CERTIFICATION

I, Michael Burke, am a Qualified Environmental Professional (QEP), as defined in Rules of the City of New York (RCNY) § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation at 160 Leroy Street, (OER Project Number 15EH-N227M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents, and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Michael D. Burke, CHMM

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to Rules of the City of New York (RCNY)§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located in the West Village neighborhood of Manhattan and is identified as Lot 10 (formerly Lots 1, 4, 5, 8, and 10) of Block 601 on the New York City Tax Map. The five former tax lots comprising the Site were merged into a single lot (Lot 10) as part of the proposed redevelopment. The Site is bound by Leroy Street to the north, Lot 12 (asphalt-paved parking lot) and Lot 13 (two- and three-story commercial buildings) of Block 601 to the east, Clarkson Street to the south, and West Street to the west. The Hudson River is west of the Site, across West Street. The Site encompasses an area of about 28,000 square feet.

A brief description and current use of each of the five former lots is provided below:

Former Lot 1:

- Two-story slab-on-grade building occupied by a night club at 75-77 Clarkson Street;
- One-story building with a basement occupied by a cabaret at 354 West Street; and
- Two-story building occupied by a ground floor automobile repair garage with an office and storage space on the second story at 356 West Street. The buildings at 354 West Street and 356 West Street share a common basement.

Former Lot 4:

- One-story vacant and dilapidated building that was formerly used as a restaurant at 357 West Street. A wooden patio area and open space are present in the rear and side of the building, respectively.

Former Lot 5:

- Three-story building with a ground-floor hardware store at 358 West Street. The second and third stories of the building are currently under renovation for use as commercial space.

Former Lot 8:

- One-story vacant building with a second story addition in the rear of the building and a partial basement at 359-361 West Street and 160-162 Leroy Street. The building was formerly occupied by an automobile repair garage, car wash and oil change shop. The second story addition is a vacant residential apartment.

Former Lot 10:

- There is a two-story vacant building at 156-158 Leroy Street formerly occupied by a pasta manufacturing facility with office space on the second story.

Summary of Proposed Redevelopment Plan

The proposed development project is in design development and is anticipated to consist of a fourteen-story mixed-use residential and commercial building with a cellar. The elevation of the first floor will be about 6 feet above existing grade to comply with the new advisory base flood elevation (ABFE) maps published by the Federal Emergency Management Agency (FEMA). The cellar is anticipated to be used for parking (about 6,000 square feet), bicycle storage, tenant storage, amenities, including a laundry room and spa/fitness room, and mechanical equipment and building services. The first floor is anticipated to include an entrance/lobby, commercial retail space, amenities, including a pool, a driveway/cul-de-sac, a loading dock, mechanical equipment and building services, and an outdoor terrace/garden. Residential units will consist of a mix of 1-bedroom to 7-bedroom units and will be located on the second to twelfth floors. Mechanical equipment will be housed on the thirteenth and fourteenth floors. The thirteenth floor will also include an outdoor terrace.

The new development will require the demolition of all existing buildings and excavation to about el. -2 feet (NAVD88¹) (about 9 to 12 feet below existing grade) to accommodate the foundation slab. Locally deeper excavation, up to about 16 feet below existing grade, will be required to accommodate pile caps, grade beams, and elevator pits. Dewatering will also be required to construct the building's foundation.

Summary of Past Uses of Site and Areas of Concern

Based on a review of historical maps, the original shoreline of the Hudson River was east of the Site. Prior to its initial development, the Site consisted of marshland, which was subsequently drained and filled. A review of historic Sanborn fire insurance maps, city directory information, and available public databases indicated the Site was occupied since at least 1891 by manufacturing and commercial tenants. The Site was historically used for primarily commercial and industrial purposes including stores, offices, a hotel, machine shops, auto body shops, a car wash, a junkyard, a smelting works, and a warehouse. Current improvements to the Site were constructed between 1936 and 1968. Ownership records for the five former lots comprising the Site list multiple realty groups, corporations, and individual property owners. City Directory abstract records identified multiple residential, commercial, and professional uses including auto repair, transportation, metalworking, and salvage/disposal facilities.

The surrounding area has historically been occupied by residential, commercial, industrial, and storage facilities. Historical commercial, industrial, and storage operations on adjacent properties included storage facilities and a filling station to the north, a chemical manufacturing company, a wagon builder, an auto repair shop, a garage, and a railroad right-of-way to the east, a lumberyard, a soap works, a steam laundry, a warehouse, and a freight terminal to the south, and multiple piers to the west.

The Areas of Concern (AOCs) identified during previous investigations are described below:

¹ National Vertical Datum of 1988. Datum refers to the National Vertical Datum of 1988 (NAVD88) which is approximately 1.1 feet above mean sea level datum at Sandy Hook New Jersey as defined by the United States Geologic Survey (USGS NGVD 1929).

- Closed Petroleum Spill and Historical Petroleum Bulk Storage at Former Lot 8: A petroleum spill (New York State Department of Environmental Conservation [NYSDEC] Spill No. 13-00212) was associated with the release of motor oil in the maintenance pit of a partial basement at the former express oil change (former Lot 8). The release was presumably caused by flooding during Tropical Storm Sandy. Eight aboveground storage tanks (ASTs) were once present at former Lot 8, including three 1,000-gallon lube oil ASTs, one 500-gallon waste oil AST, and four 500-gallon temporarily-out-of-service ASTs. The spill was remediated under the oversight of Langan and closed by the NYSDEC on June 12, 2013. Three 500-gallon ASTs were removed and closed during the remediation of the spill. Although no significant residual waste oil, petroleum-related staining or odors and preferential migration pathways were identified in the oil change pit and on the concrete walls and slab of the partial basement post-remediation, this petroleum spill may have adversely impacted soil, groundwater, and/or soil vapor at former Lot 8.
- Current Use of and Historic Petroleum Bulk Storage at Former Lot 1: Former Lot 1 (356 West Street) is currently used as an automobile repair garage. A 275-gallon waste oil underground storage tank (UST), associated with NYSDEC PBS #2-611746, was removed and closed in January 2013. Although the UST was removed and closed and there is no documentation of a release, it is unclear whether environmental samples (i.e. soil and groundwater) were collected and analyzed as part of the removal work, a deviation from standard industry practice. Leaks or spills of petroleum from the former UST at former Lot 1 may have adversely impacted soil, groundwater and/or soil vapor at former Lot 1.
- Historic use of Lot 10: Former Lot 10 was previously used as an automobile repair shop. Potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically used by this facility may have adversely impacted soil, groundwater, and/or soil vapor at the Site.
- Historic Fill: Previous environmental investigations (Langan [2012] and IVI Environmental, Inc. [2007]) at former Lots 8 and 10 identified a surficial layer of historic fill overlying native soil. The historic fill layer extended to depths of about 7 to 10 feet below grade surface (bgs). Concentrations of semivolatile organic compounds (SVOCs),

mostly polycyclic aromatic hydrocarbons (PAHs), and metals (copper, lead, mercury, and zinc) were identified in historic fill at concentrations that exceed the Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (SCOs). No volatile organic compounds (VOCs) or pesticides exceeded their Unrestricted Use SCOs. No polychlorinated biphenyls (PCBs) or herbicides were detected in soil samples. The concentrations of SVOCs and metals were attributed to historic fill and are characteristic of properties in the urban environment.

Summary of the Work Performed Under the Remedial Investigation

To investigate AOCs identified during previous investigations and evaluate soil, groundwater, and soil vapor quality, Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) performed the following scope of work on behalf of AP-ISC Leroy, LLC (the "Owner"):

1. Conducted a Site inspection and geophysical survey to identify physical obstructions and subsurface utilities and structures;
2. Advanced nine soil borings and collected 14 grab soil samples (plus Quality Assurance/Quality Control [QA/QC] samples) for laboratory analysis to evaluate soil quality;
3. Installed five permanent groundwater monitoring wells to establish groundwater depth and flow direction and collected five groundwater samples (plus QA/QC samples) for laboratory analysis to evaluate groundwater quality; and
4. Installed seven soil vapor probes and collected two ambient air and seven soil vapor samples for laboratory analysis to evaluate soil vapor quality.

Summary of Environmental Findings

1. Elevation of the Site ranges from about elevation (el) 7 to about el 10.5.
2. Depth to groundwater ranged from about 7 to 13 feet below first floor grade surface based on gauging of the five groundwater monitoring wells. Regional groundwater flow is generally from east to west, in the direction of the Hudson River.

3. Bedrock was not encountered during the RI. Borings extended to a maximum depth of 18 feet bgs.
4. The geophysical survey did not identify anomalies consistent with USTs. Borings were relocated as necessary to avoid subsurface utilities and minor anomalies.
5. The stratigraphy, from the surface down, consists of up to 13 feet of historic fill underlain by native material mainly consisting of fine- to coarse-grained sandy and silty soil with some gravel, cobbles, and clay.
6. Fourteen soil samples were collected and analyzed during the RI. Soil/fill sample results were compared to Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375-6.8 Unrestricted Use and Restricted Use Restricted-Residential Soil Cleanup Objectives (SCOs). Soil samples exhibited no VOC concentrations exceeding their Unrestricted Use SCOs. Concentrations of nine SVOCs exceeded their Unrestricted Use SCOs, with six SVOCs also exceeding their Restricted-Residential SCOs, including benzo(a)anthracene (max of 4 mg/kg), benzo(a)pyrene (max of 4.2 mg/kg), benzo(b)fluoranthene (max of 8.3 mg/kg), chrysene (max of 4.6 mg/kg), dibenzo(a,h)anthracene (max of 1.4 mg/kg), and indeno(1,2,3-cd)pyrene (max of 5.9 mg/kg). The maximum concentrations of all SVOCs exceeding their Restricted-Residential SCOs were found at soil boring SB-6 (0 to 2 feet bgs). Concentrations of total SVOCs ranged from non-detect to 56.24 mg/kg (SB-6 [0 to 2 feet bgs]). Concentrations of nine metals exceeded their Unrestricted Use SCOs, with six metals also exceeding their Restricted-Residential SCOs including arsenic (max of 65 mg/kg), barium (max of 1,100 mg/kg), cadmium (max of 7.7 mg/kg), copper (max of 4,700 mg/kg), lead (max of 5,700 mg/kg), and mercury (max of 5.6 mg/kg). The maximum concentrations of all metals exceeding Restricted-Residential SCOs were found at boring SB-6 (0 to 2 feet bgs), a hotspot area, with the exception of barium (maximum concentration found at boring SB-5 (6 to 7 feet bgs)). Concentrations of the pesticides 4,4'-DDD (max of 0.0168 mg/kg), 4,4'-DDE (max of 0.0988 mg/kg), and 4,4'-DDT (max of 0.272 mg/kg) exceeded their Unrestricted Use SCO of 0.0033 mg/kg, with all maximum detected pesticide concentrations occurring in soil sample SB-6 (0 to 2 feet bgs). No pesticides were detected above their Restricted-Residential SCOs. No herbicides or PCBs were detected above their Unrestricted Use SCOs. Overall, the soil results were

consistent with data identified at sites with shallow historic fill material in New York City with the exception of a hotspot for metals and SVOCs identified at soil boring SB-6.

7. PCBs, pesticides, or herbicides were not detected in groundwater. Three VOCs, including benzene (max of 11 micrograms per liter [$\mu\text{g/L}$]), naphthalene (max of 77 $\mu\text{g/L}$), and toluene (max of 5.4 $\mu\text{g/L}$) exceeded their respective NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA waters at monitoring wells MW-4 and/or MW-5. Seven SVOCs, including benzo(a)anthracene (max of 3.5 $\mu\text{g/L}$), benzo(a)pyrene (max of 3.3 $\mu\text{g/L}$), benzo(b)fluoranthene (max of 3.2 $\mu\text{g/L}$), benzo(k)fluoranthene (max of 3.2 $\mu\text{g/L}$), chrysene (max of 3.1 $\mu\text{g/L}$), indeno(1,2,3-cd)pyrene (max of 3.4 $\mu\text{g/L}$), and phenol (max of 27 $\mu\text{g/L}$), were detected at concentrations exceeding their TOGS SGVs at monitoring wells MW-4 and/or MW-5. Six metals, including antimony (max of 19.7 $\mu\text{g/L}$), iron (max of 5,180 $\mu\text{g/L}$), lead (max of 82.9 $\mu\text{g/L}$), magnesium (max of 60,300 $\mu\text{g/L}$), manganese (max of 2,686 $\mu\text{g/L}$), and sodium (max of 587,000 $\mu\text{g/L}$) were detected at total concentrations exceeding their TOGS SGVs in one or more unfiltered samples. Five metals, including antimony (max of 22.2 $\mu\text{g/L}$), iron (max of 6,020 $\mu\text{g/L}$), magnesium (max of 54,200 $\mu\text{g/L}$), manganese (max of 2,668 $\mu\text{g/L}$), and sodium (max of 553,000 $\mu\text{g/L}$) were detected at dissolved concentrations exceeding their TOGS SGVs in one more filtered samples.
8. Soil vapor samples collected during the RI were compared to the concentrations listed in Table 3.1 Air Guideline Values Derived By The NYSDOH, published in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI showed low levels of petroleum-related VOCs and elevated levels of one chlorinated VOC. The total concentration of petroleum-related VOCs (BTEX) ranged from 18 $\mu\text{g/m}^3$ to 305 $\mu\text{g/m}^3$. One chlorinated VOC, tetrachloroethene (PCE), was detected above its New York State Department of Health (NYSDOH) Air Guidance Value (AGV) of 30 micrograms per cubic meter ($\mu\text{g/m}^3$) at a sub-slab concentration of 138 $\mu\text{g/m}^3$ at SV-7. No other VOCs exceeded their NYSDOH AGVs in soil vapor samples. This sub-slab concentration of PCE requires monitoring per the NYSDOH Soil Vapor/Indoor Air Matrix 2, dated October 2006.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Langan Engineering, Environmental, Survey and Landscape Architecture, D.P.C. (Langan) was retained by AP-ISC Leroy Property Owner, LLC, c/o Gorton & Partners, LLC (the Owner) to complete a Remedial Investigation (RI) for the development of the property located at 160 Leroy Street, New York, New York (the Site). The Site is identified on New York City Tax Maps as former Lots 1, 4, 5, 8 and 10 of Block 601. The Site will be developed under the regulatory oversight of the New York City Office of Environmental Remediation (OER) pursuant to a Hazardous Materials and a Noise E-Designation (E-332 [effective March 11, 2014]) assigned by the New York City Department of City Planning (NYCDCP) in response to a Negative Declaration issued by the Board of Standards and Appeals (BSA) for variance action (CEQR No. 13-BSA-163M). The purpose of the variance action was to permit the construction of a mixed-use residential and commercial building within an M1-5 zoning district.

The RI work was performed between January 13, 2015 and March 30, 2015. This Remedial Investigation Report (RIR) summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located in the West Village neighborhood of Manhattan and is identified as Lot 10 (formerly Lots 1, 4, 5, 8, and 10) of Block 601 on the New York City Tax Map. The five former tax lots comprising the Site were merged into a single lot (Lot 10) as part of a proposed redevelopment. The Site is bound by Leroy Street to the north, Lot 12 (asphalt-paved parking lot) and Lot 13 (two- and three-story commercial building) of Block 601 to the east, Clarkson Street to the south, and West Street to the west. The Hudson River is west of the Site, across

West Street. The Site encompasses an area of about 28,000 square feet. A Site Location Map is presented as Figure 1.

A Site Plan, displaying the layout of the site, is presented as Figure 2. A brief description and current use of each of the five former lots is provided below:

Former Lot 1:

- Two-story slab-on-grade building occupied by a night club at 75-77 Clarkson Street;
- One-story building with a basement occupied by a cabaret at 354 West Street; and
- Two-story building occupied by a ground floor automobile repair garage with an office and storage space on the second story at 356 West Street. The buildings at 354 West Street and 356 West Street share a common basement.

Former Lot 4:

- One-story vacant and dilapidated building that was formerly used as a restaurant at 357 West Street. A wooden patio area and open space are present in the rear and side of the building, respectively.

Former Lot 5:

- Three-story building with a ground-floor hardware store at 358 West Street. The second and third stories of the building are currently under renovation for use as commercial space.

Former Lot 8:

- One-story vacant building with a second story addition in the rear of the building and a partial basement at 359-361 West Street and 160-162 Leroy Street. The building was formerly occupied by an automobile repair garage, car wash and oil change shop. The second story addition is a vacant residential apartment.

Former Lot 10:

- There is a two-story vacant building at 156-158 Leroy Street formerly occupied by a pasta manufacturing facility with office space on the second story.

1.2 Summary of Proposed Redevelopment Plan

The proposed development project is in design development and is anticipated to consist of a new fourteen-story mixed-use residential and commercial building with a cellar. The elevation of the first floor will be about 6 feet above existing grade to comply with the new advisory base flood elevation (ABFE) maps published by the Federal Emergency Management Agency (FEMA). The cellar is anticipated to be used for parking (about 6,000 square feet), bicycle storage, tenant storage, amenities, including a laundry room, spa/fitness room, and mechanical equipment and building services. The first floor is anticipated to include an entrance/lobby, commercial retail space, amenities, including a pool, a driveway/cul-de-sac, a loading dock, mechanical equipment, building services, and an outdoor terrace/garden. Residential units will consist of a mix of 1-bedroom to 7-bedroom units and will be located on the second to twelfth floors. Mechanical equipment will be housed on the thirteenth and fourteenth floors. The thirteenth floor will also include an outdoor terrace.

The new development will require the demolition of all existing buildings and excavation of the Site to a depth of el. 0.08 feet (NAVD88²) (about 7 to 10 feet below existing grade) to accommodate the cellar. Locally deeper excavation will be required to accommodate the deep pile foundation system. Dewatering will also be required to construct the building's foundation.

² National Vertical Datum of 1988. Datum refers to the National Vertical Datum of 1988 (NAVD88) which is approximately 1.1 feet above mean sea level datum at Sandy Hook New Jersey as defined by the United States Geologic Survey (USGS NGVD 1929).

1.3 Description of Surrounding Property

The Site is located in an area generally characterized by multi-story residential and commercial buildings in zoning districts designated for commercial, residential and manufacturing uses, which are summarized in the table below:

DIRECTION	ADJOINING PROPERTIES	SURROUNDING PROPERTIES
North	Leroy Street	Multiple-story residential and commercial buildings
East	An asphalt-paved parking lot and a two- and three-story commercial building	Washington Street
South	Clarkson Street	Multiple-story residential and commercial buildings and a private gasoline filling station to the southeast
West	West Street	Pier 40, Hudson River Park, and the Hudson River

Nearby sensitive receptors include a school and daycare centers. Public School 003 (The Charrette School) is located about 0.25 miles northeast of the Site at 490 Hudson Street. The nearest hospital is the NYEE Urgent Care Clinic (New York Eye and Ear Infirmary of Mount Sinai), located about 1.29 miles to the east at 218 Second Avenue. There are four nearby daycare centers:

- Barrow Street Nursery School, 27 Barrow Street (about 0.38 miles northeast of the Site);
- Downing Street Playgroup, Inc., 32 Carmine Street (about 0.38 miles east of the Site);
- St. Anthony’s School, 60 MacDougal Street (about 0.44 miles southeast of the Site); and
- St. Margaret of Cortona, 30 Charlton Street (about 0.37 miles southeast of the Site).

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based on a review of historical maps, the original shoreline of the Hudson River was east of the Site. Prior to its initial development, the Site consisted of marshland, which was subsequently drained and filled. A review of historic Sanborn fire insurance maps, city directory information, and available public databases indicated the Site was occupied since at least 1891 by manufacturing and commercial tenants. The Site was historically used primarily for commercial and industrial purposes, including stores, offices, a hotel, machine shops, auto body shops, a car wash, a junkyard, a smelting works, and a warehouse. Current improvements were constructed between 1936 and 1968. Ownership records for the five former lots comprising the Site list multiple realty groups, corporations, and individual property owners. City Directory Abstract records identified multiple residential, commercial, and professional uses of the Site including auto repair, transportation, metalworking, and salvage/ disposal facilities.

The surrounding area has historically been occupied by residential, commercial, industrial, and storage facilities. Historical commercial, industrial, and storage operations on adjacent properties included storage facilities and a filling station to the north, a chemical manufacturing company, a wagon builder, an auto repair shop, a garage, and a railroad right-of-way to the east, a lumberyard, a soap works, a steam laundry, a warehouse, and a freight terminal to the south, and multiple piers to the west.

2.2 Previous Investigations

The following previous environmental reports were reviewed as part of this RIR. They are summarized below and included in Appendix A.

July 2007 Phase II Environmental Site Investigation Report, prepared by IVI Environmental, Inc.

A Phase II Environmental Site Investigation (ESI) Report was performed by IVI Environmental, Inc. (IVI) in July 2007. The investigation was completed at former Lots 8 and 10 and the scope included:

- Completion of four soil borings to 16 feet below grade surface (bgs), and the collection and analysis of four soil samples; and
- Installation of four temporary monitoring wells and collection and analysis of four groundwater samples.

Groundwater was observed at approximately 10 feet bgs in each soil boring. IVI did not observe visual or olfactory evidence of contamination in soil; however, total organic vapor concentrations measured with a photoionization device (PID) were reported between 0.6 parts per million (ppm) and 117 ppm.

IVI submitted four soil samples for analysis. Soil samples were analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC) and metals, and were compared to New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs), the applicable regulatory standard at the time of the investigation. IVI only included detected analytes in the ESI Report.

A review of the soil analytical results revealed no VOC concentrations exceeding their Title 6 New York Codes, Rules and Regulations Part 375-6.8(a) Unrestricted Use SCOs and Part 375-6.8(b) Restricted Use Restricted-Residential Use SCOs. Six SVOCs, all polycyclic aromatic hydrocarbons (PAHs), were detected in soil at concentrations above Unrestricted Use and Restricted Use Restricted-Residential SCOs in soil sample B-4: benzo(a)anthracene (18 mg/kg), benzo(a)pyrene (6.3 mg/kg), benzo(b)fluoranthene (7.9 mg/kg), benzo(k)fluoranthene (5 mg/kg), chrysene (17 mg/kg), and indeno(1,2,3-cd)pyrene (1 mg/kg). No SVOCs exceeded their

Unrestricted Use SCOs and Restricted-Residential Use SCOs in B-1. No SVOCs were detected in B-2 and B-3. Three metals, including copper (max of 152 mg/kg), lead (max of 1,100 mg/kg) and zinc (max of 560 mg/kg) exceeded their Unrestricted Use SCOs in soil samples B-1 and B-4; lead also exceeded its Restricted-Residential SCO (400 mg/kg) in soil samples B-1 and B-4.

IVI also submitted four groundwater samples for lab analysis. Groundwater samples were analyzed for VOCs, SVOCs and metals. No compounds were detected at concentrations above the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA waters.

IVI concluded that the presence of SVOCs and metals within Site soil were not indicative of a spill, but were related to historic fill at the site. The IVI soil boring and temporary monitoring well locations are presented on Figure 3.

September 2012 Environmental Site Investigation Report, prepared by Langan

An ESI was performed by Langan in September 2012 to supplement the findings from IVI's Phase II ESI and evaluate subsurface conditions at former Lot 8. The ESI included:

- Completion of two soil borings to 15 and 20 feet bgs, and the collection and analysis of four soil samples;
- Installation of two temporary monitoring wells and collection and analysis of two groundwater samples; and
- Installation of one sub-slab soil vapor point and collection and analysis of one sub-slab soil vapor sample.

The following is a summary of the findings based on Langan's *Environmental Site Investigation Report*, dated September 28, 2012:

- The stratigraphy included a surficial layer of historic fill overlying native fine sand

interlayered with silt. The historic fill layer extended to depths of about 7 to 10 feet below the building slab.

- No VOCs exceeded their 6 NYCRR Part 375-6.8(a) Unrestricted Use or Restricted Use Restricted-Residential Soil Cleanup Objectives (SCOs) in soil samples. Tetrachloroethene (PCE) was detected below its Unrestricted Use SCO (1.3 milligrams per kilogram [mg/kg]) at an estimated concentration of 0.006 mg/kg in LB-1 (3-5 feet below slab).
- Seven SVOCs, all PAHs, including benzo(a)anthracene (max of 3 mg/kg), benzo(a)pyrene (max of 2.7 mg/kg), benzo(b)fluoranthene (max of 3.2 mg/kg), benzo(k)fluoranthene (max of 1.1 mg/kg), chrysene (max of 2.9 mg/kg), dibenzo(a,h)anthracene (max of 0.36 mg/kg), and indeno(1,2,3-cd)pyrene (max of 1.5 mg/kg), exceeded their Unrestricted Use SCOs in soil samples at LB-1 and LB-2 (3-5 feet below slab). All of the above PAHs except benzo(k)fluoranthene and chrysene were also detected above their Restricted Use Restricted-Residential SCOs in LB-1 and/or LB-2. No SVOCs exceeded their Unrestricted Use SCOs in native soil. The suite of PAHs found in soil above their respective SCOs are characteristic of and attributed to historic fill.
- No pesticides exceeded their Unrestricted Use or Restricted-Residential Use SCOs. No PCBs and herbicides were detected in soil samples.
- Three metals, including copper (max of 82.7 mg/kg), lead (65.9 mg/kg), and mercury (max of 0.872 mg/kg), exceeded their Unrestricted Use SCOs in soil samples at LB-1 and LB-2 (3-5 feet below slab), with mercury in both samples also exceeding its Restricted-Residential SCO. No metals exceeded their Unrestricted Use SCOs in native soil. The metals found in soil above their respective SCOs are characteristic of and attributed to historic fill.
- No VOCs, SVOCs, PCBs, pesticides, or herbicides were detected in groundwater samples.
- Four metals, including iron (max of 13,700 µg/L), magnesium (max of 47,000 µg/L), manganese (max of 4,680 µg/L), and sodium (max of 707,000 µg/L), were detected in total and dissolved concentrations above their TOGS SGVs for Class GA waters. A

comparison of the total and dissolved metals results did not indicate a significant reduction in metals concentrations; therefore, the metals concentrations are reflective of true groundwater quality. The total and dissolved concentrations of iron, magnesium, manganese, and sodium are characteristic of naturally-occurring or brackish groundwater conditions.

- The PCE concentration in soil vapor sample SV-1 was above the New York State Department of Health (NYSDOH) Air Guideline Value (AGV) of 30 $\mu\text{g}/\text{m}^3$ at a concentration of 39.3 $\mu\text{g}/\text{m}^3$. The PCE identified in soil vapor was attributed to the low-level concentration of PCE in historic fill (LB-1), which is in the vicinity of SV-1.

May 2013 Phase I Environmental Site Assessment, prepared by Langan

Langan completed a Phase I Environmental Site Assessment (ESA) in May 2013. The Phase I ESA identified the following Recognized Environmental Conditions (RECs):

- A petroleum spill (NYSDEC Spill No. 13-00213) associated with the release of motor oil in the maintenance pit of a partial basement at the former express oil change (former Lot 8). The release was presumably caused by flooding during Tropical Storm Sandy.
- Current use of Lot 1 (356 West Street) as an automobile repair garage.
- Seven ASTs³ on former Lot 8, including three 1,000-gallon lube oil ASTs, one 500-gallon waste oil AST and three 500-gallon temporarily-out-of-service ASTs. A release from these ASTs was presumed to be the source of NYSDEC Spill No. 13-00212.
- Historical petroleum bulk storage (PBS #2-611746) on Lot 1 (356 West Street). A 275-gallon waste oil underground storage tank (UST) was removed and closed in January 2013.
- Historical use of Lot 10 as an automobile repair shop.

³ An eighth unregistered tank (a 500-gallon AST) was also identified during the remediation of the spill. Three 500-gallon ASTs were removed and closed during the remediation of the spill. A copy of FDNY tank closure affidavit is included in Appendix B of the Phase I ESA Report. Five inactive ASTs are still present at Lot 8. An update to the NYSDEC Petroleum Bulk Storage (PBS) listing (2-610379) to reflect changes in the status of the tanks is pending.

June 2013 Spill Closure Report, prepared by Langan

The spill in former Lot 8 was remediated and closed by the NYSDEC on June 12, 2013. Brookside Environmental, Inc. of Copiague, New York was contracted by Langan to recover waste oil and petroleum-contaminated water and to remove residual petroleum from the floor, ceiling and interior walls of the oil change pit and partial basement. About 57,125 gallons of petroleum-impacted water and 2,000 gallons of oil was recovered and transported to Clean Water of New York, Inc. of Staten Island, New York (NYSDEC 2-6401-0065/0001) for recycling or disposal. Langan conducted a post-remediation inspection of the oil change pit and partial basement to verify completion of cleanup. No significant residual waste oil, petroleum-related staining or odors were identified in the interior of the oil change pit and basement. No cracks, gaps, joints or other preferential migration pathways were identified on the concrete walls surrounding the oil change pit and on the concrete walls and slab of the partial basement. The spill closure report concluded that petroleum impacts in the subsurface surrounding the maintenance pit and partial basement were unlikely based on the absence of preferential migration pathways and the amount of oil recovered during the spill cleanup.

2.3 Site Inspection

To assist in an assessment of Site history and observe current conditions, a Site inspection was performed at 7:30 AM on January 13, 2015 by Patrick Farnham of Langan under the direction of the Qualified Environmental Professional (QEP) certifying this report. The weather at the time of the inspection was partly cloudy and approximately 20° F. The following observations were noted during the inspection:

- The Site was occupied by seven buildings of between one and three stories.
- No signs of staining or previous use of hazardous materials were observed. Langan did not access any second or third floor areas.

2.4 Areas of Concern

The Areas of Concern (AOCs) identified during previous investigations are described below:

- Closed Petroleum Spill and Historical Petroleum Bulk Storage at Former Lot 8: A petroleum spill NYSDEC Spill No. 13-00212 was associated with the release of motor oil in the maintenance pit of a partial basement at the former express oil change (former Lot 8). The release was presumably caused by flooding during Tropical Storm Sandy. Eight aboveground storage tanks (ASTs) were once present at former Lot 8, including three 1,000-gallon lube oil ASTs, one 500-gallon waste oil AST, and four 500-gallon temporarily-out-of-service ASTs. A release from these ASTs was presumed to be the source of NYSDEC Spill No. 13-00212. The spill was remediated under the oversight of Langan and closed by the NYSDEC on June 12, 2013. Three 500-gallon ASTs were removed and closed during the remediation of the spill. Although no significant residual waste oil, petroleum-related staining or odors and preferential migration pathways were identified in the oil change pit and on the concrete walls and slab of the partial basement post-remediation, this petroleum spill may have adversely impacted soil, groundwater, and/or soil vapor at former Lot 8.
- Current Use of and Historical Petroleum Bulk Storage at Former Lot 1: Former Lot 1 (356 West Street) is currently used as an automobile repair garage. A 275-gallon waste oil underground storage tank (UST), associated with NYSDEC PBS #2-611746, was removed and closed in January 2013. Although the UST was removed and closed and there is no documentation of a release, it is unclear if environmental samples (i.e. soil and groundwater) were collected and analyzed as part of the removal work, a deviation from standard industry practice. Leaks or spills of petroleum from the former UST at former Lot 1 may have adversely impacted soil, groundwater and/or soil vapor at former Lot 1.
- Historical Use of Lot 10: Former Lot 10 was previously used as an automobile repair shop. Potential leaks and/or spills of petroleum, solvents, or other hazardous

substances typically used by this facility may have adversely impacted soil, groundwater, and/or soil vapor at the Site.

- Historic Fill: Previous environmental investigations (Langan [2012] and IVI Environmental, Inc. [2007]) at former Lots 8 and 10 identified a surficial layer of historic fill overlying native soil. The historic fill layer extended to depths of about 7 to 10 feet below grade surface (bgs). Concentrations of SVOCs (all PAHs), and metals (copper, lead, mercury, and zinc) were identified in historic fill at concentrations that exceed the Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). No volatile organic compounds (VOCs) or pesticides exceeded their Unrestricted Use SCOs. No polychlorinated biphenyls (PCBs) or herbicides were detected in soil samples. The concentrations of SVOCs and metals were attributed to historic fill and are characteristic of properties in the urban environment.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for the implementation and oversight of the remedial investigation and preparation of this RIR is Michael D. Burke, CHMM.

3.2 Health and Safety

All work described in this RIR was performed in compliance with applicable laws and regulations, including site and Occupational Safety and Health Administration (OSHA) worker safety requirements and Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. Drill cuttings were returned to the boreholes from which they were generated. No free product or grossly-contaminated soil was encountered during the RI. Excess purge water generated during the RI was containerized in one DOT-approved, 55-gallon steel drum and stored on site pending off-site disposal.

4.0 REMEDIAL INVESTIGATION

To investigate AOCs identified during previous investigations and evaluate soil, groundwater, and soil vapor quality, Langan performed the following scope of work on behalf of the Owner:

1. Conducted a Site inspection and geophysical survey to identify physical obstructions and subsurface utilities and structures;
2. Advanced nine soil borings, and collected 14 grab soil samples (plus Quality Assurance/Quality Control [QA/QC] samples) for laboratory analysis to evaluate soil quality;
3. Installed five permanent groundwater monitoring wells to establish groundwater depth and flow direction, and collected five groundwater samples (plus QA/QC samples) for laboratory analysis to evaluate groundwater quality;
4. Installed seven soil vapor probes and collected two ambient air and seven soil vapor samples for laboratory analysis to evaluate soil vapor quality.

