, referred to as large-quantity generators, and those that generate less than 1,000 kg/month of non-acutely hazardous waste, referred to as small-quantity generators. RCRA facilities which have had a release of hazardous waste or constituents to the environment, for which the government is requiring corrective action, are tracked in the Corrective Action Tracking System (CORRACTS) database, while generators that are known to have violated RCRA regulations are tracked in the RCRA violations and enforcement (RCRA Viol) or the RCRA Administrative Action Tracking System (RAATS) database. These violations can be the result of paperwork problems and are not necessarily related to releases of hazardous material.

No RCRA TSD or Viols sites were identified within the study radius.

One CORRACTS site was identified within the study radius. This site, Olin Water Services, at 609 West 131st Street, is located approximately 0.90 mile to the northwest of, and crossgradient from, the subject property the subject property. However, given the hydrological location and distance of this site from the subject property, this site is not an issue of concern at this time.

Two RCRIS sites were identified within the study radius. The closest site, NYS Adam Clayton Powell Jr. S.O.B., at 163 West 125th Street, is located approximately 0.10 mile to the west of, and crossgradient from, the subject property. Violations exist for this facility. However, given the hydrological location and distance of this site from the subject property, this site is not an issue of concern at this time. One additional site is listed on the RCRIS. However, a listing on the GNRTR database is not necessarily indicative of an environmental concern. This site is not listed on the CORRACTS or RCRA Viol databases, and is, therefore, not an issue of concern at this time.

6.4 ERNS Incidents

The Emergency Response and Notification System (ERNS) is a national database containing records of releases of oil and hazardous substances reported to the USEPA, U.S. Coast Guard, the National Response Center and the Department of Transportation, since 1986.

No ERNS sites were identified within the study radius.

6.5 Supplemental Federal Databases including FINDS and TRIS Databases

Additional federal databases include the Facility Index System (FINDS) and Toxic Inventory Information System (TRIS). The FINDS report is a computerized inventory of all facilities that are regulated or tracked by the USEPA. These facilities are assigned an identification number that serves as a cross-reference for other databases in the USEPA's program system. The appearance of a site in the FINDS system does not, in itself, indicate an environmental concern. The TRIS report contains information concerning the industrial release and/or transfer of toxic chemicals, as reportable under Title III of the Superfund Amendments and Re-authorization Act of 1986 (SARA Title III). Inclusion on this database is required for facilities which release reportable amounts of chemicals into the environment. However, inclusion on the TRIS database does not indicate that chemicals have been released in amounts that exceed federal or state standards or the facilities' permits.

Three FINDS sites were identified within the study radius. These sites are cross-listed on other USEPA databases (such as the GNRTR database), and are discussed further in the appropriate sections of this database review.

6.6 SHWS Database

State Hazardous Waste Sites (SHWS) are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund or NPL) are identified along with sites where cleanup will be paid for by potentially responsible parties.

No SHWS listings were identified within the study radii.

6.7 SWF/LF Facilities

The State Solid Waste Facilities/Landfill Database (SWF/LF) is a collection of known regulated and unregulated solid waste landfills, incinerators, or transfer stations.

No SWF/LF facilities were identified within the study radius.

6.8 UST, LUST & AST Sites

The state Underground Storage Tank (UST) and Aboveground Storage Tank (AST) databases are an inventory of all regulated USTs and ASTs, respectively. The Leaking Underground Storage Tank (LUST) database is a listing of all confirmed or suspected releases from underground storage tanks that have been reported to the state.

Four UST sites were identified within the study radius. The closest UST site, 105 West 125th Street, is located adjacent to the north of, and crossgradient from, the subject property. This site is not listed on the LUST database. In addition, there are three remaining UST sites. UST sites not known or suspected to have had a release are generally not considered recognized environmental concerns. Sites with known or suspected releases are discussed below.

Nine AST sites were identified within the study radius. The closest AST site, 310 Lenox Avenue, is located approximately 0.10 mile to the north, and crossgradient from the subject property. Many area buildings utilize heating oil as a fuel source, and are equipped with ASTs. These tanks are generally located in a vault in the basements of the buildings and can be visually inspected and gauged to determine if leaks have occurred. In addition, fuel oil typically has a limited migration potential.

Forty-six LUST sites were identified within the study radius. Twenty-eight of the LUST sites are listed as being closed. A closure designation is given when adequate remediation has been performed, and all the appropriate paperwork has been filed as necessary. Given the remedial status of these 28 sites, these sites are not an issue of concern.

Seventeen of the remaining 18 LUST sites impacted land. These 18 sites are located between 0.10 and 0.50 mile from the subject property. The closest of these sites is located at 152 West 124th Street, approximately 0.10 mile to the west of, and crossgradient from, the subject property. Given the distances of these sites from the subject property, and that groundwater was not impacted, these sites are not cause for significant concern.

The remaining LUST site impacted groundwater. This site, Shell Service Station, on St. Nicolas Avenue, is located approximately 0.45 mile to the west of, and crossgradient from, the subject property. Given the hydrological location and distance from the subject property, this site is not an issue of concern at this time.

Based on the Lawrence Livermore National Laboratory study *Recommendations To Improve the Cleanup Process for California's Leaking Underground Fuel Tanks ("LUFTs")*, October 16, 1995, petroleum contamination did not extend more than 200 to 250 feet in 90% of the release incidents investigated, in which groundwater was impacted. This information was generally confirmed by a study conducted by the Bureau of Economic Geology entitled *Extent, Mass, and Duration of Hydrocarbon Plumes from Leaking Petroleum Storage Tanks in Texas*, 1997, and is consistent with Aaron & Wright's experience in conducting subsurface investigations across the country.

The state historically has not held owners or operators of a property financially responsible for the cleanup of petroleum contamination where the contamination has come onto the property solely as the result of subsurface migration from a source outside the property and the owners or operators did not cause, contribute to or aggravate the release. The probability that the security holder of the subject property would be financially responsible from a potential off-site release from these sites is likely limited. For this reason, and for the reasons listed above, it is Aaron & Wright's opinion that the identified UST and LUST sites do not pose a significant environmental concern to the subject property.

6.9 Additional and Supplemental State or Local Databases or Information

EDR provided a list of sites for which the exact locations could not be identified. Aaron & Wright reviewed the list of "unplottable" sites and determined that some of these sites may be located within the study radii; however, based on their locations, compliance status and/or nature of the listings, none of these sites are considered an environmental concern to the subject property.

6.10 Environmental Database Summary

Findings: Aaron & Wright did not identify activities at the subject property or at neighboring properties that would indicate a significant potential for recognized environmental conditions, based on the information contained in the databases reviewed.

Recommendations: No further investigations or actions are recommended at this time.

7.0 SITE RECONNAISSANCE

During the property visit, attempts were made to observe the subject property and improvements. The purpose of the property reconnaissance is to obtain information indicating the likelihood of recognized environmental concerns in connection with the subject property.

7.1 Visual Observations

During the property reconnaissance, Aaron & Wright looked for the following visual indications of potential environmental concern.