4.1 Geophysical Survey

Prior to commencement of ground-intrusive investigation, the New York City One-Call center was contacted to identify subsurface utility services entering the Site. On January 13, 2015 and March 16 and 17, 2015, NOVA Geophysical & Environmental, Inc. of Douglaston, New York, conducted a geophysical survey.

NOVA utilized ground-penetrating radar (GPR) and an electromagnetic (EM) detector to locate and identify buried utilities or other subsurface structures at the Site. The geophysical survey did not identify anomalies consistent with USTs. Borings were relocated as necessary to avoid subsurface utilities and minor anomalies. A copy of the geophysical survey report is included in Appendix B.

4.2 Soil Investigation

Drilling Procedures

Nine soil borings (SB-3 to SB-11) were installed by AARCO Environmental Services Corp. (AARCO) of Lindenhurst, New York on January 13-15, 2015 and March 17, 2015. Soil borings were documented by a Langan field engineer. The soil boring locations are presented on Figures 3 and 4.

Soil boring SB-11 was moved approximately 60 feet east of the location proposed in Langan's December 2nd, 2014 *Remedial Investigation Work Plan (RIWP)* due to site access restrictions. OER was informed of and approved the changed boring location.

Soil borings were completed using a remote access Geoprobe™ 420M direct-push drill rig. Soil samples were collected continuously into 2-inch diameter Macro-Core barrels lined with 4-foot dedicated acetate sleeves. Extracted soil was screened with a PID equipped with a 10.6 electron volt (eV) lamp, inspected for visual and olfactory evidence of contamination, and classified by Langan field staff. Soil borings were advanced to the groundwater interface or to several feet below the groundwater interface in locations where groundwater monitoring wells were installed. Soil boring logs are included as Appendix C.

Soil Observations

The stratigraphy consists of a surficial layer of historic fill material overlying native fine- to coarse-grained sandy and silty soil with some gravel, cobbles, and clay. The surficial historic fill material generally extends from ground surface to about 5 to 13 feet bgs (only 3 feet bgs in some limited areas) and is composed of varying amounts of sand, silt, gravel, slag, brick, wood, glass, tar, ceramic, and concrete fragments. No visual, olfactory, or PID evidence of petroleum or other gross contamination was identified in the completed soil borings. PID readings above site background and ranging from 0.9 parts per million (ppm) to 24.1 ppm were recorded in soil borings SB-4 and SB-5, and appeared to be associated with a degraded tar-like waterproofing material and treated wood at about 8 feet bgs. The slab of the oil change pit and partial

basement at former Lot 8 was underlain by a layer of plastic sheeting followed by about 7 inches (up to 16 inches in select areas) of 3/4-inch gravel.

4.3 Groundwater Investigation

Permanent Monitoring Well Construction

Five permanent monitoring wells (MW-3 to MW-7) were installed by AARCO under the supervision of a Langan field engineer during the period January 13-15, 2015 and March 17, 2015. The monitoring well locations are presented on Figures 3 and 5.

A permanent monitoring well was constructed at five completed soil borings with a Geoprobe® 420M remote access drill rig. Monitoring wells were constructed of 3/4-inch pre-packed Schedule 40 PVC pipe with 0.010-inch slotted well screen across the groundwater interface and a 20/40 mesh silica sand filter inside the pre-packed well annulus. An annular seal of hydrated bentonite was installed above the primary filter pack. Where appropriate, the annulus around the solid PVC pipe was filled with drill cuttings up to a cement grout surface seal. All completed monitoring wells were fitted with a locking well cap, a protective case and flush-mounted manhole cover. New monitoring wells were developed with a bailer and with a peristaltic pump and dedicated polyethylene tubing⁴. The groundwater level in each well repeatedly drew down during development; pumping and bailing was repeated for several cycles with recharge time allowed between each cycle. Well construction logs are included in Appendix D.

⁴ The MW-5 well riser was curved and the well could not be developed. MW-5 was purged prior to sampling in accordance with NYSDEC DER-10 and USEPA's *Low Flow Purging and Sampling Procedures for the Collection of Groundwater Samples from Monitoring Wells*.

Groundwater Observations

Depth to groundwater ranged from about 7 to 13 feet below first floor grade surface (NAVD88⁵) based on gauging of the five monitoring wells. The expected direction of groundwater flow is to the west and northwest in the direction of the Hudson River. Given the proximity to the Hudson River, groundwater is expected to be tidally influenced; however, tidal influence was not studied as part of the RI. No free product was observed during sampling and gauging activities. A PID reading above site background (12.8 ppm) was recorded beneath the inner well cap of monitoring well MW-5. Groundwater purged from monitoring well MW-5 exhibited a tar-like odor, which may have been associated with the degraded tar-like waterproofing material and treated wood observed at approximately 8 feet below grade surface in soil boring SB-5.

4.4 Soil Vapor Investigation

Seven temporary soil vapor sampling points (SV-2 through SV-8) were installed across the Site by AARCO under the supervision of a Langan field engineer during January 13-15, 2015 and March 17, 2015. In addition, two ambient air samples (one per sampling day) were collected and analyzed for QA/QC purposes.

Soil vapor sampling point SV-8 was moved approximately 60 feet east of the location proposed in Langan's December 2nd, 2014 RIWP due to site access issues. Langan informed OER of the changed vapor point location.

Six of the seven soil vapor sampling points were installed using a jackhammer, a Bosch® Hammer Drill, and/or a hand auger, and were completed to within 6 inches from the bottom of existing concrete foundation slabs. Sampling point SV-7 was installed using a remote access Geoprobe™ 420M direct-push drill rig and was completed to approximately 5 feet below grade

⁵ National Vertical Datum of 1988. Datum refers to the National Vertical Datum of 1988 (NAVD88) which is approximately 1.1 feet above mean sea level datum at Sandy Hook New Jersey as defined by the United States Geologic Survey (USGS NGVD 1929).

surface. The sample collection points consisted of a 6-inch stainless steel screened-probe and inert 3/16-inch by 1/4-inch Teflon-lined polyethylene tubing. The annulus (i.e., the sampling zone) around the probe was filled with No. 2 pure silica sand to about 2 inches above the top of the probe screen. A hydrated bentonite seal was installed above the sampling zone up to the ground surface at all locations except SV-5, in which the hydrated bentonite seal extended 2 feet above the sampling zone as well as from 0.5 feet to 0 feet below grade surface. After sample collection, the vapor points were removed from each location and the ground surface restored to its original level with hydrated bentonite and/or cement grout. Soil vapor sampling locations are presented on Figures 3 and 6.

4.5 Sample Collection and Chemical Analysis

Soil, groundwater and soil vapor samples were collected to evaluate environmental conditions related to the AOCs and to evaluate soil, groundwater, and soil vapor quality. Discrete (grab) samples were used for final delineation of the nature and extent of contamination and to determine the potential impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling Procedures

Two discrete (grab) soil samples were collected at each boring for laboratory analysis, except in borings in which the groundwater table was less than 4 feet below grade surface. A total of 14 soil samples (plus QA/QC samples) were collected during the RI. At each boring location, one soil sample was collected from the 0 to 2 foot interval below surface cover and the second soil sample was collected at the groundwater interface.

No samples were collected from SB-9, where subgrade material above the groundwater interface consisted of 3/4" gravel.

No grossly contaminated soil was observed in the completed borings. EnCore™ kits (5-gram) were used to collect soil samples for VOC analysis. One field duplicate sample (1 per 20 samples), one field blank sample (1 per 20 samples), and trip blanks (one per cooler of VOC samples) were collected and analyzed for QA/QC purposes. A summary of the soil samples and soil QA/QC samples is presented in Table 1.

Soil samples and QA/QC samples were collected into laboratory-supplied batch-certified clean glassware and submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory (Alpha Analytical, Inc. of Westborough, MA [ELAP ID #11148]) via courier service under standard chain-of-custody protocol. Soil samples, field duplicates, and field blanks were analyzed for the following parameters:

- Target Compound List (TCL) VOCs by USEPA Method 8260
- TCL SVOCs by USEPA Method 8270
- TCL Pesticides/PCBs by USEPA Method 8081/8082
- TCL Herbicides by USEPA Method 8151
- Target Analyte List (TAL) metals by USEPA Method 6010 and 7471
- Total Cyanide by USEPA Method 9010/9012
- Hexavalent Chromium by USEPA Method 7196
- Trivalent Chromium by calculation

Trip blanks were analyzed for VOCs only by USEPA Method 8260C. The laboratory was instructed to report all analytical data as an Analytical Services Protocol (ASP) Category A data deliverable. The reported list of soil results was inclusive of all parameters listed in the TCL/TAL standard list and 6 NYCRR Part 375-6.8 and most parameters listed in the NYSDEC Commissioner's Policy CP-51.

Groundwater Sampling Procedures

One groundwater sample was collected from each monitoring well in general accordance with NYSDEC DER-10 and USEPA's *Low Flow Purging and Sampling Procedures for the Collection of Groundwater Samples from Monitoring Wells*. Five groundwater samples (plus QA/QC samples) were collected during the RI. The groundwater samples were collected at least one week after the monitoring wells were installed using a peristaltic pump connected to dedicated polyethylene tubing. Before a groundwater sample was collected, the well was gauged and then continuously purged until groundwater quality parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) stabilized, to the extent practical, in accordance with the USEPA Low Flow Procedures⁶. Stabilization was achieved when three consecutive readings of all parameters, to the extent practical, were within the limits specified in the USEPA Low Flow Procedures. A multi-parameter water quality system (Horiba U52) was used to monitor the groundwater quality parameters during sampling. Purged groundwater was containerized in one properly labeled 55-gallon steel drum and stored on-site prior to off-site disposal. In addition to the groundwater samples, one field duplicate sample (1 per 20 samples), one field blank sample (1 per 20 samples), and trip blanks (one per cooler of VOC samples) were collected and analyzed for quality QA/QC purposes. A summary of the groundwater samples and groundwater QA/QC samples is presented in Table 2. Well sampling logs are included in Appendix E.

Groundwater samples and QA/QC samples were collected into laboratory-supplied batch-certified clean glassware and submitted to Alpha via courier service under standard chain-of-custody protocol. Groundwater samples, field duplicates, and field blanks were analyzed for the following analytes:

- TCL VOCs by USEPA Method 8260
- TCL SVOCs by USEPA Method 8270
- TCL Pesticides/PCBs by USEPA Method 8081/8082

⁶ The MW-5 well riser was curved and the well could not be gauged.

- TCL Herbicides by USEPA Method 8151
- TAL metals (total and dissolved) by USEPA Methods 6020 and 7470
- Total Cyanide by USEPA Method 9010/9012
- Hexavalent Chromium by USEPA Method 7196
- Trivalent Chromium by calculation

Trip blanks were analyzed for VOCs only by USEPA Method 8260C. The laboratory was instructed to report all analytical data as an ASP Category A data deliverable. The reported list of groundwater results was inclusive of all parameters listed in the TCL/TAL standard list.

Soil Vapor Sampling Procedures

Samples were collected in general accordance with the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York* (NYSDOH October 2006). Soil vapor samples were collected from each temporary collection point on January 15, 2015 and March 17, 2015, for a total of seven soil vapor samples and two ambient air samples during this RI. A minimum of three implant volumes (i.e., the volume of the sample probe and tubing) was purged from each sample port at a rate of approximately 0.45 liters per minute using a RAE Systems MiniRAE 3000® photoionization detector (PID). The purged soil vapor was monitored for volatile organic compounds (VOCs) with the PID during purging. A helium tracer gas was used in accordance with the NYSDOH protocols to serve as a QA/QC technique to verify the integrity of each soil vapor sampling point seal before and after sampling was initiated. A plastic 5-gallon bucket and hydrated cement grout were used to keep the helium tracer gas in contact with the probe during the seal integrity test. A helium monitoring instrument was used to analyze a sample of soil vapor for the tracer gas prior to sampling. All soil vapor sampling point seals were determined to be adequate before and after sampling was initiated.

Soil vapor samples were collected into laboratory-supplied batch-certified clean 2.7-liter Summa® canisters with calibrated flow controllers. Soil vapor sampling times ranged from 79

minutes to 128 minutes. Ambient air samples were also collected for two hours. A log sheet for each soil vapor sample was completed to record the following:

- Sample identification name;
- Date and time of sample collection;
- Sampling depth;
- Name of the field engineer responsible for sampling;
- Sampling methods and equipment;
- Soil vapor purge volumes;
- Volume of soil vapor extracted;
- Flow rate; and
- Vacuum of canisters before and after sample collection.

Soil vapor sampling logs are provided as Appendix F.

Soil vapor samples and QA/QC samples (ambient air samples) were submitted to Alpha via courier service under standard chain-of-custody protocol and analyzed for VOCs by the United States USEPA Method TO-15. The laboratory was instructed to report all analytical data as an ASP Category A equivalent data deliverable.

Quality Control Sampling

During the RI, field blanks, trip blanks, coded field duplicate samples, and an ambient air sample were collected and submitted for laboratory analysis for QA/QC purposes. During the course of the investigation, the following quality control samples were collected:

Soil samples:

- One coded duplicate sample;
- One field blank sample; and
- Four trip blank samples.

Groundwater samples:

- One coded duplicate sample;
- One field blank sample; and
- Six trip blank samples.

Soil vapor samples:

- Two ambient air samples.

The field blank samples were collected to determine the effectiveness of the laboratory decontamination procedures for laboratory-supplied bottleware and to identify the presence of any ambient contamination at the field site. The field blanks were collected by pouring deionized water provided by the laboratory directly into sample bottleware

Coded field duplicates were collected to evaluate the precision of the analytical methods and uniformity of the sample matrix. The duplicates were collected from the same material as the primary sample by splitting the volume of sample collected in the field into two sample containers. The samples are termed "coded" because they were labeled in such a manner that the laboratory would not be able to determine the parent sample associated with the duplicate samples. This coding serves to eliminate possible bias that could arise during lab analysis. The field duplicates were analyzed for the same parameters as their parent samples.

The trip blank samples were collected to assess the potential for contamination of the sample containers and samples during the trip from the laboratory, to the field, and back to the laboratory for analysis. Trip blanks contain approximately 40 milliliters of water preserved with hydrochloric acid sealed by the laboratory when the empty sample containers are shipped to the field, and unsealed and analyzed by the laboratory when the sample shipment is received from the field.

Laboratory Analysis

Analytical work presented in this RIR was performed in the following manner:

Factor	Description
Analytical Laboratory	The analytical laboratory used during the RI was Alpha Analytical, Inc., an NYSDOH ELAP-certified laboratory (ELAP ID #11148).

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

According to United States Geologic Survey (USGS) maps and historic topographic maps, New York City geology is generally characterized by layers of fill and native soil overburden underlain by metamorphic bedrock. The native overburden generally consists of till and outwash deposits predominantly in inland areas, and riverine deposits (peat, organic silt and clay) along the shorelines that were filled in with anthropogenic materials. Three formations of metamorphic rock, the Manhattan Schist, the Inwood Marble, and the Fordham Gneiss, are present across New York City.

The Site is underlain by a glacial deposit known as ground moraine. New York City's subsurface soil is primarily the result of repeated glaciation and ice advancement during the Pleistocene Epoch. During ice advancement, soil and rock material scraped from the surface and pushed southward by the glaciers was deposited at the limit of the ice advance as a wall of soil and rock called a terminal moraine. The New York City area terminal moraine stretches across northern Long Island, through Staten Island and across New Jersey. When the climate moderated, the glacier began a gradual retreat northward. During the retreat, soil and rock material was still carried south in the melting glacier outwash and spread out over the ground in front of the ice as a veneer called ground moraine. The ground moraine is a widespread dense layer, consisting typically of clay, sand, and boulders, typically less than 100 feet thick.

The "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen County, New Jersey" by Charles A. Baskerville, et al. indicates the bedrock underlying the Site is part of the Hartland Formation. The Hartland Formation is comprised of a dark gray, medium to coarse-grained muscovite-biotite-garnet (mica) schist and gray fine-grained quartz-feldspar granulite with biotite and garnet, with localized concentrations of granite and intrusions of coarse-grained granitic pegmatite. The predominant feature of the Hartland Formation is the parallel alignment of the

mineral grains, referred to as schistosity of foliation. The foliation in the Hartland Formation generally dips steeply to the west or the east depending on local conditions of folding, although foliation dipping to other directions or nearly horizontal foliation has been observed.

Beneath the ground surface, water (groundwater) is contained within the subsurface strata and fractured bedrock. The upper surface of the groundwater reservoir is marked by the water table surface, which fluctuates seasonally, in response to precipitation events and tides (along shorelines). The overburden deposits typical to the project area can have low to moderate hydraulic conductivities. The bedrock is relatively impermeable except where concentrations of fractures, faults or joints are present. Preferential flow occurs through the more permeable zones of the overburden, such as individual sand or gravel layers, and through bedrock fractures and joints. Groundwater flow in an urban setting can be interrupted by the presence of pumping stations, building foundations, utilities, retaining walls, or other buried structures. Based on Site/area topography, the regional groundwater flow within the overburden material is anticipated to be to the west and northwest in the direction of the Hudson River.

Stratigraphy

The stratigraphy underlying the Site consists of a surficial layer of historic fill overlying native fine- to coarse-grained sandy and silty soil with some gravel, cobbles, and clay. The surficial historic fill generally extends from ground surface to about 5 to 13 feet bgs (only 3 feet bgs in some limited areas) across most of the Site and is composed of varying amounts of sand, silt, gravel, slag, brick, wood, glass, tar, ceramic, and concrete fragments. Bedrock was not encountered during the RI. Soil boring logs are included in Appendix C.

Hydrogeology

Depth to groundwater ranged from about 7 to 13 feet below first floor grade surface based on gauging of the five groundwater monitoring wells. The expected direction of groundwater flow is to the west and northwest in the direction of the Hudson River. Given the proximity to the

Hudson River, groundwater is expected to be tidally influenced; however, tidal influence was not studied nor quantified as part of the RI.

5.2 Soil Chemistry

The analytical data generated by the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. Fourteen grab soil samples were collected during the RI. Soil analytical results were compared to 6 NYCRR Part 375-6.8(a) Unrestricted Use SCOs and Part 375-6.8(b) Restricted Use Restricted-Residential SCOs. A summary of soil analytical results is presented in Table 4 and Figure 4. Complete laboratory analytical reports are included in Appendix G. A summary of the soil analytical results is provided below:

Herbicides – No herbicides were detected above their reporting limits.

VOCs – No VOCs exceeded their Unrestricted Use SCOs.

PCBs – No PCBs exceeded their Unrestricted Use SCOs.

SVOCs – Concentrations of nine SVOCs exceeded their respective Unrestricted Use SCOs in one or more soil samples. Six SVOCs, all PAHs, also exceeded their Restricted-Residential SCOs in one or more soil samples. The maximum concentration or, where appropriate, concentration ranges of each PAH exceeding its Restricted-Residential SCO is provided below:

- Benzo(a)anthracene – 1.2 mg/kg (SB-11_7-8) to 4 mg/kg (SB-6_0-2) (RR SCO = 1 mg/kg)
- Benzo(a)pyrene – 2 mg/kg (SB-4_1-3) to 4.2 mg/kg (SB-6_0-2) (RR SCO = 1 mg/kg)
- Benzo(b)fluoranthene – 1.4 mg/kg (SB-11_7-8) to 8.3 mg/kg (SB-6_0-2) (RR SCO = 1 mg/kg)
- Chrysene – 4.6 mg/kg (SB-6_0-2) (RR SCO = 3.9 mg/kg)
- Dibenzo(a,h)anthracene – 0.34 mg/kg (SB-4_5-7) to 1.4 mg/kg (SB-6_0-2) (RR SCO = 0.33 mg/kg)

- Indeno(1,2,3-cd)pyrene – 0.78 mg/kg (SB-11_7-8) to 5.9 mg/kg (SB-6_0-2) (RR SCO = 0.5 mg/kg)

Total SVOC concentrations ranged from non-detect to 56.24 mg/kg (SB-6 [0 to 2 feet bgs]). Soil samples with SVOC concentrations exceeding their Unrestricted Use SCOs were collected from historic fill, which typically exhibits elevated concentrations of SVOCs. The SVOCs exceeding their Restricted-Residential SCOs were PAHs, a class of compounds typically associated with pyrogenic and petrogenic artifacts (e.g., coal, slag, and ash).

Metals – Concentrations of nine metals exceeded their Unrestricted Use SCOs in one or more soil samples. Six metals also exceeded their Restricted-Residential SCOs in one or more soil samples. The maximum concentration or, where appropriate, the concentration range of each metal exceeding its Restricted-Residential SCO is provided below:

- Arsenic – 65 mg/kg (SB-6_0-2) (RR SCO = 16 mg/kg)
- Barium – 960 mg/kg (SB-5_1-3) to 1,100 mg/kg (SB-5_6-7) (RR SCO = 400 mg/kg)
- Cadmium – 7.7 mg/kg (SB-6_0-2) (RR SCO = 4.3 mg/kg)
- Copper – 4,700 mg/kg (SB-6_0-2) (RR SCO = 270 mg/kg)
- Lead – 1,400 mg/kg (SB-4_5-7) to 5,700 mg/kg (SB-6_0-2) (RR SCO = 400 mg/kg)
- Mercury – 0.9 mg/kg (SB-5_1-3) to 5.6 mg/kg (SB-6_0-2) (RR SCO = 0.81 mg/kg)

Soil samples with metals concentrations exceeding their Unrestricted Use and Restricted-Residential SCOs were collected from historic fill, which typically contains elevated metals concentrations.

Pesticides – Concentrations of 4,4'-DDD (max of 0.0168 mg/kg), 4,4'-DDE (max of 0.0988 mg/kg), and 4,4'-DDT (max of 0.272 mg/kg) exceeded their Unrestricted Use SCO of 0.0033 mg/kg in one or more soil samples collected from borings SB-4, SB-5, SB-6, and SB-11. No pesticides exceeded their Restricted-Residential SCOs. Soil samples with pesticide

concentrations exceeding their Unrestricted Use SCOs were collected from historic fill, which commonly exhibits elevated pesticide concentrations.

5.3 Groundwater Chemistry

The analytical data generated by the RI is sufficient to delineate the distribution of contaminants in groundwater. Five groundwater samples were collected during the RI. Groundwater analytical results were compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA waters. A summary of groundwater analytical results is presented in Table 5 and Figure 5. Complete laboratory analytical reports are provided in Appendix G. A summary of the soil analytical results is provided below:

VOCs – Three VOCs exceeded their TOGS SGVs in groundwater samples collected from monitoring wells MW-4 and/or MW-5:

- Benzene (max of 11 µg/L in MW-5) (TOGS SGV = 1 µg/L);
- Naphthalene (max of 77 µg/L in MW-5) (TOGS SGV = 10 µg/L); and
- Toluene (max of 5.4 µg/L in MW-5) (TOGS SGV = 5 µg/L). Toluene did not exceed its TOGS SGV in MW-4.

SVOCs – Concentrations of seven SVOCs exceeded their TOGS SGVs in groundwater samples collected from monitoring wells MW-4 and/or MW-5. The maximum concentration or, where appropriate, concentration range of each SVOC exceeding its TOGS SGV is provided below:

- Benzo(a)anthracene – 0.46 µg/L (MW-4) to 3.5 µg/L (MW-5) (TOGS SGV = 0.002 µg/L)
- Benzo(a)pyrene – 0.19 µg/L (MW-4) to 3.3 µg/L (MW-5) (TOGS SGV = Not Detected)
- Benzo(b)fluoranthene – 0.28 µg/L (MW-4) to 3.2 µg/L (MW-5) (TOGS SGV = 0.002 µg/L)
- Benzo(k)fluoranthene – 0.09 µg/L (MW-4) to 3.2 µg/L (MW-5) (TOGS SGV = 0.002 µg/L)
- Chrysene – 0.38 µg/L (MW-4) to 3.1 µg/L (MW-5) (TOGS SGV = 0.002 µg/L)

- Indeno(1,2,3-cd)pyrene – 0.09 µg/L (MW-4) to 3.4 µg/L (MW-5) (TOGS SGV = 0.002 µg/L)
- Phenol – 27 µg/L (MW-5) (TOGS SGV = 1 µg/L)

Metals – Six metals, including antimony (max of 19.66 µg/L), iron (max of 5,180 µg/L), lead (max of 82.91 µg/L), magnesium (max of 60,300 µg/L), manganese (max of 2,686 µg/L), and sodium (max of 587,000 µg/L) were detected at total concentrations exceeding their TOGS SGVs in one or more unfiltered samples. Five metals, including antimony (max of 22.2 µg/L), iron (max of 6,020 µg/L), magnesium (max of 54,200 µg/L), manganese (max of 2,668 µg/L), and sodium (max of 553,000 µg/L) were detected at dissolved concentrations exceeding their TOGS SGVs in one more filtered samples.

PCBs – No PCBs were detected in the groundwater samples.

Pesticides – No pesticides were detected in the groundwater samples.

Herbicides – No herbicides were detected in the groundwater samples.

The groundwater samples with VOC and SVOC concentrations exceeding their TOGS SGVs were collected from MW-4 and MW-5, where degraded tar-like waterproofing and treated wood exhibiting a tar-like odor and PID readings above background were apparent in soil samples below the groundwater table at a depth of about 8 feet bgs. The groundwater purged from MW-5 also exhibited a tar-like odor. No free product and gross contamination were identified at these borings before they were converted to monitoring wells. Furthermore, no petroleum constituents were found in the soil samples collected from these borings. The VOC and SVOC constituents exceeding their TOGS SGVs in MW-4 and MW-5 are aromatic and polycyclic aromatic hydrocarbons, compounds typically associated with coal-tar-based products and preservatives (e.g. creosote).

The metals (iron, magnesium, manganese, and sodium) frequently detected in groundwater

above their TOGS SGVs are characteristic of brackish and naturally-occurring groundwater conditions. A comparison of the filtered and unfiltered metals detected in groundwater did not indicate a significant reduction in metals concentrations with the exception of lead. Lead was detected only in total concentrations above its TOGS SGV; lead was not detected in dissolved concentrations above its TOGS SGV. Antimony was detected in total and dissolved concentrations above its TOGS SGV. The presence of total lead and antimony in groundwater is attributed to the presence of suspended solids derived from historic fill, which was generally found to contain lead and antimony and generally extends into the groundwater table across the Site. Dissolved-phase antimony in groundwater is attributed to the dissolution of an unidentified antimony source in historic fill.

5.4 Soil Vapor Chemistry

The analytical data generated by the RI is sufficient to delineate the distribution of contaminants in soil vapor. Seven soil vapor samples were collected during the RI. Soil vapor analytical results were compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs). A summary of soil vapor analytical results is presented in Table 6 and Figure 6. A summary of the soil vapor analytical results is provided below:

- At SV-7, one VOC, tetrachloroethene (PCE), was detected at a concentration of 138 $\mu\text{g}/\text{m}^3$, which is above the AGV of 30 $\mu\text{g}/\text{m}^3$.
- No other VOCs exceeded their NYSDOH AGVs in soil vapor samples.

No potential on-site source of PCE was identified during the RI. Furthermore, no PCE was detected in soil or groundwater at the Site. PCE was detected below its Unrestricted Use SCO (1.3 mg/kg) at an estimated concentration of 0.006 mg/kg in LB-1 (3-5 feet bgs), approximately 55 feet west of SV-7, during the Langan 2012 ESI.

5.5 Quality Control Samples

Duplicate soil and groundwater sample analytical results are included with their parent samples in Tables 4 and 5. The ambient air analytical results are shown with soil vapor analytical results in Table 6. A summary of soil sample trip blank and field blank analytical results is provided in Table 7. A summary of groundwater sample trip blank and field blank analytical results is provided in Table 8.

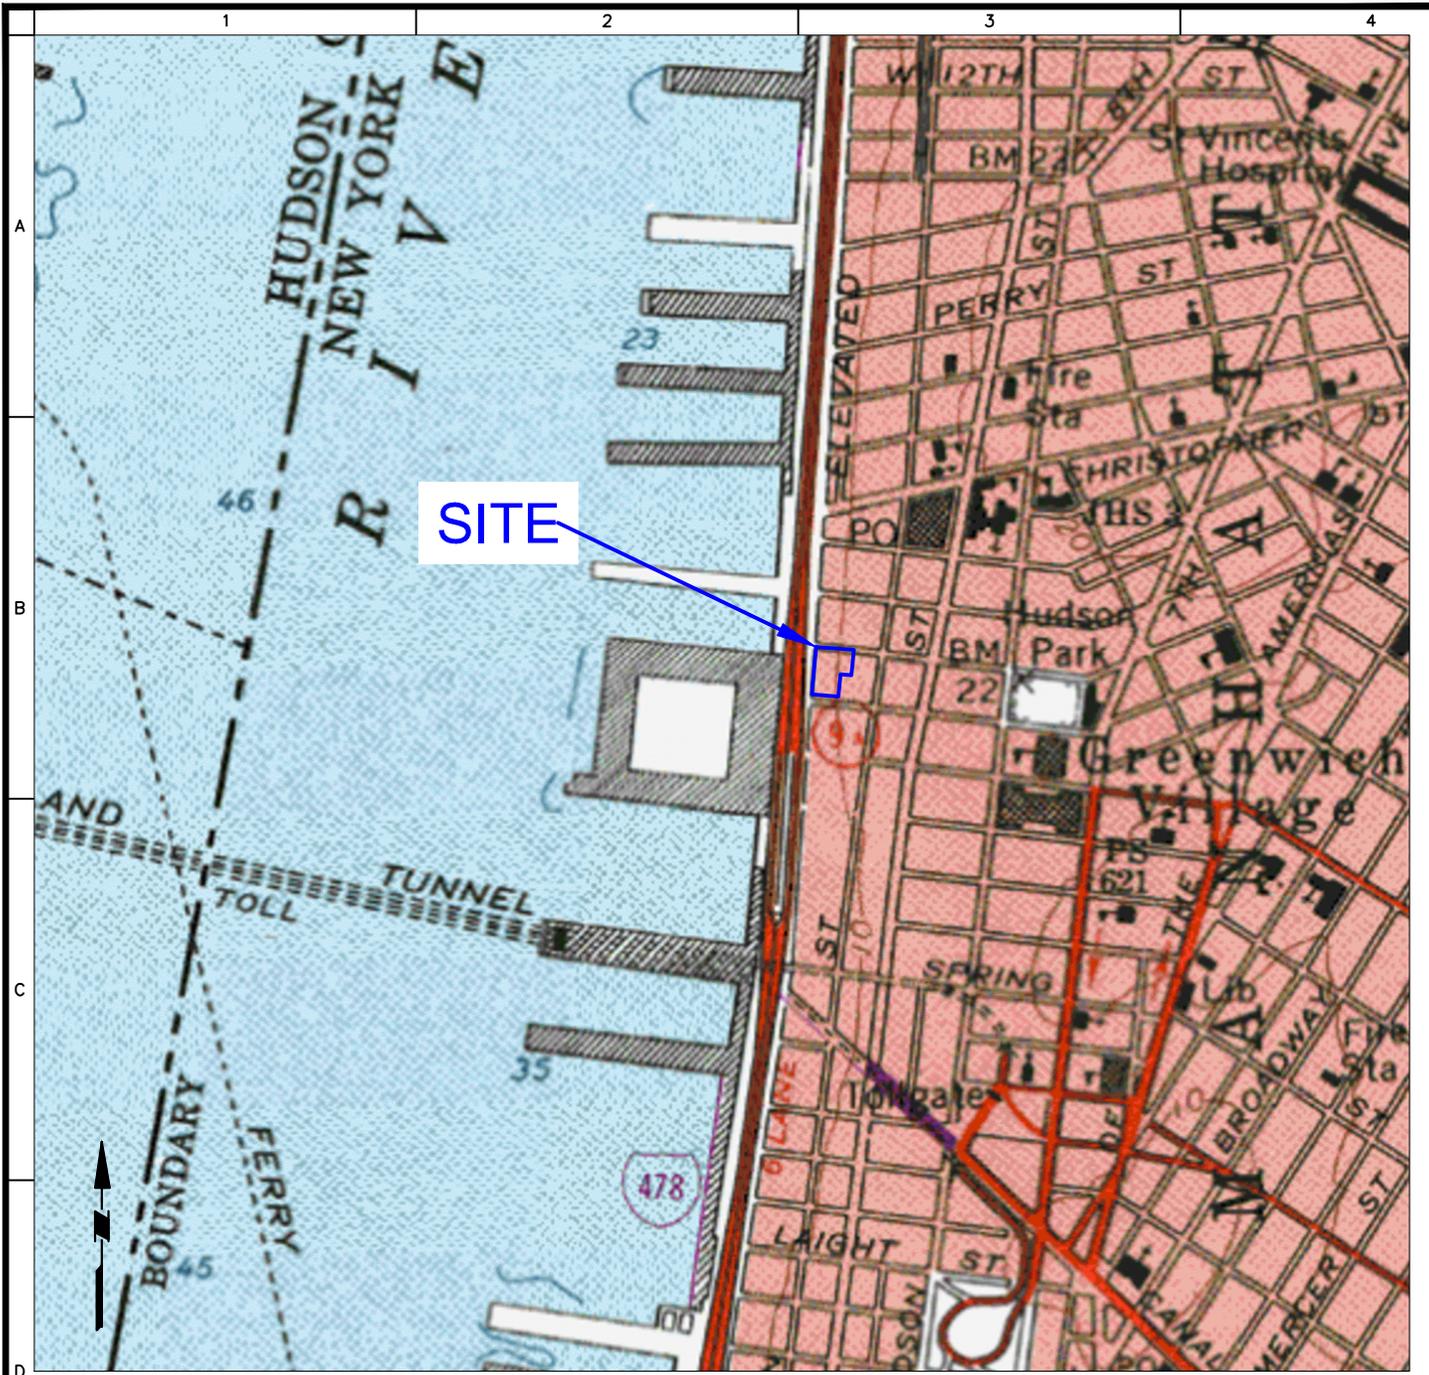

5.6 Prior Activity

Based on an evaluation of the data and information from the RIR, the potential for D008 lead-characteristic waste exists. A waste characterization will be performed to determine whether hazardous soil exists and the results shared with the OER upon request.

5.7 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

- GENERAL NOTES**
- BASE MAP SOURCE: SURVEY BY NY LAND SURVEYOR, P.C. (AUGUST 20, 2014).
 - SOIL SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) 6 NYCRR PART 375-6.8(A,B) UNRESTRICTED USE AND RESTRICTED-RESIDENTIAL SOIL CLEANUP OBJECTIVES (SCO) (TABLE 1)
 - ONLY ANALYTES WITH DETECTIONS ARE SHOWN
 - NO SOIL SAMPLES WERE COLLECTED FROM SOIL BORING SB-9.
 - DETECTED CONCENTRATIONS EXCEEDING NYSDEC PART 375-6.8(A) UNRESTRICTED USE SCO ARE SHADED AND BOLDED BLACK.
 - DETECTED CONCENTRATIONS EXCEEDING NYSDEC PART 375-6.8(B) RESTRICTED-RESIDENTIAL SCO ARE SHADED AND BOLDED RED.
 - VOC - VOLATILE ORGANIC COMPOUND
 - SVOC - SEMIVOLATILE ORGANIC COMPOUND
 - PCB - POLYCHLORINATED BIPHENYL
 - MG/KG - MILLIGRAMS PER KILOGRAM
 - NE - CONCENTRATION DOES NOT EXCEED CRITERIA
 - ND - NOT DETECTED
 - NA - NOT ANALYZED
 - J - THE ANALYTE WAS DETECTED ABOVE THE METHOD DETECTION LIMIT BUT BELOW THE REPORTING LIMIT; THEREFORE, THE RESULT IS AN ESTIMATED CONCENTRATION.
 - D - SAMPLE WAS DILUTED. DILUTION FACTOR IS INCLUDED IN LABORATORY DATA REPORT.
 - P - THE RELATIVE PERCENT DIFFERENCE (RPD) BETWEEN THE RESULTS FOR THE TWO COLUMNS EXCEEDS THE METHOD-SPECIFIED CRITERIA.

- INFERRED GROUNDWATER FLOW DIRECTION
- UNDERGROUND STORAGE TANK (UST)
- INACTIVE ABOVEGROUND STORAGE TANK (AST)
- FORMER AST LOCATION (REMOVED)
- SUMP

- GENERAL NOTES**
- BASE MAP SOURCE: SURVEY BY NY LAND SURVEYOR, P.C. (AUGUST 20, 2014).
 - GROUNDWATER SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) TECHNICAL AND OPERATIONAL GUIDANCE SERIES (TOGS) AMBIENT WATER QUALITY STANDARDS AND GUIDANCE VALUES (SGVs) FOR CLASS GA WATER - TABLE 1.
 - ONLY ANALYTES WITH DETECTIONS ARE SHOWN.
 - DETECTED CONCENTRATIONS EXCEEDING NYSDEC TOGS 1.1.1 AMBIENT WATER QUALITY STANDARDS AND GUIDANCE VALUES ARE SHADED AND BOLDED BLACK.
 - VOC - VOLATILE ORGANIC COMPOUND
 - SVOC - SEMIVOLATILE ORGANIC COMPOUND
 - PCB - POLYCHLORINATED BIPHENYL
 - µg/L - MICROGRAMS PER LITER
 - NE - CONCENTRATION DOES NOT EXCEED CRITERIA
 - ND - NOT DETECTED
 - NA - NOT ANALYZED
 - ~ - CRITERIA DOES NOT EXIST
 - J - THE ANALYTE WAS DETECTED ABOVE THE METHOD DETECTION LIMIT BUT BELOW THE REPORTING LIMIT; THEREFORE, THE RESULT IS AN ESTIMATED CONCENTRATION.
 - D - SAMPLE WAS DILUTED. DILUTION FACTOR IS INCLUDED IN LABORATORY DATA REPORT.

- 2012 SUB-SLAB SOIL VAPOR SAMPLING POINT AND ID (LANGAN)
- REMEDIAL INVESTIGATION SOIL VAPOR SAMPLING POINT LOCATION AND ID
- UNDERGROUND STORAGE TANK (UST)
- INACTIVE ABOVEGROUND STORAGE TANK (AST)
- FORMER AST LOCATION (REMOVED)
- SUMP

- GENERAL NOTES**
- BASE MAP SOURCE: SURVEY BY NY LAND SURVEYOR, P.C. (AUGUST 20, 2014).
 - SOIL VAPOR SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF HEALTH (NYSDOH) AIR GUIDANCE VALUE (AGV).
 - ALL DETECTIONS ARE SHOWN ON THE FIGURE.
 - DETECTED CONCENTRATIONS EXCEEDING NYSDOH AGV ARE SHADED AND BOLD BLACK.
 - VOC - VOLATILE ORGANIC COMPOUND
 - µg/m³ - MICROGRAMS PER CUBIC METER
 - J - THE ANALYTE WAS DETECTED ABOVE THE METHOD DETECTION LIMIT BUT BELOW THE REPORTING LIMIT; THEREFORE, THE RESULT IS AN ESTIMATED CONCENTRATION.
 - D - SAMPLE WAS DILUTED. DILUTION IS INCLUDED IN LABORATORY DATA REPORT.
 - TWO AMBIENT AIR SAMPLES WERE COLLECTED: AA01_011515 AND AA01_031715; THE RESULTS DO NOT EXCEED THE NYSDOH AGV CRITERIA.

Notes and Qualifiers:

- Groundwater analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA water.
- Only analytes with detections are shown in the table.
- Detected concentrations exceeding their NYSDEC TOGS 1.1.1 SGVs are shaded and bolded black.
- Reporting Limits (RL) above NYSDEC TOGS 1.1.1 SGVs are italicized.
- µg/L = micrograms per liter
- ~ = Criterion does not exist.

- ND = Not Detected
- J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated concentration.
- U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
- D = Sample was diluted. Dilution factor is included in laboratory data report.

Re: Phase II Environmental Site Assessment
Three Commercial Buildings
357 and 359 West Street, and 156 Leroy Street
New York, New York 10014
IVI Project No.: E7063663

Dear Mr. Torres:

IVI Environmental, Inc. (IVI) is pleased to submit this Phase II Environmental Site Assessment (“Assessment”) for the Three Commercial Buildings (the “Subject”), located at 357 and 359 West Street, and 156 Leroy Street; New York, New York. The property location is shown on the Site Location Map provided as Figure 1 in Appendix A.

The purpose of this Assessment was to address the Recognized Environmental Conditions (RECs) identified in IVI’s *Phase I Environmental Site Assessment*, dated December 28, 2005. Specifically, the following RECs were identified in the Phase I ESA:

- **Historical and Current Use of the Subject**

Some historical industrial and commercial site usages, particularly the machine shop, smelting works, freight station and auto repair shop, likely involved the usage and storage of significant quantities of hazardous materials such as petroleum products, organic solvents, heavy metals and acids. The Subject’s former industrial usages may have negatively impacted the subsurface soil and groundwater. Moreover the current Village Car Center located at 359 West Street performs automotive oil changing activities, which generates waste motor oil. The waste oil tank, which is not provided with secondary containment, appeared to be in good condition, void of leaks. However, poor housekeeping

has resulting in significant oil spillage on the surface of the concrete slab floor beneath the tank and throughout the cellar. In addition, oily water was observed in a sump pump pit adjacent to the tank.

Scope of Work

The scope of this Assessment included the following activities:

1. Subsurface utilities mark out;
2. Geophysical survey to clear the proposed boring locations;
3. Advancement of four (4) borings;
4. Collection and field screening of soil samples for volatile organic compound (VOC) contamination with a photoionization detector (PID) using the head space analysis, and;
5. Laboratory analysis of four (4) soil and four (4) groundwater samples.

Field Activities

On June 27, 2007, IVI directed the advancement of four (4) borings, denoted as B-1 through B-4, on the Subject. Specifically, two (2) borings were located inside The Village Car Center (B-1 and B-2), and two (2) borings were located inside the abandoned pasta factory at 156 Leroy Street (B-3 and B-4). The borings were advanced using a track-mounted Geoprobe® 5400DT rig operated by TPI Environmental, Inc. (TPI). The specific boring locations are shown on the Boring Location Plan provided as Figure 2 in Appendix A.

Prior to the advancement of each boring, all down-hole drilling equipment was decontaminated by TPI in accordance with EPA protocols and good commercial and customary practice. IVI collected continuous soil samples at 4' intervals using macro-core samplers for each boring. Each borings was advanced approximately 5' below the soil/groundwater interface at a depth of 16' below ground surface (bgs).

Observed soil conditions consisted predominately of reddish brown coarse to fine sand and silt to an approximate depth of 8' bgs, which was underlain with brown fine sand and silt. Of note, IVI encountered fill material at boring location B-4 to an approximate depth of 3' bgs. The fill material was composed of concrete, brick, and coal fragments, and; cinders and ash.

Groundwater was encountered at an approximate depth of 10' bgs. IVI inspected each sample for evidence of contamination and field screened the samples for VOC contamination using a PID. IVI did not observe visual or olfactory evidence of contamination. However, IVI detected elevated PID readings at each boring location at concentrations ranging between 0.2 parts per million (ppm) to 117 ppm. PID readings and surficial geology are provided on the boring logs provided in Appendix B of this report.

IVI retained a soil sample from each boring for laboratory analysis, from the interval which exhibited the greatest evidence of contamination. Specifically, the soil samples were collected at

the following depths: 4' bgs at boring B-1; 2' bgs at boring B-2; 9' bgs at boring B-3, and; at 2'; bgs at boring B-4. IVI collected groundwater samples at each of the four (4) boring locations using dedicated 1" PVC riser and screen, and polyethylene tubing. IVI transferred the collected samples to appropriate laboratory supplied containers, packed them on ice in a cooler, and sent them under proper chain-of-custody to York Analytical Laboratories (York). York analyzed the four (4) soil and four (4) groundwater samples for VOCs, semi-VOCs (base neutrals), and priority pollutant metals (metals) in accordance with EPA Methods 8260B, 8270C, and 6010, respectively. Of note, IVI filtered each groundwater sample for the priority pollutant metal analysis in the field.

Soil Analytical Results

Soil analytical results are summarized on Table 1 in Appendix C.

VOCs

The soil sample collected from boring B-4 identified the presence of naphthalene at a concentration of 0.56 milligrams per kilogram (mg/Kg), which was below its New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs) of 13 mg/Kg. No other VOCs were detected above their respective laboratory method detection limit (MDL).

Semi-VOCs

The soil samples collected from borings B-1 and B-4 identified at least twelve or more semi-VOCs above their respective laboratory MDL. The soil samples collected at borings B-1 and B-4 identified the presence of benzo(a)anthracene, benzo(a)pyrene and chrysene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 0.224 mg/Kg, 0.061 mg/Kg, and 0.4 mg/Kg. The soil sample collected at boring B-4 also identified the presence of benzo(b)- and benzo(k)fluoranthene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 1.1 mg/Kg. The remaining semi-VOCs 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(g,h,i)perylene, carbazole, dibenzofuran, diethylphthalate, fluoranthene, fluorine, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and; pyrene were detected below their respective NYSDEC TAGM #4046 RSCOs.

Priority Pollutant Metals

The soil samples collected from each boring identified at least six or more metal compounds above their respective laboratory MDL. The following metals were detected above their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values: arsenic, chromium, copper, lead, nickel, and zinc. The highest concentration of metals exceeding the NYSDEC TAGM #4046 RSCOs were detected in the soil sample collected from Boring B-4.

Groundwater Analytical Results

Groundwater analytical results are summarized on Table 2 in Appendix C.

VOCs

No VOCs were detected in any of the groundwater water sample collected above their respective laboratory MDL.

Semi-VOCs

The groundwater sample collected from boring B-4 identified the presence of fluoranthene, phenanthrene, and pyrene at concentrations of 9 micrograms per kilogram ($\mu\text{g/L}$), which were below their NYSDEC Technical and Operational Guidance Series (TOGS) Class GA Water Quality Standards (WQS) of 50 $\mu\text{g/L}$.

Priority Pollutant Metals

The groundwater samples collected from each boring identified the presence of at least one or more metal compounds above their respective laboratory MDL. The following metals were detected below their respective NYSDEC TOGS Class GA WQS: antimony, arsenic, chromium copper, lead, nickel, selenium, and zinc.

The analytical report is provided in Appendix D.

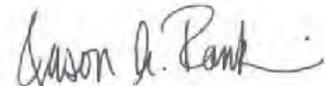

Conclusions and Recommendations

Soil analytical results indicated the presence of five semi-VOCs and four metal compounds at concentrations exceeding their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values at each boring location. Groundwater analytical results did not identify any semi-VOCs or metals above their respective NYSDEC TOGS Class GA WQS. The compounds identified during this Assessment are not indicative of a spill, but are closely related to historic fill material (incineration waste). Soils exhibiting petroleum related contaminants in exceedance of the NYSDEC TAGM #4046 RSCOs that are excavated as part of the Subject's redevelopment will need to be properly disposed of during construction activities. The soils must be classified for waste characterization parameters according to disposal facility requirements, transported under appropriate regulatory permits, and disposed or recycled at a licensed facility permitted to accept the soil. IVI recommends further delineation of the impacted soils is warranted to minimize the amount of soil removed from the Subject.

Please do not hesitate to call if you have any comments or questions regarding this Assessment.
Thank you for letting us be of assistance.

Sincerely,

IVI ENVIRONMENTAL, INC.

Notes:

1. NYSDEC TAGM #4046 RSCO = New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum #4046 Recommended Soil Cleanup Criteria
2. Shaded cells indicate Eastern USA Background Guidance Values and/or NYSDEC TAGM #4046 RSCO exceedances
3. All concentrations reported in mg/Kg
4. VOCs = Volatile Organic Compounds
5. SVOCs ~ B/N = Semi-Volatile Organic Compounds ~ Base Neutrals
6. PPMs = Priority Pollutant Metals
7. N/A = Not Applicable
8. ND = Not detected
9. SB = Site Background
10. Only compounds detected in at least one sample are shown.

Table 2

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/28/07. The project was identified as your project "E7063663/West & Leroy Streets, New York, NY".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

Notes for York Project No. 07060984

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This MDL is the REPORTING LIMIT and is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

Approved By:

Robert Q. Bradley
Managing Director

**Re: Environmental Site Investigation Report
359 West Street
New York, New York
Langan Project No.: 170215701**

Dear Mr. Del Savio:

On behalf of Gorton & Partners, LLC, Langan prepared this environmental site investigation report in support of your due diligence of the property at 359 West Street in Manhattan, New York (the site). The objective of this environmental investigation is to supplement the findings from the Phase II Environmental Site Investigation (ESI), performed by IVI Environmental, Inc. (IVI) in July 2007, in order to better evaluate subsurface environmental conditions. This report includes a summary of the background and existing data, a description of our field investigation procedures including soil, groundwater and soil gas sampling, analytical results and our conclusion and recommendations.

PROJECT BACKGROUND

We understand that the building occupying 359 West Street will be demolished to allow for redevelopment. The foundation design has not yet been finalized. For this investigation, we evaluated soil conditions to 12 feet below the slab.

Site Location and Description

The site is identified as Block 601, Lot 8 on the City of New York official tax maps and located on the northwest corner of the city block bound by Leroy Street to the north, Washington Street to the east, Clarkson Street to the south and West Street to the west. A site location map is included as Figure 1.

The site lot is 9,985 square feet and is improved with a two-story, 12,517 square foot building with a cellar. The cellar was used a lube pit while the building was an active carwash and lube/oil change shop. At the time of this investigation, the building was vacant.

Previous Investigations

A Phase I environmental site assessment was completed by IVI on December 28, 2005. The Phase I report was not available for review. A Phase II ESI, performed by IVI in July 2007, included completion of two soil borings, collection and analysis of two soil samples, installation of two temporary monitoring wells and collection and analysis of two groundwater samples. A complete copy of IVI's Phase II ESI is included in Attachment A. Relevant information is summarized below:

Two soil borings, B-1 and B-2, were completed to a depth of 16-feet below ground surface (bgs). Groundwater was observed approximately 10-feet bgs.

IVI did not observe visual or olfactory evidence of contamination in subsurface soils; however, elevated total organic vapor concentrations measured with a photoionization device (PID) were reported between 0.6 parts per million (ppm) and 117 ppm.

IVI submitted two soil samples, B-1 and B-2, for analysis. Soil samples were analyzed for volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and metals. Volatile organic compounds were not detected in soil. Three SVOC and four metal compounds were detected in soil at concentrations above the New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs). IVI concluded that the presence of these compounds are not indicative of a spill, but are related to historic fill material at the site.

IVI also submitted two groundwater samples, B-1 and B-2, for analysis. Groundwater samples were analyzed for VOC, SVOC and metals. No compounds were detected at concentrations above the NYSDEC Technical and Operational Guidance Series (TOGS) Class GA Water Quality Standards (WQS).

FIELD INVESTIGATION

The purpose of this investigation is to evaluate subsurface conditions and supplement the findings IVI's Phase II. Our field activities were performed on September 17, 2012 and consisted of the following:

- Observation and inventory of site cellar/oil change pit;
- Advancement of two soil borings and collection and analysis of four soil samples (two from depths of 3 to 5 feet, one from 7 to 9 feet, and one from 10 to 12 feet below the slab);
- Installation of two temporary monitoring wells screened at 5 to 15 feet and 10 to 20 feet below the slab;
- Collection and analysis of two groundwater samples, and;
- Installation of one sub-slab soil vapor point and analysis of one sub-slab soil vapor sample.

Photographs documenting our field investigation are included as Attachment B.

Site Observation and Inventory

Langan observed and inventoried the lube/oil change pit. The area was entered via a wall ladder at the western end of the oil change pit. The following is a summary of significant observations:

- Four Lube Cube® above ground storage tanks (ASTs) were observed in the cellar. Signage indicated the ASTs contained motor oil 10W-30 and appeared to be in good condition. The contents could not be confirmed; however, Langan observed liquids in each AST.
- Two, plastic, 55-gallon drums were observed in the cellar. The drums appeared to be in good condition with no signs of leakage or corrosion. The contents of each drum could not be confirmed; however, liquid was identified in each drum.
- Three steel drums, consisting of one 30-gallon and two 55-gallon open-topped drums, were observed in the cellar. We observed oil in each drum. Indications of leakage and corrosion were observed surrounding the 30-gallon drum.
- The cellar floor is concrete and in general good conditions (free of major cracks or penetrations).
- One floor drain or possible fill port was observed at the eastern end of the cellar (see Photo 5 in Attachment B). An oily-like fluid was observed in the drain and evidence of staining was observed on the floor in the surrounding area.
- Indications of spillage, including residual oil and staining were observed throughout the cellar floor.

Soil Investigation

Aquifer Drilling and Testing, Inc. (ADT) of Mineola, New York completed the soil borings, well installations, and soil vapor sampling point installation. ADT advanced two soil borings (SB-1 and SB-2) to depths of 15 and 20 feet bgs using a track-mounted, Geoprobe® 6610 direct-push sampler. Soil samples were collected continuously into five-foot Macro-Core® sample barrels with dedicated acetate liners. Soil samples were inspected for visual and olfactory evidence of contamination and screened for total organic vapors with a PID equipped with a 10.6 electron volt lamp. Field observations were documented in boring logs, which are included as Attachment C. Boring locations are shown in Figure 2.

Four grab soil samples were collected into laboratory-supplied containers and delivered via courier under standard chain-of-custody protocol to Chemtech Environmental Laboratories, Inc (Chemtech), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) accredited laboratory in Mountainside, New Jersey. Langan collected one grab sample from fill and one from the capillary fringe at each location. The fill sample was collected because of elevated PID readings and observed ash and other anthropogenic material. The capillary fringe sample was collected to assess the unsaturated soil and groundwater interface and because no other indications of contamination was observed.

Grab soil samples from fill were analyzed for target compound list (TCL) VOCs by Environmental Protection Agency (EPA) method 8260, TCL SVOCs by EPA method 8270, target analyte list (TAL) metals by EPA Methods 6010B/7471A, polychlorinated biphenyls (PCB) by EPA method 8082, pesticides by EPA method 1699 and herbicides by EPA method 8151. Grab soil samples collected from the capillary fringe were analyzed for TCL VOC, TCL SVOC and TAL metals only. Grab VOC soil samples were collected with Encore™ soil sampling kits.

Groundwater Investigation

ADT installed temporary groundwater monitoring wells (TMW-1 and TMW-2) at each boring by inserting one-inch diameter, schedule 40 polyvinyl chloride (PVC), 0.01-inch, 10-foot-long, slotted screen and attached riser into the open borehole. An oil-water interface probe was used to measure depth to groundwater and screen for light, non-aqueous phase liquids. Groundwater was recovered from each well using a peristaltic pump and dedicated polyethylene tubing. Prior to sample collection, groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) were recorded using a Horiba® U-52 water quality meter. Groundwater parameters are provided in Attachment D.

Two groundwater samples were collected into laboratory-supplied glassware and delivered via courier service under standard chain-of-custody protocol to Chemtech. Groundwater samples collected from wells TMW-1 and TMW-2 were analyzed for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, TAL metals by EPA Methods 6010B/7471A, PCBs by EPA Method 8082, pesticides by EPA Method 1699 and herbicides by EPA Method 8151. Temporary monitoring well locations are shown in Figure 2.

Soil Vapor Investigation

ADT installed a gas vapor implant 6 inches below the slab. ADT penetrated the concrete slab with a hammer drill and inserted the gas vapor implant into the open borehole. Prior to sample collection, each sampling point was purged using a PID at a rate of 0.5 liters per minute (L/min) to evacuate a minimum of three sample tubing volumes. As a quality assurance/quality control (QA/QC) measure, an inert tracer gas (helium) was introduced into an above-grade sampling chamber and then a helium detector was attached to the tubing. This step ensured that the soil vapor sampling point was properly sealed above the target sampling depth and confirmed that ambient air did not infiltrate the subsurface during sampling.

Soil vapor samples were collected into laboratory-supplied, batch-certified six-liter Summa® canisters that were calibrated for a sampling rate of 0.05 L/min for 120 minutes of sampling. The collected samples were delivered via courier service to Chemtech under standard chain-of-custody protocol and analyzed for VOCs by EPA Method TO-15. Soil vapor sample logs are provided in Attachment E.

OBSERVATIONS AND RESULTS

Subsurface Observations

Historic fill, consisting primarily of fine to coarse sand with some silt, gravel, brick, concrete, and ash, extends from ground surface to depths ranging between 7 feet (SB-1) and 10 feet bgs (SB-2). Fine sand interlayered with silt underlies the fill. The depth to groundwater was 9.5 in TMW-1 and 13.1 feet in TMW-2.

Visual and olfactory evidence of contamination was not observed in soil or groundwater at the site. Elevated PID readings were observed in historic fill. PID readings up to limits of the instrument (9,999 ppm) were observed at 4 feet bgs in each boring. PID readings steadily decreased with depth at each location to 0.1 ppm at termination depth.

Analytical Results

Complete analytical results for soil, groundwater and sub-slab soil vapor samples are included as Attachment F. Significant results are summarized below.

Soil Sample Results

Analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). The analytical results are summarized in Table 1 and presented on Figure 2.

Volatile Organic Compounds

One VOC, tetrachloroethene, was detected in soil sample in LB-1 (3-5) at a concentration below its Unrestricted Use SCO.

Semi Volatile Organic Compounds

Twenty SVOCs were detected in one or more samples, including seven at concentrations greater than the Unrestricted Use SCOs. The following SVOCs were detected at concentrations greater than their respective Unrestrictive Use SCOs:

- Benzo(a)anthracene
- Benzo(a)pyrene
- Benzo(b)fluoranthene
- Benzo(K)fluoranthene
- Chrysene
- Dibenz(a,h)anthracene
- Indeno(1,2,3-cd)pyrene

These polycyclic aromatic hydrocarbons (PAH) are commonly found in historic urban fill and only exceeded the SCOs in samples collected from the fill layer and is likely due to the ash observed in the fill.

Polychlorinated Biphenyls, Pesticides and Herbicides

No PCB or herbicides were detected in soil samples. One pesticide compound, methoxychlor, was detected in fill samples LB-1 (3-5) and LB-2 (3-5) at concentrations of 0.092 milligrams per kilogram (mg/kg) and 0.11 mg/kg. An Unrestricted Use SCO does not exist for methoxychlor; however, the CP-51 / Soil Cleanup Guidance Supplemental Soil Cleanup Objective for methoxychlor is 100 mg/kg.

Metals

Twenty one metals were detected in one or more samples, including three at concentrations greater than the Unrestricted Use SCOs. The following metals were detected at concentrations greater than their respective SCOs:

- Copper
- Lead

- Mercury

Groundwater Results

Analytical results were compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance values for Class GA groundwater. Analytical results are summarized in Table 2 and presented on Figure 2.

VOCs, SVOCs, PCBs Pesticides and Herbicides

No VOC, PCB, pesticides or herbicides were detected in groundwater samples.

Total Metals

Fifteen metals were detected in one or more samples, including four at concentrations above the TOGS Class GA AWQS. The following metals were detected above their respective AWQS:

- Iron
- Magnesium
- Manganese
- Sodium

These metals were also detected in soil samples collected during this investigation.

Dissolved Metals

Thirteen metals were detected in one or more samples, including four at concentrations above the TOGS Class GA AWQS. The following metals were detected above their respective AWQS:

- Iron
- Magnesium
- Manganese
- Sodium

These metals were also detected in soil samples collected and were reported at similar concentrations for total metals.

Sub-Slab Soil Vapor Sample Results

Sub-slab soil vapor samples were compared to the NYSDOH Air Guidance Values (AGVs). In addition, sample results were compared to several indoor air background data base concentrations that are presented in Appendix C of the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH Guidance), including Upper Fence Limit Indoor Air Values from "Table C-1 NYSDOH 2003: Study of VOCs in Air of Fuel Oil Heated Homes," 90th Percentile Indoor Air Values from "Table C-2 – EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method," and the 95th Percentile Indoor Air Values from "Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air". The analytical results for subsurface samples are summarized in Table 3 and are shown on Figure 2.

None of the VOCs exceeded the NYSDOH AGVs. Only acetone and o-xylene were detected at concentrations above the background comparison criteria.

CONCLUSIONS

Based on this investigation, we conclude the following:

- Shallow soil at the site consists of historic urban fill to depths of 7 to 10 feet below the slab. Native soil was observed below the fill to boring termination depths of 15 and 20 feet.
- Concentrations of SVOCs, methoxychlor, and metals above NYSDEC Part 375 Unrestricted Use SCOs were detected in samples collected from the fill. Based on our subsurface observations and review of the analytical data, the SVOCs, methoxychlor, and metals appear to be a constituent of the historic fill and are not related to a separate contaminant source.
- Soil results do not indicate the presence of characteristic hazardous waste;
- Several metals were detected and concentrations above the TOGS AWQS in groundwater. However, these compounds were also detected in soil and are attributed to historic urban fill;
- Comparison of filtered to unfiltered groundwater samples did not indicate a significant reduction in metals concentrations from filtering. From this comparison, we conclude that the detected metals are reflective of groundwater quality and minimally affected by suspended soils;
- The detected acetone and o-xylene vapor concentrations marginally exceed the anticipated indoor air background concentrations. Because these compounds were not detected in soil or groundwater samples, their presence does not warrant further remedial measures; and,
- Our review of IVI's Phase II ESI and its comparison to results of this investigation, confirms that subsurface conditions have not significantly changed.

RECOMMENDATIONS

Langan recommends the following:

- Excavated fill would be considered a regulated, non-hazardous solid waste. Soil should be handled and transported in accordance with applicable local, state and federal regulations to a disposal facility that is permitted to accept this material. This material should be properly characterized prior to transportation to an offsite disposal facility.
- Upon redevelopment, exposed soil (i.e., soil is not covered by a paved or other impermeable surface), it should be covered with at least two feet of fill material meeting the Part 375 Unrestricted Use SCO.
- The floor drain observed in the eastern end of the cellar should be further evaluated for subsurface impacts.

- ASTs, associated piping, stained concrete, petroleum containers, petroleum-impacted debris, and drums identified in the cellar and lube/oil change pit should be emptied prior to development and care should be taken to collect any residual liquid. This material should be properly characterized prior to transportation to an off-site disposal facility and handled in accordance with applicable local, state and federal regulations.

CLOSING

This environmental site investigation report was prepared expressly for Gorton & Partners, LLC for the property located at 359 West Street in Manhattan, New York and for the objectives defined herein. If you have any questions or comments, please call me at (212) 479-5559 or via email at gnicholls@langan.com.

Sincerely,

Langan Engineering & Environmental Services, Inc., PC

NOTES:

Analytical results compared to New York State Department of Environmental Conservation (NYSDEC) NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs).

Compounds detected at concentrations above the SCOs are shown in **bold**.

Compounds with a reporting limit above the applicable criteria are shown *italics*.

U -The compound was not detected at the indicated concentration.

J-Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL. The concentration given is an approximate value.

D-The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

NR-Not analyzed.

ND - None detected.

NA - Applicable criteria does not currently exist.

mg/kg-milligrams per kilogram.

NOTES:

Analytical results compared to New York State Department of Environmental Conservation (NYSDEC) Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values (AWQS). Compounds detected above the AWQS are shown in **bold**.

U-The compound was not detected at the indicated concentration.

J-Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL.

NR-Not analyzed

ND-None detected.

NA-criteria does not currently exist.

Re: Phase II Environmental Site Assessment
Three Commercial Buildings
357 and 359 West Street, and 156 Leroy Street
New York, New York 10014
IVI Project No.: E7063663

Dear Mr. Torres:

IVI Environmental, Inc. (IVI) is pleased to submit this Phase II Environmental Site Assessment (“Assessment”) for the Three Commercial Buildings (the “Subject”), located at 357 and 359 West Street, and 156 Leroy Street; New York, New York. The property location is shown on the Site Location Map provided as Figure 1 in Appendix A.

The purpose of this Assessment was to address the Recognized Environmental Conditions (RECs) identified in IVI’s *Phase I Environmental Site Assessment*, dated December 28, 2005. Specifically, the following RECs were identified in the Phase I ESA:

- **Historical and Current Use of the Subject**

Some historical industrial and commercial site usages, particularly the machine shop, smelting works, freight station and auto repair shop, likely involved the usage and storage of significant quantities of hazardous materials such as petroleum products, organic solvents, heavy metals and acids. The Subject’s former industrial usages may have negatively impacted the subsurface soil and groundwater. Moreover the current Village Car Center located at 359 West Street performs automotive oil changing activities, which generates waste motor oil. The waste oil tank, which is not provided with secondary containment, appeared to be in good condition, void of leaks. However, poor housekeeping

has resulting in significant oil spillage on the surface of the concrete slab floor beneath the tank and throughout the cellar. In addition, oily water was observed in a sump pump pit adjacent to the tank.

Scope of Work

The scope of this Assessment included the following activities:

1. Subsurface utilities mark out;
2. Geophysical survey to clear the proposed boring locations;
3. Advancement of four (4) borings;
4. Collection and field screening of soil samples for volatile organic compound (VOC) contamination with a photoionization detector (PID) using the head space analysis, and;
5. Laboratory analysis of four (4) soil and four (4) groundwater samples.

Field Activities

On June 27, 2007, IVI directed the advancement of four (4) borings, denoted as B-1 through B-4, on the Subject. Specifically, two (2) borings were located inside The Village Car Center (B-1 and B-2), and two (2) borings were located inside the abandoned pasta factory at 156 Leroy Street (B-3 and B-4). The borings were advanced using a track-mounted Geoprobe® 5400DT rig operated by TPI Environmental, Inc. (TPI). The specific boring locations are shown on the Boring Location Plan provided as Figure 2 in Appendix A.

Prior to the advancement of each boring, all down-hole drilling equipment was decontaminated by TPI in accordance with EPA protocols and good commercial and customary practice. IVI collected continuous soil samples at 4' intervals using macro-core samplers for each boring. Each borings was advanced approximately 5' below the soil/groundwater interface at a depth of 16' below ground surface (bgs).

Observed soil conditions consisted predominately of reddish brown coarse to fine sand and silt to an approximate depth of 8' bgs, which was underlain with brown fine sand and silt. Of note, IVI encountered fill material at boring location B-4 to an approximate depth of 3' bgs. The fill material was composed of concrete, brick, and coal fragments, and; cinders and ash.