POTENTIAL CONCERNS	COMMENTS
• Hazardous or regulated materials stored on the property	No hazardous or regulated materials were identified on-site.
• Medical/biological wastes stored on the property	No medical or biological wastes were observed or reported.
• X-ray or other radioactive activities conducted on the property	No x-ray or other radioactive activities were observed or reported.
• Activities likely to generate, store or use hazardous materials	No manufacturing, fabrication, or assembly operations are conducted on the property.
• Operations that result in a wastewater or air discharge	No operations likely to result in a significant wastewater or air discharge were noted.
• Interior stains or corrosion	No signs of interior stains or corrosion, likely to have been generated by a hazardous or regulated material, were noted.
• Strong, pungent or noxious odors	No significant odors were noted or reported.
• Discolored drains or sumps	No discolored drains or sumps were noted or reported.
• Pits, ponds or lagoons	No pits, ponds, or lagoons, associated with hazardous or regulated materials, were observed or reported.
• Stained soil or pavement	No significantly stained soil or pavement were observed or reported.
• Stressed vegetation	No significant areas of stressed vegetation were observed or reported.
• Improperly stored solid waste	No improper solid waste storage was noted. The removal and disposal of general refuse and solid waste is outsourced to private contractors.
• Onsite wells or septic systems	No on-site wells or septic systems were observed or reported.

Recommendations: Aaron & Wright did not observe any recognized environmental concerns that would warrant additional action or investigation.

7.2 Underground and Above Ground Tanks

An effort was made to identify all ASTs, USTs, or vent pipes, fill pipes or access ways indicating USTs. In addition information from local records and historical maps and information regarding historical heating sources were reviewed.

POTENTIAL CONCERNS	COMMENTS
<ul style="list-style-type: none">• Visual indication of ASTs	<p>Aaron & Wright identified an active 5,000-gallon fuel oil tank completely encased in concrete in the basement boiler room of 291 Lenox Avenue. No weepholes were identified on the base of the tank encasement. The fuel oil grade was not listed on-site, and Aaron & Wright's site contact was unaware of the grade of fuel oil used. No areas of petroleum staining were identified in the vicinities of this tank.</p> <p>In addition, the following abandoned fuel oil tanks were identified on-site: one 1,500-gallon fuel oil tank completely encased in concrete in the basement of 281 Lenox Avenue (no weepholes were identified on the base of this tank encasement, and no areas of petroleum staining were identified in the vicinities of this tank); and one AST of unknown size in the basement of 287 Lenox Avenue (this tank was covered in rubble and debris, and the condition and capacity of the tank was not visible).</p> <p>In addition, a fuel oil fill cap and vent pipe were identified in front of 289 Lenox Avenue. However, access was not gained to this building. Therefore, Aaron & Wright was unable to inspect for potential tanks in this area.</p>
<ul style="list-style-type: none">• Visual indications of USTs	<p>Aaron & Wright did not identify any visual indications of USTs on the subject property.</p>
<ul style="list-style-type: none">• Records of USTs	<p>No records indicating the past or current presence of USTs on the property were identified.</p>
<ul style="list-style-type: none">• Current heating source	<p>The subject buildings, with the exception of 291 Lenox Avenue, which is heated by one oil-fired boiler, are currently unheated.</p>
<ul style="list-style-type: none">• Historical usage heating oil	<p>Historically, it is assumed that the subject property utilized heating oil as a heat source. Information obtained by Aaron & Wright indicates the heating oil was most likely contained in ASTs. There are no indications of USTs utilized for heating oil on the subject property.</p>
<ul style="list-style-type: none">• Other	<p>There were no indications of USTs on the historical maps reviewed.</p>
<p>Recommendations:</p>	<p>Aaron & Wright identified an active 5,000-gallon fuel oil tank completely encased in concrete in the basement boiler room of 291 Lenox Avenue. In addition, the following abandoned fuel oil tanks were identified on-site: one 1,500-gallon fuel oil tank completely encased in concrete in the basement of 291 Lenox Avenue, and one AST of unknown size in the basement of 287 Lenox Avenue. In addition, a fuel oil fill cap and vent pipe were identified in front of 289 Lenox Avenue. However, access was not gained to this building. Therefore, Aaron & Wright was unable to inspect for potential tanks in this area. Given that the buildings on-site are slated for demolition, Aaron & Wright recommends that these tanks be decommissioned and removed in accordance with all federal, state, and local regulations. In addition, Aaron & Wright recommends that care be taken in the development of the subject property.</p>

In the event that additional aboveground fuel oil tanks are discovered during interior demolition, the ASTs should be decommissioned and removed in accordance with all local, state, and federal regulations. If USTs are discovered during future site excavations, the USTs should be removed in accordance with all federal, state, and local regulations.

7.3 PCB-Containing Equipment

Aaron & Wright relied on visual observations and interviews with the property contacts and/or the utility company to identify known or potential PCB-containing electrical or hydraulic equipment. Where identified, efforts were made to determine ownership and to identify indications of leakage.

POTENTIAL CONCERNS	COMMENTS
• Pole-mounted Transformers	No pole-mounted transformers were identified on the subject property.
• Pad-mounted Transformers	No pad-mounted transformers were identified on the subject property.
• Hydraulic Elevators or Lifts	No hydraulic elevators or lifts were identified on the subject property.

Recommendations: No information was obtained or observations made that would warrant any additional investigation or action.

7.4 Preliminary Asbestos Evaluation

Efforts were made to identify the presence of the most obvious and common ACM. The potential for the presence of friable ACM was evaluated based on the age of the improvements, dates of renovation, and other relevant information.

Per the Client's scope of work, samples of building materials were not collected and analyzed; however, an effort was made to identify suspect ACM.

SUSPECT ACM	LOCATION/CONDITION/COMMENT
• Cement Pipes	No suspect ACM cement pipes were observed.
• Cement Wallboard or Siding	No suspect ACM cement wallboard or siding was observed.
• Asphalt/Vinyl Floor Tile and Mastic	An unquantified amount of 9"x9" and 12"x12" vinyl floor tiles and mastic were observed throughout the buildings. These materials are considered non-friable, and ranged from good to poor condition.
• Vinyl Sheet Flooring and Backing	An unquantified amount of vinyl sheet flooring was observed throughout the buildings. This material is considered non-friable, and ranged from good to poor condition.
• Acoustical Or Decorative Plaster	No suspect ACM acoustical or decorative plaster was observed.
• Textured Paints/Coatings	No suspect ACM textured paints and coatings were observed.
• Ceiling Tiles and Lay-in Panels	Suspect ACM 12"x12", 2'x2', and 2'x4' drop ceiling tiles were observed throughout the ground floor commercial units. These materials are considered friable, and ranged from good to poor condition.

SUSPECT ACM	LOCATION/CONDITION/COMMENT
• Spray-Applied Insulation	No suspect ACM spray-applied insulation was observed.
• Blown-in Insulation	No suspect ACM blown-in insulation was observed.
• Fireproofing Materials	No suspect ACM fireproofing materials were observed.
• Taping Compounds (thermal)	No suspect ACM thermal taping compounds were observed.
• HVAC Duct Insulation	No suspect ACM duct insulation was observed.
• Boiler Insulation	Approximately 200 SF of suspect friable cementitious boiler insulation in poor condition was identified in the 291 Lenox Avenue main basement area.
• Breeching Insulation	No suspect ACM breeching insulation was observed.
• Ductwork Flexible Fabric Connection	No suspect ACM flexible fabric ductwork was observed.
• Pipe Insulation	Small amounts of suspect friable aircell pipe insulation with cementitious pipe fitting insulation in poor condition was identified in the basements of the following buildings: 291 Lenox Avenue (approximately 20 SF pipe elbows only); 281 Lenox Avenue (approximately 20 LF aircell insulation); 108 West 125 th Street (approximately 20 LF); and 110 West 125 th Street (approximately 35 LF).
• Roofing Materials	It is possible that roofing materials contain asbestos. These materials are considered non-friable and should not pose a significant environmental concern to the subject property.
• Wallboard/Joint Compounds	Suspect ACM wallboard and joint compound are present throughout the subject property. These materials are considered non-friable and should not pose a significant concern unless disturbed.