Groundwater was encountered at an approximate depth of 10' bgs. IVI inspected each sample for evidence of contamination and field screened the samples for VOC contamination using a PID. IVI did not observe visual or olfactory evidence of contamination. However, IVI detected elevated PID readings at each boring location at concentrations ranging between 0.2 parts per million (ppm) to 117 ppm. PID readings and surficial geology are provided on the boring logs provided in Appendix B of this report.

IVI retained a soil sample from each boring for laboratory analysis, from the interval which exhibited the greatest evidence of contamination. Specifically, the soil samples were collected at

the following depths: 4' bgs at boring B-1; 2' bgs at boring B-2; 9' bgs at boring B-3, and; at 2'; bgs at boring B-4. IVI collected groundwater samples at each of the four (4) boring locations using dedicated 1" PVC riser and screen, and polyethylene tubing. IVI transferred the collected samples to appropriate laboratory supplied containers, packed them on ice in a cooler, and sent them under proper chain-of-custody to York Analytical Laboratories (York). York analyzed the four (4) soil and four (4) groundwater samples for VOCs, semi-VOCs (base neutrals), and priority pollutant metals (metals) in accordance with EPA Methods 8260B, 8270C, and 6010, respectively. Of note, IVI filtered each groundwater sample for the priority pollutant metal analysis in the field.

Soil Analytical Results

Soil analytical results are summarized on Table 1 in Appendix C.

VOCs

The soil sample collected from boring B-4 identified the presence of naphthalene at a concentration of 0.56 milligrams per kilogram (mg/Kg), which was below its New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs) of 13 mg/Kg. No other VOCs were detected above their respective laboratory method detection limit (MDL).

Semi-VOCs

The soil samples collected from borings B-1 and B-4 identified at least twelve or more semi-VOCs above their respective laboratory MDL. The soil samples collected at borings B-1 and B-4 identified the presence of benzo(a)anthracene, benzo(a)pyrene and chrysene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 0.224 mg/Kg, 0.061 mg/Kg, and 0.4 mg/Kg. The soil sample collected at boring B-4 also identified the presence of benzo(b)- and benzo(k)fluoranthene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 1.1 mg/Kg. The remaining semi-VOCs 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(g,h,i)perylene, carbozole, dibenzofuran, diethylphthalate, fluoranthene, fluorine, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and; pyrene were detected below their respective NYSDEC TAGM #4046 RSCOs.

Priority Pollutant Metals

The soil samples collected from each boring identified at least six or more metal compounds above their respective laboratory MDL. The following metals were detected above their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values: arsenic, chromium, copper, lead, nickel, and zinc. The highest concentration of metals exceeding the NYSDEC TAGM #4046 RSCOs were detected in the soil sample collected from Boring B-4.

Groundwater Analytical Results

Groundwater analytical results are summarized on Table 2 in Appendix C.

VOCs

No VOCs were detected in any of the groundwater water sample collected above their respective laboratory MDL.

Semi-VOCs

The groundwater sample collected from boring B-4 identified the presence of fluoranthene, phenanthrene, and pyrene at concentrations of 9 micrograms per kilogram ($\mu\text{g/L}$), which were below their NYSDEC Technical and Operational Guidance Series (TOGS) Class GA Water Quality Standards (WQS) of 50 $\mu\text{g/L}$.

Priority Pollutant Metals

The groundwater samples collected from each boring identified the presence of at least one or more metal compounds above their respective laboratory MDL. The following metals were detected below their respective NYSDEC TOGS Class GA WQS: antimony, arsenic, chromium copper, lead, nickel, selenium, and zinc.

The analytical report is provided in Appendix D.

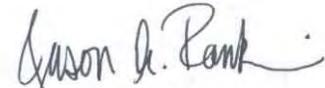

Conclusions and Recommendations

Soil analytical results indicated the presence of five semi-VOCs and four metal compounds at concentrations exceeding their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values at each boring location. Groundwater analytical results did not identify any semi-VOCs or metals above their respective NYSDEC TOGS Class GA WQS. The compounds identified during this Assessment are not indicative of a spill, but are closely related to historic fill material (incineration waste). Soils exhibiting petroleum related contaminants in exceedance of the NYSDEC TAGM #4046 RSCOs that are excavated as part of the Subject's redevelopment will need to be properly disposed of during construction activities. The soils must be classified for waste characterization parameters according to disposal facility requirements, transported under appropriate regulatory permits, and disposed or recycled at a licensed facility permitted to accept the soil. IVI recommends further delineation of the impacted soils is warranted to minimize the amount of soil removed from the Subject.

Please do not hesitate to call if you have any comments or questions regarding this Assessment.
Thank you for letting us be of assistance.

Sincerely,

IVI ENVIRONMENTAL, INC.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/28/07. The project was identified as your project "E7063663/West & Leroy Streets, New York, NY".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

For Soils/Solids: mg/kg = ppm ; ug/kg = ppb

Notes for York Project No. 07060984

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This MDL is the REPORTING LIMIT and is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

PROJECT NAME : WEST & LEROY STREETS

LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES, INC

360 West 31st Street

21 Penn Plaza, Ste 800

New York, NY - 10001

Phone No: 2124795400

ORDER ID : D4252

ATTENTION : Gerald Nicholls

284 Sheffield Street, Mountainside NJ 07092 (908)-789-8900 Fax : 908 789 8922

Date : 09/25/2012

Dear Gerald Nicholls,

1 air samples for the **West & Leroy Streets** project were received on **09/18/2012**. The analytical fax results for those samples requested for an expedited turn around time may be seen in this report. Please contact me if you have any questions or concerns regarding this report.

The invoice for this workorder is also attached to the e-mail.

Regards,

Kurt Hummler

PROJECT NAME : WEST & LEROY STREETS

LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES, INC

360 West 31st Street

21 Penn Plaza, Ste 800

New York, NY - 10001

Phone No: 2124795400

ORDER ID : D4250

ATTENTION : Gerald Nicholls

284 Sheffield Street, Mountainside NJ 07092 (908)-789-8900 Fax : 908 789 8922

Date : 09/25/2012

Dear Gerald Nicholls,

4 water and **4** soil samples for the **West & Leroy Streets** project were received on **09/18/2012**. The analytical fax results for those samples requested for an expedited turn around time may be seen in this report. Please contact me if you have any questions or concerns regarding this report.

The invoice for this workorder is also attached to the e-mail.

Regards,

Kurt Hummler

908-728-3143

Color After:	Yellow	Clarity After:	Artifacts:	No
Comments:	METALS-TAL			

U = Not Detected

LOQ = Limit of Quantitation

MDL = Method Detection Limit

LOD = Limit of Detection

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits.

E = Indicates the reported value is estimated because of the presence of interference.

OR = Over Range

N = Spiked sample recovery not within control limits

Color Before:	Brown	Clarity Before:	Texture:	Medium
Color After:	Yellow	Clarity After:	Artifacts:	No
Comments:	METALS-TAL			

U = Not Detected
 LOQ = Limit of Quantitation
 MDL = Method Detection Limit
 LOD = Limit of Detection
 D = Dilution
 Q = indicates LCS control criteria did not meet requirements

J = Estimated Value
 B = Analyte Found in Associated Method Blank
 * = indicates the duplicate analysis is not within control limits.
 E = Indicates the reported value is estimated because of the presence of interference.
 OR = Over Range
 N = Spiked sample recovery not within control limits

Color After:	Yellow	Clarity After:	Clear	Artifacts:
Comments:	METALS-TAL			

U = Not Detected

LOQ = Limit of Quantitation

MDL = Method Detection Limit

LOD = Limit of Detection

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits.

E = Indicates the reported value is estimated because of the presence of interference.

OR = Over Range

N = Spiked sample recovery not within control limits

Color Before:	Brown	Clarity Before:	Cloudy	Texture:	
Color After:	Yellow	Clarity After:	Clear	Artifacts:	
Comments:	METALS-TAL				

U = Not Detected

LOQ = Limit of Quantitation

MDL = Method Detection Limit

LOD = Limit of Detection

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits.

E = Indicates the reported value is estimated because of the presence of interference.

OR = Over Range

N = Spiked sample recovery not within control limits

1.0 EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for the assemblage of properties located at 75-77 Clarkson Street, 354-361 West Street, 156–162 Leroy Street (the Site). The Site is also identified as Tax Block 601, Lot 1 (354-356 West Street and 75-77 Clarkson Street), Lot 4 (357 West Street), Lot 5 (358 West Street), Lot 8 (359-361 West Street and 160-162 Leroy Street) and Lot 10 (156-158 Leroy Street). The footprint of the Site encompasses an area of approximately 28,365.66 square feet. This Phase I ESA was performed on behalf of AP-ISC Leroy, LLC, c/o Gorton & Partners, LLC (the “User”) in support of their proposed redevelopment of the Site.

The Site is located in the West Village neighborhood of Manhattan on the west end of the city block bordered by Leroy Street to the north, Washington Street to the east, Clarkson Street to the south, and West Street to the west. The following is a summary of land use at each tax lot:

Lot 1 (75-77 Clarkson Street and 354-356 West Street)

- One-story slab-on-grade building occupied by an adult cabaret establishment at 75-77 Clarkson Street;
- One-story building that is currently undergoing interior renovations and was formerly occupied by an adult video rental store and adult cabaret establishment at 354 West Street; and
- Two-story building occupied by a ground floor automobile repair garage with an office and storage space on the second story at 356 West Street. The buildings at 354 West Street and 356 West Street share a common basement.

Lot 4 (357 West Street)

- One-story vacant and dilapidated building that was formerly used as a restaurant. A wooden patio area and open space are present in the rear and side of the building, respectively.

Lot 5 (358 West Street)

- Three-story building with a ground floor hardware store. The second and third stories of the building are currently under renovation for use as commercial space.

Lot 8 (359-361 West Street and 160-162 Leroy Street)

- One-story vacant building with a second story addition in the rear of the building and a partial basement. The building was formerly occupied by an automobile repair garage, car wash and express oil change shop. The second story addition is a vacant residential apartment.

Lot 10 (156 – 158 Leroy Street)

- There is a two-story vacant building at 156-158 Leroy Street formerly occupied by a pasta manufacturing facility with office space on the second story.

This Phase I ESA was conducted in accordance with the American Society for Testing Materials (ASTM) Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule. The objective of this Phase I ESA is to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-05 as a recognized environmental condition (REC) and to satisfy the AAI needed to qualify for the bona fide prospective purchaser liability protections available under the Comprehensive Environmental Response Compensation and Liability Act ("CERCLA").

Recognized Environmental Conditions (RECs)

The following RECs were identified at the Site:

REC 1 – Open Petroleum Spill

At least four feet of floating oil, presumably caused by flooding associated with Tropical Storm Sandy, was identified in the maintenance pit at the former express oil change at 359-361 West Street and 160-162 Leroy Street (Lot 8) during the site reconnaissance completed as part of this Phase I. In response to this finding, the New York State Department of Environmental Conservation (NYSDEC) was notified and NYSDEC Spill No. 13-00212 was assigned on April 8, 2013. The open petroleum spill case is considered a REC as it represents an existing release to structures on the property, a material threat of release to the ground and groundwater, and is subject to enforcement action by a regulatory agency.

REC 2 – Current Use of the Site

Current use of 356 West Street (Lot 1) as an automobile repair garage is considered a REC as potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically

used by such a facility may have adversely impacted soil, groundwater, and/or soil vapor at the property. Evidence of poor housekeeping practices, including staining around the hydraulic lift, 55-gallon waste oil drums, and throughout the garage floor were identified during the site reconnaissance.

REC 3 – On-Site Petroleum Bulk Storage

Seven aboveground storage tanks (ASTs) are present at 359-361 West Street and 160-162 Leroy Street (Lot 8), including three 1,000-gallon lube oil ASTs, one 500-gallon waste oil AST and three 500-gallon temporarily-out-of-service ASTs. A release from these ASTs is presumed to be the source of NYSDEC Spill No. 13-00212. The ASTs were not observed during the Site reconnaissance because the basement was flooded and inaccessible. A subsurface investigation was completed by Langan in 2012 to investigate historic releases associated with these ASTs and no adverse impacts to soil, groundwater, and soil vapor were identified. However, based on the change in conditions at the Site since Tropical Storm Sandy and the release that is presumed to be associated with these ASTs, the release may have also impacted soil, soil vapor, and/or groundwater; on-site petroleum bulk storage is a REC.

REC 4 – Historical On-Site Petroleum Bulk Storage

A 275-gallon waste oil UST was removed and closed at 356 West Street (Lot 1) in January 2013. Although the UST was removed and closed and there is no documentation of a release, historical on-site petroleum bulk storage is considered a REC as it is unclear if environmental samples (i.e. soil and groundwater) were collected and analyzed as part of the UST removal work – a deviation from standard industry practice. Leaks or spills of petroleum from the former UST at Lot 1 may have adversely impacted soil, groundwater and/or soil vapor at Lot 1.

REC 5 – Historic Use of the Site

The historical use of Lot 10 as an automobile repair shop is considered a REC as potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically used by such a facility may have adversely impacted soil, groundwater, and/or soil vapor at the property.

Historic RECs

There were no Historic RECs identified at the Site. The following off-site Historic RECs (HRECs) were identified:

Historical Petroleum Spill Cases

- There are two closed petroleum spill cases associated with 149 Leroy Street, which adjoin the Site to the north across Leroy Street. The closed petroleum spill cases were associated with the discovery of petroleum-contaminated soil during removal of underground storage tanks (USTs) and a subsequent subsurface investigation. A total of 17 USTs and excavated petroleum-contaminated soil were removed from the property. The spill cases are not considered RECs as the spills were remediated to the satisfaction of the NYSDEC and were administratively closed, but are considered HRECs as they involved past releases of petroleum at an adjoining property.
- Two closed petroleum spill cases associated with 560 Washington Street, which adjoins the Site to the south across Clarkson Street. The spill cases are not considered RECs as the spills were remediated to the satisfaction of the NYSDEC and were administratively closed, but are considered HRECs as they involved a past release of petroleum at an adjoining property.
- One closed petroleum spill case associated with 330 West Street, which adjoins the Site to the south across Clarkson Street. The spill case is not considered a REC as the spill was remediated to the satisfaction of the NYSDEC and was administratively closed, but is considered an HREC as it involved a past release of petroleum at an adjoining property.

De Minimis Conditions

De Minimis conditions were not identified at the Site.

The following off-site *De Minimis* conditions were identified:

In-Service Petroleum Bulk Storage

- Active petroleum bulk storage at 148 Leroy Street, 333 West Houston Street, and 560 Washington Street are considered off-site *De Minimis* conditions as the tanks store petroleum products, but are not affiliated with an open spill case, are generally not a threat to human health or the environment and are generally not subject to enforcement action by an agency.

Historical Use of Adjoining and Adjacent Properties

- The historical use of the adjoining property to the east of the Site (Block 601, Lot 13) as a railroad right-of-way is considered an off-site *De Minimis* condition. Environmental conditions typically associated with railroad rights-of-way include petroleum, metals, PCBs, pesticides and herbicides. However, since no historical spills or releases were associated with the property, the property's historical use is generally not a threat to human health or the environment and generally not subject to regulatory enforcement action, and the property's historical use is not an HREC, the property's historical use is considered an off-site *De Minimis* condition.

Additional Environmental Concerns

The following non-scope additional environmental conditions were identified at the Site:

- Based on a review of historic maps, the original shoreline of the Hudson River was east of the Site; The Site was built on made land. The presence of historic fill was confirmed during Langan's 2012 subsurface investigation. Excess historic fill material will likely be managed as a regulated solid waste after it is excavated and removed from the Site.
- Rodent habitation and animal nuisance conditions.
- Fluorescent lighting assemblages with suspect mercury containing light fixtures and PCB-containing ballasts;
- Suspect lead-based paint;
- Caulking on skylight windows which may contain PCBs, lead and/or asbestos;
- Suspect asbestos containing material (ACM). Suspected ACM identified at the Site included, but is not limited to the following:
 - Rolled-on asphalt roofing;
 - Flashing at seams of roll-on asphalt roofing, flashed seals of terracotta shingles, and flashing around the parapet and rooftop penetrations;
 - Caulking on skylight windows;
 - Sheetrock and plaster wallboard;
 - Piping insulation;
 - Cove base and mastic;
 - 1'x 1' vinyl floor material and mastic;

- 2' x 2' terrazzo floor material and mastic;
- 2' x 2' ceiling tiles; and
- Suspect mold identified in the basement of 354 West Street and 356 West Street (Lot 1)

Additional information related to the RECs, Historic RECs, *DeMinimis* conditions, and non-scope environmental concerns is contained within the body of this report.

2.0 INTRODUCTION

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for the assemblage of properties located at 75-77 Clarkson Street, 355-361 West Street, 156-162 Leroy Street (the Site). The Site is also identified as Tax Block 601, Lot 1 (354-356 West Street and 75-77 Clarkson Street), Lot 4 (357 West Street), Lot 5 (358 West Street), Lot 8 (359-361 West Street and 160-162 Leroy Street) and Lot 10 (156-158 Leroy Street). The footprint of the Site encompasses an area of approximately 28,365.66 square feet. This Phase I ESA was performed on behalf of AP-ISC Leroy c/o Gorton & Partners, LLC (the "User") in support of their due diligence for the proposed redevelopment of the Site.

The purpose of this ESA is to accomplish the following:

(1) Identify Recognized Environmental Conditions (REC) in connection with the Site, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-05, which states: The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimize conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

(2) Satisfy the criteria of United States Environmental Protection Agency 40 CFR Part 312 Subpart C Standards and Practices §312.20 All Appropriate Inquiries.

2.1 Scope of the ESA

This ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-05. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-05 are noted in Section 9.0 of this report. In general, the scope of

this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Site; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Site; and conducting a site inspection. The specific scope of this assessment included the following:

1. A Site reconnaissance to inspect on-site conditions and assess the Site and surrounding property uses and natural surface features. Photographs taken as part of the Site reconnaissance are provided in Appendix A.
2. A review of the responses to a User/Client Questionnaire. The completed Questionnaire is provided in Appendix B.
3. A review of available previous environmental reports completed for the Site. Copies of the reports are included as Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distances required by ASTM E-1527-05. The environmental database report was provided by Environmental Data Resources, Inc. (EDR) and is included in Appendix D.
5. Freedom of Information Act (FOIA) requests were sent to federal, state, and local agencies. Copies of the FOIA requests and any responses received by these agencies up to the date of publication of this report are included in Appendix E.
6. New York City Department of Buildings (NYCDOB) records and a Planning Commission Zoning Map were reviewed. Available NYCDOB records and the Zoning Map are included in Appendices F and G, respectively.
7. A review of physical characteristics of the Site through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Site. Copies are included in Appendices H, I, J, and K, respectively.

9. A review of an Environmental Lien and Activity and Use Limitations (AUL) for the Site. A copy of the environmental lien search report is included as Appendix L.
10. A review of the responses to the Owner/Operator/Site Manager Questionnaire. The completed Questionnaire is provided in Appendix M.
11. A review of published radon occurrence maps to evaluate whether the Site is located in an area with a propensity for elevated radon levels. A USEPA Radon Map is provided in Appendix N.

2.2 Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for User for the property on Tax Block 601, Lots 1, 4, 5, 8 and 10 in New York, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Site addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.1, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort conforms to those prescribed in the ASTM Standard E1527-05. Intrusive sampling (i.e. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

The partial basement of the building at 359-361 West Street and 160-162 Leroy Street (Lot 8) was flooded and inaccessible; therefore, this area was not inspected during the site reconnaissance. The inability to inspect this areas is a deviation in scope and a data gap with respect to the ASTM Standard E-1527-05. However, the lack of an inspection in this area is not expected to significantly affect the findings of this Phase I ESA in regards to the identification of on-site RECs, HRECs and *DeMinimis* conditions as at least one or more of the ASTs located in the partial basement of the building located at Lot 8 leaked as a result of the flooding from Tropical Storm Sandy.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Site. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Site. It should be understood that even the most comprehensive Phase I ESA might fail to detect environmental liabilities at a particular

site. Therefore, Langan cannot "insure" or "certify" that the Site is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-05 and are intended exclusively for the purpose stated herein, at the specified Site, as it existed at the time of our site visit.

3.0 SITE DESCRIPTION

3.1 Location and Description

The Site is located at 75-77 Clarkson Street, 354-356 West Street (Tax Block 601, Lot 1), 357 West Street (Tax Block 601, Lot 4), 358 West Street (Lot 5), 359-361 West Street and 160-162 Leroy Street (Lot 8), and 156-158 Leroy Street (Lot 10) in the West Village neighborhood of Manhattan. The footprint of the Site encompasses an area of approximately 28,365.66 square feet. A Site Location Map is included as Figure 1.

The Site is located on the west end of the city block bordered by Leroy Street to the north, Washington Street to the east, Clarkson Street to the south, and West Street to the west. The following is a summary of land use at each tax lot:

Lot 1 (75-77 Clarkson Street and 354-356 West Street)

- One-story slab-on-grade building occupied by an adult cabaret establishment at 75-77 Clarkson Street;
- One-story building that is currently undergoing interior renovations and was formerly occupied by an adult video rental store and adult cabaret establishment at 354 West Street; and
- Two-story building occupied by a ground floor automobile repair garage with an office and storage space on the second story at 356 West Street. The buildings at 354 West Street and 356 West Street share a common basement.

Lot 4 (357 West Street)

- One-story vacant and dilapidated building that was formerly used as a restaurant. A wooden patio area and open space are present in the rear and side of the building, respectively.

Lot 5 (358 West Street)

- Three-story building with a ground floor hardware store. The second and third stories of the building are currently under renovation for use as commercial space.

Lot 8 (359-361 West Street and 160-162 Leroy Street)

- One-story vacant building with a second story addition in the rear of the building and a partial basement. The building was formerly occupied by an automobile repair garage, car wash and express oil change shop. The second story addition is a vacant residential apartment.

Lot 10 (156 – 158 Leroy Street)

- There is a two-story vacant building at 156-158 Leroy Street formerly occupied by a pasta manufacturing facility with office space on the second story.

The Site is located in an urban area primarily characterized by multi-story residential and commercial buildings. Site topography slopes gently to the west, with an approximate elevation of +10 feet (elevations refer to the Borough of Manhattan Topographical Bureau Datum, which is 2.75 feet above mean sea level at Sandy Hook N.J. as established by the U.S. Coast and Geodetic Survey in 1929). Depth to bedrock is approximately 80 to 100 feet bgs. According to previous environmental investigations performed at the Site by Langan, depth to groundwater is approximately 10 to 13 feet bgs with a presumed westerly flow toward the Hudson River.

3.2 Current Use of the Site

The Site is occupied by an adult cabaret establishment, vacant commercial establishments that are currently undergoing interior construction/renovation, automobile repair garage, a vacant building formerly occupied by a restaurant/diner, a hardware store, a vacant building formerly occupied by an automobile repair garage, car wash, express oil change shop, and a residential apartment, and a vacant building formerly occupied by a pasta manufacturing company. Reconnaissance photographs depicting the current use of the Site are presented in Appendix A.

3.3 Description of Site Improvements

Improvements at the Site are summarized in the following table:

SITE IMPROVEMENTS	
Size of the Site	Approximately 28,365.66 square feet
Buildings/Spaces/Structures	<p>Lot 1 <i>75 Clarkson Street:</i> A one-story slab-on-grade building. <i>354 West Street:</i> One-story building with basement. <i>356 West Street:</i> Two-story building with basement.</p> <p>Lot 4: Vacant one-story slab-on-grade building. Lot 5: Three-story slab-on-grade building. Lot 8: Vacant one-story slab-on-grade building with a second story rear addition and a partial basement. Lot 10: Two-story slab-on-grade building</p>
Surface Water	Surface water is not located on the Site; the nearest surface water body is the Hudson River, which is located approximately 255 feet to the west.
Potable Water Source	New York City
Sanitary and Storm Sewer Utilities	New York City
Electrical Utilities	Consolidated Edison Company of New York, Inc.
Construction Completion Date	<p>Lot 1 <i>75 Clarkson Street:</i> 1920 (Estimate) <i>354 West Street:</i> 1920 (Estimate) <i>356 West Street:</i> 1920 (Estimate)</p> <p>Lot 4: 1920 (Estimate) Lot 5: 1915 (Estimate) Lot 8: 1920 Lot 10: 1920 (Estimate)</p>

SITE IMPROVEMENTS	
General Construction Type	<p>Lot 1 75 Clarkson Street: Concrete/brick. 354 West Street: Concrete/brick. 356 West Street: Concrete/brick.</p> <p>Lot 4: Concrete/brick and wood/aluminum. Lot 5: Concrete/brick. Lot 8: Concrete/brick. Lot 10: Concrete/brick.</p>
Cooling and Ventilation System Type	<p>Lot 1 75 Clarkson Street: Central HVAC 354 West Street: Central HVAC 356 West Street: Central HVAC</p> <p>Lot 4: None Present Lot 5: None Present Lot 8: None Present Lot 10: Central HVAC</p>
Heating System Type	<p>Lot 1 75 Clarkson Street: Central HVAC and Space Heaters 354 West Street: Central HVAC 356 West Street: Central HVAC and Space Heaters.</p> <p>Lot 4: None Present Lot 5: Space Heaters Lot 8: Space Heaters Lot 10: Central HVAC and Space Heaters</p>
Emergency Power	<p>Lot 1 75 Clarkson Street: None Present 354 West Street: None Present 356 West Street: None Present</p> <p>Lot 4: None Present Lot 5: None Present Lot 8: None Present Lot 10: None Present</p>

3.4 Title Records

Langan researched ownership records for the Site on the New York City Department of Finance's Automated City Register Information System (ACRIS). ACRIS listed APMM Leroy, LLC as the current owner of Lots 4, 8, and 10. ACRIS listed 358 West, LLC as the current owner of Lot 5. ACRIS listed Bergnat Realty Association as the current owner of Lot 1.

The following table presents available deed information for the Site:

Lot 1		
Date	First Party	Second Party
1/31/1980	BERGNAT REALTIES INC	BERGNAT REALTY ASSOC

Lot 4		
Date	First Party	Second Party
9/24/2007	357 WEST LLC 156 LEROY LLC WESTSIDE VIEWS LLC	APMM LEROY LLC
2/17/2006	DORIZAS, ANDREAS GLYNOS, EVANGELOS	357 WEST LLC
7/25/2005	WEISS, ESTELLE KULLMAN, BETTY KULLMAN, JULIA	DORIZAS, ANDREAS GLYNOS, EVANGELOS
6/30/2005	BEIER, SAMUEL K KULLMAN, BETTY	WEISS, ESTELLE KULLMAN, BETTY KULLMAN, JULIA
10/6/1988	COMMISSIONER OF FINANCE	CITY OF NEW YORK
11/16/1971	BEIER, SAMUEL R PIER DINER, INC.	WEISS, ESTELLE KULLMAN, BETTY KULLMAN, JULIA
11/16/1971	WEISS, ESTELLE KULLMAN, BETTY KULLMAN, JULIA	DORIZAS, ANDREAS GLYNOS, EVANGELOS
10/13/1971	BEIER, SAMUEL R PIER DINER, INC.	WEISS, ESTELLE KULLMAN, BETTY KULLMAN, JULIA
8/26/1968	CURREN, CORNELIUS	PIER DINER, INC

Lot 5		
Date	First Party	Second Party
8/6/1997	TINWILL REALTY CORP.	358 WEST, LLC

Lot 8		
Date	First Party	Second Party
9/24/2007	357 WEST LLC 156 LEROY LLC WESTSIDE VIEWS LLC	APMM LEROY LLC
3/16/2001	WEISBERG, HARVEY	WESTSIDE VIEWS, LLC
12/22/1978	WESTWAY FORWARDING INC	WEISBERG, HARVEY
12/22/1978	359 WEST STREET CORP	WESTWAY FORWARDING INC

Lot 10		
Date	First Party	Second Party
9/24/2007	357 WEST LLC 156 LEROY LLC WESTSIDE VIEWS LLC	APMM LEROY LLC
2/17/2006	ANDRICH ASSOCIATES	156 LEROY LLC
2/6/1992	156 LEROY ST REALTY CORP	ANDRICH ASSOCIATES
12/31/1979	PAMAVITA INC	156 LEROY ST REALTY
9/1/1972	LEROY 156 INC	PAMAVITA INC
2/1/1967	ANTONIELLO, CARMINE	LEROY 156, INC

The review of ownership records did not reveal evidence of RECs.

4.0 USER PROVIDED INFORMATION

4.1 User Questionnaire

As per ASTM E1527-05, a questionnaire was provided to the User in order to obtain specialized User knowledge. The User questionnaire was completed by Michael Overington of IS Leroy Developmnet, LLC. Mr. Overington indicated that he was aware of the following:

- Past uses of the property; and
- A spill on Lot 8 only.

Mr. Overington indicated that he was not aware of the following:

- Any environmental cleanup liens filed or recorded against the Subject Property;
- Activity and land use limitations that are in place on the Subject Property or that have been filed or recorded in a registry past uses of the property;
- Specific chemicals that are present or once were present at the property; and
- Environmental cleanups that have taken place at the property.

Mr. Overington indicated that he had no specialized knowledge or experience related to the Subject Property or adjoining properties. Mr. Overington did indicate that the purchase price being paid for the property reasonably reflects the fair market value of the property. Mr. Overington indicated that based on this knowledge and experience related to the property there were obvious indicators of the presence or likely presence of contamination at Lot 8 only. The completed User questionnaire is included in Appendix B.

4.2 Previous Environmental Reports

The following reports were provided to Langan and reviewed for this Phase I ESA:

- Environmental Site Investigation Report for 359 West Street, prepared by Langan Engineering & Environmental Services, Inc., dated September 28, 2012

This Environmental Site Investigation Report was prepared on behalf of Gorton & Partners, LLC in support of its due diligence of the property located at 359 West Street, New York, NY. The

objective of the environmental investigation was to supplement the findings from a Phase II Environmental Site Investigation (ESI) performed by IVI Environmental, Inc. (IVI) in July 2007 and evaluate subsurface environmental conditions.

The field investigation involved the collection and analysis of four soil samples, two groundwater samples and one sub-slab soil vapor sample. The field investigation also included an inventory of a lube/oil change pit. The following is a summary of the inventory:

- Four Lube Cube ® above ground storage tanks (ASTs) that appeared to be in good condition were identified in the cellar. Signage indicated that the ASTs contained 10W-30 motor oil.
- Two, plastic, 55-gallon drums with unknown contents were observed in the cellar. The drums were reported to be in good condition with no signs of leakage or corrosion.
- Three steel drums (one 30-gallon and two 55-gallon open-top drums) were also observed in the cellar. Oil was observed in each drum. Evidence of leakage and corrosion were observed near the 30-gallon drum.
- The concrete cellar floor was reported to be in good condition with no major preferential migration pathways.
- A floor drain or possible fill port was observed in the cellar. An oil-like substance was observed in the drain or fill port. Staining was observed on the floor near the floor drain/fill port.
- Evidence of previous releases, including residual oil and staining, was apparent throughout the cellar floor.

The following is a summary of findings that were presented in the Langan Site Investigation Report:

- Soil consists of historic fill to depths of 7 to 10 feet below the slab underlain by native soil to depths of at least 10 to 20 feet below the slab.
- Concentrations of semi-volatile organic compounds (SVOCs), pesticides (methoxychlor) and metals (copper, lead, mercury) were identified in soil at concentrations that exceed the NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). These compounds are constituents of historic fill.
- The analytical soil results did not indicate the presence of characteristic hazardous waste in soil.

- Concentrations of metals (iron, magnesium, manganese and sodium) above the Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards (AWQS) were detected in groundwater and are attributed to salt water intrusion from the Hudson River and/or historic fill.
- Two VOCs (acetone and o-xylene) exceeded indoor air background concentrations, but neither compound was detected in soil or groundwater and was believed to be attributed to ambient conditions.

The following recommendations were made in Langan's Site Investigation Report:

- Excess historic fill that is excavated during site development and cannot be reused at the site should be managed as a regulated, non-hazardous solid waste and properly characterized prior to transportation to an offsite disposal facility.
- The floor drain/fill port observed in the cellar should be further evaluated for subsurface impacts.
- ASTs, associated piping, drums, and other petroleum-contaminated material (i.e. concrete slab and debris) should be managed appropriately during redevelopment, including collection of residual liquids, proper waste characterization and offsite disposal.

Based on a review of Langan's Environmental Site Investigation Report, pervasive petroleum staining identified in the cellar is indicative of historic release and is considered a REC. The presence of historic fill should be considered during future development plans and is considered an environmental business concern.

A copy of the Langan Site Investigation Report is included in Appendix C.

5.0 RECORDS REVIEW

5.1 Environmental Records

A regulatory database search was performed by EDR. The EDR report is included in Appendix D. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-05. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the sites identified represent a potential for environmental impact to the Site. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are unmapped sites due to inadequate address information. Any Orphan Sites identified by Langan within the

ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are discussed below.

The following table lists the number of sites identified in standard and additional environmental record databases within the prescribed search radius and included in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of Government Version)	Minimum Search Area	Site Listed	Number of Sites Within Minimum Search Area
USEPA DATABASES			
National Priorities List (NPL) (10/1/2012)	1 Mile Radius	No	1
Delisted NPL (10/01/2012)	1/2 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) (11/02/2012)	1/2 Mile Radius	No	3
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (2/12/2013)	1 Mile Radius	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDF) (2/12/2013)	1/2 Mile Radius	No	0
RCRA Generators (2/12/2013)	Site and Adjoining	Yes	4
FINDS (10/23/2011)	Site	No	0
Environmental Response Notification System (ERNS) (12/31/2012)	Site	No	0
Engineering Controls (EC) Sites Lists (12/19/2012)	Site	No	0
Institutional Controls (IC) Sites Lists (12/19/2012)	Site	No	0
NYSDEC DATABASES			

DATABASE RECORD SUMMARY			
Database Reviewed (Date of Government Version)	Minimum Search Area	Site Listed	Number of Sites Within Minimum Search Area
Hazardous Waste Disposal Sites (SHWS) (11/19/2012)	1 Mile Radius	No	0
Solid Waste or Landfill Facilities (SWF/LF) (1/7/2013)	1/2 Mile Radius	No	1
Leaking Storage Tanks (LTANKS) (11/19/2012)	1/2 Mile Radius	No	53
SPILLS Information Database (NY SPILLS) (11/19/2012)	1/8 Mile Radius	No	29
EC Sites Lists (11/19/2012)	Site	No	0

DATABASE RECORD SUMMARY			
Database Reviewed (Date of Government Version)	Minimum Search Area	Site Listed	Number of Sites Within Minimum Search Area
Manifest (11/01/2012)	Site and Adjoining	No	3

N/A Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-05.

A copy of the reviewed databases is provided in the EDR Report (Appendix D). A summary of sites identified within the prescribed search area is presented below.

5.1.1 Federal Agency Database Findings

NPL Database

The NPL database identifies sites for priority cleanup under the Superfund Program. The Site was not listed in the NPL database, but the Hudson River PCBs Cleanup was included. Although a 200-mile section of the Hudson River is included as part of the Superfund Site, the dredging work is focused north of Albany, New York. Based on the nature of this NPL listing, it is not considered a REC, HREC, or *De Minimis* condition.

CERLIS and CERCLIS NFRAP Database

The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites, which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites granted the status of No Further Remedial Action Planned (NFRAP) are also included in this database. The Site was not listed in the CERCLIS or CERCLIS NFRAP databases. Two CERCLIS sites and one NFRAP site were identified within ½-mile of the Site.

The Hudson River PCBs Cleanup and the New York City Anthrax Sites, located 0.081-miles down-gradient and 0.338 miles up-gradient of the Site, respectively, are listed as CERCLIS sites. The Federal Building/GSA site, located 0.244-miles upgradient of the Site, is listed as a CERCLIS NFRAP site. Based on distance from the Site and nature of the listings, neither listing is considered a REC, HREC, or *De Minimis* condition.

RCRA Generators/Transporters

The RCRA generators/transporters database is USEPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. RCRA Databases include Large Quantity Generators (LQG), Small Quantity Generators (SQG), Conditionally Exempt Small Quantity Generators (CESQG), and Non Generators (NonGen). The Site is not listed in the RCRA databases.

Four adjoining properties are listed in the RCRA databases and are discussed below:

Site Name: Bloomberg Data Center

Site Address: 340 West Street

Location: This facility adjoins the Site to the south across Clarkson Street.

Description: This facility has been a SQG since 2008. The only waste type listed for the facility are lamps (i.e. universal waste). The facility received a violation in August 2010 for "Universal Waste – General." A compliance evaluation inspection was performed on-site in August 2010. No data for compliance achievement was listed in the EDR report. Although it appears there is an unresolved violation for the facility, the violation does not appear to be related to an existing, past or material threat of release. Therefore, this RCRA listing is not considered an off-site REC, HREC, or *De Minimis* condition.

Site Name: Ondeo Nalco Co

Site Address: 330 West Street

Location: This facility adjoins the Site to the south across Clarkson Street.

Description: This facility was listed as a SQG in 2002 and has been a CESQG since 2006. Waste types generated at the facility from 2003 to 2005 include D001, D002, D005 and F003. No violations were reported for this facility. This RCRA listing is not considered an off-site REC, HREC, or *De Minimis* condition based on a lack of violations and the lack of existing, past or material threats of release into structures, ground, groundwater or surface water on the property.

Site Name: Yellow Freight Systems Inc.

Site Address: 149 Leroy Street

Location: This facility adjoins the Site to the north across Leroy Street.

Description: This facility was listed as a SQG in 1996 and verified a non-generator in 1999 and 2006. No record of waste generation was available in the EDR Report. No violations were reported for this facility. This RCRA-NonGen listing is not considered an off-site REC, HREC, or *De Minimis* condition.

Site Name: Federal Express Corp.

Site Address: 148 Leroy Street

Location: This facility adjoins the Site to the north across Leroy Street.

Description: This facility was listed as a LQG in 1991 and verified a non-generator in 1999 and 2006. Waste types generated at the facility from 1990 to 2000 include D001, F002 and waste oil. No violations were reported for this facility. This RCRA-NonGen listing is not considered an off-site REC, HREC, or *De Minimis* condition.

FINDS

The FINDS database maintains information on facilities regulated by Program Offices as manifested in their data system. The FINDS database provides some basic information about each facility and a listing of its ID numbers in other USEPA databases, but was succeeded by USEPA's Facility Registration System (FRS), the latest of EPA's efforts to integrate facility-level information across reporting programs. The Site was not listed in the FINDS database.

The Hudson River PCBs Cleanup, located 0.081-miles downgradient of the Site, was listed in both the Engineering Controls (EC) and Institutional Controls (IC) databases. The listing of the Hudson River PCBs Cleanup in the EC and IC databases is not considered a REC, HREC, or *De Minimis* condition based on distance from the Site and the nature of the listing.

No Delisted NPL, RCRA CORRACTS, RCRA TSDF, or ERNS, sites were listed within their respective minimum search distances as specified by ASTM E1527-05.

5.1.2 State Agency Database Findings

Hazardous Waste Disposal Sites (SHWS)

The SHWS database includes known contaminated sites and is the State equivalent to CERCLIS. The Site was not listed in the SHWS registry. No SHWS facilities were listed within a 1-mile radius of the Site.

SWF/LF Database

The SWF/LF database is a comprehensive listing of State permitted/recorded solid waste facilities. The Site was not listed in the SWF/LF database. One SWF/LF facility was listed within a ½-mile of the Site.

Site Name: Bartlett Carting Corp.

Site Address: 509 Greenwich Street

Location: 0.282-miles south of the Site

Description: This facility was listed as an inactive transfer station. No other information was available in the EDR report. Based on its distance from the Site and its inactive status, this SWF/LF listing is not considered an off-site REC, HREC, or *De Minimis* condition.

Leaking Underground Storage Tanks Database

The Leaking Storage Tanks (LTANKS) database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The primary causes of the LTANK incidents include tank test failures, tank failures, and tank overfills. As per ASTM E1527-05, the approximate minimum search distance required for LTANK incidents is within ½ mile of the Site. The Site was not listed in the LTANK database; however, 53 LTANK incidents were identified at other properties within a ½-mile radius. All reported LTANK incidents have been granted closed status by the NYSDEC and are therefore not considered RECs, HRECs or *De Minimus* conditions.

NY Spills Database

The NY Spills database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to the NYSDEC.

The Site was not listed in the NY Spills database. However, three adjoining properties were listed in the NY Spills database. All four spill cases, described below, were closed by the NYSDEC. Two closed spill cases in subsurface utility vaults located at adjoining properties were found in the NY Spills database. Both closed spill cases involved less than ten gallons of petroleum and/or dielectric fluid. Spills in subsurface utility vaults are typically contained within the vaults and are unlikely to affect adjoining property.

Site Name: Yellow Freight System Inc.

Site Address: 149 Leroy Street

Location: Adjoins the Site to the north across Leroy Street

Description: Spill No. 0001838 was reported on May 12, 2000 in response to the results of a Phase II ESI. The Phase II ESI report was dated April 7, 2000. Spill No. 0001838 was cross-referenced with Spill No. 9909631. Spill No. 9909631 was reported on November 8, 1999 in response to the discovery of petroleum-contaminated soil during the removal of three 4,000-gallon USTs. In response to the spill, 17 USTs were removed, petroleum-impacted soil was excavated, and three groundwater monitoring wells were installed in 2000. Spill No. 0001838 was closed by the NYSDEC on January 12, 2001. The NYSDEC indicated in a closure letter that no further investigation or response was required. This closed spill case is considered an off-site HREC as it involved past releases of petroleum into the ground of an adjoining property.

Site Name: MCI

Site Address: 560 Washington Street

Location: Adjoins the Site to the south across Clarkson Street

Description: Spill No. 0506181 was reported on August 19, 2005 when an unknown quantity of diesel fuel was released from a 250-gallon AST on the roof of the building. The spill was flushed down a roof drain by the FDNY. The cause of the spill was reported to be a malfunctioning pump. According to the EDR report, the spill did not infiltrate from the roof into the building, no odors were detected in the building, and no free product or sheen was observed on the Hudson River. The spill case was closed by the NYSDEC on August 22, 2005. This closed spill case is considered an off-site HREC as it involved a past release of petroleum into the structure of an adjoining property.

Site Name: 560 Washington Street

Site Address: 560 Washington Street

Location: Adjoins the Site to the south across Clarkson Street

Description: Spill No. 0103173 was reported on June 22, 2001 when 55-gallons of diesel fuel were released on the roof of the building during the installation of a generator. According to the EDR report, there was no discharge to the ground or sewer. The spill case was closed by the NYSDEC on June 29, 2001. This closed spill case is considered an off-site HREC as it involved a past release of petroleum into the structure of an adjoining property.

Site Name: 330 West Street

Site Address: 330 West Street

Location: Adjoins the Site to the south across Clarkson Street

Description: Spill No. 9502690 was reported on June 1, 1995 when approximately 10 gallons of diesel fuel were released on the roof of the building. The spill was cleaned up using absorbent pads and closed by the NYSDEC on June 2, 2005. This closed spill case is considered an off-site HREC as it involved a past release of petroleum into the structure of an adjoining property.

Twenty-five additional spills were identified within 1/8-mile of the Site. Based on their distance from the Site, location relative to the direction of groundwater flow, and/or their closed status, none of these spills are considered RECs.

NY VCP Database

The Voluntary Cleanup Agreements (VCP) database is an inventory of contaminated sites that have been remediated to allow for the productive use of the site via a voluntary remedial program. As per ASTM E1527-05, the approximate minimum search distance required for NY VCP sites is within 1/2-mile of the Site. The Site was not listed in the VCP database. No VCP sites were identified within 1/2-mile of the Site.

Brownfields

The Brownfields list includes any real property where development or re-use may be complicated by the presence or potential presence of hazardous waste, petroleum, or other contaminants. As per ASTM E1527-05, the approximate minimum search distance required for Brownfield sites is within 1/2-mile of the Site. The Site is not listed in the Brownfields database. One Brownfield site was identified within 1/2-mile of the Site.

Site Name: West & Watts Development

Site Address: 281 West Street / 456 Washington Street

Location: 0.390-miles south of the Site

Description: This property is located on the block bordered by Canal Street to the north, Washington Street to the east, Watts Street to the south and West Street to the west. The property was historically used as a gasoline filling station, a railroad freight station and warehouse from 1928 through 2005. Based on its distance and location relative to the direction of groundwater flow, this Brownfield listing is not considered an off-site REC, HREC, or *De Minimis* condition.

NY Petroleum Bulk Storage (PBS) TANKS, UST and AST Database

The PBS TANKS, UST and AST database contains records of registered USTs and/or ASTs. A registered petroleum bulk storage tank, UST and/or AST does not constitute a REC in and of itself. However, properties listed on the TANKS, UST and/or AST lists with a reported leak, spill, or release could constitute a REC with respect to the Site. As per ASTM E1527-05, the approximate minimum search distance required for USTs and ASTs is the Site and adjoining properties. Two listings for the Site were found in the UST and AST databases.

#1 Autotech Group at 356 West Street (Lot 1) was listed in the UST database as having one active 275-gallon steel/carbon-steel UST installed in 2006. According to the NYSDEC PBS

Search Database, this UST stored waste oil and was closed and removed on January 29, 2013. It is unclear if environmental samples (i.e. soil and groundwater) were collected and analyzed as part of the UST removal work – a deviation from standard industry practice. Releases or spills of petroleum from the former UST may have adversely impacted soil, groundwater and/or soil vapor at Lot 1 and is considered a REC.

Village Mart, Inc. at 160 Leroy Street (Lot 8) was listed in the AST database as having seven ASTs. A summary of the ASTs for 160 Leroy Street (Lot 8) is provided in the table below. Additional information obtained from the NYSDEC PBS Search Database is included.

AST Summary for 160 Leroy Street							
Tank No.	Capacity (gal)	Installation Date	Type	Tank Contents	Status	Secondary Containment	Dispenser
001	1000	1992	Steel/carbon-steel	Lube Oil	In Service	Double-Walled (Underground)	Suction
002	1000	1992	Steel/carbon-steel	Lube Oil	In Service	Double-Walled (Underground)	Suction
003	1000	1992	Steel/carbon-steel	Lube Oil	In Service	Double-Walled (Underground)	Suction
004	500	1992	Steel/carbon-steel	Waste Oil	In Service	Double-Walled (Underground)	Suction
005	500	1992	Steel/carbon-steel	N/A	Temp. Out of Service	Double-Walled (Underground)	Suction
006	500	1992	Steel/carbon-steel	N/A	Temp. Out of Service	Double-Walled (Underground)	Suction
007	500	1992	Steel/carbon-steel	N/A	Temp. Out of Service	Double-Walled (Underground)	Suction

A release from these ASTs is presumed to be the source of NYSDEC Spill No. 13-00212. The ASTs were not observed during the Site reconnaissance because the basement was flooded and inaccessible. A subsurface investigation was completed by Langan in 2012 to investigate historic releases associated with these ASTs and no adverse impacts to soil, groundwater, and soil vapor were identified. However, based on the change in conditions at the Site since

Tropical Storm Sandy, the release that is presumed to be associated with these ASTs, and the continuous source of petroleum that is represented by these tanks, these ASTs are a REC.

Five adjoining properties were listed in the UST and AST databases and are described below.

Site Name: Washington Street Associates

Site Address: 149 Leroy Street

Location: The property adjoins the Site to the north across Leroy Street.

Description: This facility has record of nine storage tanks (NYSDEC PBS No. 2-292419):

- Three 4,000-gallon steel/carbon-steel diesel USTs closed and removed in 1999.
- One 275-gallon steel/carbon-steel diesel AST with a subterranean vault closed and removed in 1999.
- Three 550-gallon steel/carbon-steel diesel ASTs installed in 2002, but closed and removed on an unknown date.
- One 550-gallon steel/carbon-steel #2 fuel oil AST installed in 2002, but closed and removed on an unknown date.
- One 1,500-gallon steel/carbon-steel diesel AST installed in 2002, but closed and removed on an unknown date.

This adjoining property (149 Leroy) was listed in the LTANKS and NY Spills databases, but under the name of Yellow Freight System Inc. This listing is considered an off-site HREC as the three 4,000-gallon USTs are associated with two petroleum spill cases that have been remediated to the satisfaction of the NYSDEC and administratively closed.

Site Name: 350 West Street

Site Address: 350 West Street

Location: This facility adjoins the Site to the south across Clarkson Street.

Description: This facility has record of one 4,000-gallon steel/carbon-steel #2 fuel oil UST that was closed-in-place in 1997. This listing is not considered an off-site REC, HREC, or *De Minimis* condition based a lack of reported spills associated with the UST, its closed-in-place status, its distance from the Site, and its location with respect to groundwater floor (cross-gradient).

Site Name: Federal Express - WTCA

Site Address: 148 Leroy Street

Location: This facility adjoins the Site to the east.

Description: This facility has record of one in-service 280-gallon steel/carbon-steel waste oil/used oil AST that was installed in 2002. The in-service 280-gallon AST is not considered an off-site REC or HREC. The AST is considered an off-site *De Minimis* condition as it stores a petroleum product, but is not affiliated with an open spill case, is generally not a threat to human health or the environmental and is generally not subject to enforcement action by an agency.

Site Name: St. John's Center

Site Address: 333 West Houston Street

Location: This facility adjoins the Site to the south across Clarkson Street.

Description: This facility has record of one in-service steel/carbon-steel #2 fuel oil AST that was installed in 1970 and one in-service steel/carbon-steel #2 fuel oil AST that was installed in 1971. The ASTs are considered off-site *De Minimis* conditions as they store a petroleum product, but are not affiliated with an open spill case, are generally not a threat to human health or the environmental and are generally not subject to enforcement action by an agency.

Site Name: MCI D/B/A Verizon Business

Site Address: 560 Washington Street

Location: This facility adjoins the Site to the south across Clarkson Street.

Description: This facility has record of one in-service 10,000-gallon steel/carbon-steel diesel AST that was installed in 1998 and one in-service 200-gallon steel/carbon-steel AST that was installed in 1998. This address appeared in the NY Spills database under two closed spill case listings; however, the spill cases were not related to the 10,000-gallon AST or 200-gallon AST, but rather incidental releases associated with a malfunctioning pump on a 250-gallon AST and the installation of a rooftop generator. The in-service 10,000-gallon and 200-gallon ASTs is not considered off-site RECs or HRECs. The ASTs are considered an off-site *De Minimis* condition as they stores a petroleum product, but are not affiliated with an open spill case, are generally not a threat to human health or the environmental and are generally not subject to enforcement action by an agency.

NY DRYCLEANERS and Historical Cleaners Database

The NY Dry Cleaners Database includes registered dry cleaning facilities in the State of New York. The Historical Cleaners database is a list of historically documented dry cleaners. The Site was not included in the NY DRYCLEANERS list; however, five dry cleaning facilities were identified within ¼-mile of the Site. Based on the distance from the site, the absence of violations, and/or the facility use as a drop shop, none of these facilities are considered a REC.

Other State Databases

No state EC, IC, CBS UST and AST, MOSF listings were found within their respective minimum search distances as specified by ASTM E1527-05.

5.1.3 Other Database Findings

Manufactured Gas Plant (MGP) Sites

The Manufactured Gas Plant (MGP) Sites database is a proprietary database that includes records of manufactured coal gas plants compiled by EDR. The Site was not listed in the MGP database. One MGP site was identified within a 1-mile radius of the Site; however, this was located more than one mile from the Site and is not considered a REC, HREC, or *De Minimis* condition due to distance from the Site.

Historical Auto Stations

The Historical Auto Stations database is a proprietary database that includes records of potential historical gas station, filling station and service station sites. Two listings for the Site were found in the Historical Auto Stations database.

The address of the first listing was 160 Leroy Street, which corresponds to Lot 8. According to the EDR report, this address was occupied by Two Guys Lube Incorporated in 2000, Two Guys General Auto Repair Inc. from 2001 through 2002, Two Guys Lube Inc. from 2003 through 2004, and Village Auto from 2011 through 2012. This address was also listed in the NY Petroleum Bulk Storage AST database. Information related to the ASTs at 160 Leroy Street (Lot 8) is discussed in Section 3.1.2.

The address of the second listing was 356 West Street, which corresponds to Lot 1. According to the EDR report, this address was occupied by 1 Hour Auto Glass Incorporated from 1999 through 2000 and Village 24-Hour Auto Repair from 2010 through 2012.

The historical use of 356 West Street (Lot 1) and 160 Leroy Street (Lot 8) is considered a REC as potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically used by such a facility may have adversely impacted soil, groundwater, and/or soil vapor at the property.

Manifests

A manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility. The Site was not listed in the Manifest database. Three adjoining properties were listed in the Manifest database. Information related to hazardous waste generation at these properties is discussed in Section 3.1.1.

5.1.4 Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted to the following federal, state, and local agencies via written and electronic correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC; and
- USEPA, Region 2.

FOIA requests were sent on March 13, 2013 for each individual lot of the Site. Langan requested information or copies of files regarding environmental conditions, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of

hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports.

Response letters were received from the USEPA Region 2, NYSDEC, NYSDOH, FDNY and NYCDEP and indicated no records were found for the Site. A response packet received on April 8, 2013 from the NYCDOH indicated that Lots 1, 5, 8 and 10 were inspected on March 28-29, 2012. No health code violations were reported for Lots 1, 5, 8 and 10. The response packet included a letter dated April 3, 2012 from the NYCDOH to APMM Leroy, LLC for Lot 4. The letter indicated the property was inspected on March 28, 2012 and cited for two violations related to rodent habitation and animal nuisance conditions. The letter ordered prompt abatement of all rodent and/or animal nuisance conditions.

If any pertinent information is received after the production of this report, an addendum will be prepared. Copies of the FOIA requests and available responses are included in Appendix E.

NYCDOB

Langan conducted a records search via the NYCDOB Building Information system on March 11, 2013. A copy of the NYCDOB records is included as Appendix F.

Lot 1

Based on a review of the NYCDOB records, there were no RECs, HRECs, or *DeMinimis* conditions at any of the building addresses associated with Lot 1.

Lot 4

Based on a review of the NYCDOB records, there were no RECs, HRECs, or *DeMinimis* conditions associated with Lot 4.

Lot 5

Based on a review of the NYCDOB records, there were no RECs, HRECs, or *DeMinimis* conditions associated with Lot 5.

Lot 8

Based on a review of the NYCDOB records, historical use of Lot 8 as an auto service station is considered a REC (as explained in Section 3.1.3).

Lot 10

Based on a review of the NYCDOB records, historical use of Lot 10 as an auto repair shop is considered a REC.

Zoning Department

According to the New York City Planning Commission (NYCPC) Zoning Map 12a. The Site is in a M1-5 manufacturing district. According to the zoning map, the above properties are not listed with any restrictive E- or D-designations. The above properties were not listed on the list of City Environmental Quality Review (CEQR) Environmental Designations available on the NYC City Planning Commission website. A copy of the zoning map is provided in Appendix G.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the USGS Jersey City Quadrangle Topographic Maps (7.5-minute series), the elevation of the Site is approximately 10 feet above mean sea level (MSL). The topography of the Site and the surrounding area slopes gently to the west towards the Hudson River.

5.2.2 Geology

Geological surface features (e.g., rock outcroppings) were not observed at the Site. Soil and bedrock stratigraphy throughout Manhattan typically consists of a layer of historical fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a review of the Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen and Hudson Counties New Jersey, by Charles A. Baskerville, dated 1994 (Baskerville Map), the Site is underlain by bedrock of the Cambrian Manhattan Schist formation, which consists of interbedded mica schist, gneiss, quartz, and amphibolite. The Baskerville engineering geology map depicts bedrock at the Site at approximately 80 to 100 feet bgs. In addition, the Baskerville engineering geology map depicts that the Site is located west (outboard) of the original Hudson River shoreline prior to historical filling activities.

5.2.3 Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extents of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. According to previous environmental investigations performed at the Site by Langan, depth to groundwater is approximately 10 to 13 feet with a presumed westerly flow toward the Hudson River.

Groundwater in the New York City area is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

5.3 Historical Use Information

Langan reviewed available historical resources (including aerial photographs, Sanborn and topographic maps, and city directories) dated 1894 through 2012. Langan's review findings are provided below.

5.3.1 Aerial Photographs

Langan reviewed available aerial photographs of the Site and surrounding areas for the years 1924, 1943, 1954, 1966, 1975, 1984, 1995, 2006, 2008, 2009, 2010 and 2011. The photographs indicate that the Site is located within a densely developed urban area. The Site was occupied by multi-story buildings as early as circa 1924. A rail yard occupied the adjoining properties to the east of the Site from circa 1943 to circa 1954. Surrounding properties were occupied by multi-story residential and commercial buildings.

The presence of a historic rail yard on adjoining properties to the east of the Site is considered an off-site historic REC. The review of the aerial maps did not indicate on-site or off-site RECs, on-site HRECs or on-site or off-site De Minimis conditions in association with the Site. Copies of the aerial maps are provided as Appendix H.

5.3.2 Sanborn Fire Insurance Maps

Langan reviewed available Sanborn Maps for the Site for the years 1894, 1895, 1904, 1905, 1913, 1919, 1921, 1922, 1928, 1950, 1968, 1969, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1983, 1985, 1987, 1988, 1990-1996, 2001-2005. Sanborn Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Copies of the maps are provided as Appendix I. A summary of the Sanborn Maps is presented in the following table.

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1894	The available Sanborn map for 1894 did not provide clear and adequate coverage of the Site.
1895	<p>Lot 1: The lot was occupied with four five-story buildings. The building at 75 Clarkson Street was labeled a hotel.</p> <p>Lot 4: The lot was occupied by one two-story building labeled a machine shop.</p> <p>Lot 5: The lot was occupied by a one-story building of unknown use.</p> <p>Lot 8: The lot was occupied by multiple buildings of residential and unknown use.</p> <p>Lot 10: A portion of the lot was occupied by a two-story residential building. The other portion of the lot was unoccupied.</p> <p>Surrounding Area: The adjoining properties to the east on the subject block were occupied by multiple buildings with uses including residential and hotel. The adjoining properties to the south were occupied multiple buildings of unknown use and a lumberyard. The adjoining properties to the north were occupied by buildings of unknown use. Multiple piers were depicted across West Street along the Hudson River.</p>
1904	<p>Lot 1: The lot was occupied with four five-story buildings with uses including, store, dwelling, and hotel.</p> <p>Lot 4: The lot was occupied by one two-story building labeled a machine shop with a boiler.</p> <p>Lot 5: The lot was occupied by a three-story building labeled a machine shop with a boiler.</p> <p>Lot 8: The lot was occupied by multiple buildings with uses including residential, store, building materials, and smelting works (160 Leroy Street).</p> <p>Lot 10: A portion of the lot was occupied by a two-story building of unknown use. The other portion of the lot was unoccupied and labeled building materials.</p> <p>Surrounding Area: The adjoining properties to the east on the subject block were occupied by multiple buildings with uses including residential, hotel, chemical manufacturing. The adjoining properties to the south were occupied multiple buildings with uses including soap works, steam laundry and offices. The adjoining properties to the north were occupied by multiple buildings with uses including storage. Multiple piers were depicted across West Street along the Hudson River.</p>
1905	The available Sanborn map for 1905 did not provide clear and adequate coverage of the Site.

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1913	The available Sanborn map for 1913 did not provide clear and adequate coverage of the Site.
1919	The available Sanborn map for 1919 did not provide clear and adequate coverage of the Site.
1921	<p>Lots 1, 4, 5: No significant changes were noted for the lots in this map when compared to the 1904 Sanborn map.</p> <p>Lot 8: The lot was occupied by multiple buildings with uses including residential, store, smelting works (160 Leroy Street), and a junk yard.</p> <p>Lot 10: The lot was occupied by a multiple buildings of unknown use.</p> <p>Surrounding Area: The adjoining properties to the east on the subject block were occupied by multiple buildings with uses including residential, hotel, public storage, auto repairs, and a wagon builder. The adjoining property to the south was occupied multi-story building labeled steel warehouse. The adjoining properties to the north were occupied by multiple buildings with uses including storage. Multiple piers were depicted across West Street along the Hudson River</p>
1922	The available Sanborn map for 1922 did provide adequate coverage of the Site, but no detail was displayed on the map.
1928	The available Sanborn map for 1922 did provide adequate coverage of the Site, but no detail was displayed on the map.
1950	<p>Lot 1: The lot was occupied with five multi-story buildings with uses including stores and motor freight stations (356 West Street and 75 Clarkson Street).</p> <p>Lot 4: The lot was occupied by a one-story store.</p> <p>Lot 5: The lot was occupied by a three-story building labeled "machine shop".</p> <p>Lot 8: The lot was occupied by one multi-story building with uses including a motor freight station and offices (359-361 West Street and 160-162 Leroy Street).</p> <p>Lot 10: The lot was occupied by two one-story buildings labeled "waste paper".</p> <p>Surrounding Area: The adjoining property to the east was labeled NYCRR Right of Way. The adjoining property to the north was occupied by a filling station with two tanks and a small office building. The adjoining property to the south was occupied by a large multi-story building covering the entire block labeled St. John's Park freight terminal, which was built in 1933. Multiple piers were depicted across West Street along the Hudson River.</p>
1968	The available Sanborn map for 1968 did not provide clear and adequate coverage of the Site.

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1969	<p>Lot 1: The lot was occupied with five multi-story buildings with uses including stores and auto body works (356 West Street).</p> <p>Lot 4: The lot was occupied by one one-story store.</p> <p>Lot 5: The lot was occupied by a three-story building labeled a machine shop.</p> <p>Lot 8: No significant changes were noted for the lot in this map when compared to the 1950 Sanborn map.</p> <p>Lot 10: The lot was occupied by two one-story buildings labeled waste paper (156-158 Leroy Street).</p> <p>Surrounding Area: The adjoining property to the east was occupied by a three-level open deck garage and multiple one-story buildings with uses including storage and office. The adjoining property to the north was occupied by a two-story building with uses including motor freight station and offices. The adjoining property to the south was occupied by the St. John's Park freight terminal. Multiple piers were depicted across West Street along the Hudson River.</p>
1975	<p>Lot 1, 4, 5, 8: No significant changes were noted for the lots in this map when compared to the 1969 Sanborn map.</p> <p>Lot 10: The lot was occupied by a one-story manufacturing building.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1969 Sanborn map with the exception that the adjoining property to the east was occupied by a United States Post Office Garage and the adjoining property to the south was occupied by a large multi-story building labeled St. John's Park building.</p>
1976-1978	The available Sanborn maps for 1976-1978 did not provide clear and adequate coverage of the Site.
1979	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1975 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1975 Sanborn map with the exception that the adjoining property to the west was labeled Pier 40.</p>
1980-1981	The available Sanborn maps for 1980-1981 did not provide clear and adequate coverage of the Site.
1983	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1979 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1979 Sanborn map.</p>
1985-1988	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1983 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1983 Sanborn map.</p>
1990	The available Sanborn maps for 1990 did not provide clear and adequate coverage of the Site.
1991	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1983 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1983 Sanborn map with the exception that the adjoining property to the east was labeled Federal Express.</p>

SANBORN MAP SUMMARY	
YEAR	COMMENTS
1992	<p>Lot 1: The lot was occupied by three one-story buildings. Two buildings were interconnected (75-77 Clarkson Street and 354-355 West Street). The other building was labeled an auto body works (356 West Street).</p> <p>Lots 4, 5, 8: No significant changes were noted for the lot in this map when compared to the 1983 Sanborn map.</p> <p>Lot 10: The lot was occupied by two one-story buildings labeled auto repair (156-158 Leroy Street).</p>
1993-1994	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1992 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1992 Sanborn map.</p>
1995	<p>Lots 1, 4, 5: No significant changes were noted for the lots in this map when compared to the 1992 Sanborn map.</p> <p>Lot 8: The lot was occupied by one two-story building labeled auto wash, auto repair and offices (359-361 West Street and 162 Leroy), and one one-story building labeled auto repair (160 Leroy Street).</p> <p>Lot 10: The lot was occupied by a two-story building labeled a warehouse.</p>
1996	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1995 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1995 Sanborn map.</p>
2001-2003	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1996 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 1996 Sanborn map with the exception that the adjoining block to the north was vacant.</p>
2004	<p>Lots 1, 4, 5, 8, 10: No significant changes were noted for the lots in this map when compared to the 1996 Sanborn map.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 2003 Sanborn map with the exception that the adjoining block to the north was occupied by a multi-story residential building.</p>
2005	<p>Lots 1, 4, 5, 8: No significant changes were noted for the lots in this map when compared to the 2004 Sanborn map.</p> <p>Lot 10: A portion of the lot was occupied by a two-story warehouse. The other portion of the lot was vacant.</p> <p>Surrounding Area: No significant changes were noted for the surrounding area in this map when compared to the 2004 Sanborn map.</p>

Langan's review of available Sanborn Maps indicated that the Site was developed with multiple low-rise buildings as early as 1895. From circa 1895 through circa 2005, the Site was primarily occupied by commercial and industrial uses.

A review of the available Sanborn Maps indicated historical property use of the Site, including motor freight stations (Lot 1 1950 – 1969), auto body works (Lot 1 1969 – 2005), and auto repair shop (Lot 10 1992 – 1995) as an on-site REC.

Commercial, industrial and mixed-use buildings generally occupied the adjoining and surrounding properties. The commercial and industrial uses of surrounding properties included retail, restaurants, offices, hotels, shipping piers, railroad right-of-way, auto repair and service stations, filling stations, warehousing and storage, freight terminals, smelters, and automobile parking and garages.

A review of the available Sanborn Maps indicated no off-Site HRECs at adjoining properties. A review of the available Sanborn Maps indicated off-Site *De Minimis* conditions at adjoining properties. The historical use of the adjoining property to the east of the Site as a railroad right-of-way is considered an off-site *De Minimis* condition. Environmental conditions typically associated with railroad rights-of-way include petroleum, heavy metals, PCBs, pesticides and herbicides.

5.3.3 Historical USGS Topographic Quadrangles

Langan reviewed available historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Site. Quadrangle maps were available for the Site for the years 1891, 1900, 1905, 1925, 1947, 1955, 1967, and 1981. Based on a review of the historic topographic maps, the Site was developed within a dense urban area as early as 1891. A railroad yard was depicted on the east end of the subject block on the maps from 1947 through 1955. The railroad yard did not appear to occupy the Site. No other structures were depicted on the subject block from 1891 through 1981. The presence of a historic rail yard on adjoining properties of the subject block is considered an off-site *De Minimis* condition. The review of the historic topographic maps did not indicate on-site or off-site RECs, on-site HRECs or on-site *De Minimis* conditions in association with the Site. Copies of the topographic maps are provided as Appendix J.