Recommendations: Small amounts of suspect friable aircell pipe insulation with cementitious pipe fitting insulation in poor condition was identified in the basements of the following buildings: 291 Lenox Avenue (approximately 20 SF pipe elbows only); 281 Lenox Avenue (approximately 20 LF aircell insulation); 108 West 125th Street (approximately 20 LF); and 110 West 125th Street (approximately 35 LF). In addition, approximately 200 SF of suspect friable cementitious boiler insulation in poor condition was identified in the 291 Lenox Avenue basement.

Also, suspect friable 12"x12", 2'x2', and 2'x4' drop ceiling tiles were observed throughout the ground floor commercial units. In addition, non-friable 9"x9" and 12"x12" vinyl floor tiles, vinyl sheet flooring, and wallboard and joint compound were observed throughout the buildings.

Given that the buildings are slated for demolition, comprehensive asbestos surveys of each of the buildings should be conducted in compliance with NESHAP and New York City Building Department regulations before initiating such destructive activities. The surveys should include an assessment of all subject building materials, including those in areas which are normally inaccessible. Materials that should be considered suspect ACM are listed in Appendix G of the EPA publication, *Managing Asbestos in Place*, (the "Green Book"). Materials listed in the Green Book, which were installed prior to 1989, are suspected of containing asbestos.

However, it should be noted that asbestos may still be utilized in some non-friable products, such as sheet vinyl flooring, vinyl floor tiles, floor tile mastic, asbestos-cement board and roofing materials, as these materials may still be manufactured and installed in the United States.

Any ACM removed from the subject property should be removed in accordance with all applicable federal, state and local regulations. The procedure should be performed in a safe and controlled manner by a qualified asbestos abatement contractor. The contractor should use prudent techniques recognized as industry standards. Any removed asbestos should be disposed of in an approved and legal manner.

7.5 Radon Review

An evaluation was made to determine the potential for elevated levels of radon at the subject property based on the property's location, construction type and usage.

RADON FACTORS	COMMENTS
• Radon Zone	The subject property is located in Radon Zone 3, which has a predicted average indoor screening level of less than 2 picocuries per liter (pCi/L). The USEPA action level for radon is 4 pCi/L.
• Are There Regularly Occupied Subsurface or Ground Level Residential Units	No
• Results of Previous Tests at the Property	No previous test results were made available to Aaron & Wright.

Recommendations: Based on the low regional averages, radon is not considered a significant concern and no additional investigation is warranted.

7.6 Lead-Based Paint Evaluation

Aaron & Wright evaluated the potential for significant concerns relating to the presence of LBP at the subject property. The LBP evaluation was based on the age of the improvements, dates of renovation and other relevant information.

LBP FACTORS	COMMENTS
• Constructed Date:	Prior to 1902 Construction of the property improvements occurred prior to 1979; therefore, LBP may be present.
• Property Usage	Residential with ground floor commercial/retail units
• Damaged or Peeling Paint	Damaged and peeling paint was observed in the vacant ground floor commercial units.
• Previous LBP Tests	Aaron & Wright was not provided with any previous LBP testing results.

Recommendations: Given the ages of the buildings on-site (prior to 1902), it is possible that painted surfaces contain lead. It is Aaron & Wright's understanding that the buildings will be demolished. Aaron & Wright recommends that proper precautions be taken in accordance with OSHA Industrial Guidelines, New York State, and New York City Regulations for lead paint to minimize the generation of lead-borne dust.

Any LBP removed from the subject property should be removed in accordance with all applicable federal, state and local regulations. The procedure should be performed in a safe and controlled manner by a qualified lead abatement contractor. The contractor should use prudent techniques recognized as industry standards. Any removed LBP should be disposed of in an approved and legal manner.

7.7 Drinking Water Evaluation

The potential for problems relating to elevated levels of contaminants, particularly lead, was evaluated.

DRINKING WATER FACTORS	COMMENTS
• Source of Drinking Water	The subject property receives its drinking water from the City of New York. The source of the water is the Catskills in Upstate New York. According to Ms. Aspa Capetamakis, the Supervisor of Special Investigations for the New York City Department of Environmental Protection, the city tests its water before it enters the distribution system. The water reportedly meets federal and state drinking water standards, including those for lead and copper. Therefore, Aaron & Wright does not consider the quality of drinking water to be a significant concern.
• Other	No concerns regarding drinking water were reported to Aaron & Wright by the property contact or tenants.

Recommendations No information was uncovered that would warrant additional investigation or action.

APPENDIX 3

PERSONNEL QUALIFICATIONS

QUALIFICATIONS OF AARON & WRIGHT

CORPORATE OVERVIEW

Aaron & Wright Technical Services Incorporated is a full-service real estate consulting firm specializing in meeting the third party due diligence needs of clients active in the acquisition, finance or securitization of real estate. Aaron & Wright provides a full range of services, including but not limited to:

- Phase I and Phase II Environmental Site Assessments
- Brownfields Investigations and Remediation
- Asbestos and Lead Paint Management Programs
- Property Condition Assessments
- Americans with Disabilities Act Surveys
- Probable Maximum Loss/Seismic Studies
- Plan and Cost Reviews and Construction Draw Inspections
- Third Party Desktop Report Reviews

Aaron & Wright provides services nationwide, utilizing a network of regional offices and satellite locations. Aaron & Wright has appraised, consulted and/or performed environmental and property condition assessments on over \$12 billion of real estate throughout the United States, Canada, Mexico and the Caribbean. Our national presence allows us to effectively handle large portfolios of properties, and to respond quickly to the needs of clients, providing answers and solutions when time is of the essence. Aaron & Wright is well known for responsiveness and client service. Our company's focus is to provide solutions, not just to provide reports.

Since its inception in 1994, Aaron & Wright has prepared over:

- 4,800 Phase I ESAs and Transaction Screens
- 250 Phase II ESAs
- 3,700 Property Condition Assessments
- 250 Probable Maximum Loss (PML) studies

Aaron & Wright has prepared environmental and property condition reports on over:

- 3,500 multi family properties
- 2,700 retail properties
- 900 office buildings
- 700 industrial and mixed use properties
- 550 special use properties

ENVIRONMENTAL & ENGINEERING SERVICES

Aaron & Wright's Environmental & Engineering Group was founded in 1994, and has grown to be one of the most highly-regarded firms providing environmental and structural due diligence on a national basis. Aaron & Wright's reports are widely utilized on Wall Street, as well as Main Street. Our environmental site assessments and property condition assessments have been widely accepted by the major rating agencies, Wall Street investment banks, Fannie Mae, Freddie Mac, as well as numerous life insurance companies, banks, and national developers.

Aaron & Wright has engineers, architects and environmental scientists strategically located across the country. The practice of using local Project Managers and Engineers with centralized review and production allows us to provide local knowledge and expertise, and provide reports with a consistently high level of quality, content and appearance. The Environmental & Engineering Services Group has significant experience dealing with multifamily, hospitality, retail, office, light industrial, mobile home communities and credit tenant lease properties.

Aaron & Wright's Environmental & Engineering Group is comprised of a staff of Professional Engineers (PEs), Professional Geologists (PGs), Certified Hazardous Materials Managers (CHMMs), architects and other professionals with hands on experience with building foundations, building construction, roofing, asbestos, hazardous site characterization, underground storage tank removals, site remediations and other related fields.

REMEDICATION SERVICES

Aaron & Wright's Remediation Group was founded in 2001 to provide its clients with an effective method on resolving environmental concerns. The Remediation Group is staffed with Aaron & Wright's most senior Professional Geologists (PGs), Professional Engineers (PEs), chemists and other professionals.

The group focuses on brownfields redevelopment, leaking underground storage tank assessments and closures, dry cleaner investigations and remediations, and other hazardous site investigations and cleanups.

Our real estate experience and technical knowledge provides the firm with a unique perspective in remediating contaminated property. Aaron & Wright works hand-in-hand with developers, industrial operators, and other real estate owners to find cost-effective, real-world solutions to environmentally-impacted real estate. We maintain a solid working relationship with the regulatory agencies, and can often facilitate quick resolutions of complex cleanup issues.

INDUSTRIAL HYGIENE SERVICES

Aaron & Wright's Industrial Hygiene Group was founded in 2002 to address our clients' asbestos, lead, mold and indoor air quality needs. The staff is comprised of Certified Industrial Hygienists (CIHs) and other environmental professionals.

This group focuses on conducting pre-renovation/demolition asbestos and lead-based paint surveys, as well as investigations concerning mold and other indoor air quality concerns. Once a concern is identified, Aaron & Wright's professionals can develop procedures and specifications to abate the concern or design operations and maintenance (O&M) programs for managing the materials in place. The firm also provides management oversight on abatement projects.

JEREMY MUSHLIN
Project Manager

Academic

- Masters of Public Administration (MPA) - Environmental Policy, New York University - Wagner Graduate School of Public Service
- B. A. Environmental Policy & Geography, Boston University

Certifications/Registrations/Additional Training:

- 24-Hour Asbestos Inspector Class, A.H.E.R.A. - 40CFR763-Appendix C; NYSDOL Licensed Asbestos Inspector
- Multiple certifications in Javascript, Macromedia Flash and multi-media design, New York University - IT Department

Experience

Mr. Mushlin has performed over 1,100 Phase I Environmental Site Assessments of retail, commercial, residential, and office properties for use by real estate/lending institutions. Duties have included writing, editing, and reviewing environmental technical reports, acting as liaison between real estate/financial entities and environmental agencies, and managing due diligence inquiries around the United States.

RICHARD DAGNALL

PRESIDENT

Professional Experience

Mr. Dagnall has been working in the environmental and engineering fields since 1984 when as a consultant to the United States Environmental Protection Agency (USEPA), he inspected over 100 potentially hazardous waste sites (CERCLIS sites) and scored the sites for possible inclusion on the National Priorities List. Later, as a Remedial Project Manager for the USEPA Superfund program, he was responsible for the overseeing the remedial investigations, feasibility studies and cleanups at Superfund sites.

After gaining this experience in the regulatory analysis of projects for compliance with federal and state environmental regulations, Mr. Dagnall started conducting due diligence for property owners and lending institution in 1988. He has prepared or reviewed Environmental Site Assessments Phase I's and Property Condition Assessments on over one thousand industrial, office, multi-family, retail, undeveloped and residential properties nationwide for regional banks, investment banks, insurance companies, developers and law firms.

Mr. Dagnall co-founded Aaron and Wright Technical Services Inc in 1994. As President of the company, Mr. Dagnall directs the technical and business operations of the company. Under his leadership, the company has grown to be a true national provider of engineering and environmental due diligence reports on commercial real estate for the lending industry.

Additionally, Mr. Dagnall has written articles on various environmental and structural engineering topics and has participated in environmental round tables hosted by trade and economic groups.

AARON & WRIGHT
ENVIRONMENTAL QUESTIONNAIRE

*Answer all applicable questions or check
the appropriate box*

PREVIOUS INVESTIGATIONS

1. Has a Phase I Environmental Assessment, asbestos survey, tank closure/removal report or other environmental study of the subject property ever been performed? - Yes - No
2. If yes, what concerns were noted or recommendations made? _____
Please provide a copy of the previous study if possible.

PAST & PRESENT USAGE

1. To the best of your knowledge, is the subject property or any adjoining property currently used, or have they ever been used for industrial purposes? - Yes - No
2. Is the property or any adjoining property currently used, or have they ever been used, as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard, landfill, or as a waste treatment, storage, disposal, process or recycling facility? - Yes - No

SITE CONDITIONS

1. Has fill dirt been brought onto the property that originated from a contaminated site or that is of an unknown origin? - Yes - No
2. Are there currently, or to the best of your knowledge have there been previously, any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal? - Yes - No
3. To the best of your knowledge, have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials been dumped above grade, buried and/or burned, on the property? - Yes - No

STORAGE TANKS & DRAINS

1. Are there currently, or to the best of your knowledge have there been previously, any registered or unregistered above ground or underground storage tanks located on the property? - Yes - No
2. Are there currently, or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structures located on the property? - Yes - No
3. Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors? - Yes - No

REGULATORY STATUS

1. If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency? - Yes - No
2. Do you have any knowledge of environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property? - Yes - No

3. Do you have knowledge of the past or current existence of hazardous substances or petroleum products or environmental violations with respect to the property or any facility located on the property? - Yes - No
4. Are there any threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of hazardous substances or petroleum products involving the property or any owner or occupant of the property? - Yes - No

TRANSFORMERS AND HYDRAULIC EQUIPMENT

1. Are there any electrical transformers, capacitors or hydraulic equipment on the subject property? - Yes - No
2. If yes, who owns the item? _____
3. If yes, has any of the equipment been sampled for PCBs? - Yes - No
4. If yes, what levels were present? _____

ASBESTOS

1. Has there been an asbestos survey of the building that included physical sampling by a qualified firm? - Yes - No
2. If yes, what asbestos-containing materials were identified Are there any electrical transformers, capacitors or hydraulic equipment on the subject property? _____