5.3.4 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1920 through 2012. The target search addresses for the Site were 354-356 West Street and 75 Clarkson Street (Lot 1), 357 West Street (Lot 4), 358 West Street (Lot

5), 359-361 West Street and 160-162 Leroy Street (Lot 8), and 156-158 Leroy Street (Lot 10). Copies of the City Directory Abstracts are provided in Appendix K.

Langan's review of the City Directory Abstract revealed that the Site was used for residential, commercial and professional purposes from circa 1920 through circa 2012. The identified residential, commercial and professional uses are not likely to be of environmental concern based on their names with exception of the following:

Lot 1 (354-356 West Street and 75 Clarkson Street)

Business Name: Village Twenty-Four Hour Automobile (356 West Street)

Dates of Operation: 2006 - 2012

Business Name: 1 Hour Auto Glass Inc. (356 West Street)

Dates of Operation: 1998 - 2000

Business Name: Gus & Benny Auto Repairs Inc. (356 West Street)

Dates of Operation: 1973

Lot 8 (359-361 West Street and 160-162 Leroy Street)

Business Name: Village Auto (160 Leroy Street)

Dates of Operation: 2012

Business Name: Two Guys General Auto Repair (160 Leroy Street)

Dates of Operation: 1993, 1998, 2012

Business Name: Two Guys Lube Inc. (160 Leroy Street)

Dates of Operation: 2000

Business Name: Brooks Transportation Co. Inc. (160 Leroy Street)

Dates of Operation: 1942, 1947, 1950, 1956, 1958

Business Name: Pittsburgh White Metal Co. (160 Leroy Street)

Dates of Operation: 1920, 1923, 1927

Business Name: American Lead Co. (160 Leroy Street)

Dates of Operation: 1927

Business Name: Auto Club Road Service (161 Leroy Street)

Dates of Operation: 2012, 2006

Business Name: Lowy D & Co Scrap Iron (162 Leroy Street)

Dates of Operation: 1927

Business Name: Leroy Salvage Co Inc. (162 Leroy Street)

Dates of Operation: 1923

Business Name: Salvage Disposal Corp. (162 Leroy Street)

Dates of Operation: 1920

Lot 10 (156-158 Leroy Street)

Business Name: Virginia Motor Express Co. (157 Leroy Street)

Dates of Operation: 1934

Langan performed additional diligence to identify the current location of the above businesses as well as information related to past operations at the above locations. Village Auto, Two Guys General Auto Repair, Two Guys Lube Inc. and Auto Club Road Service (Lot 1) are active businesses at the Site. Village Twenty-Four Hour Automobile and 1 Hour Auto Glass Inc. (Lot 8) are not active businesses at the Site. Multiple automobile repair businesses were depicted on the available Sanborn maps. Pittsburgh White Metal Co. may in fact be the smelting facility depicted on the available Sanborn maps from circa 1904 through circa 1921. No information could be found for any of the other businesses listed above nor were the businesses listed in the available regulatory database records reviewed for this Phase I ESA. The above businesses are considered on-site RECs in associated with the Site.

Langan's review of the City Directory Abstract revealed that adjoining properties were used for residential, commercial and professional purposes from circa 1920 through circa 2012. The identified uses at adjoining properties are not likely to be of environmental concern based on their names with exception of the following:

Business Name: Ace Envelope Manufacturing Corp.

Site Address: 330 West Street

Dates of Operation: 1968-1983

Business Name: Exclusive Envelope Corp.

Site Address: 330 West Street

Dates of Operation: 1963-1983

Business Name: St. Johns Freight Terminal

Site Address: 340 West Street

Dates of Operation: 1963-1973

Business Name: Ballad Motor Service Inc.

Site Address: 340 West Street

Dates of Operation: 1938

Langan performed additional diligence to identify the current location of the above businesses as well as information related to past operations at the above locations. St. John's Freight Terminal was depicted on the available Sanborn maps. No information could be found for any of the other businesses. No listings related to the above businesses were found in the available regulatory database records; however, the addresses of 340 West Street and 330 West Street did appear in the NY Spills database as having closed NYSDEC spill cases. No link between the above businesses and the closed NYSDEC spill cases could be established based on available information. Therefore, the above businesses do not represent on-site or off-site RECs, HRECs or *De Minimis* conditions in associated with the Site.

5.3.5 Environmental Lien Search

Langan contracted EDR to conduct an Environmental Lien search for the Site. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no Environmental Liens or other Activity and Use Limitations (AUL) associated with Lots 1, 4, 5, 8, and 10. A copy of the Environmental Lien Search for 1552 Broadway and 1560 Broadway is provided in Appendix L.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The Site reconnaissance was conducted in a systematic manner focusing on the spatial extents of the Site and then progressing to the adjoining and surrounding properties.

The assessment of the adjoining and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

6.1.1 Date and Time of Inspection

The reconnaissance of Lots 1, 4, 5 and 8 was performed at 9:00 am on April 5, 2013 by Gregory C. Wyka of Langan. The weather at the time of the inspection was clear and with a temperature of about 45°F. Langan was accompanied by Keith Murray (Gorton & Partners, LLC) during the Site reconnaissance. The reconnaissance of Lot 10 was performed at 8:00AM on May 22, 2013 by Gregory C. Wyka of Langan. The weather at the time of the inspection was cloudy with a temperature of about 70°F.

6.2 General Site Setting and Reconnaissance Observations

Lot 1

75 Clarkson Street

The one-story building was constructed of concrete and brick with a slab-on-grade foundation and interior sheetrock walls. The building was occupied by an adult cabaret establishment and included dance floors, eating and drinking areas, a kitchen, and multiple bathrooms. The interior floors were improved with ceramic tiles and roll-on vinyl sheet flooring. Interior wall paint was generally in good condition. Ceilings in the building were open with suspended mechanical and electrical equipment. The rooftop area was improved with a rolled-on, built-up asphalt roof with flashing at the seams and roof penetrations that appeared to be in good condition. Two 5-gallon containers of roofing adhesive were observed on the rooftop.

354 West Street

The one-story building with a basement was constructed of concrete and brick and interior wood panel and/or plaster walls improved with mirrored-glass in areas. The building was occupied by an adult video rental store and adult cabaret establishment that was under construction/renovation. The interior floors were improved with ceramic tiles and 1' x 1' vinyl tiles. Interior wall paint was generally in good condition. The ceiling in the retail store area was constructed of 2' x 2' suspended ceiling tiles. The ceiling in the dance floor area was constructed of 2' x 4' suspended ceiling tiles. Langan observed ceiling mounted fluorescent lighting assemblages in the retail store and dance floor areas. The basement was improved with brick walls, a concrete floor and a French drain system. Pools of water were observed on the concrete floor. Probable mold was observed on the walls, ceiling and exposed floor beams. The basement at 354 West Street was shared with the two-story building at 356 West Street. The rooftop area was improved with a rolled-on, built-up asphalt roof that appeared to be in good condition. One five-gallon container of asphalt roofing tar was observed on the rooftop.

356 West Street

The two-story building with a basement was constructed of concrete and brick. The building was occupied by an automobile repair garage on the ground floor and an office and storage area on the second story. The concrete floor of the garage was in good condition, but heavily stained in areas. No significant perforations, cracks, or migration pathways (i.e. floor drains or sumps) were observed in the concrete floor with the exception of two 1" diameter holes in the southwest corner of the garage; the holes did not appear to extend below the concrete floor. The interior wall paint was in poor condition. The following equipment and items were observed in the garage: one hydraulic lift, two 55-gallon steel drums of waste oil on a wooden pallet, auto batteries, spare parts (engines, brake rotors, suspension leaf springs, mufflers, and tires), typical automotive liquids (6-packs of motor oil, windshield washer fluid, engine coolant, grease, and cleaning supplies), compressors, propane tanks, and tool chests and cabinets. A containment vessel for hydraulic fluid was located next to the hydraulic lift. The concrete floor was heavily stained in the vicinity of the hydraulic lift and containment vessel. Sorbent pads were observed on the concrete floor next to the hydraulic lift, which indicated a past release of hydraulic oil to the concrete floor. The two 55-gallon drums were located above the former location of a 275-gallon waste oil UST. The concrete floor was heavily stained in the vicinity of both drums. The basement was improved with brick walls, a concrete floor and a French drain system. Pools of water were observed on the concrete floor. Probable mold was

observed on the walls, ceiling and exposed floor beams. The basement at 356 West Street was shared with the one-story building at 354 West Street. The rooftop area was improved with a rolled-on, built-up asphalt roof that appeared to be in good condition

Lot 4

The one-story building was constructed of concrete, brick, wood and aluminum with a slab-on-grade foundation. A wooden patio and open space were present in the rear and side of the building, respectively. The building was vacant and appeared to be formerly occupied by a restaurant/diner. The building was in very poor condition with heaps of garbage present in the building interior and open space surrounding the building. The interior floors were improved with ceramic tiles, 1' x 1' vinyl tiles, and 2' x 2' terrazzo tiles. The ceiling was in poor condition and constructed of aluminum framing and wood paneling. An old refrigerator, walk-in freezer and grease trap were observed in the kitchen area. The rooftop area was improved with a rolled-on, built-up asphalt roof that appeared to be in poor condition.

Lot 5

The three-story building was constructed of concrete and brick with a slab-on-grade foundation and interior sheetrock walls on the second and third stories. The building was occupied by a hardware store on the ground floor and included product storage and display space and one bathroom. Interior wall paint was generally in good condition. The hardware store sold steel reinforcement supplies and parts as well as five-gallon buckets of exterior patching cement. The second and third stories were currently under construction/renovation for use as commercial space. Ceiling-mounted space heaters were observed on the ground floor. The ceiling on the ground floor was open with suspended mechanical and electrical equipment. Electrical baseboard heaters were observed on the second and third stories. The interior floors of the second and third stories were improved with wood panel flooring. The ceiling on the second and third stories was constructed of sheetrock and improved with recessed incandescent light fixtures. A hot water heater was observed on the second and third stories. The rooftop area was improved with a rolled-on, built-up asphalt roof that appeared to be in good condition. One skylight with caulking around the window panes was observed on the rooftop. One roof drain was observed on the rooftop.

Lot 8

The vacant one-story building with a second story addition in the rear of the building and a partial basement was constructed of concrete and brick with interior sheetrock walls. The building was formerly occupied by an automobile repair garage, car wash and express oil change shop. The second story addition was a former residential apartment. The partial basement where three 1,000-gallon used oil/waste oil ASTs, one 500-gallon used oil/waste oil AST and three 500-gallon temporarily-out-of-service ASTs were apparently located was not accessible and therefore not inspected as part of the Site reconnaissance. Trench drains were observed under the roll-up gate at West Street and one of the three roll-up gates along Leroy Street.

The interior of the one-story building included a cashier booth and lobby, an express oil change pit (approximately 40 feet in length and 3 feet in width), a car wash track and collection basin, tire racks and storage, multiple open rooms (presumably the location of the former automobile repair garage and storage areas), multiple bathrooms and a utility closet with a hot water heater. Concrete flooring was observed in and around the oil change pit and car wash and throughout the former automobile repair garage areas. The interior floors improved with ceramic tiles in the lobby area and bathrooms and 1' x 1' vinyl tiles in the former storage rooms. Fluorescent lighting assemblages were observed throughout the interior of the building. Interior wall paint was generally in poor condition. The express oil change pit was full of petroleum. Four vent pipes and three fill ports were observed in the vicinity of the oil change pit near the rollup gate at Leroy Street. The concrete flooring in the vicinity of the oil change pit was in good condition, but heavily stained near the roll-up gate at West Street. The trench drain at this roll-up gate was dry, but heavily stained. One hydraulic lift and one multilevel sump were observed in the former automobile repair garage areas. The following storage containers were observed in the building: one 55-gallon plastic drum of high gloss wax, one 55-gallon plastic drum of malodor destroyer with biozyme, one 55-gallon plastic drum with unknown contents, one 55-gallon corroded steel drum with unknown contents, and one 55-gallon steel drum with white kerosene.

The interior of the second-story rear addition included a kitchen area, three bedrooms, one bathroom, and access to the rooftop above the one-story structure. The interior floors were improved with wood panel flooring. Interior wall paint was generally in good condition with the exception of a few areas where obvious signs of water damaged was observed.

The rooftop area of the one-story structure was improved with a rolled-on, built-up asphalt roof that appeared to be in good condition with flashing at the seams. Multiple skylights with caulking around the window panes were observed on the rooftop. One roof drain was observed on the rooftop.

Lot 10

The two-story building was constructed of concrete and brick with a slab-on-grade foundation and interior painted plaster walls. The building was formerly occupied by a pasta manufacturing facility. A business placard on the building's façade identified the owner and/or tenant as "Raffeto's Corp: Makers of Fresh Pasta Since 1906." The ground floor included a loading dock, multiple freezer/refrigerator rooms, and one central manufacturing room. Fluorescent lighting assemblages were observed throughout the ground floor. Suspended 2' x 4' ceiling tiles were observed in the hallways and in the loading dock. The ceiling was open in a few areas; suspended and insulated mechanical and electrical equipment was observed. A hot water heater was observed on the ground floor. The second story was formerly used as office space; desks, computers and filing cabinets were observed. Fluorescent lighting assemblages and tracked-mounted incandescent lighting fixtures were observed throughout the second story. The interior floors on the second story were improved with 1' x 1' vinyl floor tiles and/or carpeting. Suspended 2' x 4' ceiling tiles were observed throughout the second story. The ceiling was open in a few areas; suspended and insulated mechanical and electrical equipment was observed. The rooftop area of the two-story structure was improved with a rolled-on, built-up asphalt roof that appeared to be in good condition with flashing at the seams.

Pits, Ponds, Lagoons

Langan did not observe pits, ponds, or lagoons at Lots 1, 4, 5 or 10. An oil change pit that was full of waste oil was identified in Lot 8. This observation was an atypical condition as oil change pits in auto garages are normally accessible and not filled to grade level with oil. It is assumed that Lot 8 was flooded during Tropical Storm Sandy.

Pools of Liquid

With the exception of small pools of water in the basement of 354 and 356 West Street, Langan did not observe any pools of liquids at Lot 1. Langan did not observe pools of liquids at Lots 4, 5, and 10. A pool of waste oil was identified in the oil change pit at Lot 8.

Storm Drains, Wells, and Cisterns

Langan did not observe floor drains, wells or cisterns at Lots 1, 4, or 5. One floor drain adjacent to the oil change pit was identified at Lot 8. Multiple floor drains were observed on the ground floor of the two-story building on Lot 10.

Polychlorinated Biphenyl (PCB) Transformers and Suspect Equipment

Langan observed fluorescent lighting assemblages with suspected mercury containing light fixtures and suspected PCB-containing ballasts at Lots 1 (354 West Steet), 8, and 10.

Storage Containers and Drums

Langan identified two 55-gallon steel drums of waste oil and multiple six-packs of new motor oil at Lot 1 (356 West Street). In addition, one 55-gallon plastic drum of high gloss wax, one 55-gallon plastic drum of malodor destroyer with biozyme, one 55-gallon plastic drum with unknown contents, one 55-gallon corroded steel drum with unknown contents, and one 55-gallon steel drum with white kerosene were identified at Lot 8. Additional storage containers and drums were reportedly observed in the partial basement below the oil change pit in Lot 8 during Langan's 2012 site investigation. The partial basement was not accessible during the Site reconnaissance due to flooding. Langan did not observe any storage containers or drums in Lot 10.

Air Emissions or Wastewater Discharges

Langan did not observe evidence of air or wastewater discharges at the Site.

Sumps

Langan did not observe sumps at Lots 1, 4, or 5. Langan observed one sump in the area of the former automobile repair garage in Lot 8. Langan observed one sump on the ground floor near the Leroy Street entrance in the two-story building on Lot 10.

USTs or ASTs

Langan did not observe USTs or ASTs at Lot 1, 4, 5 or 10. Langan did not observe USTs or ASTs at Lot 8; however, four vent pipes and three fill ports (indicative of USTs and/or ASTs) were identified. According to the regulatory databases searched as part of this Phase I ESA, three in-service 1,000-gallon ASTs and one in-service 500-gallon AST were registered for 160

Leroy Street (Lot 8). According to Langan's 2012 ESI Report, four ASTs were observed in the partial basement below the oil change pit. The partial basement was not accessible during the Site reconnaissance.

Monitoring Wells or Remedial Activities

No monitoring wells were observed within the physical boundaries of the Site. However, one monitoring well was observed in the sidewalk to the north of 359-361 West Street / 160-162 Leroy Street adjacent to Leroy Street. This well is an observation well installed by Langan for a geotechnical investigation. This monitoring well is not indicative of a previous environmental investigation.

Stained or Discolored Soil

Langan did not observe stained or discolored soil at Lot 1, 4, 5 or 10. Stained and discolored soil was identified in Lot 8 within the collection basin of the car wash track.

Leachate or Seeps

Langan did not observe leachate or seeps at the Site.

Adjoining and Surrounding Property Uses

The Site consists of four adjoining properties within the city block bordered by Leroy Street to the north, West Street to the west, Clarkson Street to the south, and Washington Street to the east. The Site is adjoined to the north, south and east by multistory residential building with ground-level retail space and multistory commercial buildings. Pier 40 and Hudson River Park were located to the west of the Site across West Street. The surrounding area beyond the adjoining properties consisted of multistory residential and commercial buildings with ground-level, retail, entertainment, and restaurant uses. A private gasoline filling station operated by the United Parcel Service was located on the adjoining block to the southeast.

Site Reconnaissance Conclusions

The Site reconnaissance revealed the following on-site RECs:

- Floating oil in the express oil change pit at 359-361 West Street and 160-162 Leroy Street (Lot 8) led to the reporting of a spill to the NYSDEC on April 8, 2013. The NYSDEC assigned Spill No. 13-00212 to the case.
- Current use of 356 West Street (Lot 1) as an automobile repair garage is considered an on-site REC. Evidence of poor housekeeping practices and staining around the hydraulic lift, 55-gallon drums of waste oil, and throughout the garage were observed during the inspection.
- Current on-site petroleum bulk storage at 359-361 West Street and 160-162 Leroy Street (Lot 8) is considered an on-site REC. A release from these ASTs is presumed to be the source of NYSDEC Spill No. 13-00212. The ASTs were not observed during the Site reconnaissance because the basement was flooded and inaccessible.

The Site revealed evidence of the following non-scope environmental conditions:

- Fluorescent lighting assemblages with suspected mercury containing light fixtures and suspected PCB-containing ballasts based on the age of the buildings;
- Suspected lead-based paint, based on the age of the buildings on the Site;
- Caulking on skylight windows may contain PCBs, lead and/or asbestos;
- Suspected asbestos containing material (ACM). Suspected ACM identified at the Site included, but is not limited to the following:
 - Rolled-on asphalt roofing;
 - Flashing at seams of roll-on asphalt roofing, flashed seals of terracotta shingles, and flashing around the parapet and rooftop penetrations;
 - Caulking on skylight windows;
 - Sheetrock and plaster wallboard;
 - Piping insulation;
 - Cove base and mastic;
 - 1' x 1' vinyl floor material and mastic;
 - 2' x 2' terrazzo floor material and mastic;
 - 2' x 2' ceiling tiles
- Suspect mold identified in the basement of 354 West Street and 356 West Street (Lot 1).

7.0 INTERVIEWS

7.1 Site Owner

As per ASTM E1527-05, a questionnaire was provided to the Owners/Operators/Site Managers in order to obtain specialized Owner/Operator/Site Manager knowledge.

Lot 1

Bergnat Realty Associates LP, the owner of Lot 1, completed the ASTM E1527-05 Owner/Operator/Site-Manager Questionnaire on May 7, 2013. Bergnat Realty Associates LP did not know of the following:

- Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property;
- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property;
- Any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products;
- Any environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for underground and aboveground storage tanks, material safety data sheets, community-right-to-know plan, spill prevention plans, safety plans, hydrogeological condition reports, notices or other correspondence from any governmental agency relating to past or current violations of environmental laws or environmental liens with respect to the property, hazardous waste generator notices or reports, geotechnical studies, risk assessments, recorded activity and use limitations, and environmental cleanup reports; and
- The previous owner, occupant and facility manager of Lot 1.

The completed Owner questionnaire for Lot 1 is included in Appendix M.

Lot 4

APMM Leroy LLC, the owner of Lot 4, completed the ASTM E1527-05 Owner/Operator/Site-Manager Questionnaire on May 1, 2013. APMM Leroy LLC did not know of the following:

- Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property;
- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property;
- Any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products;
- Any environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for underground and aboveground storage tanks, material safety data sheets, community-right-to-know plan, spill prevention plans, safety plans, hydrogeological condition reports, notices or other correspondence from any governmental agency relating to past or current violations of environmental laws or environmental liens with respect to the property, hazardous waste generator notices or reports, geotechnical studies, risk assessments, recorded activity and use limitations, and environmental cleanup reports; and
- The previous occupant and facility manager of Lot 4.

APMM Leroy LLC indicated it had knowledge of previous geotechnical studies and the contact information for the previous owner of the property. The completed Owner questionnaire for Lot 4 is included in Appendix M.

Lot 5

Hugh A. Feinberg, the Site Manager of Lot 5, completed the ASTM E1527-05 Owner/Operator/Site-Manager Questionnaire on May 7, 2013. Mr. Feinberg did not know of the following:

- Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property;
- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property; and
- Any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

- Any environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for underground and aboveground storage tanks, material safety data sheets, community-right-to-know plan, spill prevention plans, safety plans, hydrogeological condition reports, notices or other correspondence from any governmental agency relating to past or current violations of environmental laws or environmental liens with respect to the property, hazardous waste generator notices or reports, geotechnical studies, risk assessments, recorded activity and use limitations, and environmental cleanup reports.

Mr. Feinberg indicated that he did not know the previous owner, occupant or facility manager of Lot 5. The completed Owner questionnaire for Lot 5 is included in Appendix M.

Lot 8

APMM Leroy LLC, the owner of Lot 8, completed the ASTM E1527-05 Owner/Operator/Site-Manager Questionnaire on May 1, 2013. APMM Leroy LLC did not know of the following:

- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property;
- Any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products;
- Any environmental compliance audit reports, environmental permits, registrations for underground and aboveground storage tanks, material safety data sheets, community-right-to-know plan, spill prevention plans, safety plans, notices or other correspondence from any governmental agency relating to past or current violations of environmental laws or environmental liens with respect to the property, hazardous waste generator notices or reports, risk assessments, and recorded activity and use limitations; and
- The previous facility manager of Lot 8.

APMM Leroy LLC indicated it had knowledge of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from Lot 8 (NYSDEC Spill #13-00212). APMM Leroy LLC also indicated it had knowledge of previous environmental site assessment reports, hydrogeological condition reports, geotechnical studies, and environmental cleanup reports for Lot 8. In addition, APMM Leroy LLC indicated it

had knowledge of the previous owner and previous occupant of the Lot 8. The completed Owner questionnaire for Lot 8 is included in Appendix M.

Lot 10

APMM Leroy LLC, the owner of Lot 10, completed the ASTM E1527-05 Owner/Operator/Site-Manager Questionnaire on May 1, 2013. APMM Leroy LLC did not know of the following:

- Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property;
- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property;
- Any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products;
- Any environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for underground and aboveground storage tanks, material safety data sheets, community-right-to-know plan, spill prevention plans, safety plans, hydrogeological condition reports, notices or other correspondence from any governmental agency relating to past or current violations of environmental laws or environmental liens with respect to the property, hazardous waste generator notices or reports, geotechnical studies, risk assessments, recorded activity and use limitations, and environmental cleanup reports; and
- The previous occupant and facility manager of Lot 10.

APMM Leroy LLC indicated it had knowledge of previous geotechnical studies and the contact information for the previous owner of the property. The completed Owner questionnaire for Lot 10 is included in Appendix M.

7.2 Site Occupants

No occupants/tenants of the Site were interviewed during Site Reconnaissance with the exception of an employee of #1 Auto Tech Group of 356 West Street. The employee stated that one 275-gallon waste oil UST was closed and removed from the property in January 2013. The employee provided photographs of the UST removal work, a copy of the NYSDEC PBS

closure application and a receipt for the waste oil pumped from the UST. The tank appeared to be in good condition with no significant perforations or visible signs of damage and the material in the UST grave did not appear to be visually impacted with petroleum. In total, 225 gallons of waste oil were removed from the UST. After the UST was removed, the UST grave was backfilled with fragments of concrete block. The employee was unaware of whether environmental samples (i.e. soil and/or groundwater) were collected and analyzed as part of the UST removal work.

7.3 Owners/Tenants of Adjoining and Surrounding Properties

Owners/tenants of adjoining properties were not interviewed as part of this Phase I ESA.

8.0 ADDITIONAL SERVICES

8.1 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

According to the USEPA radon map, Manhattan is considered a Zone 3 area, which indicates the predicted average indoor radon levels are less than 2 picoCuries per liter (pCi/L). The New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to the NYSDOH, a total of 61 radon tests have been conducted in New York County with results indicating that 0.9 % of living areas and 4% of basements have radon concentrations above 4 pCi/L, the USEPA action level. It is unlikely that elevated levels of radon gas are present at the Site. A USEPA radon map is provided as Appendix N.

8.2 Asbestos-Containing Material, Lead-Based Paint, and PCBs

An intrusive survey to identify ACM, lead-based paint (LBP) and/or PCB-containing material was not conducted as part of this Phase I ESA. However, evidence of suspected ACM, LBP and PCB-containing material was observed during the Site reconnaissance. A description and list of the suspected ACM, LBP and PCB-containing material identified at the Site is provided in Section 6.2.

9.0 DEVIATIONS

Langan has performed a Phase I ESA of the Subject Properties utilizing a standard of good commercial and customary practice that is consistent with the ASTM E1527-05 and the 40 Code of Federal Regulations (CFR) Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

9.1 Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in

the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E 1527-05, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion.

As noted in Section 6.2, Langan was unable to inspect the partial basement of the building located at 359-361 West Street and 160-162 Leroy Street (Lot 8) due to access restrictions related to NYSDEC Spill No. 13-00212. The inability to inspect this areas is a deviation in scope and a data gap with respect to the ASTM Standard E-1527-05. However, the lack of an inspection in this area is not expected to significantly affect the findings of this Phase I ESA in regards to the identification of on-site RECs, HRECs and *DeMinimis* conditions as at least one or more of the ASTs located in the partial basement of the building located at Lot 8 leaked as a result of the flooding from Tropical Storm Sandy.

10.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Phase I ESA was conducted in accordance with the ASTM Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-05 as a REC.

Recognized Environmental Conditions (RECs)

The following RECs were identified at the Site:

REC 1 – Open Petroleum Spill

At least four feet of floating oil, presumably caused by flooding associated with Tropical Storm Sandy, was identified in the maintenance pit at the former express oil change at 359-361 West Street and 160-162 Leroy Street (Lot 8) during the site reconnaissance completed as part of this Phase I. In response to this finding, the New York State Department of Environmental Conservation (NYSDEC) was notified and NYSDEC Spill No. 13-00212 was assigned on April 8, 2013. The open petroleum spill case is considered a REC as it represents an existing release to structures on the property, a material threat of release to the ground and groundwater, and is subject to enforcement action by a regulatory agency.

REC 2 – Current Use of the Site

Current use of 356 West Street (Lot 1) as an automobile repair garage is considered a REC as potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically used by such a facility may have adversely impacted soil, groundwater, and/or soil vapor at the property. Evidence of poor housekeeping practices, including staining around the hydraulic lift, 55-gallon waste oil drums, and throughout the garage floor were identified during the site reconnaissance.

REC 3 – On-Site Petroleum Bulk Storage

Seven aboveground storage tanks (ASTs) are present at 359-361 West Street and 160-162 Leroy Street (Lot 8), including three 1,000-gallon lube oil ASTs, one 500-gallon waste oil AST and three 500-gallon temporarily-out-of-service ASTs. A release from these ASTs is presumed to be the source of NYSDEC Spill No. 13-00212. The ASTs were not observed during the Site reconnaissance because the basement was flooded and inaccessible. A subsurface investigation was completed by Langan in 2012 to investigate historic releases associated with

these ASTs and no adverse impacts to soil, groundwater, and soil vapor were identified. However, based on the change in conditions at the Site since Tropical Storm Sandy and the release that is presumed to be associated with these ASTs, the release may have also impacted soil, soil vapor, and/or groundwater; on-site petroleum bulk storage is a REC.

REC 4 – Historical On-Site Petroleum Bulk Storage

A 275-gallon waste oil UST was removed and closed at 356 West Street (Lot 1) in January 2013. Although the UST was removed and closed and there is no documentation of a release, historical on-site petroleum bulk storage is considered a REC as it is unclear if environmental samples (i.e. soil and groundwater) were collected and analyzed as part of the UST removal work – a deviation from standard industry practice. Leaks or spills of petroleum from the former UST at Lot 1 may have adversely impacted soil, groundwater and/or soil vapor at Lot 1.

REC 5 – Historic Use of the Site

The historical use of Lot 10 as an automobile repair shop is considered a REC as potential leaks and/or spills of petroleum, solvents, or other hazardous substances typically used by such a facility may have adversely impacted soil, groundwater, and/or soil vapor at the property.

There were no Historic RECs identified at the Site. The following off-site Historic RECs (HRECs) were identified:

Historical Petroleum Spill Cases

- There are two closed petroleum spill cases associated with 149 Leroy Street, which adjoin the Site to the north across Leroy Street. The closed petroleum spill cases were associated with the discovery of petroleum-contaminated soil during removal of underground storage tanks (USTs) and a subsequent subsurface investigation. A total of 17 USTs and excavated petroleum-contaminated soil were removed from the property. The spill cases are not considered RECs as the spills were remediated to the satisfaction of the NYSDEC and were administratively closed, but are considered HRECs as they involved past releases of petroleum at an adjoining property.
- Two closed petroleum spill cases associated with 560 Washington Street, which adjoins the Site to the south across Clarkson Street. The spill cases are not considered RECs as the spills were remediated to the satisfaction of the NYSDEC and were administratively

closed, but are considered HRECs as they involved a past release of petroleum at an adjoining property.

- One closed petroleum spill case associated with 330 West Street, which adjoins the Site to the south across Clarkson Street. The spill case is not considered a REC as the spill was remediated to the satisfaction of the NYSDEC and was administratively closed, but is considered an HREC as it involved a past release of petroleum at an adjoining property.

De Minimis Conditions

De Minimis conditions were not identified at the Site.

The following off-site *De Minimis* conditions were identified:

In-Service Petroleum Bulk Storage

- Active petroleum bulk storage at 148 Leroy Street, 333 West Houston Street, and 560 Washington Street are considered off-site *De Minimis* conditions as the tanks store petroleum products, but are not affiliated with an open spill case, are generally not a threat to human health or the environment and are generally not subject to enforcement action by an agency.

Historical Use of Adjoining and Adjacent Properties

- The historical use of the adjoining property to the east of the Site (Block 601, Lot 13) as a railroad right-of-way is considered an off-site *De Minimis* condition. Environmental conditions typically associated with railroad rights-of-way include petroleum, metals, PCBs, pesticides and herbicides. However, since no historical spills or releases were associated with the property, the property's historical use is generally not a threat to human health or the environment and generally not subject to regulatory enforcement action, and the property's historical use is not an HREC, the property's historical use is considered an off-site *De Minimis* condition.

Additional Environmental Concerns

The following non-scope additional environmental conditions were identified at the Site:

-
- Based on a review of historic maps, the original shoreline of the Hudson River was east of the Site; The Site was built on made land. The presence of historic fill was confirmed during Langan's 2012 subsurface investigation. Excess historic fill material will likely be managed as a regulated solid waste after it is excavated and removed from the Site.
 - Rodent habitation and animal nuisance conditions.
 - Fluorescent lighting assemblages with suspect mercury containing light fixtures and PCB-containing ballasts;
 - Suspect lead-based paint;
 - Caulking on skylight windows which may contain PCBs, lead and/or asbestos;
 - Suspect asbestos containing material (ACM). Suspected ACM identified at the Site included, but is not limited to the following:
 - Rolled-on asphalt roofing;
 - Flashing at seams of roll-on asphalt roofing, flashed seals of terracotta shingles, and flashing around the parapet and rooftop penetrations;
 - Caulking on skylight windows;
 - Sheetrock and plaster wallboard;
 - Piping insulation;
 - Cove base and mastic;
 - 1' x 1' vinyl floor material and mastic;
 - 2' x 2' terrazzo floor material and mastic;
 - 2' x 2' ceiling tiles; and
 - Suspect mold identified in the basement of 354 West Street and 356 West Street (Lot 1)

12.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312.10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Properties. They have developed and performed the AAs in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix O.

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

USER QUESTIONNAIRE

ASTM PRACTICE E 1527-05: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering and Environmental Services Inc.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

General Information

User/Client Name (s): IS LEROY DEVELOPMENT LLC

Property Name: LEROY STREET CONDOMINIUM

Address: BLOCK 601

LOTS 1, 4, 5, 8 and 10

Property Type: VACANT

Type of Property Transaction:

- Purchase of property
- Financing of property
- Sale of property
- Ground Lease
- Build to Suit Lease

Other DEVELOPMENT, REAL ESTATE

Reason Why Phase I ESA is required: BSA Approval

Site Contact (s): FOR ACCESS: RAY DELSAVIO
GORTON + PARTNERS

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.]