RADON

1. Has the building been tested for radon? - Yes - No
2. If yes, what levels of radon were detected? _____

LEAD-BASED PAINT

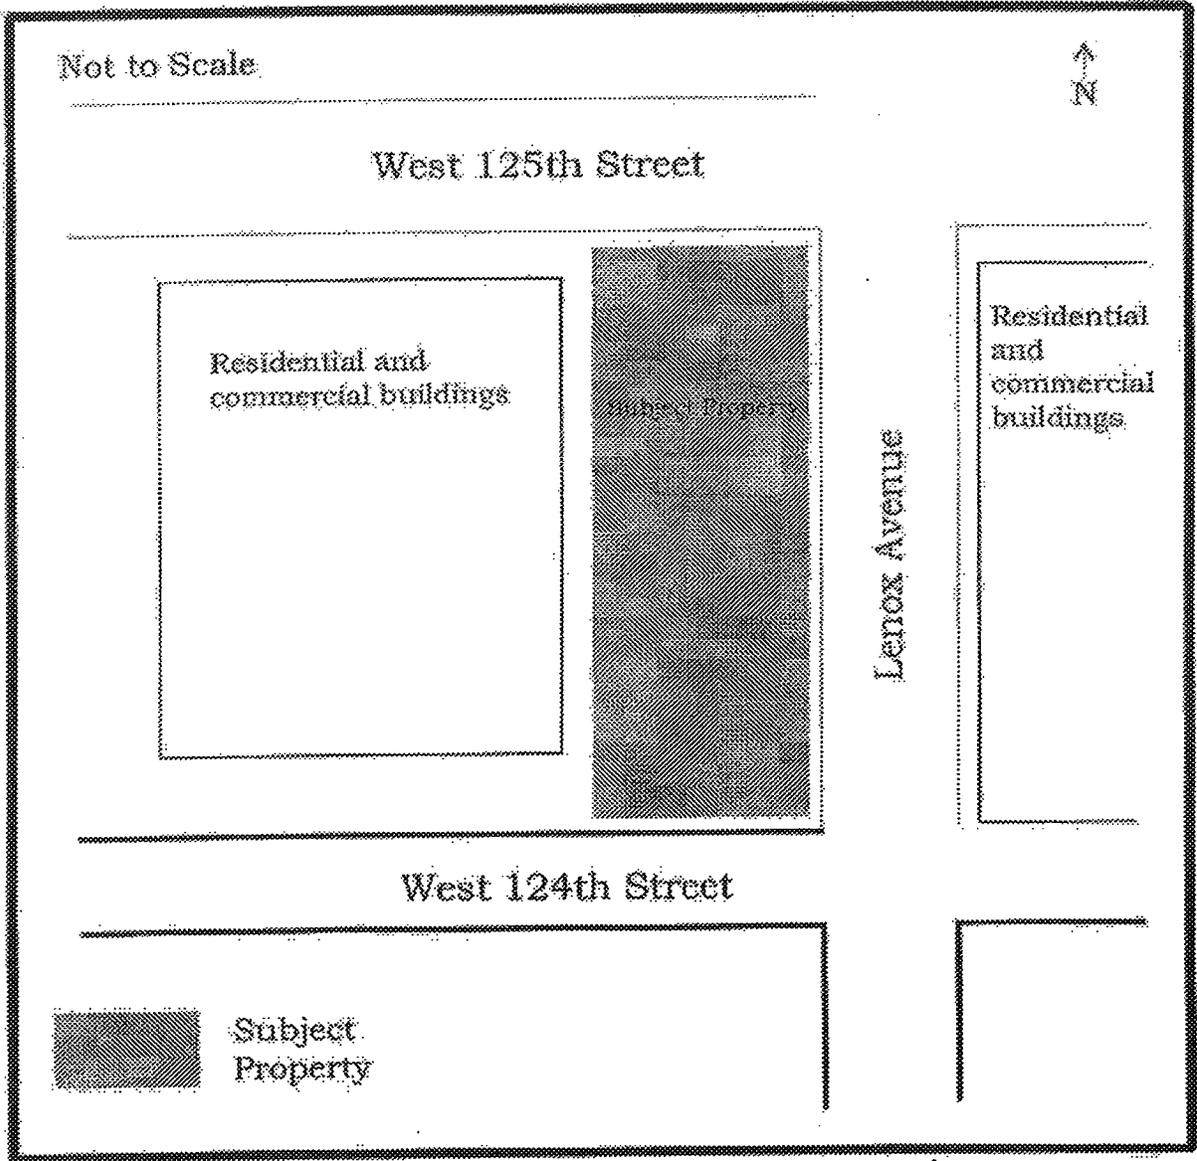

1. Has the building been tested for lead-based paint? - Yes - No
2. If yes, what surfaces were found to contain lead? _____

COMMENTS (If you answered yes to any of the above, please provide details below or attach appropriate documentation.)

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

PADS..... PCB Activity Database System
RAATS..... RCRA Administrative Action Tracking System
TRIS..... Toxic Chemical Release Inventory System
TSCA..... Toxic Substances Control Act
FTTS..... FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

HSWDS..... Hazardous Substance Waste Disposal Site Inventory
MOSF AST..... Major Oil Storage Facilities Database
NY Spills..... Spills Information Database

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/14/2001 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
<i>OLIN WATER SERVICES</i>	<i>609 W 131ST ST</i>	<i>1/2 - 1 NW</i>	<i>O62</i>	<i>93</i>

EXECUTIVE SUMMARY

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-SQG list, as provided by EDR, and dated 12/01/2001 has revealed that there are 2 RCRIS-SQG sites within approximately 0.125 miles of the target property.

STATE ASTM STANDARD

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 46 LTANKS sites within approximately 0.5 miles of the target property.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 4 UST sites within approximately 0.125 miles of the target property.

FEDERAL ASTM SUPPLEMENTAL

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/29/2001 has revealed that there are 3 FINDS sites within approximately 0.125 miles of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS AST site within approximately 0.25 miles of the target property.

DEC Remarks: DEC Sigona investigated on 10/4/99 at 2:25 P.M. arrived on scene no work on site. Called PTC Anthony Lara on 10/4/99, he said Issac inspected the abandoned building who said may be leaking. Called A.J. Patel, he will call back. According to PTC,, the FDNY stopped them to clean the floor and wanted the tank floor. Issac said HPD may want to use a different contractor to handle a tank replacement remediation. There are 2-275 gallon ASTs which are leaking and require replacement. DECC Sigona called Ajay Patel on 10/28/99 at 11:30 A.M., left message with Secretary. Ajay Patel, Director of Bureau of Maintenance and Procurement, HPD 212)863-7764.

Spill Cause: Caller reports tank leak to floor approximately 15 gallons.

DEC Remarks: 1/25/96 - Heavy rains in the last week caused seepage of oil and groundw ater into boiler room of this project. Oil got into sump pit also. Sump pumps were shut down. Winston Contracting power washed the floor and sump but oil continues to seep in. Tank is encased in concrete and has failed an air test. Tank has been taken out of service and replaced with four 275 gallon tanks temporarily project runs gas for hot water and oil for heat only). Tank is to be ultrasonically and internally inspected.

DEC Remarks: On 6/18/01 Spill responder De Meo received a report from NYFD regarding fuel oil leaking into a HPD owned apartment building, located at 411 West 128th Street in Manhattan (spill 0102976). The oil from an unknown source was coming out of drains and small open excavations in the basement of the above mentioned property. Additionally, in the courtyard behind the property oil was observed leaching through a 20 ft. high retaining wall. A canvas of the area revealed a leaking 5,000 gallon tank at 412 West 129th Street. The above tank was leaking the fuel oil into an open excavation (3 ft x 3ft x 3ft). The building owner was instructed to empty contents of tank and address the impacts to building on W128th. Environmental Tank cleaners was retained to pump oil and perform cleanup. DLE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/29/02

Date Made Active at EDR: 02/25/02

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 02/04/02

Elapsed ASTM days: 21

Date of Last EDR Contact: 05/06/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2010 has revealed that there is 1

EXECUTIVE SUMMARY

CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 05/24/2010 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

Class Code: Significant threat to the public health or environment - action required.

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at

EXECUTIVE SUMMARY

sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 02/02/2010 has revealed that there is 1 VAPOR REOPENED site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 05/24/2010 has revealed that there are 69 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 52 HIST LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 04/06/2010 has revealed that there are 15 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS AST site within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/24/2010 has revealed that there are 23 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 16 NY Hist Spills sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 12 RCRA-NonGen sites within approximately 0.25 miles of the target property.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the MANIFEST list, as provided by EDR, and dated 04/30/2010 has revealed that there are 31 MANIFEST sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

CON EDISON - WEST 132ND ST. ST	12TH AVE. BETWEEN W. 13	NW 1/2 - 1 (0.907 mi.)	AS262	863

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there is 1 EDR Historical Cleaners site within approximately 0.25 miles of the target property.