Yes No

(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any activity and use limitations and to report these limitations to the environmental professional conducting a Phase I Environmental Site Assessment.]

Yes No

(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes No

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

- (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4b and 4c.]
- (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
- (c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.

Yes No

(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property?
- (b.) Do you know of specific chemicals that are present or once were present at the property?
- (c.) Do you know of spills or other chemical releases that have taken place at the property?
- (d.) Do you know of any environmental cleanups that have taken place at the property?

Yes No

(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes No

LOT #8 ONLY

SIGNATURE:

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

APPENDIX C
PREVIOUS ENVIRONMENTAL REPORTS

September 28, 2012

Raymond L. Del Savio
Gorton & Partners, LLC
21 West 38th Street, 6th Floor
New York, NY 10018

**Re: Environmental Site Investigation Report
359 West Street
New York, New York
Langan Project No.: 170215701**

Dear Mr. Del Savio:

On behalf of Gorton & Partners, LLC, Langan prepared this environmental site investigation report in support of your due diligence of the property at 359 West Street in Manhattan, New York (the site). The objective of this environmental investigation is to supplement the findings from the Phase II Environmental Site Investigation (ESI), performed by IVI Environmental, Inc. (IVI) in July 2007, in order to better evaluate subsurface environmental conditions. This report includes a summary of the background and existing data, a description of our field investigation procedures including soil, groundwater and soil gas sampling, analytical results and our conclusion and recommendations.

PROJECT BACKGROUND

We understand that the building occupying 359 West Street will be demolished to allow for redevelopment. The foundation design has not yet been finalized. For this investigation, we evaluated soil conditions to 12 feet below the slab.

Site Location and Description

The site is identified as Block 601, Lot 8 on the City of New York official tax maps and located on the northwest corner of the city block bound by Leroy Street to the north, Washington Street to the east, Clarkson Street to the south and West Street to the west. A site location map is included as Figure 1.

The site lot is 9,985 square feet and is improved with a two-story, 12,517 square foot building with a cellar. The cellar was used a lube pit while the building was an active carwash and lube/oil change shop. At the time of this investigation, the building was vacant.

Previous Investigations

A Phase I environmental site assessment was completed by IVI on December 28, 2005. The Phase I report was not available for review. A Phase II ESI, performed by IVI in July 2007, included completion of two soil borings, collection and analysis of two soil samples, installation of two temporary monitoring wells and collection and analysis of two groundwater samples. A complete copy of IVI's Phase II ESI is included in Attachment A. Relevant information is summarized below:

Two soil borings, B-1 and B-2, were completed to a depth of 16-feet below ground surface (bgs). Groundwater was observed approximately 10-feet bgs.

IVI did not observe visual or olfactory evidence of contamination in subsurface soils; however, elevated total organic vapor concentrations measured with a photoionization device (PID) were reported between 0.6 parts per million (ppm) and 117 ppm.

IVI submitted two soil samples, B-1 and B-2, for analysis. Soil samples were analyzed for volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and metals. Volatile organic compounds were not detected in soil. Three SVOC and four metal compounds were detected in soil at concentrations above the New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs). IVI concluded that the presence of these compounds are not indicative of a spill, but are related to historic fill material at the site.

IVI also submitted two groundwater samples, B-1 and B-2, for analysis. Groundwater samples were analyzed for VOC, SVOC and metals. No compounds were detected at concentrations above the NYSDEC Technical and Operational Guidance Series (TOGS) Class GA Water Quality Standards (WQS).

FIELD INVESTIGATION

The purpose of this investigation is to evaluate subsurface conditions and supplement the findings IVI's Phase II. Our field activities were performed on September 17, 2012 and consisted of the following:

- Observation and inventory of site cellar/oil change pit;
- Advancement of two soil borings and collection and analysis of four soil samples (two from depths of 3 to 5 feet, one from 7 to 9 feet, and one from 10 to 12 feet below the slab);
- Installation of two temporary monitoring wells screened at 5 to 15 feet and 10 to 20 feet below the slab;
- Collection and analysis of two groundwater samples, and;
- Installation of one sub-slab soil vapor point and analysis of one sub-slab soil vapor sample.

Photographs documenting our field investigation are included as Attachment B.

Site Observation and Inventory

Langan observed and inventoried the lube/oil change pit. The area was entered via a wall ladder at the western end of the oil change pit. The following is a summary of significant observations:

- Four Lube Cube® above ground storage tanks (ASTs) were observed in the cellar. Signage indicated the ASTs contained motor oil 10W-30 and appeared to be in good condition. The contents could not be confirmed; however, Langan observed liquids in each AST.
- Two, plastic, 55-gallon drums were observed in the cellar. The drums appeared to be in good condition with no signs of leakage or corrosion. The contents of each drum could not be confirmed; however, liquid was identified in each drum.
- Three steel drums, consisting of one 30-gallon and two 55-gallon open-topped drums, were observed in the cellar. We observed oil in each drum. Indications of leakage and corrosion were observed surrounding the 30-gallon drum.
- The cellar floor is concrete and in general good conditions (free of major cracks or penetrations).
- One floor drain or possible fill port was observed at the eastern end of the cellar (see Photo 5 in Attachment B). An oily-like fluid was observed in the drain and evidence of staining was observed on the floor in the surrounding area.
- Indications of spillage, including residual oil and staining were observed throughout the cellar floor.

Soil Investigation

Aquifer Drilling and Testing, Inc. (ADT) of Mineola, New York completed the soil borings, well installations, and soil vapor sampling point installation. ADT advanced two soil borings (SB-1 and SB-2) to depths of 15 and 20 feet bgs using a track-mounted, Geoprobe® 6610 direct-push sampler. Soil samples were collected continuously into five-foot Macro-Core® sample barrels with dedicated acetate liners. Soil samples were inspected for visual and olfactory evidence of contamination and screened for total organic vapors with a PID equipped with a 10.6 electron volt lamp. Field observations were documented in boring logs, which are included as Attachment C. Boring locations are shown in Figure 2.

Four grab soil samples were collected into laboratory-supplied containers and delivered via courier under standard chain-of-custody protocol to Chemtech Environmental Laboratories, Inc (Chemtech), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) accredited laboratory in Mountainside, New Jersey. Langan collected one grab sample from fill and one from the capillary fringe at each location. The fill sample was collected because of elevated PID readings and observed ash and other anthropogenic material. The capillary fringe sample was collected to assess the unsaturated soil and groundwater interface and because no other indications of contamination was observed.

Grab soil samples from fill were analyzed for target compound list (TCL) VOCs by Environmental Protection Agency (EPA) method 8260, TCL SVOCs by EPA method 8270, target analyte list (TAL) metals by EPA Methods 6010B/7471A, polychlorinated biphenyls (PCB) by EPA method 8082, pesticides by EPA method 1699 and herbicides by EPA method 8151. Grab soil samples collected from the capillary fringe were analyzed for TCL VOC, TCL SVOC and TAL metals only. Grab VOC soil samples were collected with Encore™ soil sampling kits.

Groundwater Investigation

ADT installed temporary groundwater monitoring wells (TMW-1 and TMW-2) at each boring by inserting one-inch diameter, schedule 40 polyvinyl chloride (PVC), 0.01-inch, 10-foot-long, slotted screen and attached riser into the open borehole. An oil-water interface probe was used to measure depth to groundwater and screen for light, non-aqueous phase liquids. Groundwater was recovered from each well using a peristaltic pump and dedicated polyethylene tubing. Prior to sample collection, groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) were recorded using a Horiba® U-52 water quality meter. Groundwater parameters are provided in Attachment D.

Two groundwater samples were collected into laboratory-supplied glassware and delivered via courier service under standard chain-of-custody protocol to Chemtech. Groundwater samples collected from wells TMW-1 and TMW-2 were analyzed for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, TAL metals by EPA Methods 6010B/7471A, PCBs by EPA Method 8082, pesticides by EPA Method 1699 and herbicides by EPA Method 8151. Temporary monitoring well locations are shown in Figure 2.

Soil Vapor Investigation

ADT installed a gas vapor implant 6 inches below the slab. ADT penetrated the concrete slab with a hammer drill and inserted the gas vapor implant into the open borehole. Prior to sample collection, each sampling point was purged using a PID at a rate of 0.5 liters per minute (L/min) to evacuate a minimum of three sample tubing volumes. As a quality assurance/quality control (QA/QC) measure, an inert tracer gas (helium) was introduced into an above-grade sampling chamber and then a helium detector was attached to the tubing. This step ensured that the soil vapor sampling point was properly sealed above the target sampling depth and confirmed that ambient air did not infiltrate the subsurface during sampling.

Soil vapor samples were collected into laboratory-supplied, batch-certified six-liter Summa® canisters that were calibrated for a sampling rate of 0.05 L/min for 120 minutes of sampling. The collected samples were delivered via courier service to Chemtech under standard chain-of-custody protocol and analyzed for VOCs by EPA Method TO-15. Soil vapor sample logs are provided in Attachment E.

OBSERVATIONS AND RESULTS

Subsurface Observations

Historic fill, consisting primarily of fine to coarse sand with some silt, gravel, brick, concrete, and ash, extends from ground surface to depths ranging between 7 feet (SB-1) and 10 feet bgs (SB-2). Fine sand interlayered with silt underlies the fill. The depth to groundwater was 9.5 in TMW-1 and 13.1 feet in TMW-2.

Visual and olfactory evidence of contamination was not observed in soil or groundwater at the site. Elevated PID readings were observed in historic fill. PID readings up to limits of the instrument (9,999 ppm) were observed at 4 feet bgs in each boring. PID readings steadily decreased with depth at each location to 0.1 ppm at termination depth.

Analytical Results

Complete analytical results for soil, groundwater and sub-slab soil vapor samples are included as Attachment F. Significant results are summarized below.

Soil Sample Results

Analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). The analytical results are summarized in Table 1 and presented on Figure 2.

Volatile Organic Compounds

One VOC, tetrachloroethene, was detected in soil sample in LB-1 (3-5) at a concentration below its Unrestricted Use SCO.

Semi Volatile Organic Compounds

Twenty SVOCs were detected in one or more samples, including seven at concentrations greater than the Unrestricted Use SCOs. The following SVOCs were detected at concentrations greater than their respective Unrestrictive Use SCOs:

- Benzo(a)anthracene
- Benzo(a)pyrene
- Benzo(b)fluoranthene
- Benzo(K)fluoranthene
- Chrysene
- Dibenz(a,h)anthracene
- Indeno(1,2,3-cd)pyrene

These polycyclic aromatic hydrocarbons (PAH) are commonly found in historic urban fill and only exceeded the SCOs in samples collected from the fill layer and is likely due to the ash observed in the fill.

Polychlorinated Biphenyls, Pesticides and Herbicides

No PCB or herbicides were detected in soil samples. One pesticide compound, methoxychlor, was detected in fill samples LB-1 (3-5) and LB-2 (3-5) at concentrations of 0.092 milligrams per kilogram (mg/kg) and 0.11 mg/kg. An Unrestricted Use SCO does not exist for methoxychlor; however, the CP-51 / Soil Cleanup Guidance Supplemental Soil Cleanup Objective for methoxychlor is 100 mg/kg.

Metals

Twenty one metals were detected in one or more samples, including three at concentrations greater than the Unrestricted Use SCOs. The following metals were detected at concentrations greater than their respective SCOs:

- Copper
- Lead

- Mercury

Groundwater Results

Analytical results were compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance values for Class GA groundwater. Analytical results are summarized in Table 2 and presented on Figure 2.

VOCs, SVOCs, PCBs Pesticides and Herbicides

No VOC, PCB, pesticides or herbicides were detected in groundwater samples.

Total Metals

Fifteen metals were detected in one or more samples, including four at concentrations above the TOGS Class GA AWQS. The following metals were detected above their respective AWQS:

- Iron
- Magnesium
- Manganese
- Sodium

These metals were also detected in soil samples collected during this investigation.

Dissolved Metals

Thirteen metals were detected in one or more samples, including four at concentrations above the TOGS Class GA AWQS. The following metals were detected above their respective AWQS:

- Iron
- Magnesium
- Manganese
- Sodium

These metals were also detected in soil samples collected and were reported at similar concentrations for total metals.

Sub-Slab Soil Vapor Sample Results

Sub-slab soil vapor samples were compared to the NYSDOH Air Guidance Values (AGVs). In addition, sample results were compared to several indoor air background data base concentrations that are presented in Appendix C of the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH Guidance), including Upper Fence Limit Indoor Air Values from "Table C-1 NYSDOH 2003: Study of VOCs in Air of Fuel Oil Heated Homes," 90th Percentile Indoor Air Values from "Table C-2 – EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method," and the 95th Percentile Indoor Air Values from "Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air". The analytical results for subsurface samples are summarized in Table 3 and are shown on Figure 2.

None of the VOCs exceeded the NYSDOH AGVs. Only acetone and o-xylene were detected at concentrations above the background comparison criteria.

CONCLUSIONS

Based on this investigation, we conclude the following:

- Shallow soil at the site consists of historic urban fill to depths of 7 to 10 feet below the slab. Native soil was observed below the fill to boring termination depths of 15 and 20 feet.
- Concentrations of SVOCs, methoxychlor, and metals above NYSDEC Part 375 Unrestricted Use SCOs were detected in samples collected from the fill. Based on our subsurface observations and review of the analytical data, the SVOCs, methoxychlor, and metals appear to be a constituent of the historic fill and are not related to a separate contaminant source.
- Soil results do not indicate the presence of characteristic hazardous waste;
- Several metals were detected and concentrations above the TOGS AWQS in groundwater. However, these compounds were also detected in soil and are attributed to historic urban fill;
- Comparison of filtered to unfiltered groundwater samples did not indicate a significant reduction in metals concentrations from filtering. From this comparison, we conclude that the detected metals are reflective of groundwater quality and minimally affected by suspended soils;
- The detected acetone and o-xylene vapor concentrations marginally exceed the anticipated indoor air background concentrations. Because these compounds were not detected in soil or groundwater samples, their presence does not warrant further remedial measures; and,
- Our review of IVI's Phase II ESI and its comparison to results of this investigation, confirms that subsurface conditions have not significantly changed.

RECOMMENDATIONS

Langan recommends the following:

- Excavated fill would be considered a regulated, non-hazardous solid waste. Soil should be handled and transported in accordance with applicable local, state and federal regulations to a disposal facility that is permitted to accept this material. This material should be properly characterized prior to transportation to an offsite disposal facility.
- Upon redevelopment, exposed soil (i.e., soil is not covered by a paved or other impermeable surface), it should be covered with at least two feet of fill material meeting the Part 375 Unrestricted Use SCO.
- The floor drain observed in the eastern end of the cellar should be further evaluated for subsurface impacts.

- ASTs, associated piping, stained concrete, petroleum containers, petroleum-impacted debris, and drums identified in the cellar and lube/oil change pit should be emptied prior to development and care should be taken to collect any residual liquid. This material should be properly characterized prior to transportation to an off-site disposal facility and handled in accordance with applicable local, state and federal regulations.

CLOSING

This environmental site investigation report was prepared expressly for Gorton & Partners, LLC for the property located at 359 West Street in Manhattan, New York and for the objectives defined herein. If you have any questions or comments, please call me at (212) 479-5559 or via email at gnicholls@langan.com.

Sincerely,

Langan Engineering & Environmental Services, Inc., PC

NOTES:

Analytical results compared to New York State Department of Environmental Conservation (NYSDEC) NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs).

Compounds detected at concentrations above the SCOs are shown in **bold**.

Compounds with a reporting limit above the applicable criteria are shown *italics*.

U -The compound was not detected at the indicated concentration.

J-Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL. The concentration given is an approximate value.

D-The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

NR-Not analyzed.

ND - None detected.

NA - Applicable criteria does not currently exist.

mg/kg-milligrams per kilogram.

Re: Phase II Environmental Site Assessment
Three Commercial Buildings
357 and 359 West Street, and 156 Leroy Street
New York, New York 10014
IVI Project No.: E7063663

Dear Mr. Torres:

IVI Environmental, Inc. (IVI) is pleased to submit this Phase II Environmental Site Assessment (“Assessment”) for the Three Commercial Buildings (the “Subject”), located at 357 and 359 West Street, and 156 Leroy Street; New York, New York. The property location is shown on the Site Location Map provided as Figure 1 in Appendix A.

The purpose of this Assessment was to address the Recognized Environmental Conditions (RECs) identified in IVI’s *Phase I Environmental Site Assessment*, dated December 28, 2005. Specifically, the following RECs were identified in the Phase I ESA:

- **Historical and Current Use of the Subject**

Some historical industrial and commercial site usages, particularly the machine shop, smelting works, freight station and auto repair shop, likely involved the usage and storage of significant quantities of hazardous materials such as petroleum products, organic solvents, heavy metals and acids. The Subject’s former industrial usages may have negatively impacted the subsurface soil and groundwater. Moreover the current Village Car Center located at 359 West Street performs automotive oil changing activities, which generates waste motor oil. The waste oil tank, which is not provided with secondary containment, appeared to be in good condition, void of leaks. However, poor housekeeping

has resulting in significant oil spillage on the surface of the concrete slab floor beneath the tank and throughout the cellar. In addition, oily water was observed in a sump pump pit adjacent to the tank.

Scope of Work

The scope of this Assessment included the following activities:

1. Subsurface utilities mark out;
2. Geophysical survey to clear the proposed boring locations;
3. Advancement of four (4) borings;
4. Collection and field screening of soil samples for volatile organic compound (VOC) contamination with a photoionization detector (PID) using the head space analysis, and;
5. Laboratory analysis of four (4) soil and four (4) groundwater samples.

Field Activities

On June 27, 2007, IVI directed the advancement of four (4) borings, denoted as B-1 through B-4, on the Subject. Specifically, two (2) borings were located inside The Village Car Center (B-1 and B-2), and two (2) borings were located inside the abandoned pasta factory at 156 Leroy Street (B-3 and B-4). The borings were advanced using a track-mounted Geoprobe® 5400DT rig operated by TPI Environmental, Inc. (TPI). The specific boring locations are shown on the Boring Location Plan provided as Figure 2 in Appendix A.

Prior to the advancement of each boring, all down-hole drilling equipment was decontaminated by TPI in accordance with EPA protocols and good commercial and customary practice. IVI collected continuous soil samples at 4' intervals using macro-core samplers for each boring. Each borings was advanced approximately 5' below the soil/groundwater interface at a depth of 16' below ground surface (bgs).

Observed soil conditions consisted predominately of reddish brown coarse to fine sand and silt to an approximate depth of 8' bgs, which was underlain with brown fine sand and silt. Of note, IVI encountered fill material at boring location B-4 to an approximate depth of 3' bgs. The fill material was composed of concrete, brick, and coal fragments, and; cinders and ash.

Groundwater was encountered at an approximate depth of 10' bgs. IVI inspected each sample for evidence of contamination and field screened the samples for VOC contamination using a PID. IVI did not observe visual or olfactory evidence of contamination. However, IVI detected elevated PID readings at each boring location at concentrations ranging between 0.2 parts per million (ppm) to 117 ppm. PID readings and surficial geology are provided on the boring logs provided in Appendix B of this report.

IVI retained a soil sample from each boring for laboratory analysis, from the interval which exhibited the greatest evidence of contamination. Specifically, the soil samples were collected at

the following depths: 4' bgs at boring B-1; 2' bgs at boring B-2; 9' bgs at boring B-3, and; at 2'; bgs at boring B-4. IVI collected groundwater samples at each of the four (4) boring locations using dedicated 1" PVC riser and screen, and polyethylene tubing. IVI transferred the collected samples to appropriate laboratory supplied containers, packed them on ice in a cooler, and sent them under proper chain-of-custody to York Analytical Laboratories (York). York analyzed the four (4) soil and four (4) groundwater samples for VOCs, semi-VOCs (base neutrals), and priority pollutant metals (metals) in accordance with EPA Methods 8260B, 8270C, and 6010, respectively. Of note, IVI filtered each groundwater sample for the priority pollutant metal analysis in the field.

Soil Analytical Results

Soil analytical results are summarized on Table 1 in Appendix C.

VOCs

The soil sample collected from boring B-4 identified the presence of naphthalene at a concentration of 0.56 milligrams per kilogram (mg/Kg), which was below its New York State Department of Environmental Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) #4046 Recommended Soil Cleanup Objectives (RSCOs) of 13 mg/Kg. No other VOCs were detected above their respective laboratory method detection limit (MDL).

Semi-VOCs

The soil samples collected from borings B-1 and B-4 identified at least twelve or more semi-VOCs above their respective laboratory MDL. The soil samples collected at borings B-1 and B-4 identified the presence of benzo(a)anthracene, benzo(a)pyrene and chrysene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 0.224 mg/Kg, 0.061 mg/Kg, and 0.4 mg/Kg. The soil sample collected at boring B-4 also identified the presence of benzo(b)- and benzo(k)fluoranthene at levels exceeding their NYSDEC TAGM #4046 RSCOs of 1.1 mg/Kg. The remaining semi-VOCs 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(g,h,i)perylene, carbozole, dibenzofuran, diethylphthalate, fluoranthene, fluorine, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and; pyrene were detected below their respective NYSDEC TAGM #4046 RSCOs.

Priority Pollutant Metals

The soil samples collected from each boring identified at least six or more metal compounds above their respective laboratory MDL. The following metals were detected above their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values: arsenic, chromium, copper, lead, nickel, and zinc. The highest concentration of metals exceeding the NYSDEC TAGM #4046 RSCOs were detected in the soil sample collected from Boring B-4.

Groundwater Analytical Results

Groundwater analytical results are summarized on Table 2 in Appendix C.

VOCs

No VOCs were detected in any of the groundwater water sample collected above their respective laboratory MDL.

Semi-VOCs

The groundwater sample collected from boring B-4 identified the presence of fluoranthene, phenanthrene, and pyrene at concentrations of 9 micrograms per kilogram ($\mu\text{g/L}$), which were below their NYSDEC Technical and Operational Guidance Series (TOGS) Class GA Water Quality Standards (WQS) of 50 $\mu\text{g/L}$.

Priority Pollutant Metals

The groundwater samples collected from each boring identified the presence of at least one or more metal compounds above their respective laboratory MDL. The following metals were detected below their respective NYSDEC TOGS Class GA WQS: antimony, arsenic, chromium copper, lead, nickel, selenium, and zinc.

The analytical report is provided in Appendix D.

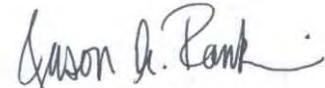

Conclusions and Recommendations

Soil analytical results indicated the presence of five semi-VOCs and four metal compounds at concentrations exceeding their respective NYSDEC TAGM #4046 RSCOs and/or Eastern USA Background Guidance Values at each boring location. Groundwater analytical results did not identify any semi-VOCs or metals above their respective NYSDEC TOGS Class GA WQS. The compounds identified during this Assessment are not indicative of a spill, but are closely related to historic fill material (incineration waste). Soils exhibiting petroleum related contaminants in exceedance of the NYSDEC TAGM #4046 RSCOs that are excavated as part of the Subject's redevelopment will need to be properly disposed of during construction activities. The soils must be classified for waste characterization parameters according to disposal facility requirements, transported under appropriate regulatory permits, and disposed or recycled at a licensed facility permitted to accept the soil. IVI recommends further delineation of the impacted soils is warranted to minimize the amount of soil removed from the Subject.

Please do not hesitate to call if you have any comments or questions regarding this Assessment.
Thank you for letting us be of assistance.

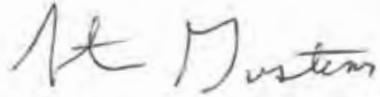

Sincerely,

IVI ENVIRONMENTAL, INC.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/28/07. The project was identified as your project "E7063663/West & Leroy Streets, New York, NY".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

Notes for York Project No. 07060984

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This MDL is the REPORTING LIMIT and is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

PROJECT NAME : WEST & LEROY STREETS

LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES, INC

360 West 31st Street

21 Penn Plaza, Ste 800

New York, NY - 10001

Phone No: 2124795400

ORDER ID : D4252

ATTENTION : Gerald Nicholls

284 Sheffield Street, Mountainside NJ 07092 (908)-789-8900 Fax : 908 789 8922

Date : 09/25/2012

Dear Gerald Nicholls,

1 air samples for the **West & Leroy Streets** project were received on **09/18/2012**. The analytical fax results for those samples requested for an expedited turn around time may be seen in this report. Please contact me if you have any questions or concerns regarding this report.

The invoice for this workorder is also attached to the e-mail.

Regards,

Kurt Hummler

908-728-3143

PROJECT NAME : WEST & LEROY STREETS

LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES, INC

360 West 31st Street

21 Penn Plaza, Ste 800

New York, NY - 10001

Phone No: 2124795400

ORDER ID : D4250

ATTENTION : Gerald Nicholls

284 Sheffield Street, Mountainside NJ 07092 (908)-789-8900 Fax : 908 789 8922

Date : 09/25/2012

Dear Gerald Nicholls,

4 water and **4** soil samples for the **West & Leroy Streets** project were received on **09/18/2012**. The analytical fax results for those samples requested for an expedited turn around time may be seen in this report. Please contact me if you have any questions or concerns regarding this report.

The invoice for this workorder is also attached to the e-mail.

Regards,

Kurt Hummler

908-728-3143

khummler@chemtech.net

SURROGATES							
877-09-8	Tetrachloro-m-xylene	18.6		35 - 137		93%	SPK: 20
2051-24-3	Decachlorobiphenyl	18.7		40 - 135		93%	SPK: 20

U = Not Detected

LOQ = Limit of Quantitation

MDL = Method Detection Limit

LOD = Limit of Detection

E = Value Exceeds Calibration Range

P = Indicates >25% difference for detected concentrations between the two GC columns

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

N = Presumptive Evidence of a Compound

* = Values outside of QC limits

D = Dilution

S = Indicates estimated value where valid five-point calibration was not performed prior to analyte detection in sample.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

355-359 WEST STREET AND 156 LEROY STREET
NEW YORK, NY 10014

COORDINATES

Latitude (North): 40.7301000 - 40° 43' 48.36"
Longitude (West): 74.0102000 - 74° 0' 36.72"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 583585.2
UTM Y (Meters): 4509056.0
Elevation: 7 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/01/2012 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	W 0 - 1/8 (0.081 mi.)	0	8

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 11/02/2012 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

NEW YORK CITY ANTHRAX SITES	31 DOWNING STREET/2 PRI	E 1/4 - 1/2 (0.338 mi.)	AG234	791

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 11/02/2012 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/19/2012 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/07/2013 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/19/2012 has revealed that there are 53 NY LTANKS sites within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 45 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/19/2012 has revealed that there are 29 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 21 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 35 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - CANAL ST. WORKS M	CANAL STREET	SE 1/2 - 1 (0.946 mi.)	259	862

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station,

EXECUTIVE SUMMARY

service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 12 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 8 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river

sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an

American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"8/31/00, 4:00 PM: spoke with Gary Windman (Gas Ops) - this is NOT a 3rd party spill. It is a Con Ed gas line, but break was caused by a contractor. Also, Construction Mgmt. is responsible organization for clean up. Material is being treated as hazardous for benzene contamination. No samples were taken for PCBs. 4:10 PM: left message for Greg Rucco (Construction Mgmt) to get details of clean up. (JHO)9/5/00: spoke with Greg Rucco - 3 drums of soil were removed. Samples were collected from drums and from excavation after soil removal for benzene only. I asked Rucco to contact the Chem Lab - see if they have enough soil sample from drums to run for PCB scan. If not, take wipe sample from pipe for PCBs. After speaking with Chem Lab, he informed me that samples were sent to an outside lab. Chem Lab will send a tech to site to take PCB wipe samples from inside the pipe. (JHO)9/6/00: benzene sample from excavation lab sequence # 00-08420 <0.00091 ppm. (JHO)9/12/00: wipe samples from inside gas line non-detect for PCBs - lab sequence # 00-08660. (JHO)e2mis no. 133-150:On 8/31/00 at 1422 Construction Management reported a spill of unknown liquid from a 6 in cast iron gas main in an excavation at W.Houston St 30 feet East of West St. Man. The spill was contained to the excavation and did not enter any sewers, waterways or subsurface structures. The spill was caused by Perreni Contractor working for New York State doing paving work. The job was supervised by Construction Management.1/11/01 J. Mele reports that on 8/31/00 spill was cleaned up from excavation. On 9/5/00 pipe was removed from site and brought back to Con Edison's Yard W 28 St for disposal.

Remarks: DURING EXCAVATION THE PAVING CREW AN OLD GAS MAIN WAS MOVED ANDTHERE WAS A 1 GAL SPILL OF DRIP WATER (COULD POSS CONTAIN CONTAMINATES) SPILL CONTAINED IN THE EXCAVATION - CON ED# 13315

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 135045
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"2/23/2000 DEC received a "Closure Report" from GZA - Stephen Kline 212-594-8140 (fax212-279-8180)Report outlined removal of 3 - 4,000 gal tanks, soil samples taken, contamination left on site. Discussion of other tanks on site (some in use, some abandoned). DEC letter to GZA 2/23/2000 requires:1) 3 wells in area of tanks and pumping island - Water samples tested to 8021 & 82702) summary of tanks on site, including if they were closed out with water or sand.3) report with findings and either recommendations for site remediation or justification for "No Action" status due April 14, 2000.4/4/2000 Stephen Travis P.E. (Yellow Freight) & Frances Schultz (GSA - 973-256-7800) met with Sangesland to discuss this site.4 wells were installed as requested. Some slight trace levels of VOC's found, one MTBE reading of 12 ug/l found in one well. Whole area was built on landfill (probably coal ash) back in 1800's thru 1900. Background levels of other contaminants may be caused by this fill and not from recent contamination.Yellow Freight is going to submit soil boring results from other spots on the site. If these results show similar contamination, DEC may close it out.5/2/2000 SANGESLAND SPOKE WITH KATIE BORDENARO (212-675-3004) FROM A LOCAL CITIZENS ORGANIZATION. SHE ASKED ABOUT WHAT WAS HAPPENING ON THE SITE. SHE HAS RECORDS ABOUT MANY TANKS ON THE SITE. SHE IS MAILING A COPY OF HER REPORT TO THE DEC.5/12/2000 Advanced Cleanup Technologies, Inc (631-293-4992) was hired by a potential purchaser to conduct a Phase I / II review of the site. Several soil borings and wells were installed in Feb, 2000. The resulting report was issued by ACT on April 7, 2000. NYSDEC received a copy of this report directly from ACT on May 5, 2000. Based on the results of this report, a new spill number was called on the site to cover the entire block. Cross Ref to Spill #00018385/12/2000 Sangesland spoke to Steve Travis at Yellow Freight to discuss the results of the ACT Site Assessment. Mr. Travis requested that the two spill numbers be kept seperate. Right now, 9909631 relates to an area midblock along Washington St. in the area of the former 3 - 4,000 gal diesel tanks. Spill #0001838 basically covers the remainder of the city block.Issues include petroleum contamination and various metals.

Remarks: THEY WERE UNCOVERING OLD UNDERGROUND TANK (4 TANKS ALL 4000 GALLONS) - WHEN THEY REMOVED THEY ENCOUNTERED SOIL THAT SMELLED OF SOIL - THEY USED A METER THAT MEASURED JUST ABOVE THE REPORTABLE LIMIT - THE SOIL WILL BE REMOVED THIS WEEK

DEC Remarks: 2/23/2000 DEC received a Closure Report from GZA - Stephen Kline 212-594-8140 fax212-279-8180) Report outlined removal of 3 - 4,000 gal tanks, soil samples taken, contamination left on site. Discussion of other tanks on site some in use, some abandoned). DEC letter to GZA 2/23/2000 requires: 1) 3 wells in area of tanks and pumping island - Water samples tested to 8021 8270 2) summary of tanks on site, including if they were closed out with water or sand. 3) report with findings and either recommendations for site remediation or justification for No Action status due April 14, 2000. 4/4/2000 Stephen Travis P.E. Yellow Freight) Frances Schult GSA - 973-256-7800) met with Sangesland to discuss this site. 4 wells were installed as requested. Some slight trace levels of VOC s found, one MTBE reading of 12 ug/l found in one well. Whole area was built on landfill probably coal ash) back in 1800 s thru 1900. Background levels of other contaminants may be caused by this fill and not from recent contamination. Yellow Freight is going to submit soil boring results from other spots on the site. If these results show similar contamination, DEC may close it out. 5/2/2000 SANGESLAND SPOKE WITH KATIE BORDENARO 212-675-3004) FROM A LOCAL CITIZENS ORGANIZATION. SHE ASKED ABOUT WHAT WAS HAPPENING ON THE SITE. SHE HAS RECORDS ABOUT MANY TANKS ON THE SITE. SHE IS MAILING A COPY OF HER REPORT TO THE DEC. 5/12/2000 Advanced Cleanup Technologies, Inc 631-293-4992) washired by a potential purchaser to conduct a

Phase I / II review of the site. Several soil borings and wells were installed in Feb, 2000. The resulting report was issued by ACT on April 7, 2000. NYSDEC received a copy of this report directly from ACT on May 5, 2000. Based on the results of this report, a new spill number was called on the site to cover the entire block. Cross Ref to Spill 0001838 5/12/2000 Sangesland spoke to Steve Travis at Yellow Freight to discuss the results of the ACT Site Assessment. Mr. Travis requested that the two spill numbers be kept separate. Right now, 9909631 relates to an area midblock along Washington St. in the area of the former 3 - 4,000 gal diesel tanks. Spill 0001838 basically covers the remainder of the city block. Issues include petroleum contamination and various metals.