SEMI-VOL BY DIRECT METHOD, WHICH BY RULE DEC COMPARES TO TAGM4046, SHOWS SIGNIFIGANT EXCEEDANCES. FURTHER ASSESSMENT AND REMEDIATION REQUIRED, LEFT MESSAGE FOR MIMI SOTIROU AKRF, 212-340-9779 ADVISING THE SAME. FOLLOW UP LETTER, RESPONSE DUE 11/30/01 11/8/2001 Sangesland spoke to Andy Rudko and Mimi Sotiriou from AKRF. The contamination found was in a construction site. The area of major contamination was removed and manifested. The remainder of the site was over excavated for construction and the entire area has been removed. AKRF will follow up with photos and a write up to confirm this statement. 5/6/2002 Sangesland reviewed a report from AKRF dated 4/17/2002. This report outlines the additional excavation work done on the site during November and December 2001 (1,782.45 tons removed during this period). The endpoint samples came back clean again for VOC, but still had some exceedences for SVOC's (some of the PAH's). Since these endpoints are well below groundlevel under the subbasement floor of a new major construcion project, they will not come in human contact. In addition, the report outlines that these PAH levels are similar to the PAH levels found in typical fill (old coal ash) from around the city. Report shows photos of the excavation along with manifests for the soil removed. Based on this information, this spill is closed.

Remarks: DURING EXCAVATION AT ABOVE LOCATION ABANDONED TANK WAS STRUCK. AKRF ENVIORNMENTAL IS RESPONDING FOR CLEANUP AND HAS CONTRACTED BROOKSIDE ENVIORNMENTAL.

Contact Name: ANTHONY NATALE
Contact Phone: (212) 580-6763
DEC Region: 2
DER Facility ID: 135774
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY" e2mis no. 136838: 20:00 he reported to a call from the fire dept. at Opp. 104 W. 125 st . structure # TM-2884, there he found that the transformer had blown internally & aproxamatly 1 Qt. of dielectric fluid had sprayed out all over the stucture also some spraying upward onto the street side of the grateing & around the rim. Lab Seq.#01-05404-001 PCB <1 ppm. clean up was completed on tm2884. double wash with slix and flush. A new transformer was installed 6/7/2001.
Remarks: transformer smoking - transformer holds 300 to 400 gal of fluid unk how much leaked at this time - pcb count is 1 part per million con ed spill number not avaiable at this time - unk if any water ways effected at this time

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ" E2MIS NOTES 143826 On 07/07/02 at approx. 07:38 r. jack #17064 reported that during a phase check in vault he found approx four gallons of oil and twenty five gallons of standing water mixed. This vault is located in front of a burger king. The source and cause of spill are unknown. Samples taken for oil id and PCB. Lab Sequence Number: 02-06249-001 PCB <1 ppm Lab Sequence Number: 02-06250-001 analysis indicates the presence of a substance similar to a cooking oil/grease Update: 9/30/02 Bob Biliski, I&A Operating Supervisor, reported at 15:00 hrs. on 9/25/02 that the vault was cleaned by Clean Harbors. He stated that a total of 3 drums of waste was generated and removed. He also reported that they used citrus cleaner to clean the walls & floor and that the environmental spill tag was removed. The cleanup was completed at 15:00 hrs. on 9/25/02.

Remarks: MANHOLE 4031. 4 GALLONS OF OIL ON 25 GALLONS OF WATER. CONTAINED WITHIN MANHOLE. SAMPLES WERE TAKEN. TEST RESULTS INDICATE THAT IT'S SOME SORT OF COOKING GREASE. THE BURGER KING THERE IS THE SUSPECTED SPILLER. A SIMILAR SPILL WAS REPORTED LAST JULY. TO BE CLEANED UP IN THE MORNING. CON EDISON REFERENCE NUMBER 143826.

 DEC Region: 2
 DER Facility ID: 272424
 DEC Memo: 03/23/05 transferred from T. DeMeo to J. Krimgold who was daytime
 duty officer when inquiring phone call came in. CS. 03/31/05.
 J.Krimgold spoke to Carol Payne (Pine Funeral Home) @ 212-662-4840
 located 273 Lenox Ave.- affected party. She stated that about
 December 2004 a strong oil odor was observed in the basement. Also,
 oil seepage was observed coming from a wall adjacent to 275 Lenox
 Ave. Oil odor substantially diminished over last few months, but the
 oil seepage (stain) is still there. J.Krimgold called South Carolina
 Heating (SCH) and spoke with Natasha Danzler @ 212-234-5900. She
 informed that they have been called by Funeral Home and informed
 about incident in about 2 weeks after it happened. No notification
 was made to the Department at that time. They sent a crew to check
 out and found that one of two 257 Gal #2 oil tanks was tipped on the
 side and released an unknown amount of oil to the basement's concrete
 floor and on the wall of the adjacent (273 Lenox Ave.) building. No
 paddles of oil were observed at that time. SCH was in contact with
 Funeral Home's insurance, but as of today they have not come to the
 agreement. J.Krimgold called RP, Mr. Walter Edwards (landlord? of 275

Lenox Ave) and left a message with his assistant Ms. Santa M Johns (212-864-7410x208). 3/31/05. CSL has been sent to: Mr. W. Edwards Walter J Edwards Enterprises Inc 275 Lenox Avenue New York, NY 10027-5541 YK. 5/2/05. Talked to Mr. Edwards. He claimed that his office lost CSL letter and his consultant Ethan Elton, Inc. also lost a fax copy of this letter. Nothing has been done since. Mr. Edwards was out from country and just came back. He will come and pick up a copy of CSL tomorrow. YK. 5/2/05. Mr. Poul Franky called and asked for a copy of CSL. He is with ICS Claims, an adjuster for West Port Insurance (claim # 185540 filed by Pine Funeral Home). They can cover a part of the cleanup expenses. His phone # 914-907-5788, fax 845-778-0658. YK. 5/27/05. Aimee Petkus from Ethan C. Eldon Associates, Inc. called to discuss her letter to the Department dated May 25, 2005. Generally, the letter states that 40 gal of #2 oil was spilled and 40 gal was recovered. It is unclear then how adjacent property got oil in their basement if all oil was removed. Phone conversation revealed that the consultant was not aware about oil spillage at adjacent (273 Lenox Ave) property. Agreed that they will take soil samples from under tanks in the tank room and from the basement at 273 Lenox. If results warrant a soil excavation will be performed at both sites. YK. 6/1/05. J.Krimgold reviewed a work plan submitted by the Ethan C. Eldon Associates, Inc. dated May 27, 2005. At least 4 soil borings to be advanced in the tank room and at 273 Lenox. The work should begin on June 8, 2005. 9/8/05. J.Krimgold reviewed the Phase II Environmental investigation report prepared by Ethan C. Eldon Assoc, Inc. and submitted on June 22, 2005. Afer initial cleanup four soil borings were advanced in the spill area. The lab results show no contaminants level above TAGM in all borings. NFA letter.

with concrete, leaking at the bottom, tiny puddle by the tank.No PBS record found.A letter was sent asking to clean up , investigation and registration of the tank to Eugene Webb 2534 Adam Clayton Powell Blvd New York, NY 10039 12/18/06 Rahman- I spoke with Mr. Webb today.He indicated that the old tank has been replaced and a new tank is in place.As of now, no PBS application has been submitted to the department.He will make sure with the contractor, who is working on it to send DEC all necessary documents. 01/18/07 Rahman- Report by PTC.The old 2500 gallon tank was removed, the floor was cleaned using oil absorbent.PTC claimed the concrete floor under the tank was found to be free of any contamination.The floor area was found to be over eighteen inches thick and free of cracks or faults.Therefore, soil samples were not obtainable.PBS application has been filed for new tank.