Spill Cause: THEY WERE UNCOVERING OLD UNDERGROUND TANK 4 TANKS ALL 4000 GALLONS) - WHEN THEY REMOVED THEY ENCOUNTERED SOIL THAT SMELLED OF SOIL - THEY USED A METER THAT MEASURED JUST ABOVE THE REPORTABLE LIMIT - THE SOIL WILL BE REMOVED THIS WEEK

up (typical of much of the west side of Manhattan) with fill material (coal ash) and other non native fill material. Owner of the site is: Washington Street Associates, LLC (Mr. Gary Koehnken) address: 352 Park Ave - Suite 702, New York, NY 10010 Attorney for the owner is: Gail Port with Proskauer Rose LLP (212-969-3243) address: 1585 Broadway, New York, NY 10036 Environmental Consultant: Advanced Cleanup Technologies, Inc. (631-293-4992) address: 117 Verdi Street, Farmingdale, NY 11735 During the course of 2000, a total of 17 buried tanks were found in 5 general locations around the site. Advanced Cleanup Technologies removed the tanks and excavated out any contamination found to the satisfaction of the DEC. In addition, a total of 3 groundwater monitoring wells were installed on the site and found to be clean. On January 11, 2001 ACT submitted an "Underground Storage Tank and Spill Closure Report" which documents the excavation of the 17 tanks and associated petroleum contamination in the area. Based on this report, the spill number associated with this site is closed. Closure letter specifically says: "the NYSDEC is in receipt of the spill closure report, prepared by Advanced Cleanup Technologies Inc. and dated January 11, 2001, for the referenced site. This information, when combined with the documentation already provided to the NYSDEC to close out spill number 9909631, provide a complete summary of the environmental conditions for the full city block under investigation. The historical petroleum contamination which was on the site has been satisfactorily remediated. Based on this information, no further investigation or response will be required concerning the petroleum contamination at this specific site." NYSDEC rep - Tom Lang (Hazardous Wastes Department) added this: "Based on the environmental investigatory information provided to the NYSDEC, there is no evidence of the presence of a consequential amount of hazardous waste on the site."

Remarks:

ACT INC. SUBMITTED A PHASE I AND PHASE II REPORT WHICH IDENTIFIES PETROLEUM AND METAL CONTAMINATION THRU OUT THE SITE. SEVERAL SOIL BORINGS AND WELLS WERE INSTALLED. SEVERAL SHOWING HIGH CONTAMINATION LEVELS.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 8/23/05-Vought-Site visit by DEC Vought and DEC Ketani as per DEC Austin. Spill of diesel from a 250 gallon AST on roof of site. Spill flushed down drain by NYFD. Clean Harbors onsite (Jime Cardone 732-248-1997). On site DEC met with Ray Pichardo (super 212-929-5075). Roof drain was connected to sewer as per DEP (Keith Williams) who had left site by time of DEC site visit. DEC spoke with senior operations manager (Al Miller 646-739-4953) and spill originated from vent pipe due to malfunction of pump. No leak from UST. Contractor enroute to fix pump. Spill cleaned using adsorbent

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 07/01/2004
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE

S106534449

Remarks: "DEMEO" August 16, 2005 As part of the Spills Backlog Reduction, Jason Pelton initially called Roy Rucci with Rucci Oil. Rucci Oil delivers #2 fuel oil to 627 Greenwich property and was listed on the Spill Report Form as a contact person. Rucci referred the property owner to Crown Leak Detection to complete the tank testing. Roy Rucci indicated that the tanks were repaired by Petroleum Tank Services. Rucci Oil continues to deliver oil to this property. Roy provided me with contact information for Ed Armstrong (212-741-2111). Ed Armstrong is the 627 Greenwich Street property Superintendent. I followed up with a phone call to Ed Armstrong. Ed Armstrong indicated that a vent line was broken and there was never any petroleum spill. Ed has documentation on the tank tightness testing and the tank repairs and faxed them to me on August 16, 2005. The testing and repair documents were scanned and placed in eDocs on 9/6/05. Based on the fact that no petroleum spill occurred and that repairs were made to the underground storage tank system, the status of the spill was changed to closed by Jason Pelton on September 6, 2005.

no pbs number but violation number is d2-5294-12-01 take 2 is in a tomb and tank 1 is underground both failed test property owner is aware tanks will be uncovered and cleaned then retested

information regarding clean up and repair of the spill.10/21/2008
Case is transferred to DEC- Veronica Zhune for site inspection.Caller
says all the work was done and the fill line was repaired/replaced
back in Nov. 2000. They have no paperwork. An inspection is needed to
confirm repairs were made to the fill line.10/30/2008- Zhune visited
the site. The Mechanical Ramiz Beskouvic showed me the new fill line.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"10/10/95: This is additional information about material spilled from the translation of the old spill file: UNK GASOLINE ODORS.4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.Albany assignment: "adebong"9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end10/30/06 - Raphael Ketani. The record was found for the site. DEP was digging and found gasoline odors. Kim Hanna of DEP (718) 595-4681 was the person in charge at the time.The site is at 148 Barrow Street, Manhattan. Block/lot are 00604/0030. It is presently owned by William Gottlieb Real Estate, 544 Hudson Street, NY, 10014-3233. There is no PBS record. The phone number is: (212) 989-3100. I tried calling Mr. Gottlieb, but could only leave a message.Two sets of 8260 only analytical results are present. Sample SH-1 (soil)has as much as 26,270 ppb of total xylenes - among many other VOC analytes in the thousands of ppb. The liquid sample (SH-2) had no hits. 11/1/06 - Raphael Ketani. I tried calling Mr. Gottlieb again. I again got his secretary or receptionist. She said that he doesn't own 148 Barrow Street, but rather 150 Barrow Street. I told her that he is listed as the owner in the NYC Property Tax records database. She said that he is listed for a lot of properties he doesn't own. She said the site is a vacant lot. I asked her to have him give me a call back anyway if he has any information. She said she will ask him. I rechecked my investigation of the ownership of the property. I checked Property Shark, the NYC Property Tax database and ACRIS. Each database listed the property with the same block and lot and the same address, 144 to 150 Barrow Street. As the person I talked to confirmed that he owns 150 Barrow Street, I will send a CSL.11/7/06 - Raphael Ketani. Mr. Gottlieb (212) 989-3100 called me today. He said that the site had

the contamination from before his company bought the property. He said that there are no records anywhere for the cleanup of the site. He added that the property has been vacant, without tenants, for the past 10 years. However, a phase 1 investigation was recently done for the site. I asked him for a copy. He said that the phase 2 was about to start. Mr. Gottlieb stated that debris removal work will begin about 11/15/06. The phase 2 investigation company is Hillman Group, LLC. He will send me a letter with the full name, address and phone number of the company. 11/15/06 - Raphael Ketani. I received a letter today from Charles F. Fritsch, Senior Manager, at William Gottlieb Management Co., Inc. It stated the same information as is in my 11/7/06 notes. 6/25/07 - Raphael Ketani. I tried to contact Mr. Gottlieb regarding the site and the phase II report, but could only leave a message. 8/3/07 - Raphael Ketani. I tried to get ahold of Mr. Gottlieb, but could only leave a message. 8/14/07 - Raphael Ketani. I made an unannounced site visit. I took 3 pictures. The site is an old rundown hotel. The building may have been built in the nineteen teens or twenties. The owner has put modern windows in the building. They were dirty and looked like they had been put in several years ago. A triple space garage is attached to the building. There were numerous old work permits on the inside of the door dating from 2004 to 2007. A Con Ed notice was attached to the door stating that service will be turned off. The door was locked and the entranceway was dark. There was no sign that anyone was inhabiting the building. I tried to contact Mr. Gottlieb (212) 989-3100, but could only leave a message. The end of my message stated that if DEC doesn't hear anything from him by the end of this week, then the case will be referred to DEC's Legal division. I received a message from A.J. Lefler of 2+3 Architects. He said he is the architect for Mr. Gottlieb and the 148 Barrow Street site. His number is (718) 387-6587, ext 13. 8/15/07 - Raphael Ketani. I tried to contact Mr. Lefler, but could only leave a message. Mr. Lefler called me back. He said that the site encompasses 144 and 148 Barrow Street and the old Keller Hotel. He said that his firm is designing a horizontal addition to the 144 Barrow Street part of the site. The spill is in the southeast corner of the 144-148 site. Mr. Lefler added that the remediation will take place with the demolition of the 3 car garage. He said this will happen in 4 to 6 months. Hillman Environmental did the phase II. He said the contact there is David Umbach. I told Mr. Lefler that DEC never received the phase II report. He said he will have Hillman send it quickly. 8/17/07 - Raphael Ketani. Mr. Lefler called to state that DEC will receive the Phase II next week. 9/24/07 - Raphael Ketani. DEC received the Phase I Environmental Site Assessment and the Phase II Limited Investigation on 8/31/07 from 2 Plus 3 Architects, P.C. I reviewed the Phase I and the Phase II. According to the Phase I: The site consists of two lots, 1 and 30. Lot 1 is 150 Barrow Street, the old hotel, and lot 30 is 144-148 Barrow Street, the four car garage. The entire site was a coal storage yard up until 1898, when the hotel was built. Lot 30 continued to be a coal storage yard into the early twentieth century. In the 1930s, lot 30 became a car service business, and subsequently many other types of businesses took residence, as indicated by city records. A gasoline UST was installed in the 1950s and remained there until 1983. The old hotel was using oil, but neither the gas tank, nor the oil tank(s) were found during the Phase I that took place in 2006. According to the Phase II: Seven borings were attempted in the basement of the hotel. However, due to the thickness of the floor slab, only 1 soil sample was recovered.

148 BARROW STREET (Continued)

S102672473

The analytical data for the sample wasn't listed in the report. No borings were attempted in the southeast quarter of the basement, nor to the southeast of boring B-4, nor in the western quarter of the basement. GPR was used in the garage, but didn't find any evidence of a gas tank. Eight borings were attempted in the garage and 8 soil samples and 2 groundwater samples were recovered. Groundwater sample BAR-1GW had 35,300 ppb total xylenes, 1360 ppb toluene, 8020 ppb ethylbenzene, and was non-detect for benzene. Groundwater sample BAR-2GW had all non-detects, except for 0.94 ppb benzene. Soil sample BAR-1 in the east garage bay (northeast corner) had 113 ppm total xylenes, 21.2 ppm ethylbenzene, toluene 0.97 ppm, and was non-detect for benzene. Soil sample BAR-2 in the east garage bay (southeast corner) had 200 ppm total xylene, 35.7 ppm toluene, 39 ppm ethylbenzene, and 0.43 ppm benzene. All of the other soil samples were non-detect or well under TAGM.BAR-Fill (a composite of fill soil from all 4 bays) had exceedences only for the benzo series of combustion products and their associated analytes. No borings were done to the west of the bathroom. 9/25/07 - Raphael Ketani. A letter was sent out to Mr Fritsch of the William Gottlieb Management Co., Inc. requesting that more soil borings and wells be installed, and that soil and groundwater samples be taken. The letter also requested that the soil be removed in the vicinities of BAR-1 and BAR-2.9/26/07 - Raphael Ketani. Mr. Loeffler of 2 Plus 3 Architects called to say that William Gottlieb Management Co., Inc. received the 9/25/07 letter. He said that the Phase I and Phase II were produced by Hillman Group, LLC and that Mr. Fritsch is no longer at William Gottlieb. He said to address all future letters to Mark Caldeira. Mr. Loeffler added that all of the soil removal will take place with the demolition of the garage and that all of the work mentioned in the letter will be done.10/4/07 - Raphael Ketani. Chris Hirshmann of the Hillman Group (908) 688-7800 called to inquire as to how many wells and borings DEC wanted. I explained the September 24 letter and I told him that one well should be in the sidewalk and that he should submit an investigation plan for DEC's approval. He said will do this. 10/10/07 - Raphael Ketani. I received a well installation proposal from Mr. Hirschmann of the Hillman Group. The proposal was for the delineation of the groundwater contamination under the eastern two garage bays. Three wells are proposed in the eastern two bays. I told Mr. Hirschmann that this was fine for the groundwater investigation. I asked him about the soil borings that were asked for in DEC's 9/25/07 letter. He said he will do those, also.12/7/07 - Raphael Ketani. I spoke to Mr. Hirshmann. He said that they finished boring and sampling yesterday. He said that the soil samples have been sent to the laboratory for analysis. 1/31/08 - Raphael Ketani. I tried to contact Mr. Hirshmann, but could only leave a message.2/13/08 - Raphael Ketani. I contacted Mr. Hirshmann and asked him about the sample analytical results. He said that they are part of a report and the report is being reviewed and commented upon by the various involved parties. He said he will send the parties an e-mail stating the DEC wants to see the report right now. I told him that would be fine. 3/21/08 - Raphael Ketani. I spoke to Mr. Hirshmann (908) 688-7800. He said that his client is done reviewing it and that DEC should get the report very soon.8/18/08 - Raphael Ketani. I tried to contact Mr. Hirshmann, but could only leave a message.The case is being prepared for transfer due to a case realignment within the unit. Mr. Hirshmann needs to submit the site investigation report to DEC. The case manager should contact Mr.

Hirshmann to see where the report is. It's overdue.8/20/08 - Raphael Ketani. Mr. Hirshmann left me a message that he thought the report had been sent to DEC. He will ask his client what happened to it.Mr. A. J. Leffler of 2+3 Architects called. He said that he had the investigation report on his desk. It just got buried. He apologized and said that he will Fed Ex it.08/25/09- Zhune spoke to Melvina from 2+3 Arquitects, She said Mr. Lefler is busy in the other line I will tell him to call you back.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

spill was caused by ConEd and is being cleaned up by them.204253. see eDocs. 4/13/07: Spill submitted for closure by Con Ed. Request denied, with comment: "Was repair made to damaged fill line? Was contractor that installed vault working for Con Ed?" (JHO)5/15/07: spill submitted for closure by Con Ed. Response to above comment was: "Safeway Construction Enterprises was working directly for Con Edison. Safeway repaired the oil fill line. Safeway also conducted the clean up and disposed of the non-haz oily debris." Request for closure denied, with comment: "Following completion of repairs to fill line, a NYSDEC-approved precision test is required to confirm repair was successful. Was testing performed? What test method was used?" (JHO)12/19/07: e-mail from Con Ed (Brian Bellows) regarding testing of the line:"As mentioned, there is no access to the tank system for line testing. In addition, approval from the property owner will be needed for work on their tank as mentioned below. Any guidance in resolving this issue would be appreciated." Attached to Con Ed (Bellows) e-mail was an e-mail from Con Ed's contractor (Robert M. Laga of The Franklin Company Contractors, Inc.), which states:"Based upon my inspection, there is a buried tank located under the building. The tank has a fill line, vent line, suction and return. The only access to the tank is through a 24"x24" manhole to a round man-way cover, I noticed a few bolts missing in the cover. The cover has noopenings on it to access the tank. The size of the tank is questionable."Testing the tank through approved methods by the DEC/EPA is not possible because there is no access to the tank. In the event you are required to test the tank, the DEC has allowed in the past, to test the tank through the vent line. This test would only be an indication ofweather the tank was tight or non-tight. To perform a complete test, the water intrusion portion of the test must be performed. Water intrusion testing does not have to be completed if it can be demonstrated to the DEC that groundwater is well below the bottom of the tank. This could be determined suing a Geo-probe rig for an additional cost."Another option is to have us remove the man-way lid and weld on a 2" or 4" bung. This would allow us to test the tank the conventional method, but would require a few days to prepare and get the tank ready for testing." (JHO)12/20/07: e-mail to Con Ed (Bellows):"Please clarify the sequence of events for me. As I understand it, your contractor disconnected the fill line in order to install the vault. The fill line was re-connected but leaked (?) or did the leak happen during the disconnection period? At what point was the fill line re-connected?" (JHO)12/21/07: e-mail response from Con Ed (Bellows):"On January 26, 2007, a spill was cleaned up in the area where the contractor had removed an oil fill line when

S105998775

constructing a vault. When the oil company came to make a delivery, the oil leaked into the backfilled excavation. The contractor came back and excavated soil then made the repairs to the oil fill line they removed." (JHO)12/21/07: E-mail to Con Ed (Bellows): "Was the initial spill they cleaned up (on Jan 26) a result of the line being disconnected?" (JHO)12/21/07: e-mail response from Con Ed (Bellows): "According to the inspector, the final clean up was completed on 1-26-07 at 1500 hrs. Clean up was completed by Safeway construction. The affected 2 yards soil was dug up and replaced with clean soil." 1/16/08: E-mail from Con Ed (Bellows): "Just a quick follow-up on this spill event, I believe you were checking to see if we would be required to have the entire tank system tested since the tank line could not be isolated. As mentioned previously the tank system would need to be modified for testing. Let me know if anything else is needed at this time or if a tank testing determination is made." E-mail reply to Con Ed (Bellows): "I spoke with our PBS staff [Jacob Krimgold], and they said the line has to be tested. I checked the records for this building, and saw that the tank system was tested in 2003 using the Horner EZ3 testing method, and is due for another test in June 2008. Perhaps that method can be used again." (JHO)

Remarks: CON ED DID THE DIGGING AND HIT THE OIL LINE ;; CON ED WILL CLEAN UP: 204253.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 130777:1 pint of distribution feeder dielectric fluid leaked from a set of 1/2 duplex joints in manhole #36357. Placed pads on floor of manhole. Spill no way near sump. No water,no smoke or fire. crew going to above location will take a sample for pcb and cleanup to be made 50-499 ppm PCB.4/6/00 10:20 hrs. Emergency Bureau reports to Zoeller that further inspection of the spill matter identifies it as a solid compound. Fred Simms had contacted Kieran O'Flynn who had noted that he didn't report any oil spill. Prior to Kieran arriving on site the structure was flushed by a Flush Truck - no oil was found at that time either. This structure and job is considered "Clean" and no tag was hung. Initial report of oil was incorrect.

Remarks: caller reportes 1 pt spill in manhole from leaking feeder cable joint. con ed # 130777.

DEC Memo: Sangesland spoke to Calvin Morgan at State Facility. He said All County Plumbing did repair work to the 8,000 gal tank (manway gasket & fill line). He says the tank was retested and passed. He will gather the records and forward an information package via e-mail to close out the case.1/26/2012 Mr. Morgan forwarded a document package that confirms repairs were made and the tank was retested. No contamination was found. Spill Closed.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: 11/4/10-HRAHMED-DEC Rahman is responding to the site.11/05/10
Performed site visit.Building super was present during my inspection.The tank is 1,500 gallon, vaulted(cemented all over).No evidence of spill observed around the tank.No spill seen coming through the weephole.Super removed cinderblock from the top of the tank encasement to see the bottom of the tank.The bottom is dry.Tank failed the tightness test.Unsure where the leak is.As per the delivery slip, tank was delivered 1,300 gallons oil.Tank needs to be investigated for leak.csl was sent out to A B Ilibassi Realty CoP.O. Box 3545New Hyde ParkNY 11040(sr)12/08/10 Stopped by the site today.PTC removed the vaulted tank and currently excavating the tank grave. Excavation is approx 15'x6', 4' deep.Tank room has strong odor of petroleum. End point sample will be taken.PTC found holes at the bottom of the tank.(sr)03/31/11 Rec'd closure report. Tank was removed and found to be corroded and contained numerous holes.Excavation extended 15'x 8'x 8'.A total of twenty yards of contaminated soil and debris were removed.Two end point samples were taken from the bottom of the excavation. Minor VOCs left in the soil. ORC applied before backfilling. Vapor barrier was installed. Floor was epoxy painted.Report in edocs.Case closed.(sr)
Remarks: 1500gal agt is leaking/ leak is contained to vault area/vault is located inside, basement area/tank was filled day before yesterday

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: NONE
Waste name: None

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

RADINFO (Radiation Information Database) contains basic information about certain facilities that the U.S. Environmental Protection Agency (EPA) regulates for radiation and radioactivity. The regulations that govern radiation across the federal government are complex, and, therefore, RADINFO may not include every facility you might expect to find.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"07/23/03. By the owner's request J. Krimgold visit the site to check the cleanup. Conversations with witnesses revealed that spill occurred in the basement due to the overfill. Oil came out through a loose fitting on the top of the tank. Fitting was replaced and a new thank whistle was installed. No oil stains or odor in the tank area. Cleaned up by the RP. NFA letter on 07/29/03. YK.

Remarks:

anonymous caller would not give name but gave his phone number(212-627-5700) discovered the spill. resident called manager of building and he is the notifier

DEC Region: 2
DER Facility ID: 397166
DEC Memo: 11/17/10- Zhune spoke to Ray Lara from PTC. He said tank was isolated and tank itself failed the test. Tank was emptied. Tank is located under the sidewalk. There is spill under the basement. Tank is right near the water a block away from West Side Highway. There are vapors in the house. Plymouth Management: 212-447-7000 Ext 221 Steve Miller or Marlene Crawford (Ext. 223, email: mcrawford@plymouthny.com). 3:15 PM:- visited site. site has four story building with basement. found temporary 275 gal tank under the stairs to first floor. temp. tank is installed in passage outside of building, but this passage bottom is at basement floor level. inspected boiler room in corner of basement. no odors found in boiler room. no access available inside building to confirm any odors in building. found old aboveground supply/return lines inside boiler room. site has one 1,500 gal #2 oil UST under the sidewalk. found metal grate on sidewalk. found vent line running inside the grate. fill port has been sealed. 11/18/10-Hiralkumar Patel. 10:10 AM:- spoke with Ray at PTC. he mentioned that there are two metal grates nearby the temp. tank area and they found free product in these grates. Ray also mentioned that he noticed a faint odors in basement apartment near the temp tank area. 10:16 AM:- spoke with Steve Miller, property manager. Steve mentioned that the building is a co-op building. asked Steve to provide access in basement apartment for further inspection at 3:30 PM today. 10:26 AM:- received call from Bruce Flynn (917-553-7838, belgoduvel@aol.com), a tenant living in basement apartment #A . Bruce mentioned that he was living in hotel for past five days due to odors in apartment, but after tank pump out, no more odors in his apartment and he returned to apartment last night. 1:19 PM:- received call from Ray. Ronnie from PTC will meet at the site at 3:30 PM to show grate areas where free product was found. alternate addresses: 146-148 Perry Street, 695-701 Washington Street no other spills reported at the site. PBS #: 2-161373. as per the PBS record, site has one 1,500 gal AST in contact with soil (but actually tank is underground under the sidewalk). tank was installed on 10/15/77. as per ACRIS, Adam Brandenburger and Barbara Rifking owns the property. 2:01 PM:- spoke with Mr. Miller. he mentioned that building is a co-op since 1977 and he is managing the building for past 20 years. he mentioned that

building is owned by Perry Washington Tenants Corp., and not by Adam Brandenburger or Barbara Rifking. Perry Washington Tenants Corp. **property owner**c/o Plymouth Management Group, Inc. **management company**37 West 19th Street, 6th Floor New York, NY 10011 Attn.: Steve Miller **property manager**Ph. (212) 447-7000 Ext. 221 (212) 685-9000 Fax (212) 447-7344 email: plymouthmg@aol.com 3:30 PM:- visited site. met Ronnie from PTC. Ronnie showed two sumps with metal grates in passage area where temp. tank is installed. open both grates. found free product in northern sump (closer to temp. tank area) with sewer clean-out connection. no product found in southern sump (closer to boiler room), but found sewer lines in it. Ronnie mentioned that they removed dirt from the area under the metal grate on sidewalk (where vent line found) and then cut piece of tank to remove product. met Bruce at the site. Bruce mentioned that he bought the basement unit recently. they moved to hotel due to strong petroleum odors in building. but odors are gone since tank was pumped out. Bruce also mentioned that there is no oil seepage into his apartment. due to on-going floor repair work, no access to Bruce's apartment for inspection. Bruce mentioned that there are total of 8 units in building. 3:36 PM:- spoke with Mr. Miller and asked him to pump out product from sump immediately. Mr. Miller will talk to Ray. asked Mr. Miller to send insurance company's contact info with claim number. 3:41 PM:- received call from Ray. he will send vacuum truck tomorrow morning to pump out the sump. 3:57 PM:- received email from Mr. Miller with insurance broker's info. Illinois Insurance **owner's insurance company**c/o Mackoul and Associates **insurance broker company**25 Nassau Lane Island Park, NY 11558 Attn.: Gina Ferrato **insurance broker**Ph. (516) 690-8025 (516) 431-9100 Ext. 210 Fax (516) 431-4641 email: gferrato@mackoul.com claim #: 114599805 11/19/10-Hiralkumar Patel. 8:33 AM:- spoke with Ray. he has sent crew to the site. asked Ray to wait for about half an hour after pump out to see if any more oil comes back. discussed with DEC Austin about oil in sump and odors in basement apartment. Austin asked to inspect basement apartment to confirm no odors or oil seepage. 10:29 AM:- spoke with Bruce. he mentioned that he moved into building couple of months ago, but there was no problem at that time. petroleum odors were strong right after oil delivery, so he lived in hotel for about 8-9 days. informed Bruce that the department needs access in his apartment to confirm no petroleum seepage or odors. site visit will be made next week. 10:34 AM:- spoke with Ray. Ray mentioned that after pumping out sump, his crew noticed water and some oil coming back. Ray will send someone to the site this afternoon to see how much oil coming back into the sump. 10:44 AM:- spoke with Gina, insurance broker. she mentioned that her company is not handling remediation work, but another company called ACE is handling that. 10:46 AM:- spoke with Mr. Miller and got ACE's number. informed Mr. Miller that oil/water is coming back into the sump after pump out which indicates more oil around tank area and groundwater may also be impacted. 10:49 AM:- spoke with operator at Network whose number i got from Mr. Miller. operator told that her company name is Network and they provide service between client and insurance company. they only takes claim's information, create a claim number and that information goes to insurance company directly. in this case, information went to ACE Environmental Risk and operator doesn't have their phone number. Network ACE Environmental Risk Ph. (888) 310-9553 10:56 AM:- spoke with Mr. Miller regarding contact number for ACE. Mr. Miller doesn't have it. he is always dealing with Gina for insurance

matters.10:58 AM:- left message for Gina.11:10 AM:- spoke with Chris Stella at ACE. Chris mentioned that ACE will only handle bills from contractor, but insured has to hire contractor for required work.Christopher StellaACE USA10 Exchange Place, 9th FloorJersey City, NJ 07302Ph. (201) 356-5225email: christopher.stella@acegroup.comclaim #: 114599805 11:15 AM:- spoke with Mr. Miller and informed him about discussion with Chris at ACE. informed Mr. Miller that impacted sump must be pump out daily until no more oil comes in sump.11:46 AM:- spoke with Castle oil (914-381-6600), oil delivery company for the building. operator mentioned that last oil delivery was for 730 gal was on 11/09/10 (and 1,024 gal on 10/19/10).1:08 PM:- spoke with Ray. informed him about daily product removal. Ray received ok from Mr. Miller. Ray mentioned that as they don't work on weekend, unless it is an emergency, he will put some absorbent pads in sump and ask super to change it on weekend. informed him that super must notified immediately if more product comes in and he can not handle that.1:17 PM:- sent letter to Mr. Miller requiring daily sump monitoring and product removal, tank removal and endpoint samples. asked Mr. Miller to provide tank removal schedule by the end of 11/30/10 and tank closure report is due on 01/19/11. letter emailed to Mr. Miller, Ray, Gina and Chris.12/10/10-Hiralkumar Patel.2:28 PM:- left message for Mr. Miller.2:31 PM:- left message for Ray at PTC.3:17 PM:- received call from Ray. they have collected three soil samples, through the tank bottom, at 4 ft below the tank bottom. Ray mentioned that no water encountered below the tank bottom. they are pumping about 25 gal oil/water mix everyday. he will get sample results back by 12/17/10.3:33 PM:- received message from Mr. Miller stating that PTC has collected soil samples and waiting for results.01/05/11-Hiralkumar Patel.9:17 AM:- left message for Mr. Miller.9:19 AM:- spoke with Ray. asked him to submit results of investigation.01/06/11-Hiralkumar Patel.3:58 PM:- received call from Mr. Miller. asked him to submit report on soil investigation and product removal data. he will talk to Ray.4:01 PM:- received call from Ray. he will submit report tomorrow.12:11 PM:- received message from Mr. Miller. Mr. Miller mentioned that Ray has submitted report.received fax from Ray including results of three soil samples and copy of proposal for tank abandonment. it doesn't include site map, sampling depth, product recovery data etc.1:14 PM:- spoke with Mr. Miller. informed him that Ray submitted incomplete report. informed him that as tank failed an isolation test and product found in pits about 10 ft from the tank, the department requires soil investigation again to confirm the recent soil sample data. also informed him that future investigation(s) must be done in the presence of DEC project manager. suggest him to consult with structural engineer for tank removal possibility. informed him that tank abandonment must be done only after getting approval from the DEC.01/18/11-Hiralkumar Patel.11:34 AM:- left message for Mr. Miller.11:37 AM:- left message for Ray.01/21/11-Hiralkumar Patel.10:20 AM:- left message for Mr. Miller.10:44 AM:- received call from Mr. Miller. asked him to submit report for work done till date. asked him to submit report by the end of today. he mentioned that they have hired Rand Engineering to inspect the site for possibility of tank removal. asked Mr. Miller to contact Rand and submit their schedule.Liad GoldmanRand EngineeringPh. (212) 675-884411:46 AM:- received call from Ray. he will send documents by 01/24/11.01/24/11-Hiralkumar Patel.4:14 PM:- received fax from Ray

including job tickets, tank test result and site map with tank/sampling locations. as per job tickets, PTC removed oily water from pits. as per site map, tank is 4 ft in diameter and tank top is 2 ft bg. Ray collected soil samples at two ft below tank bottom.4:33 PM:- spoke with Mr. Miller inquiring about inspection by structural engineer. Mr. Miller will call back after talking to the engineer. informed him about possible site visit tomorrow afternoon (around 3:30 PM) to inspect pits.01/25/11-Hiralkumar Patel.2:10 PM:- visited site. observed some oil in a pit which is close to the temp tank. no oil found in pit closer to the boiler room. inspected Bruce's apartment. no oil seeps found through foundation wall above the apartment floor, but found some oil soaked pads in small area underneath the bedroom. Bruce mentioned that he has been changing pads. due to ongoing renovation (which includes paint and other chemical), could not distinguish minor odor in Bruce's apartment.02/02/11-Hiralkumar Patel.11:51 AM:- spoke with Steve. he will call his structural engineer and will call back.02/07/11-Hiralkumar Patel.3:11 PM:- left message for Mr. Miller.02/08/11-Hiralkumar Patel.4:41 PM:- received call from Marlene from Mr. Miller's office. she mentioned that the structural engineer who inspected the site is out of office and will send report tomorrow. Marlene mentioned that they will send update by 02/10/11.02/10/11-Hiralkumar Patel.10:40 AM:- received email from Mr. Miller including letter report from Rand, engineering firm. the structural inspection report does not specify if tank removal is possible or not.10:44 AM:- spoke with Mr. Miller and informed him that the report from Rand does not specify if tank removal is possible or not. asked him to contact structural engineer again to clarify this.02/11/11-Hiralkumar Patel.12:07 PM:- received email from Mr. Miller including revised report from Rand engineering. as per structural engineer, tank removal is possible.02/15/11-Hiralkumar Patel.3:11 PM:- left message for Mr. Miller.02/16/11-Hiralkumar Patel.10:11 AM:- received message from Mr. Miller.2:19 PM:- left message for Mr. Miller.2:47 PM:- received call from Mr. Miller. he will talk to insurance company and engineer regarding tank removal work. informed him that based on site location, groundwater is probably flowing away from the building and there could be more oil under the sidewalk and the street. if they choose tank removal, then they need some proposals before deciding the contractor. asked Mr. Miller to submit update by end of 03/16/11, either update on contractor selection for tank removal or work plan for further investigation.2:55 PM:- sent email to Mr. Miller summarizing above discussion. email copied to Chris at ACE USA.03/22/11-Hiralkumar Patel.4:15 PM:- left message for Steve inquiring update.03/23/11-Hiralkumar Patel.1:16 PM:- received call from Peter from RAND engineering. Peter mentioned that they will be handling installation of new gas line and also spill matter. Peter will contact Miller Environmental to schedule a site visit.Peter VarsalonaRAND EngineeringPh. (212) 675-8844 Ext. 232email: pevarsalona@randpc.com04/08/11-Hiralkumar Patel.12:07 PM:- received email from Nicholas Marrone from Miller Environmental. Nick is going to visit site at 4 PM on 04/11/11.Nicholas MarroneMiller Environmental Group, Inc.Ph. (845) 569-1200 Ext. 104Fax (845) 569-1288email: nmarrone@millerenv.com04/12/11-Hiralkumar Patel.2:48 PM:- spoke with Nick at Miller. he visited site yesterday and submitted proposal for soil investigation.04/15/11-Hiralkumar Patel.4:29 PM:- sent email to Mr. Miller and asked him to call