Remarks: CLEAN UP IS NOT IN PROCESS. TOMORROW THEY WILL CLEAN IT UP.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL" Con Ed e2mis #138200: 13-July-2001 10:19 hrs. Splicer/Mechanic T.Fitzgibbon #12737 was on location to perform maintenance work in VS4031 located in f/o 141 W124th St. When he attempted to enter the structure he discovered a large amount of a substance that appeared to look like grease & cooking oil mixed together. The splicer states that the approximate amount appears to be (50) gallons of grease & oil mixed with approximately (5) gallons of water. He also states that this VS4031 is located in the drive-thru entrance of Burger King & he suspects that they have been dumping their oil & grease into this structure. The spill is on the concrete in the structure & the housing of the transformer. This appears to be a substance owned by a 3rd party. An environmental tag #10714 was hung in the structure & (2) samples were taken, (1) for ID & (1) for PCB. The spill is on the concrete in the structure & the housing of the transformer. This appears to be a substance owned by a 3rd party. An environmental tag #10714 was hung in the structure & (2) samples were taken, (1) for ID & (1) for PCB. UPDATE @ 18:07 HRS. Bob Boliski, I&A Supervisor, reported at 13:45 hrs. that NYC DEP rep. Elie Saint- Jean arrived on location at approx. 13:15 hrs.. He believes that the unknown substance in the vault belongs to Con Edison. Mr. Biliski explained that the transformer is not leaking and the oil level indicates that the unit is full. Mr. Biliski also pointed out that the substance looks and smells like cooking oil and grease. An adjacent restaurant has been dumping their waste in our vault. The DEP rep. wants this vault cleaned up immediately. UPDATE @ 20:00 hrs. Bob Biliski, I&A Supervisor, reported at 20:00 hrs. that the DEP rep., Elie Saint-Jean issued a Commissioner's order to clean this vault immediately. Cleanup must be completed by 7/15/01 at 14:00 hrs. He also reported that a partial cleanup was completed as of 20:00 hrs. The tanker pumped out 100 gallons of water from flushing the vault. The vault was flushed with the Vactor truck and pumped out with the tanker. UPDATE @ 21:22 hrs. The Environmental Desk arranged for Clean Harbors to complete the cleanup starting at 08:00 hrs. on Saturday, 7/14/01. Clean Harbors will bring a tanker, vactor truck, crew and steam jenny to clean this vault. Arrangements were made with Tom Columbia & Jeb Cook of Clean Harbors. An I&A crew will be location to assist. Lab Sequence #01-07321-001, PCBs <1ppm Lab Sequence #01-07322-001, Oil ID'd as dielectric fluid Update 7-14-01 @ 13:57. J Cumberbatch reports cleanup is complete @ 12:50. Double washed with slix and flushed. Clean Harbors assisted on this cleanup. Not reported

Remarks: spill contained in vs...looks like it may be coming from burger king...samples taken...Ref # 138200.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 268974
DEC Memo:

4/20/2005 Spill case transferred from DeMeo to Rahman: Sangesland spoke to project manager working for building owner. He said the problem tank was cleaned, cut up and removed from the vault. Vault was located under the sidewalk in front of the building. Vault was cleaned and there were no cracks in the floor, therefore no oil leaked out of the vault area. Sangesland asked the project manager to send into the DEC: 1) Letter stating that the tank was removed 2) Statement that the vault area was totally cleaned and no cracks found. 3) Detailed photos of the vault floor showing it is clean and has no cracks. 4) Request closure of open spill number. 06/14/05-SR// Received photographs, invoice and left a message for them. 10.21.05 Sharif- Reviewed the waste disposal manifest and photographs after the tank has been removed. Aparently, there is no cracks or leak on the floor. But the tank room wall looks wet with black stain at different places. Spoke with Phil Rutherford, 212-685-9680 who said they took pictures after it was power washed again since my last conversation with him. He would send me the all new photographs and check with the company whether they filed any deregistration application with DEC. 11.18.05 Sharif// Recev'd new photograph that looks pretty much clean. NFA required.

Remarks: CONTAINED IN VAULT TANKS HAVE BEEN PUMPED OUT TANK SIZE ABOUT 1500 GALLONS:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: 07/23/07-Vought-Off hours responder. Called FF Lemieux (Hazmat 1) and left message to return call with owners info (Phone number). No listing in PBS records. Vought spoke to FF Lemieux and site is abandoned building and spill was caused by relocation of oil burner and spil coming out of supply return lines. As per Lemieux spill was actually on concrete with minor cracks and pathways to subsurface. As per Lemieux, no further action is warranted by the Department. Oil was overpacked into drum and cleaned with absorbent material. No sewers or drains affected. Spill closed by Vought due to minor spill to subsurface combined with abandoned building and cleanup by FDNY. fire dept on scene cleaning up basement. confined to dirt floor. attempting to locate owner. no call back needed

DEC Memo: e2mis no. 156933: 01/21/05 04:25 M.Lyons#88777, I&A Supervisor, notified the control center that while draining the transformer in V6644 approx. 2 gallons of transformer oil spilled from the hose on to the concrete floor of the vault. No sewers or waterways were affected. A yellow environmental tag numbered #16955 was hung in V6644. There is no water in V6644. There was one sample taken from V6644, it was a solid grap sample, due to the fact M.Lyons#88777 placed speed dry on the spill. The sample was marked priority E. M.Lyons#88777 said a partial cleanup will be performed. The final cleanup is pending lab results and transformer removal. @ 06:30 A partial clean-up was completed. Absorbent pads were placed down in the structure. Environmental tag remains in place. See clean-up crew on people screen. They also will verify if oil leaked into the structure, service box 26145. Lab Sequence Number: 05-00566-001 QC ID: 01-200501201354 TEST DESCRIPTION RESULT UNIT METHOD

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 96246
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD" 7/17/01. J. Krimgold@ site. Spoke to FF J. Hack (Haz.Mat.). Homeowner cannot be found at this time. Basement floated with 2' of water. About 2" of oil is floating on the top of water. There are 2x275 gal tanks in the basement. Oil delivery of 150 gal was made today by Price Oil (718)824-6023, ticket # 18111, truck # 644. Probable spill cause is the tank overflow. FDNY requested to pump out water and oil from basement. J. Krimgold opened a PIN job and call Milro. 7/18/01. J. Krimgold spoke to the homeowner Ms. Lorraine Gobern (718) 231-1141, 1451 Stickney Pl, Bronx, NY 10469. She told me that she asked for the delivery of 150 gal of oil without checking the gauge. Her insurance co. Cambridge & Leach (718-756-4200, 660 Nostrand Ave, Brooklyn, NY), policy # cf3003298 denied her claim. 7/23/01. J.Krimgold spoke to Ray Gordon (Milro) via phone. Milro completed the cleanup, but basement flooded again due to a broken sewer pipes.
Remarks: FIRE DEPARTMENT ON SCENE. ABOUT TWO FEET OF OIL AND WATER IN THE BASEMENT OF A MULTIPLE OCCUPANCY DWELLING. UNKNOWN CAUSE. UNABLE TO CONTACT BUILDING OWNER. CALLER IS REQUESTING A CALL BACK FROM DEC REPRESENTATIVE.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD" see also 9911165. 01/26/04 REassigned fromRommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 04/23/07-Vought-Reassigned from Krimgold to Vought. DEC Austin received email from Lasdin that she has received word from AG's office that the case was closed on 12/18/06. Request for further information. Vought called AG's office (Bechard) to confirm case status. Vought reviwed file and DEC's contractor removed oil contaminated speedi dry from basement and excavated impacted soil and sealed and washed floor. Cause of spill was collapsed leg on 275-gallon AST resulting in separated fill line. Letter of Inital Demand from AG Donna Ross to owner (Lorraine Gobern) dated 12/30/21. 4/23/07-Vought-Called AG Ross to confirm status of spill and AG settled case with owner who paid outstanding costs. Spill closed by Vought as no further action required for soil and groundwater and costs have been recovered. Final ISR submitted to DEC Austin for review.

DEC Memo: 6/13/06 - Raphael Ketani. I talked to Thomas Leddy of Protest (631) 321-4670. He said that they did a normal plug off test. He said it is a UST for heating oil for their buildings in the park. The contact person is: Wellington Green or Gabe Ramos (boss) NYC Parks Department Randalls Island, NY, 10035 (212) 410-8969 06/19/06-Hiralkumar Patel. Spoke to Tom. he is not sure but that was dry leak probably. haven't heard from parks department yet. PBS #: 2-604978 TTF sent out to Gabe Ramos at: Gabe Ramos City of NY Parks & Recreation 5 Boro Operations Randalls Island, NY 10035 Ph. (212) 410-8916 FAX (212) 410-8319 letter faxed to Mr. Ramos.
Remarks: IT MAY BE THE DIRECT FILL SITCK LINE.

DEC Region: 2
DER Facility ID: 315518
DEC Memo: x236 need CSL to be sent LiRo documented the removal of one 5,000-gallon heating oil (#2 diesel) underground storage tank (UST) at the Pelham Fritz Recreation Center. The removal was conducted by Gemstar Construction Corp. of Staten Island, NY. The Pelham Fritz Recreation Center is located within the western portion of the Marcus Garvey Park at 18 Mount Morris Park West in Manhattan, New York. The tank was being replaced as part of an ongoing New York City Department of Design and Construction UST management and upgrade program. No problems had been previously reported for the heating oil tank. A 5,000-gallon heating oil single-wall steel UST and associated piping were removed from the site. During the excavation of the tank, the top of the tank was encountered at approximately 3.5 feet below ground surface and a concrete bottom slab was encountered at approximately 10.5 feet below ground surface. Upon inspection, the exterior of the tank had surficial rust. However, the interior and exterior of the UST were free of any visual damage such as holes, pitting or degradation. No staining or discoloration was noted within the excavation. The bottom slab was removed and six excavation bottom samples were collected at a depth of 12 feet bgs along the centerline of the excavation (see attached figure). The laboratory results (also attached) showed relatively low VOC concentrations. SVOC concentration for several PAHs exceeded TAGM 4046 criteria and therefore I called in a spill report. No water was observed in the excavation. Based on surrounding locale (there are bedrock outcrops in the Park) we expect that the depth to rock and groundwater is 25 feet or less. LiRo is preparing a UST Closure report that will be

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region: 2
DER Facility ID: 133038
DEC Memo: Spill closed on 10/17/2005. According to the documentation submitted by the current property owner, Classic Townhouses LLC (CTL), this formerly vacant NYC owned property was transferred to CTL's ownership on June 30, 2003 and there was no oil tank on the premises. Currently CTL is in the process of renovating this property and converting it to a 2-family house with a gas boiler. Therefore, the alleged threat is not apparent. By J. Perez on 10/17/05.
Remarks: Caller reports tank leak to floor approximately 15 gallons.

DEC Remarks: DEC Sigona investigated on 10/4/99 at 2:25 P.M. arrived on scene no work on site. Called PTC Anthony Lara on 10/4/99, he said Issac inspected the abandoned building who said may be leaking. Called A.J. Patel, he will call back. According to PTC, the FDNY stopped them to clean the floor and wanted the tank floor. Issac said HPD may want to use a different contractor to handle a tank replacement remediation. There are 2-275 gallon ASTs which are leaking and require replacement. DEC Sigona called Ajay Patel on 10/28/99 at 11:30 A.M., left message with Secretary. Ajay Patel, Director of Bureau of Maintenance and Procurement, HPD 212)863-7764.

Spill Cause: Caller reports tank leak to floor approximately 15 gallons.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Heitzman Spill transferred back to R-2 3/7/08 - Austin - Assigned to Ketani for further investigation - end 7/15/08 - Raphael Ketani. The spill happened on 11/30/94. About 100 gal. of #4 oil was spilled. The oil was cleaned up and the spent absorbent was put into drums. There is just one letter in the paper file. It is dated November 4, 2005 and is the same letter that I found in the E-docs. There were no other documents available. There is no PBS record. The site is block and lot 1718 and 53. Alternate addresses are 42-44 W. 120 Street. The owner of record is 40-44 West 120 Street Associates, LLC, c/o Tahl-Propp Equities, 405 Park Avenue, Ste 1103, NY, 10022-9410. I tried the alternate address and still couldn't find a PBS record. I sent a CSL. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The case manager should find out whether a site investigation is taking place or whether an investigation plan has been written. The owners need to submit a PBS registration for the tanks.

Remarks: SPEEDY DRY USED-WILL PUT INTO DRUMS ETC.

12/22/2005: Site visit may help to close the spill. (Sadique)
 01/20/2006: John Grathwol and I visited the spill location on
 01/18/2006 at 1:25pm. Met with building superintendent Mr. Francis
 Rivera. They changed to gas heating last summer. The old tank removed
 from the building. No spill visible. Nothing on the floor. Moldy
 smell but no petroleum smell noticed. Inspected out side, fill pipe
 removed. No sign of oil spill found. Took photos of inside and out
 side locations. Spill can be closed. (Sadique) 01/20/2006: Spill
 closed. (Sadique)
 Remarks: OIL TANK IN OFFICE BUILDING APPEARS TO HAVE BEEN OVERFILLED. SIGNS OF
 OIL IN VAULT WHERE FILL PIPE IS LOCATED. CALLER STATES IT IS A SMALL
 AMOUNT. HE DOES NOT KNOW NAME OF OIL COMPANY THAT FILLS TANK. CALLER
 WILL ADDRESS PROBLEM TOMORROW WITH HILLMAN ENVIRONMENTAL.

 DER Facility ID: 351412
 DEC Memo: Case started out as a Tank Test Failure. Tank is 3,000 gal and no PBS was found. Tank will "probably" be replaced. Property Manager: Paul Martinez with Wavecrest Management 718-463-1200 Wavecrest compliance person looked up the records and confirmed the tank had never been registered. Building has an alternate address of 170 thru 178 Lenox Ave, Manhattan. Building is being sold through city HPD to be a tenant owned Co-op - Contact for this transfer is: Alan Blitz 212-479-3308 -Shuhab Housing Development Fund Corp 1780 Broadway Fl 6, New York NY 10019-1414 TTF letter sent to Mr. Blitz at Shuhab. 03/02/09: I left a voice message for both Paul Martinez and Alan Blitz with respect to failure of the 3000 gallon tank, and non-compliance status because the facility is not registered under PBS. (MA) 12/17/09: DEC is in receipt of report document dated 10/22/09 prepared and submitted on behalf of Shuhab Housing Development Fund Corp by VTEQE LTD. The report documents investigation in connection with TTF, and PBS registration for the new AST. Based on this report document, spill number associated with the TTF is hereby closed. See eDocs for detail. (MA)

DEC Region: 2
DER Facility ID: 294184
DEC Memo: Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter issued 9/5/97. - J. Kolley
Remarks: 2,500-gal gasoline tank removed in mid-1990s, dispenser suspected to have leaked. Spill was not reported at the time.
